Document Title	System Template
Document Owner	AUTOSAR
Document Responsibility	AUTOSAR
Document Identification No	063

Document Status	Final
Part of AUTOSAR Standard	Classic Platform
Part of Standard Release	4.4.0

Document Change History			
Date	**Release**	**Changed by**	**Description**
2018-10-31	4.4.0	AUTOSAR Release Management	• Added support for BusMirorring • Reworked the modeling of LinSlaves • Introduced Crypto Infrastructure for SecuredIPdu • Minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation
2017-12-08	4.3.1	AUTOSAR Release Management	• Minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation
2016-11-30	4.3.0	AUTOSAR Release Management	• Added support for new E2E Profiles 7, 11 and 22 • Improved configuration of Ethernet Switch Ports • Introduced Security Profiles • Minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation
2015-07-31	4.2.2	AUTOSAR Release Management	• Minor corrections / clarifications / editorial changes; For details please refer to the ChangeDocumentation

2014-10-31	4.2.1	AUTOSAR Release Management	• Introduction of data transformation • Introduction of SecuredIPdu • Introduction of Switch Configuration • Introduction of Global Time Synchronization • Improved support for CanFD • Minor corrections / clarifications / editorial changes; For details please refer to the BWCStatement
2014-03-31	4.1.3	AUTOSAR Release Management	• Various fixes and clarifications
2013-10-31	4.1.2	AUTOSAR Release Management	• Set CanNmCluster.nmChannelActive, FlexrayArTpChannel.timeFrIf and FlexrayArTpChannel.maxFrIf to deprecated • Added SoAd Pdu Collection attributes to SocketConnection • Added SoAdRouting-Group.eventGroupControlType • Introduced SocketAddress.multicastConnector • Clarified usage of ISignal.dataTypePolicy • Described the handling of ComSpecs during flattening • Introduced new Pdu types: GeneralPurposePdu and GeneralPurposeIPdu
			• Made RootSwCompositionProto-type.calibrationParameterValueSet "atpSplitable" • Made RootSwCompositionProto-type.flatMap "atpSplitable" • Added new Ethernet addressing attributes to SocketConnection to help to derive the Ecu Configurations for the Server and the Clients

2013-03-15	4.1.1	AUTOSAR Administration	• Added support for remote activation of RunnableEntitys • Added support VLANs and Service Discovery • Reworked the SoAd configuration • Introduced SenderReceiverCompositeElementToSignalMapping and ClientServerToSignalMapping • Added support for CAN FD • Reworked the J1939 TP configuration • Clarification of the usage of swDataDefProps on ISignals and SystemSignals • Added support for Complex Drivers in the Topology • Updated IPduM to allow only static part reception • Added LinSlaveConfig class to the LinMaster • Clarified meaning of PduToFrameMapping.startPosition
2011-12-22	4.0.3	AUTOSAR Administration	• Added support for Partial Networking • Added support for Complex Drivers • Added support for new COM transfer properties • Added support for transmission mode switch via Com_SwitchIpduTxMode COM API • Added support for treating byte arrays with primitive type mapping • Added support for partial routing in signal gateways • Added support for FlexRay AUTOSAR TP • Added rules for creation of Pdu Triggerings and Pdu Ports • Explained the general approach of bit counting

2009-12-18	4.0.1	AUTOSAR Administration	• updated System class category names • Changed specification of PduLength parameter from bits to bytes • Made Flexray channel specific attributes optional • Clarified the usage of EcuPorts in System Extract/Ecu Extract • Allowed to define sending and receiving connections to EcuPorts for NmPdus, XcpPdus • Aligned FrTP model to AUTOSAR FrTp SWS • Replaced ComProcessingPeriod by three timebase parameters • Reworked E2E protection of selected I-PDUs • Corrected AssignFrameIdRange configuration in LIN model • Clarified the routing of ISignalGroups in the Signal Gateway • Extended the enumeration "TransferPropertyEnum" with the element "triggeredOnChange" • Added a subchapter to the appendix about special use cases that are supported by the System Template • Reworked SenderReceiverToSignal-GroupMapping and ClientServerToSignalGroupMapping • Changed multiplicity between System and SystemMapping from 1 to 0..1.

2010-02-02	3.1.4	AUTOSAR Administration	• Implemented support for LIN 2.1 • Implemented support for Network Management (FlexRayNm, CanNm, LinNm, UdpNm) • adapted IPdu Multiplexer model to ASAM Fibex 3.1 • Reworked "ECU Extract" chapter • Introduced "System Extract" • Introduced EndToEndProtection for ISignalIPdus • Reworked "Transport Layer" chapter • Implemented Variant Handling concept • Implemented Documentation support concept • Implemented support for J1939 communication • Implemented support for TTCan • Implemented support for for TCP/IP and DoIP. • Introduced Pdu Counter and Pdu Replication • Implemented VMM/AMM concept • Introduced low-level routing of NPdu's • Implemented support for dynamic signals • Introduced PdurIPduGroups
2009-02-04	3.1.2	AUTOSAR Administration	• Clarified semantics of Data Mappings • Added inheritance from Identifiable to PduToFrameMapping • Added "FlexRayChannelName" attribute to FlexRayPhysicalChannel element.

2008-08-13	3.1.1	AUTOSAR Administration	• Added the boolean attribute "payloadPreambleIndicator" to the "FlexrayFrameTriggering". • Added extension that allows the assignment of IPduGroups to ECUs. • Added missing reference from "ClientServerComposite-TypeMapping" to "ArgumentPrototype" • Alignment with AUTOSAR IPduM SWS
2008-02-01	3.0.2	AUTOSAR Administration	• Moved "canAddressingMode" attribute from "CanCluster" to the "CanFrameTriggering" element • Clarified the descriptions of several elements and attributes.
2007-12-21	3.0.1	AUTOSAR Administration	• Communication part reworked from scratch • Alignment with ECU Configuration • Added support for Transport Protocols • Major changes in Topology chapter after harmonisation with Fibex (removed complex Topologies) • Document meta information extended • Small layout adaptations made

2006-11-28	2.1	AUTOSAR Administration	• Support for Signal Groups added. • Rework of the Topology Description • Introduction of PDUs. Description of the PDU Multiplexer, PDU Gateway. • FlexRay: multiple transmission of a frame within one communication cycle is supported now. • Removed the concept of Variant Descriptions (Properties) and CompToECUMappingConstraints relying on the property concept. • Split SwCompToEcuMapping in two classes in order to allow separation of SWC-to-ECU mapping and Implementation-to-SWC mapping. • Removed preliminary chapter on MOST as it is not part of the standard. • For all Instance References in the System Template added diagrams to the meta-model containing detailed representations of these references.
2005-05-31	1.0	AUTOSAR Administration	Initial Release

1 Introduction

1.1 Abbreviations

a CAN	Controller Area Network
CAS	Collision Avoidance Symbol
CBV	Control Bit Vector
CC	Communication Controller
DLC	Data Length Code
DoIp	Diagnostics over IP
DTD	Document Type Definition
ECU	Electrical Control Unit
FIBEX	Field Bus Exchange Format
I^2C	Inter-Integrated Circuit
ID	Identifier
IPDU	Interaction Layer Protocol Data Unit
ISG	Inter-slot Gap
LIN	Local Interconnect Network
LPDU	Data Link Layer Protocol Data Unit
MOST	Media Oriented Systems Transport
NAD	Node Address for Diagnostic
NID	NOde Identification
NIT	Network Idle Time
NM	Network Management
NPDU	Network Layer Protocol Data Unit
OBD	Onboard Diagnostic
PDU	Protocol Data Unit
POC	Protocol Operation Control
RTE	Runtime Environment
SDU	Service Data Unit
SID	Service Identifier
SPI	Serial Peripheral Interface
SWC	Software Component
SWC-T	Software Component Template
SYS-T	System Template
TP	Transport Protocol
TTCAN	Time Triggered Controller Area Network
UML	Unified Modeling Language
VFB	Virtual Functional Bus
XML	Extensible Markup Language
XSD	XML Schema Definition a

		[TPS_SYST_02054] [TPS_SYST_02055] [TPS_SYST_02056] [TPS_SYST_02057] [TPS_SYST_02074] [TPS_SYST_02075] [TPS_SYST_02080] [TPS_SYST_02092] [TPS_SYST_02093] [TPS_SYST_02094] [TPS_SYST_02121] [TPS_SYST_02123] [TPS_SYST_02124] [TPS_SYST_02125] [TPS_SYST_02126] [TPS_SYST_02127] [TPS_SYST_02128] [TPS_SYST_02129] [TPS_SYST_02130] [TPS_SYST_02131] [TPS_SYST_02132] [TPS_SYST_02156] [TPS_SYST_02195]
[RS_SYST_00051]	Support of COM Based Data Transformation	[TPS_SYST_02058]
[RS_SYST_00052]	Ethernet Switch Configuration	[TPS_SYST_03002] [TPS_SYST_03003] [TPS_SYST_03004] [TPS_SYST_03005] [TPS_SYST_03006] [TPS_SYST_03007] [TPS_SYST_03008] [TPS_SYST_03009] [TPS_SYST_03010] [TPS_SYST_03011] [TPS_SYST_03013]
[RS_SYST_00053]	The System Template shall provide the ability to define naming conventions for public symbols	[TPS_SYST_05015]
[RS_SYST_00054]	Support of Secured Pdus	[TPS_SYST_02059] [TPS_SYST_02060] [TPS_SYST_02148] [TPS_SYST_02149] [TPS_SYST_02152] [TPS_SYST_02153] [TPS_SYST_02154] [TPS_SYST_02171] [TPS_SYST_02172] [TPS_SYST_02173] [TPS_SYST_02189] [TPS_SYST_05020] [TPS_SYST_05021] [TPS_SYST_05022] [TPS_SYST_05023] [TPS_SYST_05024] [TPS_SYST_05025] [TPS_SYST_05026] [TPS_SYST_05027] [TPS_SYST_05028]
[RS_SYST_00055]	Support of Container Pdus	[TPS_SYST_01056] [TPS_SYST_02061] [TPS_SYST_02062] [TPS_SYST_02063] [TPS_SYST_02064] [TPS_SYST_02065] [TPS_SYST_02066] [TPS_SYST_02097] [TPS_SYST_02098] [TPS_SYST_02099] [TPS_SYST_02100] [TPS_SYST_02196] [TPS_SYST_03014]
[RS_SYST_00056]	E2E-protected communication	[TPS_SYST_02067] [TPS_SYST_02068] [TPS_SYST_02069] [TPS_SYST_02070] [TPS_SYST_02071] [TPS_SYST_02072] [TPS_SYST_02073] [TPS_SYST_02134] [TPS_SYST_02135] [TPS_SYST_02155]
[RS_SYST_00057]	Assigning communication graphs to particular RTE Implementation Plug-Ins	[TPS_SYST_02197]
[RS_SYST_00058]	The System Template shall support the usage of the TLV encoding in SOME/IP messages	[TPS_SYST_05016] [TPS_SYST_05017]

Table 1.2: RequirementsTracing

1.3 Requirements not fulfilled by TPS requirements

This section contains a list of requirements that are not yet fulfilled by TPS requirements.

Requirement	Description	Satisfied by
[RS_SYST_00015] Bus bandwidth	The System Template shall support bandwidth calculation as a constraint for the definition of the Communication Matrix.	chapter Topology (3); Communication (chapter 6)
[RS_SYST_00023] ECU Communication via MOST	The System Template has to cover the system communication via MOST.	not covered
[RS_SYST_00025] Derivation of ECU Configuration Parameters from the System Template	The System Template shall enable the configuration of the Com Stack of the ECU. It handles those parameters that are necessary to describe the inter-ECU communication. Configuration parameters local to an ECU are not in the scope of the System Template.	Harmonization between Upstream Templates and ECU Configuration (chapter C)
[RS_SYST_00026] Fibex compatibility	Whenever there is a considerable overlap between the System Template and the ASAM FIBEX Standard, the System Template shall adopt the structures of the ASAM FIBEX Standard.	AUTOSAR System Template and ASAM FIBEX (chapter 1.8)
[RS_SYST_00032] Topology Variants	The System Template shall provide the means to describe topology variants with optional/alternative ECUs and communication clusters.	chapter Variant Handling 1.7.2 and chapter Topology 3.
[RS_SYST_00033] Software-to-ECU mapping variants	The System Template shall provide the means to describe alternative mappings of software components to ECUs.	chapter 1.7.2 Variant Handling and chapter 5.1 Software Component Mapping.
[RS_SYST_00034] Timing variants	The System Template shall provide the means to describe alternative timing properties (e.g. trigger type, period, priority) and timing constraints (e.g. latency, age).	chapter 1.7.2 Variant Handling and chapter 6 Communication.
[RS_SYST_00035] Data mapping variants	The System Template shall provide the means to describe data mapping Variants.	chapter 1.7.2 Variant Handling and chapter 5.2 Data Mapping.
[RS_SYST_00036] Communication variants	The System Template shall provide the means to describe communication variants, such as alternative signal-to-PDU mappings, alternative communication paths, and alternative signal and PDU properties (e.g. data type, data length).	chapter 1.7.2 Variant Handling and chapter 6 Communication.
[RS_SYST_00040] Timing constraints	The System Template shall provide the means to describe the timing constraints of a system's dynamics, which are determined by the consumption of computation, communication, and other hardware resources.	Timing Extensions (chapter 1.7.3)

[RS_SYST_00041] Variants in ECU Extract	The ECU Extract shall support variability of elements taken over or derived during the transformation from the System Description.	Variant Handling in ECU Extract (chapter 12.6)

1.4 Methodology for Defining Formal Template

Figure 1.1 illustrates the overall methodology used to define formal templates. As is explained in the "Generic Structure Template" [2], it is important to separate a precise and concise model of the information that needs to be captured from the concrete XML-DTDs, XML-Schemas or other technology that is used to define the actual templates.

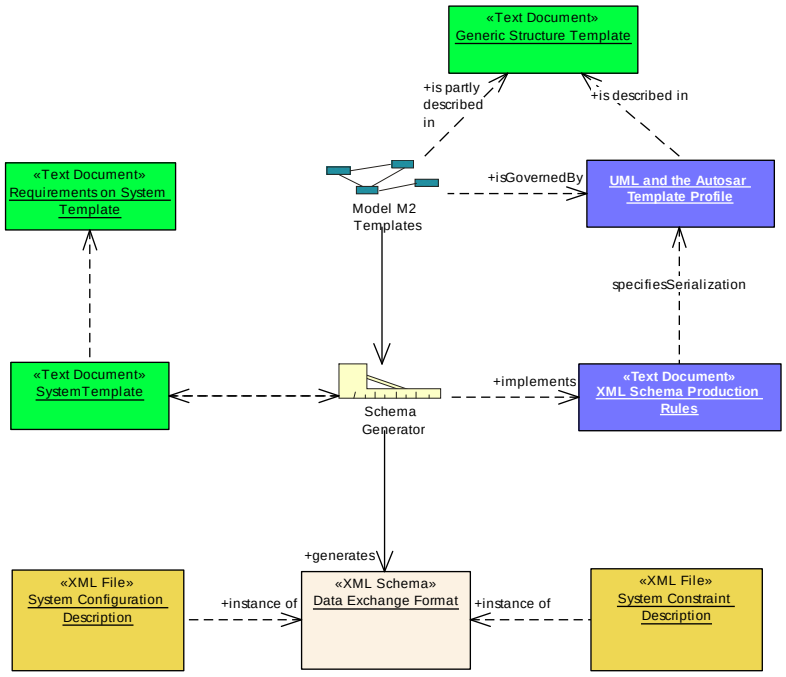

Figure 1.1: Methodology to define templates in AUTOSAR

The following documents describe the various aspects of the methodology:

1. The document called System Template (this document) describes the information that can be captured in the "system constraint" and "system configuration" description, independently from the mapping of this model on XML-technology. This document is based upon the AUTOSAR meta-model and contains an elaborate description of the semantics (the precise meaning) of all the information that can be captured within the relevant parts of this meta-model.

2. The UML and the AUTOSAR Template Profile [2] describes the basic concepts that should be used when creating content of the meta-model.

3. The document called "XML Schema Production Rules" [3] describes how XML is used and how the meta-model designed in the "System Template" should be translated by the "Schema Generator" (MMT) into XML-Schema (XSD) "Data Exchange Format". This "formalization strategy" is to be used for all data that is formally described in the meta-model. In particular this document is worth to read in order to understand the mapping of the meta-model and the XML based System template.

4. The "Generic Structure Template" [2] describes the top level structure which is common to all AUTOSAR templates and provides AUTOSAR standard mechanisms of modeling elements and patterns.

5. The concrete "Template", the "Data Exchange Format" is an XML schema which is generated out of the meta-model described in the "System Template" using the approach and the patterns defined in the "XML Schema Production Rules". This schema is typically used as input to tools. The M1-level system descriptions are XML files which can be validated against the schema. In that sense they are instances of the schema defining the XML representation of the template.

1.5 Scope

This document describes the system template and its use for the System Constraint Description and the System Configuration Description. In general a filled system template defines the relationship between the pure Software View on the System (represented by a top level SW Component Composition) and a Physical System Architecture with networked ECU instances. The system template is used in two stages of the "AUTOSAR Methodology" [4] (see Figure 1.2).

- As System Constraint Description it serves as input to the AUTOSAR system generator
- As System Configuration Description it defines the output of the AUTOSAR System Configuration Generator and serves as input to the AUTOSAR ECU Configuration Generator for the different ECUs defined in the description.
- As ECU Extract of the System Configuration Description it describes the ECU specific view on the System Description. It is individually generated for each of the System's ECU as the output of the AUTOSAR ECU Configuration Generator.

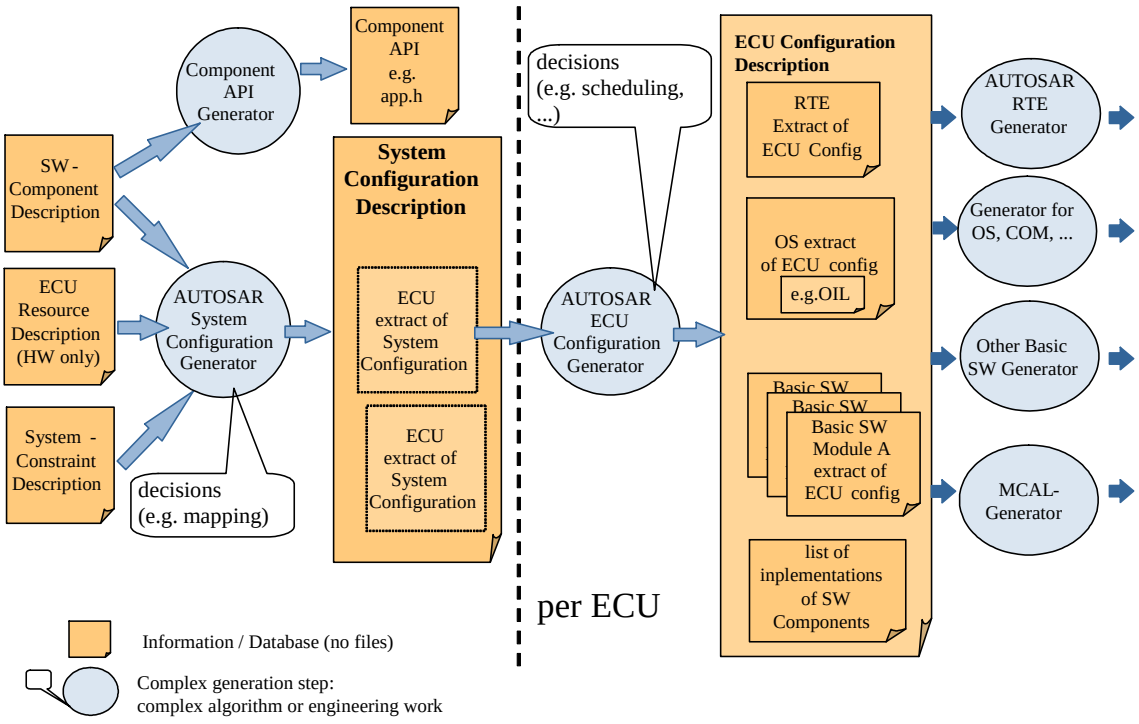

Figure 1.2: AUTOSAR Methodology

The System Template defines five major elements: Topology, Software, Communication, Mapping and Mapping Constraints, which will be defined in detail in the following chapters. Figure 1.3 gives an overview how these are used in the two different descriptions.

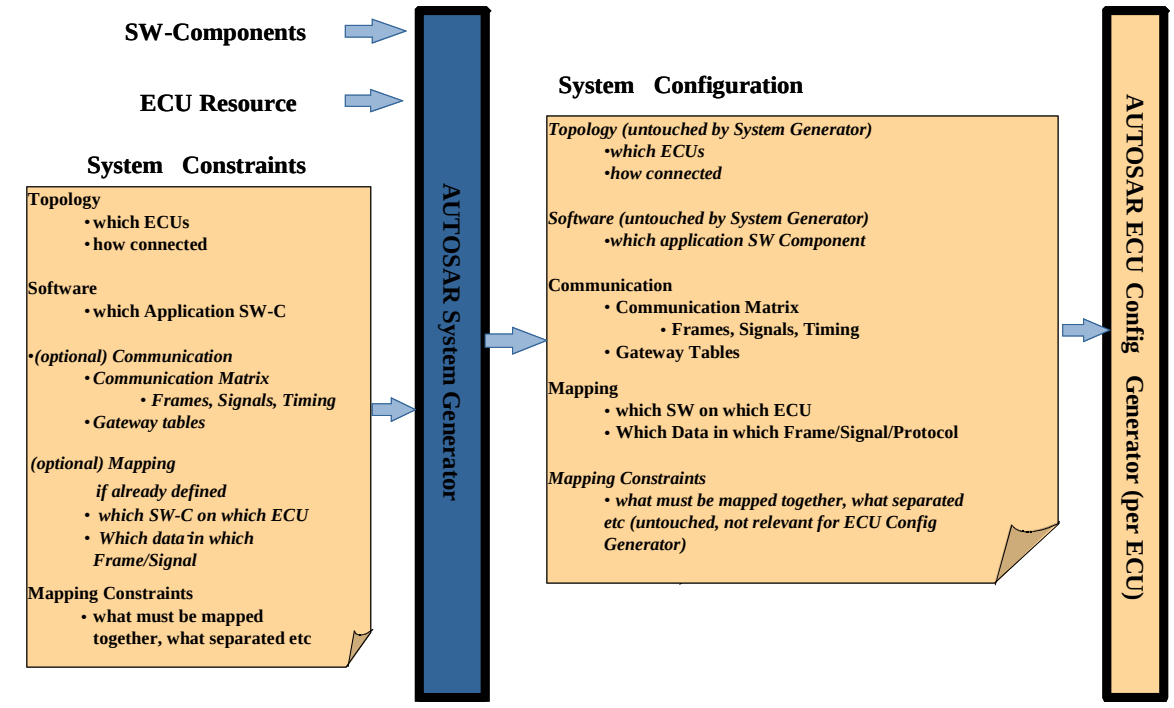

Figure 1.3: Scope of System Constraint Description and System Configuration Description

On Figure 1.3 some of the elements are marked `optional` for the System Constraint Description. If one starts with a new AUTOSAR project, these elements may not be present in the System Constraint Description. No (at least partial) functionality has been mapped yet, thus the communication matrix is not populated. But in most cases, many functional mappings are already predefined and contribute to the population of the communication matrix with their associated signals, thus being present in the System Constraint Description.

Reasons for such a predefinition are manifold. In some cases, hardware setup dictates where certain functionality resides, in some cases, a partial or complete communication matrix and/or completely configured ECUs (HW and SW) of another system (vehicle) has to be taken over. This approach is eased by the fact that System Configuration and System Constraint Description use the same format. That way it is possible to reuse parts of a System Configuration Description of the other system/vehicle in the actual System Constraint Description.

Furthermore, in the figure some of the elements are marked `untouched` for the System Configuration Description. This can have two reasons:

- The System Generator does not modify neither the Topology (networked ECUs) nor the Software, so these parts are just moved from System Constraint Description to System Configuration Description during the generation step.
- In a completed System Configuration Description, all SW components and all ECU-to-ECU communication have been mapped. Thus mapping constraints that limit the flexibility in the mapping phase of the system generator are obsolete

and will not be used in subsequent generator steps. They may however still be present for documentation and validation reasons.

Even if the communication matrix is determined as the result of the system configuration, the ECUs still have to be configured. This is done by the ECU configuration generator, which takes the System Configuration description as input and generates the ECU configuration description. The following guiding principles have been used to determine which information must be part of the System Configuration Description and which goes into the ECU Configuration Description:

- Information that is common for several ECUs and has to be agreed, must be part of the System Configuration Description and is thus covered by the System Template.
- Information, that only has ECU-local relevance is part of the ECU Configuration Description.

Thus the ECU Configuration Description will include the OS-schedule, the RTE-configuration and last but not least the configuration of the ECU basic software including the concrete communication drivers on that ECU.

1.6 UML Meta-Model

This chapter gives an overview of the AUTOSAR Unified Modeling Language (UML) meta-model. All AUTOSAR templates use a common meta-model. The templates describe software components, ECU resources, the Basic Software Modules, the ECU Configuration Parameters (ECU Configuration Description and ECU Configuration Parameter Definition) and the System.

The System Template defines all elements, their parameters and their relations, which are necessary for the System Constraint Description and the System Configuration Description.

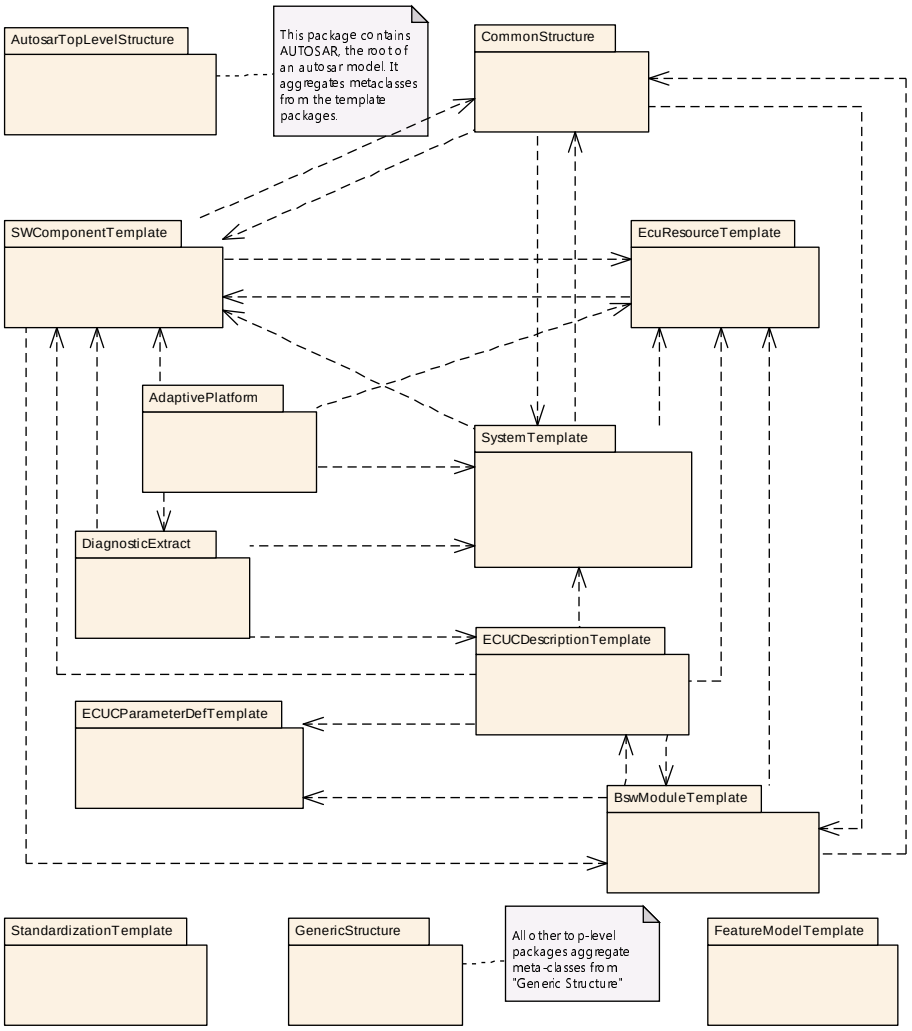

Figure 1.4: AUTOSAR Package Overview

Figure 1.4 shows the overall structure of the meta-model.

The dashed arrows in the diagram describe dependencies in terms of import-relationships between the packages within the meta-model. For example, the package `SystemTemplate` imports meta-classes defined in the packages `GenericStructure` [2], `SWComponentTemplate` [5] and `ECUResourceTemplate` [6].

For clarification, please note that the package `GenericStructure` contains some fundamental infrastructure meta-classes and common patterns that are described in [2]. As these are used by all other template specification the dependency associations are not depicted in the diagram for the sake of clarity.

Generic Structure provides details about

- Autosar Top level structure,
- Commonly used metaclasses and primitives
- Variant Handling

- Documentation

The ECU Resource Template deals with the description of the hardware resources of an ECU. The collection of all ECUs, which are integrated in the car, are described in the topology part of the System Configuration Description/System Constraint Description. Each of these ECUInstances uses the ECU Resource Template to describe the hardware resources. That's the reason, why the topology part has references to the ECU Resource Description.

The SW component description describes the SW components as well as their communication by data elements. The top-level software composition (`RootSwCompositionPrototype`) is part of the System Template (Software). This top-level software composition contains the functionality of the full system and describes the complete application software architecture of this system. The definition of the top level software composition uses the elements defined in the SW Component Template, like e.g. `SwComponentType`, `PortInterface`, `AssemblySwConnector` and `DelegationSwConnector`. That's why the System Description has references to the Software Component Description. The top level software composition is described in more detail in chapter 4.

Every template starts with an element `AUTOSAR`. While the models created in accordance to this guide are independent of the used formalization, it may still help the reader's understanding to note that `AUTOSAR` would also typically be the root element of a XML Schema generated from such a model. `AUTOSAR` can then contain one or more nested packages, simply allowing to further structure the contents of the M1 model[1].

1.7 Document Conventions

Technical terms are typeset in mono spaced font, e.g. `PortPrototype`. As a general rule, plural forms of technical terms are created by adding "s" to the singular form, e.g. `PortPrototype`s. By this means the document resembles terminology used in the AUTOSAR XML Schema.

This document contains constraints in textual form that are distinguished from the rest of the text by a unique numerical constraint ID, a headline, and the actual constraint text starting after the ⌈ character and terminated by the ⌋ character.

The purpose of these constraints is to literally constrain the interpretation of the AUTOSAR meta-model such that it is possible to detect violations of the standardized behavior implemented in an instance of the meta-model (i.e. on M1 level).

[1] A model and its meta-model are said to be on different meta levels (also referred to as abstraction levels). In AUTOSAR a five layer meta-model hierarchy is used, consisting of the five meta levels M0, M1, M2, M3 and M4 where entities in M0 are expressed in terms of M1 entities, M1 is expressed in terms of M2 entities and so on. The AUTOSAR meta-model hierarchy is described in more detail in the Autosar Template Modeling Guide [2].

Makers of AUTOSAR tools are encouraged to add the numerical ID of a constraint that corresponds to an M1 modeling issue as part of the diagnostic message issued by the tool.

The attributes of the classes introduced in this document are listed in form of class tables. They have the form shown in the example of the top-level element AUTOSAR:

Class	**AUTOSAR**			
Package	M2::AUTOSARTemplates::AutosarTopLevelStructure			
Note	Root element of an AUTOSAR description, also the root element in corresponding XML documents. **Tags:** xml.globalElement=true			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
adminData	AdminData	0..1	aggr	This represents the administrative data of an Autosar file. **Tags:** xml.sequenceOffset=10
arPackage	ARPackage	*	aggr	This is the top level package in an AUTOSAR model. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=blueprintDerivationTime xml.sequenceOffset=30
fileInfo Comment	FileInfoComment	0..1	aggr	This represents a possibility to provide a structured comment in an AUTOSAR file. **Stereotypes:** atpStructuredComment **Tags:** xml.roleElement=true xml.sequenceOffset=-10 xml.typeElement=false
introduction	DocumentationBlock	0..1	aggr	This represents an introduction on the Autosar file. It is intended for example to rpresent disclaimers and legal notes. **Tags:** xml.sequenceOffset=20

Table 1.3: AUTOSAR

The first rows in the table have the following meaning:

Class: The name of the class as defined in the UML model.

Package: The UML package the class is defined in. This is only listed to help locating the class in the overall meta model.

Note: The comment the modeler gave for the class (class note). Stereotypes and UML tags of the class are also denoted here.

Base Classes: If applicable, the list of direct base classes.

The headers in the table have the following meaning:

Attribute: The name of an attribute of the class. Note that AUTOSAR does not distinguish between class attributes and owned association ends.

Type: The type of an attribute of the class.

Mul.: The assigned multiplicity of the attribute, i.e. how many instances of the given data type are associated with the attribute.

Kind: Specifies, whether the attribute is aggregated in the class (`aggr` aggregation), an UML attribute in the class (`attr` primitive attribute), or just referenced by it (`ref` reference). Instance references are also indicated (`iref` instance reference) in this field.

Note: The comment the modeler gave for the class attribute (role note). Stereotypes and UML tags of the class are also denoted here.

Please note that the chapters that start with a letter instead of a numerical value represent the appendix of the document. The purpose of the appendix is to support the explanation of certain aspects of the document and does not represent binding conventions of the standard.

The verbal forms for the expression of obligation specified in [TPS_STDT_00053] shall be used to indicate requirements, see Standardization Template, chapter Support for Traceability ([7]).

The representation of requirements in AUTOSAR documents follows the table specified in [TPS_STDT_00078], see Standardization Template, chapter Support for Traceability ([7]).

1.7.1 Detailed Representation of InstanceRef Associations

As a special type of association "instanceRef" refers to an exact instance of the referenced class, requiring additional information of the target and the context. This is explained in detail in the AUTOSAR Generic Structure Template [2]. Each "instanceRef" association can both be represented by the short form and by an detailed representation. For readability the diagrams in the main body of the specification use the short form. The detailed descriptions can be found in the Appendix B.

1.7.2 Variant Handling

The System Template supports the creation of Variants in many of its model elements. In the Metamodel all locations that may exhibit variability are marked with the stereotype `atpVariation`. This allows the definition of possible variation points. Tagged Values are used to specify additional informations.

There are four types of locations in the metamodel which may exhibit variability:

- Aggregations
- Associations
- Attribute Values
- Classes providing property sets

The reasons for the attachment of the stereotype `atpVariation` to certain model elements and the consequences for other model elements are explained in class tables in the following chapters. More details about the AUTOSAR Variant Handling Concept can be found in the AUTOSAR Generic Structure Template [2].

1.7.3 Timing Extensions

With AUTOSAR Release 4.0 a new set of concepts for the description and analysis of end-to-end timing constraints is introduced by the Specification of Timing Extensions. A subset of these extensions aims for the system level and can be used to enhance the descriptions that are already available in the System Template.

A dedicated description of the timing extensions that can be used at system level is given in chapter 3 (System timing) in the Specification of Timing Extensions [8].

1.7.4 Documentation Support

With AUTOSAR Release 4.0 the AUTOSAR XML schema provides support for integrated and well structured documentation. More details about the AUTOSAR Documentation Support concept can be found in the AUTOSAR Generic Structure Tem-

plate [2]. An optional documentation block can be applied to any identifiable element. Furthermore, as shown in figure 1.5, the System Template provides the possibility of adding additional documentation to several non-identifiable elements. The documentation of a `System` is composed of several chapters.

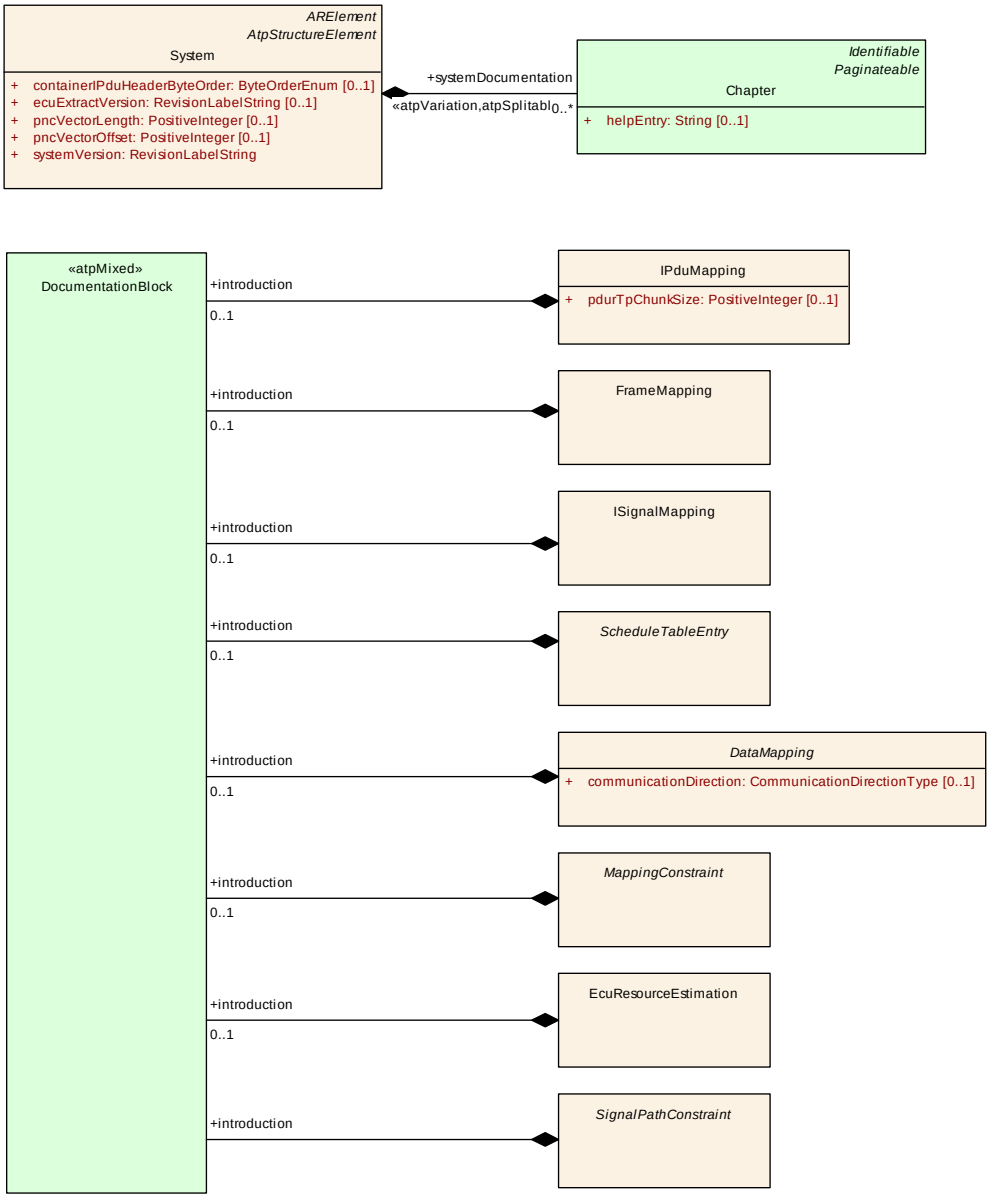

Figure 1.5: System Template Documentation Support

1.7.5 Stereotype atpSplitable in the System Template

The stereotype ≪atpSplitable≫ is used in the System Template to support stepwise processes, where the System Configuration Description is completed incrementally over a development process. Example:

1) Description of Communication only consists of interaction signals (ISignal). This is enough information to create an individual ECU's RTE, and even contains enough information to configure an ECU where the actual Frame/Pdu communication is being handled post-build.

2) In a second step, the communication matrix is being completed for a concrete vehicle. Pdus and Frames, along with their Triggerings are being added to the previous System Description. This model then contains the full information about an ECU's communication, especially containing the additional information to generate the post build information.

So, in this 2-step approach, an OEM could deliver the incomplete ECU extract from step (1) to the ECU integrator, who can then build a complete software image for the ECU. In the 2nd step, the ECU extract will be completed by the previously missing information, but as the first extract will still be valid due to the ≪atpSplitable≫ construct, the ECU including the flashed image from step (1) can be (re)used as it is, and just will be completed with the post build information, e.g. Frames and Pdus.

Further details about the ≪atpSplitable≫ stereotype can be found in the Generic Structure Template [2].

1.8 AUTOSAR System Template and ASAM FIBEX

FIBEX (Field Bus Exchange Format) [9] is an XML exchange format proposed for data exchange between tools that deal with bus communication Systems. The format supports the most common automotive data buses: LIN [10], CAN [11], MOST [12], FlexRay [13]. The covered areas of the exchange format are the functional network, system topology and the communication level. The functional network describes the software architecture of the system. In the system topology the logical layout of the system is described. This means it is documented which ECU is connected to which bus. The central purpose of a communication system is the exchange of frames with certain properties. The format is able to describe frames and their timing properties.

In future versions of the System Template a common subset between ASAM Fibex and Autosar will be harmonized. The current version of the System Template contains already the ASAM FIBEX description for communication and topology. Due to requirements of AUTOSAR some extensions were made to those descriptions. For instance the communication part is extended by a concept for PDUs (I-Pdus and N-Pdus). The harmonization between ASAM Fibex and AUTOSAR System Template is not finalized at this time.

In the UML Meta-Model the FIBEX contents are located in an own FIBEX UML Package. The top level `FibexElement` is referenced by the top level element `System` of the System Template. Similar to the usage of the `ARElement`, specializations of the `FibexElement` represent elementary building blocks within the FIBEX package. Each of this elements will be described in more detail in the following chapters.

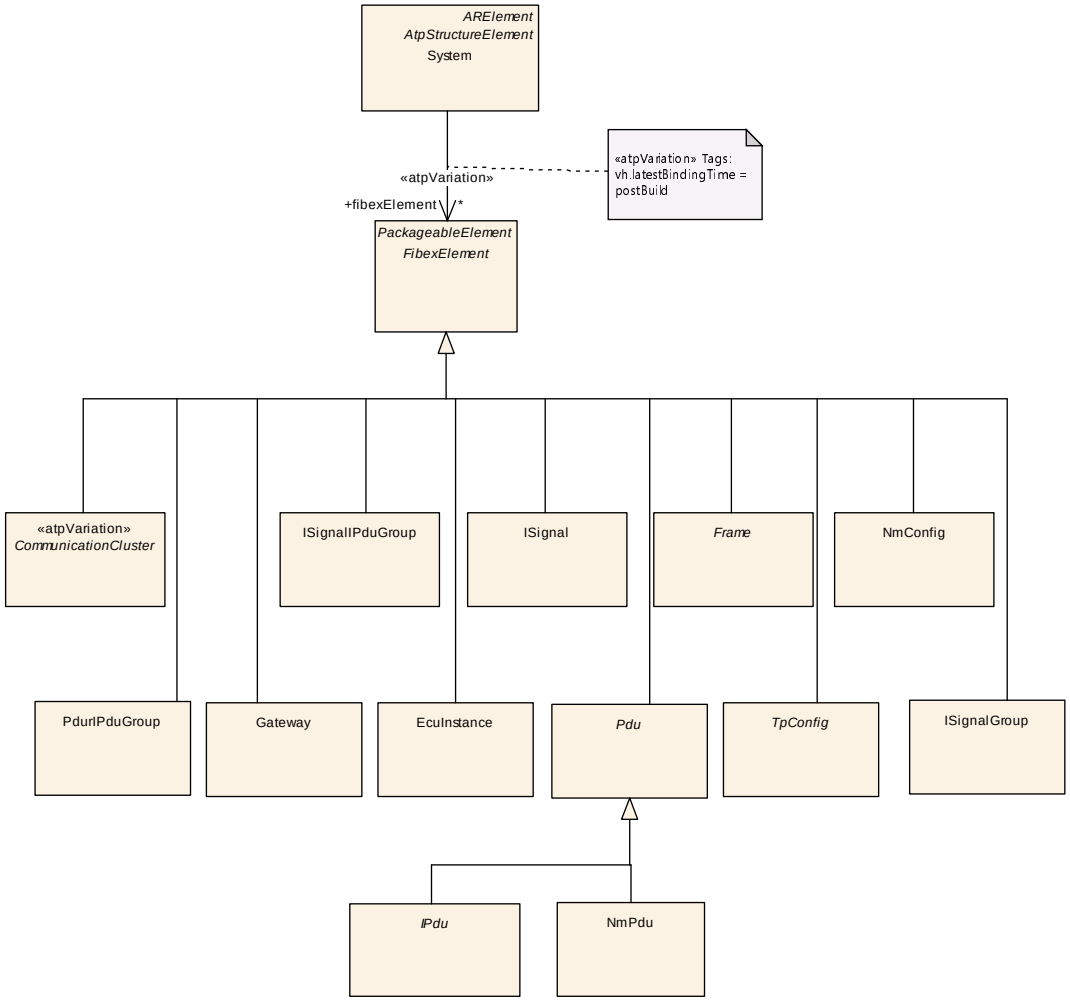

Figure 1.6: Fibex Elements

2 System

The top level element of the System Template is the class `System`, as shown in figure 2.1.

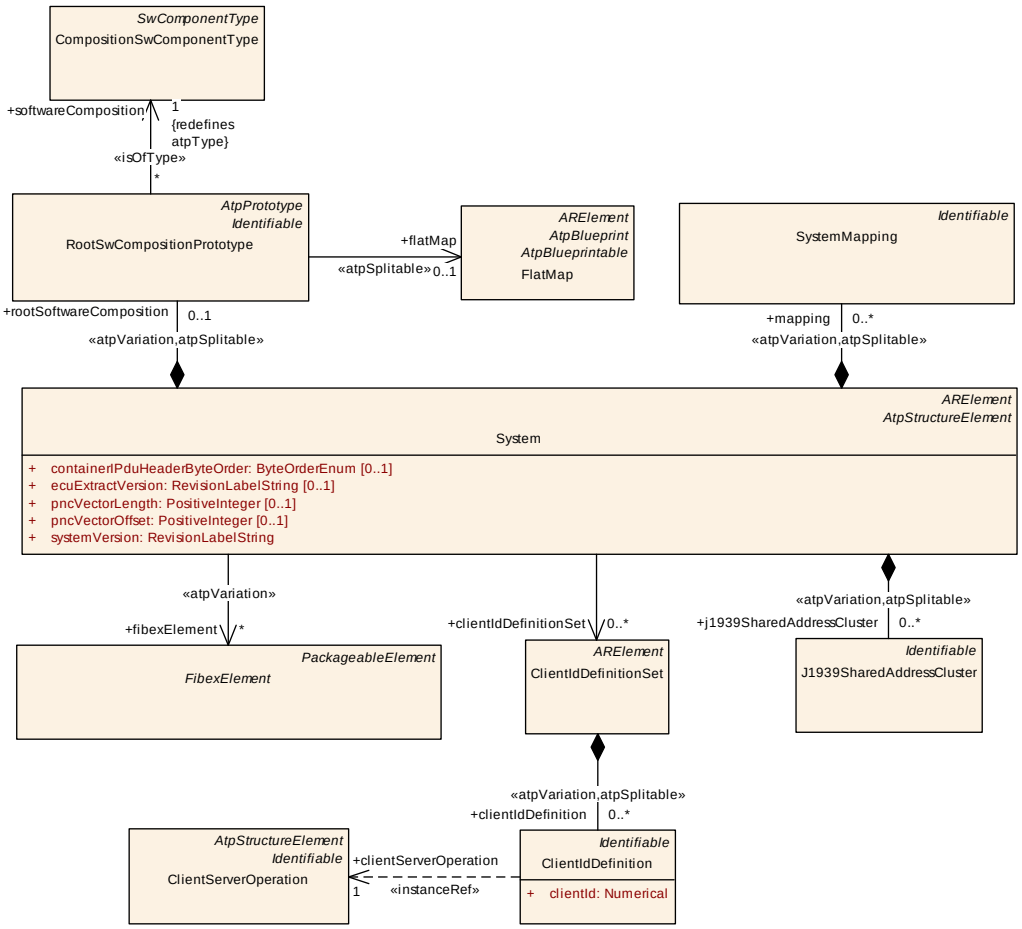

Figure 2.1: System Template Overview

Class	**System**			
Package	M2::AUTOSARTemplates::SystemTemplate			
Note	The top level element of the System Description. The System description defines five major elements: Topology, Software, Communication, Mapping and Mapping Constraints. The System element directly aggregates the elements describing the Software, Mapping and Mapping Constraints; it contains a reference to an ASAM FIBEX description specifying Communication and Topology. **Tags:** atp.recommendedPackage=Systems			
Base	*ARElement*, *ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
clientId DefinitionSet	ClientIdDefinitionSet	*	ref	Set of Client Identifiers that are used for inter-ECU client-server communication in the System.

△

Class	**System**			
containerIPdu HeaderByte Order	ByteOrderEnum	0..1	attr	Defines the byteOrder of the header in ContainerIPdus.
ecuExtract Version	RevisionLabelString	0..1	attr	Version number of the Ecu Extract.
fibexElement	FibexElement	*	ref	Reference to ASAM FIBEX elements specifying Communication and Topology. All Fibex Elements used within a System Description shall be referenced from the System Element. atpVariation: In order to describe a product-line, all Fibex Elements can be optional. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild
j1939Shared AddressCluster	J1939SharedAddress Cluster	*	aggr	Collection of J1939Clusters that share a common address space for the routing of messages. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild
mapping	SystemMapping	*	aggr	Aggregation of all mapping aspects (mapping of SW components to ECUs, mapping of data elements to signals, and mapping constraints). In order to support OEM / Tier 1 interaction and shared development for one common System this aggregation is atpSplitable and atpVariation. The content of System Mapping can be provided by several parties using different names for the SystemMapping. This element is not required when the System description is used for a network-only use-case. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild
pncVector Length	PositiveInteger	0..1	attr	Length of the partial networking request release information vector (in bytes).
pncVectorOffset	PositiveInteger	0..1	attr	Absolute offset (with respect to the NM-PDU) of the partial networking request release information vector that is defined in bytes as an index starting with 0.
rootSoftware Composition	RootSwComposition Prototype	0..1	aggr	Aggregation of the root software composition, containing all software components in the System in a hierarchical structure. This element is not required when the System description is used for a network-only use-case. atpVariation: The RootSwCompositionPrototype can vary. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=systemDesignTime
system Documentation	Chapter	*	aggr	Possibility to provide additional documentation while defining the System. The System documentation can be composed of several chapters. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=systemDesignTime xml.sequenceOffset=-10

▽

△

Class	**System**			
systemVersion	RevisionLabelString	1	attr	Version number of the System Description.

Table 2.1: System

System has relationships to all elements that define a system constraint description or system configuration description. It aggregates the SystemMapping and RootSwCompositionPrototype elements. SystemMapping deals with mapping of software components to ECUs as well as with the mapping of data elements that are to be exchanged between software components onto signals and frames. The RootSwCompositionPrototype element contains a reference to the top level software composition.

[constr_3028] **FibexElements** ⌈ Each FibexElement that is used in the System Description shall be referenced by the System element in the role FibexElement. ⌋ *()*

FibexElements can be defined in a stand alone and reusable way (hence they can simply be created in any package like ARElements), but on the other hand it shall be clear that a certain FibexElement actually belongs to a certain System Description. Thus, all FibexElements used within a System Description (i.e. contributing to the specification of the System communication and topology) shall be referenced from the System element. More details about the integration of FIBEX into the System Template will be given in chapter 1.8.

[TPS_SYST_01002] **System Category** ⌈ The System shall have a category element defined which indicates the role of this work product. ⌋*(RS_SYST_00003, RS_SYST_00027)*

[TPS_SYST_01003] **Standardized System Category Definitions** ⌈ The standardized System category definitions are defined in Table 2.2. ⌋*(RS_SYST_00003, RS_SYST_00027)*

category	*Meaning*
SYSTEM_ CONSTRAINTS	The System class is used to describe System Constraints. In this usage, it forms the core element of a System Constraints Description, serving as an input to the AUTOSAR System Generator.
SYSTEM_ DESCRIPTION	The System class is used to describe the System Configuration of a complete AUTOSAR System. In this usage, it forms the core element of a System Description, the output of the AUTOSAR System Generator.
SYSTEM_EXTRACT	The System class is used to describe a subsystem specific view on the complete System Description. The System Extract is not fully decomposed and still contains compositions. The SYSTEM_EXTRACT is the basis for designing subsystems.
ECU_EXTRACT	The System class is used to describe the ECU specific view on the complete System Description. In this usage, it forms the core element of ECU Extract, the output of the AUTOSAR ECU Configuration Extractor. The ECU Extract is fully decomposed and contains only atomic software components. The ECU Extract is the basis for setting up the ECU Configuration.

category	*Meaning*
ABSTRACT_ SYSTEM_ DESCRIPTION	This System is used to describe a functional (solution-independent/abstract) system design. It can be taken as basis for the development of the SYTEM_DESCRIPTION. No structural constrains are applied on the transformation of the ABSTRACT_SYSTEM_DESCRIPTION to the SYSTEM_DESCRIPTION.
ECU_SYSTEM_ DESCRIPTION	This System is used to describe the closed view on one ECU (note that an AUTOSAR ECU is defined being one microprocessor running one AUTOSAR Stack). It can be derived from a SYSTEM_EXTRACT or it can be designed independently and mapped to a SYSTEM_EXTRACT. The ECU_SYSTEM_DESCRIPTION is not fully decomposed and still may contain compositions.
RPT_SYSTEM	System which describes the rapid prototyping algorithm in the format of AUTOSAR Software Components. For more details see the Software Component Template [5] and TR_Methodology [4].

Table 2.2: System class categories

Note: SYSTEM_EXTRACT does not prescribe the number of micro controllers / cores for one ECU from the OEM perspective.

- Supplier decides to design one AUTOSAR ECU with multicore support leads to one ECU_EXTRACT supporting one AUTOSAR stack
- Supplier decides to design two AUTOSAR ECUs (i.e., two micro-controllers) in one box leads to two ECU_EXTRACTs supporting two AUTOSAR stacks

[constr_3027] Existence of `ecuExtractVersion` ⌈ In case the category of the System is SYSTEM_EXTRACT or ECU_EXTRACT the ecuExtractVersion attribute shall be defined. ⌋*()*

2.1 ClientIdDefinitionSet

In the ClientIdDefinitionSet all Client Identifiers of the transaction handle used for a inter-ECU client server communication can be defined that belong to the System that refers the ClientIdDefinitionSet.

Class	**ClientIdDefinitionSet**			
Package	M2::AUTOSARTemplates::SystemTemplate			
Note	Set of Client Identifiers that are used for inter-ECU client-server communication in the System. **Tags:** atp.recommendedPackage=ClientIdDefinitionSets			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***

▽

△

Class	ClientIdDefinitionSet			
clientId Definition	ClientIdDefinition	*	aggr	Definition of a Client Identifier that will be used by the RTE in a inter-ECU client-server communication. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild

Table 2.3: ClientIdDefinitionSet

Class	ClientIdDefinition			
Package	M2::AUTOSARTemplates::SystemTemplate			
Note	Several clients in one client-ECU can communicate via inter-ECU client-server communication with a server on a different ECU, if a client identifier is used to distinguish the different clients. The Client Identifier of the transaction handle that is used by the RTE can be defined by this element.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
clientId	Numerical	1	attr	The Client Identifier of the transaction handle used for an inter-ECU client server communication is defined by this attribute. If defined the RTE generator shall use this client Id.
clientServer Operation	ClientServerOperation	1	iref	Reference to the ClientServerOperation that is called by the client.

Table 2.4: ClientIdDefinition

[constr_3117] Allowed value of attribute `clientId` ⌈ Within the context of one `ClientIdDefinition`, the value of attribute `clientId` shall be in the range of `ClientIdRange.lowerLimit` and `ClientIdRange.upperLimit` for the `ClientIdRange` that is aggregated by the `EcuInstance` onto which the `SwComponentPrototype`s included in the `ClientIdDefinition.clientServerOperation` are mapped. ⌋*()*

Please note that the `clientId` is bound to the ClientServer relationship and does not represent a globally unique identifier of the Client call. ClientIds can be reused in the context of a different ClientServer relationship.

[constr_3118] Valid reference target for `ClientIdDefinition.clientServerOperation.contextPort` ⌈ In the context of the definition of a `ClientIdDefinition`, the reference `clientServerOperation.contextPort` shall only refer to an `RPortPrototype`. ⌋*()*

Rationale: the definition of a client ID does only make sense in the context of a client of a `ClientServerOperation`.

3 Topology

This chapter explains how a vehicle's physical System Topology is being modeled in AUTOSAR (Example: Figure 3.1). A topology is formed by a number of EcuInstances that are interconnected to each other in order to form ensembles of ECUs and CommunicationClusters, which are further detailed by providing information on bus-specific properties.

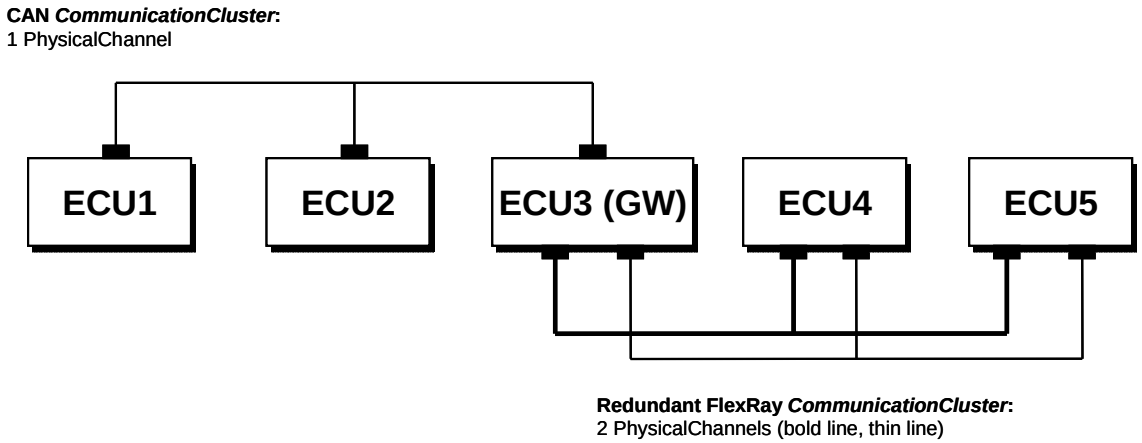

Figure 3.1: Example for a Communication Cluster within a physical network topology

In the AUTOSAR methodology [4] the topology description is one of the inputs for the System Generator. It serves as constraints for mapping the Software Components (see chapter 5.1) contained in the RootSwCompositionPrototype as well as for defining the System Communication matrix (see chapter 6). Gateways which allow the exchange of Signals between CommunicationClusters are covered in chapter 8.

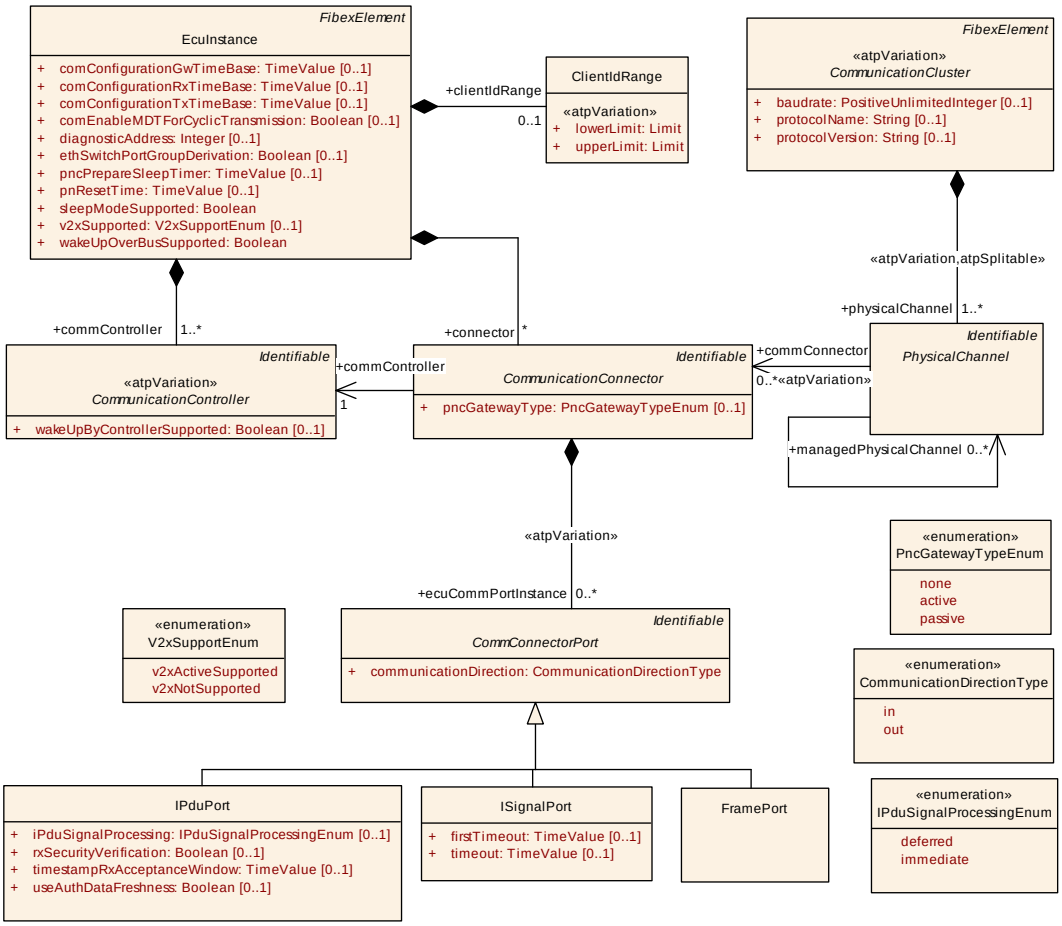

Figure 3.2: Topology elements (Topology)

3.1 ECUs and their communication capabilities

Within a System Topology, the ECUs actually being connected with each other are described in the form of `EcuInstance`s. An `EcuInstance` needs to have one or more `CommunicationController`, the actual hardware device by means of which devices send and receive frames from the communication medium. Furthermore, the `EcuInstance` has one or more `CommunicationConnector`s which describe the bus interfaces of the ECUs and to specify the sending/receiving behavior.

[TPS_SYST_01004] Definition of AUTOSAR ECU ⌈ In the AUTOSAR sense an ECU means a microcontroller plus peripherals and the according software/configuration. Therefore, each microcontroller requires its own ECU Configuration. ⌋ *(RS_SYST_00013)*

3.1.1 ECU Instance

[TPS_SYST_01005] Definition of `EcuInstance` ⌈ `EcuInstance` describes the presence of a microcontroller in the vehicle. Within an `EcuInstance` class only those properties are described that are subject to system configuration. ⌋*(RS_SYST_00013)*

The actual description of the ECU hardware resources is done by the means of the ECU Resource Template [6]: It uses the `HwElement` class and its aggregated hardware elements for defining a specific ECU type.

[TPS_SYST_01006] Assign `ECU` type to `EcuInstance` ⌈ The process of assigning an `ECU` type to `EcuInstance` is a mapping step (see [TPS_SYST_01019]) and performed latest in the System Generation step. ⌋*(RS_SYST_00013)*

An `EcuInstance` can serve as a gateway if it is connected to two or more different clusters by two or more of its `CommunicationController`s.

Class	**EcuInstance**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	ECUInstances are used to define the ECUs used in the topology. The type of the ECU is defined by a reference to an ECU specified with the ECU resource description. **Tags:** atp.recommendedPackage=EcuInstances			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
associatedComIPduGroup	ISignalIPduGroup	*	ref	With this reference it is possible to identify which ISignalIPduGroups are applicable for which Communication Connector/ ECU. Only top level ISignalIPduGroups shall be referenced by an EcuInstance. If an ISignalIPduGroup contains other ISignalIPduGroups than these contained ISignalIPduGroups shall not be referenced by the EcuInstance. Contained ISignalIPduGroups are associated to an Ecu Instance via the top level ISignalIPduGroup.
associatedPdurIPduGroup	PdurIPduGroup	*	ref	With this reference it is possible to identify which PduR IPdu Groups are applicable for which Communication Connector/ ECU.
clientIdRange	ClientIdRange	0..1	aggr	Restriction of the Client Identifier for this Ecu to an allowed range of numerical values. The Client Identifier of the transaction handle is generated by the client RTE for inter-Ecu Client/Server communication.
comConfigurationGwTimeBase	TimeValue	0..1	attr	The period between successive calls to Com_MainFunctionRouteSignals of the AUTOSAR COM module in seconds.
comConfigurationRxTimeBase	TimeValue	0..1	attr	The period between successive calls to Com_MainFunctionRx of the AUTOSAR COM module in seconds.
comConfigurationTxTimeBase	TimeValue	0..1	attr	The period between successive calls to Com_MainFunctionTx of the AUTOSAR COM module in seconds.

▽

△

Class	EcuInstance			
comEnable MDTForCyclic Transmission	Boolean	0..1	attr	Enables for the Com module of this EcuInstance the minimum delay time monitoring for cyclic and repeated transmissions (TransmissionModeTiming has cyclic Timing assigned or eventControlledTiming with numberOf Repetitions > 0).
commController	CommunicationController	1..*	aggr	CommunicationControllers of the ECU.
connector	CommunicationConnector	*	aggr	All channels controlled by a single controller.
diagnostic Address	Integer	0..1	attr	An ECU specific ID for responses of diagnostic routines.
ethSwitchPort Group Derivation	Boolean	0..1	attr	Defines whether the derivation of SwitchPortGroups based on VLAN and/or CouplingPort.pncMapping shall be performed for this EcuInstance. If not defined the derivation shall not be done.
partition	EcuPartition	*	aggr	Optional definition of Partitions within an Ecu.
pnResetTime	TimeValue	0..1	attr	Specifies the runtime of the reset timer in seconds. This reset time is valid for the reset of PN requests in the EIRA and in the ERA.
pncPrepare SleepTimer	TimeValue	0..1	attr	Time in seconds the PNC state machine shall wait in PNC_PREPARE_SLEEP.
sleepMode Supported	Boolean	1	attr	Specifies whether the ECU instance may be put to a "low power mode" • true: sleep mode is supported • false: sleep mode is not supported Note: This flag may only be set to "true" if the feature is supported by both hardware and basic software.
v2xSupported	V2xSupportEnum	0..1	attr	This attribute is used to control the existence of the V2X stack on the given EcuInstance.
wakeUpOver BusSupported	Boolean	1	attr	Driver support for wakeup over Bus.

Table 3.1: EcuInstance

Table 3.2: ClientIdRange

[constr_3116] Overlap of `ClientIdRange`s in the context of the enclosing System ⌈ The `ClientIdRange` defined for an `EcuInstance` shall not overlap with the `ClientIdRange` of any other `EcuInstance` in the context of the enclosing System. ⌋*()*

3.1.2 Communication Controller

[TPS_SYST_01007] Definition of CommunicationController ⌈ A `CommunicationController` is a dedicated hardware device by means of which hosts are sending frames to and receiving frames from the communication medium. ⌋*(RS_SYST_00013)*

[TPS_SYST_01008] Assign `CommunicationController` to the AUTOSAR Communication Peripheral ⌈ In order to illustrate the relationship of an `CommunicationController` to the `HwElement` with `category` `CommunicationController` defined in the ECU Resource Description, a mapping between these two classes may be specified using the `CommunicationControllerMapping` (see [TPS_SYST_01014]). ⌋*(RS_SYST_00013)*

Class	«atpVariation» ***CommunicationController*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	The communication controller is a dedicated hardware device by means of which hosts are sending frames to and receiving frames from the communication medium. **Tags:** vh.latestBindingTime=postBuild			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	*AbstractCanCommunicationController*, EthernetCommunicationController, FlexrayCommunication Controller, *LinCommunicationController*, UserDefinedCommunicationController			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
wakeUpBy Controller Supported	Boolean	0..1	attr	Defines whether the ECU shall be woken up by this CommunicationController. TRUE: wake up is possible FALSE: wake up is not supported Note: If wakeUpByControllerSupported is set to TRUE the feature shall be supported by both hardware and basic software.

Table 3.3: CommunicationController

3.1.3 Communication Connector

[TPS_SYST_01009] Definition of `CommunicationConnector` ⌈ An `EcuInstance` uses `CommunicationConnector` elements in order to describe its bus interfaces and to specify the sending/receiving behavior. ⌋*(RS_SYST_00013)*

The relationship between an `EcuInstance`, a `CommunicationController`, and a `PhysicalChannel` is expressed by letting a `PhysicalChannel` reference a `CommunicationConnector` (which in turn is aggregated by `EcuInstance`) and which also has the ability to reference a `CommunicationController`.

Class	***CommunicationConnector*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	The connection between the referencing ECU and the referenced channel via the referenced controller. Connectors are used to describe the bus interfaces of the ECUs and to specify the sending/receiving behavior. Each CommunicationConnector has a reference to exactly one communicationController. Note: Several CommunicationConnectors can be assigned to one PhysicalChannel in the scope of one ECU Instance. **Tags:** atp.ManifestKind=MachineManifest			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	*AbstractCanCommunicationConnector*, EthernetCommunicationConnector, FlexrayCommunicationConnector, LinCommunicationConnector, UserDefinedCommunicationConnector			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
commController	CommunicationController	1	ref	Reference to the communication controller. The CommunicationConnector and referenced CommunicationController must be aggregated by the same ECUInstance. The communicationController can be referenced by several CommunicationConnector elements. This is important for the FlexRay Bus. FlexRay communicates via two physical channels. But only one controller in an ECU is responsible for both channels. Thus, two connectors (for channel A and for channel B) must reference to the same controller.
ecuCommPortInstance	CommConnectorPort	*	aggr	An ECUs reception or send ports. atpVariation: If signals/PDUs/frames are variable, the corresponding ports must be variable, too. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild
pncGatewayType	PncGatewayTypeEnum	0..1	attr	Defines if this EcuInstance shall implement the Pnc Gateway functionality on this CommunicationConnector and its respective PhysicalChannel. Several Ecu Instances on the same PhysicalChannel can have the PncGateway functionality enabled, but only one of them shall have the pncGatewayType "active".

Table 3.4: CommunicationConnector

Enumeration	**PncGatewayTypeEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology
Note	Defines the PncGateway roles.
Literal	***Description***
active	The active PncGateway functionality shall be performed **Tags:** atp.EnumerationValue=0
none	No PncGateway functionality shall be performed **Tags:** atp.EnumerationValue=1
passive	The passive PncGateway functionality shall be performed **Tags:** atp.EnumerationValue=2

Table 3.5: PncGatewayTypeEnum

Note: Use-case for the relation of several CommunicationConnectors assigned to one PhysicalChannel in the scope of one EcuInstance: One safety measure for a safety relevant ECU can be to have two transceivers (and two controllers) connected to the same network (Bus). In case a safety violation is detected one transceiver can be disabled and the respective Frames are blocked. The other transceiver stays active and keeps the ECU alive for diagnostics.

3.2 Communication Clustering

3.2.1 Communication Cluster

[TPS_SYST_01010] Definition of CommunicationCluster ⌈ CommunicationCluster represents a formal way to express that a number of EcuInstances are linked by an arbitrary topology (bus, star, ring, tree). Depending on the communication standard, a CommunicationCluster may either have exactly one or more (redundant) PhysicalChannels. ⌋*(RS_SYST_00013)*

Note that all ECUs within a CommunicationCluster communicate within the same address range.

Note that the same ECU can participate in more than one CommunicationCluster if it has more than one CommunicationConnector being referenced by PhysicalChannels owned by different CommunicationClusters.

Class	«atpVariation» ***CommunicationCluster*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	The CommunicationCluster is the main element to describe the topological connection of communicating ECUs. A cluster describes the ensemble of ECUs, which are linked by a communication medium of arbitrary topology (bus, star, ring, ...). The nodes within the cluster share the same communication protocol, which may be event-triggered, time-triggered or a combination of both. A CommunicationCluster aggregates one or more physical channels. **Tags:** vh.latestBindingTime=postBuild			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Subclasses	*AbstractCanCluster*, EthernetCluster, FlexrayCluster, LinCluster, UserDefinedCluster			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
baudrate	PositiveUnlimitedInteger	0..1	attr	Channels speed in bits/s.
physical Channel	PhysicalChannel	1..*	aggr	This relationship defines which channel element belongs to which cluster. A channel must be assigned to exactly one cluster, whereas a cluster may have one or more channels. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=systemDesignTime
protocolName	String	0..1	attr	The name of the protocol used.
protocolVersion	String	0..1	attr	The version of the protocol used.

Table 3.6: CommunicationCluster

Some communication clusters need, additional to the general attributes which are valid for all communication clusters, specialized attributes to describe the individual communication cluster properties. The bustype-specific specializations of `CommunicationCluster` (Figure 3.3) are further detailed in chapter 3.3.

3.2.2 Physical Channel

[TPS_SYST_01011] Definition of `PhysicalChannel` ⌈ `PhysicalChannel` represents the communication medium that is used to send and receive information between communicating ECUs. Each `CommunicationCluster` has at least one `PhysicalChannel`. ⌋*(RS_SYST_00013)*

[constr_3373] Limitation on the number of `PhysicalChannel`s that are referencing a `CommunicationConnector` ⌈ A `CommunicationConnector` shall only be referenced by at most one `PhysicalChannel`. ⌋*()*

Class	***PhysicalChannel*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	A physical channel is the transmission medium that is used to send and receive information between communicating ECUs. Each CommunicationCluster has at least one physical channel. Bus systems like CAN and LIN only have exactly one PhysicalChannel. A FlexRay cluster may have more than one PhysicalChannels that may be used in parallel for redundant communication. An ECU is part of a cluster if it contains at least one controller that is connected to at least one channel of the cluster.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	*AbstractCanPhysicalChannel*, EthernetPhysicalChannel, FlexrayPhysicalChannel, LinPhysicalChannel, UserDefinedPhysicalChannel			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
comm Connector	Communication Connector	*	ref	Reference to the ECUInstance via a Communication Connector to which the channel is connected. atpVariation: Variable assignment of Physical Channels to different CommunicationConnectors is expressed with this variation. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild
frameTriggering	FrameTriggering	*	aggr	One frame triggering is defined for exactly one channel. Channels may have assigned an arbitrary number of frame triggerings. atpVariation: If signals/PDUs/frames are variable, the corresponding triggerings must be variable, too. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild
iSignal Triggering	ISignalTriggering	*	aggr	One ISignalTriggering is defined for exactly one channel. Channels may have assigned an arbitrary number of ISignaltriggerings. atpVariation: If signals/PDUs/frames are variable, the corresponding triggerings must be variable, too. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild
managed Physical Channel	PhysicalChannel	*	ref	Reference between a channel with role managing channel and a channel with role managed channel.
pduTriggering	PduTriggering	*	aggr	One PduTriggering is defined for exactly one channel. Channels may have assigned an arbitrary number of I-Pdu triggerings. atpVariation: If signals/PDUs/frames are variable, the corresponding triggerings must be variable, too. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild

Table 3.7: PhysicalChannel

3.3 Specialized Attributes of the Topology Entities

According to their characteristic features, different communication standards like FlexRay, CAN, TTCAN, LIN, J1939 and Ethernet have individual attributes that need to be described additionally to the common topology classes. Figure 3.3 shows the spe-

cialization of the CommunicationCluster into the more specific FlexrayCluster, CanCluster, TtcanCluster, J1939Cluster, LinCluster and EthernetCluster.

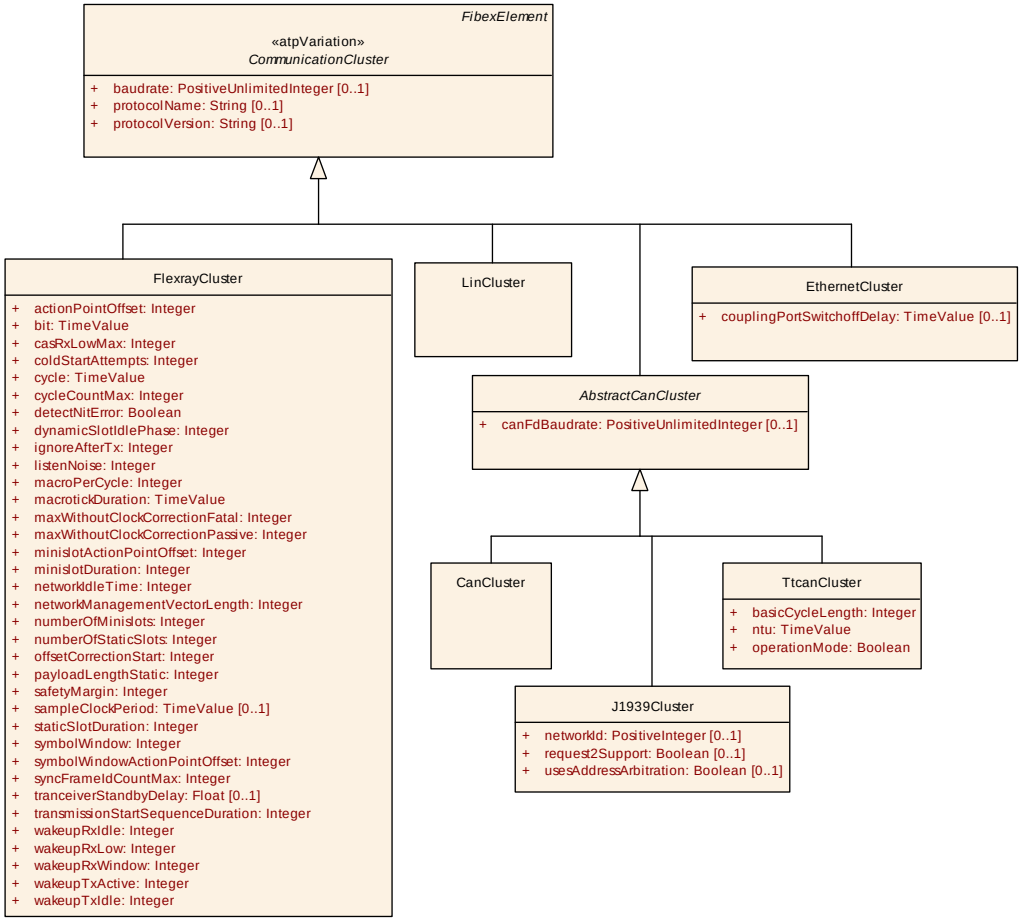

Figure 3.3: Specialized CommunicationCluster attributes (TopologyAttributeRefinement)

3.3.1 CAN

Modeling of the CAN bus is supported in the System Template by the means of four specialized meta-model classes: `CanCluster`, `CanCommunicationController`, `CanPhysicalChannel`, `CanCommunicationConnector` (Figure 3.4).

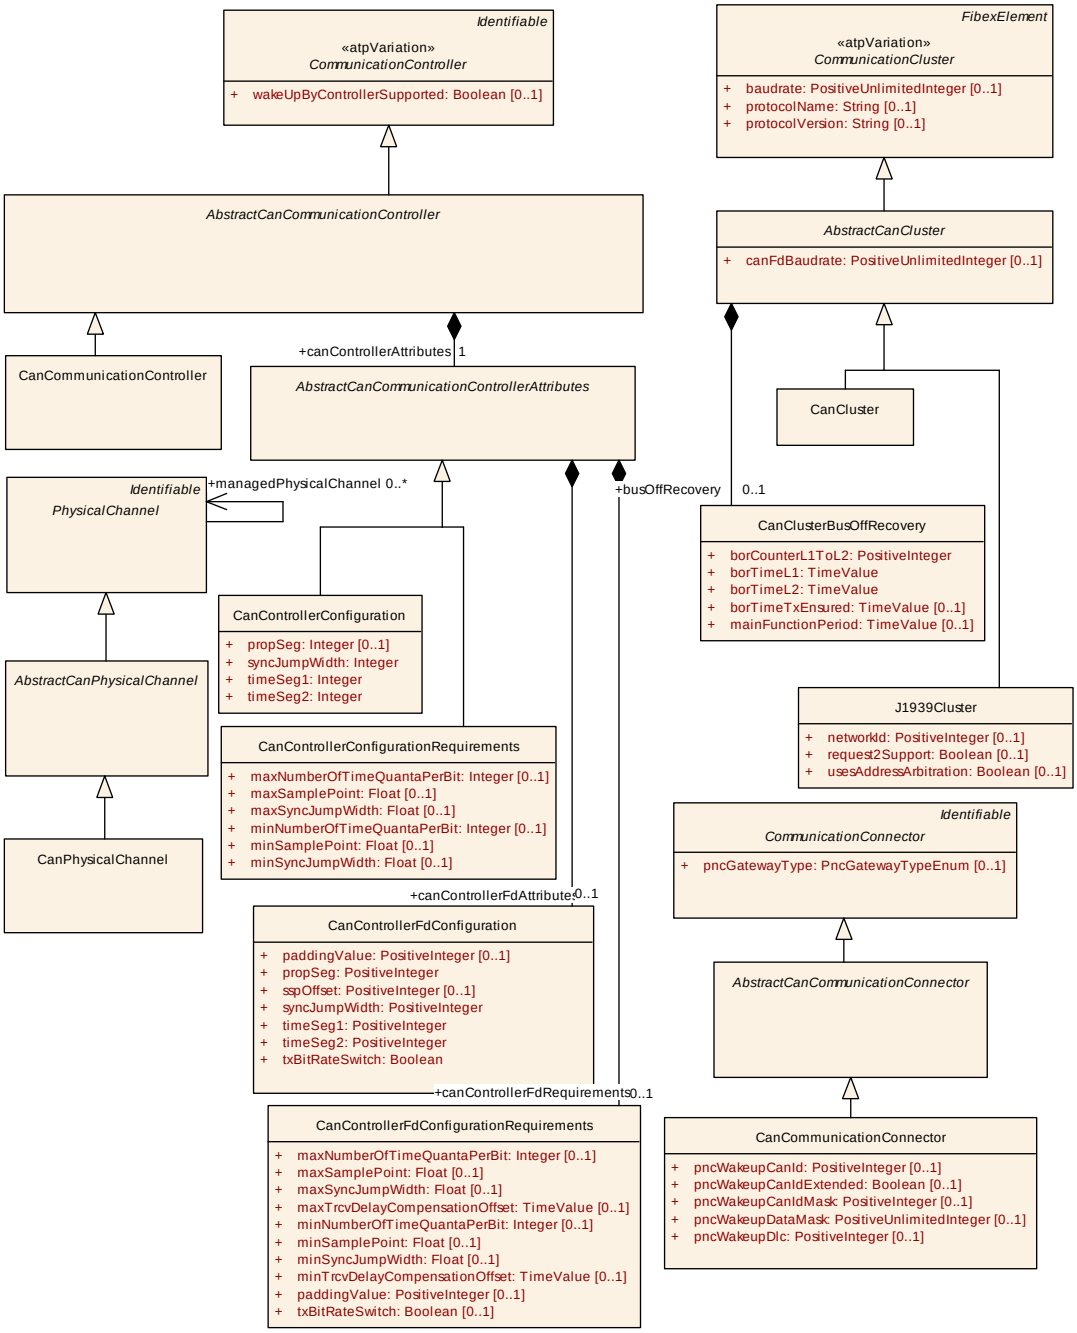

Figure 3.4: CAN bus elements (Fibex4Can_Topology)

3.3.1.1 CAN Cluster

CanCluster specifies the existence of a CAN cluster in the system's physical topology. It contains additional CAN-specific cluster-wide attributes. The common CAN and TTCAN attributes are collected in the AbstractCanCluster class.

Class	«atpVariation» ***AbstractCanCluster*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	Abstract class that is used to collect the common TtCAN, J1939 and CAN Cluster attributes.			
Base	*ARObject*, *CollectableElement*, *CommunicationCluster*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	CanCluster, J1939Cluster, TtcanCluster			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
busOffRecovery	CanClusterBusOff Recovery	0..1	aggr	CAN bus off monitoring / recovery at system level.
canFdBaudrate	PositiveUnlimitedInteger	0..1	attr	Specifies the data segment baud rate of the controller in bits/s.

Table 3.8: AbstractCanCluster

Class	«atpVariation» **CanCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology

Base	*ARObject*, *AbstractCanCluster*, *CollectableElement*, *CommunicationCluster*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table 3.9: CanCluster

Class	**CanClusterBusOffRecovery**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	This element contains the attributes that are used to configure the CAN bus off monitoring / recovery at system level.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
borCounterL1ToL2	PositiveInteger	1	attr	This threshold defines the count of bus-offs until the bus-off recovery switches from level 1 (short recovery time) to level 2 (long recovery time).
borTimeL1	TimeValue	1	attr	This attribute defines the duration of the bus-off recovery time in level 1 (short recovery time) in seconds.
borTimeL2	TimeValue	1	attr	This attribute defines the duration of the bus-off recovery time in level 2 (long recovery time) in seconds.
borTimeTxEnsured	TimeValue	0..1	attr	This attribute defines the duration of the bus-off event check in seconds.
mainFunctionPeriod	TimeValue	0..1	attr	This attribute defines the cycle time of the function Can SM_MainFunction in seconds.

Table 3.10: CanClusterBusOffRecovery

3.3.1.2 CAN Communication Controller

CanCommunicationController is a specialization of the abstract CommunicationController class. It contains the specific CAN controller attributes needed for configuring the CAN stack in an ECU connected to a certain CAN cluster. The common CAN and TTCAN attributes are collected in the AbstractCanCommunicationController class. It is possible to specify the CAN Controller configuration parameters as exact values or as requirements that have to be respected by the ECU developer. Therefore the two elements CanControllerConfiguration and CanControllerConfigurationRequirements were created.

Class	«atpVariation» **CanCommunicationController**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	CAN bus specific communication port attributes.			
Base	*ARObject*, *AbstractCanCommunicationController*, *CommunicationController*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table 3.11: CanCommunicationController

Class	«atpVariation» ***AbstractCanCommunicationController*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	Abstract class that is used to collect the common TtCAN and CAN Controller attributes.			
Base	*ARObject*, *CommunicationController*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	CanCommunicationController, TtcanCommunicationController			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
canController Attributes	AbstractCan Communication ControllerAttributes	1	aggr	CAN Bit Timing configuration

Table 3.12: AbstractCanCommunicationController

Class	***AbstractCanCommunicationControllerAttributes*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	For the configuration of the CanController parameters two different approaches can be used: 1. Providing exact values which are taken by the ECU developer (CanControllerConfiguration). 2. Providing ranges of values which are taken as requirements and have to be respected by the ECU developer (CanControllerConfigurationRequirements).			
Base	*ARObject*			
Subclasses	CanControllerConfiguration, CanControllerConfigurationRequirements			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
canControllerFd Attributes	CanControllerFd Configuration	0..1	aggr	Bit timing related configuration of a CAN controller for payload and CRC of a CanFD frame. If this element exists the controller supports CanFD frames and the ECU developer shall take these values for the configuration of the CanFD controller.
canControllerFd Requirements	CanControllerFd Configuration Requirements	0..1	aggr	Additional CanFD ranges of the bit timing related configuration of a CanFD controller. If this element exists the controller supports CanFD frames and the ECU developer shall take these ranges as requirements for the configuration of the CanFD controller.

Table 3.13: AbstractCanCommunicationControllerAttributes

Class	**CanControllerConfiguration**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	This element is used for the specification of the exact CAN Bit Timing configuration parameter values.			
Base	*ARObject*, *AbstractCanCommunicationControllerAttributes*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
propSeg	Integer	0..1	attr	Specifies propagation delay in time quantas.
syncJumpWidth	Integer	1	attr	The number of quanta in the Synchronization Jump Width, SJW. The (Re-)Synchronization Jump Width (SJW) defines how far a resynchronization may move the Sample Point inside the limits defined by the Phase Buffer Segments to compensate for edge phase errors.
timeSeg1	Integer	1	attr	Specifies phase segment 1 in time quantas. timeSeg1 = Phase_Seg1
timeSeg2	Integer	1	attr	Specifies phase segment 2 in time quantas. timeSeg2 = Phase_Seg2

Table 3.14: CanControllerConfiguration

Class	**CanControllerConfigurationRequirements**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	This element allows the specification of ranges for the CAN Bit Timing configuration parameters. These ranges are taken as requirements and have to be respected by the ECU developer.			
Base	*ARObject*, *AbstractCanCommunicationControllerAttributes*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
maxNumberOf TimeQuantaPer Bit	Integer	0..1	attr	Maximum number of time quanta in the bit time.
maxSample Point	Float	0..1	attr	The max. value of the sample point as a percentage of the total bit time.
maxSyncJump Width	Float	0..1	attr	The max. Synchronization Jump Width value as a percentage of the total bit time. The (Re-)Synchronization Jump Width (SJW) defines how far a resynchronization may move the Sample Point inside the limits defined by the Phase Buffer Segments to compensate for edge phase errors.
minNumberOf TimeQuantaPer Bit	Integer	0..1	attr	Minimum number of time quanta in the bit time.
minSamplePoint	Float	0..1	attr	The min. value of the sample point as a percentage of the total bit time.
minSyncJump Width	Float	0..1	attr	The min. Synchronization Jump Width value as a percentage of the total bit time. The (Re-)Synchronization Jump Width (SJW) defines how far a resynchronization may move the Sample Point inside the limits defined by the Phase Buffer Segments to compensate for edge phase errors.

Table 3.15: CanControllerConfigurationRequirements

[TPS_SYST_01154] CAN Controller support of CAN FD frames ⌈ The bit timing configuration of CAN controllers for CAN FD frames is supported by the `CanControllerFdConfiguration` element that is aggregated by `AbstractCanCommunicationControllerAttributes`. ⌋*(RS_SYST_00048)*

[constr_3095] canControllerFdAttributes and canControllerFdRequirements are mutually exclusive ⌈ The existence of canControllerFdAttributes and canControllerFdRequirements is mutually exclusive. ⌋()

[constr_3518] Range of CanControllerFdConfiguration.paddingValue and CanControllerFdConfigurationRequirements.paddingValue ⌈ The value given for CanControllerFdConfiguration.paddingValue and CanControllerFdConfigurationRequirements.paddingValue shall be in the range from 0 to 255. ⌋()

Class	**CanControllerFdConfiguration**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	Bit timing related configuration of a CAN controller for payload and CRC of a CAN FD frame.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
paddingValue	PositiveInteger	0..1	attr	Specifies the value which is used to pad unused data in CAN FD frames which are bigger than 8 byte if the length of a Pdu which was requested to be sent does not match the allowed DLC values of CAN FD.
propSeg	PositiveInteger	1	attr	Specifies propagation delay in time quantas.
sspOffset	PositiveInteger	0..1	attr	Specifies the Transmitter Delay Compensation Offset in minimum time quanta. Transmitter Delay Compensation Offset is used to adjust the position of the Secondary Sample Point (SSP), relative to the beginning of the received bit. If this parameter is configured, the Transmitter Delay Compensation is done by measurement of the CAN controller. If not specified Transmitter Delay Compensation is disabled.
syncJumpWidth	PositiveInteger	1	attr	Specifies the synchronization jump width for the controller in time quantas.
timeSeg1	PositiveInteger	1	attr	Specifies phase segment 1 in time quantas.
timeSeg2	PositiveInteger	1	attr	Specifies phase segment 2 in time quantas.
txBitRateSwitch	Boolean	1	attr	Specifies if the bit rate switching shall be used for transmissions. TRUE: CAN FD frames shall be sent with bit rate switching. FALSE: CAN FD frames shall be sent without bit rate switching.

Table 3.16: CanControllerFdConfiguration

PNC identifiers	39	38	37	36	35	34	33	32	47	46	45	44	43	42	41	40	55	54	53	52	51	50	49	48	63	62	61	60	59	58	57	56

Figure 3.5: Example of masked pncIdentifiers in a NmPdu

3.3.2 TTCAN

Modeling of TTCAN clusters is supported in the System Template by the means of four specialized meta-model classes: `TtcanCluster`, `TtcanCommunicationController`, `TtcanCommunicationConnector`, `TtcanPhysicalChannel` (figure 3.6).

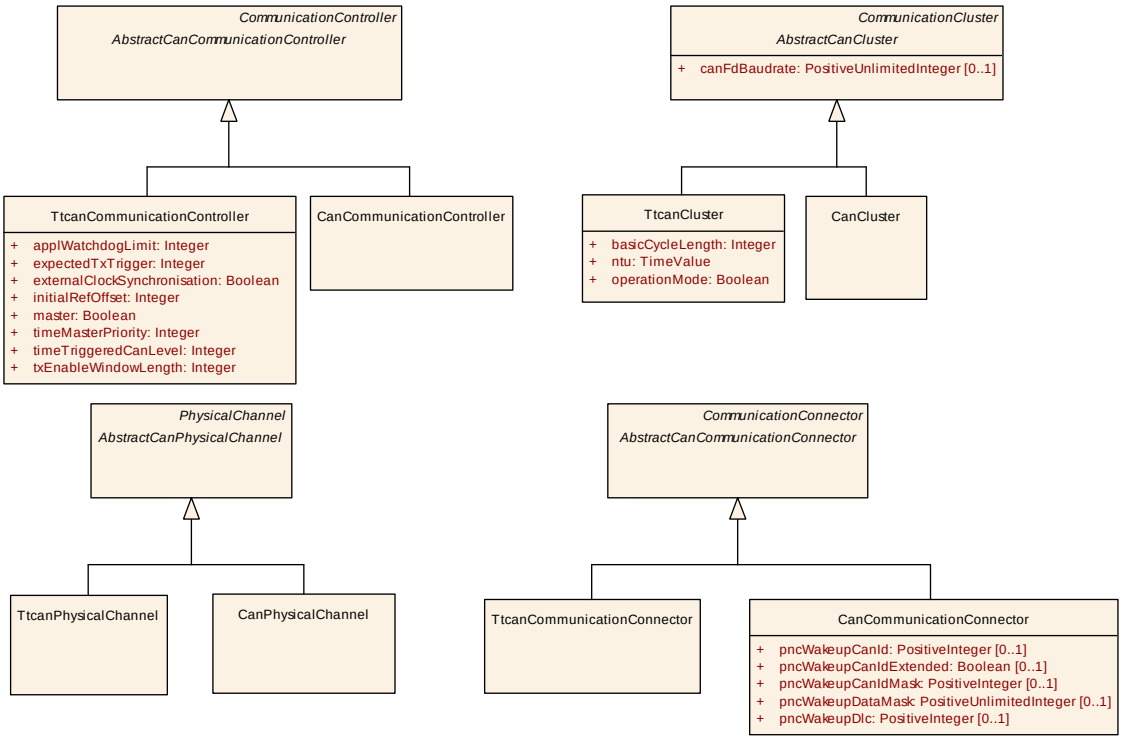

Figure 3.6: TTCAN bus elements (Fibex4Ttcan_Topology)

3.3.2.1 TTCAN Cluster

`TtcanCluster` specifies the existence of a TTCAN cluster in the system's physical topology. Additionally to the common CAN and TTCAN attributes it contains TTCAN-specific cluster-wide attributes.

Class	«atpVariation» **TtcanCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology			
Note	TTCAN bus specific cluster attributes. **Tags:** atp.recommendedPackage=CommunicationClusters			
Base	*ARObject*, *AbstractCanCluster*, *CollectableElement*, *CommunicationCluster*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
basicCycle Length	Integer	1	attr	Length of a basic-cycle. Unit: NTUs
ntu	TimeValue	1	attr	Unit measuring all times and providing a constant of the whole network. For level 1, this is always the CAN bit time. Unit: seconds.
operationMode	Boolean	1	attr	Possible operation modes True: Time-Triggered False: Event-Synchronised-Time-Triggered

Table 3.22: TtcanCluster

3.3.2.2 TTCAN Communication Controller

`TtcanCommunicationController` is a specialization of the `AbstractCanCommunicationController` class. Additionally to the common CAN and TTCAN attributes it contains the specific TTCAN Controller attributes.

Class	«atpVariation» **TtcanCommunicationController**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology			
Note	TTCAN bus specific communication port attributes.			
Base	*ARObject*, *AbstractCanCommunicationController*, *CommunicationController*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
applWatchdog Limit	Integer	1	attr	The Appl_Watchdog_Limit shall be an 8-bit value specifying the period for the application watchdog in Appl_Watchdog_Limit times 256 NTUs.
expectedTx Trigger	Integer	1	attr	The Expected_Tx_Trigger shall be an eight (8) bit value which limits the number of messages the FSE may try to transmit in one matrix cycle.
externalClock Synchronisation	Boolean	1	attr	One bit shall be used to configure whether or not external clock synchronisation will be allowed during runtime (only Level 2).
initialRefOffset	Integer	1	attr	The Initial_Ref_Offset shall be an eight (8) bit value for the initialisation of Ref_Trigger_Offset.
master	Boolean	1	attr	One bit shall be used to distinguish between (potential) time masters and time slaves. This can be derived from the frame-triggering's triggers.

△

Class	«atpVariation» **TtcanCommunicationController**			
timeMaster Priority	Integer	1	attr	The time master priority shall contain a three bit value for the priority of the current time master (the last three bits of the identifier of the reference message). This can be derived from the frame-triggering's triggers.
timeTriggered CanLevel	Integer	1	attr	One bit shall be used to distinguish between Level 1 and Level 2.
txEnable WindowLength	Integer	1	attr	The length of the Tx_Enable window shall be a four (4) bit value specifying the length of the time period (1-16 nominal CAN bit times) in which a transmission may be started.

Table 3.23: TtcanCommunicationController

3.3.2.3 TTCAN Physical Channel

`TtcanPhysicalChannel` is a specialization of the `AbstractCanPhysicalChannel` class. Additionally to the common CAN and TTCAN attributes it contains the specific TTCAN Physical Channel attributes.

Class	**TtcanPhysicalChannel**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology			
Note	TTCAN bus specific physical channel attributes.			
Base	*ARObject*, *AbstractCanPhysicalChannel*, *Identifiable*, *MultilanguageReferrable*, *PhysicalChannel*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table 3.24: TtcanPhysicalChannel

3.3.2.4 TTCAN Communication Connector

`TtcanCommunicationConnector` is a specialization of the `AbstractCanCommunicationConnector` class. Additionally to the common CAN and TTCAN attributes it contains the specific TTCAN `CommunicationConnector` attributes.

Class	**TtcanCommunicationConnector**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology			
Note	TTCAN bus specific communication connector attributes.			
Base	*ARObject*, *AbstractCanCommunicationConnector*, *CommunicationConnector*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table 3.25: TtcanCommunicationConnector

3.3.3 SAE J1939

Modeling of J1939 Communication Clusters is supported in the System Template with the J1939Cluster element that is derived from AbstractCanCluster (see figure 3.4).

Class	«atpVariation» **J1939Cluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanTopology			
Note	J1939 specific cluster attributes. **Tags:** atp.recommendedPackage=CommunicationClusters			
Base	*ARObject*, *AbstractCanCluster*, *CollectableElement*, *CommunicationCluster*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
networkId	PositiveInteger	0..1	attr	This represents the network ID for the J1939 cluster.
request2Support	Boolean	0..1	attr	Enables support for the Request2 PGN (RQST2).
usesAddress Arbitration	Boolean	0..1	attr	Defines whether the nodes attached to this channel use an initial address claim, and whether they react to contending address claims of other nodes. True: The initial address claim is sent, and the node reacts to address claims of other nodes. False: The node only sends an address claim upon request, and does not care for contending address claims.

Table 3.26: J1939Cluster

To describe the communication on a J1939Cluster CanFrameTriggerings are used that are aggregated by a CanPhysicalChannel.

[constr_3050] J1939Cluster uses exactly one CanPhysicalChannel ⌈ A J1939Cluster shall aggregate exactly one CanPhysicalChannel. ⌋*()*

[constr_1463] Applicable values for J1939Cluster.networkId ⌈ The values of the attribute J1939Cluster.networkId shall always be within the interval 1..4. ⌋*()*

Please note that AUTOSAR supports only the four mentioned bus types. Still, an implementation could e.g. support J1708 [14] by means of a complex driver and would then need to assign the corresponding bus type.

3.3.4 FlexRay

Modeling of FlexRay clusters is supported in the System Template by the means of four specialized meta-model classes: `FlexrayCluster`, `FlexrayCommunicationConnector`, `FlexrayPhysicalChannel`, `FlexrayCommunicationController` (Figure 3.7).

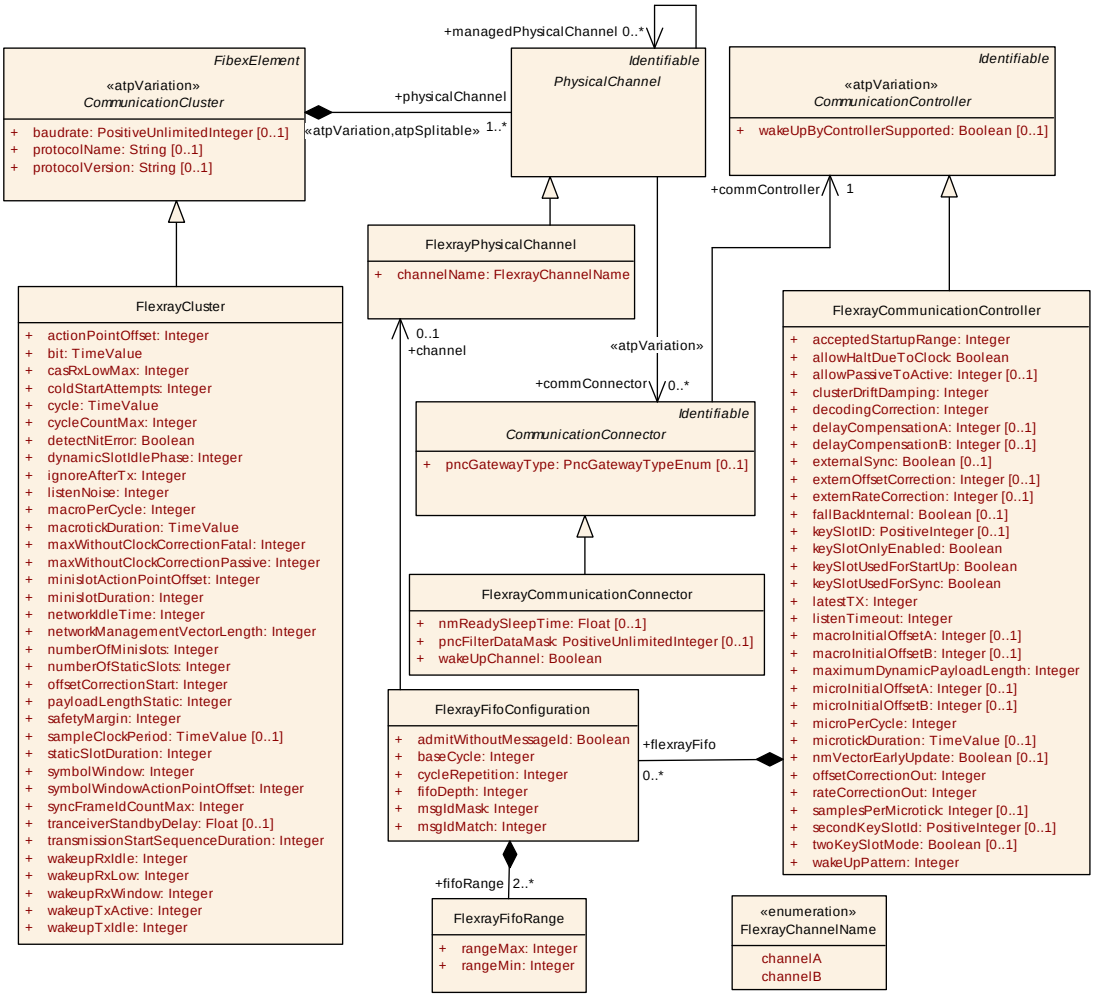

Figure 3.7: FlexRay cluster elements (Fibex4FlexRay_Topology)

3.3.4.1 FlexRay Cluster

`FlexrayCluster` specifies the existence of a FlexRay cluster in the system's physical topology. It contains additional FlexRay-specific cluster-wide attributes.

Class	«atpVariation» **FlexrayCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology			
Note	FlexRay specific attributes to the physicalCluster **Tags:** atp.recommendedPackage=CommunicationClusters			
Base	*ARObject*, *CollectableElement*, *CommunicationCluster*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
actionPoint Offset	Integer	1	attr	The offset of the action point in networks
bit	TimeValue	1	attr	Nominal bit time (= 1 / fx:SPEED). gdBit = cSamplesPer Bit * gdSampleClockPeriod. Unit: seconds (gdBit)
casRxLowMax	Integer	1	attr	Upper limit of the Collision Avoidance Symbol (CAS) acceptance window. Unit:bitDuration
coldStart Attempts	Integer	1	attr	The maximum number of times that a node in this cluster is permitted to attempt to start the cluster by initiating schedule synchronization
cycle	TimeValue	1	attr	Length of the cycle. Unit: seconds
cycleCountMax	Integer	1	attr	Maximum cycle counter value in a given cluster. Remark: Set to 63 for FlexRay Protocol 2.1 Rev. A compliance.
detectNitError	Boolean	1	attr	Indicates whether NIT error status of each cluster shall be detected or not.
dynamicSlotIdle Phase	Integer	1	attr	The duration of the dynamic slot idle phase in minislots.
ignoreAfterTx	Integer	1	attr	Duration for which the bitstrobing is paused after transmission [gdBit].
listenNoise	Integer	1	attr	Upper limit for the start up and wake up listen timeout in the presence of noise. Expressed as a multiple of the cluster constant pdListenTimeout. Unit microticks
macroPerCycle	Integer	1	attr	The number of macroticks in a communication cycle
macrotick Duration	TimeValue	1	attr	Duration of the cluster wide nominal macrotick, expressed in s.
maxWithout ClockCorrection Fatal	Integer	1	attr	Threshold concerning vClockCorrectionFailedCounter. Defines the number of consecutive even/odd Cycle pairs with missing clock correction terms that will cause the protocol to transition from the POC:normal active or POC:normal passive state into the POC:halt state.
maxWithout ClockCorrection Passive	Integer	1	attr	Threshold concerning vClockCorrectionFailedCounter. Defines the number of consecutive even/odd Cycle pairs with missing clock correction terms that will cause the protocol to transition from the POC:normal active state to the POC:normal passive state.
minislotAction PointOffset	Integer	1	attr	The Offset of the action point within a minislot. Unit: macroticks
minislotDuration	Integer	1	attr	The duration of a minislot (dynamic segment). Unit: macroticks.
networkIdle Time	Integer	1	attr	The duration of the network idle time in macroticks
network Management VectorLength	Integer	1	attr	Length of the Network Management vector in a cluster [bytes]
numberOf Minislots	Integer	1	attr	Number of Minislots in the dynamic segment.
numberOfStatic Slots	Integer	1	attr	The number of static slots in the static segment.

△

Class	«atpVariation» **FlexrayCluster**			
offsetCorrection Start	Integer	1	attr	Start of the offset correction phase within the Network Idle Time (NIT), expressed as the number of macroticks from the start of cycle. Unit: macroticks
payloadLength Static	Integer	1	attr	Globally configured payload length of a static frame. Unit: 16-bit WORDS.
safetyMargin	Integer	1	attr	Additional timespan in macroticks which takes jitter into account to be able to set the JobListPointer to the next possible job which can be executed in case the FlexRay Job List Execution Function has be resynchronized.
sampleClock Period	TimeValue	0..1	attr	Sample clock period. Unit: seconds
staticSlot Duration	Integer	1	attr	The duration of a slot in the static segment. Unit: macroticks
symbolWindow	Integer	1	attr	The duration of the symbol window. Unit: macroticks
symbolWindow ActionPoint Offset	Integer	1	attr	Number of macroticks the action point offset is from the beginning of the symbol window [Macroticks].
syncFrameId CountMax	Integer	1	attr	Maximum number of distinct syncframe identifiers present in a given cluster. This parameter maps to FlexRay Protocol 2.1 Rev. A parameter gSyncNodeMax.
tranceiver StandbyDelay	Float	0..1	attr	The duration of timer t_TrcvStdbyDelay in seconds. The granularity of this parameter shall be restricted to full Flex Ray cycles (cycle). The transceiver status setting to STANDBY shall be delayed by this value. Not specifying a value or a value of 0 shall imply that the timer is not used.
transmission StartSequence Duration	Integer	1	attr	Number of bits in the Transmission Start Sequence [gd Bits].
wakeupRxIdle	Integer	1	attr	Number of bits used by the node to test the duration of the 'idle' or HIGH phase of a received wakeup. Unit:bitDuration Remarks: This parameter maps to FlexRay Protocol 2.1 Rev. A parameter gdWakeupSymbolRxIdle.
wakeupRxLow	Integer	1	attr	Number of bits used by the node to test the duration of the LOW phase of a received wakeup. Unit:bitDuration Remarks: This parameter maps to FlexRay Protocol 2.1 Rev. A parameter gdWakeupSymbolRxLow.
wakeupRx Window	Integer	1	attr	The size of the window used to detect wakeups [gdBit]. Remarks: This parameter maps to FlexRay Protocol 2.1 Rev. A parameter gdWakeupSymbolRxWindow.
wakeupTxActive	Integer	1	attr	Number of bits used by the node to transmit the LOW phase of awakeup symbol and the HIGH and LOW phases of a WUDOP. Unit:bitDuration
wakeupTxIdle	Integer	1	attr	Number of bits used by the node to transmit the 'idle' part of a wakeup symbol. Unit: gDbit

Table 3.27: FlexrayCluster

3.3.4.2 FlexRay Communication Controller

FlexrayCommunicationController is a specialization of the CommunicationController class. It contains the specific FlexRay controller attributes needed for configuring the FlexRay stack in an ECU connected to a certain FlexRay cluster.

Class	«atpVariation» **FlexrayCommunicationController**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology			
Note	FlexRay bus specific communication port attributes.			
Base	*ARObject*, *CommunicationController*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
accepted StartupRange	Integer	1	attr	Expanded range of measured clock deviation allowed for startup frames during integration. Unit:microtick
allowHaltDueTo Clock	Boolean	1	attr	Boolean flag that controls the transition to the POC:halt state due to a clock synchronization errors. If set to true, the Communication Controller is allowed to transition to POC:halt. If set to false, the Communication Controller will not transition to the POC:halt state but will enter or remain in the normal POC (passive State).
allowPassiveTo Active	Integer	0..1	attr	Number of consecutive even/odd cycle pairs that must have valid clock correction terms before the Communication Controller will be allowed to transition from the POC:normal passive state to POC:normal active state. If set to 0, the Communication Controller is not allowed to transition from POC:norm
clusterDrift Damping	Integer	1	attr	The cluster drift damping factor used in clock synchronization rate correction in microticks
decoding Correction	Integer	1	attr	Value used by the receiver to calculate the difference between primary time reference point and secondary time reference point. Unit: Microticks (pDecodingCorrection)
delay CompensationA	Integer	0..1	attr	Value used to compensate for reception delays on channel A Unit: Microticks. This optional parameter shall only be filled out if channel A is used.
delay CompensationB	Integer	0..1	attr	Value used to compensate for reception delays on channel B. Unit: Microticks. This optional parameter shall only be filled out if channel B is used.
externOffset Correction	Integer	0..1	attr	Fixed amount added or subtracted to the calculated offset correction term to facilitate external offset correction, expressed in node-local microticks.
externRate Correction	Integer	0..1	attr	Fixed amount added or subtracted to the calculated rate correction term to facilitate external rate correction, expressed in node-local microticks.
externalSync	Boolean	0..1	attr	Flag indicating whether the node is externally synchronized (operating as Time Gateway Sink in an TT-E Time Triggered External Sync cluster) or locally synchronized.
fallBackInternal	Boolean	0..1	attr	Flag indicating whether a Time Gateway Sink node will switch to local clock operation when synchronization with the Time Gateway Source node is lost (pFallBackInternal = true) or will instead go to POC:ready (pFallBackInternal = false).
flexrayFifo	FlexrayFifo Configuration	*	aggr	One First In First Out (FIFO) queued receive structure, defining the admittance criteria to the FIFO.
keySlotID	PositiveInteger	0..1	attr	ID of the slot used to transmit the startup frame, sync frame, or designated single slot frame. If the attributes keySlotUsedForStartUp, keySlotUsedFor Sync, or keySlotOnlyEnabled are set to true the key slot value is mandatory.

▽

△

Class	«atpVariation» **FlexrayCommunicationController**			
keySlotOnly Enabled	Boolean	1	attr	Flag indicating whether or not the node shall enter key slot only mode following startup.
keySlotUsedFor StartUp	Boolean	1	attr	Flag indicating whether the Key Slot is used to transmit a startup frame.
keySlotUsedFor Sync	Boolean	1	attr	Flag indicating whether the Key Slot is used to transmit a sync frame.
latestTX	Integer	1	attr	The number of the last minislot in which a transmission can start in the dynamic segment for the respective node
listenTimeout	Integer	1	attr	Value for the startup listen timeout and wakeup listen timeout. Although this is a node local parameter, the real time equivalent of this value should be the same for all nodes in the cluster. Unit: Microticks
macroInitial OffsetA	Integer	0..1	attr	Integer number of macroticks between the static slot boundary and the closest macrotick boundary of the secondary time reference point based on the nominal macrotick duration. (pMacroInitialOffset). This optional parameter shall only be filled out if channel A is used.
macroInitial OffsetB	Integer	0..1	attr	Integer number of macroticks between the static slot boundary and the closest macrotick boundary of the secondary time reference point based on the nominal macrotick duration. (pMacroInitialOffset). This optional parameter shall only be filled out if channel B is used.
maximum Dynamic PayloadLength	Integer	1	attr	Maximum payload length for the dynamic channel of a frame in 16 bit WORDS.
microInitial OffsetA	Integer	0..1	attr	Number of microticks between the closest macrotick boundary described by gMacroInitialOffset and the secondary time reference point. The parameter depends on pDelayCompensationA and therefore it has to be set independently for each channel. This optional parameter shall only be filled out if channel A is used.
microInitial OffsetB	Integer	0..1	attr	Number of microticks between the closest macrotick boundary described by gMacroInitialOffset and the secondary time reference point. The parameter depends on pDelayCompensationB and therefore it has to be set independently for each channel. This optional parameter shall only be filled out if channel B is used.
microPerCycle	Integer	1	attr	The nominal number of microticks in a communication cycle
microtick Duration	TimeValue	0..1	attr	Duration of a microtick. This attribute can be derived from samplePerMicrotick and gdSampleClockPeriod. Unit: seconds
nmVectorEarly Update	Boolean	0..1	attr	Flag indicating when the update of the Network Management Vector in the CHI shall take place. If set to false, the update shall take place after the NIT. If set to true, the update shall take place after the end of the static segment.
offsetCorrection Out	Integer	1	attr	Magnitude of the maximum permissible offset correction value. Unit:microtick (pOffsetCorrectionOut)

▽

△

Class	«atpVariation» **FlexrayCommunicationController**			
rateCorrection Out	Integer	1	attr	Magnitude of the maximum permissible rate correction value and the maximum drift offset between two nodes operating with unsynchronized clocks for one communication cycle. Unit:Microticks (pRateCorrection Out) Remarks: This parameter maps to FlexRay Protocol 2.1 Rev. A parameter pdMaxDrift.
samplesPer Microtick	Integer	0..1	attr	Number of samples per microtick
secondKeySlot Id	PositiveInteger	0..1	attr	ID of the second Key slot, in which a second startup frame shall be sent in TT-L Time Triggered Local Master Sync or TT-E Time Triggered External Sync mode. If this parameter is set to zero the node does not have a second key slot.
twoKeySlot Mode	Boolean	0..1	attr	Flag indicating whether node operates as a startup node in a TT-E Time Triggered External Sync or TT-L Time Triggered Local Master Sync cluster.
wakeUpPattern	Integer	1	attr	Number of repetitions of the Tx-wakeup symbol to be sent during the CC_WakeupSend state of this Node in the cluster

Table 3.28: FlexrayCommunicationController

Class	**FlexrayFifoConfiguration**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology			
Note	One First In First Out (FIFO) queued receive structure, defining the admittance criteria to the FIFO, and mandating the ability to admit messages into the FIFO based on Message Id filtering criteria.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
admitWithout MessageId	Boolean	1	attr	Boolean configuration which determines whether or not frames received in the dynamic segment that don't contain a message ID will be admitted into the FIFO.
baseCycle	Integer	1	attr	FIFO cycle counter acceptance criteria.
channel	FlexrayPhysicalChannel	0..1	ref	Fifo channel admittance criteria.
cycleRepetition	Integer	1	attr	FIFO cycle counter acceptance criteria.
fifoDepth	Integer	1	attr	FrFifoDepth configures the maximum number of rx-frames which can be contained in the FIFO.
fifoRange	FlexrayFifoRange	2..*	aggr	FIFO Frame Id range acceptance criteria.
msgIdMask	Integer	1	attr	FIFO message identifier acceptance criteria (Mask filter).
msgIdMatch	Integer	1	attr	FIFO message identifier acceptance criteria (Match filter).

Table 3.29: FlexrayFifoConfiguration

Class	**FlexrayFifoRange**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology			
Note	FIFO Frame Id range acceptance criteria.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
rangeMax	Integer	1	attr	Max Range.
rangeMin	Integer	1	attr	Min Range.

Table 3.30: FlexrayFifoRange

3.3.4.3 FlexRay Communication Connector

FlexrayCommunicationConnector adds the FlexRay specific attributes to the CommunicationConnector.

Class	**FlexrayCommunicationConnector**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology			
Note	FlexRay specific attributes to the CommunicationConnector			
Base	*ARObject*, *CommunicationConnector*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
nmReadySleep Time	Float	0..1	attr	The value of this attribute influences the shutdown behavior of the FlexRay NM. FrNm switches to bus sleep mode nmReadySleepTime seconds after the completion of the last repetition cycle containing a NM vote.
pncFilterData Mask	PositiveUnlimitedInteger	0..1	attr	Bit mask for FlexRay Payload used to configure the Flex Ray Transceiver for partial network wakeup.
wakeUp Channel	Boolean	1	attr	Referenced channel used by the node to send a wakeup pattern. (pWakeupChannel)

Table 3.31: FlexrayCommunicationConnector

[constr_3508] Value of nmReadySleepTime ⌈ The nmReadySleepTime value shall be a multiple of cycle * nmRepetitionCycle. ⌋*()*

[TPS_SYST_02167] Derivation of FrNmPnFilterMaskByte ⌈ The FrNmPnFilterMaskByte should not be computed from the pncIdentifier values in order to support future introduction of additional PNCs.

Note that for one EcuInstance all contributing FlexrayCommunicationConnector.pncFilterDataMask will be bitwise ORed to obtain the value of FrNmPnFilterMaskByte. Note that this data mask is calculated over the whole payload of the NmPdu ignoring the leading bytes which do not contain pncVector information. The number of leading bytes which shall be ignored is equivalent to the value of System.pncVectorOffset. ⌋*(RS_SYST_00042)*

The masking of pncIdentifiers in a NmPdu based on the pncFilterDataMask is done in the same way as for the CanCommunicationConnector (see Example in Figure 3.5).

3.3.4.4 FlexRay Physical Channel

FlexrayPhysicalChannel adds the FlexRay specific attributes to the PhysicalChannel.

Class	**FlexrayPhysicalChannel**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology			
Note	FlexRay specific attributes to the physicalChannel			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *PhysicalChannel*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
channelName	FlexrayChannelName	1	attr	Name of the channel (Channel A or Channel B).

Table 3.32: FlexrayPhysicalChannel

Enumeration	**FlexrayChannelName**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology
Note	Name of the channel.
Literal	***Description***
channelA	Channel A **Tags:** atp.EnumerationValue=0
channelB	Channel B **Tags:** atp.EnumerationValue=1

Table 3.33: FlexrayChannelName

[constr_3018] Number of FlexRay channels ⌈ A `FlexrayCluster` shall use either one `FlexrayPhysicalChannel` with `channelName` set to either `channelA` or `channelB` or else two `FlexrayPhysicalChannel`s with one `channelName` `channelA` and one `channelName` `channelB`. ⌋*()*

3.3.5 LIN

A LinCluster consists of exactly one master node connected to several slave nodes. The master is responsible for providing the frame headers on the bus according to a predefined schedule, whereas the slaves send or receive the actual frame information ([10]).

[TPS_SYST_01012] Different Properties of LinMaster and LinSlave ⌈ In the System Template the different properties of master and slave nodes are handled by deriving the LIN-specific subclasses LinMaster and LinSlave as specializations of LinCommunicationController. ⌋(*RS_SYST_00022*)

AUTOSAR supports the stand-alone definition of both LIN masters and LIN slaves.

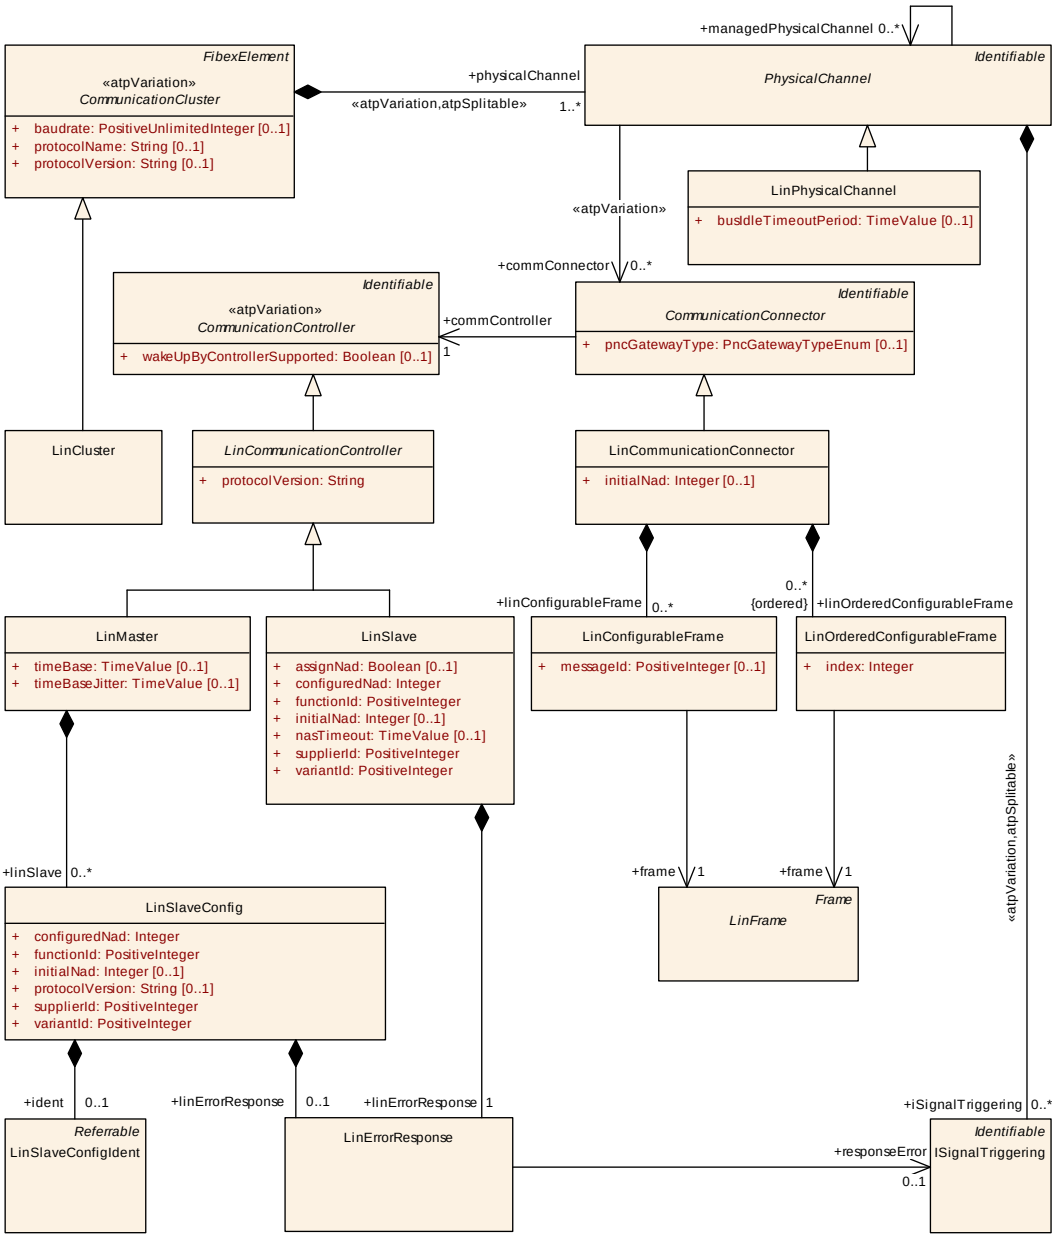

Figure 3.8: Specialized LinCommunicationController attributes (Fibex4Lin_Topology)

Note that the AUTOSAR BSW only supports LIN masters. LIN slaves are seen as non AUTOSAR ECUs. They can be described in the System Template in order to configure the LIN Interface for the master correctly, but AUTOSAR does not support the development of LIN slaves as of AUTOSAR release 4.0 ([15], [16]).

3.3.5.1 LIN Cluster

LinCluster specifies the existence of a LIN cluster in the system's physical topology.

Class	«atpVariation» **LinCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinTopology			
Note	LIN specific attributes **Tags:** atp.recommendedPackage=CommunicationClusters			
Base	*ARObject*, *CollectableElement*, *CommunicationCluster*, *FibexElement*, *Identifiable*, *Multilanguage Referrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table 3.34: LinCluster

3.3.5.2 LIN Communication Controller

LinCommunicationController is a specialization of the CommunicationController class. It is an abstract class, to be further specialized by LinMaster and LinSlave.

Class	«atpVariation» ***LinCommunicationController*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinTopology			
Note	LIN bus specific communication controller attributes.			
Base	*ARObject*, *CommunicationController*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	LinMaster, LinSlave			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
protocolVersion	String	1	attr	Version specifier for a communication protocol.

Table 3.35: LinCommunicationController

3.3.5.3 LIN Master

LinMaster describes the existence of a LIN master task in a LIN topology node. As such it contains the attributes specific to a LIN master task.

Class	«atpVariation» **LinMaster**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinTopology			
Note	Describing the properties of the refering ecu as a LIN master.			
Base	*ARObject*, *CommunicationController*, *Identifiable*, *LinCommunicationController*, *Multilanguage Referrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***

▽

△

Class	«atpVariation» **LinMaster**			
linSlave	LinSlaveConfig	*	aggr	LinSlaves that are handled by the LinMaster.
timeBase	TimeValue	0..1	attr	Time base is mandatory for the master. It is not used for slaves. LIN 2.0 Spec states: "The time_base value specifies the used time base in the master node to generate the maximum allowed frame transfer time." The time base shall be specified AUTOSAR conform in seconds.
timeBaseJitter	TimeValue	0..1	attr	The attribute timeBaseJitter is a mandatory attribute for the master and not used for slaves. LIN 2.0 Spec states: "The jitter value specifies the differences between the maximum and minimum delay from time base start point to the frame header sending start point (falling edge of BREAK signal)." The jitter shall be specified AUTOSAR conform in seconds.

Table 3.36: LinMaster

Class	**LinSlaveConfig**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinTopology			
Note	Node attributes of LIN slaves that are handled by the LinMaster. In the System Description LIN slaves may be described in the context of the Lin Master. In an ECU Extract of the LinMaster the LinSlave Ecus shall not be available. The information that is described here is necessary in the ECU Extract for the configuration of the Lin Master. The values of attributes of LinSlaveConfig and the corresponding LinSlave shall be identical (if both are defined in a System Description).			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
configuredNad	Integer	1	attr	To distinguish LIN slaves that are used twice or more within the same cluster.
functionId	PositiveInteger	1	attr	LIN function ID.
ident	LinSlaveConfigIdent	0..1	aggr	This adds the ability to become referrable to LinSlave Config.
initialNad	Integer	0..1	attr	Initial NAD of the LIN slave.
linError Response	LinErrorResponse	0..1	aggr	Each slave node shall publish one response error in one of its transmitted unconditional frames.
protocolVersion	String	0..1	attr	Version specifier for a communication protocol. Protocol version of the LinMaster and the LinSlaves may be different. **Tags:** atp.Status=shallBecomeMandatory
supplierId	PositiveInteger	1	attr	LIN Supplier ID.
variantId	PositiveInteger	1	attr	Specifies the Variant ID.

Table 3.37: LinSlaveConfig

Class	LinSlaveConfigIdent			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinTopology			
Note	This meta-class is created to add the ability to become the target of a reference to the non-Referrable Lin SlaveConfig.			
Base	*ARObject*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table 3.38: LinSlaveConfigIdent

[constr_3219] The mutual existence of LinSlaves in the LinMaster EcuExtract ⌈ LinSlaves shall not be part of the EcuExtract of the corresponding LinMaster. ⌋*()*

[constr_1655] The mutual existence of LinMasters in the LinSlave EcuExtract ⌈ A LinMaster shall not be part of the EcuExtract of a corresponding LinSlave. ⌋*()*

[TPS_SYST_02101] Usage of LinSlaveConfig in Ecu Extract ⌈ In order to configure LinMaster in a System with category ECU_EXTRACT the LinSlaveConfig aggregated by the LinMaster shall be used. ⌋*(RS_SYST_00022)*

Please note that, in concordance with [TPS_SYST_02101], even if the LinSlave **can** be modeled independently of the LinMaster it still makes sense that the the configuration of the LinMaster **positively contains the aggregation of the LinSlaveConfig** in the role linSlave.

In other words, the configuration of a LinMaster is **not affected** by the question of whether or not the LinSlave is explicitly modeled.

This statement is valid for both the existence of the LinMaster in a System of category SYSTEM_DESCRIPTION or in a System of category ECU_EXTRACT.

The actual correspondence between a Lin slave described by means of the LinSlaveConfig and the actual model of the LinSlave shall be determined by identifying pairs of LinSlaveConfig and LinSlave with an identical set of the attributes that are equally named in both meta-classes. This rule does not apply for the shortName.

Another relevant condition for finding pairs of corresponding LinSlaveConfig and LinSlave is obviously that the LinMaster that aggregates the LinSlaveConfig shall be connected to the same LinCluster to which the corresponding LinSlave is connected.

Of course, this condition can only be checked in the context of a System of category SYSTEM_DESCRIPTION or perhaps SYSTEM_EXTRACT.

3.3.5.4 LIN Slave

AUTOSAR supports the definition of a stand-alone LIN slave[1]. In other words, it is possible to define an ECU Extract that contains the modeling of a LIN slave independently of the modeling of the LIN master.

That said, the ability to define properties of the LIN slave in the context of the LIN master in the form of `LinMaster.linSlave` still exists and can be used where applicable.

[TPS_SYST_05018] Semantics of meta-class `LinSlave` ⌈ Meta-class `LinSlave` describes the existence of a LIN slave task in a LIN topology node. It describes the attributes of a single LIN slave node. ⌋*(RS_SYST_00022)*

[TPS_SYST_05019] Semantics of `LinErrorResponse.responseError` ⌈ Each Lin slave has the ability to set an error bit in the response part of one specific `LinUnconditionalFrame` in the event of errors occurring on frame level. The error bit is modeled by means of a reference to an `ISignalTriggering` in the role `LinErrorResponse.responseError`. ⌋*(RS_SYST_00022)*

Please note that because the response error bit applies for frame errors the responsibility for setting the response error bit lies exclusively at the `LinIf`.

In the event of such an error, the `LinIf` on the Lin slave Ecu calls `Com_SendSignal()` to set the value of the response error bit if applicable[2] and thus the system model needs to foresee the existence of an `ISignalTriggering` for this purpose.

Aside: on the Lin master, typically a piece of application software picks up the received error bit and uses it to e.g. increment a counter for debouncing purposes. If the counter exceeds a certain value in e.g. a given time interval the Lin master has to assume that a serious problem exists in the communication with this specific slave and react accordingly.

In terms of modeling, this means that if formally modeled application software on the Lin master exists that processes the error response bit (the receiving side of the error response bit) then a `DataMapping` to a `SystemSignal` that carries the response error bit needs to be defined.

It is important to understand that application software on a Lin slave positively has no business of setting the value of the response error bit. In other words: on the sending side (i.e. the Lin slave), the application software is not affected and therefore there shall not be a `DataMapping` on the sending side. This relation motivates the existence of [constr_1656].

[1] In former versions of this specification document the properties of a LIN slave could only be defined in the context of the corresponding LIN master

[2] In principle, the `LinIf` on the Lin slave Ecu could directly patch the value of the response error bit into a Tx Pdu before sending but in this case the `LinIf` would have to pick the correct Pdu and patch it accordingly. In other words, the `LinIf` would replicate a certain amount of Com functionality. the usage of an `ISignalTriggering` significantly simplifies the implementation of the `LinIf`.

[constr_1656] No application-level write access to `LinErrorResponse.responseError` on Lin slave ⌈ The `SystemSignal` referenced in the role `systemSignal` by the `ISignal` referenced by the `ISignalTriggering` that in turn is referenced in the role `LinErrorResponse.responseError` shall not be referenced by a `DataMapping` that allows for writing to the `SystemSignal`. ⌋()

Class	«atpVariation» **LinSlave**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinTopology			
Note	Describing the properties of the referring ecu as a LIN slave.

busIdleTimeout Period	TimeValue	0..1	attr	This attribute shall be used to set an idle timeout period for the enclosing LinPhysicalChannel.
scheduleTable	LinScheduleTable	*	aggr	Schedule tables organize the timings of the frames for LIN. atpVariation: If the transmitted frames are variable, the corresponding ScheduleTables must be variable, too. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

Table 3.44: LinPhysicalChannel

[constr_3015] Number of LIN channels ⌈ LIN clusters shall aggregate exactly one `LinPhysicalChannel`. ⌋*()*

3.3.6 Ethernet

The EthernetCluster represents an Ethernet network which may consist of several ECUs connected.

An essential aspect of modern Ethernet is the possibility to introduce Ethernet switches in order to partition the EthernetCluster into segments which are used for point-to-point communication between the respective partners. It is possible to define the behavior of such Ethernet switches, this is described in chapter 3.3.6.6.

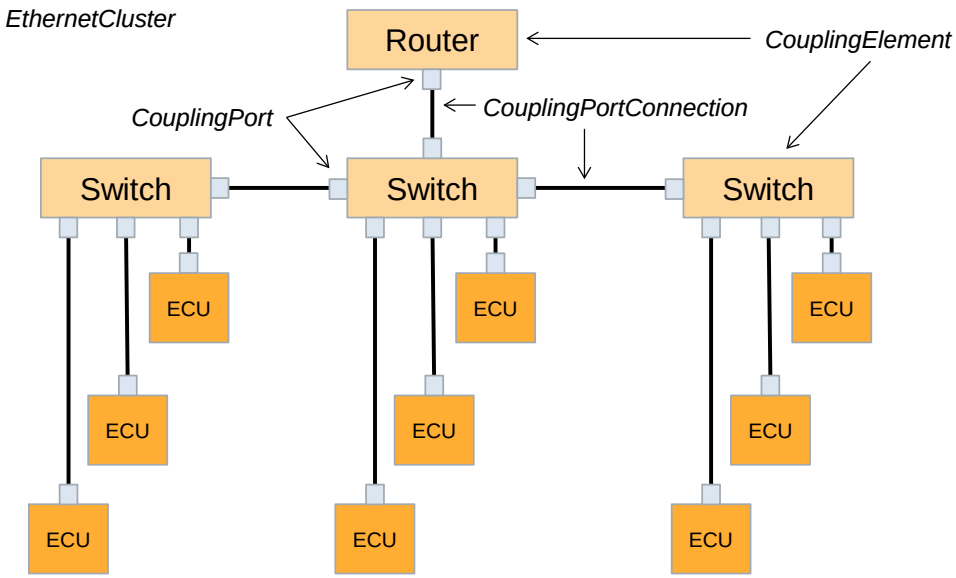

Figure 3.9: Example of an EthernetCluster

Figure 3.9 illustrates an example of an EthernetCluster. In this figure the focus is on the *Link Layer* and represents the wiring of ECUs, their communication connectors, switches, hubs, routers, and how these elements are connected electrically.

To describe the Ethernet at the data link- and physical layer the following System Template meta-model classes are used: EthernetCluster, EthernetCommunicationController, EthernetCommunicationConnector, EthernetPhysicalChannel, CouplingElement, CouplingPort and CouplingPortConnection (see Figure 3.10).

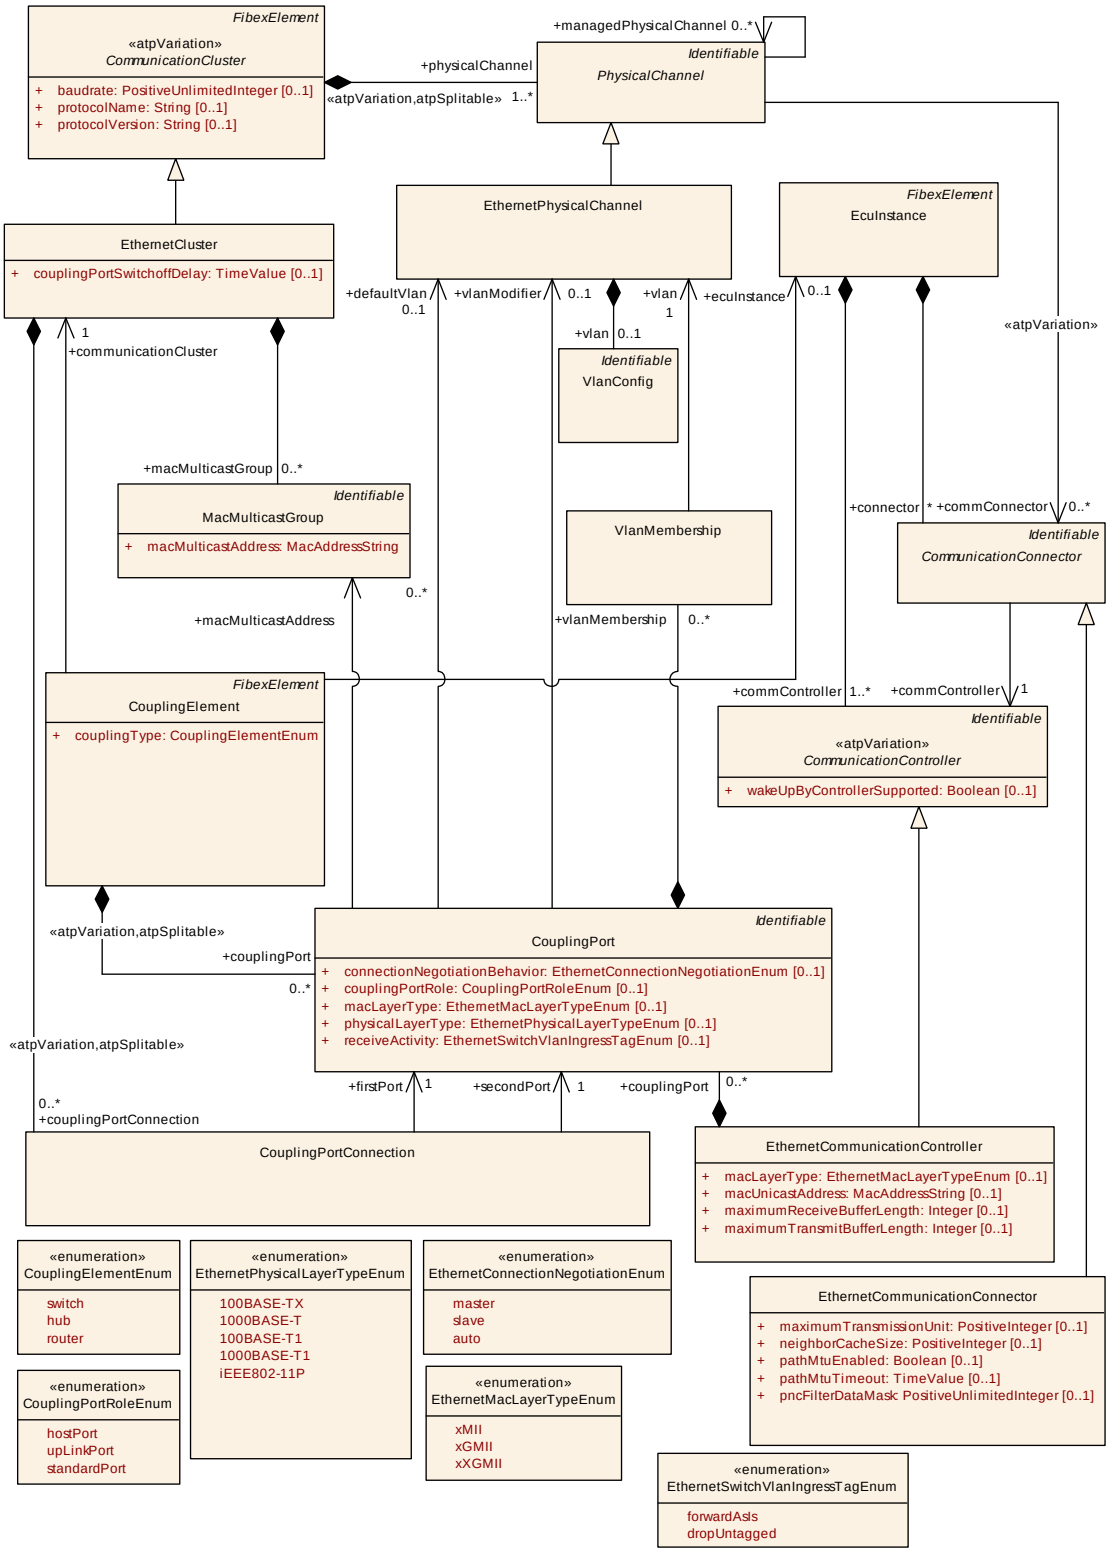

Figure 3.10: Ethernet topology elements (Fibex4Ethernet_Topology)

3.3.6.1 Ethernet Cluster

Each EthernetCluster may have globally defined MacMulticastGroups. MacMulticastGroups have a macMulticastAddress (for example 01:00:5E:7F:FF:FF). One sender can handle many receivers simultaneously, if the receivers have all the same macMulticastAddress.

[constr_3047] Uniqueness of macMulticastAddresses ⌈ A macMulticastAddress shall be unique in a particular EthernetCluster. ⌋()

couplingPort SwitchoffDelay	TimeValue	0..1	attr	Switch off delay for CouplingPorts in seconds. It denotes the delay of switching off couplingPorts after the request to switch off a couplingPort was issued. (e.g. switch off of Ethernet switch ports).
macMulticast Group	MacMulticastGroup	*	aggr	MacMulticastGroup that is defined for the Subnet (EthernetCluster).

Table 3.45: EthernetCluster

Class	**MacMulticastGroup**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Per EthernetCluster globally defined MacMulticastGroup. One sender can handle many receivers simultaneously if the receivers have all the same macMulticastAddress. The addresses need to be unique for the particular EthernetCluster. **Tags:** atp.ManifestKind=MachineManifest			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
macMulticast Address	MacAddressString	1	attr	A multicast MAC address (Media Access Control address) is a identifier for a group of hosts in a network.

Table 3.46: MacMulticastGroup

3.3.6.2 Ethernet Physical Channel

The EthernetPhysicalChannel represents a VLAN. VLANs (IEEE 802.1q) divide physical Ethernet networks in logical subnets. Their realization requires switches with VLAN support. VLANs are defined on a switch on a port-by-port basis.

The term EthernetPhysicalChannel may be misleading because it actually does *not* defined the physical (electrical) attributes of the communication but the EthernetPhysicalChannel defines the VLANs as *logical* broadcast domains in which the communication partners can interact.

Regardless whether the Ethernet communication uses tagged [TPS_SYST_01095] or untagged [TPS_SYST_01096] VLANs all communication needs to be defined within respective EthernetPhysicalChannels as defined in chapter 6.1.

[TPS_SYST_01095] tagged VLANs ⌈ In the System Description a VLAN is represented by an EthernetPhysicalChannel and is identified by its vlanIdentifier. ⌋*(RS_SYST_00039)*

[TPS_SYST_01096] untagged VLANs ⌈ If the VlanConfig and the vlanIdentifier are not defined for an EthernetPhysicalChannel than the channel is called "untagged". ⌋*(RS_SYST_00039)*

Every Frame that is sent over a "tagged" VLAN is tagged with a VLAN Tag. With this tag every receiving switch has the information about the VLAN that the Frame belongs to. The VLAN Tag that is attached to a Frame contains the user priority for the Frame that is described with the defaultPriority and the vlanIdentifier.

Class	**EthernetPhysicalChannel**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	The EthernetPhysicalChannel represents a VLAN or an untagged channel. An untagged channel is modeled as an EthernetPhysicalChannel without an aggregated VLAN. **Tags:** atp.ManifestKind=MachineManifest			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *PhysicalChannel*, *Referrable*

Note	VLAN Configuration attributes			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
vlanIdentifier	PositiveInteger	1	attr	A VLAN is identified by this attribute according to IEEE 802.1Q. The allowed values range is from 0..4095.

Table 3.48: VlanConfig

[constr_3048] Range of `vlanIdentifier` ⌈ The allowed values of `vlanIdentifier` range from 0 to 4095. ⌋*()*

3.3.6.2.1 VLAN Priority

The Priority is a 3-bit field which refers to the IEEE 802.1Q priority. It indicates the frame priority level. Values are from 0 (best effort) to 7 (highest); 1 represents the lowest priority. These values can be used to prioritize different classes of traffic (voice, video, data, etc.). The priority is contained in the Ethernet Header together with the `vlanIdentifier`.

The `defaultPriority` can be overwritten on different levels:

1. `NetworkEndpoint`
2. `ApplicationEndpoint`

3. ProvidedServiceInstance or ConsumedEventGroup

If a priority on an ApplicationEndpoint is defined the priorities in the NetworkEndpoint and the defaultPriority in the VlanMembership would be ignored.

The following table shows two CouplingPorts. Both have two NetworkEndpoints and for each NetworkEndpoint two ApplicationEndpoints are defined. This means that per Port two IP Addresses and four Tcp-Ports are used. On each level a priority may be defined.

For NEP1.1 no priority is defined. This means that the Default-Priority from CouplingPort1 is valid. On CouplingPort1 all messages have the Priority 0 ("'best effort"') except for messages that are going over ApplicationEndpoint AEP1.1.2 and AEP 1.2.2. These messages have the priority 1 (higher priority). On CouplingPort2 the priority is overwritten on several levels. Please note that AEP 2.2.1 and AEP 2.2.2 are reducing the priority that is defined on the NEP2.2.

Port (Default-Prio)	NetworkEndpoint (e.g. IpAddress)	ApplicationEndpoint (e.g. Tcp Port)
CouplingPort1: Prio.0	NEP1.1: Prio. —	AEP 1.1.1: Prio. —
		AEP 1.1.2: Prio. 1
	NEP1.2: Prio. 0	AEP 1.2.1: Prio. —
		AEP 1.2.2: Prio. 1
CouplingPort2: Prio.0	NEP2.1: Prio. 1	AEP 2.1.1: Prio. 2
		AEP 2.1.2: Prio. 3
	NEP2.2: Prio. 2	AEP 2.2.1: Prio. 1
		AEP 2.2.2: Prio. 0

Table 3.49: VLAN Priority Example

3.3.6.3 Ethernet Coupling Elements and Coupling Ports

A CouplingElement is used to connect EcuInstances via CouplingPorts to EthernetPhysicalChannels (VLANs) that are defined within an EthernetCluster.

CouplingElements can reach from a simple hub to a complex managed switch or even devices with functionalities in higher layers. A CouplingElement references the EthernetCluster and contains a collection of available CouplingPorts. The couplingType identifies the CouplingElement as a switch, hub or router.

Class	**CouplingElement**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	A CouplingElement is used to connect EcuInstances to the VLAN of an EthernetCluster. Coupling Elements can reach from a simple hub to a complex managed switch or even devices with functionalities in higher layers. A CouplingElement that is not related to an EcuInstance occurs as a dedicated single device. **Tags:** atp.recommendedPackage=CouplingElements			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
communication Cluster	EthernetCluster	1	ref	This relationship defines to which cluster the Coupling Element belongs.
couplingPort	CouplingPort	*	aggr	Hardware Port of the CouplingElement that is used to connect this CouplingPort to EcuInstances or other CouplingElements. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild
couplingType	CouplingElementEnum	1	attr	Describes the coupling type of this CouplingElement.
ecuInstance	EcuInstance	0..1	ref	Optional reference to the ECU where the Coupling Element is located.

Table 3.50: CouplingElement

Enumeration	**CouplingElementEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology
Note	Identifies the Coupling type.
Literal	***Description***
hub	A device that is used to connect segments of a LAN. In Hubs frames are "broadcasted" to every one of its ports. **Tags:** atp.EnumerationValue=0
router	A device that routes frames between different networks. **Tags:** atp.EnumerationValue=1
switch	A device that filters and forwards frames between different LAN segments. **Tags:** atp.EnumerationValue=2

Table 3.51: CouplingElementEnum

[constr_3062] The `EcuInstance` that is referenced from a specific `CouplingElement` shall be connected to the same `EthernetCluster` as the specific `CouplingElement` ⌈ The `EcuInstance` referenced from a specific `CouplingElement` in the role `ecuInstance` shall be connected via the `CommunicationConnector` and a `EthernetPhysicalChannel` that refers the `CommunicationConnector` to the `EthernetCluster` referenced by the specific `CouplingElement` in the role `communicationCluster`. ⌋*()*

Class	**CouplingPort**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	A CouplingPort is used to connect a CouplingElement with an EcuInstance or two CouplingElements with each other via a CouplingPortConnection. Optionally, the CouplingPort may also have a reference to a macMulticastGroup and a defaultVLAN.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
connection Negotiation Behavior	EthernetConnection NegotiationEnum	0..1	attr	Specifies the connection negotiation of the CouplingPort. **Tags:** atp.Status=shallBecomeMandatory
couplingPort Details	CouplingPortDetails	0..1	aggr	Defines more details of a CouplingPort in case a more specific configuration is required.
couplingPort Role	CouplingPortRoleEnum	0..1	attr	Defines the role this CouplingPort takes in the context of the CouplingElement.
defaultVlan	EthernetPhysical Channel	0..1	ref	The vLanIdentifier of the referenced VLAN is the Default-PVID (port VLAN ID). A Port VLAN ID is a default VLAN ID that is assigned to an access CouplingPort to designate the VLAN segment to which this port is connected. Also, if a CouplingPort has not been configured with any VLAN memberships, the virtual switch's Port VLAN ID (pvid) becomes the default VLAN ID for the ports connection. This identifier/tag is added for incoming untagged messages at the port (ingress tagging). For outgoing messages with this identifier, the tag is removed at the port (egress untagging, depending on the Vlan Membership.sendActivity).
macLayerType	EthernetMacLayerType Enum	0..1	attr	Specifies the mac layer type of the CouplingPort.
macMulticast Address	MacMulticastGroup	*	ref	Assigns a set of MAC-Multicast-Addresses which are addressable via this CouplingPort. This is a static pre-configuration and further addresses may be learned during runtime.
physicalLayer Type	EthernetPhysicalLayer TypeEnum	0..1	attr	Specifies the physical layer type of the CouplingPort.
pncMapping	PncMappingIdent	*	ref	Reference to the partial networks this CouplingPort participates in.
receiveActivity	EthernetSwitchVlan IngressTagEnum	0..1	attr	Defines the handling of frames at the ingress port.
vlan Membership	VlanMembership	*	aggr	Messages of VLANs that are defined here can be communicated via the CouplingPort.
vlanModifier	EthernetPhysical Channel	0..1	ref	All incoming messages at this CouplingPort shall be tagged with this VLAN Id. This tagging is performed regardless whether the message already has a VLAN tag or is untagged, an existing VLAN tag will be overwritten. This feature is XOR with CoupligPort.defaultVlan.

Table 3.52: CouplingPort

Enumeration	**EthernetConnectionNegotiationEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology
Note	Specifies connection negotiation types of Ethernet transceiver links.

Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Connection between two CouplingPorts (firstPort and secondPort).			
Base	*ARObject*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
firstPort	CouplingPort	1	ref	Reference to the first CouplingPort that is connected via the CouplingPortConnection.

▽

△

Class	**CouplingPortConnection**			
secondPort	CouplingPort	1	ref	Reference to the second CouplingPort that is connected via the CouplingPortConnection.

Table 3.58: CouplingPortConnection

CouplingPorts are hardware ports of CouplingElements and EcuInstances. Connections between CouplingPorts are realized through CouplingPortConnections.

Optionally the CouplingPort of a CouplingElement may also have one or several VlanMemberships, a defaultVlan reference and a reference to a MacMulticastGroup.

[constr_3521] defaultVlan and vlanMembership ⌈ If a CouplingPort refers to an EthernetPhysicalChannel in the role defaultVlan the CouplingPort shall also have a vlanMembership defined. This VlanMembership shall point to the same EthernetPhysicalChannel in the role vlan as the defaultVlan. ⌋*()*

[constr_3522] vlanModifier and vlanMembership ⌈ If a CouplingPort refers to an EthernetPhysicalChannel in the role vlanModifier the CouplingPort shall also have a vlanMembership defined. This VlanMembership shall point to the same EthernetPhysicalChannel in the role vlan as the vlanModifier. ⌋*()*

[constr_3435] Applicability of CouplingPort.macMulticastAddress ⌈ The reference CouplingPort.macMulticastAddress is only applicable if the CouplingPort is aggregated by a CouplingElement with couplingType = switch. ⌋*()*

[constr_3133] physicalLayerType of connected CouplingPorts ⌈ The physicalLayerType of two CouplingPorts which are connected via a CouplingPortConnection shall be equal. ⌋*()*

[constr_3134] The connection of two CouplingPorts with connectionNegotiationBehavior set to master is forbidden ⌈ The connectionNegotiationBehavior of two CouplingPorts which are connected via a CouplingPortConnection shall not be both set to master. ⌋*()*

[constr_3135] The connection of two CouplingPorts with connectionNegotiationBehavior set to slave is forbidden ⌈ The connectionNegotiationBehavior of two CouplingPorts which are connected via a CouplingPortConnection shall not be both set to slave. ⌋*()*

[TPS_SYST_01097] Assignment of CouplingPorts to a VLAN ⌈ CouplingPorts of CouplingElements can be assigned to VLANs (EthernetPhysicalChannels) with the vlanMembership aggregation. ⌋*(RS_SYST_00039)*

[TPS_SYST_01098] Assignment of CouplingPorts to an “untagged” VLAN ⌈ A CouplingPort may be assigned to several VLANs, but only one of those assignments can be “untagged”. ⌋*(RS_SYST_00039)*

[constr_3534] `EthernetPhysicalChannel` shall only be referenced by one `VlanMembership` ⌈ An `EthernetPhysicalChannel` shall only be referenced by one `VlanMembership` in the role `VlanMembership.vlan` in the scope of one `CouplingPort`. ⌋()

Figure 3.11 shows a `CouplingElement` with two `CouplingPort`s.

In this example Port 0 is assigned to three VLANs and one “untagged” `EthernetPhysicalChannel`. VLAN3 is marked as the `defaultVlan`. With the combination of the `defaultVlan` and the `VlanMembership` to the “untagged” `EthernetPhysicalChannel` the `Frame`s that are transmitted over Port 0 on VLAN3 are “untagged” on the wire in both directions (Tx and Rx). The switch adds the tag for incoming untagged messages at the port (ingress tagging) and for outgoing messages the tag is removed at the port (egress untagging).

Port 1 is assigned to three VLANs. But the `VlanMembership` to the “untagged” `EthernetPhysicalChannel` is not defined here. For this reason, `Frame`s that are transmitted over Port 1 on VLAN3 are “tagged”.

If a `defaultVlan` is defined for a `CouplingPort` but the `defaultVlan` is not referenced by the `VlanMembership` then “untagged” `Frame`s can be received via the `CouplingPort`. But a response can not be send back.

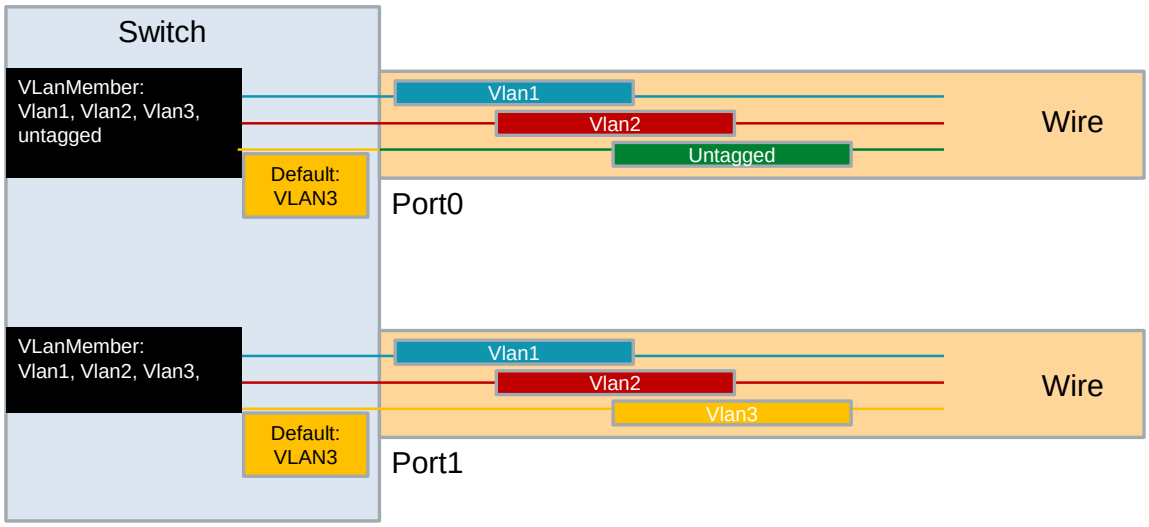

Figure 3.11: Default Vlan Example

3.3.6.4 Ethernet Communication Controller

`EthernetCommunicationController` is a specialization of the `CommunicationController` class. It contains the specific Ethernet controller attributes needed for configuring an `EcuInstance` connected to a certain Ethernet cluster.

Class	«atpVariation» **EthernetCommunicationController**

[constr_3335] Allowed references between `EthernetCommunicationConnector` and `EthernetCommunicationController` ⌈ An `EthernetCommunicationConnector` is only allowed to reference an `EthernetCommunicationController` in the role `commController` that has the same `category` value as the referencing `EthernetCommunicationConnector`. ⌋*()*

3.3.6.6 Ethernet Switch Driver

Ethernet networks in an automotive environment consist basically of ECUs with a single port PHY and switch ECUs with several ports. Different to consumer networks, where switches are typically stand-alone devices, switches in automotive networks may be integrated and connected to a CPU via MII and other interfaces. The configuration of these switches does influence the communication behavior within the network.

3.3.6.6.1 Ethernet switch port structure

In order to describe switched Ethernet networks it is essential to describe some parts of an Ethernet switch. Examples are scheduling and forwarding mechanisms within a switch as well as the switch structure within its ports.

As shown in figure 3.12, the switch consists of a certain number of ports. Each port has its own set of egress FIFOs in which the incoming packets are buffered. How the messages in the FIFOs will be forwarded depends mainly on the shaping and port scheduling mechanisms. Thus, the parametrization of the egress port influences the latency of messages within the network.

Please note that the egress port structures in figure 3.12 are meant as an example. Other structures with different FIFO numbers are possible as well.

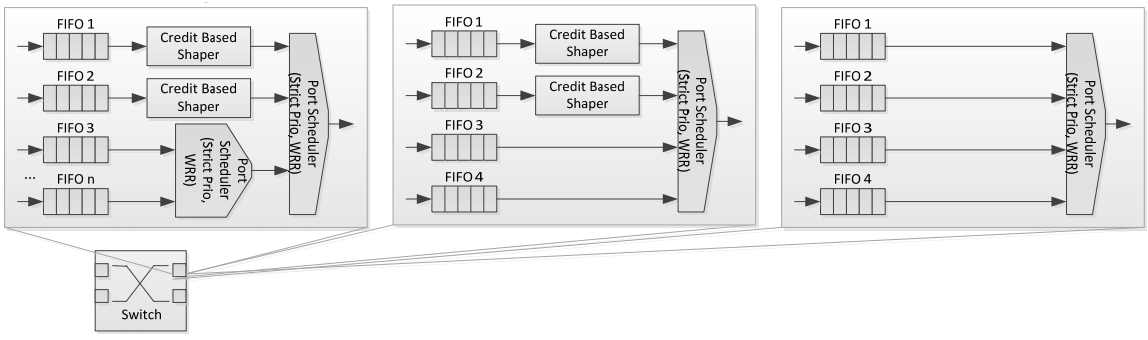

Figure 3.12: Example egress switch port configurations

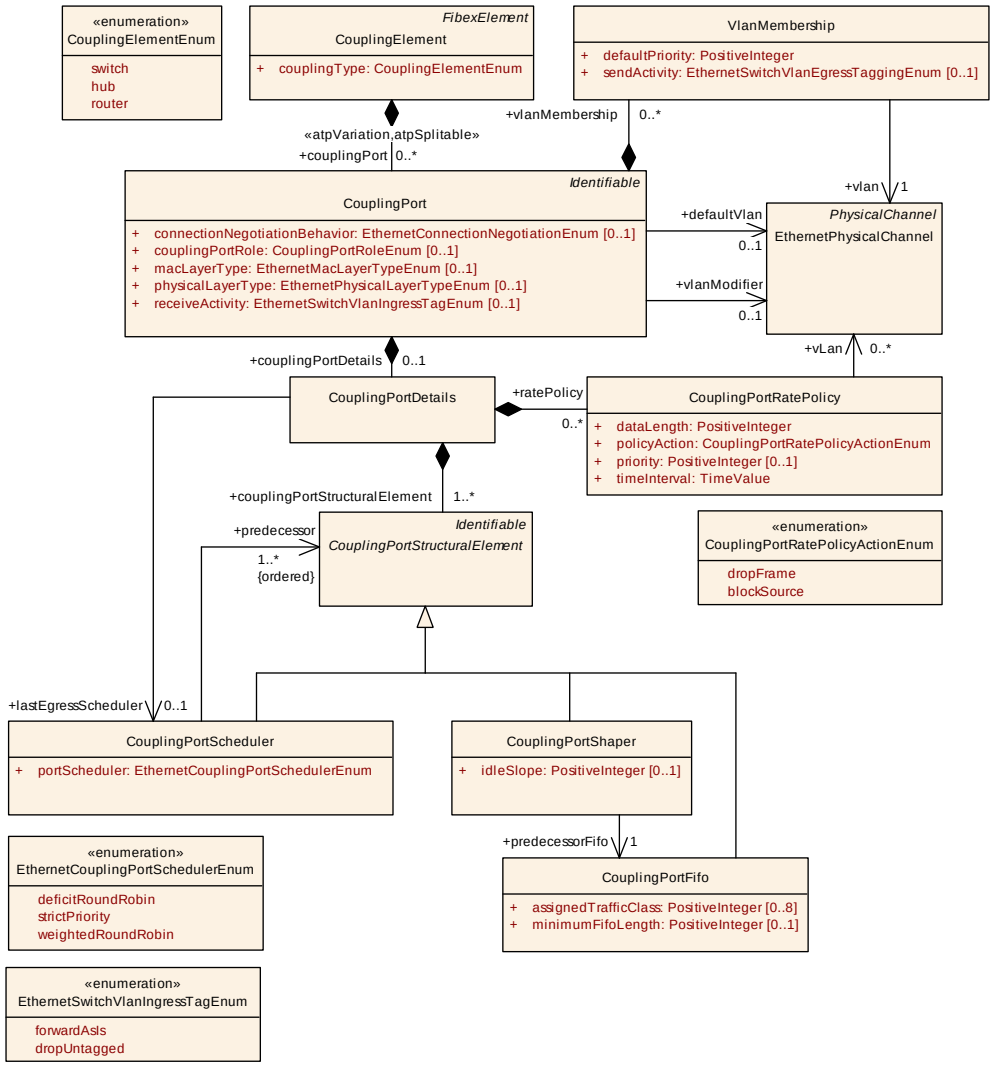

Figure 3.13: Egress switch port structure

The structural description of an Ethernet switch is based on the already existing `CouplingElement` in the System Template. Each `CouplingElement` can already have a set of `CouplingPort`s.

In case a detailed Switch configuration is required, there is the configuration option to add to the `CouplingPort` a `CouplingPortDetails` element which encapsulates the structural description of one switch port.

The elements which one switch port consists of are (egress side):

- `CouplingPortFifo`
- `CouplingPortShaper`
- `CouplingPortScheduler`

The model allows to collect the egress parts of one switch port in the `CouplingPortDetails.couplingPortStructuralElement`s.

[TPS_SYST_03006] Ethernet switch egress port setup ⌈ Two setups can be defined at an egress port of a switch:

- The switch port has only one Fifo:
  - the CouplingPortFifo element is aggregated at the CouplingPortDetails.couplingPortStructuralElements
  - no CouplingPortDetails.lastEgressScheduler is defined.
- The switch port has at least one scheduler
  - the various switch port elements are all aggregated at the CouplingPortDetails.couplingPortStructuralElements
  - the CouplingPortScheduler which is the last scheduler in a chain of structural elements is additionally referenced in the role CouplingPortDetails.lastEgressScheduler

⌋*(RS_SYST_00052)*

The modeling approach is based on a predecessor chain model where the chain is started by the last scheduler in the switch port and defines where the input to this scheduler comes from. The input to a scheduler can come from several predecessor elements which might be

- another CouplingPortScheduler
- a CouplingPortShaper
- a CouplingPortFifo.

[TPS_SYST_03007] Ethernet port scheduler algorithm ⌈ The scheduler performs a prioritization of the incoming frames based on the algorithm defined in the CouplingPortScheduler.portScheduler. ⌋*(RS_SYST_00052)*

[TPS_SYST_03008] Ethernet port scheduler priority ⌈ The first element in CouplingPortScheduler.predecessor has the highest priority.Therefore, it is important to have the predecessor definition of the scheduler ordered. ⌋*(RS_SYST_00052)*

Another restriction is that a CouplingPortShaper can only have a CouplingPortFifo as predecessorFifo, which is given by the model.

[TPS_SYST_03009] Ethernet port shaper idleSlope ⌈ The idleSlope is defined in the IEEE802.1Qav standard as a parameter for an increase of credit in bits per second. The idleSlope can never exceed the maximal transmit rate of a port, e.g. 100MBits for BroadR-Reach and 1GBits for RTPGE. The idleSlope determines the maximum fraction of the port transmit rate that is available for the queue associated with the shaper: bandwidthFraction = idleSlope/portTransmitRate. ⌋*(RS_SYST_00052)*

Class	**CouplingPortDetails**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Defines details of a CouplingPort. May be used to configure the structures of a switch.

dropFrame	If the rate policy is violated the frame shall be dropped. **Tags:** atp.EnumerationValue=0

Table 3.68: CouplingPortRatePolicyActionEnum

3.3.6.6.3 Ethernet packet forwarding

Besides the modeling of egress ports, it is necessary to specify how incoming packets are forwarded to the egress ports. For this purpose, different assignment policies of packets to egress port FIFOs are implemented in switches.

As an example, the Ethernet priority field can be evaluated and remapped into an regenerated priority: Within the VLAN-tag, the PCP-field (priority code point) is a parameter which can be modified at an ingress port of an Ethernet switch. For this purpose a priority regeneration table can be defined.

The `CouplingPortDetails.ethernetPriorityRegeneration` is optional in case the feature of priority regeneration is not be used.

[TPS_SYST_03003] Ethernet priority regeneration ⌈ The `CouplingPortDetails.ethernetPriorityRegeneration` specifies which `ingressPriority` is mapped to which `regeneratedPriority`. ⌋*(RS_SYST_00052)*

[constr_3515] Fully filled `EthernetPriorityRegeneration` table ⌈ In case the `CouplingPortDetails.ethernetPriorityRegeneration` is defined it shall contain exactly 8 elements of `EthernetPriorityRegeneration`, one for each value of `ingressPriority` (0-7). ⌋*()*

The (potentially remapped) Ethernet priority field can be evaluated and mapped to a traffic class. Such a traffic class is again mapped to an egress FIFO. Other header information of the Ethernet frame can be also used for the assignment of Ethernet frames to egress FIFOs. For the mapping to a certain traffic class, the following tables are necessary.

PORT-based Mapping	Traffic Class
Port2, Port3, Port4	7
Port1	6
–	5
–	4
–	3
–	2
–	1
–	0

Table 3.69: Port to Traffic Class mapping

PCP-based Mapping	Traffic Class
Prio 0	7
Prio 1	6
Prio 2-7	5
–	4
–	3
–	2
–	1
–	0

Table 3.70: PCP-field to Traffic Class mapping

While the first table shows the mapping of ingress-ports to traffic classes, the second table shows the priority-based mapping which can be defined per ingress port. Both tables are in conflict with each other, i.e. it has to be decided which mapping is applied.

Also the mapping of a traffic class to a FIFO shall be done on a per port basis. An example is shown in the following table.

Traffic Class	FIFO (if 4 FIFOs available)
7	3
6	2
0-5	1
–	0

Table 3.71: Traffic Class to FIFO mapping

In order to model the relationship between the ingress port and the egress port, the `CouplingPortTrafficClassAssignment` elements are used.

[TPS_SYST_03010] Ethernet switch packet to traffic class assignment ⌈ First the ingress packets are assigned to traffic classes. The two use-cases from above are both supported by this model:

- Port to traffic class mapping (only one traffic class per port possible) from table 3.69
  - `CouplingPortDetails` has exactly one `ethernetTrafficClassAssignment` defined
  - the `CouplingPortTrafficClassAssignment` has no `priority` defined
- PCP-field to Traffic Class Mapping from table 3.70
  - for each traffic class the `CouplingPortDetails` aggregate one `ethernetTrafficClassAssignment`
  - each `CouplingPortTrafficClassAssignment` element has a set of `priority`s defined which shall be mapped to the given `trafficClass`

⌋*(RS_SYST_00052)*

[TPS_SYST_03011] Ethernet switch traffic class to FIFO assignment ⌈ Second, the traffic classes are assigned to the switch egress FIFOs. The `CouplingPortFifo` has a set of `assignedTrafficClass` elements. These defined traffic classes shall be forwarded to this FIFO. ⌋*(RS_SYST_00052)*

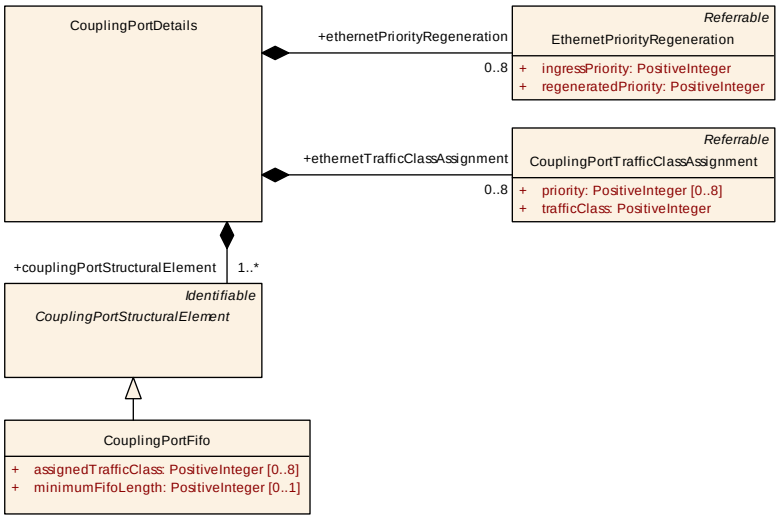

Figure 3.14: Ethernet Priority Regeneration and Ethernet Traffic Class Assignment

Class	**EthernetPriorityRegeneration**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Defines a priority regeneration where the ingressPriority is replaced by regeneratedPriority. The ethernetPriorityRegeneration is optional in case no priority regeneration shall be performed. In case a ethernetPriorityRegeneration is defined it shall have 8 mappings, one for each priority.			
Base	*ARObject*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
ingressPriority	PositiveInteger	1	attr	Message priority of the incoming message. range: 0-7
regenerated Priority	PositiveInteger	1	attr	Regenerated message priority. range: 0-7

Table 3.72: EthernetPriorityRegeneration

Class	**CouplingPortTrafficClassAssignment**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Defines the assignment of Traffic Class to a frame. Two use-cases are supported: 1. Only one ethernetTrafficClassAssignment is defined and NO priority is given: • – > all frames on this ingress port get assigned the trafficClass. 2. for each ethernetTrafficClass WITH a priority the frames which are coming in with this priority get assigned the trafficClass. Constraint: 1 and 2 can not be combined for one CouplingPortDetails.			
Base	*ARObject*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
priority	PositiveInteger	0..8	attr	Defines a priority which is mapped onto a Traffic Class.
trafficClass	PositiveInteger	1	attr	Defines the Traffic Class which is assigned. range: 0-7

Table 3.73: CouplingPortTrafficClassAssignment

3.3.6.6.4 Ethernet VLAN Configuration

For each VLAN identifier a table is necessary which stores at which egress port the corresponding VLAN is tagged or untagged. For an 8-port switch, this table could look like the following example where T stands for tagging and U for untagging:

	Port number							
VLAN-Id	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**
1	T	T	-	U	-	-	-	T
2	T	U	-	T	-	-	-	T
...								
4094								

Table 3.74: VLAN Forwarding table

Incoming packets which contain a VLAN-ID of e.g. 1 can be forwarded to the ports 1, 2, 4, and 8. At ports 1, 2, and 8 these packets will be transmitted with the VLAN tag and at port 4 the tag will be removed. If a broadcast message with e.g. VLAN-ID 2 will be received at port 2 it will be forwarded to port 1, 4, and 8. The other ports 3, 5, 6, and 7 are not in the same VLAN. Thus, the packet will not be forwarded to these egress ports. The table considers only messages which contain a VLAN-ID within the switch.

`CouplingPort.vlanMembership` defines specific attributes to the behavior a packet with a specific VLAN-ID shall have on this `CouplingPort`.

[TPS_SYST_03004] VLAN specific sending behavior ⌈ The `VlanMembership.sendActivity` defines for a `CouplingPort` and VLAN the sending behavior:

- `sentTagged`: packet is sent at this `CouplingPort` with the defined VLAN-ID
- `sentUntagged`: packet is sent at this `CouplingPort` but the VLAN-ID is removed before sending
- `notSent`: packet is not sent at this `CouplingPort`

⌋*(RS_SYST_00052)*

Another table specifies a port-based modification of the VLAN-ID or an insertion of the VLAN-ID into the Ethernet message:

Port number	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**
VLAN-Id	2	-	-	6	-	-	-	-

Table 3.75: Ingress VLAN Modification/Insertion Table

In this example, all incoming messages at port one will get the VLAN-Id 2 no matter whether they already had one before. At port 4, all incoming messages will get a 6 as their VLAN-Id. At the remaining ports, no VLAN-Ids will be inserted and an existing VLAN-Id in the Ethernet-message will remain without modification.

[TPS_SYST_03005] VLAN re-tagging ⌈ All incoming messages at a `CouplingPort` where the `CouplingPort.vlanModifier` is defined shall be tagged with the VLAN-Id defined in `CouplingPort.vlanModifier`. This tagging is performed regardless whether the message already has a VLAN tag or is untagged, an existing VLAN tag shall be overwritten. ⌋*(RS_SYST_00052)*

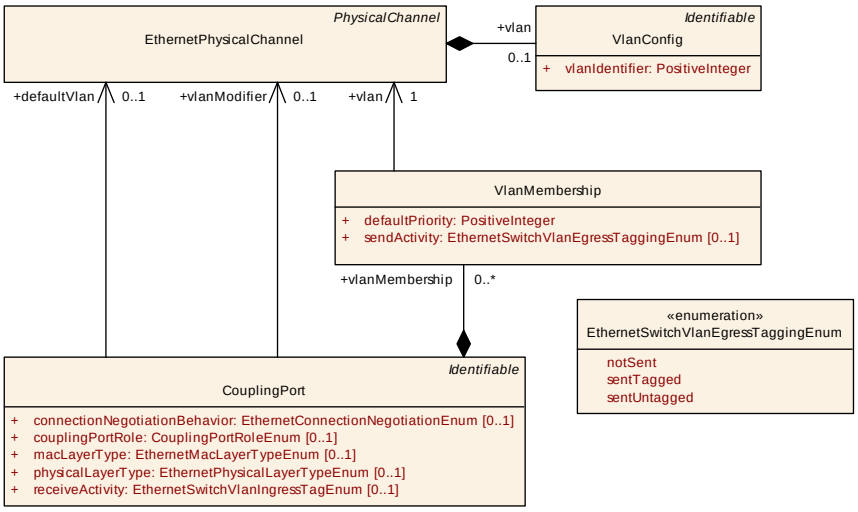

Figure 3.15: VLAN Modification

Enumeration	**EthernetSwitchVlanEgressTaggingEnum**

Table 3.76: EthernetSwitchVlanEgressTaggingEnum

3.3.6.6.5 Semi-static DHCP server configuration

The ECU which manages the Ethernet switch may run a semi-static DHCP server.

[TPS_SYST_03013] Semi-static DHCP server configuration ⌈ In order to be able to assign always the same IP-address to a dedicated DHCP client, the DHCP server needs the information at which switch port the DHCP request with the specific MAC address has been received. With this switch port information the DHCP server will assign the IP-address according to the `VlanMembership.dhcpAddressAssignment`.

This allows the assignment of MAC addresses by the Tier 1 and assignment of IP addresses by the OEM. With this mechanism it is also possible to assign different IP addresses to several VLANs at the same port. ⌋(*RS_SYST_00052*)

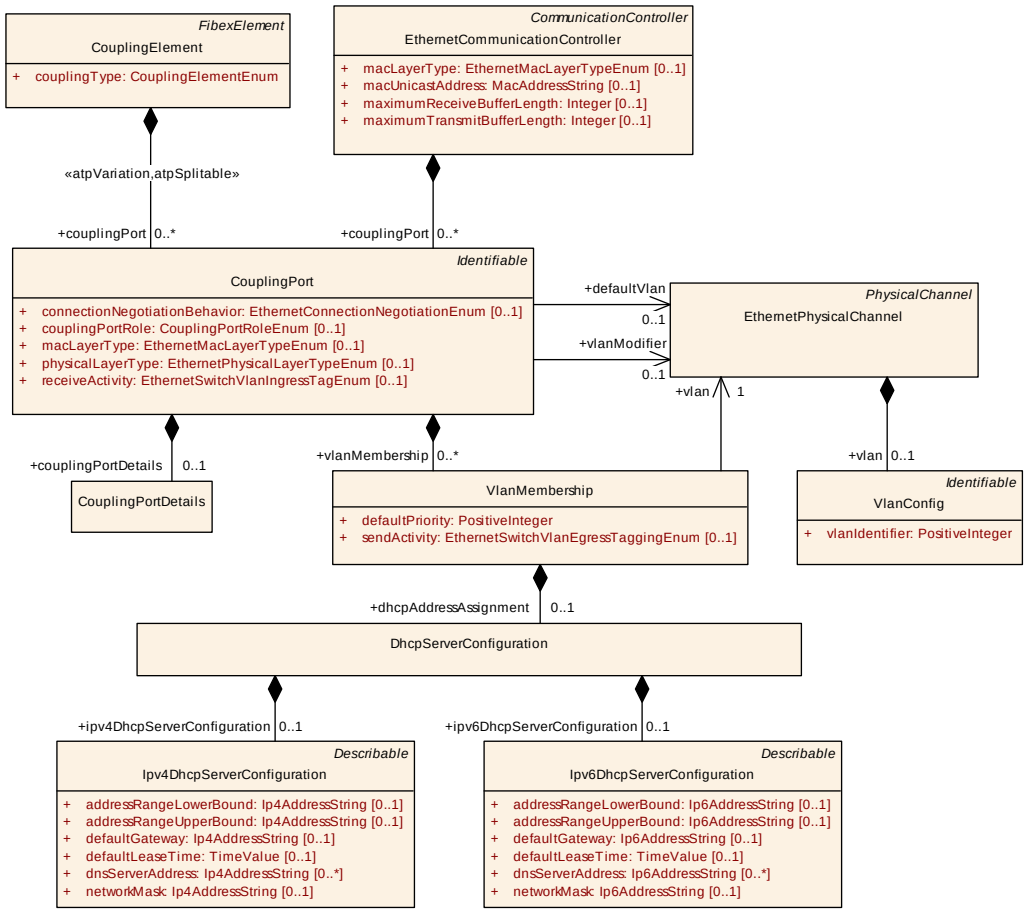

Figure 3.16: Semi-static DHCP configuration

3.3.7 CDD

The System Template allows the integration of custom bus systems on the topology level.

[TPS_SYST_01127] CDD Topology support ⌈ The elements `UserDefinedCluster`, `UserDefinedPhysicalChannel`, `UserDefinedCommunicationConnector` and `UserDefinedCommunicationController` can be used to describe alternative communication technologies (e.g. I2C, USB, serial line) that are integrated in AUTOSAR as Complex Drivers. ⌋*(RS_SYST_00044)*

The Pdu-based communication via Complex Drivers is described in chapter 6.12.

3.4 Mapping of Topology Entities onto Hardware Elements

As explained in the previous sections, the System Template contains all classes necessary to describe the physical topology in an AUTOSAR system. Based on this description, the communication matrix can be realized as explained in chapter 6.

[TPS_SYST_01019] Mapping of topology elements to elements of the ECU Resource Template ⌈ It is possible to map the hardware related topology elements onto their counterpart definitions in the ECU Resource Template. ⌋*(RS_SYST_00006)*

It can be specified which `HwElement` is realizing each given `EcuInstance`, providing the means for algorithms to map software components onto the systems `EcuInstance`. By specifying which `hwCommunicationPort`[3] on a `hwCommunicationController`[4] implements the topology's `CommunicationConnector` on a `CommunicationController`, the hardware-oriented parameters in the Communication-drivers may be derived in ECU configuration phase.

Please note that this is a rather specific type of mapping, optionally binding ECU-local topology elements to specific hardware resources. It should not be confused with the

[3] `HwPinGroup` which is of category Communication Port
[4] `HwElement` which is of category Communication Controller

System Mapping part of the System Description, where system-wide mapping decisions are described, like e.g. the the mapping of Software Components onto ECUs or the mapping of Data Element Prototypes onto System Signals (for the System Mapping, see chapter 5).

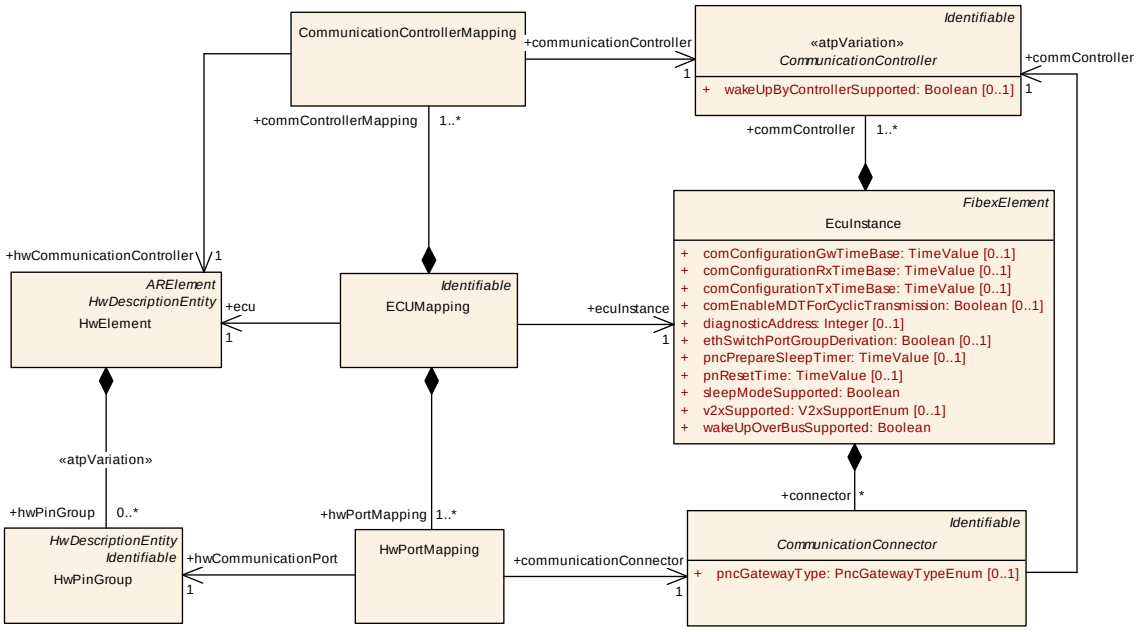

Figure 3.18: Mapping of topology description elements in the System Template onto hardware elements defined in the ECU Resource Template (ECUResourceMapping)

[constr_3006] valid EcuMapping ⌈ The referenced `hwCommunicationController` and `hwCommunicationPort` shall be part of the referenced `ecu`.

`ECUMapping.ecu`.nestedElement contains `ECUMapping.commControllerMapping.hwCommunicationController`

`ECUMapping.ecu`.nestedElement contains `ECUMapping.hwPortMapping.hwCommunicationPort` ⌋*()*

3.4.1 ECU Mapping

`ECUMapping` allows to assign a `HwElement` to an `EcuInstance` used in a physical topology.

[TPS_SYST_01013] `EcuInstance` stands for its own ⌈ An `EcuInstance` can be defined in a stand alone and reusable way without a need to have an `ECUMapping`. ⌋ *(RS_SYST_00013)*

[constr_3030] valid relationship between `ECUMapping` and `EcuInstance` ⌈ If an `EcuInstance` is assigned to a `HwElement` the `EcuInstance` shall belong to the same `System` as the `ECUMapping`. ⌋*()*

[constr_3248] Category of `HwElement` for `ECUMapping` ⌈ The `HwElement` which is referenced from `ECUMapping` in the role `ecu` shall be of category `MicroController` ⌋*()*

There exists an inconsistency between the System Template and the ECU Resource Template concerning the usage of the term "Ecu". In the System Template "Ecu" is used to determine one instance of an AUTOSAR Stack (e.g. like in `EcuInstance`). In the Ecu Resource Template "Ecu" is used to describe the physical box (`HwElement` of category Ecu) containing the electronics which may contain several processing units with several AUTOSAR Stack instances running.

Class	**ECUMapping**

Table 3.83: HwPortMapping

4 Top-level Software Composition

One of the most important inputs for the System Generator is the knowledge about the Application Software Components, their communication capabilities and the connections between them: Each SystemSignal (chapter 6.2) that is going to be exchanged between mapped Software Components onto different ECUs is a consequence of a connection between such application Software Components.

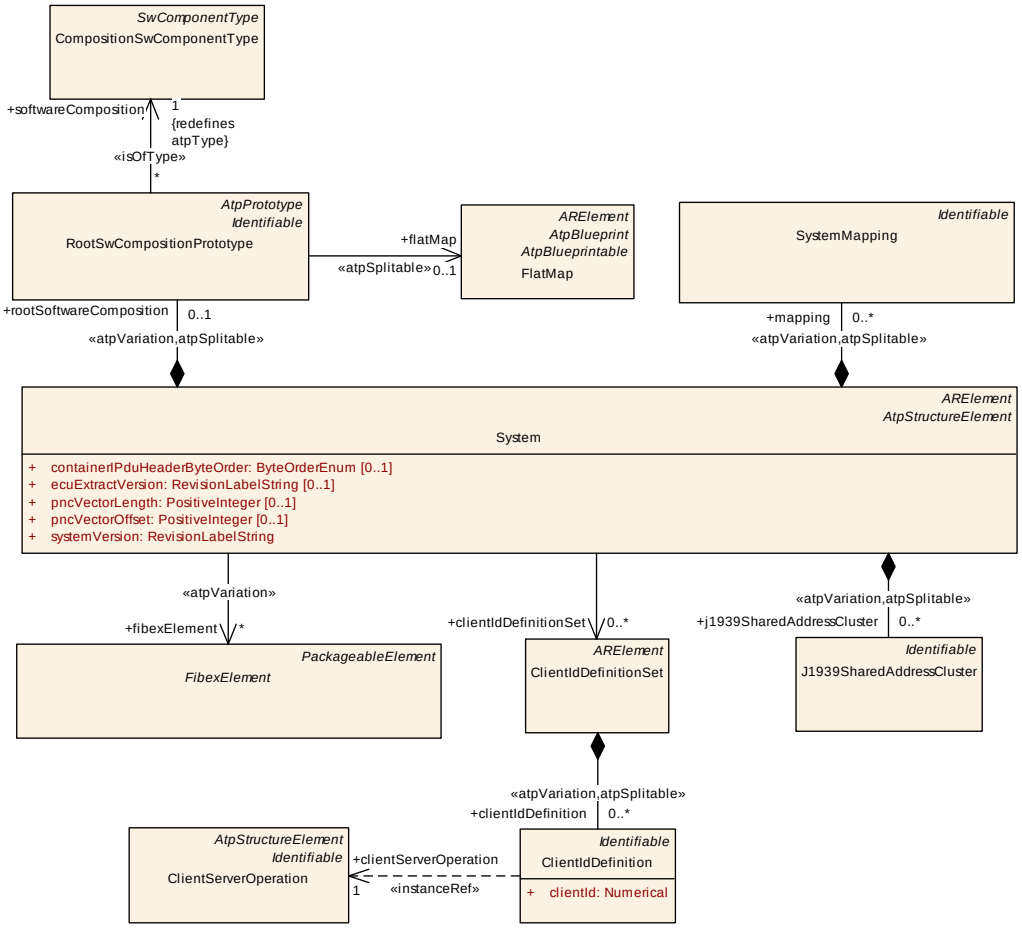

Figure 4.1: Inclusion of a (top-level) Software Composition into an AUTOSAR system (SystemTemplate)

In AUTOSAR, Software Components can either be atomic (AtomicSwComponentType) or may consist of a composition of other Software Components CompositionSwComponentType [5]. In order to assemble non-trivial applications from AUTOSAR components, such compositions can be built up hierarchically, until the outermost CompositionSwComponentType forms a kind of top-level composition.

[constr_3031] Complete System Description does not have ports on the outermost composition ⌈ In a complete System with category ABSTRACT_SYSTEM_DESCRIPTION or System with category SYSTEM_DESCRIPTION this outermost CompositionSwComponentType has the unique feature that it doesn't have any outside ports, but all the SWC contained in it are connected to each

other and fully specified by their SwComponentTypes, PortPrototypes, PortInterfaces, VariableDataPrototypes, InternalBehavior etc. ⌋()

[TPS_SYST_01016] System Extract, Ecu System Description and Ecu Extract may have ports ⌈ In a System with category SYSTEM_EXTRACT and a System with category ECU_SYSTEM_DESCRIPTION and a System with category ECU_EXTRACT outside ports for the outermost composition are allowed. ⌋ *(RS_SYST_00027)*

Since the System/Ecu Extract represents the view on one Ecu, there may be the need to define the communication of this extract with the outside world.

Two approaches are available how the external communication of an ECU in the System Extract is described. In section 11.2 the communication mapping is performed in the hierarchical structure of software components. In section 11.3 external communication delegation ports are added to the System extract outermost composition. Each delegated port is connected via a DelegationSwConnector with ports of the included components that are used for the external communication.

A System considers such a top-level CompositionSwComponentType as its application software system input by owning exactly one RootSwCompositionPrototype class, which points to the CompositionSwComponentType forming the input via its ≪isOfType≫ relationship as shown in Figure 4.1.

[TPS_SYST_01017] The role of the top-level software composition ⌈ An AUTOSAR System uses the specialized prototype class RootSwCompositionPrototype in order to designate the referenced CompositionSwComponentType as the top-level software composition. ⌋*(RS_SYST_00006)*

Class	**RootSwCompositionPrototype**			
Package	M2::AUTOSARTemplates::SystemTemplate			
Note	The RootSwCompositionPrototype represents the top-level-composition of software components within a given System. According to the use case of the System, this may for example be the a more or less complete VFB description, the software of a System Extract or the software of a flat ECU Extract with only atomic SWCs. Therefore the RootSwComposition will only occasionally contain all atomic software components that are used in a complete VFB System. The OEM is primarily interested in the required functionality and the interfaces defining the integration of the Software Component into the System. The internal structure of such a component contains often substantial intellectual property of a supplier. Therefore a top-level software composition will often contain empty compositions which represent subsystems. The contained SwComponentPrototypes are fully specified by their SwComponentTypes (including Port Prototypes, PortInterfaces, VariableDataPrototypes, SwcInternalBehavior etc.), and their ports are interconnected using SwConnectorPrototypes.

Table 4.1: RootSwCompositionPrototype

5 Mapping

A central part of the system generation process is the mapping of software components (SwComponentPrototypes) to ECUs, and the subsequent mapping of the communication between these software components to bus frames. Input to the software component mapping is the RootSwCompositionPrototype, which describes which software components have to be mapped, and the System Topology, which defines the ECU instances that are available as mapping targets. Once this mapping is done, also the communication matrix has to be taken into account for the next mapping step, the mapping of data elements exchanged between software components to bus frames. This communication matrix may either be predefined, or may be generated as part of this second mapping step. In the metamodel, different aspects of these mapping are aggregated by the meta class SystemMapping, as shown in Figure 5.1.

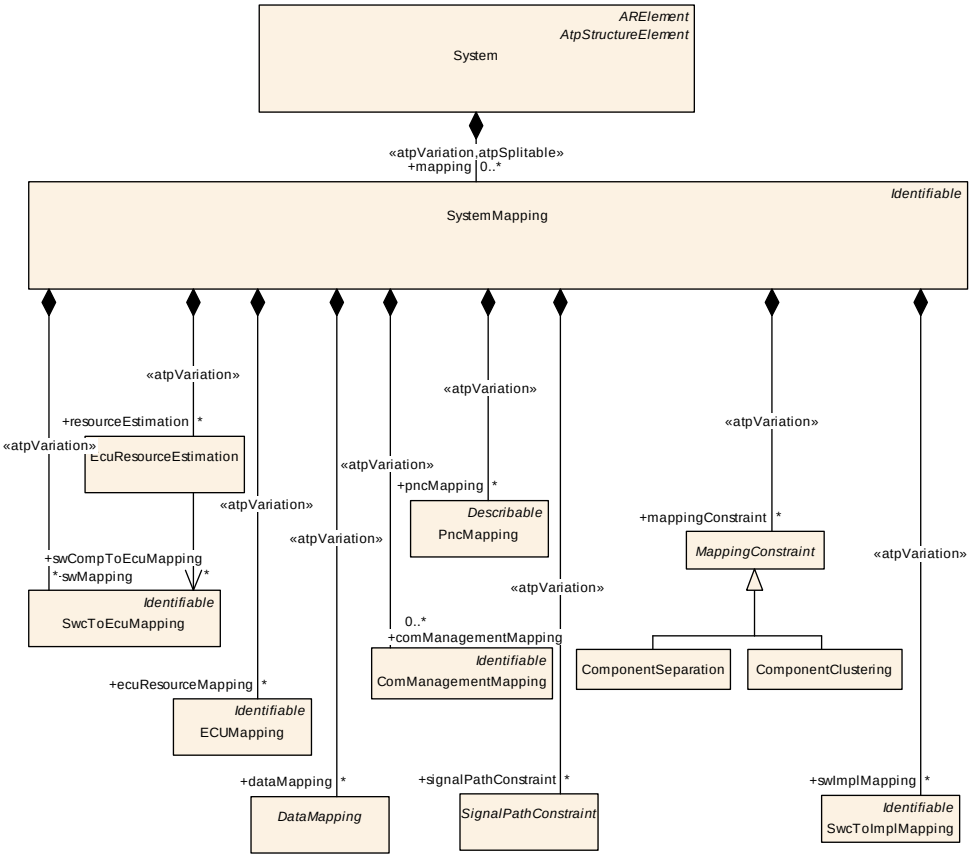

Figure 5.1: Mapping Overview (Mapping)

The following mappings are defined:

- The SwcToEcuMapping meta-class maps one or several SwComponentPrototypes to ECUs. In the System Constraint Description it is possible to predefine the mapping of SwComponentPrototypes to ECUs. The predefinition limits the system architect's freedom to map software components to arbitrary ECUs. After the system generation in the System Configuration Description, all atomic software components that are directly or indirectly part of the top level composition must be mapped with this mapping rule. Software component mapping is described in detail in chapter 5.1.
- The meta-class EcuResourceEstimation specifies the resource estimation for RTE and basic software (see chapter 5.3).
- The ECUMapping meta-class is used to map the hardware related topology elements onto their counterpart definitions in the ECU Resource Template (see chapter 3.4).
- The DataMapping meta-class is used to map VariableDataPrototypes and ClientServerOperations in software component ports (i.e. the data exchanges between software components) to signals. The data mapping is described in detail in chapter 5.2.
- The ComManagementMapping defines the mapping of one or several Mode Management PortGroups and communication channels (see chapter 5.5).
- The PncMapping defines the Partial Network behavior (see chapter 5.4).
- The SignalPathConstraint meta-class is used to define which specific way a signal (data element or client server operation arguments) between two Software Components should take in the network without defining in which frame and with which timing it is transmitted. This Signal Path Constraint is introduced in chapter 5.2.2.
- The MappingConstraint meta-class is used to define constraints that constrain the mapping of software components. It's sub-classes allow to constraint which SwComponentPrototypes must be mapped together on the same ECU (ComponentClustering) and which must not be mapped to the same ECU (ComponentSeparation). The mapping constraints are described in detail in chapter 5.1.4.
- The J1939ControllerApplicationToJ1939NmNodeMapping maps a Software Component to which a standardized function id is assigned to a J1939NmNode (see chapter 5.1.5)
- Finally, the SwcToImplMapping meta-class is used to assign one Implementation to one or more SwComponentPrototypes (see chapter 5.1.2).

Table 5.1: SystemMapping

5.1 Software Component Mapping

A fundamental concept of AUTOSAR is that SW components may be developed independently of a specific ECU hardware, and can be mapped to an ECU in the AUTOSAR System Generation Process. The System Constraint Description acts as an input to this System Generation Phase. Nevertheless, there may be some SW components which are already mapped due to previous iterations of the system generation step, and there may be system constraints that limit the system architect's freedom to map SW components to arbitrary ECUs. In the following, the individual elements are described in more detail.

5.1.1 SW Component to ECU Mapping

[TPS_SYST_01001] Definition of `SwcToEcuMapping` ⌈ With the `SwcToEcuMapping` element it is possible to express the mapping of `SwComponentPrototype`s to one `EcuInstance` or optional to individual `HwElement`s with `category` `Processing Unit` residing in this ECU. An optional assignment of Sensor/Actuator `SwComponentPrototype`s to Sensor/Actuator `HwElement`s is also possible. ⌋ *(RS_SYST_00007, RS_SYST_00033)*

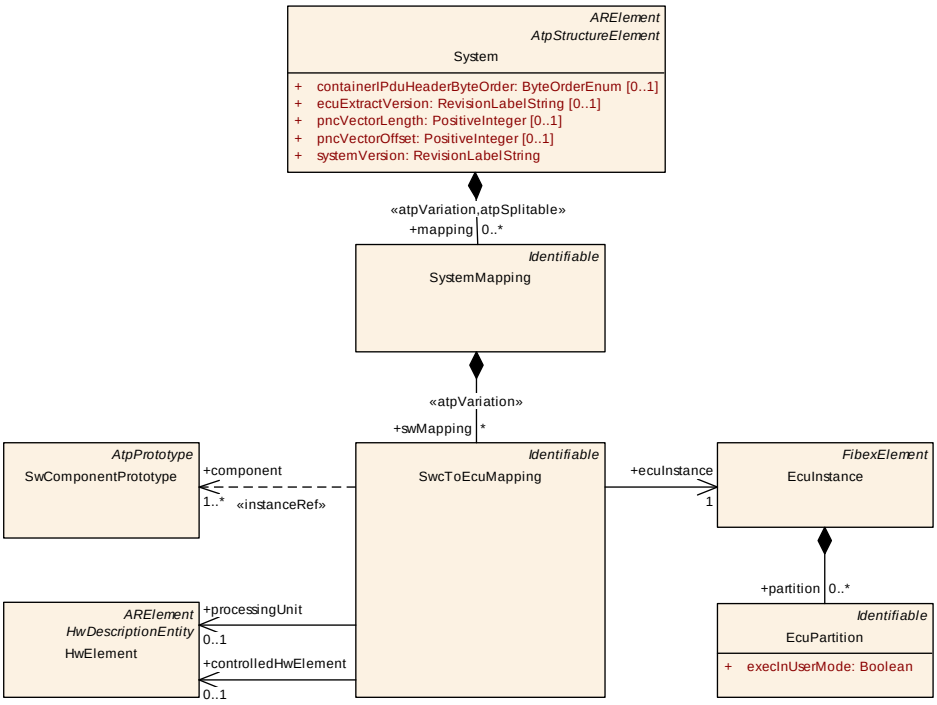

Figure 5.2: SW component to ECU mapping (SwcToEcuMapping)

The SwcToEcuMapping collects a list of all SwComponentPrototypes that shall be deployed onto the associated SwcToEcuMapping targets.

[TPS_SYST_02114] Mapping of SwComponentPrototypes onto SwcToEcuMapping targets ⌈ The SwcToEcuMapping of SwComponentPrototypes to

- EcuInstance
- processingUnit
- controlledHwElement

is arbitrary.

It is equivalent to either

- have several SwcToEcuMappings which map a set of SwcToEcuMapping.components to a SwcToEcuMapping.ecuInstance, SwcToEcuMapping.processingUnit, SwcToEcuMapping.controlledHwElement,
- or one SwcToEcuMapping which maps the set of SwcToEcuMapping.components at once.

⌋(*RS_SYST_00007*)

[constr_3263] Restriction of usage of SwcToEcuMapping in a System ⌈ For all SwcToEcuMappings in a System the following restriction applies: No two SwcToEcuMappings shall have the exact same reference to

- SwComponentPrototype

- EcuInstance
- processingUnit
- controlledHwElement

⌋()

SwcToEcuMapping may map either prototypes of AtomicSwComponentType or those of CompositionSwComponentType.

[TPS_SYST_01020] Unconditional mapping of atomic Software Components ⌈ In case a prototype of an atomic Software Components is mapped, the mapping is unconditional. ⌋*(RS_SYST_00007)*

[TPS_SYST_01021] Mapping of CompositionSwComponentType ⌈ In case a mapped SwComponentPrototype refers to a CompositionSwComponentType, the mapping is applied to any inner SwComponentPrototype recursively; however, it may be overwritten by additional SwcToEcuMapping mapping inner SwComponentPrototype to different EcuInstances. ⌋*(RS_SYST_00007)*

Usually a particular component prototype can be mapped explicitly to at most one ECU in a given system (leaving aside variant handling and the implicit mapping of "inner" prototypes mentioned above) but there are two exceptions:

- **[TPS_SYST_01022] Prototype of a ParameterSwComponentType can be mapped to more than one ECU** ⌈ A prototype of a ParameterSwComponentType can be mapped to more than one ECU. This is required, because this special component does not communicate over the network, so that a copy of the prototype has to be created on each ECU were it is required. ⌋*(RS_SYST_00007)*
- **[TPS_SYST_01023] Prototype of an ServiceProxySwComponentType can be mapped to more than one ECU** ⌈ A prototype of an ServiceProxySwComponentType can be mapped to more than one ECU even if it appears only once in the VFB system, because a prototype of this special component is required on each ECU, for which local Services are addressed via the proxy. ⌋ *(RS_SYST_00031)*

[constr_3021] Mapping of SensorActuatorSwComponents to SensorActuator HwElements ⌈ Only SwComponentPrototypes that are typed by SensorActuatorSwComponentType shall be mapped to a HwElement with category SensorActuator via the controlledHwElement relation. ⌋()

[constr_3249] Category of HwElement for SwcToEcuMapping ⌈ The HwElement which is referenced from SwcToEcuMapping in the role processingUnit shall be of category "ProcessingUnit". ⌋()

The following table describes the SwcToEcuMapping in detail.

Class	**SwcToEcuMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping			
Note	Map software components to a specific ECU Instance and optionally to a processing unit and to an Ecu Partition. For each combination of ECUInstance and the optional ProcessingUnit and the optional Ecu Partition and the optional SensorActuator only one SwcToEcuMapping shall be used.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
component	SwComponent Prototype	1..*	iref	References to the software component instances that are mapped to the referenced ECUInstance. If the component prototype referenced is a composition, this indicates that all atomic software components within the composition are mapped to the ECU. If there is aditionally a mapping of some SwComponent Prototype INSIDE the Composition to another ECU Instance the inner mapping overrides the outer mapping.
controlledHw Element	HwElement	0..1	ref	Optional mapping of SwComponentPrototypes that are typed by SensorActuatorSwComponentType to a Hw Element with category SensorActuator.
ecuInstance	EcuInstance	1	ref	Reference to a specific ECU Instance description.
processingUnit	HwElement	0..1	ref	Optional mapping of software components to individual microcontroller cores residing in one ECU. A microcontroller core is described in the ECU Resource Template by the HwElement of HwCategory Processing Unit.

Table 5.2: SwcToEcuMapping

5.1.2 Software Component to Implementation Mapping

As several implementations may exist for the same AtomicSwComponentType, it needs to be decided on and specified which instances of a given AtomicSwComponentType are mapped to which Implementation. According to the AUTOSAR Methodology this information can either be added within the Configure System activity, or later when the RTE part is configured during Configure ECU phase. If the mapping is done in System Configuration, a SwcToImplMapping is being used for assigning one Implementation to one or more instances of SwComponentPrototype relating to the same AtomicSwComponentType. This is illustrated in Figure 5.3.

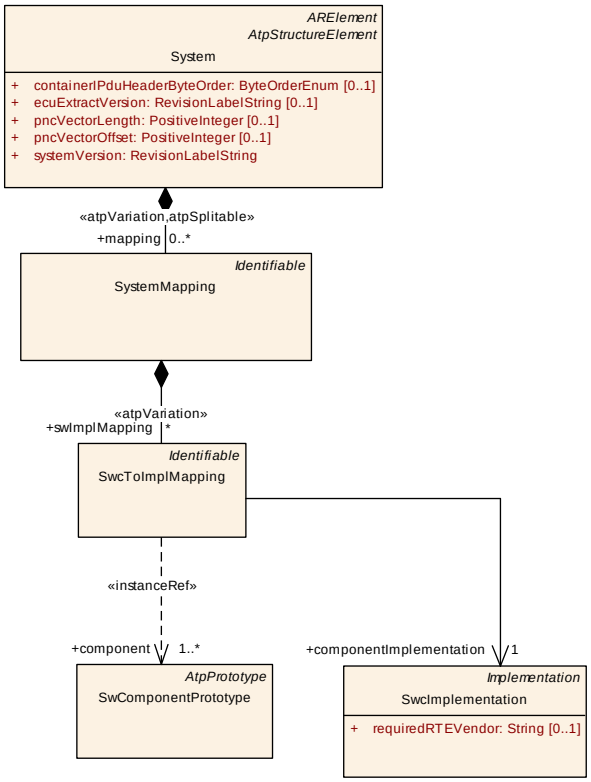

Figure 5.3: SW Component to Implementation mapping (SwcToImplMapping)

[constr_3002] valid swcToImplMapping ⌈ The referenced SwcImplementation refers to a SwcInternalBehavior that is part of a AtomicSwComponentType. The same AtomicSwComponentType shall be the type of the referenced SwComponentPrototype.

SwcToImplMapping.componentImplementation.behavior.component == SwcToImplMapping.component.type ⌋*()*

The following table contains the detailed description of SwcToImplMapping:

Class	**SwcToImplMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping			
Note	Map instances of an AtomicSwComponentType to a specific Implementation.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
component	SwComponent Prototype	1..*	iref	Reference to the software component instances that are being mapped to the specified Implementation. The targeted SwComponentPrototype needs be of the Atomic SwComponentType being implemented by the referenced Implementation.
component Implementation	SwcImplementation	1	ref	Reference to a specific Implementation description. Implementation to be used by the specified SW component instance. This allows to achieve more precise estimates for the resource consumption that results from mapping the instance of an atomic SW component onto an ECU.

Table 5.3: SwcToImplMapping

5.1.3 SW Component to Partition Mapping

With the SwcToApplicationPartitionMapping and the ApplicationPartitionToEcuPartitionMapping an OEM has the option to predefine an allocation to memory partitions in the System Design phase. The final and complete assignment is described in the OS Configuration. The SwcToApplicationPartitionMapping defines a mapping to ApplicationPartitions that allows an allocation to a formally defined partition at a point in time when the EcuInstance is not yet known or defined. In a later methodology step this assignment can be refined with the ApplicationPartitionToEcuPartitionMapping to an EcuPartition defined in the context of an EcuInstance.

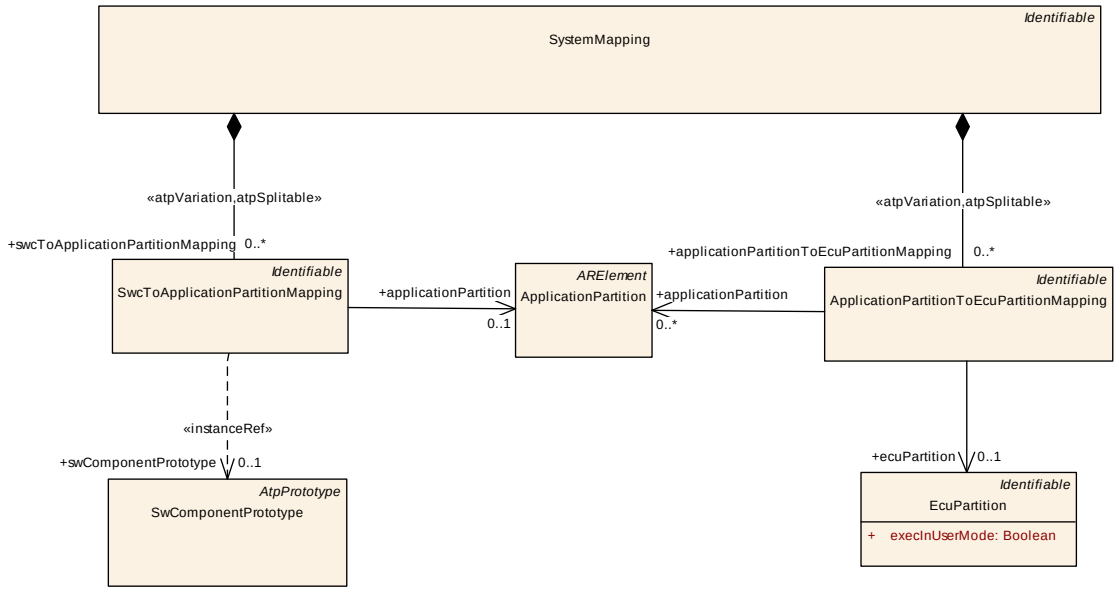

Figure 5.4: SW Component to Application Partition mapping

Class	**SwcToApplicationPartitionMapping**

Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
execInUserMode	Boolean	1	attr	A partition can execute either in CPU user mode (execInUserMode = TRUE) or supervisor mode (execInUserMode = FALSE). In user mode, the partition has a limited access to memory, to memory mapped hardware and to CPU. In user mode, the partition is mapped to a non-trusted OS-Application.

Table 5.7: EcuPartition

[constr_3232] `ApplicationPartition` is allowed to be mapped to only one `EcuPartition` ⌈ Each `ApplicationPartition` shall be mapped at most once to an `EcuPartition` via the `ApplicationPartitionToEcuPartitionMapping`. ⌋ *()*

[constr_3229] `SwComponentPrototype` mapped to an `ApplicationPartition` and `EcuInstance` ⌈ If the `SwcToEcuMapping.ecuInstance` exists then a `SwComponentPrototype` that is mapped to an `ApplicationPartition` via the `SwcToApplicationPartitionMapping` shall only be mapped by an `ApplicationPartitionToEcuPartitionMapping` to an `EcuPartition` that is aggregated by the `EcuInstance` referenced by means of `SwcToEcuMapping.ecuInstance`. ⌋*()*

5.1.4 Software Component Mapping Constraints

In contrast to the mapping description described in the previous chapters, mapping constraints allow to define invariants that have to be fulfilled by a valid mapping. They are aggregated in the MappingConstraint element as introduced in chapter 5 and depicted Figure 5.1. This chapter describes which mapping constraints can be described in the System Constraint Description. The description of this meta-class can be found in the following table:

Class	***MappingConstraint*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping			
Note	Different constraints that may be used to limit the mapping of SW components to applicable ECUs, Partitions or Cores depending on the mappingScope attribute.			
Base	*ARObject*			
Subclasses	ComponentClustering, ComponentSeparation			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
introduction	DocumentationBlock	0..1	aggr	This represents introductory documentation about the mapping constraint.

Table 5.8: MappingConstraint

The two constraints (ComponentClustering and ComponentSeparation) shown in Figure 5.5 express the restrictions that Software Components impose on each other when performing the mapping onto the ECUs, Cores or Partitions. In fact, before the mapping process begins, it can be useful to impose the allocation of a predefined set of SW components onto the same ECU, especially if such a set is tightly linked from a functional point of view. In the same way, two critical SW components, performing some kind of redundancy, may be not suitable to run both on the same ECU. Thus, we call these two kinds of mapping constraints, respectively, ComponentClustering and ComponentSeparation.

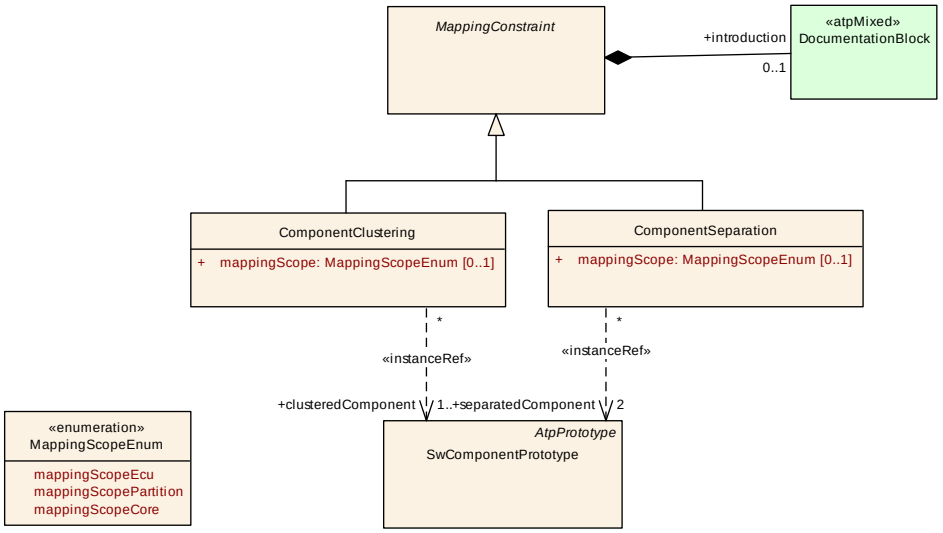

Figure 5.5: Details on ComponentClustering and ComponentSeparation (SwcClustering)

5.1.4.1 ComponentClustering

[TPS_SYST_01024] Component Clustering ⌈ The `ComponentClustering` constraint (also, *clustering*) is to be used for expressing that a certain set of SW components (atomic or not) shall be mapped (allocated) onto the same ECU, Core, Partition depending on the defined `mappingScope` attribute. ⌋*(RS_SYST_00008)*

This is some kind of "execute together on same ECU" constraint.

The semantic of the clustering constraint is straightforward if all referenced SW components are atomic. Otherwise, it shall be interpreted as follows:

[TPS_SYST_01025] Clustering of Compositions ⌈ All of the atomic SW components making up the composition shall be mapped onto the same ECU, Core, Partition depending on the defined `mappingScope` attribute together with all other SW components (atomic or not) referenced by the constraint. ⌋*(RS_SYST_00008)*

This also means that a *clustering* constraint can also refer to only a single composition.

A *clustering* constraint is part of a `MappingConstraint` element and it must refer to one or more `SwComponentPrototype` elements, representing the instances of the SW component(s) that must be mapped together.

Class	**ComponentClustering**			
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping			
Note	Constraint that forces the mapping of all referenced SW component instances to the same ECU, Core, Partition depending on the defined mappingScope attribute. If mappingScope is not specified then mappingScopeEcu shall be assumed.			
Base	*ARObject*, *MappingConstraint*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
clustered Component	SwComponent Prototype	1..*	iref	Reference to the components that have to be mapped together.
mappingScope	MappingScopeEnum	0..1	attr	This attribute indicates whether the ComponentClustering mapping constraint applies to different ECUs, partitions or cores. If this attribute is not specified then mappingScope Ecu shall be assumed. **Tags:** atp.Status=shallBecomeMandatory

Table 5.9: ComponentClustering

Enumeration	**MappingScopeEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping
Note	Defines the scope for the mapping constraints.
Literal	***Description***
mappingScopeCore	The mapping constraint applies to different Cores. **Tags:** atp.EnumerationValue=0
mappingScopeEcu	The mapping constraint applies to different Ecus. **Tags:** atp.EnumerationValue=1

▽

△

Enumeration	**MappingScopeEnum**
mappingScope Partition	The mapping constraint applies to different Partitions. **Tags:** atp.EnumerationValue=2

Table 5.10: MappingScopeEnum

5.1.4.2 ComponentSeparation

[TPS_SYST_01045] Component Seperation ⌈ The `ComponentSeparation` constraint (also, *separation*) is to be used for expressing that two SW components (atomic or not) shall not be mapped (allocated) onto the same ECU, Core, Partition depending on the defined `mappingScope` attribute. ⌋*(RS_SYST_00009)*

This is some kind of “do not execute together on same ECU” constraint.

The semantic of the separation constraint is straightforward if one or both SW components are atomic. Otherwise, it shall be interpreted as follows:

[TPS_SYST_01026] Separation of Compositions ⌈ Any of the atomic SW components making up the first composition, shall not be mapped onto the same ECU, Core, Partition depending on the defined `mappingScope` attribute with any atomic SW component from the second composition. ⌋*(RS_SYST_00009)*

As a consequence, and to preserve consistency, an atomic SW component instance cannot be part of two compositions concerned by the same separation constraint, i.e. the two compositions have to be disjoint with regards to component instances[1].

A *separation* constraint is part of a `MappingConstraint` element and it must refer to two `SwComponentPrototype` elements, representing the two SW component instances that must not be allocated together.

Class	**ComponentSeparation**
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping
Note	Constraint that forces the two referenced SW components (called A and B in the following) not to be mapped to the same ECU, Core, Partition depending on the defined mappingScope attribute. If mapping Scope is not specified then mappingScopeEcu shall be assumed. If a SW component (e.g. A) is a composition, none of the atomic SW components making up the A composition must be mapped together with any of the atomic SW components making up the B composition. Furthermore, A and B must be disjoint.

▽

[1] The only case where a component instance could be in both sets is if the `ComponentSeparation` refers to two elements where one of them is a substructure of the other. Consider the case that Atomic SW Component A is aggregated by composition B, which in turn is aggregated by composition C. Then instance A is both in B and C. It is not a good idea to formulate a separation constraint stating that B and C should not be on the same ECU.

△

Class	**ComponentSeparation**			
Base	*ARObject*, *MappingConstraint*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
mappingScope	MappingScopeEnum	0..1	attr	This attribute indicates whether the Component Separation mapping constraint applies to different ECUs, partitions or cores. If this attribute is not specified then mappingScopeEcu shall be assumed. **Tags:** atp.Status=shallBecomeMandatory
separated Component	SwComponent Prototype	2	iref	The two components that have to be mapped to different ECUs

Table 5.11: ComponentSeparation

[constr_3004] Clustering and separation must be exclusive ⌈ Clustering and separation must be exclusive, i.e. it SHALL NOT be possible that two `SwComponentPrototype`s A and B are associated by a `ComponentClustering` and by a `ComponentSeparation`. ⌋*()*

5.1.5 J1939 Controller Application Mapping

J1939 is not restricted to mere communication protocols. It also specifies the communication of software functions (a.k.a. J1939 Controller Applications) and thus has a very dedicated view on the software of an automotive ECU. The approach taken by J1939 with respect to software is very similar to the way AUTOSAR specifies software-components.

However, J1939 uses a different terminology and associates such a software-component with a predefined function. In addition, every function in J1939 has a standardized id. This function id is distributed by the Controller Application to the network as part of the so-called "name" which is a unique identifier representing a Controller Application within the J1939 network management.

Controller Applications, to some extent, fulfill the role of a "virtual ECU" since they are visible as independent entities on a J1939 network. In terms of AUTOSAR modeling, the role of a "virtual ECU" for J1939 Controller Applications is fulfilled by the meta-class `J1939NmNode`.

In order to make use of the AUTOSAR modeling approach for J1939 it is very helpful to associate a standardized function id with a software-component during an early phase of a development project. This function id shall later be mapped to a `J1939NmNode` with the identical `J1939NmNode.nodeName.function`.

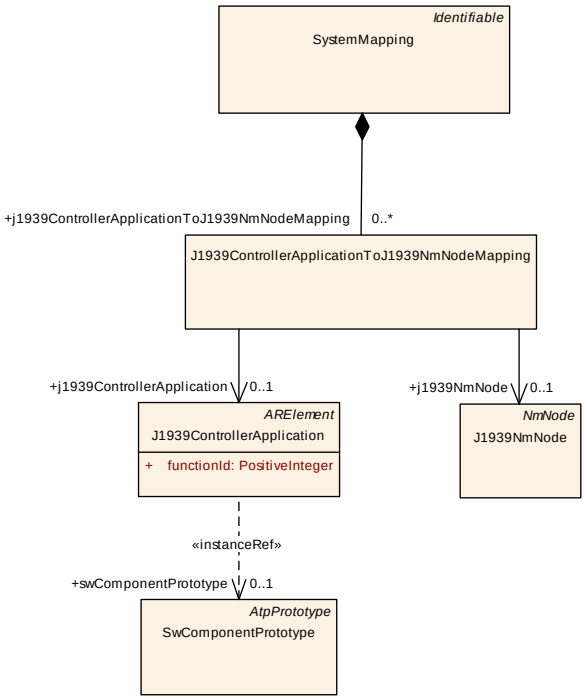

Figure 5.6: J1939 Controller Application to J1939NmNode Mapping

Class	J1939ControllerApplicationToJ1939NmNodeMapping			
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping			
Note	This meta-class represents the ability to map a J1939ControllerApplication to a J1939NmNode. Note that this is similar but not identical to the mapping of SwComponentPrototypes to EcuInstances; for J1939 the semantics of an EcuInstance itself is basically replaced by a J1939NmNode.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
j1939Controller Application	J1939Controller Application	0..1	ref	Reference to the J1939 Controller Application that is mapped to the referenced J1939NmNode.
j1939NmNode	J1939NmNode	0..1	ref	J1939NmNode that is the target of the J1939Controller ApplicationTo1939NmNodeMapping.

Table 5.12: J1939ControllerApplicationToJ1939NmNodeMapping

Class	J1939ControllerApplication

[TPS_SYST_05000] System Description doesn't use a complete Software Component Description ⌈ If the System Description doesn't use a complete Software Component Description (VFB View) the data mapping of VariableDataPrototypes or ArgumentDataPrototypes owned by ClientServerOperations on SystemSignals does not need to be defined. This supports the inclusion of legacy signals. ⌋ *(RS_SYST_00001)*

[constr_3501] Role of SystemSignal in 1:n communication ⌈ In case of 1:n communication the VariableDataPrototype in the PPortPrototype of the SwComponentPrototype shall be mapped to only one SystemSignal. ⌋*()*

[constr_3086] Role of SystemSignal in n:1 sender-receiver communication ⌈ In case of n:1 communications each sender needs to be represented by the same SystemSignal. ⌋*()*

[constr_3049] Role of SystemSignal in inter-ECU client server communication with clients located on different ECUs in case of networks other than Ethernet ⌈ In case of a n:1 inter-ECU client server communication with clients located on different ECUs different SystemSignals shall be used for each Ecu. ⌋*()*

[TPS_SYST_02150] Role of SystemSignal in inter-ECU client server communication over Ethernet with clients located on different ECUs in case that LdCom is used ⌈ In case of a n:1 inter-ECU client server communication over Ethernet with clients located on different ECUs and in the case that the LdCom module is used on these ECUs one SystemSignal per communication direction may be used to define the client server interaction. ⌋*()*

[TPS_SYST_02151] MetaData support required for inter-ECU client server communication over Ethernet with clients located on different ECUs if one SystemSignal per communication direction is used ⌈ The modeling of client server interaction over Ethernet with clients located on different ECUs and if one SystemSignal per communication direction is used requires the support of COM Stack MetaData. The relationship between the call and return is achieved by means of meta data items attached to the Pdus by the Socket Adapter. ⌋*()*

Please note that the MetaData handling is currently only supported for LdCom. When using Com still one dedicated SystemSignal has to be used for each calling ECU as described in [TPS_SYST_02161].

[TPS_SYST_02161] Role of SystemSignal in inter-ECU client server communication over Ethernet with clients located on different ECUs in case that Com is used ⌈ In case of a n:1 inter-ECU client server communication over Ethernet with clients located on different ECUs and in the case that the Com module is used on these ECUs one SystemSignal per communication direction shall be used to define the client server interaction. ⌋*()*

[TPS_SYST_01087] Role of SystemSignal in inter-ECU client server communication with clients located on the same ECU ⌈ In case of n:1 inter-ECU client server communication it is allowed to use the same SystemSignal for several clients on the same Ecu, if the client identifier is used to distinguish the different clients. ⌋*()*

[TPS_SYST_02011] initValues of receivers that are mapped to the same Ecu ⌈ All receivers of a given SystemSignal on the same EcuInstance shall have identical initValues. ⌋*()*

[constr_3112] Invalidation support for partial mapping of a data element typed by composite data type ⌈ If a VariableDataPrototype with a composite data type in a PPortPrototype is mapped to a SystemSignalGroup and only a subset of elements of the composite data type that are primitives is mapped to separate SystemSignals of the SystemSignalGroup then at least one mapped primitive shall have an invalidValue defined. ⌋*()*

[constr_3074] No TransmissionAcknowledgementRequest for multiple senders ⌈ If more than one SenderComSpec exist (in different PortPrototypes on atomic level) that refer to data elements effectively mapped to the same SystemSignal it is not allowed that any SenderComSpec aggregates transmissionAcknowledge. ⌋*()*

Please note that the term “effectively mapped” refers to the fact that the DataMapping can refer to a dataElement in a "delegation" PortPrototype on the surface of a rootSoftwareComposition of an Ecu Extract OR to PortPrototypes inside the rootSoftwareComposition. Both ways shall be considered.

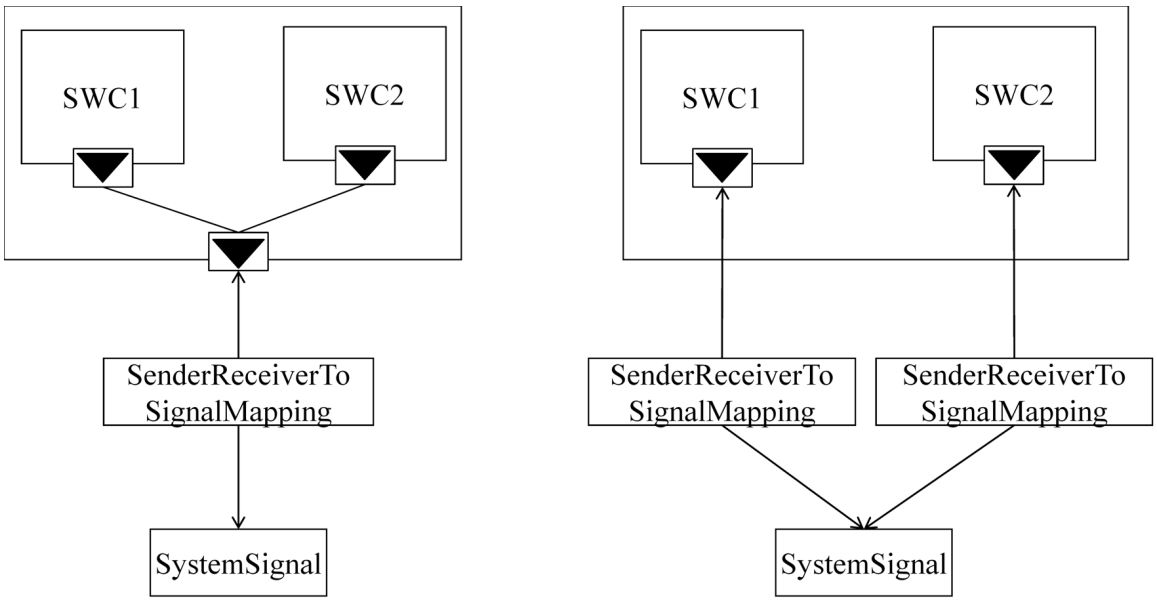

Figure 5.8: Example for data elements that are effectively mapped to the same SystemSignal

The different kinds of data mapping are described in the following sections in detail.

Please note that the usage of ImplementationDataTypes within an AnyInstanceRef is described in detail in [2].

5.2.1 Mapping of Variable Data Prototypes on System Signals

This section describes how VariableDataPrototypes are mapped onto SystemSignals. For a detailed description of the interconnection of software components refer to [5].

It is the task of system configuration to map VariableDataPrototype, ClientServerOperation, or Trigger contained in PortPrototypes referenced by the SwConnector onto a SystemSignal.

[TPS_SYST_01033] DataMapping and SwConnector ⌈ For the purpose of creating DataMappings PortPrototypes may or may not be connected by SwConnectors. ⌋*()*

The same SystemSignal may satisfy more than one SwConnector (1:n communication), and one SwConnector may be implemented by several SystemSignals (e.g. one per VariableDataPrototype in the PortInterface being connected), so there is no 1:1 mapping between SwConnectors and SystemSignals.

In the following sections, each reference to a VariableDataPrototype, ArgumentDataPrototype, or Trigger is of type AtpInstanceRef [2]. This means it not only references the actual VariableDataPrototype, but additionally contains contextual references to the PortPrototype and the hierarchy of SwComponentPrototypes forming the individual instance context of the VariableDataPrototype.

The following rules are valid for the mapping of VariableDataPrototypes, ClientServerOperations, or Triggers on SystemSignals:

[constr_3088] SystemSignal that is not part of a SystemSignalGroup in a complete System Description ⌈ For each SystemSignal that is not part of a SystemSignalGroup in a complete System with category SYSTEM_DESCRIPTION exactly one DataMapping per communicationDirection shall be defined (PPortPrototype, RPortPrototype, PRPortPrototype). Preference: AbstractProvidedPortPrototype ⌋*()*

[constr_3089] SystemSignal that is part of exactly one SystemSignalGroup and is not transmitted additionally as standalone SystemSignal in a complete System Description ⌈ For each SystemSignal that is part of exactly one SystemSignalGroup and is not transmitted additionally as standalone SystemSignal in a complete System with category SYSTEM_DESCRIPTION exactly one DataMapping per communicationDirection shall be defined (PPortPrototype, RPortPrototype, PRPortPrototype). Preference: AbstractProvidedPortPrototype ⌋ *()*

Please note that for DataMappings the following use cases are supported:

- Sending: one DataMapping that point to the DataPrototype and to the SystemSignal with communicationDirection out.
- Receiving: one DataMapping that point to the DataPrototype and to the SystemSignal with communicationDirection in.
- Sending and Receiving: two DataMappings that point to the DataPrototype and to the SystemSignal, one with communicationDirection in and one with communicationDirection out.

[constr_3055] SystemSignalGroup in a complete System Description ⌈ For each SystemSignalGroup in a complete System with category SYSTEM_DESCRIPTION exactly one DataMapping shall be defined (PPortPrototype or RPortPrototype). Preference: PPortPrototype ⌋*()*

In a complete System with category SYSTEM_DESCRIPTION, it is sufficient to refer to the VariableDataPrototype in the PPortPrototype or the RPortPrototype to define the mapping of the communication between a provider and its receivers.

This is possible since the connectors implicitly define which RPortPrototype are connected to which PPortPrototype. In case the System with category SYSTEM_DESCRIPTION does not use a complete Software Component Description (VFB View) the data mapping needs not to be defined. This supports the inclusion of legacy signals.

[TPS_SYST_01137] Several DataMappings may be defined for the same SystemSignal ⌈ For a SystemSignal which is

- part in several SystemSignalGroups
- part in at least one SystemSignalGroup and at the same time is transmitted additionally as standalone SystemSignal

several DataMappings may be defined. ⌋*()*

[TPS_SYST_01050] SystemSignal in the System Extract and ECU Extract ⌈ In the System with category SYSTEM_EXTRACT or ECU_EXTRACT the missing DataMappings on the complementary Sender/Receiver side needs to be supplemented. ⌋*()*

In the System with category SYSTEM_EXTRACT or ECU_EXTRACT, where only the relevant parts of the rootSoftwareComposition are defined, it is necessary to utilize the information from the complementary PortPrototype if the corresponding PortPrototype is located on another ECU and thus is not part of the extract. This is described in more detail in chapter 11.2 and chapter 12.2.3.

Therefore in a System with category ECU_EXTRACT the DataMappings are provided on both, PPortPrototypes and RPortPrototypes.

[TPS_SYST_01034] Data Mappings can be applied to compositions and atomic software components ⌈ DataMappings can be applied to CompositionSwComponentTypes and on AtomicSwComponentTypes. ⌋*()*

[TPS_SYST_01035] Transformation of Data Mappings during flattening ⌈ During the creation of the System with category ECU_EXTRACT (flattening) the existing DataMappings that refer to CompositionSwComponentTypes shall be transformed to refer to AtomicSwComponentTypes instead. ⌋()

[TPS_SYST_01036] No additional Data Mappings in composition substructure ⌈ When a CompositionSwComponentType is refined by a supplier the already existing DataMappings that refer to the CompositionSwComponentType shall not be copied to the internal substructure. ⌋()

Suppliers who add substructure to a CompositionSwComponentType by adding SwComponentPrototypes and SwConnectors shall respect the predefined DataMappings on the CompositionSwComponentType.

The OEM/Supplier Collaboration Scenario is described in chapter 11.1.

[constr_3087] DataMapping to PRPortPrototype ⌈ For inter-ECU communication between SwComponentPrototypes which involves PRPortPrototypes for each DataPrototype there shall be one SystemSignal and at most two DataMappings, one for each direction. ⌋()

Please note that for DataMappings the following use cases are supported:

- Sending: one DataMapping that point to the DataPrototype and to the SystemSignal with communicationDirection out.
- Receiving: one DataMapping that point to the DataPrototype and to the SystemSignal with communicationDirection in.
- Sending and Receiving: two DataMappings that point to the DataPrototype and to the SystemSignal, one with communicationDirection in and one with communicationDirection out.

[constr_1207] Existence of the attribute DataMapping.communicationDirection in the context of a SenderReceiverInterface or TriggerInterface ⌈ The following condition shall be fulfilled regarding the existence and values of the attribute DataMapping.communicationDirection that refers to a PortPrototype typed by a SenderReceiverInterface or TriggerInterface as the context PortPrototype:

- If the DataMapping refers to a PRPortPrototype as the context PortPrototype the attribute DataMapping.communicationDirection shall exist.
- If the DataMapping refers to a PPortPrototype as the context PortPrototype the attribute DataMapping.communicationDirection may exist. If the attribute exists its value shall be set to out.
- If the DataMapping refers to an RPortPrototype as the context PortPrototype the attribute DataMapping.communicationDirection may exist. If the attribute exists its value shall be set to in.

⌋()

5.2.1.1 Mapping of Variable Data Prototypes with primitive datatypes on System Signals (Sender-Receiver Communication)

This section describes the relation between the VariableDataPrototype with primitive datatypes and the SystemSignal (see Figure 5.9).

[TPS_SYST_02082] SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category VALUE or BOOLEAN and a DataTypeMap exists ⌈ If a SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category VALUE or BOOLEAN and a DataTypeMap exists that points to the ApplicationPrimitiveDataType and an ImplementationDataType of category VALUE or TYPE_REFERENCE that eventually references (via the SwDataDefProps.implementationDataType) an ImplementationDataType of category VALUE, then this SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02083] SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category STRING and a DataTypeMap exists ⌈ If a SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category STRING and a DataTypeMap exists that points to the ApplicationPrimitiveDataType and an ImplementationDataType of category ARRAY or TYPE_REFERENCE that eventually references (via the SwDataDefProps.implementationDataType) an ImplementationDataType of category ARRAY with a subElement that either

- represents the platform type uint8 or
- references a SwBaseType with a SwBaseType.baseTypeDefinition.baseTypeSize set to the value 8 and the SwBaseType.baseTypeDefinition.baseTypeEncoding set to NONE,

then this SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02084] SenderReceiverInterface.dataElement is typed by an ApplicationArrayDataType and a DataTypeMap exists ⌈ If a SenderReceiverInterface.dataElement is typed by an ApplicationArrayDataType and a DataTypeMap exists that points to the ApplicationArrayDataType and an ImplementationDataType of category ARRAY or TYPE_REFERENCE that eventually references (via the SwDataDefProps.implementationDataType) an ImplementationDataType of category ARRAY with a subElement that either

- represents the platform type uint8 or
- references a SwBaseType with a SwBaseType.baseTypeDefinition.baseTypeSize set to the value 8 and the SwBaseType.baseTypeDefinition.baseTypeEncoding set to NONE,

then this SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02085] **SenderReceiverInterface.dataElement is typed by an ImplementationDataType of category ARRAY** ⌈ If a SenderReceiverInterface.dataElement is typed by an ImplementationDataType of category ARRAY with a subElement that either

- represents the platform type uint8 or
- references a SwBaseType with a SwBaseType.baseTypeDefinition.baseTypeSize set to the value 8 and the SwBaseType.baseTypeDefinition.baseTypeEncoding set to NONE,

then this SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02086] **SenderReceiverInterface.dataElement is typed by an ImplementationDataType of category VALUE or TYPE_REFERENCE** ⌈ If a SenderReceiverInterface.dataElement is typed by an ImplementationDataType of category VALUE or TYPE_REFERENCE that eventually references (via the SwDataDefProps.implementationDataType) an ImplementationDataType of category VALUE then this SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02087] **SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category BOOLEAN and no DataTypeMap exists** ⌈ The SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02088] **SenderReceiverInterface.dataElement is typed by an ApplicationArrayDataType and no DataTypeMap exists** ⌈ If a SenderReceiverInterface.dataElement is typed by an ApplicationArrayDataType and no DataTypeMap exists and the ApplicationArrayDataType fulfills the following conditions:

- ApplicationPrimitiveDataType.swDataDefProps.dataConstr exists and refers to a PhysConstrs.
- ApplicationPrimitiveDataType.swDataDefProps.compuMethod exists and refers to a CompuMethod of category TEXTTABLE and CompuMethod.compuPhysToInternal exists.
- Application of ApplicationPrimitiveDataType.swDataDefProps.compuMethod to ApplicationPrimitiveDataType.swDataDefProps.dataConstr yields a numerical range in [0 .. 255]

then the SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02089] **SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category STRING and no DataTypeMap**

exists ⌈ If a SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category STRING and no DataTypeMap exists and the ApplicationPrimitiveDataType fulfills the following conditions:

- ApplicationPrimitiveDataType.swDataDefProps.swRecordLayout exists and values of SwRecordLayout.swRecordLayoutGroup.swRecordLayoutGroupFrom and SwRecordLayout.swRecordLayoutGroup.swRecordLayoutGroupTo are both set to 1.
- AApplicationPrimitiveDataType.swDataDefProps.swTextProps exists and refers to an SwBaseType where the SwBaseType.baseTypeDefinition.baseTypeEncoding is set to NONE and the value of SwBaseType.baseTypeDefinition.baseTypeSize is set to 8.

then the SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_02090] SenderReceiverInterface.dataElement is typed by an ApplicationPrimitiveDataType of category VALUE and no DataTypeMap exists ⌈ There is no clear indication that the SenderReceiverInterface.dataElement is a candidate for a primitive Data Mapping. ⌋*()*

[TPS_SYST_01037] primitive Data Mapping of UINT8-Arrays ⌈ The primitive Data Mapping may also be used for the Data Mapping of UINT8-Arrays. This supports an optimized definition of the Data Mapping. ⌋*()*

In other words it is allowed to map an array VariableDataPrototype consisting of UINT8 elements to exactly one SystemSignal in the context of one SenderReceiverToSignalMapping. A UINT8 element may be a String or an array that contains array elements of Integer type with range 0..255.

Background: In the ECU Configuration of the AUTOSAR COM module such a SystemSignal will be mapped to a COM Signal with the ComSignalType UINT8_N.

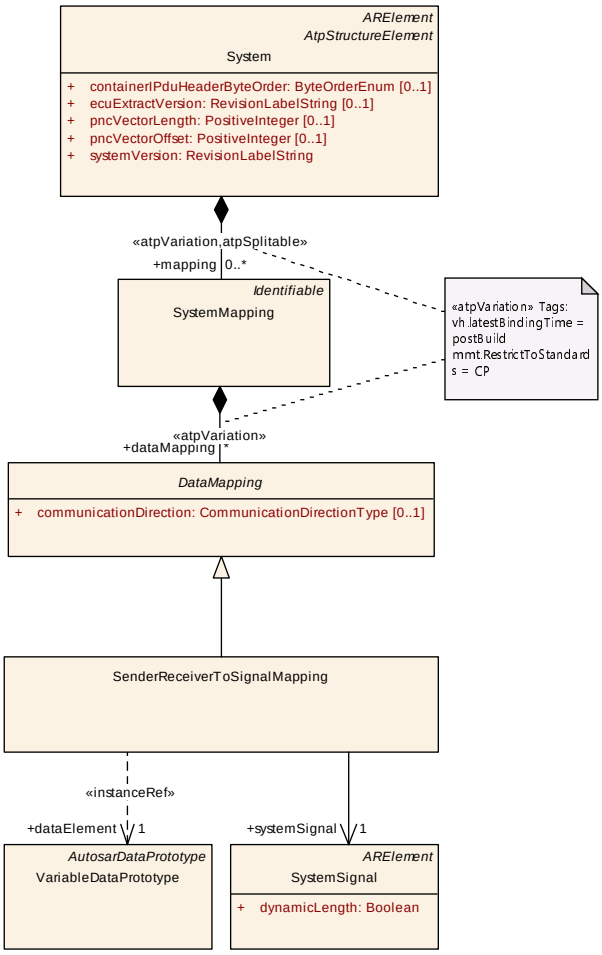

Figure 5.9: Mapping of data elements with primitive datatypes (SenderRecPrimitiveTypeMapping)

Class	**SenderReceiverToSignalMapping**

dataElement	VariableDataPrototype	1	iref	Reference to the data element.
systemSignal	SystemSignal	1	ref	Reference to the system signal used to carry the data element.

Table 5.16: SenderReceiverToSignalMapping

5.2.1.2 Mapping of Variable Data Prototypes with composite datatypes (Sender-Receiver Communication)

This section describes the mapping of VariableDataPrototypes typed by composite data types to SystemSignals.

It is not possible to map a VariableDataPrototype typed by composite data type directly (without any additional mechanisms) to one SystemSignal because The RTE is required to treat AUTOSAR signals transmitted using sender-receiver communication consistently. For this purpose, data transformation or SystemSignalGroups is used.

There are two ways to map a VariableDataPrototype typed by composite data type to SystemSignals/SystemSignalGroups:

1. Use data transformation and map it directly to a SystemSignal.
2. Map it to a SystemSignalGroup with SenderReceiverToSignalGroupMapping

[constr_3506] Mapping of composite data type to SystemSignals in SystemSignalGroup ⌈ The elements of a composite data type shall be mapped to single SystemSignals which shall be members of one SystemSignalGroup if no data transformation (except COM Based Transformer) is used.

There are two exceptions to this rule:

- it is allowed to map an array VariableDataPrototype consisting of UINT8 elements to exactly one SystemSignal in the context of one SenderReceiverToSignalMapping (see [TPS_SYST_01037]).
- in case the COM Based Transformer [17] is used it is the integral part of the approach to have a fixed mapping of the individual elements of composite data types to SystemSignals in a SystemSignalGroup ([TPS_SYST_02058]).

⌋()

Please note that a partial mapping of a data element typed by composite data type in a RPortPrototype is also supported. If a VariableDataPrototype with a composite data type in a RPortPrototype is mapped to a SystemSignalGroup then it is allowed to map only a subset of the SystemSignals out of the SystemSignalGroup to elements of the composite data type. This means that it is possible to receive a subset of a SystemSignalGroup over the network.

5.2.1.2.1 Data Transformation

If data transformation is used, the consistency of the composite data is assured by the transformation.

A VariableDataPrototype typed by composite data type can be mapped to one SystemSignal without any SystemSignalGroup if data transformation is used.

In that case any required mapping between the ApplicationCompositeElementDataPrototypes of the VariableDataPrototype of the connected PortPrototypes needs to be expressed by means of a PortInterfaceMapping attached to the SwConnector connecting the two PortPrototypes and not by means of two separated DataMappings (one referencing the VariableDataPrototype at the PPortPrototype and the other one referencing the VariableDataPrototype at the RPortPrototype).

During creation of a System Extract of the System Configuration Description or the creation of an ECU Extract of the System Configuration Description, this PortInterfaceMapping needs to be preserved in order to support proper deserializing transformation at the receiver side (see chapter 11.4 and 12.2).

See chapter 7 for details how to enable data transformation.

In case the COM Based Transformer [17] is used the mapping from section 7.3.3 is required.

5.2.1.2.2 Mapping via SystemSignalGroups

The VariableDataPrototype that is referenced by dataElement can be typed by an ApplicationDataType or by an ImplementationDataType. This type decides which reference is used within the SenderRecRecordElementMapping and SenderRecArrayElementMapping.

Composite VariableDataPrototypes may nest within other composite VariableDataPrototypes. Each element typed by a primitive data type of such nested composite VariableDataPrototypes shall be mapped to one SystemSignal.

The mapping between the SystemSignal and the VariableDataPrototype is provided in the SenderReceiverToSignalGroupMapping (see Figure 5.10).

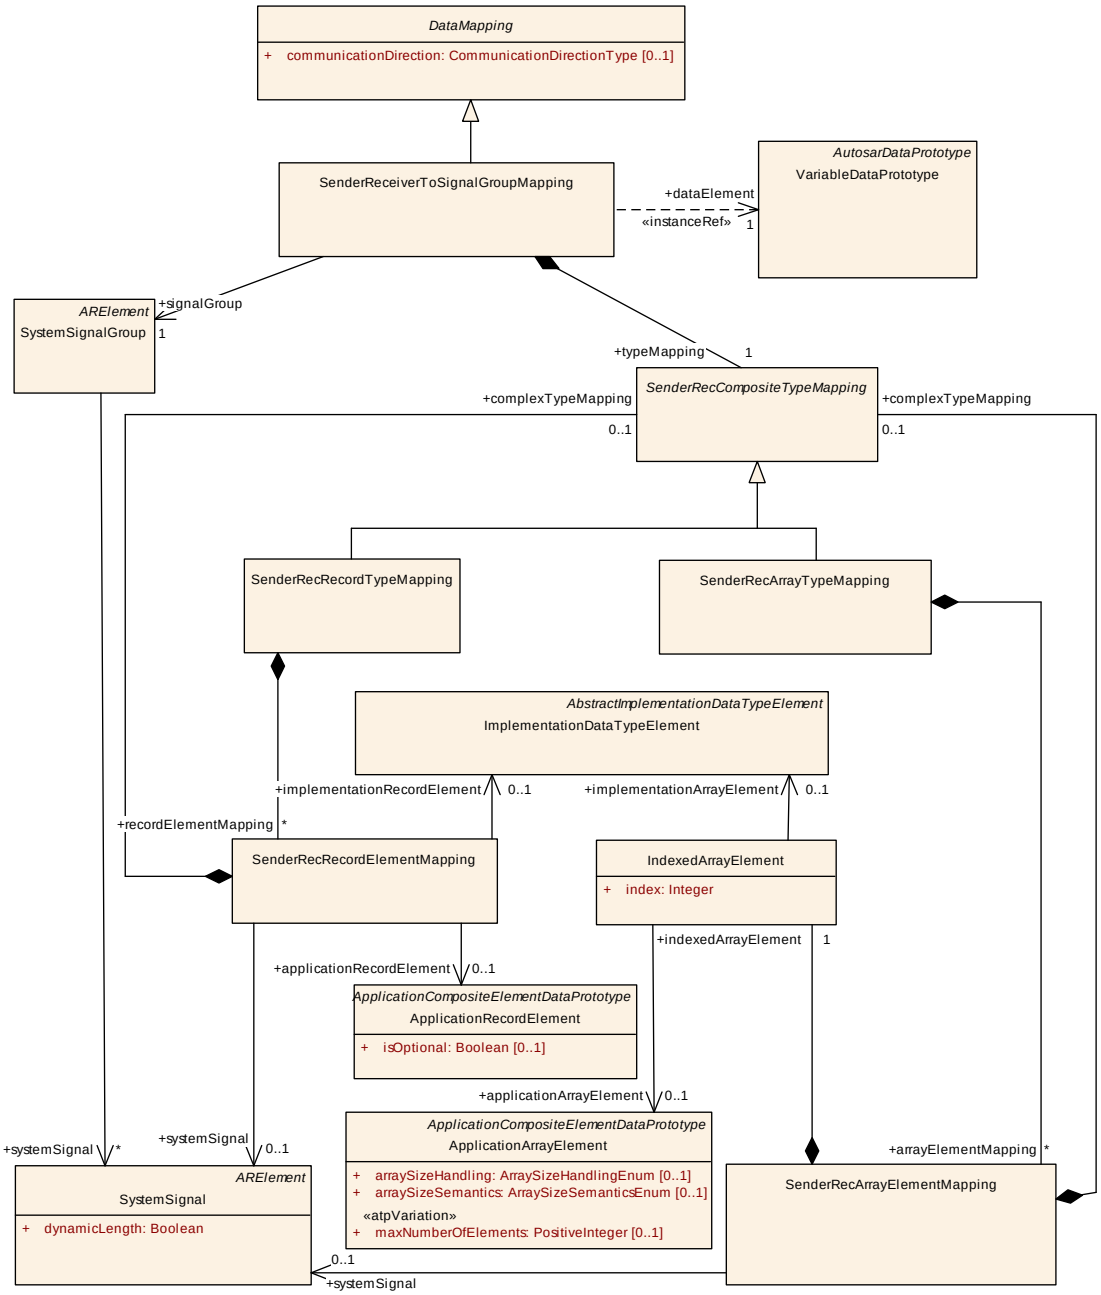

Figure 5.10: Mapping of data elements with composite data types (SenderRecCompositeTypeMapping)

[constr_3000] valid SenderRecCompositeTypeMappings ⌈SenderReceiverToSignalGroupMapping.signalGroup.systemSignal shall point to each SystemSignal being mapped within the context of SenderReceiverToSignalGroupMapping.

In other words: For each SystemSignal referenced in the role SenderReceiverToSignalGroupMapping.signalGroup.systemSignal there shall be either a reference in the role SenderRecRecordElementMapping.systemSignal or a reference in the role SenderRecArrayElementMapping.systemSignal aggregated by

the same SenderReceiverToSignalGroupMapping that refers to this System-Signal. ⌋()

Class	SenderReceiverToSignalGroupMapping			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	Mapping of a sender receiver communication data element with a composite datatype to a signal group.			
Base	*ARObject*, *DataMapping*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
dataElement	VariableDataPrototype	1	iref	Reference to a data element with a composite datatype which is mapped to a signal group.
signalGroup	SystemSignalGroup	1	ref	Reference to the signal group, which contain all primitive datatypes of the composite type
typeMapping	SenderRecComposite TypeMapping	1	aggr	The CompositeTypeMapping maps the the Application ArrayElements and ApplicationRecordElements to Signals of the SignalGroup.

Table 5.17: SenderReceiverToSignalGroupMapping

Class	***SenderRecCompositeTypeMapping*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	Two mappings exist for the composite data types: "ArrayTypeMapping" and "RecordTypeMapping". In both, a primitive datatype will be mapped to a system signal. But it is also possible to combine the arrays and the records, so that an "array" could be an element of a "record" and in the same manner a "record" could be an element of an "array". Nesting these data types is also possible. If an element of a composite data type is again a composite one, the "CompositeTypeMapping" element will be used one more time (aggregation between the ArrayElementMapping and CompositeType Mapping or aggregation between the RecordElementMapping and CompositeTypeMapping).			
Base	*ARObject*			
Subclasses	SenderRecArrayTypeMapping, SenderRecRecordTypeMapping			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table 5.20: SenderRecRecordTypeMapping

Class	SenderRecRecordElementMapping			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	Mapping of a primitive record element to a SystemSignal. If the VariableDataPrototype that is referenced by SenderReceiverToSignalGroupMapping is typed by an ApplicationDataType the reference applicationRecordElement shall be used. If the VariableDataPrototype is typed by the ImplementationDataType the reference implementationRecordElement shall be used. Either the implementationRecordElement or applicationRecordElement reference shall be used. If the element is composite, there will be no mapping to the SystemSignal (multiplicity 0). In this case the RecordElementMapping element will aggregate the complexTypeMapping element. In that way also the composite datatypes can be mapped to SystemSignals.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
application RecordElement	ApplicationRecord Element	0..1	ref	Reference to an ApplicationRecordElement in the context of the dataElement or in the context of a composite element.
complexType Mapping	SenderRecComposite TypeMapping	0..1	aggr	This aggregation will be used if the element is composite.
implementation RecordElement	ImplementationData TypeElement	0..1	ref	Reference to an ImplementationRecordElement in the context of the dataElement or in the context of a composite element.
systemSignal	SystemSignal	0..1	ref	Reference to the system signal used to carry the primitive ApplicationRecordElement.

Table 5.21: SenderRecRecordElementMapping

[constr_3230] Usage of `SenderRecRecordElementMapping.applicationRecordElement` ⌈ `SenderRecRecordElementMapping.applicationRecordElement` shall only be used if the referenced context element (`VariableDataPrototype` that is referenced by the `SenderReceiverToSignalGroupMapping.dataElement`) is typed by an `ApplicationDataType`. ⌋()

[constr_3244] Usage of SenderRecRecordElementMapping.implementationRecordElement ⌈ SenderRecRecordElementMapping.implementationRecordElement shall only be used if the referenced context element (VariableDataPrototype that is referenced by the SenderReceiverToSignalGroupMapping.dataElement) is typed by an ImplementationDataType. ⌋ *()*

Class	**SenderRecArrayElementMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	The SenderRecArrayElement may be a primitive one or a composite one. If the element is primitive, it will be mapped to the SystemSignal (multiplicity 1). If the VariableDataPrototype that is referenced by SenderReceiverToSignalGroupMapping is typed by an ApplicationDataType the reference to the ApplicationArrayElement shall be used. If the VariableDataPrototype is typed by the ImplementationDataType the reference to the ImplementationArrayElement shall be used. If the element is composite, there will be no mapping to the SystemSignal (multiplicity 0). In this case the ArrayElementMapping element will aggregate the TypeMapping element. In that way also the composite datatypes can be mapped to SystemSignals. Regardless whether composite or primitive array element is mapped the indexed element always needs to be specified.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
complexType Mapping	SenderRecComposite TypeMapping	0..1	aggr	This aggregation will be used if the element is composite.
indexedArray Element	IndexedArrayElement	1	aggr	Reference to an indexed array element in the context of the dataElement or in the context of a composite element.
systemSignal	SystemSignal	0..1	ref	Reference to the system signal used to carry the primitive ApplicationArrayElement.

Table 5.22: SenderRecArrayElementMapping

Class	**IndexedArrayElement**			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	This element represents exactly one indexed element in the array. Either the applicationArrayElement or implementationArrayElement reference shall be used.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
applicationArray Element	ApplicationArray Element	0..1	ref	Reference to an ApplicationArrayElement in an array.
implementation ArrayElement	ImplementationData TypeElement	0..1	ref	Reference to an ImplementationDataTypeElement in an array.
index	Integer	1	attr	Position of an element in an array. Starting position is 0.

Table 5.23: IndexedArrayElement

[constr_3231] Usage of IndexedArrayElement.applicationArrayElement ⌈ IndexedArrayElement.applicationArrayElement shall only be used if the referenced context element (VariableDataPrototype that is referenced by the SenderReceiverToSignalGroupMapping.dataElement) is typed by an ApplicationDataType. ⌋*()*

[constr_3245] Usage of IndexedArrayElement.implementationArrayElement ⌈ IndexedArrayElement.implementationArrayElement shall only be used if the referenced context element (VariableDataPrototype that is referenced

by the SenderReceiverToSignalGroupMapping.dataElement) is typed by an ImplementationDataType. ⌋()

Figure 5.11 shows a mapping example for nested composite data types.

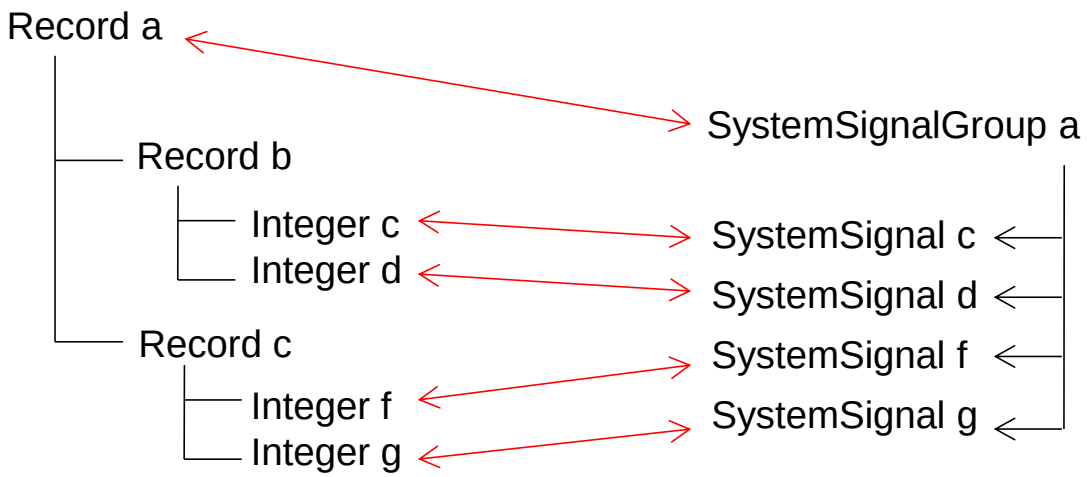

Figure 5.11: Mapping example for nested composite data types

Record a is mapped with SenderReceiverToSignalGroupMapping to a SystemSignalGroup. The content of Record a is mapped with the SenderRecRecordTypeMapping. Since the first element of *Record a* is *Record b* the SenderRecRecordElementMapping does not contain a reference to a SystemSignal because signals apply only to atomic data items. Instead it contains a complexTypeMapping with two SenderRecRecordElementMappings for *Integer c* and *Integer d*. These two elements are mapped to SystemSignals.

Please note that a partial mapping of a data element typed by composite data type in a PPortPrototype is also supported. If a VariableDataPrototype with a composite data type in a PPortPrototype is mapped to a SystemSignalGroup then it is allowed to map only a subset of elements of the composite data type that are primitives to separate SystemSignals of the SystemSignalGroup. This means that it is possible to transmit a subset of a composite data element in a ISignalGroup over the network. Figure 5.12 shows a partial mapping example for nested composite data types.

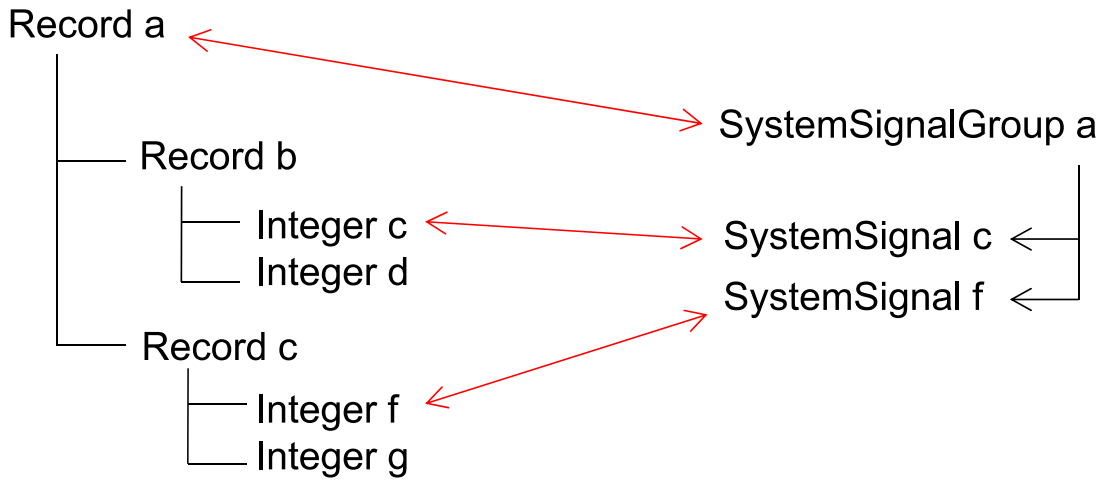

Figure 5.12: Partial mapping example for nested composite data types

5.2.1.3 Mapping of Client Server Operations to System Signals

This section describes the mapping of ClientServerOperations to SystemSignals (see Figure 5.13).

[TPS_SYST_01148] Mapping of IN and INOUT ArgumentDataPrototypes to callSignals ⌈ The ArgumentDataPrototypes that are passed to the operation (i.e. the direction is "in") and the ArgumentDataPrototypes that are passed to and returned from the operation (i.e. the direction is "inout") are expected to be mapped to the callSignal by the serializer. ⌋*()*

[TPS_SYST_01149] Mapping of OUT and INOUT ArgumentDataPrototypes to returnSignals ⌈ The ArgumentDataPrototypes that are returned from the operation (i.e. the direction is "out") and the ArgumentDataPrototypes that are passed to and returned from the operation (i.e. the direction is "inout") are expected to be mapped to the returnSignal by the serializer. ⌋*()*

[TPS_SYST_01150] Mapping of returnSignal and callSignal to COM Signal ⌈ In the ECU Configuration of the AUTOSAR COM module the returnSignal and the callSignal are expected to be mapped to COM Signals with the ComSignalType UINT8_N or UINT8_DYN. ⌋*()*

The ClientServerToSignalMapping can only map transformed data to SystemSignals because it contains no information how data shall be serialized, it only references the primitive SystemSignal which shall contain the serialized data. How to define the necessary information which serialization algorithm shall be applied can be found in chapter 7. The implementation of this algorithm is provided via a BSW module.

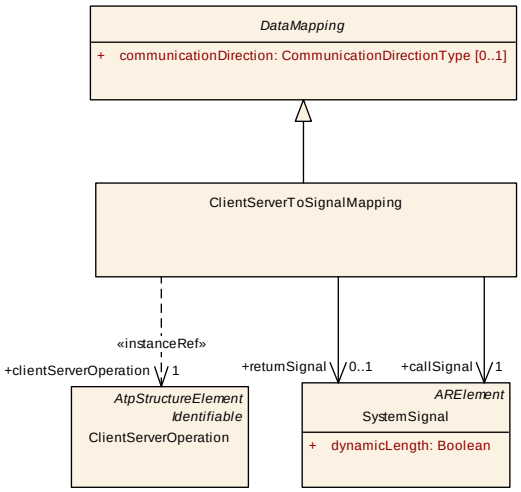

Figure 5.13: Mapping of a ClientServerOperation to a callSignal and a returnSignal

Class	**ClientServerToSignalMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	This element maps the ClientServerOperation to call- and return-SystemSignals.			
Base	*ARObject*, *DataMapping*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
callSignal	SystemSignal	1	ref	Reference to the callSignal to which the IN and INOUT ArgumentDataPrototypes are mapped.
clientServer Operation	ClientServerOperation	1	iref	Reference to a ClientServerOperation, which is mapped to a call SystemSignal and a return SystemSignal.
returnSignal	SystemSignal	0..1	ref	Reference to the returnSignal to which the OUT and INOUT ArgumentDataPrototypes are mapped. **Tags:** atp.Status=shallBecomeMandatory

Table 5.24: ClientServerToSignalMapping

[constr_3111] `returnSignal` in `ClientServerToSignalMapping` is mandatory ⌈ A `ClientServerToSignalMapping` shall always have a `returnSignal` defined. ⌋*()*

[constr_3215] `TransformationTechnology.version` and `TransformationTechnology.protocol` settings for request and response of a client/server communication ⌈ `TransformationTechnology.version` and `TransformationTechnology.protocol` shall be identical for `ISignal`s that are derived from the same `ClientServerOperation`. This means that all `ISignal`s that refer to `ClientServerToSignalMapping.callSignal` or to `ClientServerToSignalMapping.returnSignal` of the same `ClientServerToSignalMapping` shall have the same `TransformationTechnology.protocol` and `TransformationTechnology.version` defined. ⌋*()*

5.2.1.4 Mapping of a ApplicationCompositeElementDataPrototype within a composite application data type on a System Signal (Sender-Receiver Communication)

SenderReceiverCompositeElementToSignalMapping is used to map a ApplicationCompositeElementDataPrototype that is aggregated within a composite data type (record element or an array element) to a SystemSignal.

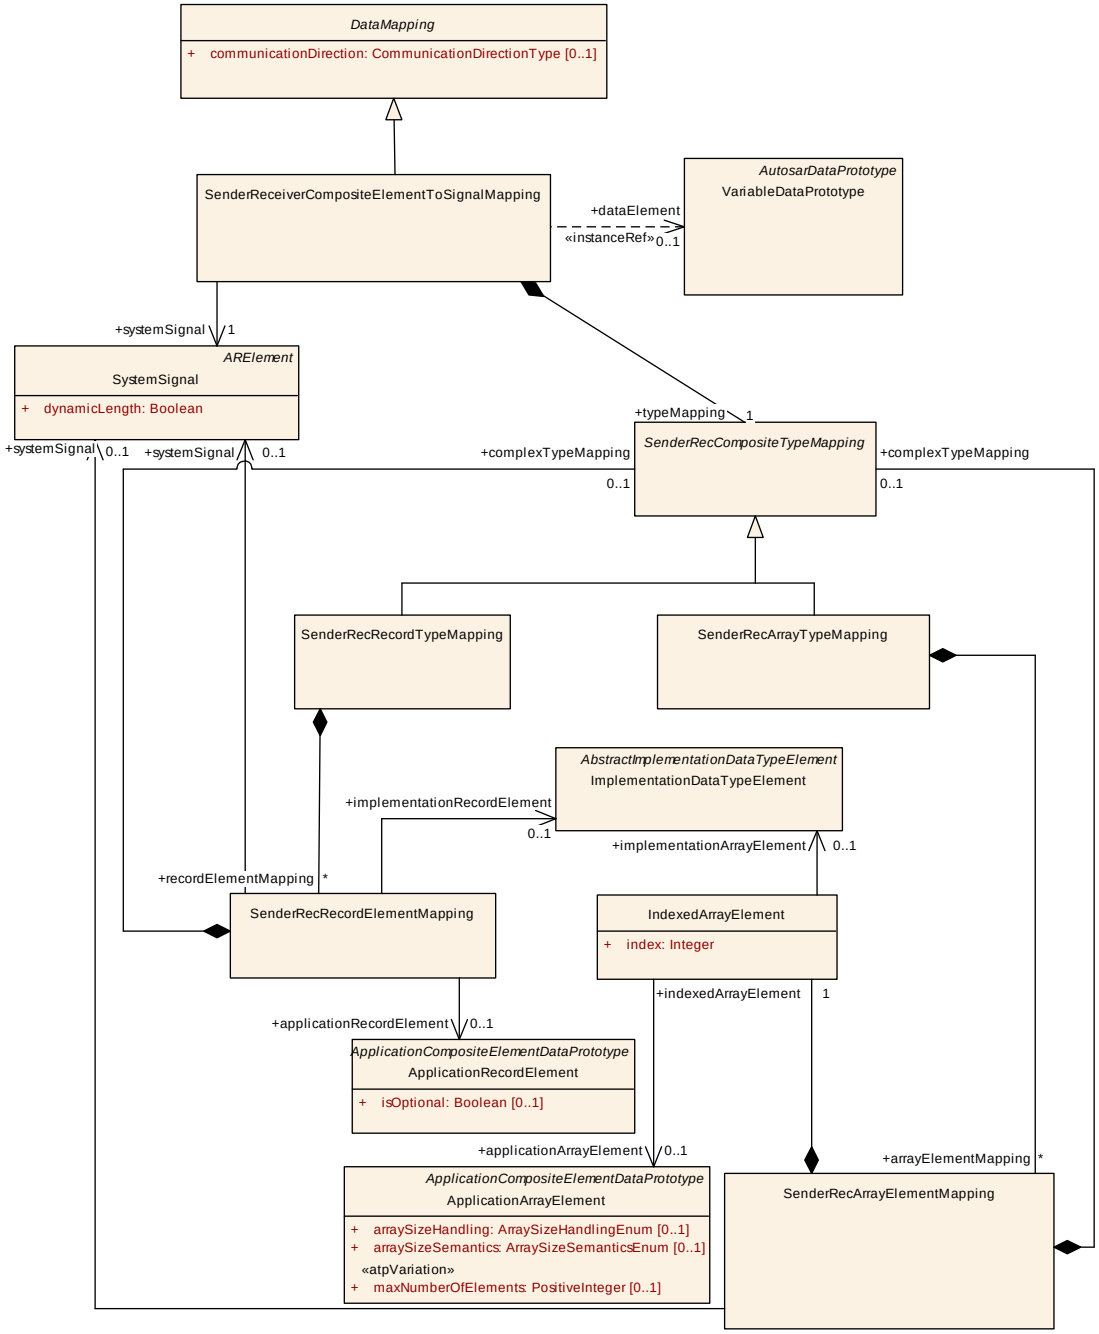

Figure 5.14: Mapping of a Variable Data Prototype which is aggregated within a composite data type on a System Signal

[constr_3058] References from SenderRecArrayElementMapping and from SenderRecRecordElementMapping to SystemSignals are not allowed within a SenderReceiverCompositeElementToSignalMapping ⌈ The reference from SenderRecArrayElementMapping to SystemSignal and from SenderRecRecordElementMapping to SystemSignal shall not exist if the enclosing SenderRecCompositeTypeMapping is owned by a SenderReceiverCompositeElementToSignalMapping. ⌋()

[constr_3059] Mandatory DataMapping on the receiver side for elements of a composite data type ⌈ On the receiver side, it is required that for every ApplicationCompositeElementDataPrototype of an ApplicationCompositeDataType (ApplicationArrayDataType.element resp. ApplicationRecordDataType.element) that types a dataElement in a RPortPrototype or PRPortPrototype in its receiver role a DataMapping exists. ⌋()

[TPS_SYST_01143] DataMapping on the sender side for elements of a composite data type ⌈ On the sender side, it is possible that only a subset of elements of a ApplicationCompositeElementDataPrototypes a dataElement in a PPortPrototype or a PRPortPrototype in its sender role is referenced by a DataMapping. ⌋()

Class	**SenderReceiverCompositeElementToSignalMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	Mapping of an Variable Data Prototype which is aggregated within a composite datatype to a System Signal (only one element of the composite data type is mapped).			
Base	*ARObject*, *DataMapping*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dataElement	VariableDataPrototype	0..1	iref	Reference to a data element with a composite datatype from which one element is mapped to a SystemSignal.
systemSignal	SystemSignal	1	ref	Reference to the SystemSignal to which one primitive of the composite type is mapped.
typeMapping	SenderRecComposite TypeMapping	1	aggr	The CompositeTypeMapping maps one VariableData Prototype of the composite data type to a SystemSignal.

Table 5.25: SenderReceiverCompositeElementToSignalMapping

SenderRecCompositeTypeMapping and all subclasses are described in section 5.2.1.2

5.2.1.5 Mapping of Trigger to SystemSignal

[TPS_SYST_05001] Send a Trigger across a network ⌈ In order to be able to send a Trigger across a network to trigger a RunnableEntity deployed to a different EcuInstance it is possible to define a TriggerToSignalMapping that maps a Trigger to a SystemSignal in the role systemSignal. ⌋()

[constr_1198] TriggerToSignalMapping.systemSignals eligible for a TriggerToSignalMapping ⌈ In the context of a TriggerToSignalMapping, it is only

possible to refer to a TriggerToSignalMapping.systemSignal that in turn is referenced by an ISignal with attribute length set to 0. ⌋()

[constr_1199] ISignals relating to systemSignals eligible for a TriggerToSignalMapping ⌈ An ISignal used to reference a systemSignal that in turn is referenced by a TriggerToSignalMapping shall also be referenced by an ISignalToIPduMapping where the attribute updateIndicationBitPosition is defined. ⌋()

[TPS_SYST_05002] The value of startPosition is irrelevant ⌈ The value of startPosition shall not be considered inside an ISignalToIPduMapping that references an ISignal used to reference a TriggerToSignalMapping.systemSignal that in turn is referenced by a TriggerToSignalMapping. ⌋()

[constr_3065] Mapping of queued Triggers to SystemSignals is prohibited ⌈ A TriggerToSignalMapping of a Trigger with swImplPolicy set to queued is prohibited. ⌋()

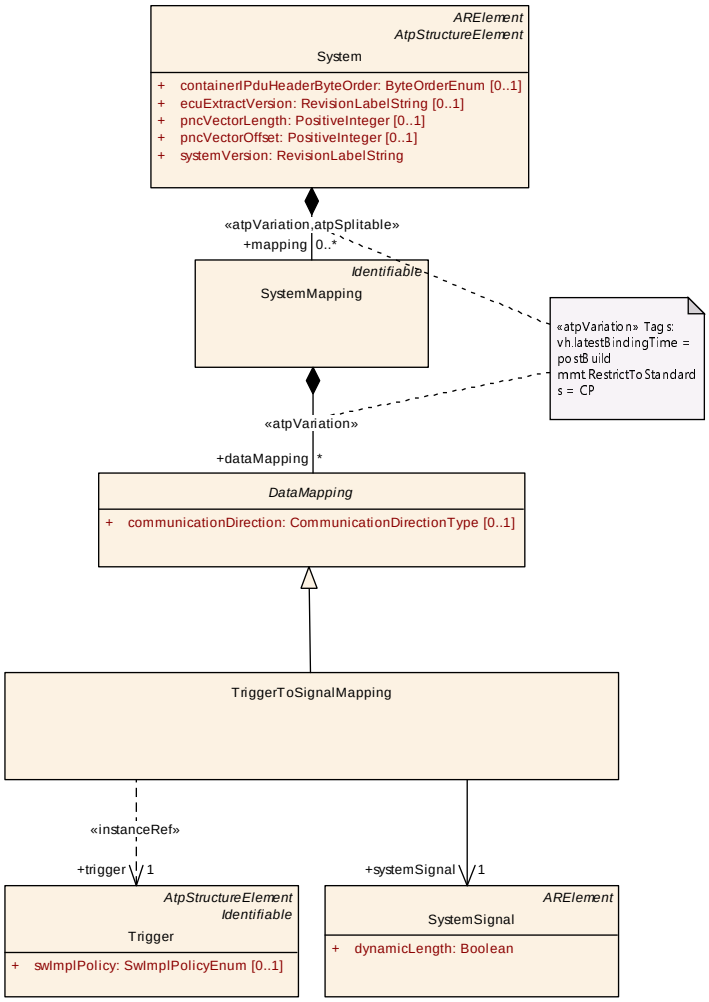

Figure 5.15: Structure of a TriggerToSignalMapping

Class	**TriggerToSignalMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping			
Note	This meta-class represents the ability to map a trigger to a SystemSignal of size 0. The Trigger does not transport any other information than its existence, therefore the limitation in terms of signal length.			
Base	*ARObject*, *DataMapping*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
systemSignal	SystemSignal	1	ref	This is the SystemSignal taken to transport the Trigger over the network. **Tags:** xml.sequenceOffset=20
trigger	Trigger	1	iref	This represents the Trigger that shall be used to trigger RunnableEntities deployed to a remote ECU. **Tags:** xml.sequenceOffset=10

Table 5.26: TriggerToSignalMapping

5.2.2 Signal Path Constraint

One task of the System Generator is to define the needed communication infrastructure (e.g. ISignals, Pdus, Frames) between ECUs. The System Generator often has the choice between alternative paths through the topology. In the example shown in Figure 5.16 the System Generator would have the choice between two paths (Path1: CAN3 or Path2: CAN1-GW-CAN2) for a signal that is send by ECU2 and is received by ECU4. If no further information is given the decision will be made e.g. by means of boundary conditions like busload, transmissions speed, etc.

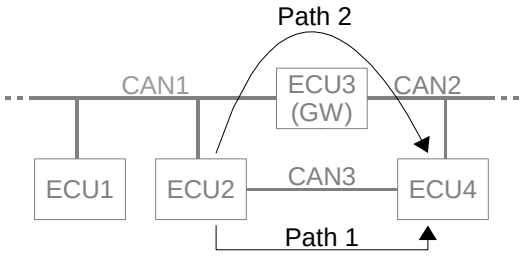

Figure 5.16: Example for a Communication Path

Signal Mapping Constraints allow to further restrict or specify the path(s) a signal is allowed to be transmitted over. A path is specified by an list of PhysicalChannels.

There exist four different constraints for signals regarding the signal path (see Figure 5.17):

[TPS_SYST_01041] CommonSignalPath definition ⌈ The CommonSignalPath describes that two or more signals shall take the same path in the topology. ⌋ *(RS_SYST_00017)*

[TPS_SYST_01042] ForbiddenSignalPath definition ⌈ The ForbiddenSignalPath describes the path that one or more signals shall not take in the topology, e.g. in case of safety critical transmission. ⌋ *(RS_SYST_00020)*

[TPS_SYST_01043] PermissibleSignalPath definition ⌈ The PermissibleSignalPath describes the path one or more signals may take in the topology. If more than one PermissibleSignalPath is defined for the same signal/operation attributes, any of them may be chosen. ⌋*(RS_SYST_00019, RS_SYST_00016)*

[TPS_SYST_01044] SeparateSignalPath definition ⌈ The SeparateSignalPath describes that two or more signals shall take separate paths in the topology e.g. in case of redundant transmission. ⌋*(RS_SYST_00018)*

It is also possible that the same signal is aggregated two times by the SeparateSignalPath element to indicate that this signal should be transmitted redundantly over two different paths.

The meta-model part, which describes the Communication Path constraints, will be explained in the following sections.

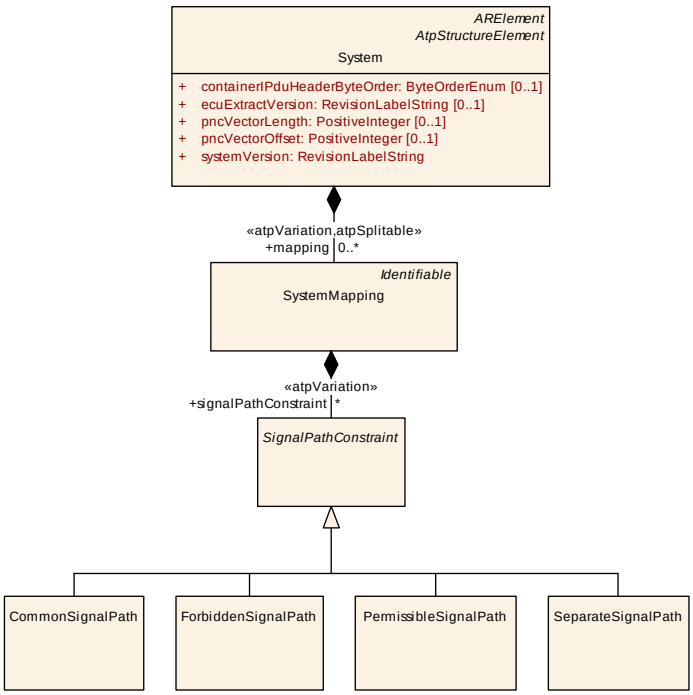

Figure 5.17: Communication Path Description (SignalPathConstraints)

5.2.2.1 CommonSignalPath

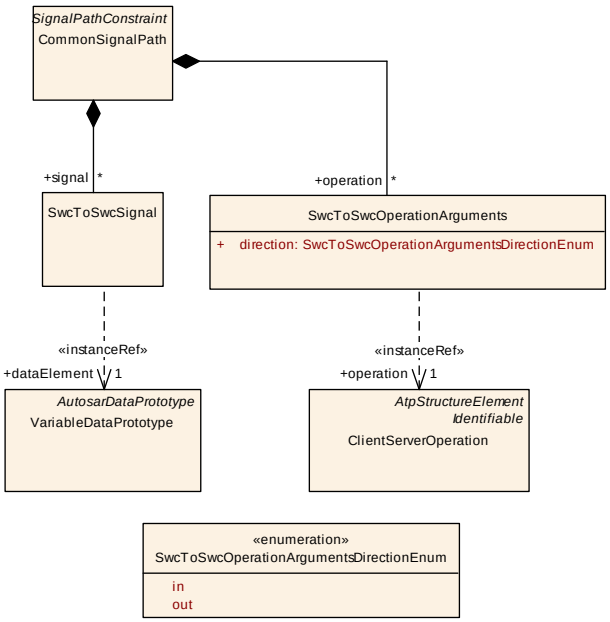

Figure 5.18: Description of signals that must take the same way in the topology (CommonSignalPath)

Class	**CommonSignalPath**			
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths			
Note	The CommonSignalPath describes that two or more SwcToSwcSignals and/or SwcToSwcOperation Arguments must take the same way (Signal Path) in the topology.			
Base	*ARObject*, *SignalPathConstraint*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
operation	SwcToSwcOperation Arguments	*	aggr	The arguments sent in one direction (either from client to server or server to client) of the operations that must take the same signal path.
signal	SwcToSwcSignal	*	aggr	The SwcToSwcSignals that must take the same way (Signal Path) in the topology.

Table 5.27: CommonSignalPath

Class	**SwcToSwcSignal**			
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths			
Note	The SwcToSwcSignal describes the information (data element) that is exchanged between two SW Components. On the SWC Level it is possible that a SW Component sends one data element from one P-Port to two different SW Components (1:n Communication). The SwcToSwcSignal describes exactly the information which is exchanged between one P-Port of a SW Component and one R-Port of another SW Component.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dataElement	VariableDataPrototype	2	iref	Reference to a data element on the PPortPrototype and to the same data element on the RPortPrototype.

Table 5.28: SwcToSwcSignal

Class	**SwcToSwcOperationArguments**			
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths			
Note	The SwcToSwcOperationArguments describes the information (client server operation arguments, plus the operation identification, if required) that are exchanged between two SW Components from exactly one client to one server, or from one server back to one client. The direction attribute defines which direction is described. If direction == IN, all arguments sent from the client to the server are described by the SwcToSwcOperationArguments, in direction == OUT, it's the arguments sent back from server to client.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
direction	SwcToSwcOperation ArgumentsDirection Enum	1	attr	Direction addressed by this SwcToSwcClientServer Operation element.
operation	ClientServerOperation	2	iref	Reference to the operation at the client and at the server side whose arguments are described by SwcToSwc OperationArguments. The two ports referenced must be connected by a connector in the software component description.

Table 5.29: SwcToSwcOperationArguments

Enumeration	**SwcToSwcOperationArgumentsDirectionEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths
Note	Direction addressed by this element.
Literal	***Description***
in	IN (all IN and INOUT arguments) **Tags:** atp.EnumerationValue=0
out	OUT (all OUT and INOUT arguments) . **Tags:** atp.EnumerationValue=1

Table 5.30: SwcToSwcOperationArgumentsDirectionEnum

5.2.2.2 ForbiddenSignalPath

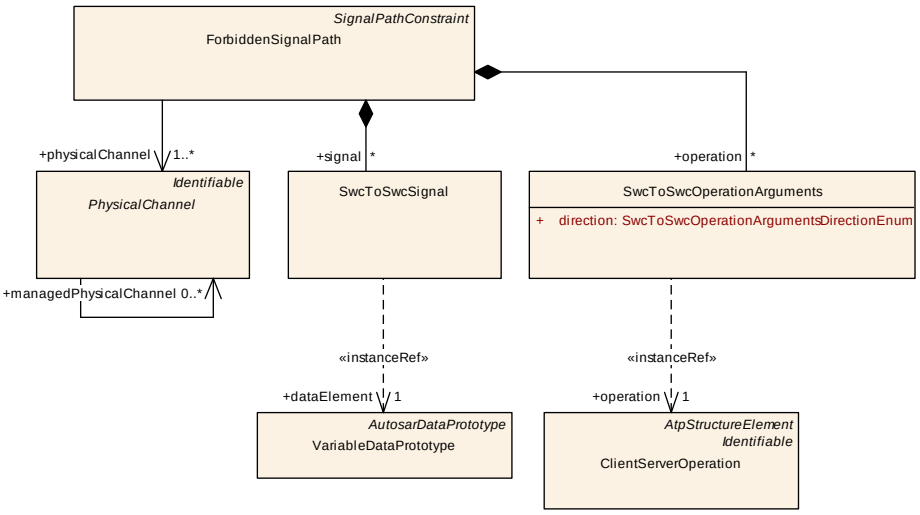

Figure 5.19: Description of the signal path that a signal must not take in the topology (ForbiddenSignalPath)

Class	**ForbiddenSignalPath**			
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths			
Note	The ForbiddenSignalPath describes the physical channels which an element must not take in the topology. Such a signal path can be a constraint for the communication matrix, because such a path has an effect on the frame generation and the frame path.			
Base	*ARObject*, *SignalPathConstraint*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
operation	SwcToSwcOperation Arguments	*	aggr	Reference to the operation arguments of one operation which must not take the predefined way in the topology.
physical Channel	PhysicalChannel	1..*	ref	The SwcToSwcSignal must not be transmitted on one of these physical channels.
signal	SwcToSwcSignal	*	aggr	The data element which must not take the predefined way in the topology.

Table 5.31: ForbiddenSignalPath

5.2.2.3 PermissibleSignalPath

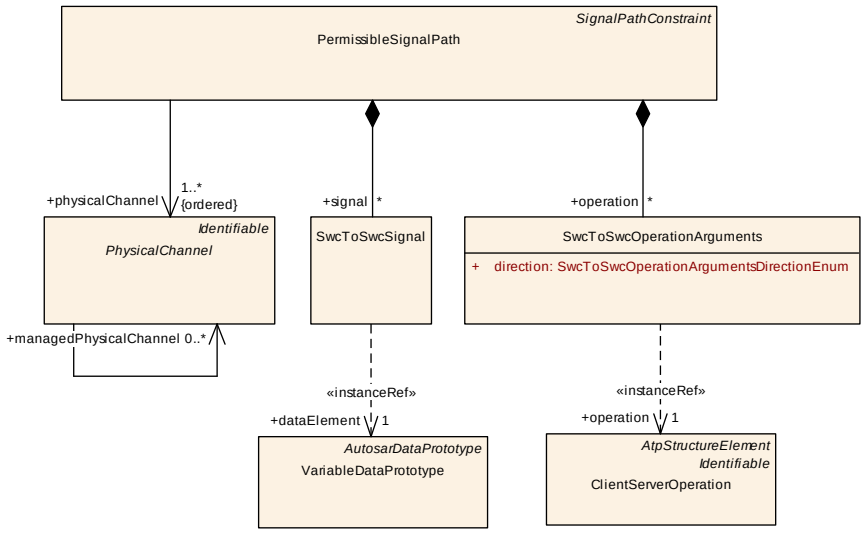

Figure 5.20: Description of the signal path that a signal must take in the topology (PermissibleSignalPath)

Class	**PermissibleSignalPath**			
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths			
Note	The PermissibleSignalPath describes the way a data element shall take in the topology. The path is described by ordered references to PhysicalChannels. If more than one PermissibleSignalPath is defined for the same signal/operation attributes, any of them can be chosen. Such a signal path can be a constraint for the communication matrix . This path describes that one data element should take path A (e.g. 1. CAN channel, 2. LIN channel) and not path B (1. CAN channel, FlexRay channel A). This has an effect on the frame generation and the frame path.			
Base	*ARObject*, *SignalPathConstraint*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
operation	SwcToSwcOperation Arguments	*	aggr	The arguments of an operation that can take the predefined way in the topology.
physicalChannel (ordered)	PhysicalChannel	1..*	ref	The SwcToSwcSignal can be transmitted on one of these physical channels.
signal	SwcToSwcSignal	*	aggr	The data element which can take the predefined way in the topology.

Table 5.32: PermissibleSignalPath

5.2.2.4 SeparateSignalPath

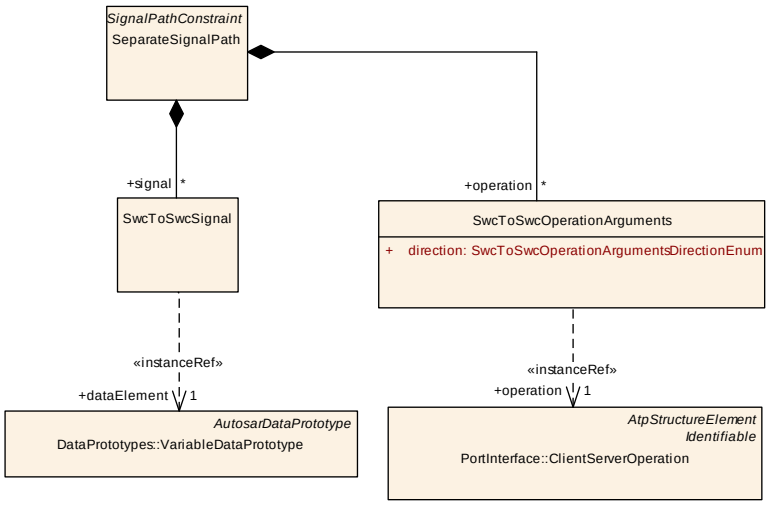

Figure 5.21: Description of signals that must not take the same way in the topology (SeparateSignalPath)

Class	**SeparateSignalPath**			
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths			
Note	The SeparateSignalPath describes that two SwcToSwcSignals and/or SwcToSwcOperationArguments must not take the same way (Signal Path) in the topology (e.g. Redundancy). This means that the signals are not allowed to share even a single physical channel in their path.			
Base	*ARObject*, *SignalPathConstraint*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
operation	SwcToSwcOperation Arguments	*	aggr	The SwcToSwcOperationArguments that must not take the same way (Signal Path) in the topology.
signal	SwcToSwcSignal	*	aggr	The SwcToSwcSignals that must not take the same way (Signal Path) in the topology.

Table 5.33: SeparateSignalPath

5.3 RTE and basic software resource estimations

Important constraints for system partitioning are the available resources on the ECUs in the system. For SW components, the resource estimations can be stated in SW component descriptions. It is however not only SW components that require resources. AUTOSAR RTE and basic software running on the ECU have resource needs as well.

The realization of the RTE and the kind of basic software to be run on a certain ECU depend on the implicit and explicit usage of all basic software by the software components. The software components need to communicate internally and with software components on other ECUs. Furthermore, they have different needs with respect to scheduling. This results in implicit use of e.g. communication and operating system software. In addition, the software components make explicit use of basic software when they e.g. utilize system services (e.g. diagnostics) and access sensors/actuators via the I/O abstraction layer or the Complex Driver abstraction layer. Thus, the resource consumption of the RTE and the basic software depend on the SW Components mapped to the ECU, since this determines the exact configuration of the RTE and the basic software.

[TPS_SYST_01126] Resource Consumption for RTE and basic software ⌈ The resource consumption for RTE and basic software may be specified using class `EcuResourceEstimation`. Each estimation is performed for a specific ECU and for a specific set of SW mapped to that ECU (reference from `EcuResourceEstimation` to `EcuInstance` and `SwcToEcuMapping`). ⌋ *(RS_SYST_00002)*

Different resource estimations for a specific ECU, but with different mappings may exist, e.g. for different variants of the system, or to show the difference of resource needs for different mappings. The `EcuResourceEstimation` aggregates the meta-class `ResourceConsumption` from the GenericStructure package each for RTE and basic software, which specifies stack and heap usage and execution time.

`ExecutionTime` and `StackUsage` are used to provide information on the implementation specific resource usage of the `ExecutableEntity` defined in the `InternalBehavior` of SW-Component respectively in the `BswInternalBehavior` of BSW Module. `MemorySection` documents the resources needed to load the object file containing the implementation on the ECU. `HeapUsage` describes the dynamic memory usage of the software.

Figure 5.22 shows the meta-model for resource estimations for RTE and basic SW.

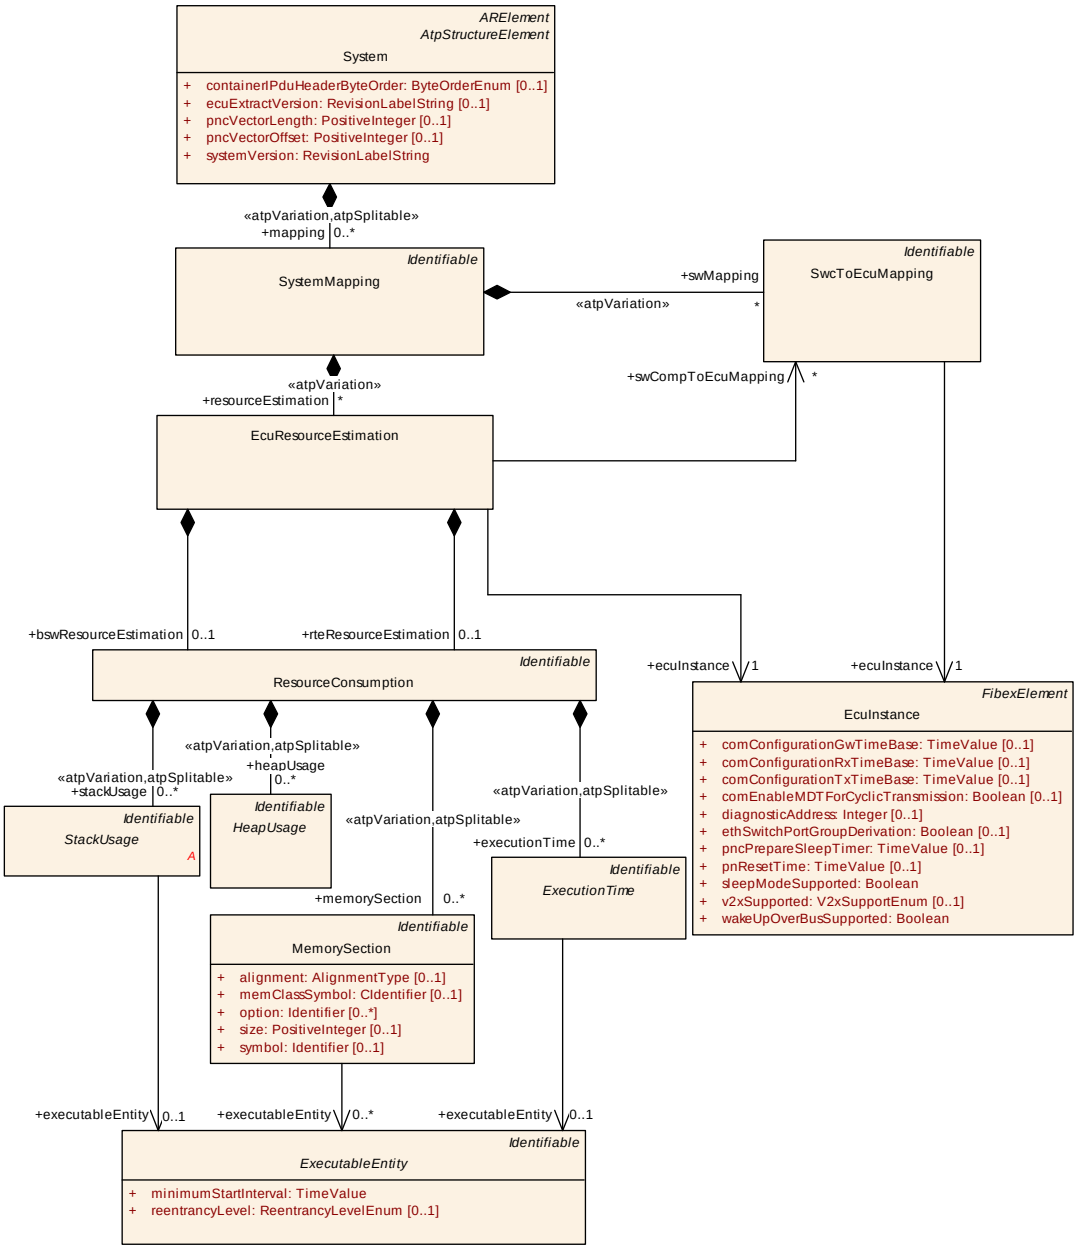

Figure 5.22: ECU resource estimations (ResourceEstimation)

[constr_3005] valid `EcuResourceEstimation` ⌈ The same `EcuInstance` shall be referenced directly from the `EcuResourceEstimation` and from the `SwcToEcuMapping`:

EcuResourceEstimation.swCompToEcuMapping.ecuInstance == EcuResourceEstimation.ecuInstance ⌋()

Class	**EcuResourceEstimation**			
Package	M2::AUTOSARTemplates::SystemTemplate::SWmapping			
Note	Resource estimations for RTE and BSW of a single ECU instance.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
bswResource Estimation	ResourceConsumption	0..1	aggr	Estimation for the resource consumption of the basic software.
ecuInstance	EcuInstance	1	ref	Reference to the ECU this estimation is done for.
introduction	DocumentationBlock	0..1	aggr	This represents introductory documentation about the ecu resource estimation **Tags:** xml.sequenceOffset=-10
rteResource Estimation	ResourceConsumption	0..1	aggr	Estimation for the resource consumption of the run time environment.
swCompToEcu Mapping	SwcToEcuMapping	*	ref	References to SwcToEcuMappings that have been taken into account for the resource estimations. This way it is possible to define dfferent EcuResourceEstimations with diifferent mappings, e.g. before and after mapping an additional SW component.

Table 5.35: ResourceConsumption

The element ResourceConsumption and the subelements HeapUsage, MemorySection, StackUsage and ExecutionTime are described in more detail in the BSW Module Description [18].

5.4 Partial Networking

The AUTOSAR BSW stack supports power saving during vehicle operation time with the partial networking mechanism. This mechanism allows to shut down and startup the bus communication interfaces of groups of ECUs (Partial Network Cluster) during normal bus communication.

On the VFB Level Partial Networks are represented by Virtual Function Clusters and are described with PortGroups. The Virtual Function Cluster groups the communication necessary to realize one or more vehicle functions that can become activated/deactivated during normal vehicle operation. Virtual Function Clusters are described in more detail in [5]. The Virtual Function Clusters are mapped onto Partial Network Clusters.

[TPS_SYST_01133] Partial Network Clusters ⌈ Partial Network Clusters are realized with ISignalIPduGroups using PncMapping. ⌋*(RS_SYST_00042)*

PncMapping is Describable.

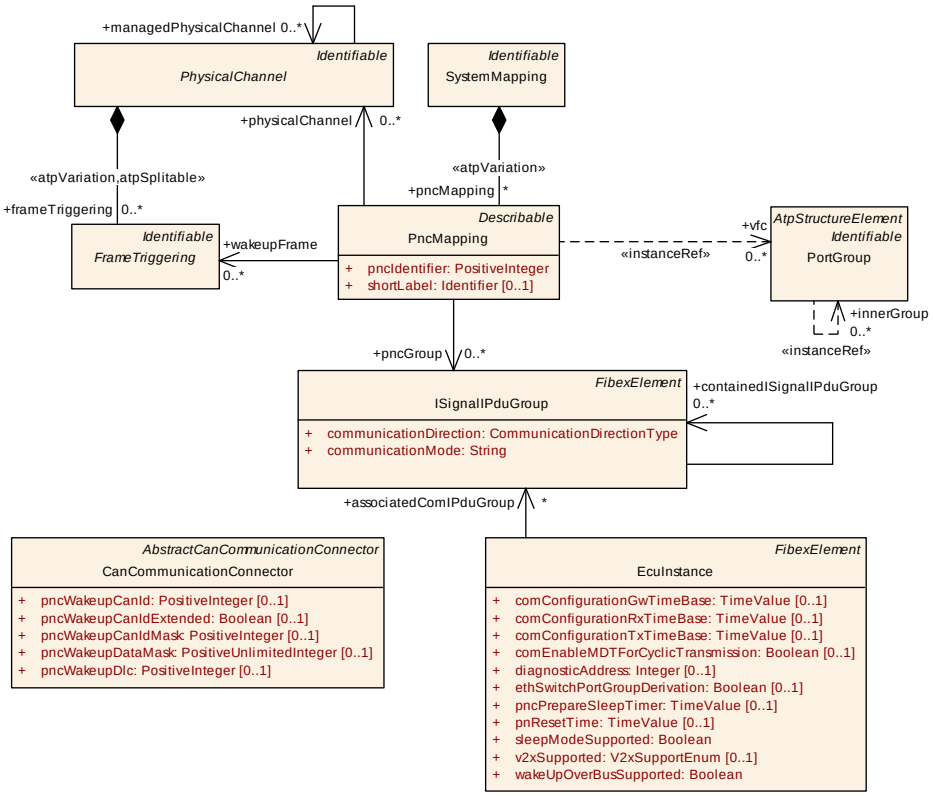

Figure 5.23: Mapping of Virtual Function Clusters onto Partial Network Clusters

Class	**PncMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::PncMapping			
Note	Describes a mapping between one or several Virtual Function Clusters onto Partial Network Clusters. A Virtual Function Cluster is realized by a PortGroup. A Partial Network Cluster is realized by one or more IPduGroups.			
Base	*ARObject*, *Describable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
ident	PncMappingIdent	0..1	aggr	This adds the ability to become referrable to PncMapping.
physical Channel	PhysicalChannel	*	ref	This reference maps the partial network to a communication channel.
pncGroup	ISignalIPduGroup	*	ref	IPduGroup participating in a Partial Network Cluster. This reference is optional in case an ecu extract has only indirect pnc access, i.e. ecu is not directly conntected to a network which supports partial network.
pncIdentifier	PositiveInteger	1	attr	Identifer of the Partial Network Cluster. This number represents the absolute bit position of this Partial Network Cluster in the NM Pdu.
shortLabel	Identifier	0..1	attr	This attribute specifies an identifying shortName for the PncMapping. It shall be unique in the System scope.
vfc	PortGroup	*	iref	Virtual Function Cluster to be mapped onto a Partial Network Cluster. This reference is optional in case that the System Description doesn't use a complete Software Component Description (VFB View). This supports the inclusion of legacy systems.

△

Class	PncMapping			
wakeupFrame	FrameTriggering	*	ref	Reference to collection of FrameTriggerings that are used for the wakeup of this PNC (Application Frames or Nm Frames can be used). This reference is only valid if this EcuExtract represents an ECU which has direct PNC access, i.e. ECU is directly connected to a network which supports partial network.

Table 5.36: PncMapping

[constr_3039] `pncIdentifier` range ⌈ The `pncIdentifier` value shall be in the range of 8..63. ⌋*()*

[constr_3198] Uniqueness of `PncMapping.shortLabel` ⌈ If the optional `shortLabel` attribute is used it shall be unique in the `System` scope. ⌋*()*

The runtime information that is used to coordinate the request/release information of all partial networks is called `pncVector`. The size and position of the `pncVector` inside the network management user data (`NmPdu.iSignalToIPduMapping`) is globally defined in the `System` class in chapter 1.6.

In the system description the `NmPdu`s are described based on the actual network interaction (i.e. an ECU sends one `NmPdu` per network and receives a set of `NmPdu`s).

`NmPdu`s that define the existence of NM user data via the existence of the attribute `iSignalToIPduMapping` shall be referenced by corresponding `PduTriggering`s where the attribute `iPduPort` exists accordingly. This is also reflected by [TPS_SYST_01057].

`NmPdu`s that define the existence of NM user data via the definition of `NmPdu.nmDataInformation` shall not be referenced by `PduTriggering`s because neither `Com` nor `PduR` are involved in the transmission (which lets the `Nm` module talk to the bus interface directly).

The `NmPdu`s contributing to partial networking also have the Nm user data layout specified to contain the `pncVector` as an UINT8_N signal.

Those `Pdu`s which are used to perform the ECU internal communication between the basic software modules (like *EIRA*, *ERA*) are not described in the system description and need to be introduced to the ECU Configuration.

[constr_3040] Restriction of `pncIdentifier` values ⌈ The `pncIdentifier` value shall be within the range described by `pncVectorOffset` and `pncVectorLength`. ⌋*()*

[constr_3041] `pncVectorOffset` range ⌈ The `pncVectorOffset` value shall be in the range of 1..7. ⌋*()*

[constr_3042] `pncVectorLength` range ⌈ The `pncVectorLength` value shall be in the range of 1..7. ⌋*()*

Please note that a `pncVector` is configured as UINT8_N signal in AUTOSAR Com.

[constr_3146] Partial Networking timing constraint ⌈ For Partial Networking the following timing constraints shall be ensured:

- CAN / Ethernet: (pnResetTime + pncPrepareSleepTimer) < nmNetwork-Timeout
- FlexRay: (pnResetTime + pncPrepareSleepTimer) < nmReadySleepTime

⌋*()*

[TPS_SYST_02145] Default behavior for not defined nmPncParticipation ⌈ When NmCluster.nmPncParticipation is set to *true* or is not defined this Nm-Cluster shall contribute to the partial network mechanism. ⌋*()*

[constr_3323] Relation between NmCluster.nmPncParticipation and PncMapping.pncGroup ⌈ If a PncMapping references an ISignalIPduGroup in role pncGroup which in turn

- contains (either directly or via one of its subordinate ISignalIPduGroups referenced in role containedISignalIPduGroup) ISignalIPdus that are referenced by a PduTriggering in role iPdu which in turn
- is composed by a PhysicalChannel in role pduTriggering which in turn
- is composed by CommunicationCluster in role physicalChannel which in turn
- is referenced by an NmCluster in role communicationCluster,

then this NmCluster shall have its nmPncParticipation attribute set to TRUE unless the PhysicalChannel is referenced in the role managedPhysicalChannel. ⌋ *()*

[constr_3484] PncMapping that refers a managedPhysicalChannel shall also refer the managing PhysicalChannel ⌈ If a PncMapping refers to a PhysicalChannel (either directly in the role physicalChannel or indirectly by referencing an ISignalIPduGroup in the role pncGroup) and this PhysicalChannel is referenced in the role managedPhysicalChannel, then the according managing PhysicalChannel (the source of the managedPhysicalChannel reference) shall also be referenced by the PncMapping (either directly in the role physicalChannel or indirectly by referencing an ISignalIPduGroup in the role pncGroup). ⌋*()*

Note that [constr_3484] ensures that the managing PhysicalChannel is part of the same PNC as the managedPhysicalChannels.

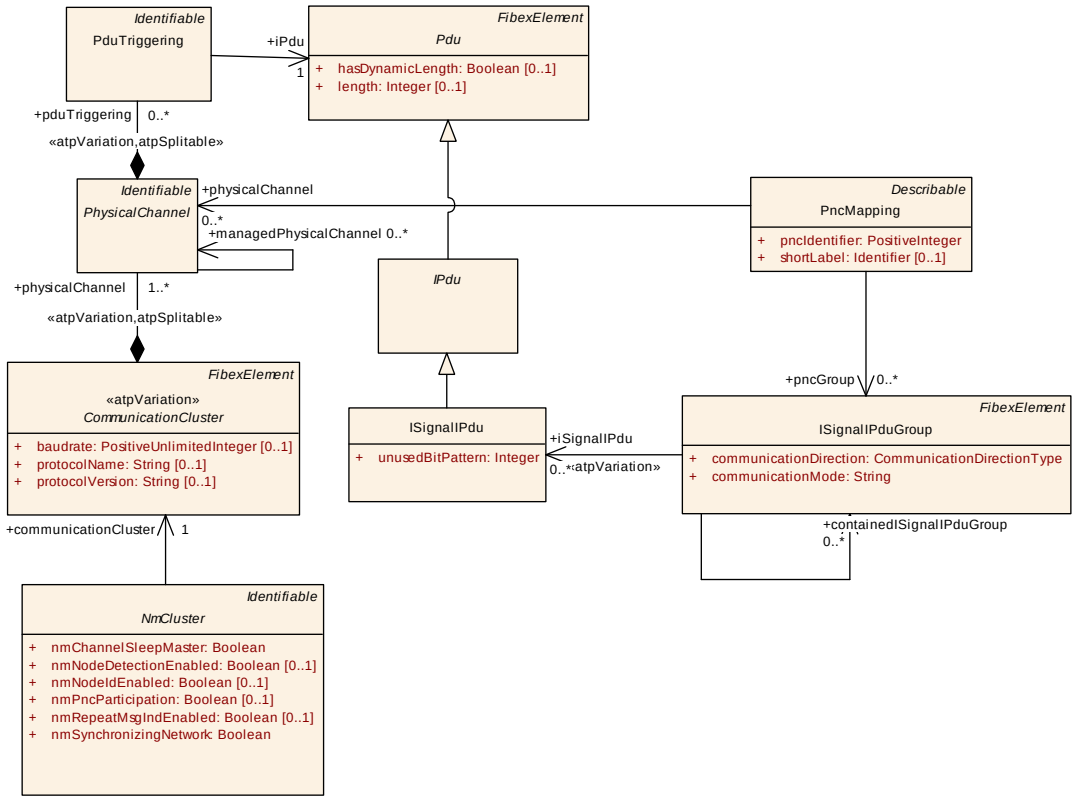

Figure 5.24: Relation between `NmCluster.nmPncParticipation` and `PncMapping.pncGroup`

[TPS_SYST_02146] Explicit definition of `pncVector` at `NmPdu` ⌈ If there is an `ISignalToIPduMapping` aggregated by `NmPdu` that fully matches the interval defined by `pncVectorOffset` and `pncVectorLength` then the corresponding `ISignal` represents the `pncVector`. ⌋*()*

[TPS_SYST_02147] Implicit definition of `pncVector` at `NmPdu` ⌈ If there is no `ISignalToIPduMapping` aggregated by `NmPdu` that fully matches the interval defined by `pncVectorOffset` and `pncVectorLength` and the respective `NmCluster.nmPncParticipation` has the value *true* or is not defined then the `ComSignal` in the COM configuration shall be derived locally in the Ecu Configuration according to the following rules: `ComBitPosition` and `ComSignalLength` shall be derived from `pncVectorOffset` and `pncVectorLength` respectively. Since `ComSignalType` is UINT8_N, `ComSignalEndianness` shall be OPAQUE (see SWS_Com_00553). `ComTransferProperty` shall be set to PENDING and `ComSignalInitValue` shall be set to 0. ⌋*()*

Attributes used to configure the Partial Network Wakeup of one specific Ecu are described in chapter 3.3.1.4.

5.4.1 Partial Networking and managed Ethernet switch

On switched Ethernet networks it is possible to let the Ethernet switch be managed by an AUTOSAR Ecu. In this case the configuration and the behavior of the CouplingElement with couplingType=switch are controlled by the management Ecu.

For the usage of Partial Networking on switched Ethernet networks with managed CouplingElements an additional application arises: Depending on the requested Partial Networks it shall be possible to switch off Ethernet switch ports which are not involved in any communication currently active.

In order to describe the relationships between Partial Networks and Ethernet switch ports an optional reference from CouplingPort to a PncMappingIdent in the role pncMapping is defined.

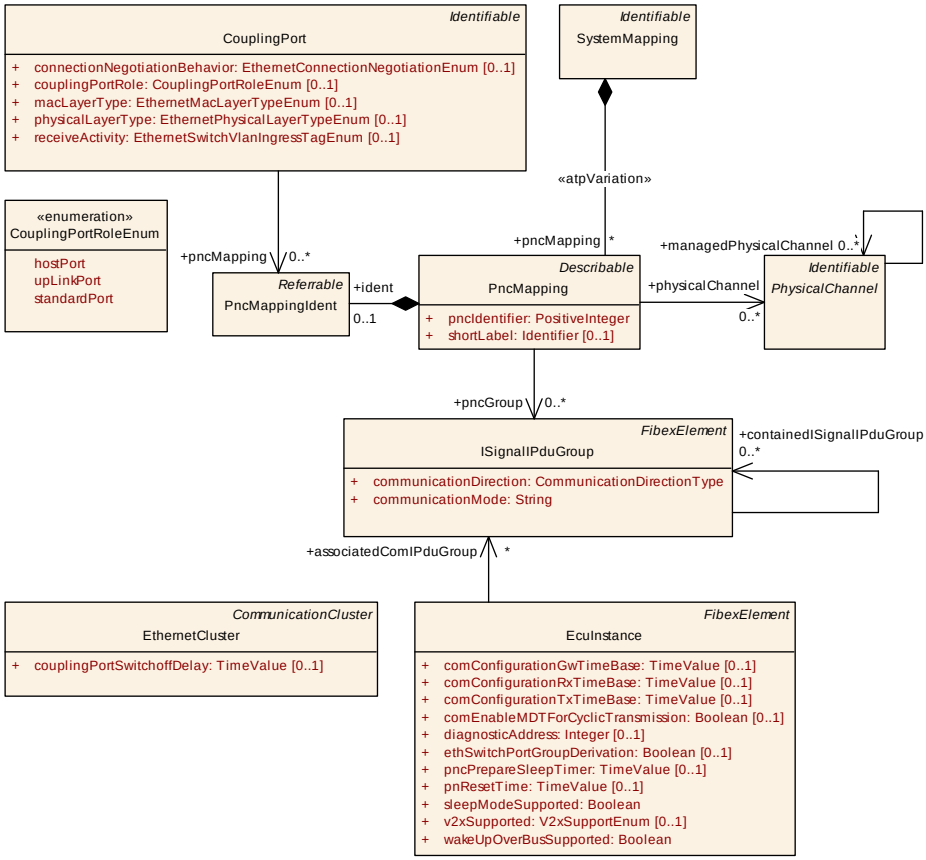

Figure 5.25: Partial Networking and managed Ethernet switch

The example in figure 5.26 illustrates the setup of an management ECU which manages 2 Ethernet switches.

The port 1 of Switch 1 is a hostPort.

The port 5 of Switch 1 and port 1 of Switch 2 are upLinkPorts.

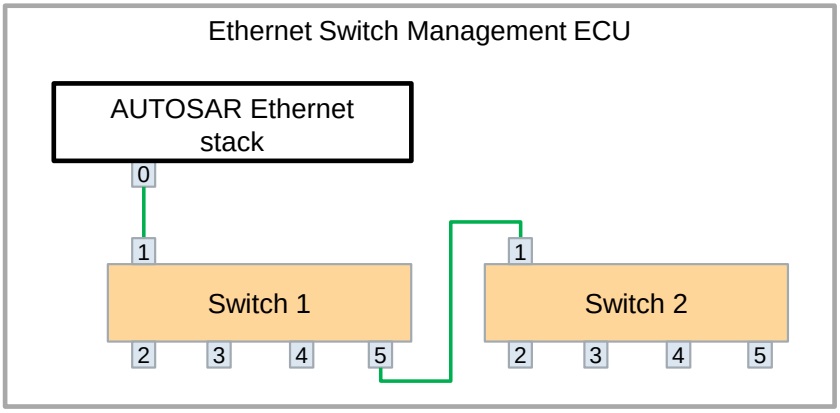

Figure 5.26: Example of managed Ethernet switches

[constr_3523] `CouplingPort` and `PncMapping` in the scope of an `EthernetPhysicalChannel` ⌈ If

- a `CouplingPort` referring to an `EthernetPhysicalChannel` – via a `VlanMembership` – references at least one `PncMapping`
- and that `PncMapping` contains PDUs – via the assignment of `PncMapping.pncGroup` – that are transported on this `EthernetPhysicalChannel`

then every `CouplingPort` referring to that `EthernetPhysicalChannel` shall reference at least one `PncMapping` as well. ⌋*()*

If a `CouplingPort` referring to an `EthernetPhysicalChannel` – via a `VlanMembership` – references no `PncMapping` then any other `CouplingPort` referring to that `EthernetPhysicalChannel` is allowed to either reference `PncMapping`s or not.

[TPS_SYST_03018] Aggregation of PNCs at the `hostPort` ⌈ A `CouplingPort` with `couplingPortRole` set to `hostPort` shall reference all `PncMapping`s that are referenced by any `CouplingPort`s of the same `CouplingElement` and all `CouplingElement`s connected to this `CouplingElement`. ⌋*()*

[constr_3524] Definition of `couplingPortRole` on `CouplingPort` for managed `CouplingElement` ⌈ A managed `CouplingElement` shall have either

- at most one `CouplingPort` with `couplingPortRole` set to `hostPort` or
- at least one `CouplingPort` with `couplingPortRole` set to `upLinkPort`.

⌋*()*

[constr_3525] Connection of `CouplingPort` with `couplingPortRole` set to `upLinkPort` ⌈ A `CouplingPort` with `couplingPortRole` set to `upLinkPort` shall be connected to exactly one other `CouplingPort` with `couplingPortRole` set to `upLinkPort`. ⌋*()*

[TPS_SYST_03020] Default value for `CouplingPort.couplingPortRole` if not defined ⌈ If no value for the attribute `CouplingPort.couplingPortRole` is defined then `standardPort` shall be assumed. ⌋*()*

[TPS_SYST_03019] Modeling of `CouplingPort`s for managed `CouplingElement` ⌈ Only `CouplingPort`s that participate in the communication of a managed `CouplingElement` shall be modeled in the System Description. ⌋*()*

All other ports of an Ethernet switch are not modeled. The expected behavior of unmodeled Ethernet switch ports on runtime:

1. the Ethernet switch driver switches off this Ethernet switch ports during its initialization
2. unmodeled Ethernet switch ports shall never be switched on.

5.5 Com Management Mapping

The AUTOSAR BSW stack supports the configuration of the ComM module which encapsulates the control of the underlying communication services. The ComM module collects the bus communication access requests from communication requestors and coordinates the bus communication access requests. In order to utilize the communication requests from application software the Software Component Template supports the definition of `PortGroup`s with the category MODE_MANAGEMENT. In this section it is described how `PortGroup`s with the category MODE_MANAGEMENT are mapped to communication channels.

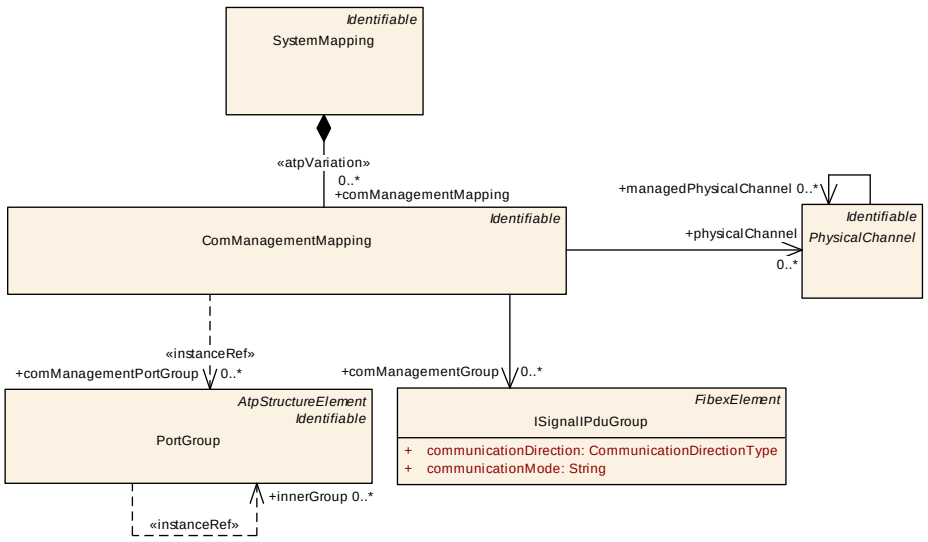

Figure 5.27: Mapping between PortGroups and communication channels

Class	**ComManagementMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate			
Note	Describes a mapping between one or several Mode Management PortGroups and communication channels.

Attribute	***Type***	***Mul.***	***Kind***	***Note***
com Management Group	ISignalIPduGroup	*	ref	IPduGroup participating in a Mode Management Port Group.
com Management PortGroup	PortGroup	*	iref	Mode Management PortGroup to be mapped onto a communication channel. This reference is optional in case that the System Description doesn't use a complete Software Component Description (VFB View). This supports the inclusion of legacy systems.
physical Channel	PhysicalChannel	*	ref	This reference maps the Mode Management PortGroup partial network to communication channels.

Table 5.37: ComManagementMapping

6 Communication

This chapter describes all topics that deal with constraints or configurations that describe the information exchange between the ECUs. The description of communication matrices in the System Template is based on the description in ASAM FIBEX [9]. Because of the requirements of AUTOSAR some extensions were made to the original FIBEX model.

The main elements to describe communication in the System Template are SystemSignals, ISignals, Pdus and Frames, as it can be seen on Figure 6.1.

Frames can be defined independently of communication clusters. On the communication channel the Frame is represented by the referencing FrameTriggering.

A Frame has a payload section of a certain length in bytes, which contains an arbitrary number of non-overlapping Pdus. In AUTOSAR only FlexRay supports the packing and unpacking of multiple Pdus into/out of one FlexRay Frame. The AUTOSAR CanIf and LinIf are not capable of packing multiple Pdus into one Frame.

[constr_3036] Pdus in CAN and LIN Frames ⌈ CAN Frames and LIN Frames shall only contain one Pdu. ⌋*()*

Note that via the ContainerIPdu it is possible to transport several IPdus in one ContainerIPdu in order to support CAN FD.

A Pdu (Protocol Data Unit) is the information delivered through a network layer. For the network to understand which layer is being discussed, a single-letter prefix is added to the PDU.

- IPdu - Interaction Layer Protocol Data Unit (assembled and disassembled in Com). In the case of external communication the Interaction Layer packs one or more signals into assigned IPdus and passes them to the underlying layer for transfer between nodes in a network.
- NPdu - Network Layer Protocol Data Unit (assembled and disassembled in a Transport Protocol module). The TP module's main purpose is the segmentation and reassembly of IPdus that do not fit in one of the assigned NPdus.
- LPdu - Data Link Layer Protocol Data Unit (assembled and disassembled in AUTOSAR Hardware Abstraction layer). The element Frame in the System Template represents the Autosar Layered Architectures LSdu. Sdu is the abbreviation of "Service Data Unit". The Data Link Layers LPdu contains the LSdu and PCI (Protocol Control Information). The LPdu is not described in the System Template.

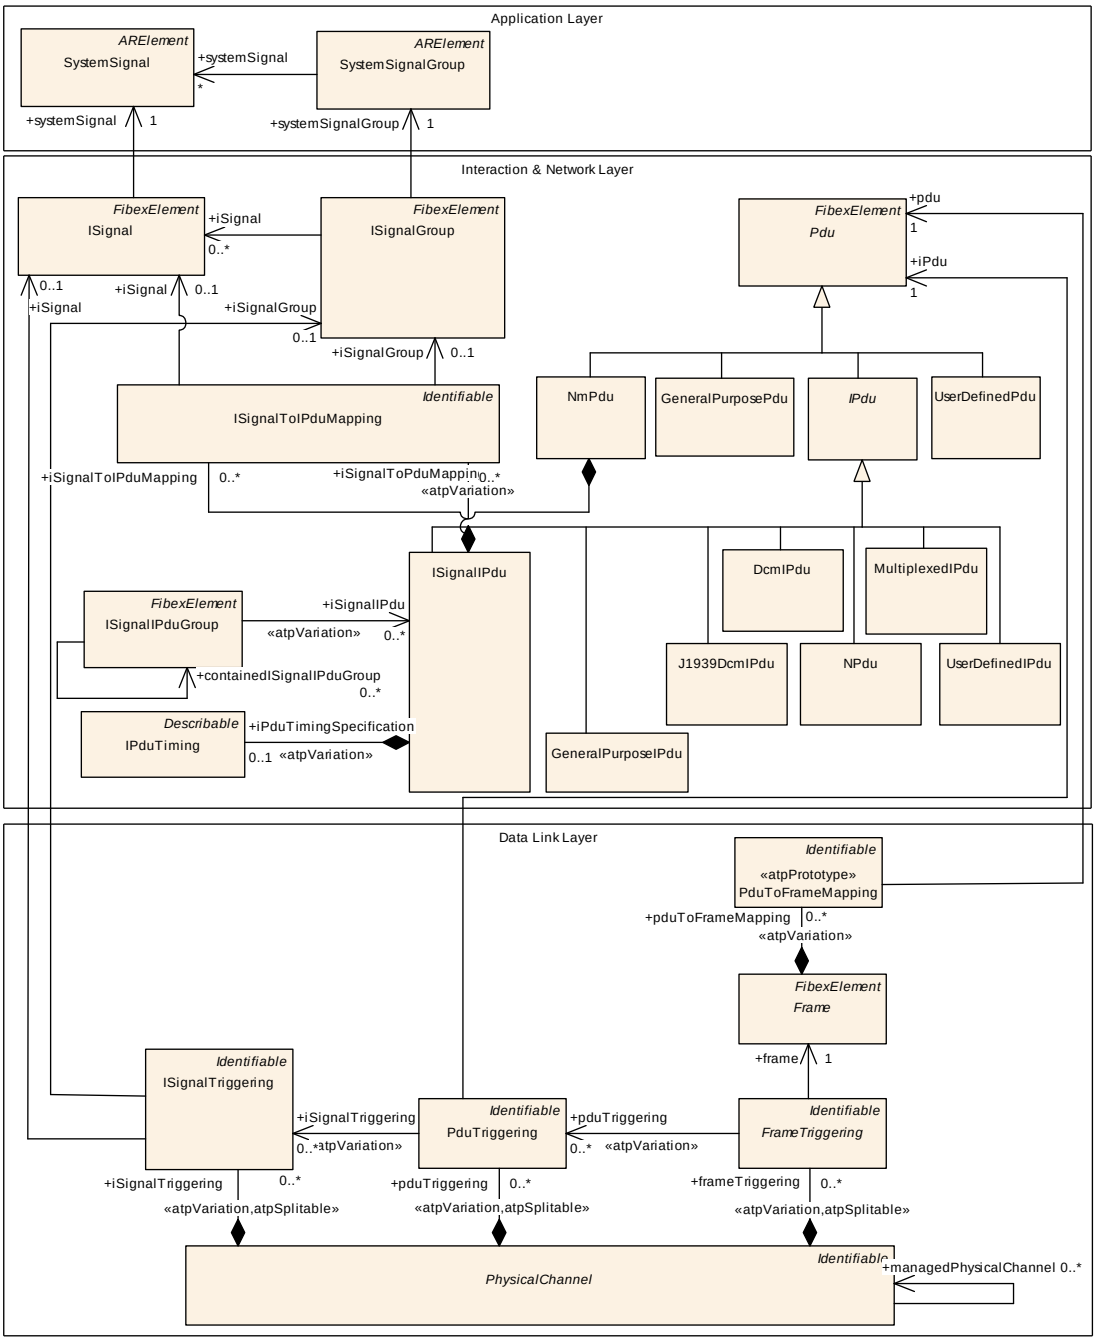

Figure 6.1: Communication Overview (FibexCore: Communication)

In case no multiplexing is performed the `IPdu`s of Com that fit into one frame can be passed directly via the PDU Router to the communication interfaces.

[constr_3037] maximum `Frame frameLength` for CAN and LIN ⌈ For CAN and LIN the maximum `frameLength` is 8 bytes and 64 bytes in case of CAN FD. ⌋*()*

[constr_3038] maximum `Frame frameLength` for FlexRay ⌈ For FlexRay the maximum `frameLength` is 254 bytes. ⌋*()*

[TPS_SYST_01048] Handling of large IPdus ⌈ Large IPdus that are too long to fit into one Frame of the respective subclass of CommunicationCluster shall be routed via a Transport Protocol to the communication interfaces. ⌋()

For example an IPdu with the length of 10 bytes needs to be routed via a Transport Protocol on CAN but on FlexRay this is not required.

The Transport Protocols are described in more detail in chapter 6.8.

If multiplexing is performed an IPdu is routed between the IPdu Multiplexer and the Interface Layer or Transport Layer. To distinguish these two different cases two specializations ISignalIPdu and MultiplexedIPdu are introduced. A ISignalIPdu represents an IPdu handled by AUTOSAR Com. The AUTOSAR IPduM is responsible to combine Com ISignalIPdus to MultiplexedIPdus. On receiver-side the IPduM is responsible to interpret the content of MultiplexedIPdus and provide Com separated ISignalIPdus by taking into account the value of the selector field. The IPdu Multiplexer is described in more detail in chapter 6.5.

AUTOSAR Com provides the possibility to define Transmission Modes for each Com ISignalIPdu. For this reason the ISignalIPdu aggregates the IPduTiming. The Transmission Modes are described in more detail in chapter 6.4.

6.1 Triggerings and Ports

The elements FrameTriggering, PduTriggering and ISignalTriggering are describing the usage of Frames, IPdus and ISignals on a PhysicalChannel.

A FrameTriggering need to fulfill requirements for contained Pdus that are defined by the corresponding PduTriggerings. And the PduTriggering need to fulfill requirements for contained ISignals that are defined by the corresponding ISignalTriggerings. The references between the Triggering elements can be used to describe these relationships. More details can be found in class tables of FrameTriggering, PduTriggering and ISignalTriggering.

In AUTOSAR the timing of bus messages can be controlled by send requests of the Application layer in combination with the Com Transmission Modes and Transfer Properties (esp. CAN). On the other hand it can be controlled by the FlexRay or LIN Interface. In this case the Bus Interface only requests IPdus that have to be provided by Com.

In the System Template the Com controlled timing is described with the aggregation between the ISignalIPdu and the IPduTiming. The LIN and FlexRay Scheduling Tables are described in the FrameTriggering.

Timing requirements for FlexRay, TTCAN and LIN Pdus can be specified with the Timing Extension model. More details are described in chapter 1.7.3.

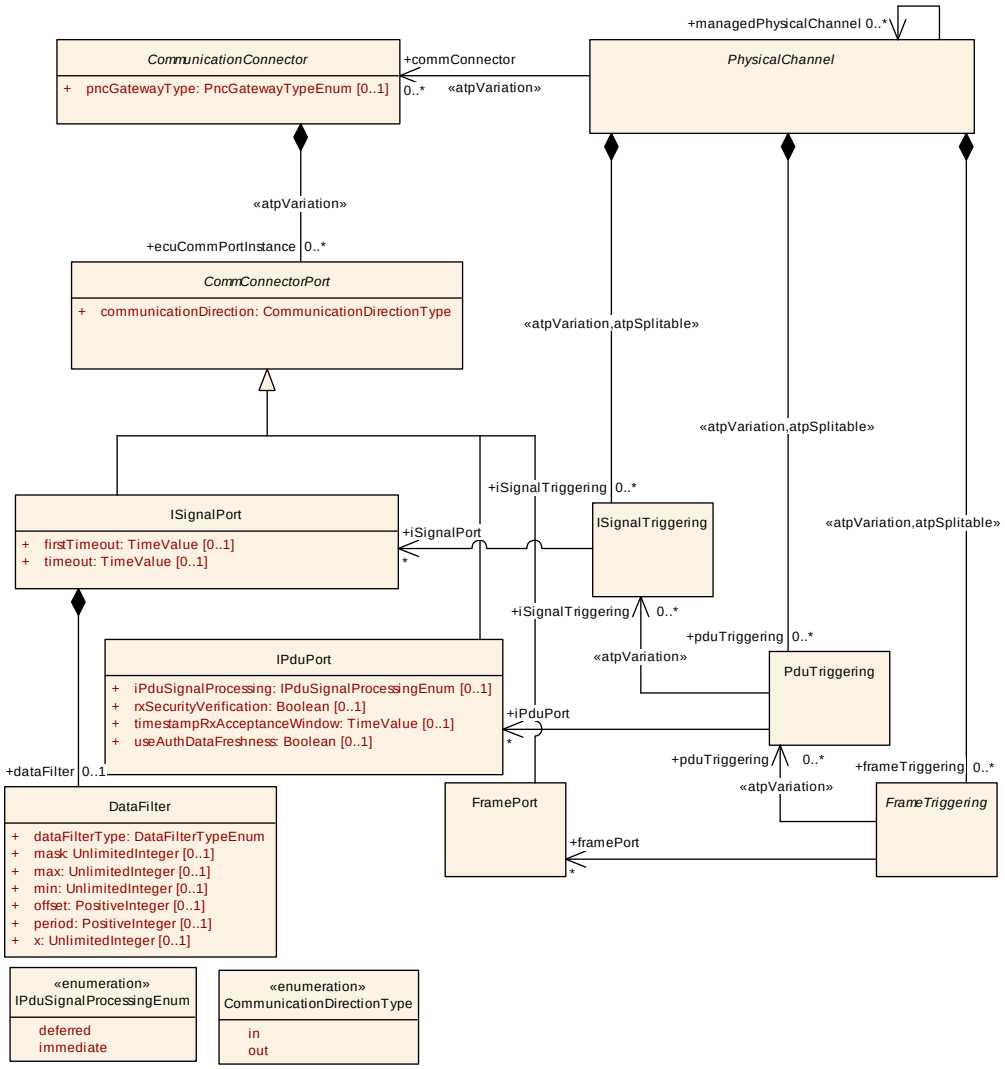

Figure 6.2: Communication Matrix (FibexCore: CommunicationMatrix)

Figure 6.2 shows the relationship between the CommConnectorPort and the FrameTriggering, PduTriggering and ISignalTriggering. This relationship allows to specify explicitly which Frames, Pdus, ISignals are received/sent by the connected ECU on the connected channel.

[constr_3243] FrameTriggering.pduTriggering condition ⌈ A FrameTriggering shall reference a PduTriggering if the PduTriggering references a Pdu that is referenced by a PduToFrameMapping which in turn is aggregated by the Frame that is referenced by that FrameTriggering. ⌋()

[constr_3250] PduTriggering.iSignalTriggering condition ⌈ A PduTriggering shall reference an ISignalTriggering if the ISignalTriggering references an ISignal or an ISignalGroup that is referenced by an ISignalToIPduMapping which in turn is aggregated by the Pdu that is referenced by that PduTriggering. ⌋()

[TPS_SYST_02102] `FrameTriggering.pduTriggering` references that shall be ignored ⌈ References from `FrameTriggering` to `PduTriggering` which are not covered by [constr_3243] shall be ignored. ⌋()

As a consequence of [constr_3243] the following implications can be derived:

- The `PduTriggering` of the `ContainerIPdu` is referenced from the `FrameTriggering` but the `PduTriggering`s of the contained `IPdu`s are not referenced from the `FrameTriggering`.
- The `PduTriggering` of the `MultiplexedIPdu` is referenced from the `FrameTriggering` but the `PduTriggering`s of the multiplexed Part `Pdu`s are not referenced from the `FrameTriggering`.

[TPS_SYST_02104] Triggerings on `PhysicalChannel` ⌈ The following modeling creates a "membership" of `ISignal`s, `ISignalGroup`s, `Pdu`s, and `Frame`s in a given `PhysicalChannel`:

- `PhysicalChannel` aggregates
  - `ISignalTriggering` that in turn references `ISignal` in the role `iSignal`
  - `ISignalTriggering` that in turn references an `ISignalGroup` in the role `iSignalGroup` ([TPS_SYST_02105] applies).
- `PhysicalChannel` aggregates `PduTriggering` that in turn references a `Pdu` in the role `iPdu`.
- `PhysicalChannel` aggregates `FrameTriggering` that in turn references a `Frame` in the role `frame`.

⌋()

[TPS_SYST_02105] `ISignalGroup` and `ISignal` referenced from `ISignalTriggering` ⌈ Either an `ISignalGroup` and all `ISignal`s referenced from the `ISignalGroup` are also referenced from `ISignalTriggering`s aggregated at the same `PhysicalChannel` or neither the `ISignalGroup` nor any of the `ISignal`s referenced by the `ISignalGroup` shall be referenced from `ISignalTriggering`s. ⌋()

[TPS_SYST_01142] Rules for the creation of references to Ports (`ecuCommPortInstance`) with `communicationDirection out` on sending Ecu ⌈

- Application sends `ISignal` or `ISignalGroup`
  - Reference from `ISignalTriggering` to `ISignalPort` shall be created for an `ISignal` that is not part of an `ISignalGroup`
  - Reference from `ISignalTriggering` to `ISignalPort` shall be created for the `ISignalGroup`
  - Reference from `ISignalTriggering` to `ISignalPort` shall be created for the `ISignalGroup` members that are sent by the Application.

  - PduTriggering reference to IPduPort shall be created
  - FrameTriggering reference to FramePort shall be created
- COM Signal Gateway
  - Reference from ISignalTriggering to ISignalPort shall be created for an ISignal that is not part of an ISignalGroup
  - Reference from ISignalTriggering to ISignalPort shall be created for the ISignalGroup
  - Reference from ISignalTriggering to ISignalPort for a subset of ISignals inside the ISignalGroup shall be created (in case not all members of the ISignalGroup participate in the target Signal Gateway relation).
  - PduTriggering reference to IPduPort shall be created
  - FrameTriggering reference to FramePort shall be created
- ISignal or ISignalGroup is mapped to ISignalIPdu but NOT sent by Application or Signal Gateway
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignal that is not part of an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for any ISignal that is part of an ISignalGroup
  - PduTriggering reference to IPduPort shall be created
  - FrameTriggering reference to FramePort shall be created
- Neither ISignal, ISignalGroup, Pdu, nor Frame sent by the ECU
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignal that is not part of an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for any ISignal that is part of an ISignalGroup
  - No PduTriggering reference to IPduPort shall be created
  - No FrameTriggering reference to FramePort shall be created

⌋()

Please note that it is possible to configure a signal that is transmitted by an application and also routed by a SignalGateway. At runtime it has to be ensured that only one path is active at a particular point in time (to avoid race conditions in COM Stack).

[TPS_SYST_02106] Rules for the creation of references to Ports (ecuCommPortInstance) with communicationDirection in on receiving Ecu ⌈

- Application receives ISignal or ISignalGroup
  - Reference from ISignalTriggering to ISignalPort shall be created for an ISignal that is not part of an ISignalGroup
  - Reference from ISignalTriggering to ISignalPort shall be created for the ISignalGroup
  - Reference from ISignalTriggering to ISignalPort shall be created for the ISignalGroup members that are received by the Application.
  - PduTriggering reference to IPduPort shall be created
  - FrameTriggering reference to FramePort shall be created
- COM Signal Gateway
  - Reference from ISignalTriggering to ISignalPort shall be created for an ISignal that is not part of an ISignalGroup
  - Reference from ISignalTriggering to ISignalPort shall be created for the ISignalGroup
  - Reference from ISignalTriggering to ISignalPort for a subset of ISignals inside the ISignalGroup shall be created (in case not all members of the ISignalGroup participate in the source Signal Gateway relation).
  - PduTriggering reference to IPduPort shall be created
  - FrameTriggering reference to FramePort shall be created
- ISignal or ISignalGroup is mapped to ISignalIPdu but NOT received by Application or Signal Gateway
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignal that is not part of an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for any ISignal that is part of an ISignalGroup
  - PduTriggering reference to IPduPort shall be created
  - FrameTriggering reference to FramePort shall be created

- Neither ISignal, ISignalGroup, Pdu, nor Frame received by the ECU
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignal that is not part of an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for an ISignalGroup
  - No ISignalTriggering reference to ISignalPort shall be created for any ISignal that is part of an ISignalGroup
  - No PduTriggering reference to IPduPort shall be created
  - No FrameTriggering reference to FramePort shall be created

⌋()

[constr_3252] ISignalTriggering.iSignalPort reference condition ⌈ An ISignalTriggering shall only reference an ISignalPort if the CommunicationConnector aggregating that ISignalPort is referenced by the PhysicalChannel which in turn aggregates that ISignalTriggering. ⌋()

[constr_3253] PduTriggering.iPduPort reference condition ⌈ A PduTriggering shall only reference an IPduPort if the CommunicationConnector aggregating that IPduPort is referenced by the PhysicalChannel which in turn aggregates that PduTriggering. ⌋()

[constr_3254] FrameTriggering.framePort reference condition ⌈ A FrameTriggering shall only reference a FramePort if the CommunicationConnector aggregating that FramePort is referenced by the PhysicalChannel which in turn aggregates that FrameTriggering. ⌋()

[constr_3255] FrameTriggering.pduTriggering reference condition with regard to the PhysicalChannel ⌈ A FrameTriggering shall only reference a PduTriggering in the role pduTriggering if both the FrameTriggering and PduTriggering are aggregated by the same PhysicalChannel. ⌋()

[constr_3256] PduTriggering.iSignalTriggering reference condition with regard to the PhysicalChannel ⌈ A PduTriggering shall only reference an ISignalTriggering in the role iSignalTriggering if both the PduTriggering and ISignalTriggering are aggregated by the same PhysicalChannel. ⌋()

The following rules apply for the creation of PduTriggerings and IPduPorts:

- **[TPS_SYST_01052] Routing of UserDefinedPdus, NmPdus, NPdus** ⌈ UserDefinedPdus, NmPdus, NPdus which are not going through the Pdu Router get their triggering information via the containing FrameTriggering and FramePort (no PduTriggering is defined for these Pdus). ⌋()

- **[TPS_SYST_03021] Routing of GeneralPurposePdus with category GLOBAL_TIME** ⌈ GeneralPurposePdus with category GLOBAL_TIME shall have PduTriggering and IPduPorts defined. ⌋*()*
- **[TPS_SYST_02091] Routing of GeneralPurposePdus with category SD and GeneralPurposePdus with category DoIP** ⌈ GeneralPurposePdus with category SD and GeneralPurposePdus with category DoIP shall have PduTriggering and IPduPorts defined since no Frames and FrameTriggerings are defined for Pdus that are handled by the SoAd. ⌋*()*
- **[TPS_SYST_01053] Low-level routing of NPdus** ⌈ In case of a low-level routing of NPdus the Pdus are handled like IPdus and the PduTriggering and IPduPort shall be defined. ⌋*()*
- **[TPS_SYST_01138] Low-level routing of XcpPdus** ⌈ Low-level routing of GeneralPurposeIPdus with category XCP: In case of a low-level routing of GeneralPurposeIPdus with category XCP the Pdus are handled like IPdus and the PduTriggering and IPduPort shall be defined. ⌋*()*
- **[TPS_SYST_01054] Routing of DcmIPdus** ⌈ DcmIPdus shall have PduTriggering and IPduPorts since they are handled by the PduR (connection to the Dcm and/or DcmIPdu-routing). ⌋*()*
- **[TPS_SYST_01055] Routing of ISignalIPdus that are part of a MultiplexedIPdu** ⌈ ISignalIPdus that are part of a MultiplexedIPdu (static or dynamic) and are also handled by the Com module shall have a PduTriggering and IPduPorts since they are handled by the PduR (and Com). Especially it is allowed to ignore certain received parts of a MultiplexedIPdu in a specific ECU. ⌋*()*
- **[TPS_SYST_01056] Routing of ISignalIPdus, UserDefinedIPdus, MultiplexedIPdus, GeneralPurposeIPdus, ContainerIPdus** ⌈ ISignalIPdus (not part of MultiplexedIPdus), UserDefinedIPdus, MultiplexedIPdus, GeneralPurposeIPdus and ContainerIPdus shall have a PduTriggering and IPduPort if they are handled by the PduR. Especially it is allowed to ignore a certain IPdu out of a Flexray frame if it is not considered in a specific ECU. ⌋*(RS_SYST_00055)*
- **[TPS_SYST_01057] Routing of NmPdus** ⌈ If an NmPdu contains user data defined via the existence of NmPdu.iSignalToIPduMapping and is consequently handled via the PduR and Com the NmPdu shall also be referenced by a corresponding PduTriggering where attribute iPduPort exists accordingly. ⌋*()*
- **[TPS_SYST_02059] Routing of SecuredIPdus** ⌈ SecuredIPdus shall have a PduTriggering and IPduPort defined since they are handled by the PduR. Pdus that are part of a SecuredIPdu and are also handled by the Com module shall have a PduTriggering and IPduPorts since they are handled by the PduR (and Com). ⌋*(RS_SYST_00054)*

- **[TPS_SYST_02061] Routing of IPdus that are part of a ContainerIPdu** ⌈ IPdus that are part of a ContainerIPdu shall have a PduTriggering and IPduPorts since they are handled by the PduR. ⌋*(RS_SYST_00055)*

The following rule applies to the creation of ISignalTriggering and ISignalPort:

[TPS_SYST_01058] Pdu Gateway where an Ecu only routes a PduTriggering without being interested in the content ⌈ In case of a Pdu Gateway where an Ecu only routes a PduTriggering without being interested in the content, the reference between the ISignalTriggerings (that are referred to by the PduTriggering in the role iSignalTriggering) and the respective ISignalPorts shall not be created. ⌋*()*

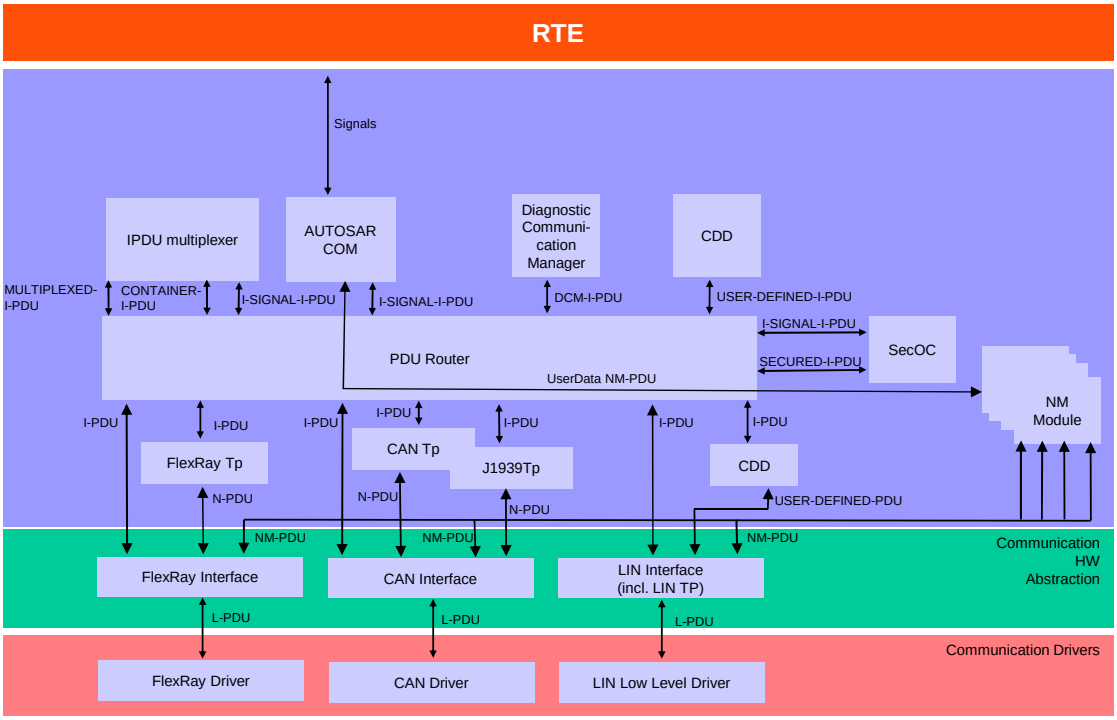

Figure 6.3: AUTOSAR Layered Architecture

Class	***CommConnectorPort*** (abstract)
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology
Note	The Ecu communication relationship defines which signals, Pdus and frames are actually received and transmitted by this ECU. For each signal, Pdu or Frame that is transmitted or received and used by the Ecu an association between an ISignalPort, IPduPort or FramePort with the corresponding Triggering shall be created. An ISignalPort shall be created only if the corresponding signal is handled by COM (RTE or Signal Gateway). If a Pdu Gateway ECU only routes the Pdu without being interested in the content only a FramePort and an IPduPort needs to be created.

Table 6.5: ISignalPort

[TPS_SYST_01059] Relationship between `FrameTriggering` and `CommConnectorPort` ⌈ For the reference between `FrameTriggering` and `FramePort` two approaches are supported:

- One to One relationship between `FrameTriggering` and `FramePort` per `EcuInstance`
- One `FramePort` per `communicationDirection` per `EcuInstance` exists and is referenced by all applicable `FrameTriggering`s (n to 1).

⌋()

[TPS_SYST_01060] Relationship between `PduTriggering` and `CommConnectorPort` ⌈ For the reference between `PduTriggering` and `IPduPort` two approaches are supported:

- One to One relationship between `PduTriggering` and `IPduPort` per `EcuInstance`
- One `IPduPort` per `communicationDirection` per `EcuInstance` exists and is referenced by all applicable `PduTriggering`s (n to 1).

⌋()

[TPS_SYST_01061] Relationship between `ISignalTriggering` and `CommConnectorPort` ⌈ For the reference between `ISignalTriggering` and `ISignalPort` two approaches are supported:

- One to One relationship between `ISignalTriggering` and `ISignalPort` per `EcuInstance`
- One `ISignalPort` per `communicationDirection` per `timeout` per `EcuInstance` exists and is referenced by all applicable `PduTriggering`s (n to 1).

⌋()

6.2 ISignals

SystemSignals can be defined independently of CommunicationClusters and are representing the VariableDataPrototypes, ArgumentDataPrototypes, Triggers and ModeDeclarationGroupPrototypes in the communication description.

The RTE supports a "signal fan-out" where the same signal (System Signal) is sent in different IPdus to multiple receivers. The Pdu Router supports the "PDU fan-out" where the same IPdu is sent to multiple destinations.

To support the "signal fan-out" ISignals and ISignalGroups are introduced. An ISignal(ISignalGroup) represents the SystemSignal(SystemSignalGroup) of the Interaction Layer.

In case of "signal fan-out", several ISignals in different IPdus refer to the same SystemSignal. The "Signal fan-out" will be executed by the RTE. ISignals describe the Interface between the precompile configured RTE and the potentially postbuild configured Com Stack.

The ISignalToIPduMapping element describes the mapping of ISignals to ISignalIPdus and defines the position of an ISignal within an ISignalIPdu.

[constr_3009] Overlapping of ISignals is prohibited ⌈ ISignals mapped to an ISignalIPdu shall not overlap. ⌋*()*

[constr_3010] ISignalIPdu length shall not be exceeded ⌈ The combined length of all ISignals and updateIndicationBitPositions that are mapped into an ISignalIPdu shall not exceed the defined Pdu length. ⌋*()*

[constr_3011] Overlapping of updateIndicationBits of ISignals is prohibited ⌈ The updateIndicationBitPosition for an ISignal in an ISignalIPdu shall not overlap with other updateIndicationBitPositions or ISignal locations. ⌋*()*

[TPS_SYST_01062] Network representation of an ISignal ⌈ With the aggregation of SwDataDefProps in the role networkRepresentationProps the actual representation of the ISignal on the network can be specified. ⌋*(RS_SYST_00047)*

[TPS_SYST_01063] Context of network representation of an ISignal ⌈ The dataTypePolicy defines from which context the network representation specification shall be taken. ⌋*(RS_SYST_00001, RS_SYST_00047)*

For an alternative network representation it is important to define an alternative SwDataDefProps especially SwBaseType defining alternative encoding (e.g. from float in PortInterface to integer on bus).

[constr_3060] Usage of networkRepresentationProps and physicalProps ⌈ Usage of networkRepresentationProps and physicalProps shall follow the restrictions given in table 6.6. ⌋*()*

Table 6.6: Allowed SwDataDefProps Attributes for the ISignal and SystemSignal

The following settings apply in table 6.6:

D Define the attribute independent from settings to the left.

I Inherit the definition from the left for usage in the scope of this element. This means that the information is taken over in the respective context without further ARXML configuration. The attribute of the SwDataDefProps shall not exist on the right side.

NA Attribute is **not applicable** for usage in the scope of this element.

M Attribute is **meaningless** in the scope of this element. As it was allowed in previous versions, declaring it as Not Applicable (NA) would break compatibility. Tools shall ignore such an attribute without a warning.

In case that the System Description doesn't use a complete Software Component Description (VFB View) the physicalProps and networkRepresentationProps are used to configure the Data Semantics.

The networkRepresentationProps contains a reference to the SwBaseType. This reference can be used for the derivation of the ComSignalType in the AUTOSAR Com Configuration.

[TPS_SYST_02001] networkRepresentationProps are mandatory in case the dataTypePolicy is set to override or legacy ⌈ If the dataTypePolicy of an ISignal is set to override or legacy, the networkRepresentationProps for the respective ISignal have to be specified. ⌋*()*

[TPS_SYST_02006] Usage of networkRepresentationFromComSpec ⌈If the networkRepresentationFromComSpec is used either the SwDataDefProps in the role networkRepresentation aggregated by the SenderComSpec or ReceiverComSpec shall exist or the ImplementationDataType shall exist. ⌋*()*

[TPS_SYST_02079] Identification of ImplementationDataType for a given ISignal in an Ecu Extract ⌈

1. From the ISignal go to the referenced SystemSignal
2. Find all DataMappings that refer to the SystemSignal
3. For all VariableDataPrototypes referenced by the applicable DataMappings
   (a) If the VariableDataPrototype is typed by an ApplicationDataType and belongs to a CompositionSwComponentType then for all DataTypeMappingSets referenced by the CompositionSwComponentType find the DataTypeMap that refers to this ApplicationDataType. The DataTypeMap also refers to the wanted ImplementationDataType.
   (b) If the VariableDataPrototype is typed by an ApplicationDataType and belongs to an AtomicSwComponentType then for all DataTypeMappingSets referenced by the InternalBehavior of the AtomicSwComponentType find the DataTypeMap that refers to this ApplicationDataType. The DataTypeMap also refers to the wanted ImplementationDataType.
   (c) If the VariableDataPrototype is typed by an ImplementationDataType then the ImplementationDataType is the wanted one.

⌋*()*

[TPS_SYST_02076] networkRepresentationProps in case the dataTypePolicy is set to transformingISignal ⌈ If the value of ISignal.dataTypePolicy is set to transformingISignal then ISignal.networkRepresentationProps shall be ignored. ⌋*()*

[constr_3199] ISignal that has dataTypePolicy set to transformingISignal shall reference a DataTransformation ⌈ In a complete model every ISignal that has dataTypePolicy set to transformingISignal shall reference a DataTransformation. ⌋*()*

[TPS_SYST_01065] Mapping onto the ComSignalType enumeration ⌈ The mapping of baseTypeSize, baseTypeEncoding, ISignal.iSignalType and SystemSignal.dynamicLength onto the ComSignalType enumeration is described in Table 6.7. ⌋*(RS_SYST_00029)*

In other words Table 6.7 focuses only on the derivation of the ComSignalType. This table shall not be taken as a source to derive requirements on the modeling of SwBaseTypes used on the level of the RTE.

BaseTypeEncoding	*BaseTypeSize*	*ISignal.iSignalType*	*SystemSignal.dynamicLength*	*ComSignalType*
2C	8 Bits	primitive	not applicable	SINT8, ComBitSize derived from ISignal.length

Table 6.7: SwBaseType to ComSignalType Mapping

The setting "not applicable" for an Attribute in Table 6.7 means that no value shall be set for this Attribute. The setting "ignored" for an Attribute in Table 6.7 means than any value is accepted for this Attribute, but the value will be ignored in creation of the ECU configuration value file.

[constr_3258] Restriction on ISignal.length in case iSignalType is set to array ⌈ If ISignal.iSignalType is set to array then ISignal.length shall be a multiple of 8. ⌋*()*

[TPS_SYST_02111] VariableDataPrototype in case ISignal.iSignalType is set to array ⌈ If ISignal.iSignalType is set to array the corresponding VariableDataPrototype shall boil down to an Array according to [TPS_SYST_02083], [TPS_SYST_02084], [TPS_SYST_02085] and [TPS_SYST_02089]. ⌋*()*

The invalidValue is aggregated by the SwDataDefProps element. The SwDataDefProps and the SwBaseType classes are described in more detail in the Software Component Template [5].

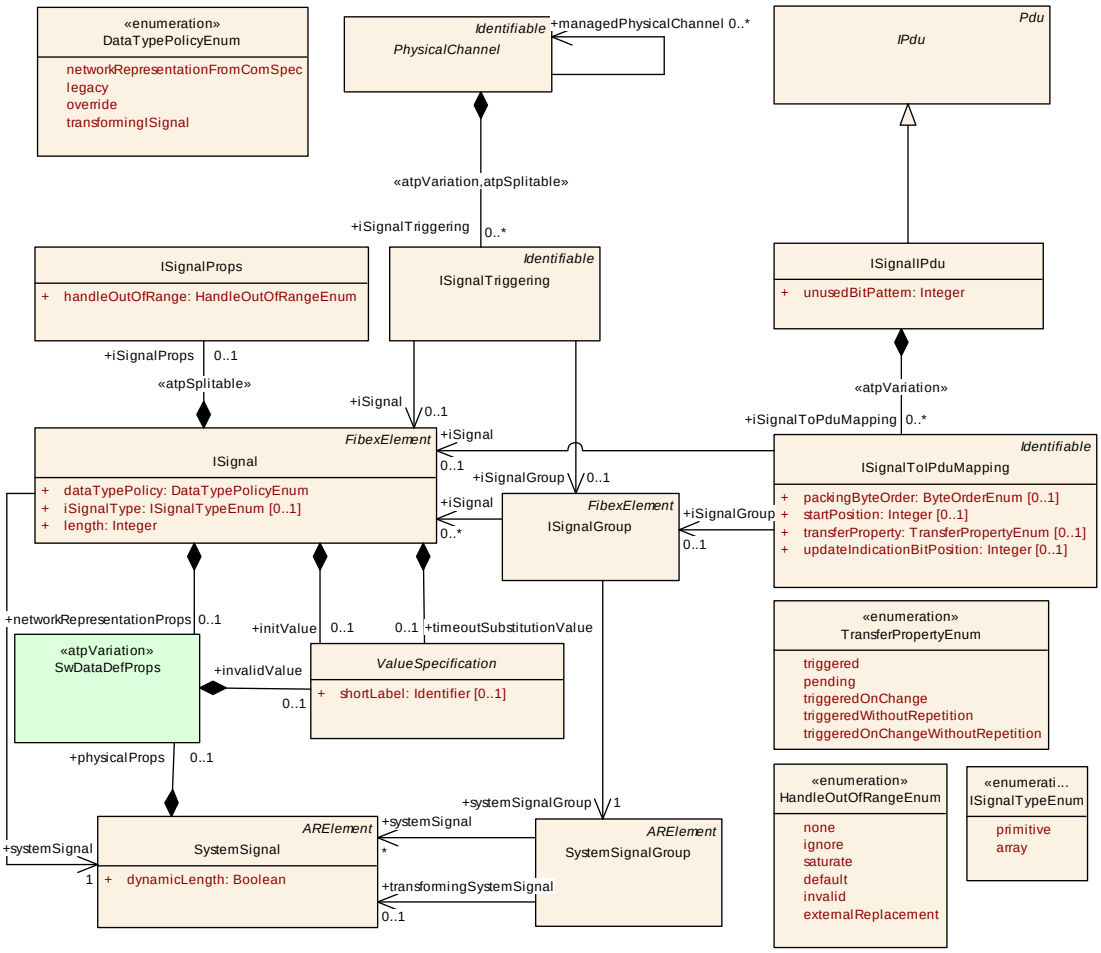

Figure 6.4: ISignals and the mapping into IPdus (FibexCore: SignalOverview)

The configuration of the COM Module for atomic signals can largely be derived from the System Template.

[TPS_SYST_01066] Derivation of Tx COM Signals ⌈ A `ComSignal` shall be defined in the COM module configuration for each `ISignalToIPduMapping` that is aggregated by `ISignalIPdu` that in turn is referenced by a `PduTriggering` that in turn references an `IPduPort` where the `communicationDirection` is set to `out` of the regarded ECU.

Exception: If the `ISignal` is part of a Signal Gateway relation (`ISignalMapping.targetSignal` pointing to an `ISignalTriggering` referencing this `ISignal`) the creation of a `ComSignal` is not mandated if

- the `ISignal` does not point to a `SystemSignal` that is referenced by a `DataMapping` (application does not send the gatewayed signal content) or
- the `ISignal` points to a `SystemSignal` that is referenced by a `DataMapping` where `communicationDirection` equals `in` and destination `ISignalTriggering.iSignalPort.communicationDirection` equals `out` (application sends the gatewayed signal content) or

- the ISignalToIPduMapping.iSignal.dataTypePolicy is set to legacy.

In these cases the configuration of ComGwMapping can be done by means of ComGwSourceDescription and ComGwDestinationDescription. However it is possible to create ComSignals for the ComGwSignal approach as well (i.e., even if the application does not require access to the respective SystemSignal). ⌋()

[TPS_SYST_01067] Derivation of Rx COM Signals ⌈ A ComSignal shall be defined in the COM module configuration for each ISignalToIPduMapping that is aggregated by ISignalIPdu that in turn is referenced by a PduTriggering that in turn references an IPduPort where the communicationDirection is set to in in the regarded ECU.

Exception: If the ISignal is part of a Signal Gateway relation (ISignalMapping.sourceSignal pointing to an ISignalTriggering referencing this ISignal) the creation of a ComSignal is not mandated if

- the ISignal does not point to a SystemSignal that is referenced by a DataMapping (application is not interested in the gatewayed signal content) or
- the ISignal points to a SystemSignal that is referenced by a DataMapping where communicationDirection equals out and source ISignalTriggering.iSignalPort.communicationDirection equals in (application is not interested in the gatewayed signal content) or
- the ISignalToIPduMapping.iSignal.dataTypePolicy is set to legacy.

In these cases the configuration of ComGwMapping can be done by means of ComGwSourceDescription and ComGwDestinationDescription. However it is possible to create ComSignals for the ComGwSignal approach as well (i.e., even if the application does not require access to the respective SystemSignal). ⌋()

To support the AUTOSAR concept of composite data types the AUTOSAR COM layer provides signal groups. Every record or array element of a composite data type requires a SystemSignal for the transmission. But the RTE has to guarantee the consistent transmission of data.

[TPS_SYST_01153] Atomic transport of SystemSignalGroups ⌈ A SystemSignalGroup shall be transmitted and received consistently; therefore it provides data consistency for composite data types. ⌋()

A SystemSignalGroup refers to a set of SystemSignals that shall always be kept together in a common IPdu. An ISignalGroup represents a SystemSignalGroup of the Interaction Layer. In the case of "signal fan-out", several ISignalGroups refer to the same SystemSignalGroup.

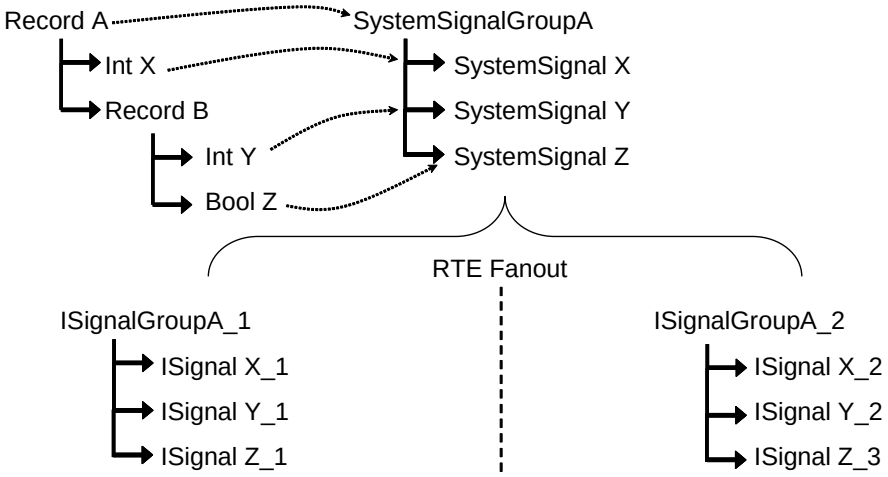

Figure 6.5: ISignal example

The example in Figure 6.5 shows the usage of ISignalGroups and ISignals. In this example a record is mapped to a SystemSignalGroup. All ApplicationRecordElements with ApplicationPrimitiveDataType are mapped to individual SystemSignals. If the same SystemSignalGroup is sent to different receivers (RTE Fanout) then two different ISignalGroups are created. For each SystemSignal within the SystemSignalGroup an ISignal is created. The different ISignals of the same SystemSignal can have different network representations.

[TPS_SYST_01156] Definition of ISignalTriggerings is allowed for ISignalGroups and for GroupSignals ⌈ If an ISignalGroup is referenced by an ISignalTriggering then the ISignals that are contained in the ISignalGroup (GroupSignals) may be referenced as well by ISignalTriggerings. ⌋*()*

[constr_3094] Consistent ISignalPort.communicationDirection for ISignalTriggerings of ISignalGroups and contained ISignals ⌈ In case the ISignals contained in an ISignalGroup are referenced by an ISignalTriggering, the communicationDirection of the ISignalPort referenced by the ISignal's ISignalTriggering shall be identical to the communicationDirection of the ISignalPort referenced by the containing ISignalGroup's ISignalTriggering. ⌋*()*

[TPS_SYST_01157] Allowed usage of attributes for ISignals, ISignalGroups and GroupSignals ⌈ Table 6.8 shows attributes that may be used to configure ISignals in different roles (ISignals that are not part of an ISignalGroup and ISignals that are part of an ISignalGroup) and ISignalGroups. ⌋*()*

	Element		
Attributes	**ISignal**	**ISignalGroup**	**GroupSignal**
startPosition	1	NA	1
updateIndicationBitPosition	0..1	0..1	NA
transferProperty	0..1	0..1	0..1
packingByteOrder	1	NA	1
dataFilter	0..1	NA	0..1

	Element		
Attributes	**ISignal**	**ISignalGroup**	**GroupSignal**

Table 6.8: Allowed usage of attributes for ISignals, ISignalGroups and GroupSignals

[constr_3067] initValue defined in the context of ISignal ⌈ The definition of an initValue in the context of an ISignal shall only be a NumericalValueSpecification, TextValueSpecification or ArrayValueSpecification that aggregates elements of type NumericalValueSpecification or TextValueSpecification. ⌋*()*

[constr_3437] invalidValue defined in the context of ISignal ⌈ The definition of SwDataDefProps.invalidValue aggregated by an ISignal in the role networkRepresentationProps shall only be a NumericalValueSpecification, TextValueSpecification or ArrayValueSpecification that aggregates elements of type NumericalValueSpecification or TextValueSpecification. ⌋*()*

[constr_3438] timeoutSubstitutionValue defined in the context of ISignal ⌈ The definition of an timeoutSubstitutionValue in the context of an ISignal shall only be a NumericalValueSpecification, TextValueSpecification or ArrayValueSpecification that aggregates elements of type NumericalValueSpecification or TextValueSpecification. ⌋*()*

[TPS_SYST_02012] initValue and invalidValue represent internal values ⌈ The initValue and invalidValue aggregated by the networkRepresentationProps shall represent the internal values. ⌋*()*

[TPS_SYST_02110] Default behavior for ISignal.iSignalType ⌈ In case ISignal.iSignalType is not defined the value "primitive" shall be assumed. ⌋*()*

[TPS_SYST_02144] ComTimeoutSubstitution does not apply for signal gateway operation ⌈ The specification of ComTimeoutSubstitution by defining the ISignal.timeoutSubstitutionValue does not apply for signal gateway operation. Only when the ISignal is processed for an upper layer the ComTimeoutSubstitution is actually performed. ⌋*()*

Note: Since an ISignal may be candidate for both - local reception and gateway operation - a definition of ISignal.timeoutSubstitutionValue is valid on ISignals which are defined for gateway operation.

Class	**ISignal**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	Signal of the Interaction Layer. The RTE supports a "signal fan-out" where the same System Signal is sent in different SignalIPdus to multiple receivers. To support the RTE "signal fan-out" each SignalIPdu contains ISignals. If the same System Signal is to be mapped into several SignalIPdus there is one ISignal needed for each ISignalToIPduMapping. ISignals describe the Interface between the Precompile configured RTE and the potentially Postbuild configured Com Stack (see ECUC Parameter Mapping). In case of the SystemSignalGroup an ISignal must be created for each SystemSignal contained in the SystemSignalGroup. **Tags:** atp.recommendedPackage=ISignals			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
data Transformation	DataTransformation	0..1	ref	Optional reference to a DataTransformation which represents the transformer chain that is used to transform the data that shall be placed inside this ISignal. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=dataTransformation, variation Point.shortLabel vh.latestBindingTime=codeGenerationTime
dataTypePolicy	DataTypePolicyEnum	1	attr	With the aggregation of SwDataDefProps an ISignal specifies how it is represented on the network. This representation follows a particular policy. Note that this causes some redundancy which is intended and can be used to support flexible development methodology as well as subsequent integrity checks. If the policy "networkRepresentationFromComSpec" is chosen the network representation from the ComSpec that is aggregated by the PortPrototype shall be used. If the "override" policy is chosen the requirements specified in the PortInterface and in the ComSpec are not fulfilled by the networkRepresentationProps. In case the System Description doesn't use a complete Software Component Description (VFB View) the "legacy" policy can be chosen.
iSignalProps	ISignalProps	0..1	aggr	Additional optional ISignal properties that may be stored in different files. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=iSignalProps
iSignalType	ISignalTypeEnum	0..1	attr	This attribute defines whether this iSignal is an array that results in a UINT8_N / UINT8_DYN ComSignalType in the COM configuration or a primitive type.
initValue	ValueSpecification	0..1	aggr	Optional definition of a ISignal's initValue in case the System Description doesn't use a complete Software Component Description (VFB View). This supports the inclusion of legacy system signals. This value can be used to configure the Signal's "Init Value". If a full DataMapping exist for the SystemSignal this information may be available from a configured Sender ComSpec and ReceiverComSpec. In this case the initvalues in SenderComSpec and/or ReceiverComSpec override this optional value specification. Further restrictions apply from the RTE specification.

△

Class	**ISignal**			
length	Integer	1	attr	Size of the signal in bits. The size needs to be derived from the mapped VariableDataPrototype according to the mapping of primitive DataTypes to BaseTypes as used in the RTE. Indicates maximum size for dynamic length signals. The ISignal length of zero bits is allowed.
network Representation Props	SwDataDefProps	0..1	aggr	Specification of the actual network representation. The usage of SwDataDefProps for this purpose is restricted to the attributes compuMethod and baseType. The optional baseType attributes "memAllignment" and "byteOrder" shall not be used. The attribute "dataTypePolicy" in the SystemTemplate element defines whether this network representation shall be ignored and the information shall be taken over from the network representation of the ComSpec. If "override" is chosen by the system integrator the network representation can violate against the requirements defined in the PortInterface and in the network representation of the ComSpec. In case that the System Description doesn't use a complete Software Component Description (VFB View) this element is used to configure "ComSignalDataInvalid Value" and the Data Semantics.
systemSignal	SystemSignal	1	ref	Reference to the System Signal that is supposed to be transmitted in the ISignal.
timeout Substitution Value	ValueSpecification	0..1	aggr	Defines and enables the ComTimeoutSubstituition for this ISignal.
transformation ISignalProps	TransformationISignal Props	*	aggr	A transformer chain consists of an ordered list of transformers. The ISignal specific configuration properties for each transformer are defined in the TransformationISignalProps class. The transformer configuration properties that are common for all ISignals are described in the TransformationTechnology class.

Table 6.9: ISignal

Enumeration	**DataTypePolicyEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::DataMapping
Note	This class lists the supported DataTypePolicies.
Literal	***Description***
legacy	In case the System Description doesn't use a complete Software Component Description (VFB View) this value can be chosen. This supports the inclusion of legacy signals. The aggregation of SwDataDefProps shall be used to configure the "ComSignalDataInvalidValue" and the Data Semantics. **Tags:** atp.EnumerationValue=0
network Representation FromComSpec	Ignore any networkRepresentationProps of this ISignal and use the networkRepresentation from the ComSpec. Please note that the usage does not imply the existence of the SwDataDefProps in the role network Representation aggregated by the SenderComSpec or ReceiverComSpec if an ImplementationData Type is defined. **Tags:** atp.EnumerationValue=1

▽

△

Enumeration	**DataTypePolicyEnum**
override	If this value is chosen the requirements specified in the ComSpec (networkRepresentationFromComSpec) are not fullfilled by the aggregated SwDataDefProps. In this case the networkRepresentation is specified by the aggregated swDataDefProps. **Tags:** atp.EnumerationValue=2
transformingISignal	This literal indicates that a transformer chain shall be used to communicate the ISignal as UINT8_N over the bus. **Tags:** atp.EnumerationValue=4

Table 6.10: DataTypePolicyEnum

Enumeration	**ISignalTypeEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication
Note	This enumeration defines ISignal types that are used for derivation of the ComSignalType in the COM configuration.
Literal	*Description*
array	ISignal shall be interpreted as an array (UINT8_N, UINT8_DYN) **Tags:** atp.EnumerationValue=0
primitive	ISignal shall be interpreted as a primitive type (e.g. UINT_8, SINT_32) **Tags:** atp.EnumerationValue=1

Table 6.11: ISignalTypeEnum

Class	**ISignalProps**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	Additional ISignal properties that may be stored in different files.			
Base	*ARObject*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
handleOutOfRange	HandleOutOfRangeEnum	1	attr	This attribute defines the outOfRangeHandling for received and sent signals.

Table 6.12: ISignalProps

Enumeration	**HandleOutOfRangeEnum**
Package	M2::AUTOSARTemplates::SWComponentTemplate::Communication
Note	A value of this type is taken for controlling the range checking behavior of the AUTOSAR RTE.
Literal	*Description*
default	The RTE will use the initValue if the actual value is out of the specified bounds. **Tags:** atp.EnumerationValue=0
external Replacement	This indicates that the value replacement is sourced from the attribute replaceWith. **Tags:** atp.EnumerationValue=1
ignore	The RTE will ignore any attempt to send or receive the corresponding dataElement if the value is out of the specified range. **Tags:** atp.EnumerationValue=2
invalid	The RTE will use the invalidValue if the value is out of the specified bounds. **Tags:** atp.EnumerationValue=3

▽

△

Enumeration	**HandleOutOfRangeEnum**
none	A range check is not required. **Tags:** atp.EnumerationValue=4
saturate	The RTE will saturate the value of the dataElement such that it is limited to the applicable upper bound if it is greater than the upper bound. Consequently, it is limited to the applicable lower bound if the value is less than the lower bound. **Tags:** atp.EnumerationValue=5

Table 6.13: HandleOutOfRangeEnum

Class	**ISignalGroup**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	SignalGroup of the Interaction Layer. The RTE supports a "signal fan-out" where the same System Signal Group is sent in different SignalIPdus to multiple receivers. An ISignalGroup refers to a set of ISignals that shall always be kept together. A ISignalGroup represents a COM Signal Group. Therefore it is recommended to put the ISignalGroup in the same Package as ISignals (see atp.recommendedPackage) **Tags:** atp.recommendedPackage=ISignalGroup			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
comBasedSignalGroupTransformation	DataTransformation	0..1	ref	Optional reference to a DataTransformation which represents the transformer chain that is used to transform the data that shall be placed inside this ISignalGroup based on the COMBasedTransformer approach. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=comBasedSignalGroupTransformation, variationPoint.shortLabel vh.latestBindingTime=codeGenerationTime
iSignal	ISignal	*	ref	Reference to a set of ISignals that shall always be kept together.
systemSignalGroup	SystemSignalGroup	1	ref	Reference to the SystemSignalGroup that is defined on VFB level and that is supposed to be transmitted in the ISignalGroup.
transformationISignalProps	TransformationISignalProps	*	aggr	A transformer chain consists of an ordered list of transformers. The ISignalGroup specific configuration properties for each transformer are defined in the TransformationISignalProps class. The transformer configuration properties that are common for all ISignal Groups are described in the TransformationTechnology class.

Table 6.14: ISignalGroup

Class	**SystemSignalGroup**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication

▽

△

Class	SystemSignalGroup			
Note	A signal group refers to a set of signals that must always be kept together. A signal group is used to guarantee the atomic transfer of AUTOSAR composite data types. The SystemSignalGroup defines a signal grouping on VFB level. On cluster level the Signal grouping is described by the ISignalGroup element. **Tags:** atp.recommendedPackage=SystemSignalGroups			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
systemSignal	SystemSignal	*	ref	Reference to a set of SystemSignals that must always be kept together.
transforming SystemSignal	SystemSignal	0..1	ref	Optional reference to the SystemSignal which shall contain the transformed (linear) data.

Table 6.15: SystemSignalGroup

Class	ISignalToIPduMapping			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
iSignal	ISignal	0..1	ref	Reference to a ISignal that is mapped into the ISignal IPdu. Each ISignal contained in the ISignalGroup shall be mapped into an IPdu by an own ISignalToIPduMapping. The references to the ISignal and to the ISignalGroup in an ISignalToIPduMapping are mutually exclusive.
iSignalGroup	ISignalGroup	0..1	ref	Reference to an ISignalGroup that is mapped into the SignalIPdu. If an ISignalToIPduMapping for an ISignalGroup is defined, only the UpdateIndicationBitPosition and the transferProperty is relevant. The startPosition and the packingByteOrder shall be ignored. Each ISignal contained in the ISignalGroup shall be mapped into an IPdu by an own ISignalToIPduMapping. The references to the ISignal and to the ISignalGroup in an ISignalToIPduMapping are mutually exclusive.
packingByte Order	ByteOrderEnum	0..1	attr	This parameter defines the order of the bytes of the signal and the packing into the SignalIPdu. The byte ordering "Little Endian" (MostSignificantByteLast), "Big Endian" (MostSignificantByteFirst) and "Opaque" can be selected. For opaque data endianness conversion shall be configured to Opaque. The value of this attribute impacts the absolute position of the signal into the SignalIPdu (see the startPosition attribute description). For an ISignalGroup the packingByteOrder is irrelevant and shall be ignored.

▽

△

Class	**ISignalToIPduMapping**			
startPosition	Integer	0..1	attr	This parameter is necessary to describe the bitposition of a signal within an SignalIPdu. It denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByte Order attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7. Please note that the way the bytes will be actually sent on the bus does not impact this representation: they will always be seen by the software as a byte array. If a mapping for the ISignalGroup is defined, this attribute is irrelevant and shall be ignored.
transferProperty	TransferPropertyEnum	0..1	attr	Defines how the referenced ISignal contributes to the send triggering of the ISignalIPdu.
update IndicationBit Position	Integer	0..1	attr	The UpdateIndicationBit indicates to the receivers that the signal (or the signal group) was updated by the sender. Length is always one bit. The UpdateIndicationBitPosition attribute describes the position of the update bit within the SignalIPdu. For Signals of a ISignalGroup this attribute is irrelevant and shall be ignored. Note that the exact bit position of the updateIndicationBit Position is linked to the value of the attribute packingByte Order because the method of finding the bit position is different for the values mostSignificantByteFirst and most SignificantByteLast. This means that if the value of packingByteOrder is changed while the value of update IndicationBitPosition remains unchanged the exact bit position of updateIndicationBitPosition within the enclosing ISignalIPdu still undergoes a change. This attribute denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.

Table 6.16: ISignalToIPduMapping

[constr_3514] No two `ISignalToIPduMapping`s shall reference the identical `ISignal` ⌈ No two `ISignalToIPduMapping`s shall reference the identical `ISignal` in the role `iSignal` in the scope of one System. ⌋*()*

iSignalGroup	ISignalGroup	0..1	ref	This reference shall be used if an ISignalGroup is transported on the PhysicalChannel. This reference forms an XOR relationship with the ISignal Triggering-ISignal reference.
iSignalPort	ISignalPort	*	ref	References to the ISignalPort on every ECU of the system which sends and/or receives the ISignal. References for both the sender and the receiver side shall be included when the system is completely defined.

Table 6.18: ISignalTriggering

6.2.1 Efficient COM for large data

AUTOSAR defines an alternative communication path between the RTE and the Communication Stack called Efficient COM for large data module (LdCom). The System Template does not define specific attributes which would distinguish whether the traditional Com or the LdCom shall be used. The idea behind this feature is rather that

- IF the LdCom module is integrated in an Ecu
- AND the specific interaction fulfills certain properties
- THEN LdCom shall be used.

Thus the usage of LdCom inside an ECU is project specific and is not derived from system description properties.

Note: even when all requirements for usage of LdCom are fulfilled it is not necessarily required to actually have an LdCom module inside the respective Ecu. It is rather a project specific decision whether LdCom module is integrated.

All of the following requirements need to be fulfilled in order to allow the usage of LdCom for the specific ISignal / ISignalIPdu combination.

[TPS_SYST_02015] LdCom: only one ISignal mapped to the ISignalIPdu ⌈ Only if exactly one ISignal is mapped into an ISignalIPdu and the LdCom module is present, this ISignal shall be handled by LdCom. ⌋*(RS_SYST_00049)*

[TPS_SYST_02016] LdCom: only Transformer output and UINT8_N or UINT8_DYN supported ⌈ Only if

- the data type of the ISignal is either UINT8_N or UINT8_DYN
- or the ISignal has a reference to the DataTransformation in the role dataTransformation

and the LdCom module is present, this ISignal shall be handled by LdCom. ⌋ *(RS_SYST_00049)*

[TPS_SYST_02017] LdCom: Opaque ISignalToIPduMapping.packingByteOrder ⌈ Only if packingByteOrder has the value "Opaque" and the LdCom module is present, this ISignal shall be handled by LdCom. ⌋*(RS_SYST_00049)*

[TPS_SYST_02018] LdCom: ISignalToIPduMapping.startPosition shall be 0 ⌈ Only if ISignalToIPduMapping.startPosition equals 0 (zero) and the LdCom module is present, this ISignal shall be handled by LdCom. ⌋ *(RS_SYST_00049)*

[TPS_SYST_02019] LdCom: ISignalToIPduMapping.transferProperty shall be triggered or triggeredWithoutRepetition ⌈ Only if ISignalToIPduMapping.transferProperty equals triggered or triggeredWithoutRepetition and the LdCom module is present, this ISignal shall be handled by LdCom. ⌋ *(RS_SYST_00049)*

[TPS_SYST_02020] LdCom: No IPduTiming.minimumDelay defined ⌈ The ISignal is mapped into an ISignalIPdu. Only if this ISignalIPdu has an ISignalIPdu.iPduTimingSpecification with no IPduTiming.minimumDelay defined and the LdCom module is present, this ISignal shall be handled by LdCom. ⌋*(RS_SYST_00049)*

[TPS_SYST_02021] LdCom: ISignalToIPduMapping.updateIndicationBitPosition shall not be defined ⌈ Only if ISignalToIPduMapping.updateIndicationBitPosition is not defined and the LdCom module is present, this ISignal shall be handled by LdCom. ⌋*(RS_SYST_00049)*

[TPS_SYST_02022] LdCom: Only the `transmissionModeTrueTiming` defined ⌈ The `ISignal` is mapped into an `ISignalIPdu`. Only if this `ISignalIPdu` has exactly the `TransmissionModeDeclaration.transmissionModeTrueTiming` defined (via `ISignalIPdu.iPduTimingSpecification`) and the LdCom module is present, this `ISignal` shall be handled by LdCom. ⌋*(RS_SYST_00049)*

[TPS_SYST_02023] LdCom: `DataFilter` "always" if `TransmissionModeCondition` defined ⌈ The `ISignal` is mapped into an `ISignalIPdu`. If this `ISignalIPdu` has either

- no `TransmissionModeDeclaration.transmissionModeCondition` defined (via `ISignalIPdu.iPduTimingSpecification`) or
- `DataFilter.dataFilterType` is set to "always" for the `TransmissionModeCondition` of this `ISignalIPdu`.

and the LdCom module is present, this `ISignal` shall be handled by LdCom. ⌋ *(RS_SYST_00049)*

[TPS_SYST_02024] LdCom: No `ModeDrivenTransmissionModeCondition` defined ⌈ The `ISignal` is mapped into an `ISignalIPdu`. Figure 6.6: Pdu Timing excerpt that may be used to configure LdCom

[TPS_SYST_02027] LdCom: No `ISignalPort.timeout` reception timeout defined ⌈ Only if the `ISignalPort` which the `ISignalTriggering` is referring to has no `ISignalPort.timeout` defined and the LdCom module is present, this `ISignal` shall be handled by LdCom. ⌋*(RS_SYST_00049)*

[TPS_SYST_02164] LdCom: No `ISignalPort.firstTimeout` reception timeout defined ⌈ Only if the `ISignalPort` which the `ISignalTriggering` is referring to has no `ISignalPort.firstTimeout` defined and the LdCom module is present, this `ISignal` shall be handled by LdCom. ⌋*(RS_SYST_00049)*

[TPS_SYST_02028] LdCom: No `ISignalPort.dataFilter` defined ⌈ Only if the `ISignalPort` which the `ISignalTriggering` is referring to has either

- no `ISignalPort.dataFilter` defined
- or the `DataFilter.dataFilterType` = always

and the LdCom module is present, this `ISignal` shall be handled by LdCom. ⌋ *(RS_SYST_00049)*

[TPS_SYST_03001] LdCom: `ISignalIPdu` not part of any `ISignalIPduGroup` ⌈ Only if the `ISignalIPdu` is not referenced by any `ISignalIPduGroup` in the role `iSignalIPdu` and the LdCom module is present, this `ISignalIPdu` shall be handled by LdCom. ⌋*(RS_SYST_00049)*

6.2.2 Big Endian and Little Endian memory layout of `Pdu`s and `Frame`s

The AUTOSAR system description provide means to specify how the memory layout looks like when signals are packed into `Pdu`s and `Pdu`s are packed into `Frame`s. The layout of `Pdu`s and `Frame`s on different communication systems is out of scope of AUTOSAR. The specification of attributes Bit counting (monotone or sawtooth) and Bit

order (decreasing or increasing)[1] is not supported by AUTOSAR. In AUTOSAR these attributes are fixed.

[TPS_SYST_01068] Bit Counting in AUTOSAR ⌈ The Bit counting shall always be considered as "sawtooth". ⌋*()*

[TPS_SYST_01069] Bit Order in AUTOSAR ⌈ The bit order shall always be considered as "Decreasing". ⌋*()*

When a signal is mapped into a `Pdu` only the `packingByteOrder` affects the memory layout of the signal inside the `Pdu` beginning with it´s start bit position.

Little endian stores the least significant byte first and begins with the least significant bit, i.e. loworder bit in the sequence (the least significant bit serves as start bit).

Big endian stores the most significant byte first and begins with the most significant bit, i.e. the bit with the greatest numerical value (the most significant bit serves as start bit).

In both cases the bit positions in the mapped signals increase with the bit positions in the `ISignalIPdu` such that the bit 2^0 is mapped to position n in the `ISignalIPdu` and bit 2^1 is mapped to position n+1 and so on.

Example 6.7 shows the memory layout for Little Endian and Big Endian if an `ISignal` with a length of 10 bits is mappped into a `Pdu`. The start bit position is 5.

Little Endian byte order:

Byte	0								1							
Bit	7	6	5	4	3	2	1	0	15	14	13	12	11	10	9	8
Signal	2^2	2^1	2^0	-	-	-	-	-	-	2^9	2^8	2^7	2^6	2^5	2^4	2^3

Big Endian byte order:

Byte	0								1							
Bit	7	6	5	4	3	2	1	0	15	14	13	12	11	10	9	8
Signal	-	-	2^9	2^8	2^7	2^6	2^5	2^4	2^3	2^2	2^1	2^0	-	-	-	-

Figure 6.7: PackingByteOrder Example

The following examples are showing the mapping of Pdus into Frames.

The first example in Figure 6.8 for little endian shows a `Frame` with four bytes that contains a single `Pdu` that is two bytes long. The `PduToFrameMapping`.`startPosition` is defined with 8 and since the `packingByteOrder` is set to `mostSignificantByteLast` the `startPosition` denotes the least significant bit of the `Pdu` in the `Frame`. The bit position of the mapped `Pdu` increases with the bit positions in the `Frame` such that the bit 2^0 is mapped to position n in the `ISignalIPdu` and bit 2^1 is mapped to position n+1 and so on.

[1] More details about Bit counting and Bit order can be found in ASAM FIBEX [9].

Please note that the Pdus are byte aligned in a Frame and only the values 0, 8, 16, 24,... (for little endian) and 7, 15, 23, ... (for big endian) for PduToFrameMapping.startPosition are allowed.

Figure 6.8 also shows that the Pdu contains three ISignals. The first ISignal has the ISignalToIPduMapping.startPosition defined as 0 and is 5 bits long. The bitposition of the second signal is 5 and the length is 10 bits. And the third signal has the bitposition 15 and is only 1 bit long. Since the ISignalToIPduMapping.packingByteOrder is defined with mostSignificantByteLast as well the startPosition of the ISignals denotes the least significant bit of the ISignal in the Pdu.

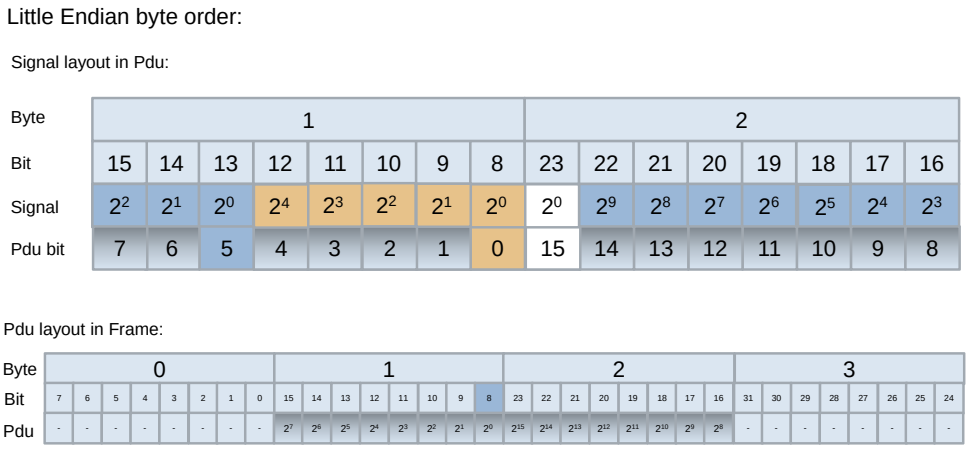

Figure 6.8: PackingByteOrder Example

The second example in Figure 6.9 for big endian shows again a Frame with four bytes that contains a single Pdu that is two bytes long. The PduToFrameMapping.startPosition is defined with 15 and since the packingByteOrder is set to mostSignificantByteFirst the startPosition denotes the most significant bit of the Pdu in the Frame.

Figure 6.9 also shows that the Pdu contains three ISignals. The first ISignal has the ISignalToIPduMapping.startPosition defined as 7 and is 5 bits long. The bitposition of the second signal is 2 and the length is 10 bits. And the third signal has the bitposition 8 and is only 1 bit long. Since the ISignalToIPduMapping.packingByteOrder is defined with mostSignificantByteFirst as well the startPosition of the ISignals denotes the most significant bit of the ISignal in the Pdu.

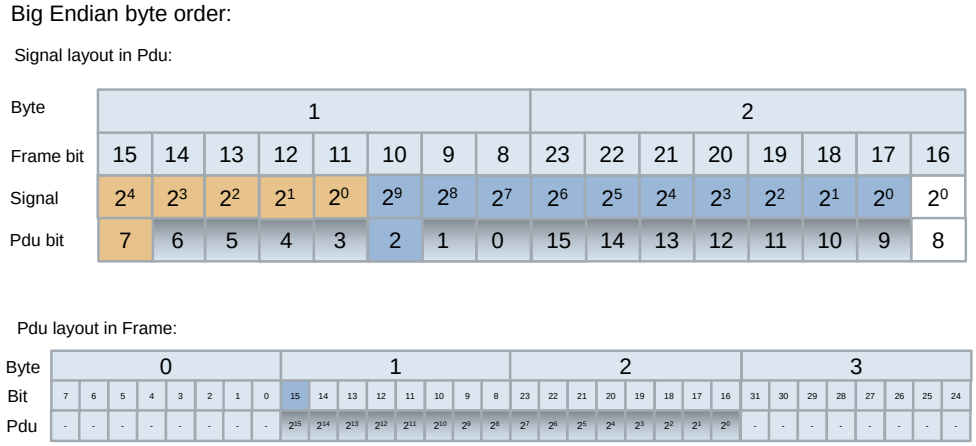

Figure 6.9: PackingByteOrder Example

Please note that the positioning of SegmentPositions in a MultiplexedIPdu works in the exact same way. The examples in Figure 6.8 and Figure 6.9 can be taken as well as an example for a MultiplexedIPdu where the 1 bit signal defines the selectorField and the other two signals represent segments defined for the DynamicPart.

6.3 PDUs

The chapter introduces the different Pdu types that are supported in the AUTOSAR Architecture and by the AUTOSAR Meta-Model.

The PDU Router is responsible only for the routing of IPdus. Other Pdus that are direct specializations of the Pdu meta-class are not routed by the PDU Router.

UserDefinedPdus and UserDefinedIPdus are used to describe PDU-based communication over Complex Drivers. Chapter 6.12 provides a more detailed description of CDDs.

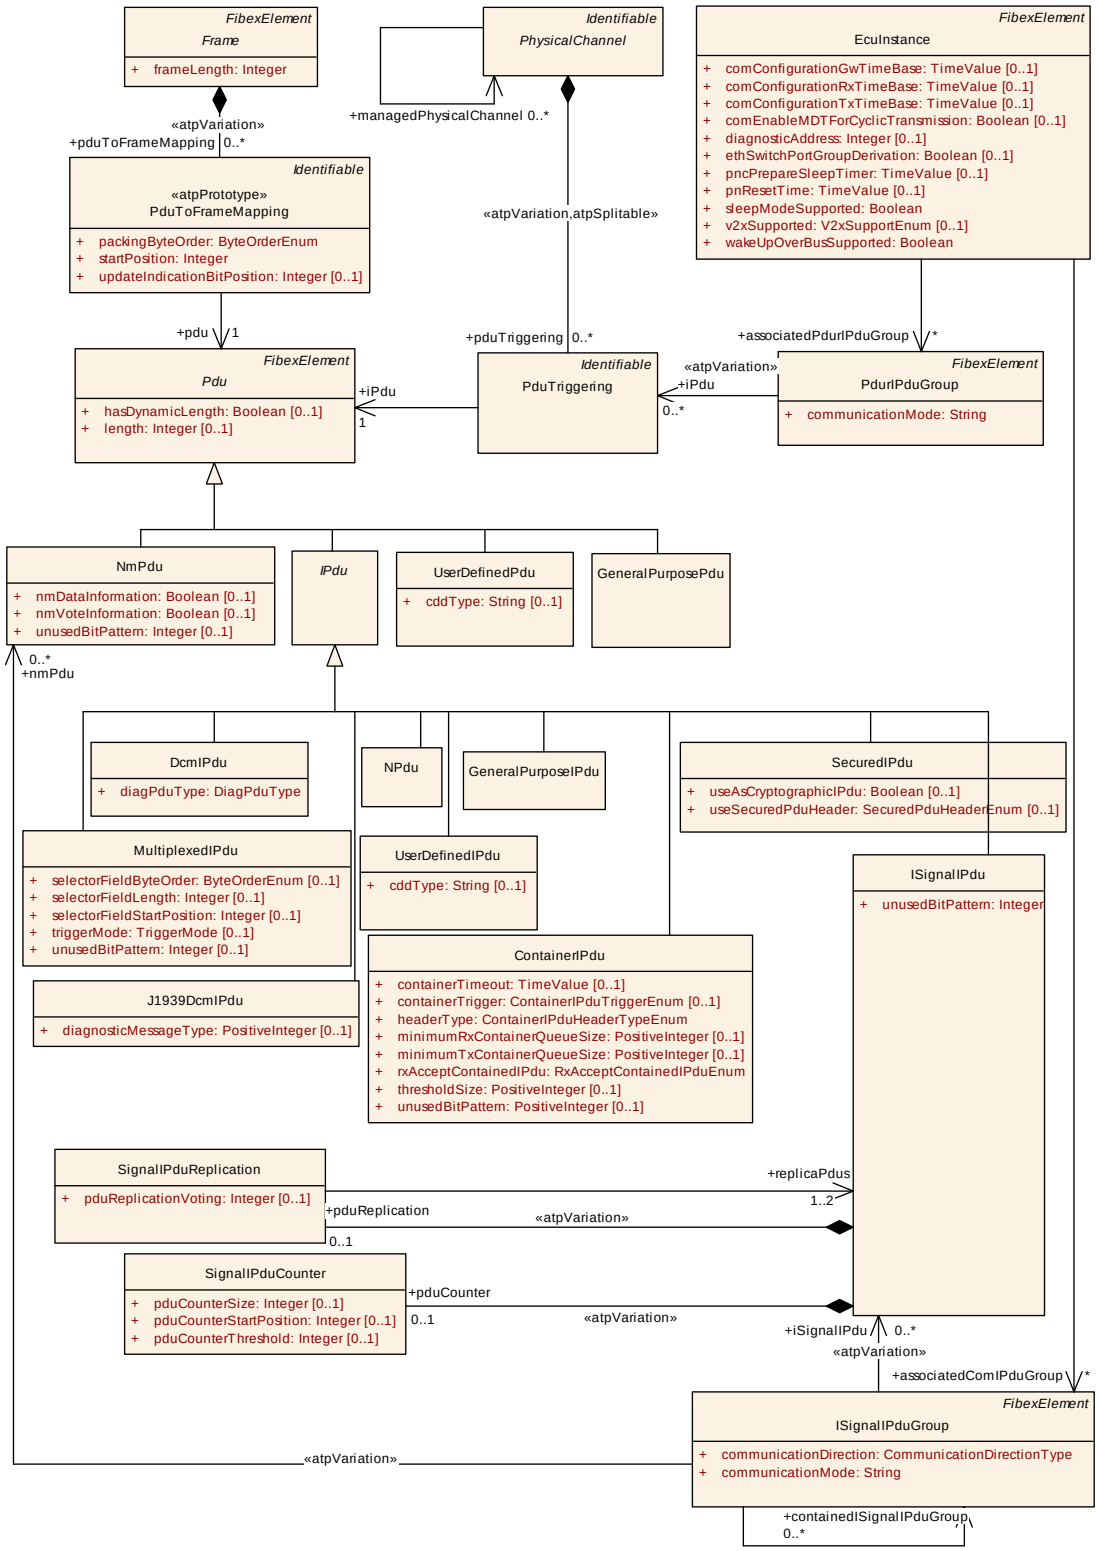

Figure 6.10: Pdus and the mapping into Frames (FibexCore: PDUOverview)

The PduToFrameMapping element describes the mapping of Pdus to Frames and defines the position of a Pdu within a Frame. By using different PduToFrameMappings it is possible to use the same Pdu in different Frames.

[constr_3516] limitation of `Pdu.length` for CAN L-PDUs ⌈ The `Pdu.length` of CAN PDUs shall be restricted to 0..8 for classic CAN L-PDUs and 0..8, 12, 16, 20, 24, 32, 48, 64 for CAN FD L-PDUs. ⌋*()*

A timing description `IPduTiming` can be aggregated directly by the `ISignalIPdu`. This timing description can be used for the Configuration of COM Transmission Modes. The `PduTriggering` describes on which channel the Pdu is transmitted. Timing requirements may be specified with the Timing Extension model. More details are described in chapter 1.7.3. Such Pdu timing requirements needs to be fulfilled by the timing specification on the Frame.

Class	***Pdu*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	Collection of all Pdus that can be routed through a bus interface.			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Subclasses	GeneralPurposePdu, *IPdu*, NmPdu, UserDefinedPdu			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
hasDynamic Length	Boolean	0..1	attr	This attribute defines whether the Pdu has dynamic length (true) or not (false). Please note that the usage of this attribute is restricted by [constr_3448].
length	Integer	0..1	attr	Pdu length in bytes. In case of dynamic length IPdus (containing a dynamical length signal), this value indicates the maximum data length. It should be noted that in former AUTOSAR releases (Rel 2.1, Rel 3.0, Rel 3.1, Rel 4.0 Rev. 1) this parameter was defined in bits. The Pdu length of zero bytes is allowed.

Table 6.19: Pdu

[constr_3448] Restriction for usage of `Pdu.hasDynamicLength` ⌈ The `Pdu.hasDynamicLength` attribute is only relevant for `UserDefinedPdu`s, `UserDefinedIPdu`s, `J1939DcmIPdu`s. ⌋*()*

For the remaining (I)Pdus, the fact whether they are dynamic or not should be derivable from the configuration of the upper layer:

- `ISignalIPdu`: At least one dynamic signal mapped to the PDU.
- `SecuredIPdu` and `MultiplexedIPdu`: At least one of the associated upper layer PDUs has dynamic length.
- `ContainerIPdu`: Pdu is dynamic if:
  - the `headerType` is `shortHeader` or `longHeader`.
  - the `headerType` is `noHeader` and the last contained PDU has dynamic length.
- `NPdu`: TP layer takes care of length handling, not visible to application.
- `DcmIPdu`: always dynamic
- `NmPdu`: always static

- GeneralPurposePdu and GeneralPurposeIPdu: Depending on upper layer, which could be: SD, TSync, DoIP, XCP, SomeIpTp, Dlt.

Class	***IPdu*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The IPdu (Interaction Layer Protocol Data Unit) element is used to sum up all Pdus that are routed by the PduR.

Attribute	***Type***	***Mul.***	***Kind***	***Note***
cddType	String	0..1	attr	This attribute defines the CDD that transmits or receives the UserDefinedPdu. If several CDDs are defined this attribute is used to distinguish between them.

Table 6.32: UserDefinedIPdu

Class	«atpPrototype» **PduToFrameMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	A PduToFrameMapping defines the composition of Pdus in each frame.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
packingByte Order	ByteOrderEnum	1	attr	This attribute defines the order of the bytes of the Pdu and the packing into the Frame. Please consider that [constr_3246] and [constr_3222] are restricting the usage of this attribute.
pdu	Pdu	1	ref	Reference to a I-Pdu, N-Pdu or NmPdu that is transmitted in the Frame.
startPosition	Integer	1	attr	This attribute describes the bitposition of a Pdu within a Frame. Please note that the absolute position of the Pdu in the Frame is determined by the definition of the packingByte Order attribute. If Big Endian is specified, the start position indicates the bit position of the most significant bit in the Frame. If Little Endian is specified, the start position indicates the bit position of the least significant bit in the Frame. The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7. The Pdus are byte aligned in a Frame and only the values 0, 8, 16, 24,... (for little endian) and 7, 15, 23, ... (for big endian) are allowed.
update IndicationBit Position	Integer	0..1	attr	Indication to the receivers that the corresponding Pdu was updated by the sender. This attribute describes the position of the update bit in the frame that aggregates this PDUToFrameMapping. Length is always one bit. Note that the exact bit position of the updateIndicationBit Position is linked to the value of the attribute packingByte Order because the method of finding the bit position is different for the values mostSignificantByteFirst and most SignificantByteLast. This means that if the value of packingByteOrder is changed while the value of update IndicationBitPosition remains unchanged the exact bit position of updateIndicationBitPosition within the enclosing Frame still undergoes a change. ▽

▽

△

Class	«atpPrototype» **PduToFrameMapping**			
				△ This attribute denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.

Table 6.33: PduToFrameMapping

[constr_3246] `Frame.packingByteOrder` mix within a `Frame` is not allowed ⌈ All `PduToFrameMapping`s within a `Frame` shall have the same `packingByteOrder` value. ⌋*()*

Please note that the absolute position (bit-position) of the `Pdu` in the `Frame` is determined by the definition of the `packingByteOrder` attribute. The `Pdu`s are byte aligned in a `Frame` and the values 0, 8, 16, 24,... (for little endian) and 7, 15, 23, ... (for big endian) are allowed. For reasons of simplicity a mix of the `packingByteOrder` is not allowed.

[constr_3222] No `ByteOrderEnum.opaque` allowed for `PduToFrameMapping.packingByteOrder` ⌈ The values of `PduToFrameMapping.packingByteOrder` are restricted to `ByteOrderEnum.mostSignificantByteFirst` and `ByteOrderEnum.mostSignificantByteLast`. I.e. the value `ByteOrderEnum.opaque` is not allowed. ⌋*()*

Class	**IPduTiming**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	AUTOSAR COM provides the possibility to define two different TRANSMISSION MODES for each IPdu. The Transmission Mode of an IPdu that is valid at a specific point in time is selected using the values of the signals that are mapped to this IPdu. For each IPdu a Transmission Mode Selector is defined. The Transmission Mode Selector is calculated by evaluating the conditions for a subset of signals (class TransmissionModeCondition in the System Template). The Transmission Mode Selector is defined to be true, if at least one Condition evaluates to true and is defined to be false, if all Conditions evaluate to false.			
Base	*ARObject*, *Describable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
minimumDelay	TimeValue	0..1	attr	Minimum Delay in seconds between successive transmissions of this I-PDU, independent of the Transmission Mode.
transmission Mode Declaration	TransmissionMode Declaration	0..1	aggr	AUTOSAR COM allows configuring statically two different transmission modes for each I-PDU (True and False). The Transmission Mode Selector evaluates the conditions for a subset of signals and decides the transmission mode. It is possible to switch between the transmission modes during runtime.

Table 6.34: IPduTiming

Class	**PduTriggering**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The PduTriggering describes on which channel the IPdu is transmitted. The Pdu routing by the PduR is only allowed for subclasses of IPdu. Depending on its relation to entities such channels and clusters it can be unambiguously deduced whether a fan-out is handled by the Pdu router or the Bus Interface. If the fan-out is specified between different clusters it shall be handled by the Pdu Router. If the fan-out is specified between different channels of the same cluster it shall be handled by the Bus Interface.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
iPdu	Pdu	1	ref	Reference to the Pdu for which the PduTriggering is defined. One I-Pdu can be triggered on different channels (PduR fan-out). The Pdu routing by the PduR is only allowed for subclasses of IPdu. Nevertheless is the reference to the Pdu element necessary since the PduTriggering element is also used to specify the sending and receiving connections to Ecu Ports.
iPduPort	IPduPort	*	ref	References to the IPduPort on every ECU of the system which sends and/or receives the I-PDU. References for both the sender and the receiver side shall be included when the system is completely defined.
iSignal Triggering	ISignalTriggering	*	ref	This reference provides the relationship to the ISignal Triggerings that are implemented by the PduTriggering. The reference is optional since no ISignalTriggering can be defined for DCM and Multiplexed Pdus. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

▽

△

Class	PduTriggering			
secOcCrypto Mapping	SecOcCryptoService Mapping	0..1	ref	This reference identifies the crypto profile applicable to the usage (send, receive) of the also referenced Secured IPdu. Obviously, this reference is only applicable if the Pdutriggering also references a SecuredIPdu in the role i Pdu.
triggerIPduSend Condition	TriggerIPduSend Condition	*	aggr	Defines the trigger for the Com_TriggerIPDUSend API call. Only if all defined TriggerIPduSendConditions evaluate to true (AND associated) the Com_Trigger IPDUSend API shall be called.

Table 6.35: PduTriggering

AUTOSAR COM provides a mechanism of starting/stopping COM PDU groups (ISignalIPduGroup).

Class	ISignalIPduGroup			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The AUTOSAR COM Layer is able to start and to stop sending and receiving configurable groups of I-Pdus during runtime. An ISignalIPduGroup contains either ISignalIPdus or ISignalIPduGroups. **Tags:** atp.recommendedPackage=ISignaliPduGroup			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
communication Direction	Communication DirectionType	1	attr	This attribute determines in which direction IPdus that are contained in this IPduGroup will be transmitted (communication direction can be either In or Out).
communication Mode	String	1	attr	This attribute defines the use-case for this ISignalIPdu Group (e.g. diagnostic, debugging etc.). For example, in a diagnostic mode all IPdus - which are not involved in diagnostic - are disabled. The use cases are not limited to a fixed enumeration and can be specified as a string.
contained ISignalIPdu Group	ISignalIPduGroup	*	ref	An I-Pdu group can be included in other I-Pdu groups. Contained I-Pdu groups shall not be referenced by the EcuInstance.
iSignalIPdu	ISignalIPdu	*	ref	Reference to a set of Signal I-Pdus, which are contained in the ISignal I-Pdu Group. atpVariation: The content of a ISignal I-Pdu group can vary (->vehicle modes). **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild
nmPdu	NmPdu	*	ref	Reference to a set of NmPdus with NmUserData, which are contained in the ISignalIPduGroup. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

Table 6.37: CommunicationDirectionType

[constr_3020] `communicationDirection` of `containedISignalIPduGroup`s ⌈ The value of the attribute `communicationDirection` of `containedISignalIPduGroup` must be identical to the value of the attribute `communicationDirection` of the enclosing `ISignalIPduGroup`. ⌋()

The AUTOSAR Pdu Router provides a mechanism of enabling/disabling of routing path groups (`PdurIPduGroup`).

Class	**PdurIPduGroup**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The AUTOSAR PduR will enable and disable the sending of configurable groups of IPdus during runtime according to the AUTOSAR PduR specification. **Tags:** atp.recommendedPackage=PdurIPduGroups			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
communication Mode	String	1	attr	This attribute defines the use-case for this PduRIPdu Group. For example, in a diagnostic mode all IPdus - which are not involved in diagnostic - are disabled. The use cases are not limited to a fixed enumeration and can be specified as a string.
iPdu	PduTriggering	*	ref	Reference to a set of IPdus, which are contained in the PduR I-Pdu Group. If an IPdu is routed by the PduR to different destinations (PduR fan-out) than an Pdu Triggering for each destination is created in the System Template. To enable/disable a specific destination the PdurIPduGroup refers to the PduTriggering. atpVariation: The content of a PduR I-Pdu group can vary (->vehicle modes). **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

Table 6.38: PdurIPduGroup

[constr_3275] `PduTriggering` containment in different `PdurIPduGroup`s of the same `EcuInstance` is not allowed ⌈ A `PduTriggering` shall not be referenced by more than one `PdurIPduGroup` in the role `iPdu` where each of these `PdurIPduGroup`s are referenced by the same `EcuInstance`. ⌋()

6.3.1 ContainerIPdu

IPdu collection is used to transport several (smaller) IPdus in one (large) ContainerIPdu. A possible use case for example is the extended payload size for Ethernet and CanFd in combination with the limited payload of Can and Lin, where Pdus from a Can network shall be routed onto an Ethernet network and then back to a Can again.

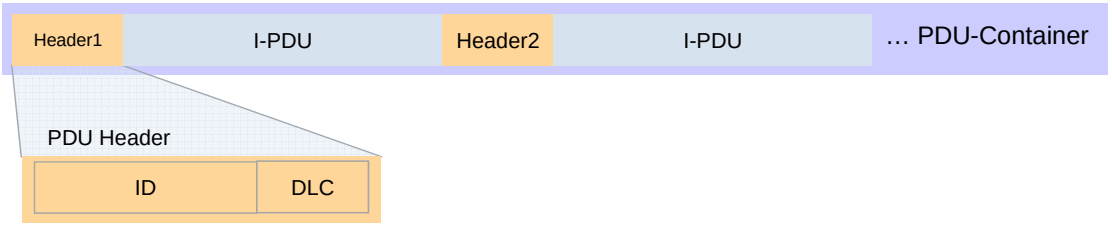

Figure 6.11: Layout of a ContainerIPdu if HeaderMode is used

For each IPdu which is put inside a ContainerIPdu, a header may be provided which determines which IPdu is contained (ContainedIPduProps.headerIdLongHeader or headerIdShortHeader) and what the size of that IPdu is (DLC during runtime). With this header mode the receivers are able to extract the individual contained IPdus again. As an alternative option to the usage of headers a statically configured layout of IPdus in the ContainerIPdu is supported.

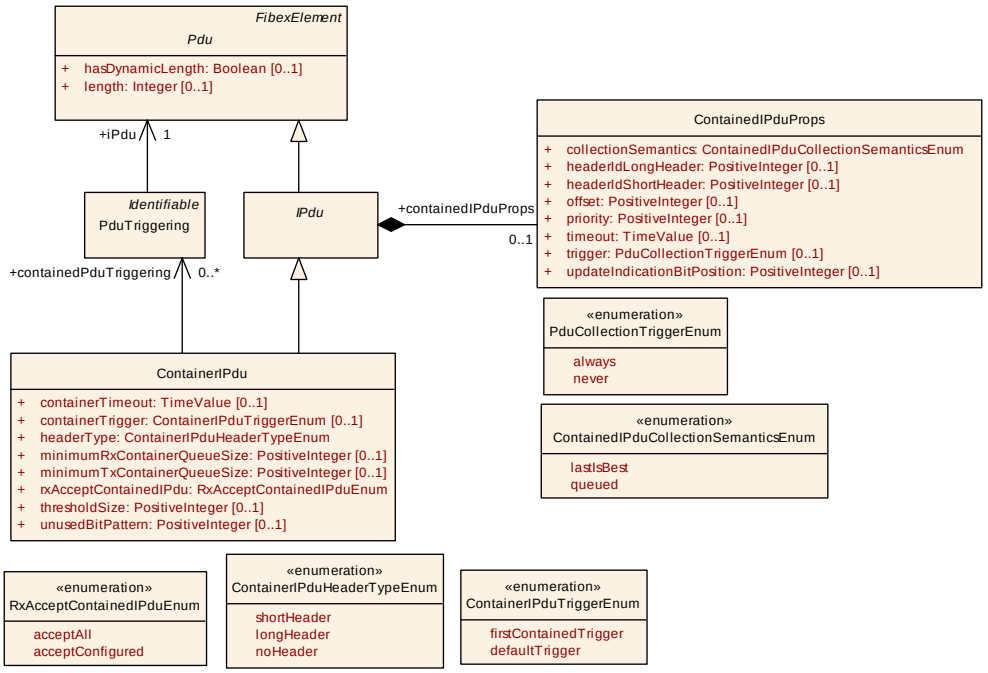

Figure 6.12: ContainerIPdu with ContainedIPduProps

Class	**ContainerIPdu**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	Allows to collect several IPdus in one ContainerIPdu based on the headerType. **Tags:** atp.recommendedPackage=Pdus			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *IPdu*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Pdu*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
containedPdu Triggering	PduTriggering	*	ref	This PduTriggering shall be collected inside the Container IPdu.
container Timeout	TimeValue	0..1	attr	When this timeout expires the ContainerIPdu is sent out. The respective timer is started when the first Ipdu is put into the ContainerIPdu. This attribute is ignored on receiver side.
containerTrigger	ContainerIPduTrigger Enum	0..1	attr	Defines if the transmission of the ContainerIPdu shall be requested right after the first ContainedIPdu was put into it. This attribute shall be ignored on receiver side.
headerType	ContainerIPduHeader TypeEnum	1	attr	Defines whether and which header type is used (header id and length).
minimumRx Container QueueSize	PositiveInteger	0..1	attr	This attribute defines the minimum queue size for received containers.
minimumTx Container QueueSize	PositiveInteger	0..1	attr	This attribute defines the minimum queue size for transmitted containers.
rxAccept ContainedIPdu	RxAcceptContainedI PduEnum	1	attr	Defines whether this ContainerIPdu has a fixed set of containedIPdus assigned for reception.
thresholdSize	PositiveInteger	0..1	attr	Defines the size threshold which, when exceeded, triggers the sending of the ContainerIPdu although the maxium Pdu size has not been reached yet. Unit: byte.
unusedBit Pattern	PositiveInteger	0..1	attr	IPduM fills not updated areas of the ContainerPdu with this byte-pattern. **Tags:** atp.Status=draft

Table 6.39: ContainerIPdu

[constr_3436] Value range of `minimumTxContainerQueueSize` and `minimumRxContainerQueueSize` ⌈ If defined, the value of `minimumTxContainerQueueSize` and `minimumRxContainerQueueSize` shall be in the range of 0..255. ⌋*()*

Enumeration	**ContainerIPduTriggerEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication
Note	Defines when the transmission of the ContainerIPdu shall be requested.
Literal	***Description***
defaultTrigger	Defines that the transmission of the ContainerIPdu shall be requested when the default trigger conditions apply (e.g. timeout of threshold). **Tags:** atp.EnumerationValue=0
firstContained Trigger	Defines that the transmission of the ContainerIPdu shall be requested right after the first Contained IPdu was put into the ContainerIPdu. **Tags:** atp.EnumerationValue=1

Table 6.40: ContainerIPduTriggerEnum

Enumeration	**ContainerIPduHeaderTypeEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication
Note	Is used to define the header type and size of ContainerIPdus. The header size includes the header id and the length information.
Literal	*Description*
longHeader	Header size is 64 bit: • Header Id 32 bit • Dlc 32 bit **Tags:** atp.EnumerationValue=0
noHeader	No Header is used and the the location of each containedPdu in the ContainerPdu is statically configured. **Tags:** atp.EnumerationValue=2 atp.Status=draft
shortHeader	Header size is 32 bit: • Header Id 24 bit • Dlc 8 bit. **Tags:** atp.EnumerationValue=1

Table 6.41: ContainerIPduHeaderTypeEnum

Enumeration	**RxAcceptContainedIPduEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication
Note	Defines whether this ContainerIPdu has a fixed set of containedIPdus assigned for reception.
Literal	*Description*
acceptAll	No fixed set of containedIPdus is defined for reception, any known containedIPdu (based on header Id) shall be expected within this ContainerIPdu. **Tags:** atp.EnumerationValue=0
acceptConfigured	A fixed set of containedIPdus is defined for reception. Only these assigned containedIPdus (based on headerId) are expected in this ContainerIPdu. If a not assigned containedIPdu is received within this ContainerIPdu this containedIPdu is discarded. **Tags:** atp.EnumerationValue=1

Table 6.42: RxAcceptContainedIPduEnum

Class	**ContainedIPduProps**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	Defines the aspects of an IPdu which can be collected inside a ContainerIPdu.			
Base	*ARObject*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
collection Semantics	ContainedIPdu CollectionSemantics Enum	1	attr	Defines whether this ContainedIPdu shall be collected using a last-is-best or queued semantics.
headerIdLong Header	PositiveInteger	0..1	attr	Defines the header id this IPdu shall have in case this IPdu is put inside a ContainerIPdu with headerType = longHeader.
headerIdShort Header	PositiveInteger	0..1	attr	Defines the header id this IPdu shall have in case this IPdu is put inside a ContainerIPdu with headerType = shortHeader.

▽

△

Class	**ContainedIPduProps**			
offset	PositiveInteger	0..1	attr	Byte offset that describes the location of the Contained Pdu in the ContainerPdu if no header is used. **Tags:** atp.Status=draft
priority	PositiveInteger	0..1	attr	Defines a priority of a ContainedTxPdu. 255 represents the lowest priority and 0 represent the highest priority.
timeout	TimeValue	0..1	attr	Defines a IPdu specific sender timeout which can reduce the ContainerIPdu timer when this containedIPdu is put inside the ContainerIPdu. This attribute is ignored on receiver side.
trigger	PduCollectionTrigger Enum	0..1	attr	Defines whether this IPdu does trigger the sending of the ContainerIPdu. This attribute is ignored on receiver side.
update IndicationBit Position	PositiveInteger	0..1	attr	The updateIndicationBit specifies the bit location of ContainedIPdu Update-Bit in the Container PDU. It indicates to the receivers that the ContainedIPdu in the ContainerIPdu was updated. **Tags:** atp.Status=draft

Table 6.43: ContainedIPduProps

Enumeration	**ContainedIPduCollectionSemanticsEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication
Note	Defines the collection semantics for ContainedIPdus.
Literal	*Description*
lastIsBest	The ContainedIPdu data will be fetched via TriggerTransmit just before the transmission executes. **Tags:** atp.EnumerationValue=0
queued	The ContainedIPdu data will instantly be stored to the ContainerIPdu in the context of the Transmit API. **Tags:** atp.EnumerationValue=1

Table 6.44: ContainedIPduCollectionSemanticsEnum

Enumeration	**PduCollectionTriggerEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication
Note	Defines whether a Pdu contributes to the triggering of the data transmission if Pdu collection is enabled.
Literal	*Description*
always	Pdu will trigger the transmission of the data. **Tags:** atp.EnumerationValue=0
never	Pdu will be buffered and will not trigger the transmission of the data. **Tags:** atp.EnumerationValue=1

Table 6.45: PduCollectionTriggerEnum

[TPS_SYST_02062] Allowed `ContainedIPduProps.headerIdLongHeader` and `ContainedIPduProps.headerIdShortHeader` values ⌈ `ContainedIPduProps.headerIdLongHeader` and `ContainedIPduProps.headerIdShortHeader` shall be restricted to values different from 0 (all bits of the value set to 0). ⌋*(RS_SYST_00055)*

Since the header information is larger than 8 bit the byte ordering of the header inside the ContainerIPdu needs to be defined. This is done at System level. Thus all ContainerIPdus have the header information in the same byte order within one System.

[TPS_SYST_02063] Byte order of ContainerIPdu header information ⌈ The System.containerIPduHeaderByteOrder defines in which byte order the header information shall be put into the ContainerIPdu. ⌋*(RS_SYST_00055)*

[constr_3140] No ByteOrderEnum.opaque allowed for System.containerIPduHeaderByteOrder ⌈ The values of System.containerIPduHeaderByteOrder are restricted to ByteOrderEnum.mostSignificantByteFirst and ByteOrderEnum.mostSignificantByteLast. I.e. the value ByteOrderEnum.opaque is not allowed. ⌋*()*

The following assumptions lead to the modeling of the ContainerIPdu structure:

- **[TPS_SYST_02097] Basic definition of contained IPdus** ⌈ Every IPdu with IPdu.containedIPduProps defined can be collected inside a ContainerIPdu. ⌋*(RS_SYST_00055)*
- **[TPS_SYST_02098] Header id and header type of a contained IPdu** ⌈ A contained IPdu shall always have the same headerId per header type (long or short header), regardless in which ContainerIPdu it is collected. If noHeader is set then the contained IPdu does not need to have a headerId. ⌋*(RS_SYST_00055)*
- **[TPS_SYST_02099] Relation between ContainerIPdu and contained PduTriggerings on sender side** ⌈ In the scope of one EcuInstance a PduTriggering shall be referenced by a ContainerIPdu in the role containedPduTriggering at most once. ⌋*(RS_SYST_00055)*
- **[TPS_SYST_02100] Relation between ContainerIPdu and contained IPdus on receiver side** ⌈ On receiver side, it is not necessarily required to statically define which IPdus may be contained inside a ContainerIPdu if the header mode is used. Thus it would be possible to update the senders of ContainerIPdus and put different or additional IPdus inside. ⌋*(RS_SYST_00055)*

The ContainerIPdu defines which IPdus may be collected inside that ContainerIPdu (ContainerIPdu.containedPduTriggering). Dynamic assignment of a contained IPdu to different ContainerIPdus during run-time is not supported by the IPdu multiplexer. Nevertheless it is allowed to collect an IPdu in several ContainerIPdus since each of those ContainerIPdus can be transmitted individually (on the same or on a different PhysicalChannel).

Since it is possible to define a fan-out in the PduR by the means of PduTriggerings, it is required for the ContainerIPdu to refer to PduTriggerings in order to unambiguously identify the fan-out IPdu.

[constr_3141] Only IPdus shall be part of a ContainerIPdu ⌈ The PduTriggering which is referenced in the role ContainerIPdu.containedPduTriggering shall refer to a subclass of an IPdu in the role PduTriggering.iPdu. ⌋*()*

Only subclasses of IPdus are handled by the PduR and therefore are available for the ContainerIPdu.

For the sender side this assignment defines which IPdus may be collected inside this ContainerIPdu. For the receiver side this assignment may be omitted if ContainerIPdu.rxAcceptContainedIPdu is set to RxAcceptContainedIPduEnum.acceptAll.

[TPS_SYST_02064] Reception acceptance of contained IPdus ⌈ ContainerIPdu.rxAcceptContainedIPdu defines for the receiver side whether the list of ContainerIPdu.containedPduTriggering is a closed set.

If ContainerIPdu.rxAcceptContainedIPdu = RxAcceptContainedIPduEnum.acceptConfigured, only those IPdus (based on headerId) which are referenced by this ContainerIPdu in the role ContainerIPdu.containedPduTriggering are extracted from this ContainerIPdu.

If ContainerIPdu.rxAcceptContainedIPdu = RxAcceptContainedIPduEnum.acceptAll, the IPdus (based on headerId) which are referenced by this ContainerIPdu in the role ContainerIPdu.containedPduTriggering are expected inside this ContainerIPdu but also any other IPdu is extracted which is referenced by any other ContainerIPdu.rxAcceptContainedIPdu with RxAcceptContainedIPduEnum.acceptAll set. ⌋(*RS_SYST_00055*)

Thus all referenced IPdus which are referenced from ContainerIPdu.rxAcceptContainedIPdu with RxAcceptContainedIPduEnum.acceptAll form the set of IPdus which are considered for the reception of ANY ContainerIPdu with ContainerIPdu.rxAcceptContainedIPdu = RxAcceptContainedIPduEnum.acceptAll.

For the receiver side ContainerIPdu.containedPduTriggering may be omitted if ContainerIPdu.rxAcceptContainedIPdu is set to RxAcceptContainedIPduEnum.acceptAll. Such a ContainerIPdu will accept any of the contained IPdus from the acceptAll IPdu set if they have the headerId (headerIdShortHeader or headerIdLongHeader) defined by the ContainerIPdu.headerType configured.

There are use-cases where several IPdus with identical content are transported on the vehicle networks. One motivation to design the communication structure like this is that the communication timing attributes may be different and thus need to be represented by different ISignalIPdus (i.e. different ISignalIPdu.iPduTimingSpecification, e.g. to support the transmission on Can and Fr networks with different transmission modes). When the content of the IPdus is identical they can be transported using the same header Id. Thus it is transparent for the receiver via which channel a specific IPdu arrived in case of ContainerIPdu with acceptAll setting.

In such a setup it may occur that several PduTriggerings for IPdus with identical header IDs are defined as candidates for the set of IPdus which are considered for the reception of acceptAll ContainerIPdus. In such a case there is additional information required to select which of these PduTriggerings shall be taken for the configuration and which shall be omitted.

The proposal is to use the PduTriggering.iPduPort relation to distinguish whether a specific PduTriggering shall be taken into account for the set of IPdus which are considered for the reception of acceptAll ContainerIPdus.

[constr_3453] Uniqueness of header Id in case of acceptAll ContainerIPdu ⌈ In case several PduTriggerings are referenced in the role ContainerIPdu.containedPduTriggering by ContainerIPdus with ContainerIPdu.rxAcceptContainedIPdu = RxAcceptContainedIPduEnum.acceptAll and the PduTriggerings refer to

- either the same IPdu (with IPdu.containedIPduProps)
- or different IPdus (with IPdu.containedIPduProps) and equal header Ids,

only one PduTriggering shall have a reference to an IPduPort with direction IN which is applicable for this EcuInstance. ⌋*()*

Note: [constr_3453] regulates that in the set of IPdus which are considered for the reception of acceptAll ContainerIPdus each header Id only occurs once and thus allows a deterministic configuration of the IPduM module and runtime behavior.

[TPS_SYST_02196] PduTriggering is referenced by several ContainerIPdus ⌈ In case a PduTriggering is referenced in the role ContainerIPdu.containedPduTriggering by several ContainerIPdus with ContainerIPdu.rxAcceptContainedIPdu = RxAcceptContainedIPduEnum.acceptAll and has a reference to an IPduPort with direction IN then this PduTriggering shall only be considered once for the set of IPdus which are considered for the reception of acceptAll ContainerIPdus. ⌋*(RS_SYST_00055)*

[constr_3403] Usage of ContainerIPdu.rxAcceptContainedIPdu if noHeader is used ⌈ If the ContainerIPdu.headerType is set to noHeader then the ContainerIPdu.rxAcceptContainedIPdu attribute value shall be set to acceptConfigured. ⌋*()*

[TPS_SYST_03014] Transmission triggering by the first contained IPdu put into a ContainerIPdu ⌈ The attribute ContainerIPdu.containerTrigger determines whether the transmission of a ContainerIPdu shall be requested when the first contained IPdu was put into the ContainerIPdu.

In case containerTrigger equals firstContainedTrigger the transmission of the ContainerIPdu shall be requested when the first contained IPdu is put into the ContainerIPdu.

In case containerTrigger equals defaultTrigger the transmission of the ContainerIPdu shall be requested when the other trigger conditions defined by the ContainerIPdu are fulfilled (e.g. containerTimeout, thresholdSize). ⌋ *(RS_SYST_00055)*

Note: This trigger condition is independent from PduCollectionTriggerEnum.always which is defined for specific IPdus. With the attribute ContainerIPdu.containerTrigger = firstContainedTrigger on the other hand, any contained IPdu will trigger the ContainerIPdu transmission.

Rationale for this trigger condition is the efficient usage (allow the ContainerIPdus to reach a certain fill level) of triggered transmission on time- (containerTrigger typically set to firstContainedTrigger) and event-driven (containerTrigger typically set to defaultTrigger) buses.

Each IPdu which shall be collected inside a ContainerIPdu shall provide the IPdu.containedIPduProps. This ContainedIPduProps defines a header Id per ContainerIPdu.headerType which shall be used in the Pdu header of the ContainerIPdu in case that the headerType is set to shortHeader or longHeader. In case that the headerType is set to noHeader the layout of IPdus in the ContainerIPdu is statically configured and no header Id is required.

[constr_3454] Unique headerIdLongHeader for acceptConfigured ⌈ For a ContainerIPdu with ContainerIPdu.rxAcceptContainedIPdu = RxAcceptContainedIPduEnum.acceptConfigured and ContainerIPdu.headerType = longHeader the following shall apply: All referenced IPdus (via ContainerIPdu.containedPduTriggering) shall have a unique ContainedIPduProps.headerIdLongHeader within the scope of this ContainerIPdu. ⌋*()*

[constr_3455] Unique headerIdShortHeader for acceptConfigured ⌈ For a ContainerIPdu with ContainerIPdu.rxAcceptContainedIPdu = RxAcceptContainedIPduEnum.acceptConfigured and ContainerIPdu.headerType = shortHeader the following shall apply: All referenced IPdus (via ContainerIPdu.containedPduTriggering) shall have a unique ContainedIPduProps.headerIdShortHeader within the scope of this ContainerIPdu. ⌋*()*

Note: With [constr_3454] and [constr_3455] it is possible to have the same header Id value received in different ContainerIPdus. It just has to be guaranteed that in the scope of one ContainerIPdu the reception of header Id is unambiguous.

[constr_3142] Mandatory headerIdLongHeader for longHeader ⌈ For each IPdu which is assigned to a ContainerIPdu in the role ContainerIPdu.containedPduTriggering with ContainerIPdu.headerType = longHeader the IPdu.containedIPduProps.headerIdLongHeader shall be defined. ⌋*()*

[constr_3143] Mandatory headerIdShortHeader for shortHeader ⌈ For each IPdu which is assigned to a ContainerIPdu in the role ContainerIPdu.containedPduTriggering with ContainerIPdu.headerType = shortHeader the IPdu.containedIPduProps.headerIdShortHeader shall be defined. ⌋*()*

[constr_3402] Mandatory `offset` if `noHeader` is used ⌈ For each IPdu which is assigned to a ContainerIPdu in the role containedPduTriggering with ContainerIPdu.headerType = noHeader the IPdu.containedIPduProps.offset shall be defined. ⌋*()*

[constr_3404] Usage of `ContainedIPduProps.updateIndicationBitPosition` ⌈ ContainedIPduProps.updateIndicationBitPosition is only allowed to be set to a value if the headerType of the ContainerIPdu that contains the IPdu with containedIPduProps is set to noHeader. ⌋*()*

[constr_3405] Dynamic Length `IPdu` inside of a static configured `ContainerIPdu` ⌈ Only the last contained IPdu (according to the ContainedIPduProps.offset) of a ContainerIPdu with static container layout (i.e., a ContainerIPdu with headerType set to noHeader) is allowed to be a dynamic length IPdu (i.e, a contained IPdu that at runtime may exhibit a length different from the one statically configured via Pdu.length of the respective Pdu). All other contained IPdus of a ContainerIPdu with static container layout have to be static length IPdus. ⌋*()*

[TPS_SYST_02065] Contained `IPdu` specific transmission timeout ⌈ The IPdu specific transmission timeout can be specified at ContainedIPduProps.timeout. If no ContainedIPduProps.timeout is provided the timeout from the ContainerIPdu shall be used (ContainerIPdu.containerTimeout). ⌋*(RS_SYST_00055)*

The case where neither the ContainerIPdu.containerTimeout nor the ContainedIPduProps.timeout is provided, will result in no time-based triggering of ContainerIPdus which might lead to long delays or no transmission at all if no other sending condition for this ContainerIPdu does occur (e.g. no further IPdu is collected inside this ContainerIPdu).

[TPS_SYST_02066] `ContainerIPdu.thresholdSize` ⌈ The attribute ContainerIPdu.thresholdSize defines the threshold when a ContainerIPdu shall be triggered for transmission. If the payload size of the ContainerIPdu exceeds the value of thresholdSize this ContainerIPdu shall be transmitted. ⌋*(RS_SYST_00055)*

Note: The ContainerIPdu.thresholdSize supports the definition of a transmission threshold which takes the data transmission model of the communication into account. Especially when operating with variable length IPdus, only the maximum length of these IPdus is defined in the System Description. Only having the maximumLength information it is not possible to derive a sensible threshold for the ContainerIPdu this variable length IPdu is collected in. Thus a ContainerIPdu would wait for further contained IPdus. Using a transmission model it can be calculated that the average size contained IPdu will not fit into that ContainerIPdu anymore and provide this as a requirement in ContainerIPdu.thresholdSize.

Another use case for the ContainedIPduProps is to support the usage of optimized trigger transmit collection of IPdus in ContainerIPdus. Therefore it is necessary to distinguish between contained IPdus with lastIsBest (will be fetched via trigger transmit just before the transmission executes) and those with queued semantics (will

instantly be stored in the context of the transmit API). This distinction is possible on the level of single contained IPdus with the attribute collectionSemantics.

For all intents and purposes, the different handling of contained IPdus depending on the semantics is supported by the attribute ContainedIPduProps.collectionSemantics that allows the individual setting of the intended semantics per contained IPdu.

[constr_3517] Consistent setting of ContainedIPduProps.collectionSemantics in the context of one ContainerIPdu ⌈ The value of the attribute ContainedIPduProps.collectionSemantics shall be identical for all contained IPdus within the context of a given ContainerIPdu. ⌋*()*

[constr_3144] Mandatory IPdu.containedIPduProps for contained IPdus ⌈ For each IPdu which is assigned to a ContainerIPdu in the role ContainerIPdu.containedPduTriggering the IPdu.containedIPduProps shall be defined. ⌋*()*

ContainedIPduProps is optional and may be ignored in case the IPdu is not mapped into a ContainerIPdu. A use-case is that an IPdu is fan-out in the PduR and one PduTriggering is part of a ContainerIPdu while the other PduTriggering is directly transported via a bus interface.

[constr_3488] Value range of ContainedIPduProps.priority ⌈ If defined, the value of ContainedIPduProps.priority shall be in the range of 0..255. ⌋*()*

[constr_3489] ContainedIPduProps.priority is only applicable if a ContainerIPdu header is used ⌈ ContainedIPduProps.priority is only applicable if the headerType of the ContainerIPdu is set to shortHeader or longHeader. ⌋*()*

[constr_3490] ContainedIPduProps.priority is only applicable if collectionSemantics is set to lastIsBest ⌈ ContainedIPduProps.priority is only applicable if ContainedIPduProps.collectionSemantics is set to lastIsBest. ⌋*()*

6.3.2 SecuredIPdu

AUTOSAR supports an authentication mechanism for critical data on the level of Pdus.

[TPS_SYST_02060] SecuredIPdus ⌈ SecuredIPdu shall be used to describe an IPdu that is protected against unauthorized manipulation and replay attacks. ⌋ *(RS_SYST_00054)*

Please note that several SecuredIPdus may exist with the same dataId value since the same data may be transported on different channels.

[TPS_SYST_02148] Meaning of useAsCryptographicIPdu that is not set or set to false ⌈ If useAsCryptographicIPdu is not set or set to false the SecuredIPdu

contains the payload of an Authentic IPdu supplemented by additional Authentication Information (Freshness Counter and an Authenticator). ⌋(*RS_SYST_00054*)

[TPS_SYST_02149] Meaning of useAsCryptographicIPdu that is set to true ⌈ If useAsCryptographicIPdu is set to true the SecuredIPdu contains the Authenticator for a payload that is transported in a separate message. The separate Authentic IPdu is described by the PduTriggering that is referenced with the payload reference. ⌋(*RS_SYST_00054*)

The attribute useAsCryptographicIPdu decides whether one single Pdu or two Pdus are transferred on the communication bus. In either case always two IPdus shall be modeled:

- SecuredIPdu with a PduTriggering
- payload IPdu with a PduTriggering

[TPS_SYST_02172] Modeling of SecuredIPdu in case useAsCryptographicIPdu is set to false ⌈ If the useAsCryptographicIPdu is set to false only the SecuredIPdu shall be

- mapped into a Frame by the PduToFrameMapping or
- assigned to SocketConnectionBundle or SocketConnection or
- assigned to ContainerIPdu

⌋(*RS_SYST_00054*)

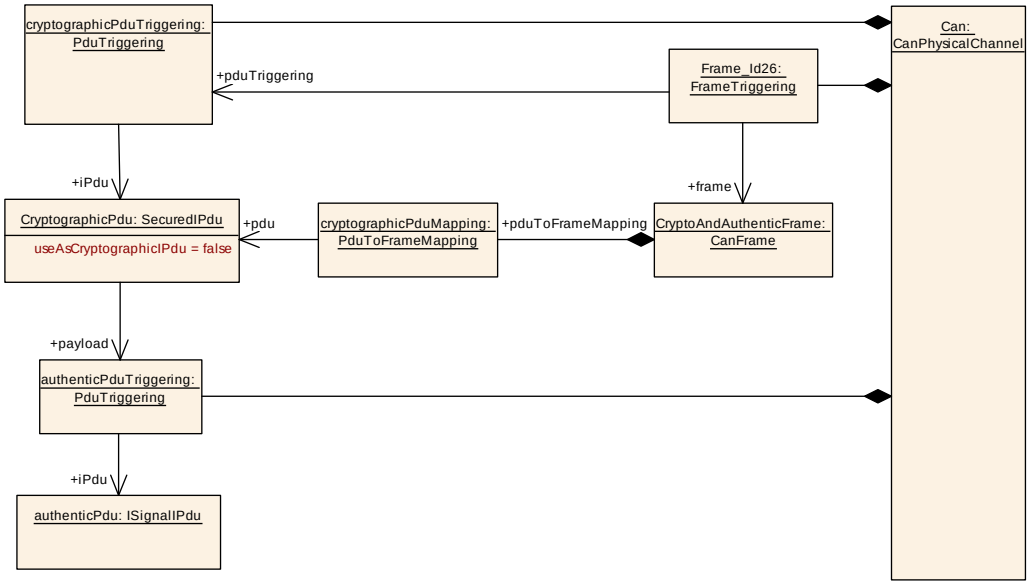

Figure 6.13: Example for the modeling of SecuredIPdu with useAsCryptographicIPdu set to false

[TPS_SYST_02173] Modeling of SecuredIPdu in case useAsCryptographicIPdu is set to true ⌈ If the useAsCryptographicIPdu is set to true then the SecuredIPdu and the payload IPdu shall be

- mapped into a Frame by the PduToFrameMapping or
- assigned to SocketConnectionBundle or SocketConnection or
- assigned to ContainerIPdu

⌋(*RS_SYST_00054*)

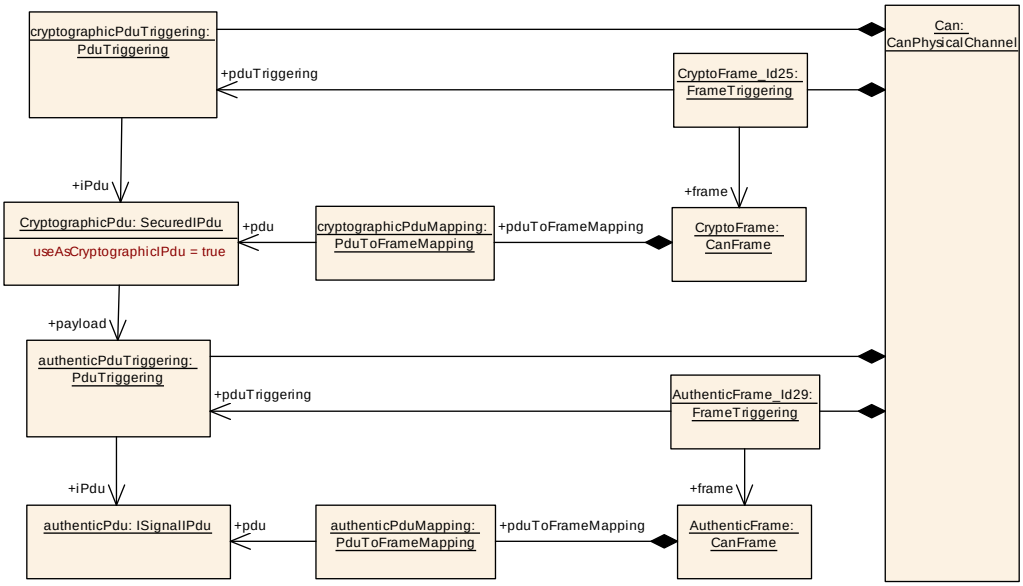

Figure 6.14: Example for the modeling of SecuredIPdu with useAsCryptographicIPdu set to true

Please note that [TPS_SYST_02059] defines that the PduTriggerings of the SecuredIPdu and PduTriggerings of the payload IPdu shall both reference IPduPorts.

A SecuredIPdu defines freshness properties by referencing the reusable SecureCommunicationFreshnessProps in the role freshnessProps. The authentication properties are defined by reusable SecureCommunicationAuthenticationProps that are referenced in the role authenticationProps. Configuration settings that are specific to the SecuredIPdu are defined in SecureCommunicationProps.

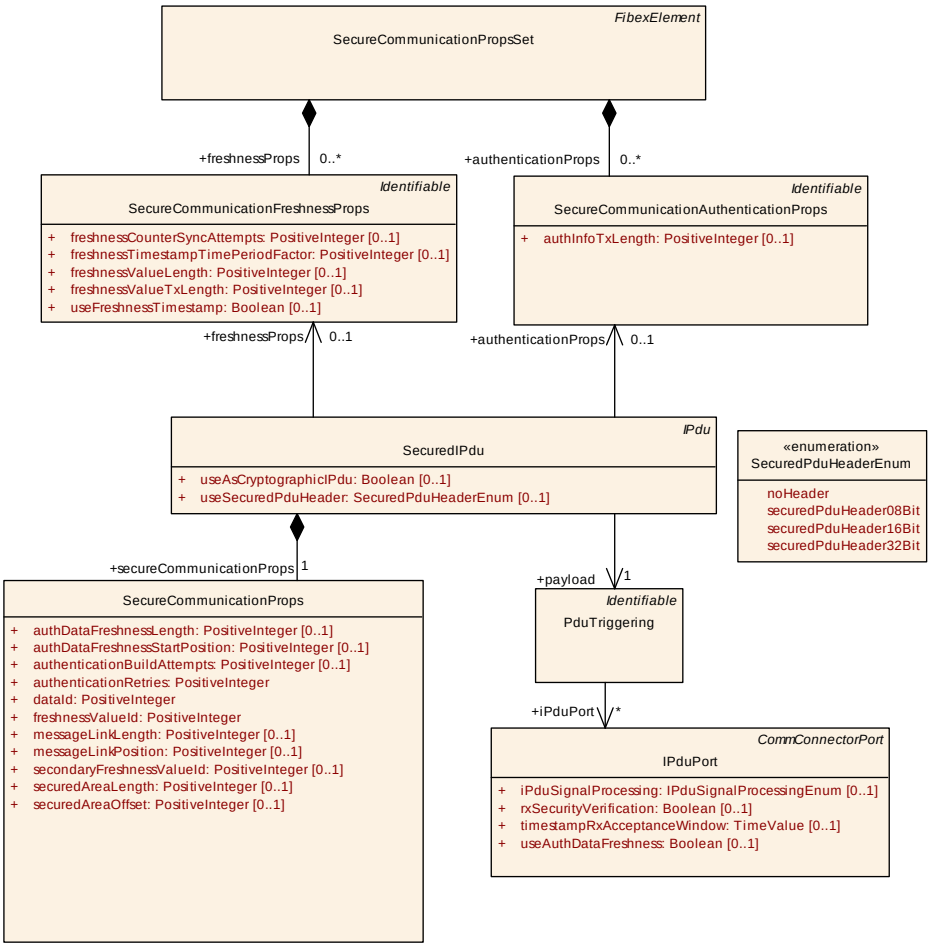

Figure 6.15: SecuredIPdu with SecureCommunicationProps

Class	**SecuredIPdu**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	If useAsCryptographicPdu is not set or set to false this IPdu contains the payload of an Authentic IPdu supplemented by additional Authentication Information (Freshness Counter and an Authenticator). If useAsCryptographicPdu is set to true this IPdu contains the Authenticator for a payload that is transported in a separate message. The separate Authentic IPdu is described by the Pdu that is referenced with the payload reference from this SecuredIPdu. **Tags:** atp.recommendedPackage=Pdus

authentication Props	SecureCommunication AuthenticationProps	0..1	ref	Reference to authentication properties that are valid for this SecuredIPdu.
freshnessProps	SecureCommunication FreshnessProps	0..1	ref	Reference to freshness properties that are valid for this SecuredIPdu.
payload	PduTriggering	1	ref	Reference to a Pdu that will be protected against unauthorized manipulation and replay attacks.
secure Communication Props	SecureCommunication Props	1	aggr	Specific configuration properties for this SecuredIPdu.

△

Class	**SecuredIPdu**			
useAs Cryptographic IPdu	Boolean	0..1	attr	If this attribute is set to true the SecuredIPdu contains the Authentication Information for an AuthenticIPdu that is transmitted in a separate message. The AuthenticIPdu contains the original payload, i.e. the secured data. If this attribute is set to false this SecuredIPdu contains the payload of an Authentic IPdu supplemented by additional Authentication Information.
useSecuredPdu Header	SecuredPduHeader Enum	0..1	attr	This attribute defines the size of the header which is inserted into the SecuredIPdu. If this attribute is set to anything but noHeader, the SecuredIPdu contains the Secured I-PDU Header to indicate the length of the AuthenticIPdu. The AuthenticIPdu contains the original payload, i.e. the secured data.

Table 6.46: SecuredIPdu

Enumeration	**SecuredPduHeaderEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication
Note	Defines the header which will be inserted into the SecuredIPdu.
Literal	*Description*
noHeader	No header included in the SecuredPdu. **Tags:** atp.EnumerationValue=0
securedPdu Header08Bit	8 Bit Secured I-PDU Header included in the Secured I-PDU. **Tags:** atp.EnumerationValue=1
securedPdu Header16Bit	16 Bit Secured I-PDU Header included in the Secured I-PDU. **Tags:** atp.EnumerationValue=2
securedPdu Header32Bit	32 Bit Secured I-PDU Header included in the Secured I-PDU. **Tags:** atp.EnumerationValue=3

Table 6.47: SecuredPduHeaderEnum

Class	**SecureCommunicationProps**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	This meta-class contains configuration settings that are specific for an individual SecuredIPdu.			
Base	*ARObject*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
authData Freshness Length	PositiveInteger	0..1	attr	This attribute defines the length in bits of the authentic PDU data that is passed to the SWC that verifies and generates the Freshness.
authData FreshnessStart Position	PositiveInteger	0..1	attr	This value determines the start position in bits of the Authentic PDU that shall be passed on to the SWC that verifies and generates the Freshness.. The bit position starts counting from the MSB of the first byte of the PDU.
authentication BuildAttempts	PositiveInteger	0..1	attr	This attribute specifies the number of authentication build attempts.

▽

△

Class	SecureCommunicationProps			
authentication Retries	PositiveInteger	1	attr	This attribute defines the additional number of authentication attempts that are to be carried out when the generation of the authentication information failed for a given SecuredIPdu. If zero is set than only one authentication attempt is done.
dataId	PositiveInteger	1	attr	This attribute defines a numerical identifier for the Secured I-PDU.
freshnessValue Id	PositiveInteger	1	attr	This attribute defines the Id of the Freshness Value. The Freshness Value might be a normal counter or a time value.
messageLink Length	PositiveInteger	0..1	attr	SecOC links an AuthenticIPdu and CryptographicIPdu together by repeating a specific part (Message Linker) of the AuthenticIPdu in the CryptographicIPdu. This attribute defines the length in bits of the messageLinker.
messageLink Position	PositiveInteger	0..1	attr	SecOC links an AuthenticIPdu and CryptographicIPdu together by repeating a specific part (Message Linker) of the AuthenticIPdu in the CryptographicIPdu. This attribute defines the startPosition in bits of the messageLinker.
secondary FreshnessValue Id	PositiveInteger	0..1	attr	This attribute defines the Id of the Secondary Freshness Value. The Secondary Freshness Value might be a normal counter or a time value. Please note that this attribute is for documentation only to allow the configuration of required freshness value manager and no upstream mapping is defined for it.
securedArea Length	PositiveInteger	0..1	attr	This attribute defines the length in bytes of the area within the payload Pdu which will be secured.
securedArea Offset	PositiveInteger	0..1	attr	This attribute defines the start position (offset in byte) of the area within the payload Pdu which will be secured.

Table 6.48: SecureCommunicationProps

Attribute	**Type**	**Mul.**	**Kind**	**Note**

▽

△

Class	**SecureCommunicationFreshnessProps**			
freshness CounterSync Attempts	PositiveInteger	0..1	attr	This attribute defines the number of Freshness Counter re-synchronization attempts when a verification failed for a Secured I-PDU. If the value is zero, there will be no additional verification attempt to synchronize with a potentially better fitting Freshness Counter value. This attribute is only applicable if useFreshnessTimestamp is FALSE.
freshness TimestampTime PeriodFactor	PositiveInteger	0..1	attr	This attribute defines a factor that specifies the time period for the Freshness Timestamp. It holds a multiplication factor that specifies the concrete meaning of a Freshness Timestamp increment by one on basis of microseconds.
freshnessValue Length	PositiveInteger	0..1	attr	This attribute defines the complete length in bits of the Freshness Value. As long as the key doesn't change the counter shall not overflow. The length of the counter shall be determined based on the expected life time of the corresponding key and frequency of usage of the counter.
freshnessValue TxLength	PositiveInteger	0..1	attr	This attribute defines the length in bits of the Freshness Value to be included in the payload of the Secured I-PDU. This length is specific to the least significant bits of the complete Freshness Counter. If the attribute is 0 no Freshness Value is included in the Secured I-PDU.
useFreshness Timestamp	Boolean	0..1	attr	This attribute specifies whether the Freshness Value is generated through individual Freshness Counters or by a Timestamps. The value is set to TRUE when Timestamps are used.

Table 6.50: SecureCommunicationFreshnessProps

Class	**SecureCommunicationAuthenticationProps**

Note	Authentication properties used to configure SecuredIPdus.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
authInfoTx Length	PositiveInteger	0..1	attr	This attribute defines the length in bits of the authentication code to be included in the payload of the authenticated Pdu.

Table 6.51: SecureCommunicationAuthenticationProps

[constr_3136] Allowed payload of `SecuredIPdu`s ⌈ `SecuredIPdu`s are allowed to reference `PduTriggering`s of `ISignalIPdu`s, `ContainerIPdu`s, `DcmIPdu`s, `MultiplexedIPdu`s, `GeneralPurposeIPdu`s with `category` SOMEIP_SEGMENTED_IPDU and `UserDefinedIPdu`s. ⌋*()*

Please note that it is currently not supported to secure multiplexed part `IPdu`s individually because it is not possible to reference a `SecuredIPdu` via `MultiplexedIPdu.dynamicPart.dynamicPartAlternative` or `MultiplexedIPdu.staticPart` in the role `iPdu`.

[TPS_SYST_02171] Secured Area in payload Pdu ⌈ The area within the payload Pdu that is secured is specified by the `securedAreaOffset` and `securedAreaLength`. In case that these two attributes are not configured the complete payload Pdu is secured. ⌋*(RS_SYST_00054)*

[constr_3399] Existence of securedAreaOffset and securedAreaLength ⌈ If the securedAreaOffset is defined then the securedAreaLength shall be defined as well and vice versa. ⌋*()*

[TPS_SYST_02152] Security profile ⌈ The Security profile is defined by SecureCommunicationFreshnessProps.category and by SecureCommunicationAuthenticationProps.category. ⌋*(RS_SYST_00054)*

[constr_3324] Category of SecureCommunicationFreshnessProps and SecureCommunicationAuthenticationProps ⌈ SecureCommunicationFreshnessProps that is referenced by a SecuredIPdu in the role freshnessProps shall have the same category value as the SecureCommunicationAuthenticationProps that is referenced by the same SecuredIPdu in the role authenticationProps. ⌋*()*

[TPS_SYST_02153] Standardized values for the attribute category of meta-class SecureCommunicationFreshnessProps ⌈ The following values of the attribute category of meta-class SecureCommunicationFreshnessProps are reserved by the AUTOSAR standard: PROFILE_01, PROFILE_02, PROFILE_03. ⌋ *(RS_SYST_00054)*

[TPS_SYST_02154] Standardized values for the attribute category of meta-class SecureCommunicationAuthenticationProps ⌈ The following values of the attribute category of meta-class SecureCommunicationAuthenticationProps are reserved by the AUTOSAR standard: PROFILE_01, PROFILE_02, PROFILE_03. ⌋*(RS_SYST_00054)*

[constr_3325] SecureCommunicationFreshnessProps and SecureCommunicationAuthenticationProps attribute values for predefined categories ⌈ Table Table 6.52 defines applicable attribute values for security profiles that are standardized by AUTOSAR. ⌋*()*

	PROFILE		
Attributes	**PROFILE_01**	**PROFILE_02**	**PROFILE_03**
authAlgorithm	CMAC/AES-128	CMAC/AES-128	CMAC/AES-128
authInfoTxLength	24 bits	24 bits	28 bits
freshnessValueLength	Not Specified	0 bits	64 bits
freshnessValueTxLength	8 bits	0 bits	4 bits

Table 6.52: Security Profiles that are standardized by AUTOSAR

[constr_3339] Relation between authDataFreshnessStartPosition, authDataFreshnessLength and useAuthDataFreshness ⌈ If authDataFreshnessStartPosition and authDataFreshnessLength are set to a value for a SecuredIPdu then the useAuthDataFreshness shall be set as well to a value on all IPduPorts with communicationDirection = in that are referenced by a PduTriggering of the SecuredIPdu. ⌋*()*

[TPS_SYST_02189] Setting of useSecuredPduHeader attribute ⌈ The useSecuredPduHeader shall be set to a value other than noHeader if the length of the

payload Pdu is dynamic and is transmitted over a network which may insert padding bytes depending on the length (e.g. CANFD, Flexray). ⌋(*RS_SYST_00054*)

Please note that the dynamic-length Pdu can be an ISignalIPdu that contains a SystemSignal with dynamicLength set to true. In general it is not possible to run diagnostics on fixed-length Pdus. Therefore, there is a probability that at least a subset of DcmIPdus and UserDefinedIPdus can have dynamic length.

[constr_3406] All signals before authDataFreshnessStartPosition shall have a static length ⌈ In case that

- an ISignalIPdu is referenced by the SecuredIPdu with the payload reference via the PduTriggering and
- the authDataFreshnessStartPosition and authDataFreshnessLength define the area in the ISignalIPdu that is taken to verify and generate the Freshness then

all ISignals that are mapped into the ISignalIPdu in front of the configured authDataFreshnessStartPosition shall have a static length. ⌋()

Please note that parts of the Authentic IPdu can be used as freshness when authDataFreshnessStartPosition and authDataFreshnessLength are defined. But therefore the part of the Authentic IPdu to be used as the freshness has to be always available at same position in the Authentic IPdu.

[constr_3407] Freshness Value in Authentic IPdu is not allowed to be used in case of ContainerIPdu with a dynamic layout ⌈ If a ContainerIPdu that is referenced by the SecuredIPdu with the payload reference via the PduTriggering contains a dynamic layout (i.e. ContainerIPdu.headerType is set to longHeader or shortHeader) and multiple contained IPdus then each IPduPort that is referenced by the PduTriggering of the SecuredIPdu shall have the attribute useAuthDataFreshness set to false. ⌋()

Please note that for ContainerIPdus with a dynamic layout it cannot be ensured which contained IPdu will be put in which position (depends on various timing and trigger conditions). Therefore [constr_3407] applies.

6.3.2.1 Crypto Infrastructure for SecuredIPdu

From the cryptographic point of view, the usage of SecuredIPdu is connected to the application of two cryptographic operations, MacGenerate (for sending the SecuredIPdu) and MacVerify (for receiving the SecuredIPdu).

There are use cases for OEMs to already provide a pre-configuration of the crypto stack specifically for the handling of SecuredIPdu.

In order to support these use cases model elements in the meta-model are defined that allow for modeling a “crypto infrastructure” that facilitates the derivation of the configuration of operations MacGenerate and MacVerify in the crypto stack.

The formalization of a Pdu that is sent or received is based on the PduTriggering and its reference to an IPduPort, specifically by interpreting the attribute IPduPort.communicationDirection. The details of the approach are summarized in Figure 6.16.

[TPS_SYST_05020] Semantics of CryptoServiceMapping ⌈ Meta-class CryptoServiceMapping represents an abstract base class for the creation of mappings in the context of cryptographic operations. Concrete sub-classes define the mapping with respect to specific cryptographic use cases, e.g. SecOC, TLS. ⌋*(RS_SYST_00054)*

Class	***CryptoServiceMapping*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::SecureCommunication			
Note	This meta-class represents an abstract base class for specializations of crypto service mappings.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	SecOcCryptoServiceMapping, TlsCryptoServiceMapping			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table 6.53: CryptoServiceMapping

[TPS_SYST_05021] Semantics of SecOcCryptoServiceMapping ⌈ Meta-class SecOcCryptoServiceMapping represents the mapping functionality required for the configuration of PDU-based secure communication by means of the SecOc.

In particular, the SecOcCryptoServiceMapping associates a CryptoServicePrimitive with the applicable CryptoServiceKey. ⌋*(RS_SYST_00054)*

Class	**SecOcCryptoServiceMapping**			
Package	M2::AUTOSARTemplates::SystemTemplate::SecureCommunication			
Note	This meta-class has the ability to represent a crypto service mapping for the Pdu-based communication via SecOC. **Tags:** atp.recommendedPackage=CryptoServiceMappings			
Base	*ARObject*, *CryptoServiceMapping*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
authentication	CryptoServicePrimitive	0..1	ref	This reference identifies the applicable crypto primitive for the authentication.
cryptoService Key	CryptoServiceKey	0..1	ref	This reference identifies the applicable crypto key.

Table 6.54: SecOcCryptoServiceMapping

[TPS_SYST_05022] Semantics of PduTriggering.secOcCryptoMapping ⌈ The reference PduTriggering.secOcCryptoMapping allows for modeling the relation of the usages (send, receive) of a SecuredIPdu to a given CryptoServiceMapping and thereby distinguish between the configuration of cryptographic operations MacGenerate and MacVerify. ⌋*(RS_SYST_00054)*

In other words, the cryptographic use case is connected to the value of attribute communicationDirection of the IPduPort that is referenced by an PduTriggering that also references a SecOcCryptoServiceMapping:

- If the value of communicationDirection is set to in then the cryptographic use case MacVerify applies.
- If the value of communicationDirection is set to out then the cryptographic use case MacGenerate applies.

[constr_1669] Existence of PduTriggering.secOcCryptoMapping ⌈ The reference PduTriggering.secOcCryptoMapping shall only exist if the PduTriggering also references a SecuredIPdu in the role iPdu. ⌋*()*

As the SecOcCryptoServiceMapping is referenced by a PduTriggering the SecOcCryptoServiceMapping needs to work for both the sender and the receivers of the corresponding Pdu in the context of a System of category SYSTEM_DESCRIPTION/SYSTEM_EXTRACT as well as in the context of a System of category ECU_EXTRACT.

[TPS_SYST_05023] Semantics of CryptoServicePrimitive ⌈ Meta-class CryptoServicePrimitive allows for the description of the applicable cryptographic algorithm. ⌋*(RS_SYST_00054)*

Class	**CryptoServicePrimitive**			
Package	M2::AUTOSARTemplates::SystemTemplate::SecureCommunication			
Note	This meta-class has the ability to represent a crypto primitive. **Tags:** atp.ManifestKind=ServiceInstanceManifest atp.recommendedPackage=CryptoPrimitives			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
algorithmFamily	String	0..1	attr	This attribute represents a description of the family (e.g. AES) of crypto algorithm implemented by the crypto primitive.
algorithmMode	String	0..1	attr	This attribute represents a description of the mode of the crypto algorithm implemented by the crypto primitive.
algorithm Secondary Family	String	0..1	attr	This attribute represents a further description of the secondary family of crypto algorithm implemented by the crypto primitive. The secondary family is needed for the specification of the hash algorithm for a signature check, e.g. using RSA.

Table 6.55: CryptoServicePrimitive

[TPS_SYST_05024] Semantics of CryptoServiceKey ⌈ Meta-class CryptoServiceKey allows for the description of the applicable cryptographic key. The ability to aggregate a ValueSpecification in the role developmentValue shall be used to distribute development keys to suppliers such that crypto functionality can be adequately verified during development. ⌋*(RS_SYST_00054)*

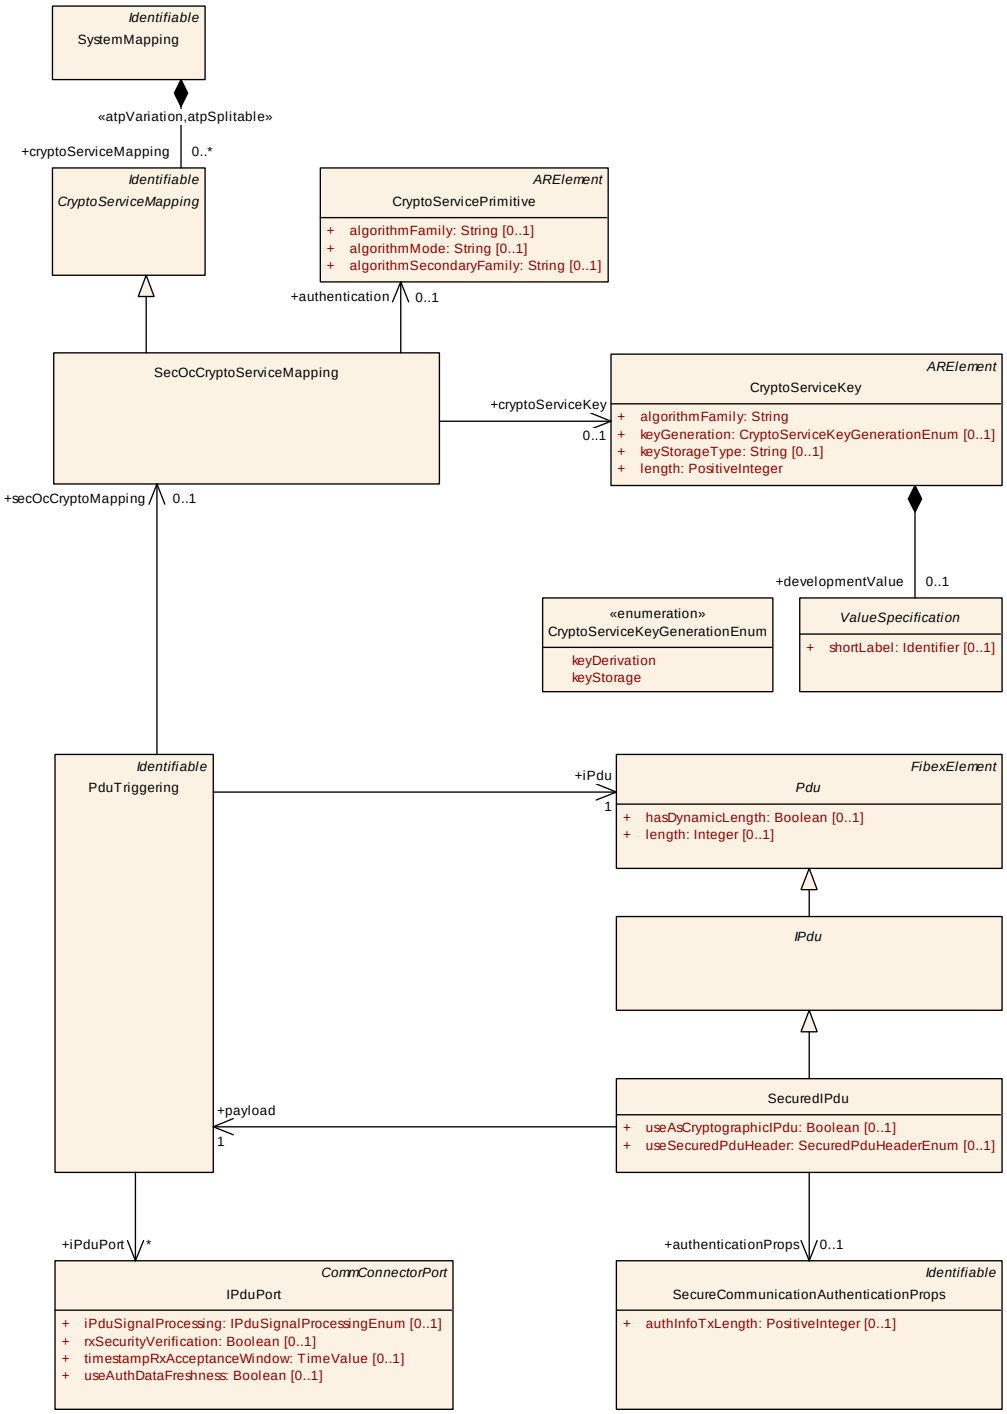

Figure 6.16: Modeling of crypto infrastructure for `SecuredIPdu`

Please note that the `developmentValue` most likely will be used in the form of a `TextValueSpecification`. However, the aggregation has still be modeled by means of using the abstract base class `ValueSpecification` to gain some headroom for future extension.

Class	**CryptoServiceKey**			
Package	M2::AUTOSARTemplates::SystemTemplate::SecureCommunication			
Note	This meta-class has the ability to represent a crypto key **Tags:** atp.ManifestKind=ServiceInstanceManifest atp.recommendedPackage=CryptoDevelopmentKeys			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
algorithmFamily	String	1	attr	This attribute represent the description of the family of the applicable crypto algorithm.
developmentValue	ValueSpecification	0..1	aggr	This aggregation represents the ability to assign a specific value to the crypto key as part of the system description. This value can then be taken for the development of the respective ECU.
keyGeneration	CryptoServiceKeyGenerationEnum	0..1	attr	This attribute describes how a the specific cryptographic key is created.
keyStorageType	String	0..1	attr	This attribute describes where the enclosing cryptographic key shall be stored. AUTOSAR reserves specific values for this attributes but it is possible to insert custom values as well.
length	PositiveInteger	1	attr	This attribute describes the length of the cryptographic key.

Table 6.56: CryptoServiceKey

Enumeration	**CryptoServiceKeyGenerationEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::SecureCommunication
Note	This enumeration shall be taken to express the handling of a crypto key in terms of whether it is obtained from e.g. a diagnostic tester or whether it is created by derivation from a master key.
Literal	***Description***
keyDerivation	This means that the crypto key is created by derivation from a master key. **Tags:** atp.EnumerationValue=0
keyStorage	This means that the crypto key is obtained from an external entity, e.g. a diagnostic tester. **Tags:** atp.EnumerationValue=1

Table 6.57: CryptoServiceKeyGenerationEnum

[TPS_SYST_05025] Standardized values of `CryptoServicePrimitive.algorithmFamily` and `CryptoServiceKey.algorithmFamily` ⌈ The following values of attributes `CryptoServicePrimitive.algorithmFamily` and `CryptoServiceKey.algorithmFamily` are standardized by AUTOSAR:

- **`CRYPTO_ALGOFAM_SHA1`**: SHA1 hash
- **`CRYPTO_ALGOFAM_SHA2_224`**: SHA2-224 hash
- **`CRYPTO_ALGOFAM_SHA2_256`**: SHA2-256 hash

- **CRYPTO_ALGOMODE_CMAC**: Cipher-based MAC
- **CRYPTO_ALGOMODE_GMAC**: Galois MAC
- **CRYPTO_ALGOMODE_CTRDRBG**: Counter-based Deterministic Random Bit Generator
- **CRYPTO_ALGOMODE_SIPHASH_2_4**: Siphash-2-4
- **CRYPTO_ALGOMODE_SIPHASH_4_8**: Siphash-4-8

⌋(*RS_SYST_00054*)

Please note that it is positively supported to define custom values for attributes `CryptoServicePrimitive.algorithmFamily` and `CryptoServicePrimitive.algorithmMode` provided that the custom values are guaranteed to not clash with future extension of the AUTOSAR standard. For example, this could be achieved by using a prefix or suffix that is specific to the organization that defines the custom value.

[TPS_SYST_05028] Semantics of `CryptoServiceKey.keyStorageType` ⌈ Attribute `CryptoServiceKey.keyStorageType` describes where the actual key shall be stored on the ECU. This attribute has been deliberately modeled as a `String` to allow future (and custom) extensions of the range of possible values.

AUTOSAR reserves the following values for this attribute:

- **SHE**
- **RAM**
- **HSM**
- **NVM**

⌋(*RS_SYST_00054*)

Please note that custom values for attribute CryptoServiceKey.keyStorageType are supported as long as the actual values are defined in a way such that a possible clash with a later standardization by AUTOSAR becomes impossible.

The best way to achieve this is to use the company name (e.g. as a prefix) within the custom value of CryptoServiceKey.keyStorageType.

6.3.3 EndToEndProtection for ISignalGroups

[TPS_SYST_01070] E2E Protection of ISignalGroups ⌈ It is possible to protect the inter-ECU data exchange of safety-related ISignalGroups which are mapped into ISignalIPdus using protection mechanisms provided by E2E Library. ⌋ (*RS_SYST_00028*)

[TPS_SYST_01071] E2E Protection of several ISignalGroups in one ISignalIPdu ⌈ It is possible to protect several ISignalGroups in one ISignalIPdu using several EndToEndProtectionISignalIPdu elements. ⌋(*RS_SYST_00028*)

The EndToEndProtectionISignalIPdu element refers to the ISignalGroup that is to be protected and to the ISignalIPdu that transmits the protected ISignalGroup. The dataOffset in the EndToEndProtectionISignalIPdu element defines the starting position of the Array representation of the ISignalGroup.

The information how the referenced ISignalGroup shall be protected (through which E2E Profile and with which E2E settings) is defined in the EndToEndDescription element.

[TPS_SYST_01072] Offset attributes of EndToEndDescription ⌈ All offset attributes of EndToEndDescription are relative to the dataOffset with respect to the ISignalIPdu (absolute position of the CRC = dataOffset + crcOffset). ⌋ (*RS_SYST_00028*)

For more details, see End to End Library [19].

[TPS_SYST_01073] E2E Protection via COM Callouts ⌈ If the E2E Protection is done via COM Callouts then the EndToEndProtectionISignalIPdu shall be defined. ⌋ (*RS_SYST_00028*)

[TPS_SYST_01074] E2E Protection in the E2E Wrapper ⌈ If the E2E Protection is done in the E2E Wrapper then both EndToEndProtectionISignalIPdu and EndToEndProtectionVariablePrototype shall be defined. ⌋(*RS_SYST_00028*)

For more details, see Software Component Template specification [5].

[constr_1002] End-to-end protection does not support n:1 communication ⌈ As the n:1 communication scenario implies that probably not all senders use the same `dataId` this scenario is explicitly not supported. ⌋*()*

It shall be possible to aggregate several EndToEnd ProtectionVariablePrototype in case additional hierarchical decompositions are introduced subsequently. In this case one particular PortPrototype is split into multiple PortPrototypes and connectors, all representing the same data entity. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortLabel, variationPoint.shortLabel vh.latestBindingTime=preCompileTime

Table 6.59: EndToEndProtection

Class	**EndToEndProtectionISignalIPdu**			
Package	M2::AUTOSARTemplates::SystemTemplate::EndToEndProtection			
Note	It is possible to protect the inter-ECU data exchange of safety-related ISignalGroups at the level of COM IPdus using protection mechanisms provided by E2E Library. For each ISignalGroup to be protected, a separate EndToEndProtectionISignalIPdu element shall be created within the EndToEndProtectionSet. The EndToEndProtectionISignalIPdu element refers to the ISignalGroup that is to be protected and to the ISignalIPdu that transmits the protected ISignalGroup. The information how the referenced ISignalGroup shall be protected (through which E2E Profile and with which E2E settings) is defined in the EndToEnd Description element.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dataOffset	Integer	1	attr	This attribute defines the beginning offset (in bits) of the Array representation of the Signal Group (including CRC, counter and application signal group) in the IPdu. This attribute is mandatory and the dataOffset shall always be defined.
iSignalGroup	ISignalGroup	1	ref	Reference to the ISignalGroup that is to be protected.
iSignalIPdu	ISignalIPdu	1	ref	Reference to the ISignalIPdu that transmits the protected ISignalGroup.

Table 6.60: EndToEndProtectionISignalIPdu

Class	**EndToEndDescription**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::EndToEndProtection			
Note	This meta-class contains information about end-to-end protection. The set of applicable attributes depends on the actual value of the category attribute of EndToEndProtection.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
category	NameToken	1	attr	The category represents the identification of the concrete E2E profile. The applicable values are specified in a semantic constraint and determine the applicable attributes of EndToEndDescription. **Tags:** xml.sequenceOffset=-100
counterOffset	PositiveInteger	0..1	attr	Bit offset of Counter from the beginning of the Array representation of the Signal Group/VariableDataPrototype (MSB order, bit numbering: bit 0 is the least important). The offset shall be a multiplicity of 4 and it should be 8 whenever possible. For example, offset 8 means that the counter will take the low nibble of the byte 1, i.e. bits 8 .. 11. If counterOffset is not present the value is defined by the selected profile. **Tags:** xml.sequenceOffset=-50
crcOffset	PositiveInteger	0..1	attr	Bit offset of CRC from the beginning of the Array representation of the Signal Group/VariableDataPrototype (MSB order, bit numbering: bit 0 is the least important). The offset shall be a multiplicity of 8 and it should be 0 whenever possible. For example, offset 8 means that the CRC will take the byte 1, i.e. bits 8..15. If crcOffset is not present the value is defined by the selected profile. **Tags:** xml.sequenceOffset=-60
dataId (ordered)	PositiveInteger	*	attr	This represents a unique numerical identifier. Note: ID is used for protection against masquerading. The details concerning the maximum number of values (this information is specific for each E2E profile) applicable for this attribute are controlled by a semantic constraint that depends on the category of the EndToEnd Protection. **Tags:** xml.sequenceOffset=-90
dataIdMode	PositiveInteger	0..1	attr	There are three inclusion modes how the implicit two-byte Data ID is included in the one-byte CRC: • dataIDMode = 0: Two bytes are included in the CRC (double ID configuration) This is used in variant 1A. • dataIDMode = 1: One of the two bytes byte is included, alternating high and low byte, depending on parity of the counter (alternating ID configuration). For even counter low byte is included; For odd counters the high byte is included. This is used in variant 1B. • dataIDMode = 2: Only low byte is included, high byte is never used. This is applicable if the IDs in a particular system are 8 bits. • dataIdMode = 3: The low byte is included in the implicit CRC calculation, the low nibble of the high byte is transmitted along with the data (i.e. it ▽

▽

△

Class	**EndToEndDescription**			
				△ is explicitly included), the high nibble of the high byte is not used. This is applicable for the IDs up to 12 bits. **Tags:** xml.sequenceOffset=-85
dataIdNibble Offset	PositiveInteger	0..1	attr	Bit offset of the low nibble of the high byte of Data ID. The applicability of this attribute is controlled by [constr_1261]. **Tags:** xml.sequenceOffset=-25
dataLength	PositiveInteger	0..1	attr	This attribute represents the length of the Array representation of the Signal Group/VariableDataPrototype including CRC and Counter in bits. **Tags:** xml.sequenceOffset=-80
maxDelta CounterInit	PositiveInteger	0..1	attr	Initial maximum allowed gap between two counter values of two consecutively received valid Data, i.e. how many subsequent lost data is accepted. For example, if the receiver gets Data with counter 1 and MaxDeltaCounter Init is 1, then at the next reception the receiver can accept Counters with values 2 and 3, but not 4. Note that if the receiver does not receive new Data at a consecutive read, then the receiver increments the tolerance by 1. **Tags:** xml.sequenceOffset=-70
maxNoNewOr RepeatedData	PositiveInteger	0..1	attr	The maximum amount of missing or repeated Data which the receiver does not expect to exceed under normal communication conditions. **Tags:** xml.sequenceOffset=-40
syncCounterInit	PositiveInteger	0..1	attr	Number of Data required for validating the consistency of the counter that shall be received with a valid counter (i.e. counter within the allowed lock-in range) after the detection of an unexpected behavior of a received counter. **Tags:** xml.sequenceOffset=-30

Table 6.61: EndToEndDescription

The maxDeltaCounterInit, maxNoNewOrRepeatedData and syncCounterInit values can also be specified in the ReceiverComSpec. This allows the definition of receiver specific values. Values for maxDeltaCounterInit, maxNoNewOrRepeatedData and syncCounterInit that are defined in the ReceiverComSpec override the possible values in the EndToEndDescription class. More details can be found in the Software Component Template specification [5].

The supported E2E profiles (possible values of category in EndToEndDescription) are described in the Software Component Template [5] and the End to End Library [19].

6.3.4 GeneralPurposeConnection

In some cases it is important to describe a relation between different PduTriggerings that are defined on the same PhysicalChannel, e.g. to create a link between a Rx-Pdu and a Tx-Pdu. The GeneralPurposeConnection meta-class is able to reference a number of PduTriggerings and thereby to set the referenced PduTriggerings into a relationship that is defined by the GeneralPurposeConnection.

[TPS_SYST_02170] category of the GeneralPurposeConnection ⌈ The category of the GeneralPurposeConnection is used to define the purpose of the relationship between the referenced PduTriggerings. ⌋()

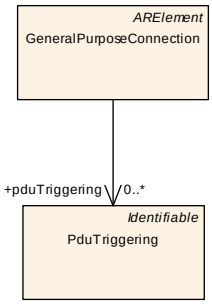

Figure 6.18: GeneralPurposeConnection

Class	**GeneralPurposeConnection**			
Package	M2::AUTOSARTemplates::SystemTemplate::GeneralPurposeConnection			
Note	This meta-class allows to describe the relationship between several PduTriggerings that are defined on the same PhysicalChannel, e.g. to create a link between Rx and Tx Pdu that are used for request/response. **Tags:** atp.recommendedPackage=GeneralPurposeConnections			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
pduTriggering	PduTriggering	*	ref	Reference to PduTriggerings that are connected to each other by a GeneralPurposeConnection.

Table 6.62: GeneralPurposeConnection

[constr_3384] PduTriggerings referenced by GeneralPurposeConnection shall be defined on the same PhysicalChannel ⌈ The PduTriggerings that are referenced by the GeneralPurposeConnection in the role pduTriggering shall be defined on the same PhysicalChannel. ⌋()

[constr_3383] Standardized values for the attribute category of meta-class GeneralPurposeConnection ⌈ The following values of the attribute category of meta-class GeneralPurposeConnection are reserved by the AUTOSAR standard:

- XcpChannel

⌋()

The XcpChannel creates a link between one Tx-Pdu and one Rx-Pdu that are used for request/response from one master.

[constr_3385] XcpChannel is allowed to reference exactly two PduTriggerings ⌈ In case that the category of meta-class GeneralPurposeConnection is set to the value *XcpChannel* the GeneralPurposeConnection is allowed to reference exactly two PduTriggerings in the role pduTriggering. ⌋*()*

[constr_3386] XcpChannel is only allowed to reference PduTriggerings of GeneralPurposeIPdus with category XCP ⌈ In case that the category of meta-class GeneralPurposeConnection is set to the value *XcpChannel* the GeneralPurposeConnection is allowed to reference PduTriggerings of GeneralPurposeIPdus with category XCP. ⌋*()*

6.4 IPdu Timing

AUTOSAR COM allows configuring statically two different transmission modes for each IPdu (True and False). TransmissionModeDeclaration uses a transmission mode selector, calculated from a number of individual TransmissionModeConditions or ModeDrivenTransmissionModeConditions to decide which of the two modes is selected. It is possible to switch between the transmission modes during runtime.

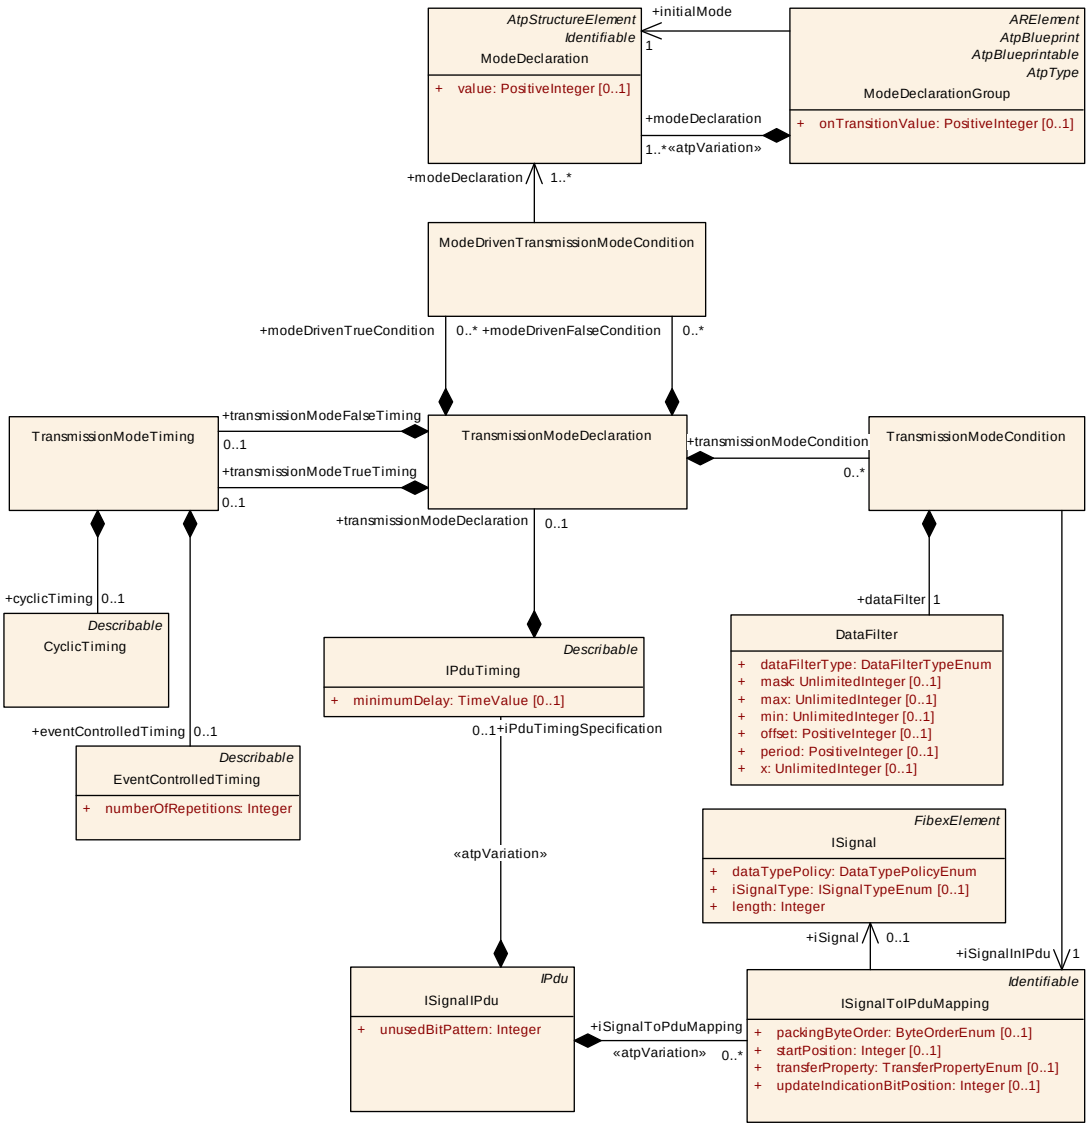

Figure 6.19: IPdu Timing

[TPS_SYST_01075] Signal content evaluation via `TransmissionModeCondition` ⌈ The signal content can be evaluated as the transmission mode selector via the `TransmissionModeCondition`s. ⌋*(RS_SYST_00037)*

[TPS_SYST_01076] Mode evaluation via `modeDrivenTrueCondition` or `modeDrivenFalseCondition` ⌈ Mode conditions can be evaluated as the transmission mode selector via the `modeDrivenTrueCondition`s or `modeDrivenFalseCondition`s. ⌋*(RS_SYST_00037)*

[constr_3045] Signal content evaluation vs. Mode evaluation ⌈ The mode evaluation and the signal content evaluation shall not be used in the same `IPdu`. A mix of these two types is not allowed. ⌋*()*

To use the signal content evaluation a `TransmissionModeCondition` can be attached to each signal within an `IPdu`. Each `TransmissionModeCondition` contains a reference to a signal and to an assigned filter. The filter condition is used for

the selection of the transmission mode. If at least one condition in the signal content evaluation is true, Transmission Mode "TRUE" shall be used for this IPdu. In all other cases, the Transmission Mode "FALSE" shall be used. More details can be found in the COM Specification [20].

[constr_3046] Consistency of TransmissionModeCondition.iSignalInIPdu ⌈ The ISignalToIPduMapping referenced by the TransmissionModeCondition in the role iSignalInIPdu shall belong to the same ISignalIPdu as the TransmissionModeCondition. ⌋*()*

In the mode driven evaluation ModeDeclarations are evaluated. The transmissionModeFalseTiming is activated if all defined modeDrivenFalseConditions evaluate to true and the transmissionModeTrueTiming is activated if all defined modeDrivenTrueConditions evaluate to true. Each condition that is defined by ModeDrivenTransmissionModeCondition evaluates to true if one of the referenced ModeDeclarations is active.

The TransmissionModeDeclaration element aggregates the TransmissionModeTiming in two different roles: transmissionModeTrueTiming and transmissionModeFalseTiming. The available COM Transmission Mode Timings can be described by the CyclicTiming and EventControlledTiming elements (see Table 6.63) that are aggregated by the TransmissionModeTiming class.

[TPS_SYST_01077] Mapping of Com Transmission Modes to System Template elements ⌈ The mapping of COM Transmission Modes to System Template elements is described in Table 6.63. ⌋*(RS_SYST_00037)*

COM Transmission Modes	*Description*	*realization in System Template*
Periodic	Transmissions occur indefinitely with a fixed period between them	CyclicTiming
Direct/n-times	Event driven transmission with n-1 repetitions	EventControlledTiming
Mixed	Periodic transmission with direct/n-times transmissions in between	EventControlledTiming and CyclicTiming
None	No transmission	no timing assigned

Table 6.63: COM Transmission Modes

Class	**TransmissionModeDeclaration**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing

▽

△

Class	TransmissionModeDeclaration			
Note	AUTOSAR COM provides the possibility to define two different TRANSMISSION MODES (True and False) for each I-PDU. As TransmissionMode selector the signal content can be evaluated via transmissionModeCondition (implemented directly in the COM module) or mode conditions can be defined with the modeDrivenTrue Condition or modeDrivenFalseCondition (evaluated by BswM and invoking Com_SwitchIpduTxMode COM API). If modeDrivenTrueCondition and modeDrivenFalseCondition are defined they shall never evaluate to true both at the same time. The mixing of Transmission Mode Switch via API and signal value is not allowed.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
modeDriven FalseCondition	ModeDriven TransmissionMode Condition	*	aggr	Defines the trigger for the Com_SwitchIpduTxMode Transmission Mode switch. Only if all defined modeDriven FalseConditions evaluate to true (AND associated) the transmissionModeFalseTiming shall be activated. mode DrivenTrueCondition and modeDrivenFalseCondition shall never evaluate to true both at the same time.
modeDriven TrueCondition	ModeDriven TransmissionMode Condition	*	aggr	Defines the trigger for the Com_SwitchIpduTxMode Transmission Mode switch. Only if all defined modeDriven TrueConditions evaluate to true (AND associated) the transmissionModeTrueTiming shall be activated. mode DrivenTrueCondition and modeDrivenFalseCondition shall never evaluate to true both at the same time.
transmission ModeCondition	TransmissionMode Condition	*	aggr	The Transmission Mode Selector evaluates the conditions for a subset of signals and decides which transmission mode should be used. In case only one transmission mode is used there is no need for the "TransmissionMode Condition" and its sub-structure. In case the transmission mode shall be switched using the COM-API "Com_Switch IpduTxMode" there is no need for the "TransmissionMode Condition" and its sub-structure.
transmission ModeFalse Timing	TransmissionMode Timing	0..1	aggr	Timing Specification if the COM Transmission Mode is false. The Transmission Mode Selector is defined to be false, if all Conditions evaluate to false.
transmission ModeTrue Timing	TransmissionMode Timing	0..1	aggr	Timing Specification if the COM Transmission Mode is true. The Transmission Mode Selector is defined to be true, if at least one Condition evaluates to true.

Table 6.64: TransmissionModeDeclaration

Class	TransmissionModeCondition			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	Possibility to attach a condition to each signal within an I-PDU. If at least one condition evaluates to true, TRANSMISSION MODE True shall be used for this I-Pdu. In all other cases, the TRANSMISSION MODE FALSE shall be used.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
dataFilter	DataFilter	1	aggr	Possibilities to define conditions
iSignalInIPdu	ISignalToIPduMapping	1	ref	Reference to a signal to which a condition is attached.

Table 6.65: TransmissionModeCondition

Class	**ModeDrivenTransmissionModeCondition**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	The condition defined by this class evaluates to true if one of the referenced modeDeclarations (OR associated) is active. All referenced modeDeclarations shall be from the same ModeDeclarationGroup. The condition is used to define which TransmissionMode shall be activated using Com_SwitchIpduTx Mode.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
mode Declaration	ModeDeclaration	1..*	ref	Reference to one modeDeclaration which is OR associated in the context of the ModeDrivenTransmission ModeCondition.

Table 6.66: ModeDrivenTransmissionModeCondition

The `ModeDeclaration` and the `ModeDeclarationGroup` is described in more detail in the Software Component Template Specification [5].

Class	**TransmissionModeTiming**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	If the COM Transmission Mode is false the timing is aggregated by the TransmissionModeTiming element in the role of transmissionModeFalseTiming. If the COM Transmission Mode is true the timing is aggregated by the TransmissionModeTiming element in the role of transmissionModeTrueTiming. COM supports the following Transmission Modes: Periodic (Cyclic Timing) Direct /n-times (EventControlledTiming) Mixed (Cyclic and EventControlledTiming are assigned) None (no timing is assigned)			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
cyclicTiming	CyclicTiming	0..1	aggr	Periodic Transmission Mode.
eventControlled Timing	EventControlledTiming	0..1	aggr	Direct Transmission Mode.

Table 6.67: TransmissionModeTiming

6.4.1 Data Filter configuration

Data Filters are used on sender side to configure Transmission Mode Conditions (TMC). On receiver side Data Filters can be used as filtering mechanisms for signals (see `ISignalPort` element). More details about the usage of `DataFilter`s can be found in the Software Component Template Specification [5].

[TPS_SYST_02013] Usage of `dataFilter`s on `GroupSignal`s on receiver side ⌈ If the `dataFilter` of one `GroupSignal` evaluates to false the whole `ISignalGroup` in which the `GroupSignal` is contained shall be discarded. ⌋*()*

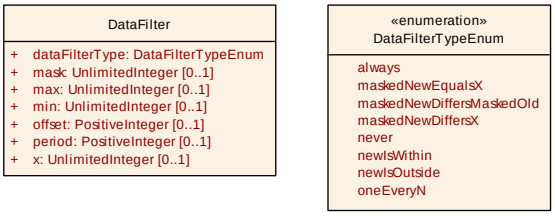

Figure 6.20: Data Filter

Class	**DataFilter**

6.4.2 Cyclic Timing

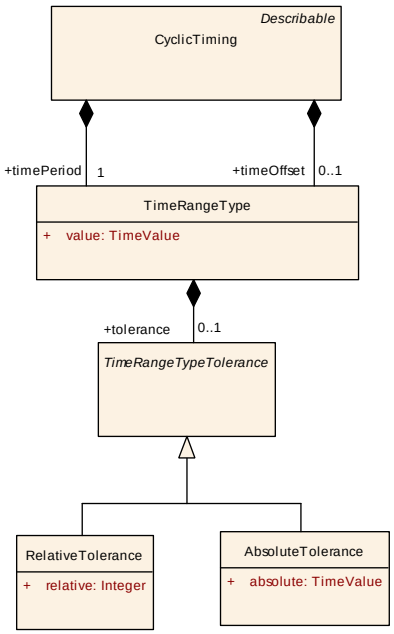

Figure 6.21: Cyclic Timing

Class	**CyclicTiming**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	Specification of a cyclic sending behavior.			
Base	*ARObject*, *Describable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
timeOffset	TimeRangeType	0..1	aggr	This attribute specifies the time until first transmission of this I-PDU. This attribute defines the time between Com_IpduGroupStart and the first transmission of the cyclic part of this transmission request for this I-PDU.
timePeriod	TimeRangeType	1	aggr	Period of the repetition of cyclic transmissions.

Table 6.70: CyclicTiming

6.4.3 EventControlled Timing

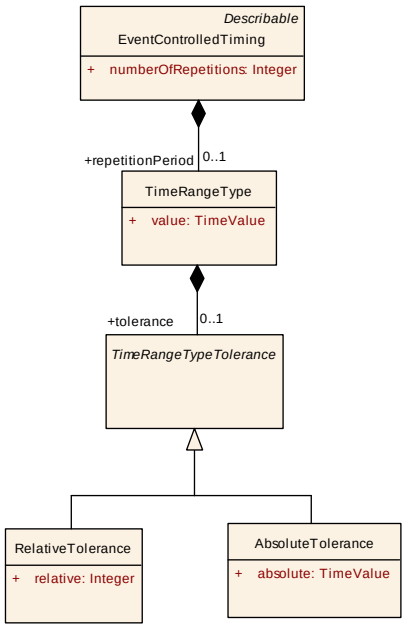

Figure 6.22: EventControlled Timing

Class	**EventControlledTiming**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	Specification of a event driven sending behavior. The PDU is sent n (numberOfRepeat + 1) times separated by the repetitionPeriod. If numberOfRepeats = 0, then the Pdu is sent just once.			
Base	*ARObject*, *Describable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
numberOf Repetitions	Integer	1	attr	Defines the number of repetitions for the Direct/N-Times transmission mode and the event driven part of Mixed transmission mode.
repetitionPeriod	TimeRangeType	0..1	aggr	The repetitionPeriod specifies the time in seconds that elapses before the pdu can be sent the next time (Minimum repeat gap between two pdus). The repetition Period is optional in case that no repetitions are configured.

Table 6.71: EventControlledTiming

Class	**TimeRangeType**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	The timeRange can be specified with the value attribute. Optionally a tolerance can be defined.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
tolerance	TimeRangeType Tolerance	0..1	aggr	Optional specification of a tolerance.

△

Class	**TimeRangeType**			
value	TimeValue	1	attr	Average value of a date (in seconds)

Table 6.72: TimeRangeType

Class	**RelativeTolerance**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	Maximum allowable deviation			
Base	*ARObject*, *TimeRangeTypeTolerance*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
relative	Integer	1	attr	Maximum allowable deviation in percent (percent of the corresponding TimeValue).

Table 6.73: RelativeTolerance

Class	**AbsoluteTolerance**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	Maximum allowable deviation			
Base	*ARObject*, *TimeRangeTypeTolerance*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
absolute	TimeValue	1	attr	Maximum allowable deviation in duration (in seconds)

Table 6.74: AbsoluteTolerance

6.4.4 Configuration of a trigger for COM_TriggerIPduSend API call

In the AUTOSAR BswM module a `BswMAction` with `BswMTriggerIPduSend` may be defined. The COM API `Com_TriggerIPDUSend` is called when this action is configured. By the call of `Com_TriggerIPDUSend` an IPdu with a given ID is triggered for transmission.

With such a configuration a single transmission of an IPdu can be configured that is independent of the configured COM transmission modes, e.g. in case of a vehicle mode change.

In a System Description the usage of the `Com_TriggerIPDUSend` API is defined with the `TriggerIPduSendCondition` that is aggregated by the `PduTriggering` in the role `triggerIPduSendCondition`. The `TriggerIPduSendCondition` defines the trigger for the `Com_TriggerIPDUSend` API call.

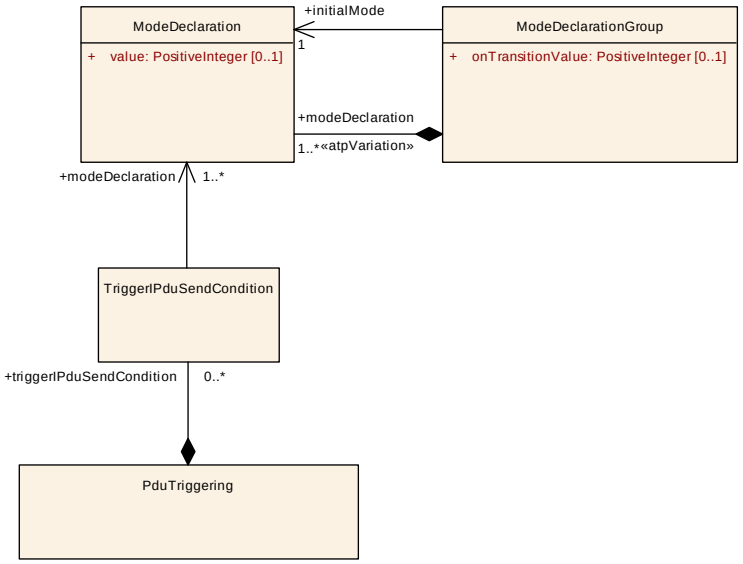

Figure 6.23: TriggerIPduSendCondition

Class	**TriggerIPduSendCondition**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication::Timing			
Note	The condition defined by this class evaluates to true if one of the referenced modeDeclarations (OR associated) is active. The condition is used to define when the Pdu is triggered with the Com_TriggerIPDUSend API call.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
mode Declaration	ModeDeclaration	1..*	ref	Reference to one modeDeclaration which is OR associated in the context of the TriggerIPduSend Condition.

Table 6.75: TriggerIPduSendCondition

Only if all defined `TriggerIPduSendCondition`s evaluate to true (AND associated) the `Com_TriggerIPDUSend` API shall be called.

[constr_3211] **PduTriggerings with triggerIPduSendCondition** ⌈ Only PduTriggerings with references to ISignalIPdus are allowed to contain a triggerIPduSendCondition. ⌋*()*

Please note that OR Conditions defined by the TriggerIPduSendCondition.modeDeclaration are evaluated first. The AND Conditions defined by PduTriggering.triggerIPduSendConditions are evaluated after the OR Conditions.

6.5 I-Pdu Multiplexer

Multiplexing is used to transport varying Com IPdus at the same position in a single multiplexed IPdu. A multiplexed IPdu consists of a dynamic part, a selector field and an optional static part. According to the value of the selector field the dynamic part can have a different layout.

[TPS_SYST_01078] Dynamic Part of a `MultiplexedIPdu` ⌈ For each alternative of a `MultiplexedIPdu` there is exactly one Com IPdu that is transmitted in the dynamic part. ⌋*()*

[TPS_SYST_01079] Static Part of a `MultiplexedIPdu` ⌈ The static part of a `MultiplexedIPdu` is the same regardless of the selector field and consists of exactly one Com IPdu. ⌋*()*

The `MultiplexedIPdu` element contains attributes that describe the position and the length of a selector within an `IPdu`. A selector is a bitfield of certain length, by the value of which the corresponding data region of the dynamic part must be interpreted dynamically, i.e. at run-time.

[constr_3007] `selectorFieldCode`s for dynamic part alternatives ⌈ The `selectorFieldCode`s for the dynamic part alternatives within one `MultiplexedIPdu` shall differ from each other. ⌋*()*

[constr_3097] Overlapping of segments of one `MultiplexedIPdu` is not allowed ⌈ The segments defined by the `SegmentPosition` elements of one and the same `MultiplexedIPdu` - aggregated via `StaticPart` and `DynamicPart` - shall not overlap. ⌋*()*

[constr_3098] Defined segments of one `MultiplexedIPdu` shall not exceed the length of the `MultiplexedIPdu` ⌈ The segments defined by the `SegmentPosition` elements of one and the same `MultiplexedIPdu` - aggregated via `StaticPart` and `DynamicPart` - shall not exceed the length of the `MultiplexedIPdu`. ⌋*()*

[constr_3099] Defined segments in a `DynamicPart` shall not exceed the length of any `DynamicPartAlternative.iPdu` ⌈ The segments defined by the `SegmentPosition` elements aggregated in the `DynamicPart` of a `MultiplexedIPdu` shall not exceed the length of any `DynamicPartAlternative.iPdu`. ⌋*()*

[constr_3100] Defined segments in a `StaticPart` shall not exceed the length of the `StaticPart.iPdu` ⌈ The segments defined by the `SegmentPosition` elements aggregated in the `StaticPart` of a `MultiplexedIPdu` shall not exceed the length of the `StaticPart.iPdu` ⌋*()*

[constr_3101] Signal representation of selector field for `DynamicPartAlternative` ⌈ Every `ISignalIPdu` that is referenced by the `DynamicPartAlternative` shall contain an `ISignal` that represents the selector field. The selector field signal shall be located at the position that is described by the `selectorFieldLength` and `selectorFieldStartPosition`. ⌋*()*

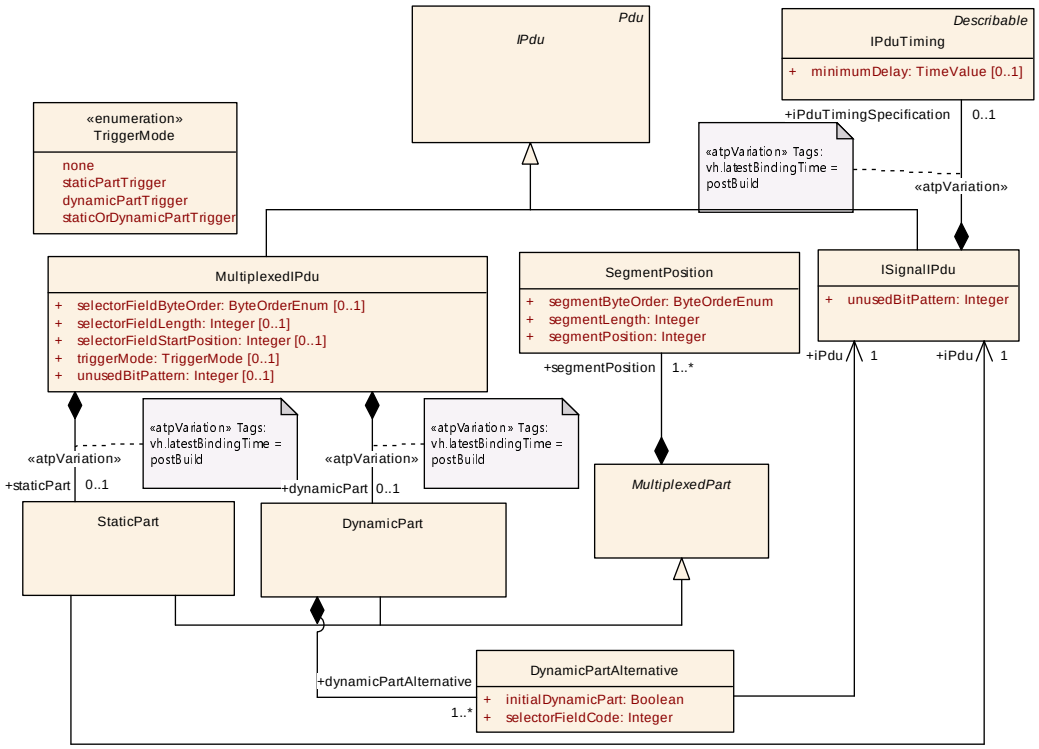

Figure 6.24: I-Pdu Multiplexer (FibexCore: IPDUMultiplexerOverview)

Enumeration	**TriggerMode**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication
Note	IPduM can be configured to send a transmission request for the new multiplexed I-PDU to the PDU-Router because of conditions/ modes.
Literal	***Description***
dynamicPartTrigger	IPduM sends a transmission request to the PduR if a dynamic part is received. **Tags:** atp.EnumerationValue=0
none	IPduM does not trigger transmission because of receiving anything of this IPdu in case of Trigger Transmit. **Tags:** atp.EnumerationValue=1
staticOrDynamic PartTrigger	IPduM sends a transmission request to the PduR if a static or dynamic part is received. **Tags:** atp.EnumerationValue=2
staticPartTrigger	IPduM sends a transmission request to the PduR if a static part is received. **Tags:** atp.EnumerationValue=3

Table 6.76: TriggerMode

Class	**MultiplexedIPdu**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	A MultiplexedPdu (i.e. NOT a COM I-PDU) contains a DynamicPart, an optional StaticPart and a selector Field. In case of multiplexing this IPdu is routed between the Pdu Multiplexer and the Interface Layer. A multiplexer is used to define variable parts within an IPdu that may carry different signals. The receivers of such a IPdu can determine which signalPdus are transmitted by evaluating the selector field, which carries a unique selector code for each sub-part. **Tags:** atp.recommendedPackage=Pdus			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *IPdu*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Pdu*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dynamicPart	DynamicPart	0..1	aggr	According to the value of the selector field some parts of the IPdu have a different layout. In a complete System Description a MultiplexedIPdu shall contain a DynamicPart. The following use cases support the multiplicity to be 0..1: • If a MultiplexedIPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedIPdu doesn't need to be described in the System Extract/Ecu Extract. • If a MultiplexedIPdu is received by an ECU which is only interested in the static part of the MultiplexedIPdu then the dynamicPart does not need to be described in the System Extract/Ecu Extract. atpVariation: Content of a multiplexed PDU can vary. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

▽

△

Class	**MultiplexedIPdu**			
selectorField ByteOrder	ByteOrderEnum	0..1	attr	This attribute defines the order of the bytes of the selector Field and the packing into the MultiplexedIPdu. Please consider that [constr_3247] and [constr_3223] are restricting the usage of this attribute. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1.
selectorField Length	Integer	0..1	attr	The size in bits of the selector field shall be configurable in a range of 1-16 bits. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1.
selectorField StartPosition	Integer	0..1	attr	This parameter is necessary to describe the position of the selector field within the IPdu. Note that the absolute position of the selectorField in the MultiplexedIPdu is determined by the definition of the selectorFieldByteOrder attribute of the Multiplexed Pdu. If Big Endian is specified, the start position indicates the bit position of the most significant bit in the IPdu. If Little Endian is specified, the start position indicates the bit position of the least significant bit in the IPdu. In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1.
staticPart	StaticPart	0..1	aggr	The static part of the multiplexed IPdu is the same regardless of the selector field. The static part is optional. atpVariation: Content of a multiplexed PDU can vary. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild
triggerMode	TriggerMode	0..1	attr	IPduM can be configured to send a transmission request for the new multiplexed IPdu to the PDU-Router because of the trigger conditions/ modes that are described in the TriggerMode enumeration. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1.

▽

△

Class	MultiplexedIPdu			
unusedBit Pattern	Integer	0..1	attr	AUTOSAR COM and AUTOSAR IPDUM are filling not used areas of an IPdu with this bit-pattern. This attribute is mandatory to avoid undefined behavior. This byte-pattern will be repeated throughout the IPdu. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1.

Table 6.77: MultiplexedIPdu

Class	StaticPart

Note	Some parts/signals of the I-PDU may be the same regardless of the selector field. Such a part is called static part. The static part is optional.			
Base	*ARObject*, *MultiplexedPart*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
iPdu	ISignalIPdu	1	ref	Reference to a Com IPdu which is routed to the IPduM module and is combined to a multiplexedPdu.

Table 6.78: StaticPart

Class	DynamicPart			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	Dynamic part of a multiplexed I-Pdu. Reserved space which is used to transport varying SignalIPdus at the same position, controlled by the corresponding selectorFieldCode.			
Base	*ARObject*, *MultiplexedPart*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
dynamicPart Alternative	DynamicPartAlternative	1..*	aggr	Com IPdu alternatives that are transmitted in the Dynamic Part of the MultiplexedIPdu.

Table 6.79: DynamicPart

Class	DynamicPartAlternative			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	One of the Com IPdu alternatives that are transmitted in the Dynamic Part of the MultiplexedIPdu. The selectorFieldCode specifies which Com IPdu is contained in the DynamicPart within a certain transmission of a multiplexed PDU.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
iPdu	ISignalIPdu	1	ref	Reference to a Com IPdu which is routed to the IPduM module and is combined to a multiplexedPdu.
initialDynamic Part	Boolean	1	attr	Dynamic part that shall be used to initialize this multiplexed IPdu. Constraint: Only one "DynamicPartAlternative" in a "DynamicPart" shall be the initialDynamicPart.

▽

△

Class	**DynamicPartAlternative**			
selectorField Code	Integer	1	attr	The selector field is part of a multiplexed IPdu. It consists of contiguous bits. The value of the selector field selects the layout of the multiplexed part of the IPdu.

Table 6.80: DynamicPartAlternative

Class	***MultiplexedPart*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The StaticPart and the DynamicPart have common properties. Both can be separated in multiple segments within the multiplexed PDU.			
Base	*ARObject*			
Subclasses	DynamicPart, StaticPart			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
segment Position	SegmentPosition	1..*	aggr	The StaticPart and the DynamicPart can be separated in multiple segments within the multiplexed PDU. Therefore the StaticPart and the DynamicPart can contain multiple SegmentPositions.

Table 6.81: MultiplexedPart

Class	**SegmentPosition**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The StaticPart and the DynamicPart can be separated in multiple segments within the multiplexed PDU. The ISignalIPdus are copied bit by bit into the MultiplexedIPdu. If the space of the first segment is 5 bits large than the first 5 bits of the ISignalIPdu are copied into this first segment and so on.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
segmentByte Order	ByteOrderEnum	1	attr	This attribute defines the order of the bytes of the segment and the packing into the MultiplexedIPdu. Please consider that [constr_3247] and [constr_3224] are restricting the usage of this attribute.
segmentLength	Integer	1	attr	Data Length of the segment in bits.
segment Position	Integer	1	attr	Segments bit position relatively to the beginning of a multiplexed IPdu. Note that the absolute position of the segment in the MultiplexedIPdu is determined by the definition of the segmentByteOrder attribute of the SegmentPosition. If Big Endian is specified, the start position indicates the bit position of the most significant bit in the IPdu. If Little Endian is specified, the start position indicates the bit position of the least significant bit in the IPdu. In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.

Table 6.82: SegmentPosition

[constr_3247] Byte order mix within a `MultiplexedIPdu` is not allowed ⌈ The `segmentByteOrder` of all `SegmentPosition`s and the `selectorFieldByteOrder` shall have the same value in the `MultiplexedIPdu`. ⌋*()*

[constr_3223] No `ByteOrderEnum.opaque` allowed for `MultiplexedIPdu.selectorFieldByteOrder` ⌈ The values of `MultiplexedIPdu.selectorFieldByteOrder` are restricted to `ByteOrderEnum.mostSignificantByteFirst` and `ByteOrderEnum.mostSignificantByteLast`. I.e. the value `ByteOrderEnum.opaque` is not allowed. ⌋*()*

[constr_3224] No `ByteOrderEnum.opaque` allowed for `SegmentPosition.segmentByteOrder`. ⌈ The values of `SegmentPosition.segmentByteOrder` are restricted to `ByteOrderEnum.mostSignificantByteFirst` and `ByteOrderEnum.mostSignificantByteLast`. I.e. the value `ByteOrderEnum.opaque` is not allowed. ⌋*()*

Figure 6.25 shows an example of an IPdu Multiplexer. The static part of the multiplexed IPdu contains ComIPduA. The value of the selector field in the dynamic part decides which content is transmitted. ComIPduB is transmitted if the selector field value is "0". ComIPduC is transmitted if the selector field value is "1".

The static and the dynamic part can consist of more than one element. These sub parts of the static or dynamic parts are called segments. In Figure 6.25 the dynamic Part is segmented into two parts. More details can be found in [21].

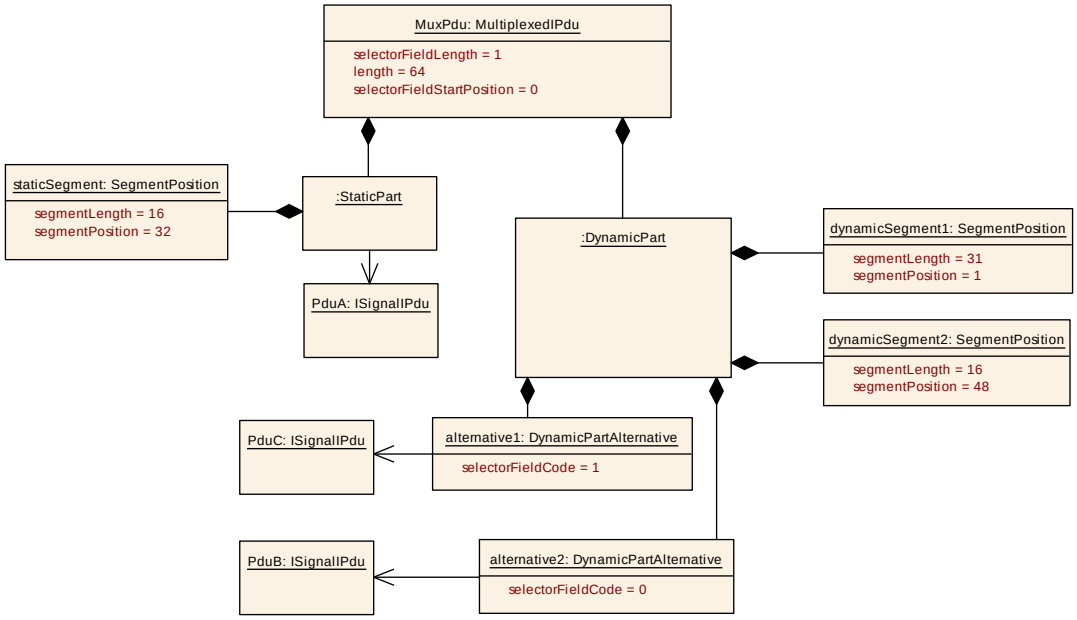

Figure 6.25: I-Pdu Multiplexer Example

Each of the following figures shows an example with an allowed IPduM configuration. Please note that the AUTOSAR IPduM module does not shift any part (static or dynamic) IPdu and just merges the payload. `ISignalIPdu`s that are referenced by the different `DynamicPartAlternative`s in one `MultiplexedIPdu` shall always have the same length. A configuration may be optimized with respect to unused data at end of a `StaticPart ISignalIPdu`. This is shown in figure 6.26 where the `ISignalIPdu` that is referenced by the `StaticPart` is shorter than the `MultiplexedIPdu`. An optimization with respect to unused data at end of `DynamicPartAlternative ISignalIPdu`s is shown in figure 6.27.

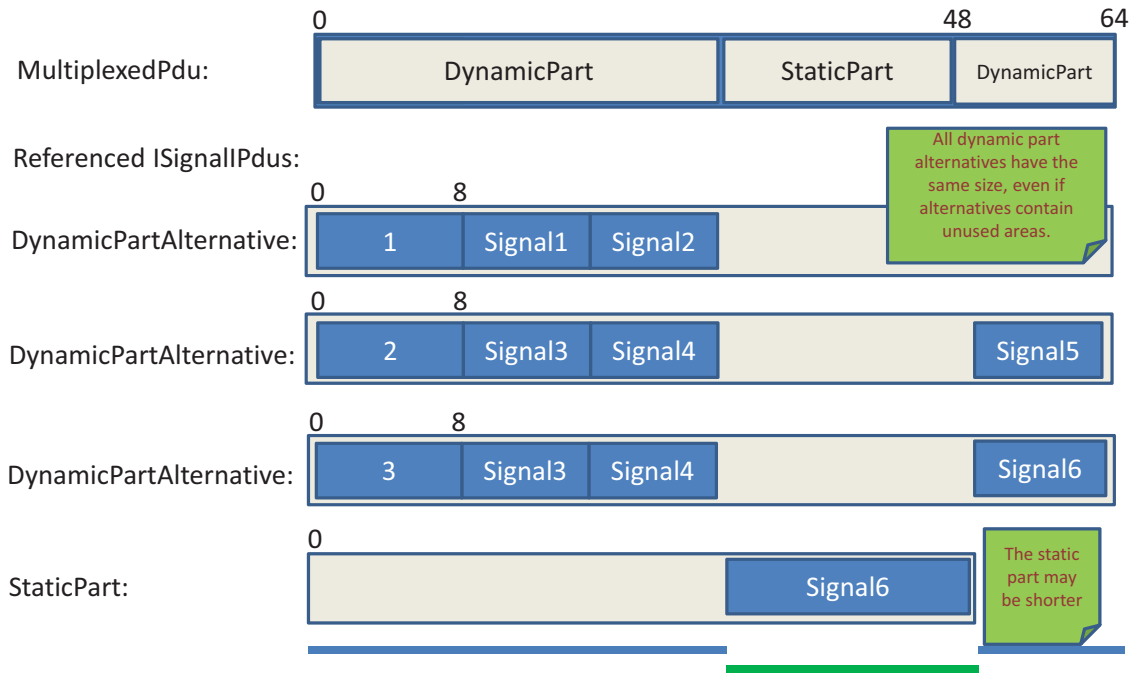

Figure 6.26: Multiplexer configuration example optimized with respect to unused data at end of static part Pdu

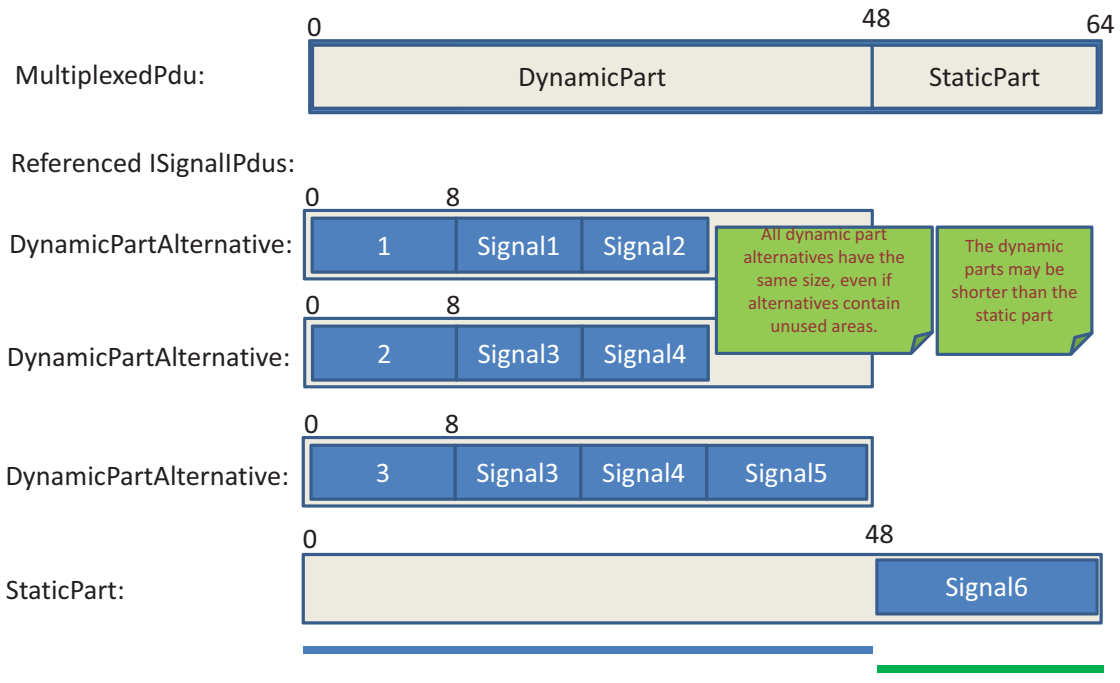

Figure 6.27: Multiplexer configuration example optimized with respect to unused data at end of dynamic part Pdus

6.5.1 I-Pdu Multiplexer in System Extract/ECU Extract

The processing in the ECU determines the description of MultiplexedIPdus in the System Extract/Ecu Extract. In case that a Gateway ECU only routes a MultiplexedIPdu without being interested in the content leads to a reduced description in the System Extract/ECU Extract. The following items describe the different scenarios and the consequences for the System Extract/ECU Extract description. A complete System Description contains all information.

[TPS_SYST_01080] Sending or receiving of a MultiplexedIPdu in System Extract/ECU Extract ⌈

- all attributes of the MultiplexedIPdu are mandatory
- aggregated DynamicPart with associated ISignalIPdus is mandatory in case
  - of sending
  - of receiving if at least one DynamicPartAlternative is received by one Ecu of the Extract.
- a PduTriggering shall be defined for the MultiplexedIPdu
- a PduTriggering shall be defined for all included ISignalIPdus in the DynamicPart and StaticPart

⌋()

The initial ECU Configuration Generator configures COM, PduR, IpduM and lower layers with the information from the System Extract/ECU Extract.

[TPS_SYST_01081] Gatewaying of a MultiplexedIPdu in System Extract/ECU Extract ⌈

- StaticPart and DynamicPart definitions shall be omitted, thus no ISignalIPdu description shall be included
- all attributes of the MultiplexedIPdu shall be omitted.
- a PduTriggering shall be defined only for the gatewayed MultiplexedIPdu
- an IPduMapping between the source and the target PduTriggerings shall be defined

⌋()

The initial ECU Configuration Generator configures PduR and lower layers with the information from the System Extract/ECU Extract.

[TPS_SYST_01082] Receiving and gatewaying of a MultiplexedIPdu in System Extract/ECU Extract ⌈

- all attributes of the MultiplexedIPdu are mandatory

- aggregated DynamicPart with associated ISignalIPdus is mandatory in case at least one DynamicPartAlternative is received by one Ecu of the Extract.
- a PduTriggering shall be defined for the MultiplexedIPdu
- an IPduMapping between the source and the target PduTriggerings shall be defined
- a PduTriggering shall be defined for all included ISignalIPdus in the DynamicPart and StaticPart

⌋()

The initial ECU Configuration Generator configures Com, PduR, IpduM and lower layers with the information from the System Extract/ECU Extract.

6.6 Frames

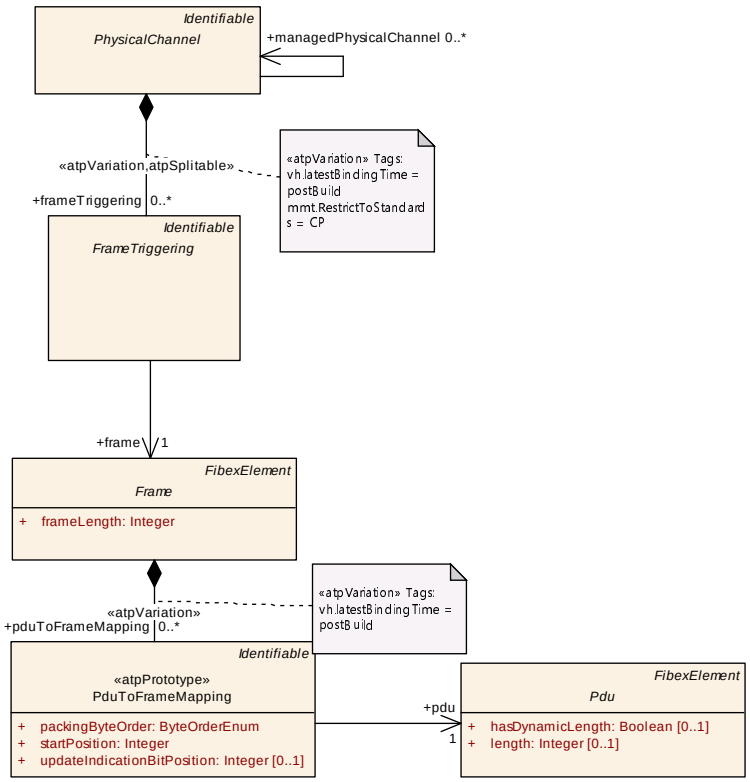

Figure 6.28: Frame Overview (FibexCore: FrameOverview)

[TPS_SYST_01083] **`Frame`** ⌈ A `Frame` represents a general design object that is used to describe the layout of the included `Pdu`s as a reusable asset. ⌋*()*

[TPS_SYST_01084] **`FrameTriggering`** ⌈ The `FrameTriggering` implements the reusable definition of a `Frame` within a concrete context and thus defines a `Frame`'s send behavior and identification on a certain `PhysicalChannel`. ⌋*()*

[constr_3012] Overlapping of `Pdu`s is prohibited ⌈ `Pdu`s mapped to a `Frame` shall NOT overlap. ⌋*()*

[constr_3013] Frame length shall not be exceeded ⌈ The combined length of all `Pdu`s that are mapped into a `Frame` shall not exceed the defined `Frame` length. ⌋*()*

[constr_3014] Overlapping of updateIndicationBits for `Pdu`s is prohibited ⌈ The `updateIndicationBitPosition` for a `Pdu` in a `Frame` shall NOT overlap with other `updateIndicationBitPosition`s and `Pdu` locations. ⌋*()*

Class	***Frame*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	Data frame which is sent over a communication medium. This element describes the pure Layout of a frame sent on a channel.			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Subclasses	*AbstractEthernetFrame*, CanFrame, FlexrayFrame, *LinFrame*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
frameLength	Integer	1	attr	The used length (in bytes) of the referencing frame. Should not be confused with a static byte length reserved for each frame by some platforms (e.g. FlexRay). The frameLength of zero bytes is allowed.
pduToFrame Mapping	PduToFrameMapping	*	aggr	A frames layout as a sequence of Pdus. atpVariation: The content of a frame can be variable. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

Table 6.83: Frame

Class	***FrameTriggering*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreCommunication			
Note	The FrameTriggering describes the instance of a frame sent on a channel and defines the manner of triggering (timing information) and identification of a frame on the channel, on which it is sent. For the same frame, if FrameTriggerings exist on more than one channel of the same cluster the fan-out/in is handled by the Bus interface.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	CanFrameTriggering, EthernetFrameTriggering, FlexrayFrameTriggering, LinFrameTriggering			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
frame	Frame	1	ref	One frame can be triggered several times, e.g. on different channels. If a frame has no frame triggering, it won't be sent at all. A frame triggering has assigned exactly one frame, which it triggers.
framePort	FramePort	*	ref	References to the FramePort on every ECU of the system which sends and/or receives the frame. References for both the sender and the receiver side shall be included when the system is completely defined.
pduTriggering	PduTriggering	*	ref	This reference provides the relationship to the Pdu Triggerings that are implemented by the FrameTriggering. The reference is optional since no PduTriggering can be defined for NmPdus and XCP Pdus. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

Table 6.84: FrameTriggering

6.7 Specialized Attributes of the Communication Entities

In the Basic Software the timing of bus frames can be controlled by send requests of the RTE in combination with the Transmission Mode and Transfer Property parameters in COM. On the other hand the timing can be controlled by the FlexRay Interface and LIN Interface.

This chapter describes the protocol specific extensions to the communication elements.

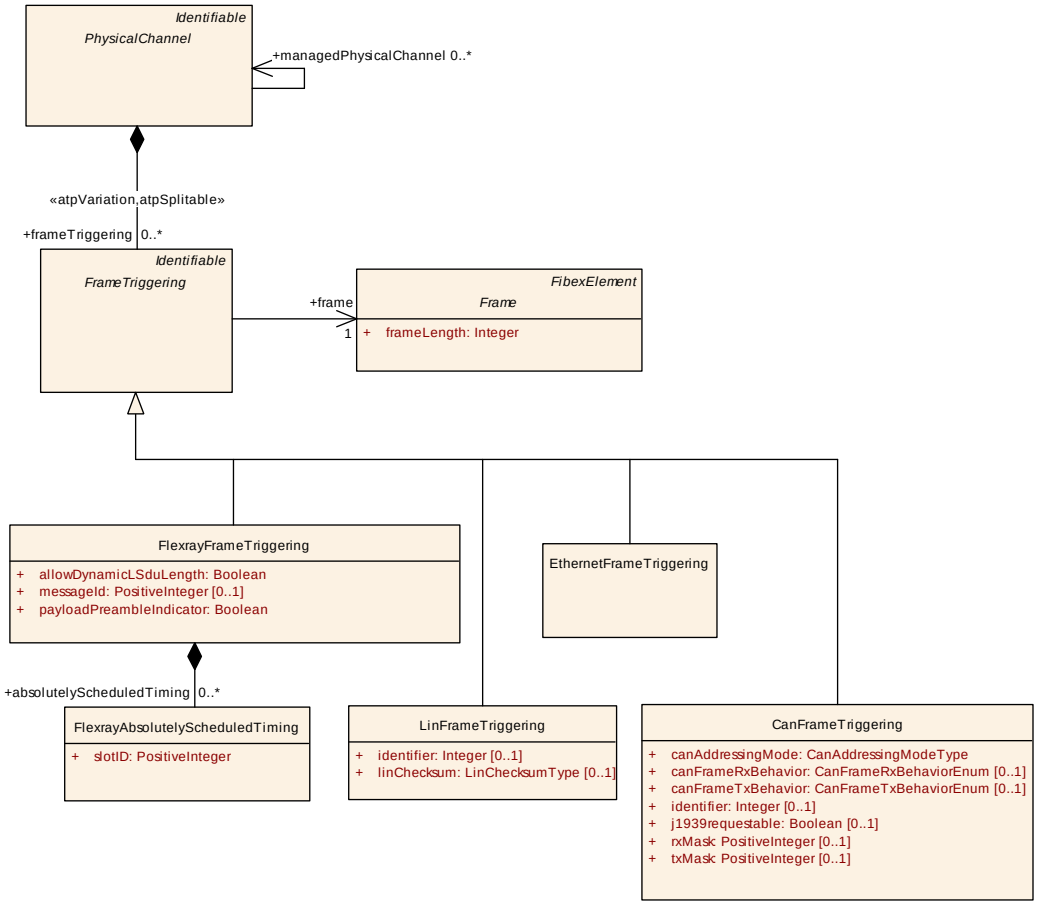

Figure 6.29: Frame Triggering

6.7.1 FlexRay specific description

[TPS_SYST_01128] Communication over FlexRay ⌈ The System Template supports the description of communication over FlexRay. ⌋*(RS_SYST_00024)*

In the following, the elements necessary to describe the FlexRay communication are specified.

FlexRay static segment parameters: Each `FlexrayFrameTriggering` is identified by its `slotID` and `communicationCycle`. In the static segment all communication

slots are of identical, statically configured duration and all FrameTriggerings are of identical, statically configured length.

The sending behavior where the exact time for the FlexrayFrameTriggerings transmission is guaranteed is provided in the System Template by the usage of FlexrayAbsolutelyScheduledTiming.

In the cycle counter field of every frame, the current value of the cycle counter is transmitted (see FlexRay frame format). This value is incremented at the beginning of each new cycle, ranging from 0 to 63, and is reset to 0 after a sequence of 64 cycles.

[TPS_SYST_01085] Transmission of a FrameTriggering multiple times within one communication cycle ⌈ In the static segment FlexrayFrameTriggerings can be sent multiple times within one communication cycle. For describing this case multiple FlexrayAbsolutelyScheduledTimings shall be used. ⌋*(RS_SYST_00024)*

FlexRay dynamic segment parameters: In the dynamic segment the duration of communication slots may vary in order to accommodate frames of varying length. Furthermore, in the dynamic part, the slotID is equivalent to a priority. The higher the number the lower is the priority.

The frames in the static and in the dynamic segment are described in the same way. Each FlexrayFrameTriggering is identified by its slotID and communicationCycle. A description is provided by the usage of FlexrayAbsolutelyScheduledTiming.

Attribute	***Type***	***Mul.***	***Kind***	***Note***
absolutely Scheduled Timing	FlexrayAbsolutely ScheduledTiming	*	aggr	Specification of a sending behaviour where the exact time for the frames transmission is guaranteed.

△

Class	**FlexrayFrameTriggering**			
allowDynamic LSduLength	Boolean	1	attr	Allows L-PDU length reduction and indicates that the related CC buffer has to be reconfigured for the actual length and Header-CRC before transmission of the L-PDU. If this attribute is set to true than the referenced Frame length attribute defines the max. length.
messageId	PositiveInteger	0..1	attr	The first two bytes of the payload segment of the FlexRay frame format for frames transmitted in the dynamic segment can be used as receiver filterable data called the message ID.
payload Preamble Indicator	Boolean	1	attr	Switching the Payload Preamble bit.

Table 6.86: FlexrayFrameTriggering

Class	**FlexrayAbsolutelyScheduledTiming**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Flexray::FlexrayCommunication			
Note	Each frame in FlexRay is identified by its slot id and communication cycle. A description is provided by the usage of AbsolutelyScheduledTiming. In the static segment a frame can be sent multiple times within one communication cycle. For describing this case multiple AbsolutelyScheduledTimings have to be used. The main use case would be that a frame is sent twice within one communication cycle.			
Base	*ARObject*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
communication Cycle	CommunicationCycle	1	aggr	The communication cycle where the frame is sent.
slotID	PositiveInteger	1	attr	In the static part the SlotID defines the slot in which the frame is transmitted. The SlotID also determines, in combination with Flexray Cluster::numberOfStaticSlots, whether the frame is sent in static or dynamic segment. In the dynamic part, the slot id is equivalent to a priority. Lower dynamic slot ids are all sent until the end of the dynamic segment. Higher numbers, which were ignored that time, have to wait one cycle and then must try again. minValue: 1 maxValue: 2047

Table 6.87: FlexrayAbsolutelyScheduledTiming

Class	***CommunicationCycle*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	The communication cycle where the frame is sent.			
Base	*ARObject*			
Subclasses	CycleCounter, CycleRepetition			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table 6.88: CommunicationCycle

The communication cycle can be described by the `CycleCounter` or by the `CycleRepetition`:

Class	**CycleCounter**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	The communication cycle where the frame is send is described by the attribute "cycleCounter".			
Base	*ARObject*, *CommunicationCycle*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
CycleCounter	Integer	1	attr	The communication cycle where the frame described by this timing is sent. If a timing is given in this way the referencing FlexrayCluster shall specify the cycleCount Max as upper bound and point of total repetition. This value is incremented at the beginning of each new cycle, ranging from 0 to cycleCountMax, and is reset to 0 after a sequence of cycleCountMax+1 cycles.

Table 6.89: CycleCounter

Class	**CycleRepetition**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology			
Note	The communication cycle where the frame is send is described by the attributes baseCycle and cycleRepetition.			
Base	*ARObject*, *CommunicationCycle*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
BaseCycle	Integer	1	attr	The first communication cycle where the frame is sent. This value is incremented at the beginning of each new cycle, ranging from 0 to 63, and is reset to 0 after a sequence of 64 cycles.
CycleRepetition	CycleRepetitionType	1	attr	The number of communication cycles (after the first cycle) whenever the frame described by this timing is sent again.

Table 6.90: CycleRepetition

Enumeration	**CycleRepetitionType**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore::CoreTopology
Note	The number of communication cycles (after the first cycle) whenever the frame is sent again. The FlexRay communication controller allows only determined values.
Literal	***Description***

Table 6.91: CycleRepetitionType

6.7.2 LIN specific description

LIN is a protocol that is based on a single master - multiple slave principle. In the following, the parameters will be specified, which are necessary to describe the LIN Schedule Tables and the LIN Frames.

[TPS_SYST_01129] Communication over LIN ⌈ The System Template supports the description of communication over LIN. ⌋*(RS_SYST_00022)*

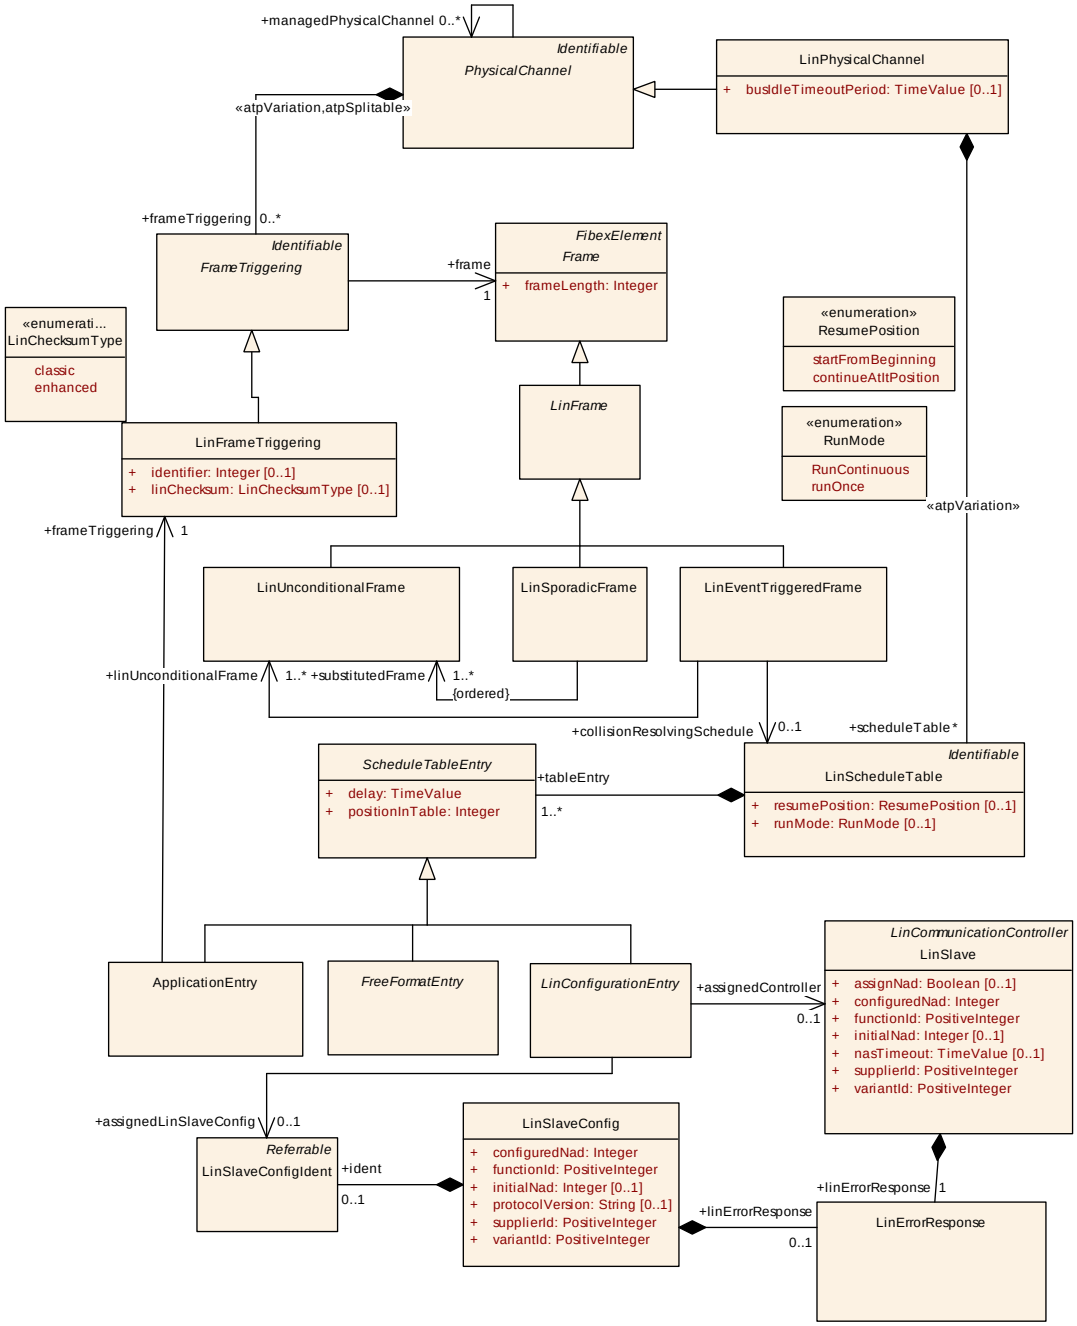

Figure 6.31: LIN Schedule Table (Fibex4Lin:LinScheduleTable)

6.7.2.1 LIN Frames

One LIN Frame consists of two parts: header and response. The header is always sent by a LinMaster, while the response is sent by only one dedicated LinSlave. There are three different ways of transmitting frames on the bus: unconditional, event triggered, and sporadic frames.

Class	***LinFrame*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Lin specific Frame element.			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Frame*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	LinEventTriggeredFrame, LinSporadicFrame, LinUnconditionalFrame			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table 6.92: LinFrame

Class	**LinFrameTriggering**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	LIN specific attributes to the FrameTriggering			
Base	*ARObject*, *FrameTriggering*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
identifier	Integer	0..1	attr	To describe a frames identifier on the communication system, usually with a fixed identifierValue. For Lin SporadicFrames the attribute shall be ignored.
linChecksum	LinChecksumType	0..1	attr	Type of checksum that the frame is using. This attribute is optional because in case of sporadic frames it should not be set.

Table 6.93: LinFrameTriggering

Enumeration	**LinChecksumType**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication
Note	Use of classic or enhanced checksum is managed by the master node and it is determined per frame identifier;
Literal	***Description***
classic	Classic in communication with LIN 1.3 slave nodes **Tags:** atp.EnumerationValue=0
enhanced	Enhanced in communication with LIN 2.0 slave nodes. **Tags:** atp.EnumerationValue=1

Table 6.94: LinChecksumType

[TPS_SYST_02095] LinFrameTriggering.linChecksum for LinUnconditionalFrames ⌈ The linChecksum attribute of a LinFrameTriggering that references a LinUnconditionalFrame shall be set. ⌋*()*

Class	LinUnconditionalFrame			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Unconditional frames carry signals. The master sends a frame header in a scheduled frame slot and the designated slave node fills the frame with data. **Tags:** atp.recommendedPackage=Frames			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Frame*, *Identifiable*, *LinFrame*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table 6.95: LinUnconditionalFrame

[constr_3225] `LinFrameTriggering.linChecksum` not allowed for `LinSporadicFrames` ⌈ The `linChecksum` attribute of a `LinFrameTriggering` that references a `LinSporadicFrame` shall not be set. ⌋()

[constr_3226] `LinFrameTriggering.linChecksum` for `LinEventTriggeredFrames` ⌈ Within a `PhysicalChannel` the `linChecksum` attribute of a `LinFrameTriggering` that references a `LinEventTriggeredFrame` shall have the same value as the `linChecksum` attribute of each `LinFrameTriggering` that references a `LinUnconditionalFrame` that in turn is referenced by that `LinEventTriggeredFrame`. ⌋()

[constr_3203] `LinFrameTriggering` to `LinSporadicFrame` reference restriction in `LinSporadicFrame` context ⌈ Within a `PhysicalChannel` a `LinUnconditionalFrame` shall be referenced by only one `LinFrameTriggering` to allow a derivation of the identifier of a substituted Frame if the `LinUnconditionalFrame` is referenced by a `LinSporadicFrame` in the role `substitutedFrame`. ⌋()

Class	LinSporadicFrame			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	A sporadic frame is a group of unconditional frames that share the same frame slot. The sporadic frame shall not contain any Pdus. **Tags:** atp.recommendedPackage=Frames			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Frame*, *Identifiable*, *LinFrame*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
substituted Frame (ordered)	LinUnconditionalFrame	1..*	ref	Reference to a group of unconditional frames that share the same frame slot. In case that more than one of the declared frames needs to be transferred, the one first listed shall be chosen. Within a channel a LIN Frame shall be referenced by only one FrameTriggering. This allows a derivation of the identifier of a substituted Frame. The identifier is specified in FrameTriggering element. A LinUnconditionalFrame associated with a LinSporadic Frame may not be allocated in the same LinSchedule Table as the sporadic frame.

Table 6.96: LinSporadicFrame

[constr_3204] `LinUnconditionalFrames` associated with a `LinSporadicFrame` ⌈ A `LinUnconditionalFrame` associated with a `LinSporadicFrame`

shall not be allocated in the same LinScheduleTable as the LinSporadicFrame. ⌋()

[constr_3205] Existence of FramePort for a FrameTriggering that references a LinSporadicFrame ⌈ A FrameTriggering that references a LinSporadicFrame shall not have a reference to a FramePort. ⌋()

Instead of the LinSporadicFrame a LinUnconditionalFrame is sent in the timeslot on the bus and therefore the FrameTriggering that references a LinSporadicFrame does not need to have a reference to a FramePort.

Class	**LinEventTriggeredFrame**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	An event triggered frame is used as a placeholder to allow multiple slave nodes to provide its response. The header of an event triggered frame is transmitted when a frame slot allocated to the event triggered frame is processed. The publisher of an associated unconditional frame shall only transmit the response if at least one of the signals carried in its unconditional frame is updated. The LIN Master discovers and purges collisions with the collisionResolvingScheduleTable. The event controlled frame shall not contain any Pdus. **Tags:** atp.recommendedPackage=Frames			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Frame*, *Identifiable*, *LinFrame*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
collision Resolving Schedule	LinScheduleTable	0..1	ref	Reference to the schedule table, which resolves a collision.
linUnconditional Frame	LinUnconditionalFrame	1..*	ref	A list of slaves can respond to the master request if at least one of the signals carried in its unconditional frame is updated. For each response a LinFrameTriggering and a Lin UnconditionalFrame shall be defined. Within a channel a LIN Frame shall be referenced by only one Frame Triggering. This allows a derivation of the identifier of a substituted Frame. The identifier is specified in Frame Triggering element. The Unconditional frames associated with an event triggered frame shall: • have equal length. • use the same checksum model (i.e. mixing LIN 1.x and LIN 2.x frames is not allowed). • reserve the first data field to its protected identifier (even if the associated unconditional frame is scheduled as a unconditional frame in the same or another schedule table). • be published by different slave nodes. • shall not be included directly in the same schedule table as the event triggered frame is scheduled.

Table 6.97: LinEventTriggeredFrame

[TPS_SYST_02077] Subscribers of a LinEventTriggeredFrame ⌈ For each subscriber of a LinEventTriggeredFrame a LinUnconditionalFrame and a LinFrameTriggering that points to this LinUnconditionalFrame shall be defined. ⌋ ()

[constr_3202] `LinFrameTriggering` to `LinUnconditionalFrame` reference restriction in `LinEventTriggeredFrame` context ⌈ Within a `PhysicalChannel` a `LinUnconditionalFrame` shall be referenced by only one `LinFrameTriggering` to allow a derivation of the identifier of a substituted Frame if the `LinUnconditionalFrame` is referenced by a `LinEventTriggeredFrame` in the role `linUnconditionalFrame`. ⌋()

[constr_3206] Existence of `FramePort` for a `FrameTriggering` that references a `LinEventTriggeredFrame` ⌈ A `FrameTriggering` that references a `LinEventTriggeredFrame` shall not have a reference to a `FramePort`. ⌋()

A `LinUnconditionalFrame` is sent as the response of a `LinEventTriggeredFrame` on the bus instead and therefore the `FrameTriggering` that references a `LinEventTriggeredFrame` does not need to have a reference to a `FramePort`.

[TPS_SYST_02078] `LinUnconditionalFrame`s associated with a `LinEventTriggeredFrame` ⌈ The `LinUnconditionalFrame`s associated with a `LinEventTriggeredFrame` shall:

- have equal length
- use the same checksum model (i.e. mixing LIN 1.x and LIN 2.x frames is not allowed)
- reserve the first data field to its protected identifier (even if the associated `LinUnconditionalFrame` is scheduled as a `LinUnconditionalFrame` in the same or another schedule table)
- be published by different slave nodes
- not be included directly in the same `LinScheduleTable` as the associated `LinEventTriggeredFrame`.

⌋()

6.7.2.2 LIN Schedule Table

The `LinMaster` uses one or more predefined scheduling tables to start the sending and receiving to the LIN bus. These scheduling tables contain at least the relative timing that defines the message sending.

[constr_1657] Existence of `LinPhysicalChannel.scheduleTable` ⌈ In any given Ecu Extract that contains a `LinSlave`, the `LinPhysicalChannel` that relates to the respective `LinSlave` via `commConnector.commController` shall not aggregate a `LinScheduleTable`. ⌋()

Class	**LinScheduleTable**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	The master task (in the master node) transmits frame headers based on a schedule table. The schedule table specifies the identifiers for each header and the interval between the start of a frame and the start of the following frame.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
resumePosition	ResumePosition	0..1	attr	Defines, where a schedule table shall be proceeded in case if it has been interrupted by a run-once table or MRF/SRF.
runMode	RunMode	0..1	attr	The schedule table can be executed in two different modes.
tableEntry	ScheduleTableEntry	1..*	aggr	The scheduling table consists of table entries, which contain Frame slots.

Table 6.98: LinScheduleTable

Enumeration	**RunMode**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication
Note	The schedule table can be executed in two different modes.

runOnce	RUN_ONCE run mode **Tags:** atp.EnumerationValue=1

Table 6.99: RunMode

Enumeration	**ResumePosition**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication
Note	Defines, where a schedule table shall be proceeded in case if it has been interrupted by a run-once table or MRF/SRF.
Literal	***Description***
continueAtItPosition	Continue at IT Point. **Tags:** atp.EnumerationValue=0
startFromBeginning	Start from the beginning **Tags:** atp.EnumerationValue=1

Table 6.100: ResumePosition

Class	**ScheduleTableEntry** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Table entry in a LinScheduleTable. Specifies what will be done in the frame slot.			
Base	*ARObject*			
Subclasses	ApplicationEntry, *FreeFormatEntry*, *LinConfigurationEntry*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
delay	TimeValue	1	attr	Relative delay between this tableEntry and the start of the successor in the schedule table in seconds.
introduction	DocumentationBlock	0..1	aggr	This represents introductory documentation about the schedule table entry. **Tags:** xml.sequenceOffset=-10
positionInTable	Integer	1	attr	Relative position in the schedule table. The first entry index in the schedule table is 0.

Table 6.101: ScheduleTableEntry

Class	**ApplicationEntry**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Schedule table entry for application messages.			
Base	*ARObject*, *ScheduleTableEntry*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
frameTriggering	LinFrameTriggering	1	ref	Specifies the LinFrame that will be transmitted in this frame slot.

Table 6.102: ApplicationEntry

Class	**FreeFormatEntry** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	FreeFormat transmits a fixed master request frame with the eight data bytes provided. This may for instance be used to issue user specific fixed frames.			
Base	*ARObject*, *ScheduleTableEntry*			
Subclasses	FreeFormat			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table 6.103: FreeFormatEntry

Class	**LinConfigurationEntry** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	A ScheduleTableEntry which contains LIN specific assignments.			
Base	*ARObject*, *ScheduleTableEntry*			
Subclasses	AssignFrameId, AssignFrameIdRange, AssignNad, ConditionalChangeNad, DataDumpEntry, Save ConfigurationEntry, UnassignFrameId			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
assigned Controller	LinSlave	0..1	ref	The LIN slaves controller who is target of this assignment. Optional in case LinConfigurationEntry.assignedLinSlave Config exists.

▽

△

Class	*LinConfigurationEntry* (abstract)			
assignedLin SlaveConfig	LinSlaveConfigIdent	0..1	ref	The LIN slave that is target of this assignment. Please note that this reference is redundant to the assignedController reference. In an Ecu Extract of the LinMaster the LinSlave Ecus shall not be available. The information that is described here is necessary in the ECU Extract for the configuration of the LinMaster.

Table 6.104: LinConfigurationEntry

6.7.2.3 Configuration Services

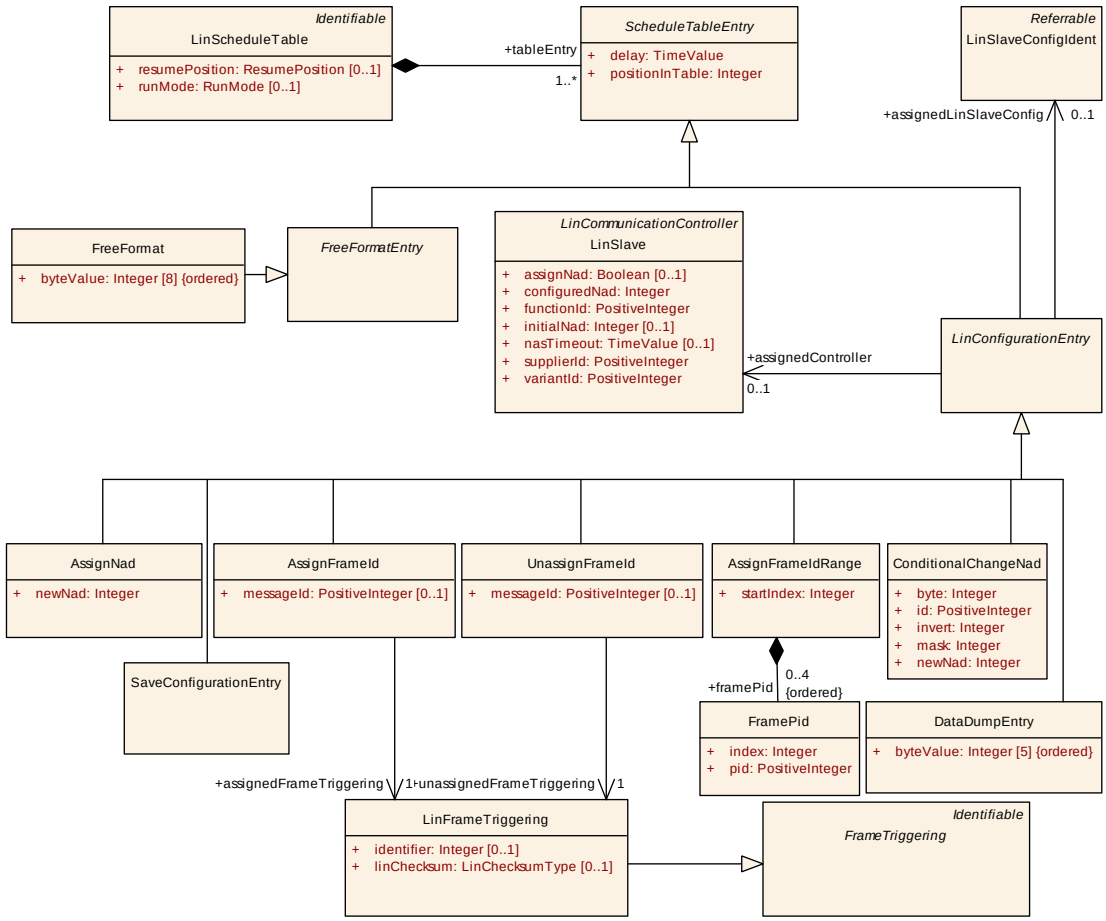

Figure 6.32: LIN Configuration Entries (Fibex4Lin:LinConfigurationEntries)

LIN only supports 64 identifiers. That creates the need for extending the address space. Hence the frames are identified by message ids from a much larger address space that is additionally separated by supplier ids. During runtime the master assigns a LinId to the frame. In case of identical parts within a cluster the initial node ID (oldNad) is used to differentiate such nodes.

To support that in System Template the AssignFrameId is introduced as a LIN specific extension. For the assignment a relation to the LinSlave is used. The LinSlave element is referenced by a LinCommunicationConnector element that contains a list of frames processed by the slave node. More details can be found in chapter 6.7.2.3.

Class	**AssignFrameId**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Schedule entry for an Assign Frame Id master request.			
Base	*ARObject*, *LinConfigurationEntry*, *ScheduleTableEntry*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
assignedFrame Triggering	LinFrameTriggering	1	ref	The frame whose identifier is set by this assignment.
messageId	PositiveInteger	0..1	attr	MessageId of the referenced frame.

Table 6.105: AssignFrameId

Class	**UnassignFrameId**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Schedule entry for an Unassign Frame Id master request where the protected identifier is assigned the value 0x40. This will disable reception/transmission of a previously dynamically assigned frame identifier.			
Base	*ARObject*, *LinConfigurationEntry*, *ScheduleTableEntry*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
messageId	PositiveInteger	0..1	attr	MessageId of the referenced frame.
unassigned FrameTriggering	LinFrameTriggering	1	ref	The frame whose identifier is reset by this assignment.

Table 6.106: UnassignFrameId

[constr_3241] Usage of AssignFrameId.messageId ⌈ The value of AssignFrameId.messageId for the AssignFrameId that refers to a LinSlave in the role assignedController shall be equal to the messageId of the LinConfigurableFrame aggregated by LinCommunicationConnector in role linConfigurableFrame that points to this LinSlave in the role commController. ⌋*()*

[constr_3242] Usage of UnassignFrameId.messageId ⌈ The value of UnassignFrameId.messageId for the UnassignFrameId that refers to a LinSlave in the role assignedController shall be equal to the messageId of the LinConfigurableFrame aggregated by LinCommunicationConnector in role linConfigurableFrame that points to this LinSlave in the role commController. ⌋*()*

The Assign frame ID configuration service is replaced in LIN 2.1 by the Assign frame ID range configuration service. AssignFrameIdRange is used to set or disable Protected Identifiers up to four frames. For the assignment a relation to the LinSlave is used. The LinSlave element is referenced by a LinCommunicationConnector element that contains a list of frames processed by the slave node. More details can be found in chapter 6.7.2.3.

Class	AssignFrameIdRange			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	AssignFrameIdRange generates an assign frame PID range request.			
Base	*ARObject*, *LinConfigurationEntry*, *ScheduleTableEntry*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
frame Pid (ordered)	FramePid	0..4	aggr	Optional assignment of frame_PID values that are included in the request. The frame_PIDs are ordered.
startIndex	Integer	1	attr	The startIndex sets the index to the first frame to assign a PID.

Table 6.107: AssignFrameIdRange

Class	FramePid			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Frame_PIDs that are included in the request. The "pid" attribute describes the value and the "index" attribute the position of the frame_PID in the request.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
index	Integer	1	attr	This attribute is used to order the frame_PIDs. The values of index shall be unique within one AssignFrameIdRange.
pid	PositiveInteger	1	attr	Frame_PID value.

Table 6.108: FramePid

Assign NAD is used to resolve conflicting NADs in LIN clusters built using off-the-shelves slave nodes or reused slave nodes. This request uses the initial NAD. The NAD used for the response shall be the same as in the request, i.e. the initial NAD.

Class	AssignNad			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Schedule entry for an Assign NAD master request.			
Base	*ARObject*, *LinConfigurationEntry*, *ScheduleTableEntry*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
newNad	Integer	1	attr	The newly assigned NAD value.

Table 6.109: AssignNad

The conditional change NAD is used to detect unknown slave nodes in a cluster and to separate their NADs.

Class	ConditionalChangeNad			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Generates an conditional change NAD request. See ISO 17987 protocol specification for more information.			
Base	*ARObject*, *LinConfigurationEntry*, *ScheduleTableEntry*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**

▽

△

Class	**ConditionalChangeNad**			
byte	Integer	1	attr	Byte Position of Data Byte that should be used for the bitwise XOR with Invert and the bitwise AND with Mask.
id	PositiveInteger	1	attr	Byte Position of Id.
invert	Integer	1	attr	Byte Position of Invert.
mask	Integer	1	attr	Byte Position of Mask.
newNad	Integer	1	attr	The newly assigned NAD value (Byte Position).

Table 6.110: ConditionalChangeNad

The Save Configuration service tells the slave node that the slave application shall save the current configuration.

Class	**SaveConfigurationEntry**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	This service is used to notify a slave node to store its configuration.			
Base	*ARObject*, *LinConfigurationEntry*, *ScheduleTableEntry*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
–	–	–	–	–

Table 6.111: SaveConfigurationEntry

The Data Dump service is reserved for initial configuration of a slave node by the slave node supplier and the format of this message is supplier specific.

Class	**DataDumpEntry**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	This service is reserved for initial configuration of a slave node by the slave node supplier and the format of this message is supplier specific.			
Base	*ARObject*, *LinConfigurationEntry*, *ScheduleTableEntry*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
byte Value (ordered)	Integer	5	attr	Supplier specific format.

Table 6.112: DataDumpEntry

With the FreeFormat a scheduling of fixed data content within a diagnostic frame is defined. For that specification `FreeFormat` is introduced.

Class	**FreeFormat**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Lin::LinCommunication			
Note	Representing freely defined data.			
Base	*ARObject*, *FreeFormatEntry*, *ScheduleTableEntry*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
byte Value (ordered)	Integer	8	attr	The integer Value of a freely defined data byte.

Table 6.113: FreeFormat

In order to be consistent with the rest of the communication configuration, it is required that the diagnostic LIN Frames (Master Request Frame, Slave Response Frame) are explicitly modeled as `Frame` elements. `LinFrameTriggering`s dealing with diagnostic Frames thus reference this diagnostic frames.

6.7.3 CAN specific description

This chapter describes additions to the CAN definition of FrameTriggerings.

[TPS_SYST_01130] Communication over CAN ⌈ The System Template supports the description of communication over CAN. ⌋*(RS_SYST_00021)*

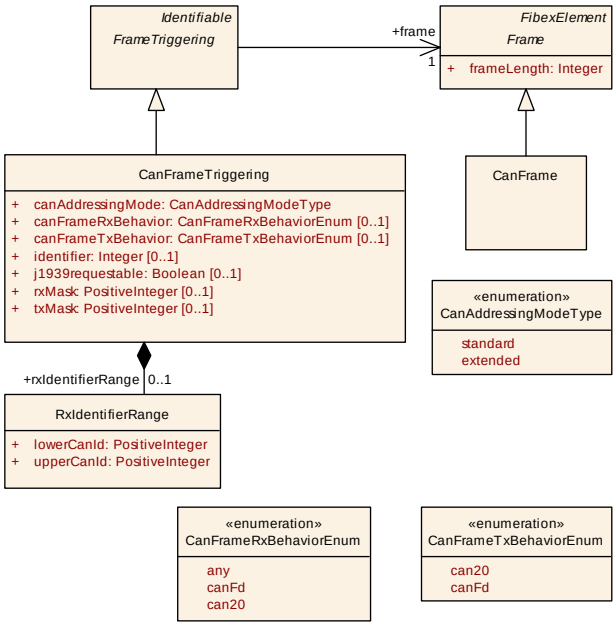

Figure 6.33: CanFrameTriggering (Fibex4Can:CanCommunication)

Class	**CanFrame**

Attribute	***Type***	***Mul.***	***Kind***	***Note***
absolutely Scheduled Timing	TtcanAbsolutely ScheduledTiming	*	aggr	Each frame in TTCAN is identified by its slot id and communication cycle. A description is provided by the usage of AbsolutelyScheduledTiming.
canAddressing Mode	CanAddressingMode Type	1	attr	The CAN protocol supports two types of frame formats. The standard frame format uses 11-bit identifiers and is defined in the CAN specification 2.0 A. Additionally the extended frame format allows 29-bit identifiers and is defined in the CAN specification 2.0 B.
canFrameRx Behavior	CanFrameRxBehavior Enum	0..1	attr	Defines which CAN protocol shall be expected for frame reception.
canFrameTx Behavior	CanFrameTxBehavior Enum	0..1	attr	Defines which CAN protocol shall be used for frame transmission.
identifier	Integer	0..1	attr	This attribute is used to define the identifier this frame shall use on the CAN network.
j1939requestable	Boolean	0..1	attr	Frame can be triggered by the J1939 request message.
rxIdentifier Range	RxIdentifierRange	0..1	aggr	Optional definition of a CanId range.
rxMask	PositiveInteger	0..1	attr	Identifier mask which denotes the relevant bits in the CAN Identifier. Together with the identifier, this parameter defines a CAN identifier range.
txMask	PositiveInteger	0..1	attr	Identifier mask which denotes static bits in the CAN identifier. The other bits can be set dynamically.

Table 6.115: CanFrameTriggering

Enumeration	**CanAddressingModeType**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanCommunication
Note	Indicates whether standard or extended CAN identifiers are used
Literal	***Description***
extended	Extended 29-bit-identifiers are used (CAN 2.0B) **Tags:** atp.EnumerationValue=0
standard	Standard 11-bit-identifiers are used (CAN 2.0A) **Tags:** atp.EnumerationValue=1

Table 6.116: CanAddressingModeType

Class	**RxIdentifierRange**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanCommunication
Note	Optional definition of a CanId range to reduce the effort of specifying every possible FrameTriggering within the defined Id range during reception. All frames received within a range are mapped to the same Pdu that is passed to a upper layer module (e.g. Nm, CDD, PduR).
Base	*ARObject*

▽

△

Class	**RxIdentifierRange**			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
lowerCanId	PositiveInteger	1	attr	This attribute can be used together with the upperCanId attribute to define a range of CanIds.
upperCanId	PositiveInteger	1	attr	This attribute can be used together with the lowerCanId attribute to define a range of CanIds.

Table 6.117: RxIdentifierRange

Enumeration	**CanFrameRxBehaviorEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanCommunication
Note	Defines different CAN protocols for frame reception behavior.
Literal	***Description***
any	This CAN frame may be received as both, CAN 2.0 and CAN FD. **Tags:** atp.EnumerationValue=0
can20	This CAN frame shall be received as CAN 2.0 only. In case the CAN frame is received as CAN FD it is discarded during reception. **Tags:** atp.EnumerationValue=1
canFd	This CAN frame shall be received as CAN FD only. In case the CAN frame is received as CAN 2.0 it is discarded during reception. **Tags:** atp.EnumerationValue=2

Table 6.118: CanFrameRxBehaviorEnum

There exist use-cases where the CanFrameTriggering is used as a placeholder for a variant number of actual Can frames and therefore no dedicated CAN identifier can be defined (e.g. MetaData handling, Bus Mirroring).

[TPS_SYST_02201] Existence of CanFrameTriggering.identifier ⌈ In a System with category SYSTEM_DESCRIPTION the identifier may be omitted if the value is computed during runtime. In a System with category ECU_EXTRACT, ECU_SYSTEM_DESCRIPTION or SYSTEM_EXTRACT for the transmitter the identifier may be omitted if the value is computed during runtime. In an System with category ECU_EXTRACT, ECU_SYSTEM_DESCRIPTION or SYSTEM_EXTRACT for the receiver the identifier may be omitted if rxIdentifierRange is defined. ⌋*()*

The CanFrameTriggering.canFrameRxBehavior allows to define a tolerant CAN FD reception strategy. With the setting any the respective CAN frame is accepted for reception, regardless whether it is received with CAN FD or CAN 2.0 protocol.

Enumeration	**CanFrameTxBehaviorEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Can::CanCommunication
Note	Defines different CAN protocols for frame transmission behavior.
Literal	***Description***
can20	This CAN frame shall be sent as CAN 2.0 only. **Tags:** atp.EnumerationValue=0

▽

△

Enumeration	**CanFrameTxBehaviorEnum**
canFd	This CAN frame shall be sent as CAN FD. **Tags:** atp.EnumerationValue=1

Table 6.119: CanFrameTxBehaviorEnum

Note that the transmission behavior of `CanFrameTriggering.canFrameTxBehavior` may still be redefined in the communication stack on driver level.

[TPS_SYST_02168] MetaData support required if `CanFrameTriggering.txMask` is used ⌈ The usage of `CanFrameTriggering.txMask` requires the support of COM Stack MetaData. ⌋*()*

Please note that the MetaData support in [TPS_SYST_02168] is required to calculate CAN-Ids at run-time.

[TPS_SYST_02169] MetaData support may be required if `CanFrameTriggering.rxMask` is used ⌈ The usage of `CanFrameTriggering.rxMask` may require the support of COM Stack MetaData. ⌋*()*

Please note that the MetaData support in [TPS_SYST_02169] is required if the upper layer is interested in the masked part of CAN-Id, e.g. J1939. In some cases the upper layer is not interested in the masked part of CAN-Id, e.g. for CanNm the MetaData is not required.

6.7.3.1 SAE J1939 Protocol specific description

J1939 is a protocol and application layer standard of the SAE (Society of Automotive Engineers) based on the CAN technology. It defines parameters uniquely identified by the SPN (Suspect Parameter Number). These are mapped to parameter groups that are uniquely identified by a PGN (Parameter Group Number). Parameters are simply handled as SystemSignals which have a name derived from the name of the SPNs. A Parameter Group (PG) corresponds to an IPdu.

J1939 uses extended 29 bit CAN identifiers to encode a priority, the source address of the frame, and a frame ID which is based on the PGN (Parameter Group Number) and may contain the destination address.

J1939 supports IPdus with more than 8 bytes, and IPdus with variable length that may exceed 8 bytes. As soon as an IPdu has more than 8 bytes, it does not fit in a single CAN frame and a transport protocol must be used. Variable length IPdus will always be handled by the J1939 TP, regardless of the actual length. The J1939 Transport Protocol is described in chapter 6.8.8.

[TPS_SYST_01132] Communication over SAE J1939 ⌈ The System Template supports the description of communication over SAE J1939. ⌋*(RS_SYST_00038)*

[constr_3209] CanFrameTriggerings with identical PGN ⌈ For all CanFrameTriggerings where the attribute identifier contains the identical PGN (as defined in section 5.2 Protocol Data Unit in [22]) the attribute j1939requestable shall also have an identical value. ⌋*()*

6.7.4 TTCAN specific description

This chapter describes additions to the TTCAN definition of FrameTriggerings.

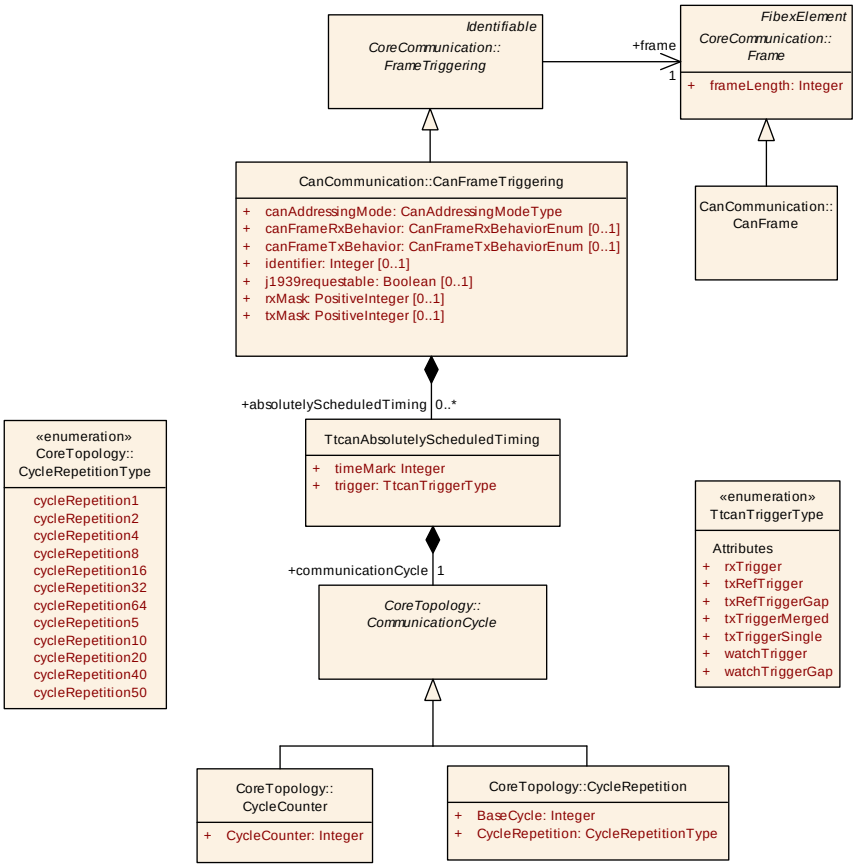

Figure 6.34: TtcanAbsolutelyScheduledTiming (Fibex4Ttcan:TtcanCommunication)

Class	**TtcanAbsolutelyScheduledTiming**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ttcan::TtcanCommunication			
Note	Each frame in TTCAN is identified by its slot id and communication cycle. A description is provided by the usage of AbsolutelyScheduledTiming. A frame can be sent multiple times within one communication cycle. For describing this case multiple AbsolutelyScheduledTimings have to be used. The main use case would be that a frame is sent twice within one communication cycle.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
communication Cycle	CommunicationCycle	1	aggr	The communication cycle where the frame is sent.
timeMark	Integer	1	attr	Where FlexRay counts the slots in the static segment, TTCAN requires explicit Tx and Rx time marks.
trigger	TtcanTriggerType	1	attr	Trigger type for this time window.

Table 6.120: TtcanAbsolutelyScheduledTiming

Enumeration	**TtcanTriggerType**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ttcan::TtcanCommunication
Note	This type lists all trigger types for a time window.
Literal	***Description***
rxTrigger	Check for message reception **Tags:** atp.EnumerationValue=0
txRefTrigger	Send reference message in periodic case **Tags:** atp.EnumerationValue=1
txRefTriggerGap	Send reference message in event-synchronised case **Tags:** atp.EnumerationValue=2
txTriggerMerged	Send message in a merged arbitration window **Tags:** atp.EnumerationValue=3
txTriggerSingle	Send message in an exclusive time window **Tags:** atp.EnumerationValue=4
watchTrigger	Check for missing reference message in periodic case **Tags:** atp.EnumerationValue=5
watchTriggerGap	Check for missing reference message in event-synchronised case **Tags:** atp.EnumerationValue=6

Table 6.121: TtcanTriggerType

6.7.5 Ethernet specific description

[TPS_SYST_01131] TCP/IP and UDP/IP communication over Ethernet ⌈ The System Template supports the description of TCP/IP and UDP/IP communication over Ethernet. ⌋*(RS_SYST_00039)*

This section specifies the information of the AUTOSAR Basic Software modules Socket Adaptor (SoAd), Service Discovery and Tcp/Ip that is common for several `EcuInstance`s and therefore is part of the System Configuration Description.

The main purpose of the SoAd module is to create an interface between the PDU Router and a socket based TCP/IP stack. The AUTOSAR Service Discovery module offers functionality to detect and announce available services within the vehicle network.

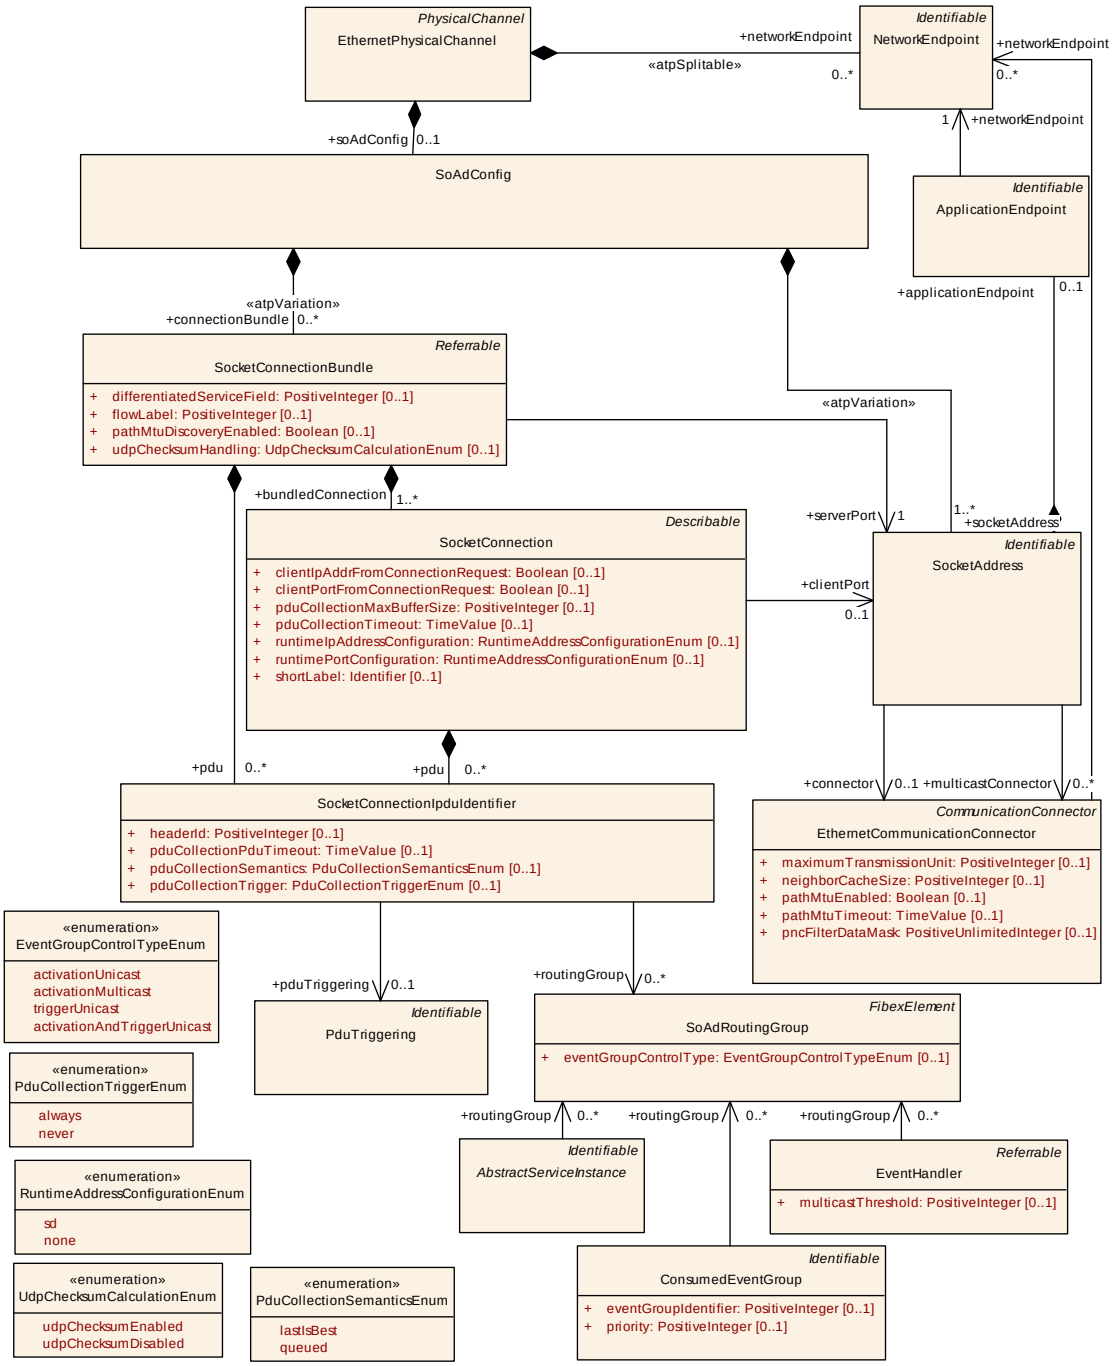

Figure 6.35: Ethernet Communication (Fibex4Ethernet:EthernetCommunication)

The SoAd serves as a (De)Multiplexer between different Pdu sources/suppliers and the TCP/IP stack. The `SocketConnection` maps TCP/UDP Ports (configured by the `ApplicationEndpoint`) as well as IP addresses (configured by the `NetworkEndpoint`) to the `IPdu` and adds this information during transmit. On receive it needs to reverse this process and create the `IPdu` from the TCP/IP information received.

The `SocketConnectionBundle` groups `SocketConnection`s and describes properties like `serverPort`s which are common for all `SocketConnection`s in the `SocketConnectionBundle`.

[TPS_SYST_01091] Definition of SoAdConfig ⌈ The SoAdConfig in the System Template is defined per EthernetPhysicalChannel which represents a VLAN. ⌋ *(RS_SYST_00039)*

[TPS_SYST_01092] Transmission of multiple Pdus over the same SocketConnection ⌈ If multiple Pdus are transmitted over the same SocketConnection a headerId information shall be used to distinguish between the different Pdus. ⌋ *(RS_SYST_00039)*

[TPS_SYST_01093] Activation/Deactivation of SoAdRoutingGroups ⌈ The routing of Pdus to and from a socket may be activated or deactivated with a SoAdRoutingGroup depending on the availability of services, EventHandlers or ConsumedEventGroups that send or receive the data. ⌋*(RS_SYST_00039)*

The Routing Group Activation Table is controlled by the Service Discovery module.

[TPS_SYST_02002] SoAdRoutingGroup for Services with Methods ⌈ For Services that contain Methods a SoAdRoutingGroup shall be created that is referenced by the ProvidedServiceInstance and by all clients in form of ConsumedServiceInstances. ⌋*()*

[TPS_SYST_02003] SoAdRoutingGroups for Services with event groups ⌈ For event groups of a Service a SoAdRoutingGroup with eventGroupControlType set to activationUnicast or activationMulticast) shall be created that is referenced by the EventHandler and by all ConsumedEventGroups that are subscribed to this event group. ⌋*()*

[TPS_SYST_02004] SoAdRoutingGroups for Services with event groups that contain triggered events ⌈ A SoAdRoutingGroup with eventGroupControlType set to triggerUnicast shall be created for event groups that contain triggered events [2]. Such a SoAdRoutingGroup shall be referenced by the EventHandler that provides the triggered events. ⌋*()*

The Methods and Events that are provided or consumed by an EcuInstance are described by the ApplicationEndpoint.

Class	**SoAdConfig**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication			
Note	SoAd Configuration for one specific Physical Channel.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
connection Bundle	SocketConnection Bundle	*	aggr	Collection of SocketConnectionBundles. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild
socketAddress	SocketAddress	1..*	aggr	Collection of SoAdAddresses. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild

Table 6.122: SoAdConfig

[2] initial events that are send out by the server after a client got subscribed

Class	**SocketConnectionBundle**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication			
Note	This elements groups SocketConnections, i.e. specifies socket connections belonging to the bundle and describes properties which are common for all socket connections in the bundle.			
Base	*ARObject*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
bundled Connection	SocketConnection	1..*	aggr	Collection of SocketConnections in the connectionGroup.
differentiated ServiceField	PositiveInteger	0..1	attr	The 6-bit Differentiated Service Field in the IP headers may be used for classifying network traffic. If not set a value of zero is used to indicate packets that have not been classified.
flowLabel	PositiveInteger	0..1	attr	The 20-bit Flow Label field in the IPv6 header may be used by a source to label sequences of packets for which it requests special handling by the IPv6 routers, such as non-default quality of service. If not set a Flow Label of zero is used to indicate packets that have not been labeled.
pathMtu Discovery Enabled	Boolean	0..1	attr	Defines whether the Path MTU Discovery shall be performed for the related socket.
pdu	SocketConnectionIpdu Identifier	*	aggr	With this aggregation SocketConnectionIpduIdentifier elements are assigned to all SocketConnections that are available in this SocketConnetionBundle.
serverPort	SocketAddress	1	ref	Server Port for TCP/UDP connection in an abstract communication sense. The server is the major provider of the communication. Please note that the server may also consume data.
udpChecksum Handling	UdpChecksum CalculationEnum	0..1	attr	Specifies if UDP checksum handling shall be enabled (udpChecksumEnabled) or skipped (udpChecksum Disabled) on the related socket connection.

Table 6.123: SocketConnectionBundle

Enumeration	**UdpChecksumCalculationEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication
Note	This enumeration defines the UDP checksum calculation.
Literal	***Description***
udpChecksum Disabled	Udp checksum handling shall be disabled **Tags:** atp.EnumerationValue=1
udpChecksum Enabled	Udp checksum handling shall be enabled **Tags:** atp.EnumerationValue=0

Table 6.124: UdpChecksumCalculationEnum

[constr_3299] `SocketConnectionBundle.pathMtuDiscoveryEnabled` setting dependency ⌈ `SocketConnectionBundle.pathMtuDiscoveryEnabled` shall only be set to TRUE if `EthernetCommunicationConnector.pathMtuEnabled` == TRUE. ⌋*()*

[constr_3311] Usage of `SocketConnectionBundle.flowLabel` ⌈ `SocketConnectionBundle.flowLabel` shall only be used if the `SocketConnectionBundle` points to a `SocketAddress` in the role `serverPort` with an `ApplicationEndpoint` that refers to a `NetworkEndpoint` with an `Ipv6Configuration`. ⌋*()*

[TPS_SYST_02140] `SocketConnectionBundle.udpChecksumHandling` default value ⌈ If `SocketConnectionBundle.udpChecksumHandling` is not used the value `udpChecksumEnabled` shall be assumed. ⌋()

[TPS_SYST_02141] Semantics of `udpChecksumHandling` ⌈ The semantics of `udpChecksumHandling` is different for the sending and the receiving side:

TX - calculation of UDP checksum:

- `udpChecksumEnabled` means that the UDP checksum is calculated on the transmission side.
- `udpChecksumDisabled` means that the UDP checksum is not calculated but set to zero on the transmission side.

RX - handling of UDP checksum of zero:

- `udpChecksumEnabled` means that the UDP checksum of zero is treated as invalid checksum on receiver side (causing the UDP datagram to be dropped by the receiver). A valid non-zero checksum is accepted and the UDP datagram is forwarded to the upper layer.
- `udpChecksumDisabled` means the the UDP checksum of zero is treated as valid checksum on the receiver side (causing the UDP datagram to be forwarded to the upper layer). A valid non-zero checksum is accepted and the UDP datagram is forwarded to the upper layer as well.

⌋()

[TPS_SYST_02142] Reception of invalid checksum ⌈ On Rx side an invalid checksum should always cause the related UDP datagram to be discarded independent of the `udpChecksumHandling` value. ⌋()

Class	**SocketConnection**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication			
Note	The SoAd serves as a (De)Multiplexer between different PDU sources and the TCP/IP stack.			
Base	*ARObject*, *Describable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
allowedIPv6Ext Headers	IPv6ExtHeaderFilterList	0..1	ref	Reference to a list of IPv6 Extension Headers allowed for this SocketConnection. If no list is referenced all IPv6 Extension Headers are allowed and processed.
allowedTcp Options	TcpOptionFilterList	0..1	ref	Reference to a list of TCP options allowed for this Socket Connection.
clientIpAddr From Connection Request	Boolean	0..1	attr	If set to true the Server "learns" the client IP address on connection request. This means that the statically configured IP Address of the related client shall be ignored. If set to false the Server only accepts statically configured IP address, e.g. 192.168.1.2. This means that the statically configured IP Address of the Client shall be used.

▽

△

Class	**SocketConnection**			
clientPort	SocketAddress	0..1	ref	Client Port for TCP/UDP connection in an abstract communication sense. The client is the major requester of the communication. Please note that the client may also produce data.
clientPortFrom Connection Request	Boolean	0..1	attr	If set to true the Server "learns" the client Port on connection request. This means that the statically configured Port of the related client shall be ignored. If set to false the Server only accepts statically configured Port. This means that the statically configured Port of the Client shall be used.
pdu	SocketConnectionIpdu Identifier	*	aggr	PDUs handed over by the PDU Router (Transmission over the Ethernet) or PDUs handed over by SoAd (Reception over Ethernet). Multiple IPdus can be transmitted over one socket connection.
pduCollection MaxBufferSize	PositiveInteger	0..1	attr	Defines the maximum buffer size in Byte which shall be filled before a socket with Pdu collection enabled shall be transmitted to the lower layer.
pduCollection Timeout	TimeValue	0..1	attr	Defines the time in seconds which shall pass before a socket with Pdu collection enabled shall be transmitted to the lower layer after the first Pdu has been put into the socket buffer.
runtimeIp Address Configuration	RuntimeAddress ConfigurationEnum	0..1	attr	This attribute determines which protocol is used by the client to obtain the IP Address information. If this attribute is not set to none the value determines the service used by the client to obtain the IP Address information for the SocketConnection. If this attribute is set to none the client used the statically configured IP Address information.
runtimePort Configuration	RuntimeAddress ConfigurationEnum	0..1	attr	This attribute determines which protocol is used by the client to obtain the Port information. If this attribute is not set to none the value determines the service used by the client to obtain the Port information for the Socket Connection. If this attribute is set to none the client uses the statically configured Port information.
shortLabel	Identifier	0..1	attr	This attribute specifies an identifying shortName for the SocketConnection. It shall be unique within its context.

Table 6.125: SocketConnection

Figure 6.36 shows an example with a `SocketConnectionBundle` that contains three `SocketConnection`s. `Client1Connection` and `Client2Connection` are pointing to static unicast addresses. `MulticastConnection` is pointing to a multicast IP Address.

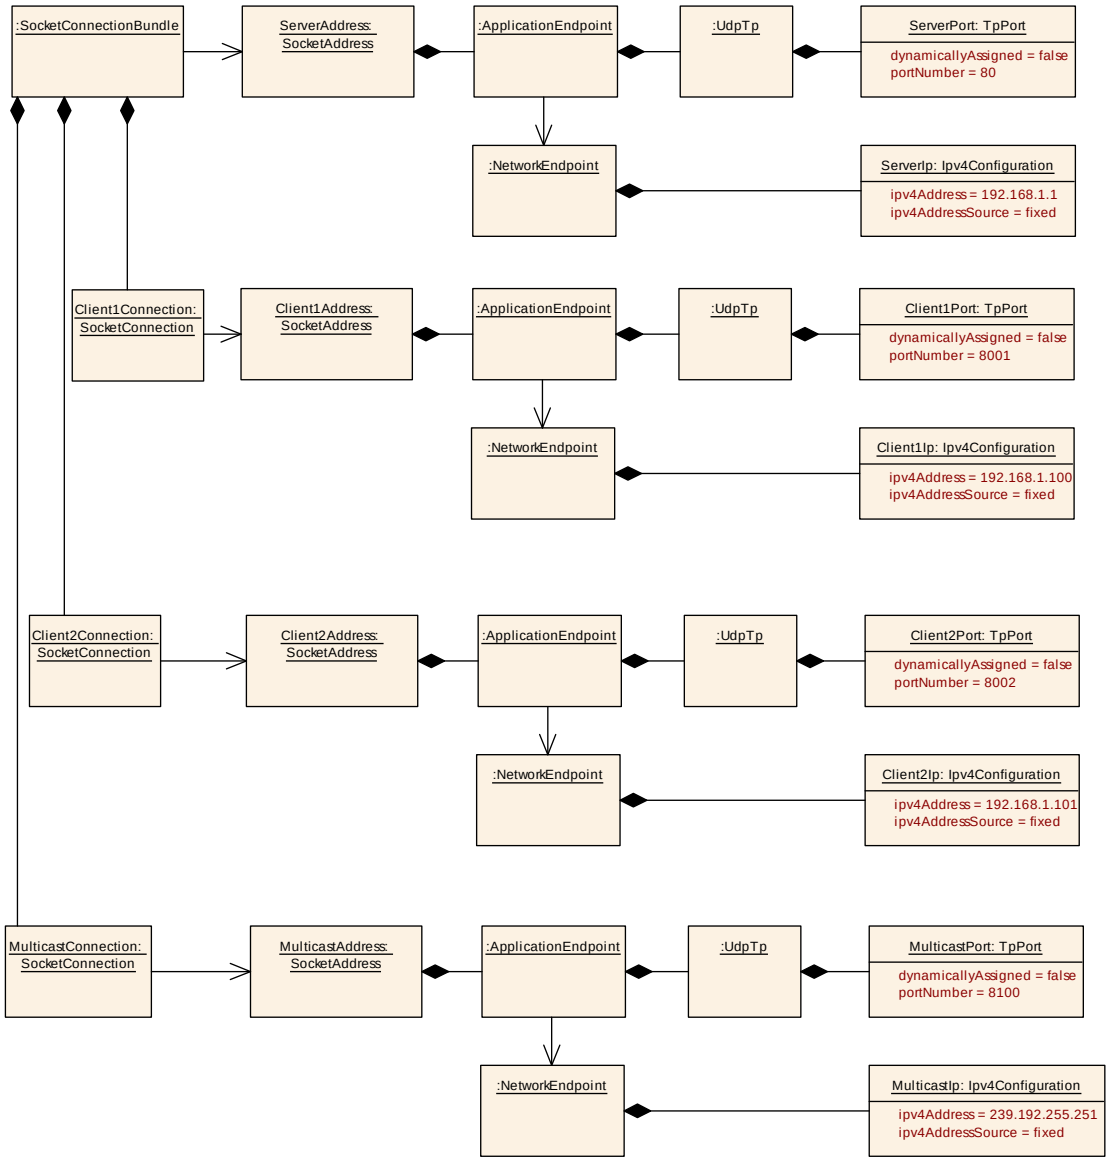

Figure 6.36: Base Addressing Example

Enumeration	**RuntimeAddressConfigurationEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication
Note	This enumeration defines the protocol to be used to obtain the address information.
Literal	***Description***
none	Static configuration is used to obtain the address information. **Tags:** atp.EnumerationValue=0
sd	AUTOSAR Service Discovery is used to obtain the address information. **Tags:** atp.EnumerationValue=1

Table 6.126: RuntimeAddressConfigurationEnum

Class	**SocketConnectionIpduIdentifier**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication			
Note	An Identifier is required in case of one port per ECU communication where multiple Pdus are transmitted over the same connection. If only one IPdu is transmitted over the connetion this attribute can be ignored.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
headerId	PositiveInteger	0..1	attr	If multiple Pdus are transmitted over the same connection this headerId can be used to distinguish between the different Pdus.
pduCollection PduTimeout	TimeValue	0..1	attr	Defines the timeout in seconds the PDU collection shall be transmitted at the latest after this PDU has been put into the buffer.
pduCollection Semantics	PduCollection SemanticsEnum	0..1	attr	Specifies if the referenced PduTriggering shall be collected using a queued (i.e. all PDU instances) or last-is-best (i.e. only the last PDU instance) semantics. If this attribute is not present the behavior of "queued" is assumed.
pduCollection Trigger	PduCollectionTrigger Enum	0..1	attr	Defines whether the referenced Pdu contributes to the triggering of the socket transmission if Pdu collection is enabled for this socket.
pduTriggering	PduTriggering	0..1	ref	Reference to a Pdu that is mapped to a socket connection.
routingGroup	SoAdRoutingGroup	*	ref	Reference to RoutingGroups that can be enabled or disabled.

Table 6.127: SocketConnectionIpduIdentifier

Class	**SocketAddress**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication			
Note	This meta-class represents the ability represent a socket address towards the rest of the meta-model. The actual semantics of the represented socket address, however, is contributed by aggregation of ApplicationEndpoint.

[constr_3297] Prohibition of usage of `allowedTcpOptions` in Udp `SocketConnections` ⌈ Udp `SocketConnections` shall not define `allowedTcpOptions`. A Udp `SocketConnection` points to a `SocketAddress` in the role `clientPort` and relates to an `ApplicationEndpoint` that has a `UdpTp` defined as `tpConfiguration`. ⌋*()*

6.7.5.1 Example for usage of SocketConnectionBundles and SocketConnections

Figure 6.39 shows a setup with a Service that contains two Events (Event1 and Event2) and one Method. In AUTOSAR an Event is described as a VariableDataPrototype in a SenderReceiverInterface. A ClientServerOperation in a ClientServerInterface is used for the description of the Method.

The Service is provided on Ecu1 by the ApplicationEndpoint with Udp Port 30490. Two unicast ApplicationEndpoints with ConsumedServiceInstances exist for the service. TpPort.dynamicallyAssigned is set to true for both these ApplicationEndpoints. With the ConsumedEventGroup on Ecu2 a subscription to EventGroup1 that contains Event1 is described. With the ConsumedEventGroup on Ecu3 a subscription to EventGroup2 that contains Event1 and Event2 is described.

In addition a multicast ApplicationEndpoint is defined. The ConsumedServiceInstance on Ecu3 contains a second ConsumedEventGroup that refers to the multicast ApplicationEndpoint to allow Ecu3 to receive Event1 also via multicast.

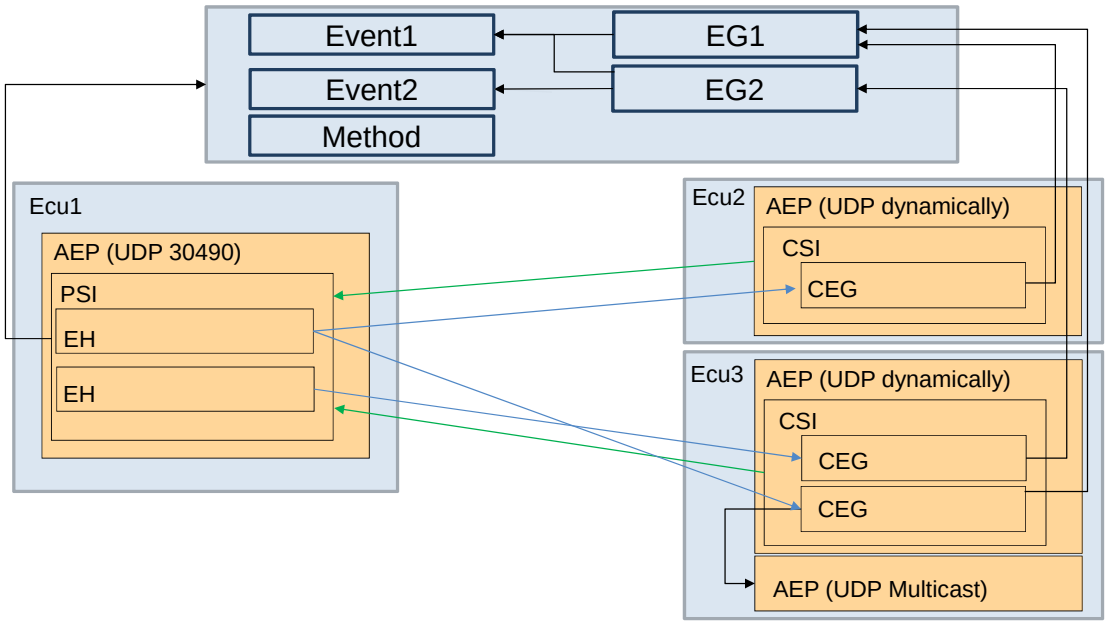

Figure 6.39: Example for a communication with dynamic configured clients

Figure 6.40 shows the resulting description with one SocketConnectionBundle and three SocketConnections. According to the settings of the attributes clientPortFromConnectionRequest, runtimePortConfiguration, clientIpAddrFromConnectionRequest and runtimeIpAddressConfiguration the superset of all available Events is distributed to all available clients. This allows the movement of ConsumedServiceInstances between client Ecus without any changes in the configuration. Therefore the SocketConnectionIpduIdentifiers resulting from the Events are assigned directly to the SocketConnectionBundle.

SocketConnectionIpduIdentifiers resulting from the Method (Call and Return) can be assigned to the SocketConnectionBundle in case that the LdCom module is used as defined by [TPS_SYST_02150]. It means that every client is able to call methods that are provided by the ProvidedServiceInstance. Please note that the relationship between the call and return is achieved by means of COM Stack meta data items attached to the Pdus by the Socket Adapter. With this meta data information it is possible to assign the call Pdu and the corresponding return Pdu to the applicable SocketConnection. Please also see [TPS_SYST_02151].

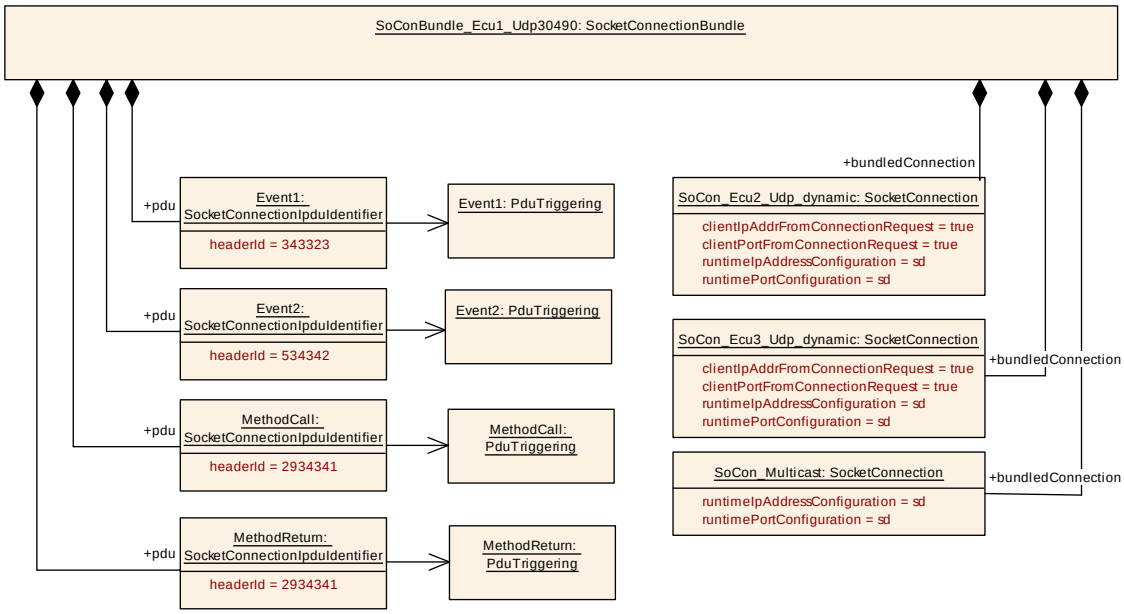

Figure 6.40: Assignment of SocketConnectionIpduIdentifiers to SocketConnectionBundles

In case that the Com module is used the SocketConnectionIpduIdentifiers resulting from the Method (Call and Return) shall be assigned to the SocketConnection as [TPS_SYST_02161] defines. This is shown in example 6.41.

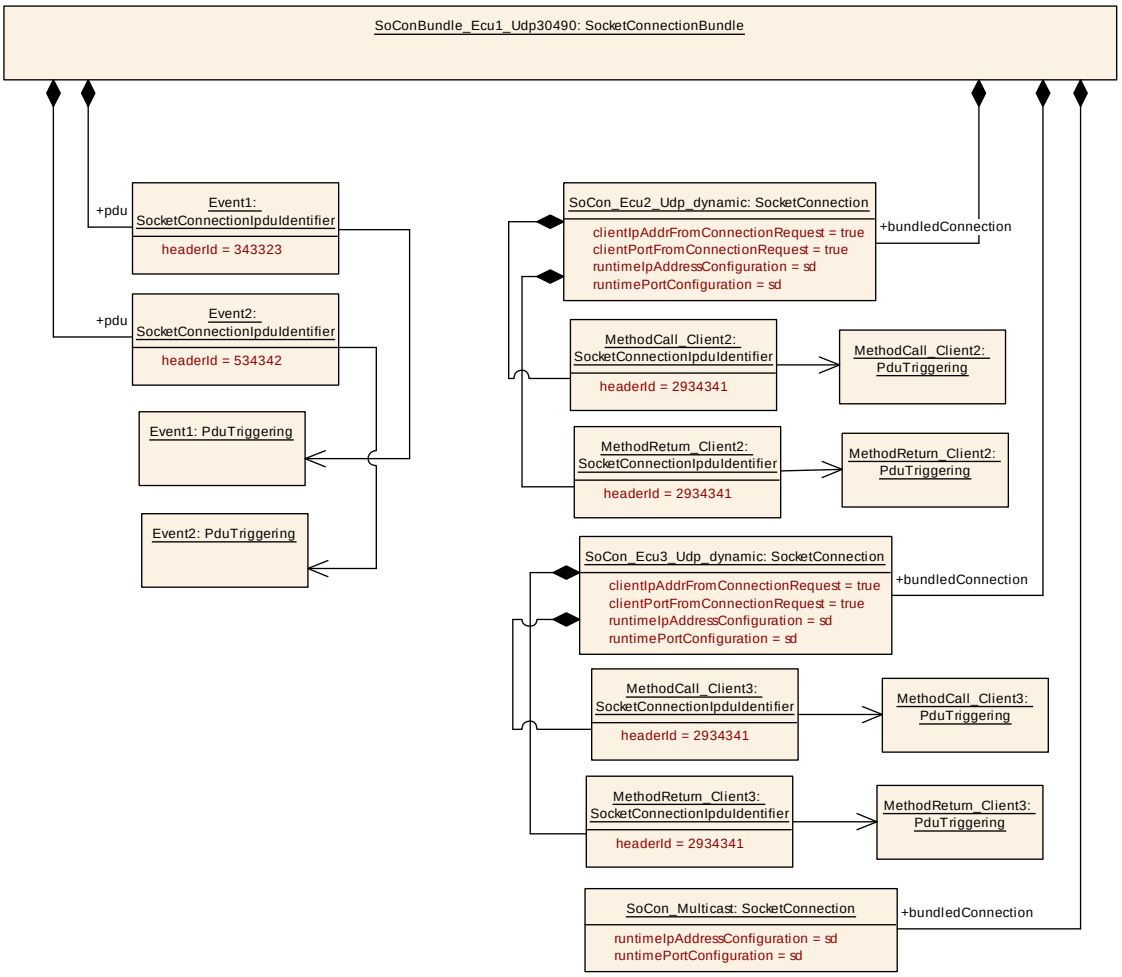

Figure 6.41: Assignment of SocketConnectionIpduIdentifiers to SocketConnectionBundles and SocketConnections

[TPS_SYST_02081] PduTriggering that is used for ClientServer Communication ⌈ A PduTriggering that points to an ISignalIPdu that aggregates an ISignalToIPduMapping that in turn references an ISignal that refers to a ClientServerToSignalMapping.callSignal or to ClientServerToSignalMapping.returnSignal is designated as PduTriggering that is used for ClientServer Communication. ⌋*()*

Figure 6.42 shows a similar setup as figure 6.39. The difference is that the TpPorts of the clients are configured statically and multicast is not used in the example. Due to the static configuration the SocketConnectionIpduIdentifiers resulting from the Events are assigned to the SocketConnections. The client on Ecu2 gets the SocketConnectionIpduIdentifier from Event1 since the client is subscribed to EventGroup1. The client on Ecu3 gets the SocketConnectionIpduIdentifiers from Event1 and Event2.

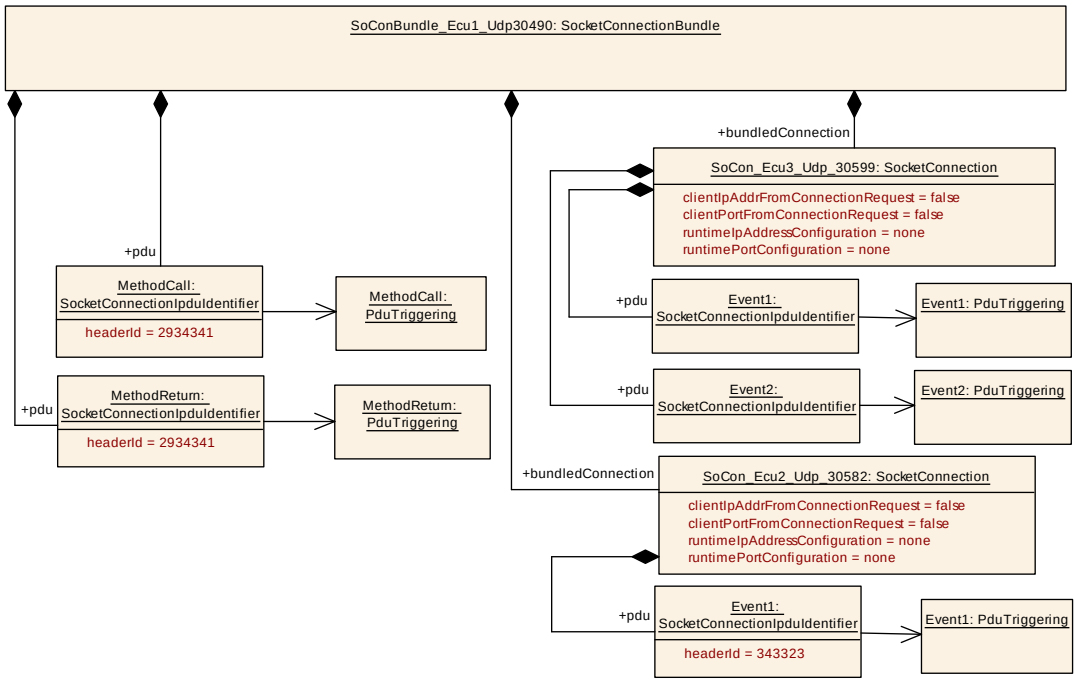

Figure 6.42: Assignment of SocketConnectionIpduIdentifiers to SocketConnections

6.7.5.2 EthernetFrameType based communication

Please note that with the introduction of the TcpIp Bsw module the description of AbstractEthernetFrames is no longer necessary for configuration of the AUTOSAR TcpIp Stack.

Nevertheless it may be useful to describe the Ethernet FrameType based communication in some cases, e.g. if a new basic software module like Ieee1722Tp is used that is located above the EthDrv and parallel to the TcpIp Stack. The Ethernet FrameType based communication shall be described without Pdus.

[constr_3113] AbstractEthernetFrame shall not have a PduToFrameMapping
⌈ It is not allowed to map Pdus into AbstractEthernetFrames. ⌋()

6.7.5.3 Ethernet Addressing examples

This chapter describes how the attributes `clientPortFromConnectionRequest`, `runtimePortConfiguration`, `clientIpAddrFromConnectionRequest` and `runtimeIpAddressConfiguration` are used. Please note that the `System` with `category` `SYSTEM_EXTRACT` is a subset of a `System` with `category` `SYSTEM_DESCRIPTION` and that no data shall be altered during the creation of the System Extract. This is also true for the values of attributes that are described in this chapter.

For more details about the `System` with `category` `SYSTEM_EXTRACT` see chapter 11.

[TPS_SYST_02007] Usage of `SocketConnection` attributes in the unicast server view ⌈ In the unicast server view the following rules apply:

- If the clientPortFromConnectionRequest is set to false the Server obtains the client Port from the static configuration.
- If the clientPortFromConnectionRequest is set to true the Server obtains the client Port from the information contained in the connection request at runtime.
- If the clientIpAddrFromConnectionRequest is set to false the Server obtains the client IpAddress from the static configuration.
- If the clientIpAddrFromConnectionRequest is set to true the Server obtains the client IpAddress from the information contained in the connection request at runtime.

⌋()

[TPS_SYST_02008] Usage of SocketConnection attributes in the unicast client view ⌈
In the unicast client view the following rules apply:

- If the runtimePortConfiguration attribute is set to none the client obtains the server port from the static configuration.
- If the runtimePortConfiguration attribute is set to other than none the client uses the respective protocol to retrieve the port information at runtime.
- If the runtimeIpAddressConfiguration attribute is set to none the client obtains the server IpAddress from the static configuration.
- If the runtimeIpAddressConfiguration attribute is set to other than none the client uses the respective protocol to retrieve the IpAddress information at runtime.

⌋()

Figure 6.44 shows two unicast use cases. In the first one (Client1Connection) both client and server configure port number and IP address of the remote partner at configuration time. In the second use case (Client2Connection) both client and server configure port number and IP address of the remote partner at runtime. The server obtains the clients IP address and port number when a connection request from any client arrives. The client obtains the server port number and IP address at runtime via the Sd service.

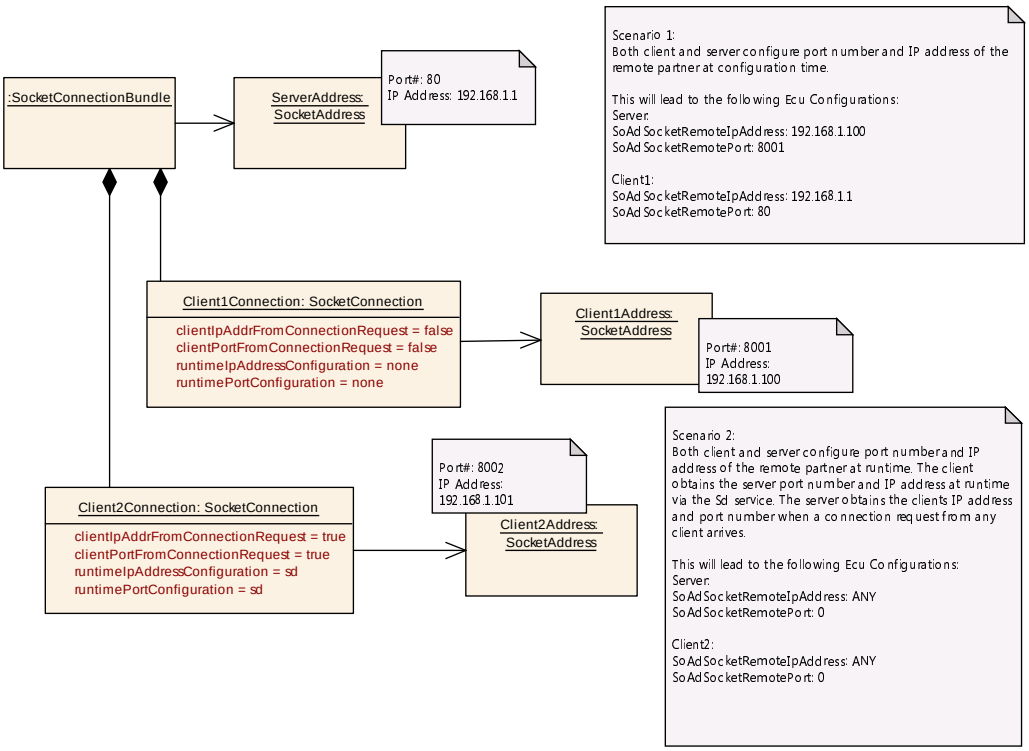

Figure 6.44: Unicast use cases 1 and 2

Figure 6.45 shows two additional unicast use cases. In the first one the server obtains the clients IP address and port number when a connection request from any client arrives. The client configures port number and IP address of the server at configuration time. In use case 4 the server obtains the clients IP address and port number at configuration time. The client obtains the server port number and IP address at runtime via the Sd service.

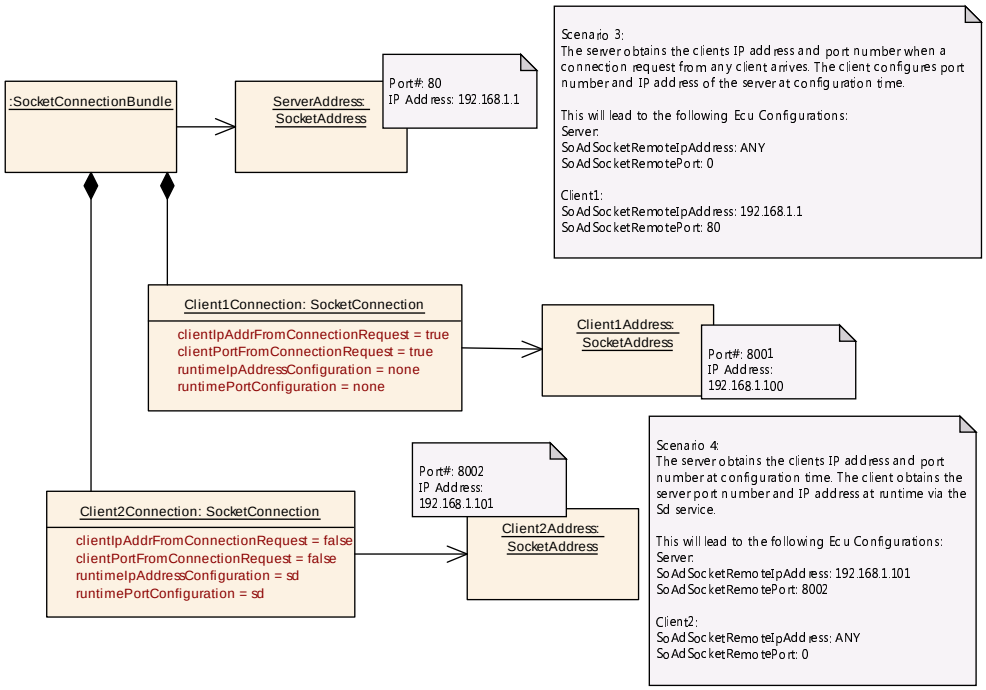

Figure 6.45: Unicast use cases 3 and 4

[TPS_SYST_02009] Usage of `SocketConnection` attributes in the multicast server view ⌈ In the multicast server view the following rules apply:

- The `clientPortFromConnectionRequest` attribute is ignored. The server always configures the remote port information based on the associated `ApplicationEndpoint` of the `clientPort`.
- The `clientIpAddrFromConnectionRequest` attribute is ignored. The server always configures the remote IpAddress information based on the associated `networkEndpoint` of the `clientPort`.

⌋()

[TPS_SYST_02010] Usage of `SocketConnection` attributes in the multicast client view ⌈ In the multicast client view the following rules apply:

- If the `runtimePortConfiguration` attribute is set to none the client obtains its own port information from the static configuration based on the associated `ApplicationEndpoint` of the `clientPort`.
- If the `runtimePortConfiguration` attribute is set to other than none the client uses the respective protocol to retrieve its own port information at runtime.
- If the `runtimeIpAddressConfiguration` attribute is set to none the client obtains its own port information from the static configuration based on the associated `networkEndpoint` of the `clientPort`.

- If the runtimeIpAddressConfiguration attribute is set to other than none the client uses the respective protocol to retrieve its own port information at runtime.

⌋()

Figure 6.46 shows two multicast use cases. In the first one the Multicast address is known at configuration time: The server configures the remote port number and IP address statically. Every addressed client adds a local address entry to its TcpIp configuration and configures the local port number statically.

The second use case shows a dynamic assignment of a Multicast address: The Server announces the Multicast address and port number it uses via Sd. Interested clients reconfigure the appropriate entries in their local configuration tables at runtime.

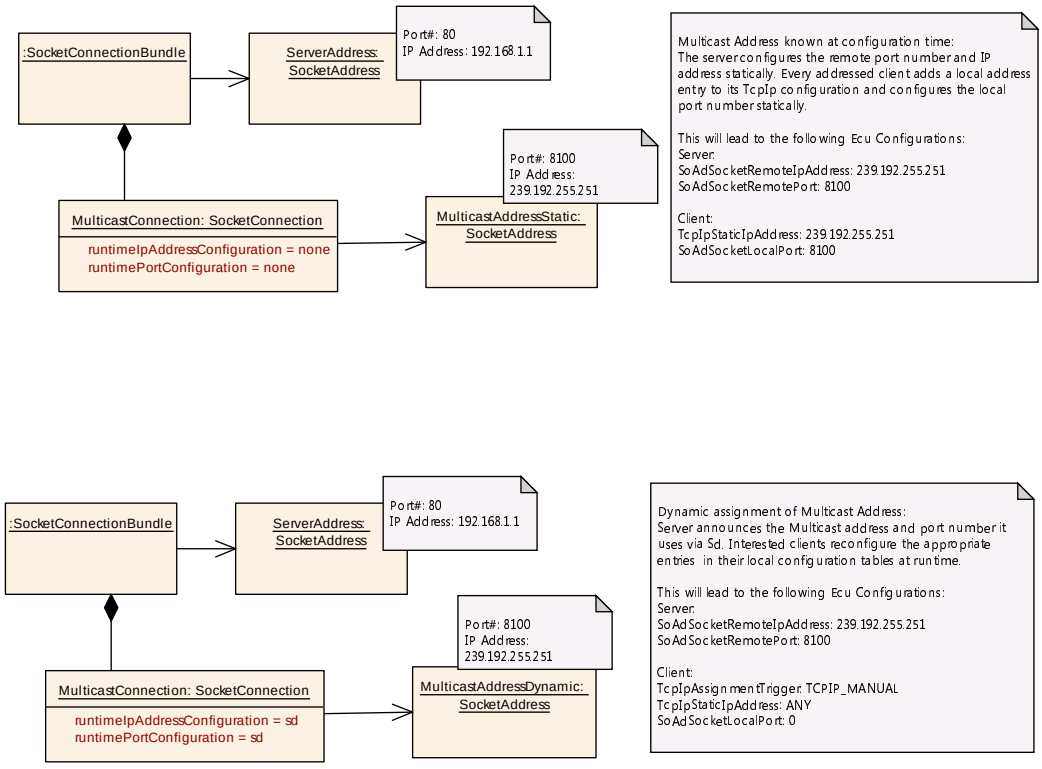

Figure 6.46: Multicast Example

6.7.5.4 Network Endpoint

The NetworkEndpoint defines the network addressing. The network endpoint may have a priority and a FQDN (Fully Qualified Domain Name) that is used for the Service Discovery (e.g. some.example.host.). A NetworkEndpoint may be referenced by several EthernetCommunicationConnectors in the role networkEndpoint.

[TPS_SYST_01090] valid NetworkEndpoint ⌈ To build a valid NetworkEndpoint a MacMulticastConfiguration with a reference to a MacMulticastGroup or

an IP configuration (Ipv4Configuration or Ipv6Configuration) needs to be defined. ⌋(*RS_SYST_00039*)

The reference to the MacMulticastGroup is needed for the mapping of IP multicast to MAC multicast.

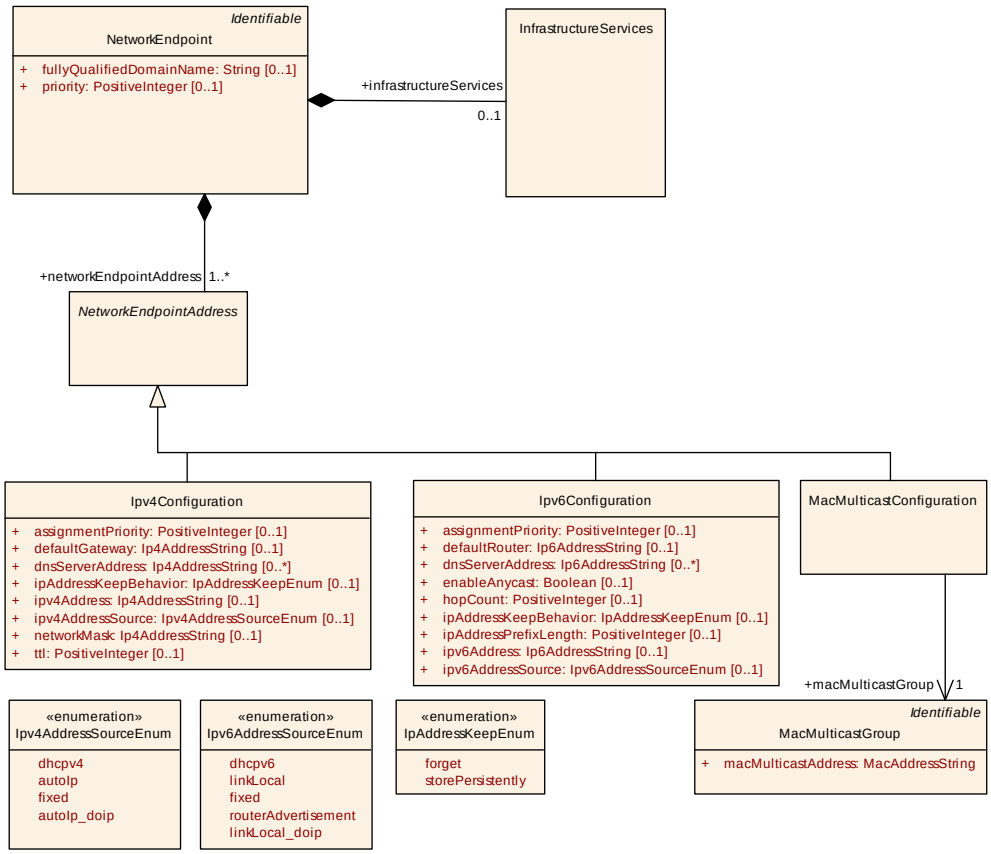

Figure 6.47: Network Endpoint

[TPS_SYST_01088] **NetworkEndpoint priority** ⌈ The priority at the NetworkEndpoint shall be used as Ethernet Header information together with the vlanIdentifier. If defined the priority overwrites the defaultPriority that is defined in the VlanMembership. ⌋(*RS_SYST_00039*)

The attribute NetworkEndpoint.networkEndpointAddress defines whether an **IPv4**, **IPv6** or **MAC multicast** address is assigned to the NetworkEndpoint.

[TPS_SYST_03002] Keep behavior of DHCP clients ⌈ The attribute IpAddressKeepEnum defines for the DHCP client to either

- persistently store an assigned IP address (storePersistently) after it has been fetched, or
- learn it after each start-up (forget).

⌋(*RS_SYST_00052*)

Class	NetworkEndpoint

Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dynamically Assigned	Boolean	0..1	attr	Indicates whether the source port is dynamically assigned.

▽

△

Class	**TpPort**			
portNumber	PositiveInteger	0..1	attr	Port Number.

Table 6.171: TpPort

[constr_3063] Usage of `portNumber` and `dynamicallyAssigned` with value "true" is mutually exclusive ⌈ Usage of `portNumber` and `dynamicallyAssigned` with value "true" is mutually exclusive. ⌋*()*

In addition the `ApplicationEndpoint` may operate as a provider (`ProvidedServiceInstance`) or a consumer (`ConsumedServiceInstance`) of a service instance. A service represents a functional entity that offers an interface. This interface can be provided by multiple Software Components within an AUTOSAR ECU. To create the connection to the VFB View the service instances in the System Template may be referenced by one or several different `DataMapping`s.

A `ProvidedServiceInstance` may receive requests from the `ConsumedServiceInstance` and respond to them. This is realized by `ClientServerOperation`s.

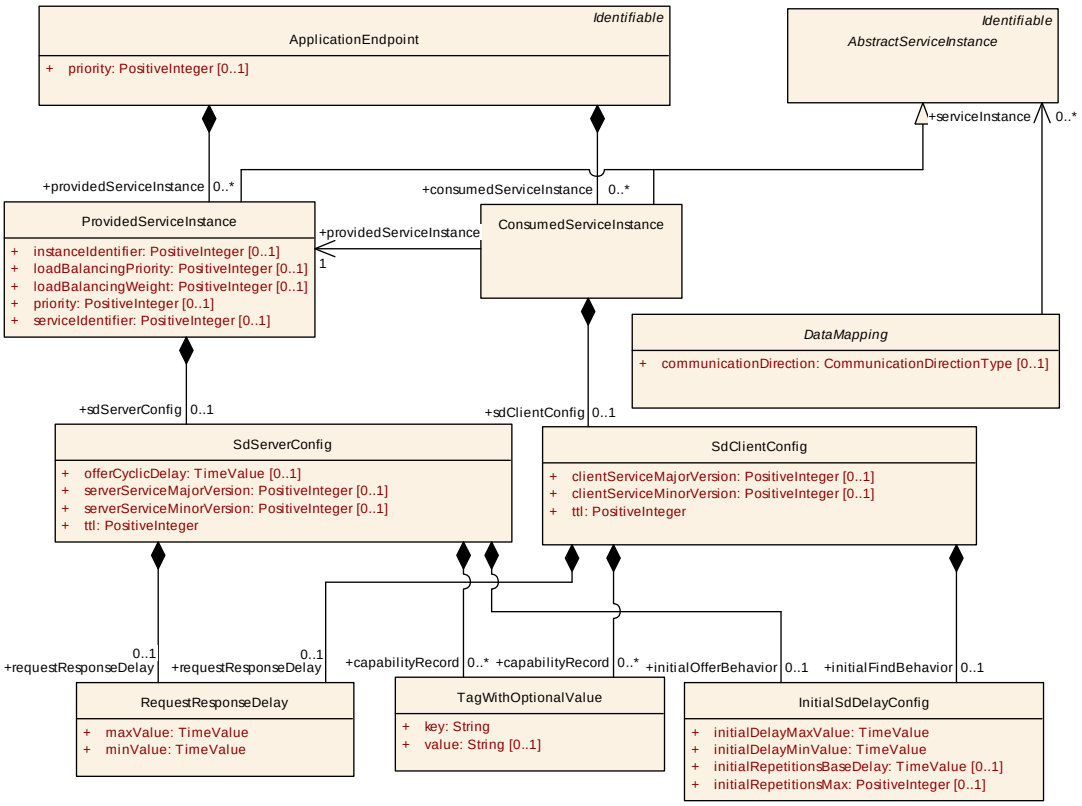

Figure 6.50: Service Instances

Class	**AbstractServiceInstance** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Provided and Consumed Ethernet Service Instances that are available at the ApplicationEndpoint.

Subclasses	ConsumedServiceInstance, ProvidedServiceInstance			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
routingGroup	SoAdRoutingGroup	*	ref	The ServiceDiscovery module is able to activate and deactivate the PDU routing from and to TCP/IP-sockets.

Table 6.172: AbstractServiceInstance

Class	**ProvidedServiceInstance**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Service instances that are provided by the ECU that is connected via the ApplicationEndpoint to a CommunicationConnector.			
Base	*ARObject*, *AbstractServiceInstance*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
EventHandler	EventHandler	*	aggr	Collection of event callback configurations.
instance Identifier	PositiveInteger	0..1	attr	Instance identifier. Can be used for e.g. service discovery to identify the instance of the service.
loadBalancing Priority	PositiveInteger	0..1	attr	Defines the value to be used for load balancing priority in the service offer. Lower value means higher priority.
loadBalancing Weight	PositiveInteger	0..1	attr	Defines the value to be used for load balancing weight in the service offer. Higher value means higher probability to be chosen.
priority	PositiveInteger	0..1	attr	Defines the frame priority where values from 0 (best effort) to 7 (highest) are allowed.
sdServerConfig	SdServerConfig	0..1	aggr	Service Discovery Server configuration.
serviceIdentifier	PositiveInteger	0..1	attr	Service ID. Shall be unique within one system to allow service discovery.

Table 6.173: ProvidedServiceInstance

Class	**ConsumedServiceInstance**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Service instances that are consumed by the ECU that is connected via the ApplicationEndpoint to a CommunicationConnector.			
Base	*ARObject*, *AbstractServiceInstance*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
consumedEvent Group	ConsumedEventGroup	*	aggr	Selection of event-groups the consumer wants to subscribe for.
providedService Instance	ProvidedService Instance	1	ref	Reference to a providedServiceInstance to get the instanceIdentifier information from the ProvidedService Instance.
sdClientConfig	SdClientConfig	0..1	aggr	Service Discovery Client configuration.

Table 6.174: ConsumedServiceInstance

[constr_3379] Multiple `SocketAddress` entries with the same IP Address, Protocol and Port in the context of a given `EcuInstance` ⌈ If there are two or more `SocketAddress` entities within the scope of one `SoAdConfig` in the scope of one

EcuInstance that have the same static (fixed at configuration time) IP Address, Protocol and Port in the aggregated ApplicationEndpoint and NetworkEndpoint, (e.g., 192.168.1.1, Tcp and 10000, respectively), ProvidedServiceInstance/ConsumedServiceInstance may only be defined in the ApplicationEndpoint aggregated by one of these SocketAddress entries. ⌋*()*

Rationale for [constr_3379]: There can be only one representation of the ProvidedServiceInstance/ConsumedServiceInstance using the given IP Address, Protocol and Port in the Sd module configuration in the context of a given EcuInstance. Therefore, defining ProvidedServiceInstance/ConsumedServiceInstance in more than one ApplicationEndpoint would in this case require a merge of potentially different attribute values of the ProvidedServiceInstances and/or ConsumedServiceInstances in the System Description and such situation is avoided by this constraint.

[constr_3456] Existence of ProvidedServiceInstance.loadBalancingPriority and ProvidedServiceInstance.loadBalancingWeight ⌈ The attributes ProvidedServiceInstance.loadBalancingPriority and ProvidedServiceInstance.loadBalancingWeight shall either not exist or be defined both. ⌋ *()*

[TPS_SYST_01108] ProvidedServiceInstance priority ⌈ The priority in the ProvidedServiceInstance shall be used as Ethernet Header information together with the vlanIdentifier. If defined the priority overwrites the defaultPriority that is defined in the VlanMembership, the priority that is defined at the NetworkEndpoint and the priority that is defined at the ApplicationEndpoint. ⌋ *(RS_SYST_00039)*

The AUTOSAR BswM is used to aggregate the availability of all entities which make up a service instance. When all entities are available, the service instance as such is available. When a service instance becomes available the SD Module will usually send an announcement message in order for other ECUs to learn about the availability and the location (IP address and UDP or TCP Port) of that service instance.

The Service Discovery configuration in the System Template is described by the two elements SdServerConfig and SdClientConfig:

Class	**SdServerConfig**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Server configuration for Service-Discovery.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***

▽

△

Class	**SdServerConfig**			
capability Record	TagWithOptionalValue	*	aggr	A sequence of records to store arbitrary name/value pairs conveying additional information about the named service. Capability records shall only be existing if the respective SdServerConfig is composed by a ProvidedService Instance (see constr_3259).
initialOffer Behavior	InitialSdDelayConfig	0..1	aggr	Controls offer behavior of the server.
offerCyclicDelay	TimeValue	0..1	attr	Optional attribute to define cyclic offers. Cyclic offer is active, if the delay is set (in seconds).
request ResponseDelay	RequestResponseDelay	0..1	aggr	Maximum/Minimum allowable response delay to entries received by multicast in seconds.
serverService MajorVersion	PositiveInteger	0..1	attr	Major version number of the Service.
serverService MinorVersion	PositiveInteger	0..1	attr	Minor version number of the Service.
ttl	PositiveInteger	1	attr	Time to live. Shall be a positive value (sInt32).

Table 6.175: SdServerConfig

Class	SdClientConfig			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Client configuration for Service-Discovery.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
capability Record	TagWithOptionalValue	*	aggr	A sequence of records to store arbitrary name/value pairs conveying additional information about the named service. Capability records shall only be existing if the respective SdClientConfig is composed by a ConsumedService Instance (see constr_3260).
clientService MajorVersion	PositiveInteger	0..1	attr	Major version number of the Service.
clientService MinorVersion	PositiveInteger	0..1	attr	Minor version number of the Service.
initialFind Behavior	InitialSdDelayConfig	0..1	aggr	Controls initial find behavior of clients.
request ResponseDelay	RequestResponseDelay	0..1	aggr	Maximum/Minimum allowable response delay to entries received by multicast in seconds.
ttl	PositiveInteger	1	attr	TTL for Request and Subscribe messages.

Table 6.176: SdClientConfig

[TPS_SYST_02096] Sending of ANY finds for minor version ⌈ AUTOSAR SD is only able to **send** ANY finds for Minor Version. This is done by using the value 0xffffffff (any) for `SdClientConfig.clientServiceMinorVersion`. ⌋*()*

Class	TagWithOptionalValue			
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::TagWithOptionalValue			
Note	A tagged value is a combination of a tag (key) and a value that gives supplementary information that is attached to a model element. Please note that keys without a value are allowed. **Tags:** atp.ManifestKind=ServiceInstanceManifest			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
key	String	1	attr	Defines a key.
value	String	0..1	attr	Defines the corresponding value.

Table 6.177: TagWithOptionalValue

[TPS_SYST_01094] allowed `key`/`value` `TagWithOptionalValue` combinations ⌈ The following `key`/`value` combinations are supported:

- `key` present, with no `value` (e.g. "passreq" -> password required for this service)
- `key` present, with empty `value` (e.g. "PlugIns=" -> server supports plugins, but none are presently installed)
- `key` present, with non-empty `value` (e.g. "PlugIns=JPEG,MPEG2,MPEG4")

⌋*(RS_SYST_00039)*

[constr_3259] Allowed use of SdServerConfig.capabilityRecord ⌈ A TagWithOptionalValue element may only be composed (in role capabilityRecord) by a SdServerConfig element if the respective SdServerConfig element is directly composed by a ProvidedServiceInstance element in role sdServerConfig. A TagWithOptionalValue element must not be composed (in role capabilityRecord) by an SdServerConfig element if the respective SdServerConfig element is composed by an EventHandler element in role sdServerConfig. ⌋()

[constr_3260] Allowed use of SdClientConfig.capabilityRecord ⌈ A TagWithOptionalValue element may only be composed (in role capabilityRecord) by a SdClientConfig element if the respective SdClientConfig element is directly composed by a ConsumedServiceInstance element in role sdClientConfig. A TagWithOptionalValue element must not be composed (in role capabilityRecord) by an SdClientConfig element if the respective SdClientConfig element is composed by a ConsumedEventGroup element in role sdClientConfig. ⌋()

Class	**RequestResponseDelay**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Time to wait before answering the query. **Tags:** atp.ManifestKind=ServiceInstanceManifest			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
maxValue	TimeValue	1	attr	Maximum allowable response delay to entries received by multicast in seconds.
minValue	TimeValue	1	attr	Minimum allowable response delay to entries received by multicast in seconds.

Table 6.178: RequestResponseDelay

Class	**InitialSdDelayConfig**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	This element is used to configure the offer behavior of the server and the find behavior on the client. **Tags:** atp.ManifestKind=ServiceInstanceManifest			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
initialDelayMaxValue	TimeValue	1	attr	Max Value in seconds to delay randomly the first offer (if aggregated by SdServerConfig) or the transmission of a find message (if aggregated by SdClientConfig).
initialDelayMinValue	TimeValue	1	attr	Min Value in seconds to delay randomly the first offer or the transmission of a find message (if aggregated by Sd ClientConfig).
initial RepetitionsBaseDelay	TimeValue	0..1	attr	The base delay for offer repetitions (if aggregated by Sd ServerConfig) or find repetitions (if aggregated by Sd ClientConfig). Successive find messages have an exponential back off delay.
initial RepetitionsMax	PositiveInteger	0..1	attr	Describes the maximum amount of offer repetitions (if aggregated by SdServerConfig) or the maximum amount of find repetitions (if aggregated by SdClientConfig).

Table 6.179: InitialSdDelayConfig

There are use cases where the client wants to be notified about events that occur at the server without the need to make an explicit request. A ConsumedServiceInstance can subscribe to event groups that are modeled as ConsumedEventGroups. All event/notification consumers (ConsumedEventGroups) are referenced by the EventHandler.

[constr_3201] eventGroupIdentifier in ConsumedEventGroups that are referenced by the same EventHandler ⌈ In case that an EventHandler refers to several ConsumedEventGroups all these ConsumedEventGroups shall have the same eventGroupIdentifier. ⌋*()*

The notification is described in the VFB view with VariableDataPrototypes that are sent via a sender/receiver interface from the ProvidedServiceInstance to all event/notification consumers. At the ConsumedServiceInstance the event-callback is processed and has normally a void return.

The availability of a consumer to receive events is configured with the SdClientConfig. The configuration of the EventHandler with the Service Discovery server attributes (SdServerConfig) ensures that the EventHandler knows which consumers are available and to which consumer the notification can be sent.

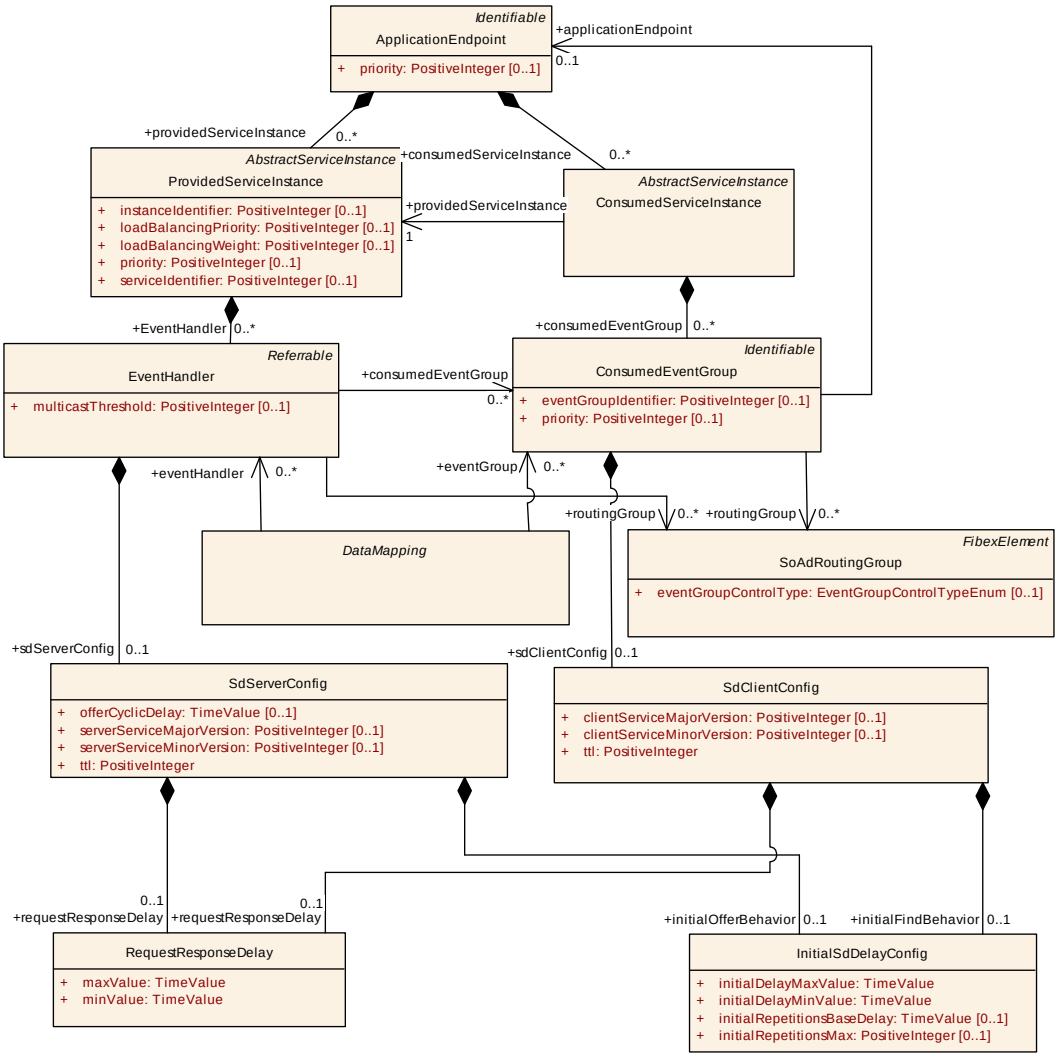

Figure 6.51: Event Handler

Class	**EventHandler**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	Configures the outbound application endpoint a server uses to call a clients callback. Only required if the source TpPort is not dynamically assigned. If a consumed event group is referenced the configuration is only valid for this relation.			
Base	*ARObject*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
consumedEvent Group	ConsumedEventGroup	*	ref	All consumers of the event are referenced here.
multicast Threshold	PositiveInteger	0..1	attr	Specifies the number of subscribed clients that trigger the server to change the transmission of events to multicast. If configured to 0 only unicast will be used. If configured to 1 the first client will be already served by multicast. If configured to 2 the first client will be server with unicast ▽

▽

△

Class	EventHandler			
				△ and as soon as the second client arrives both will be served by multicast. This does not influence the handling of initial events, which are served using unicast only.
routingGroup	SoAdRoutingGroup	*	ref	The ServiceDiscovery module is able to activate and deactivate the PDU routing for events.
sdServerConfig	SdServerConfig	0..1	aggr	Server configuration parameter for Service-Discovery.

Table 6.180: EventHandler

Class	ConsumedEventGroup			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology			
Note	A Service may have event groups which can be consumed. A service consumer has to subscribe to the corresponding event-group. After the subscription the event consumer takes the role of a server and the event provider that of a client.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
application Endpoint	ApplicationEndpoint	0..1	ref	Defines the application endpoint where the events of the event group are received in case of multicast reception.
eventGroup Identifier	PositiveInteger	0..1	attr	EventGroup ID. Shall be unique within one system to allow service discovery.
priority	PositiveInteger	0..1	attr	Defines the frame priority where values from 0 (best effort) to 7 (highest) are allowed.
routingGroup	SoAdRoutingGroup	*	ref	The ServiceDiscovery module is able to activate and deactivate the PDU routing for receiving events.
sdClientConfig	SdClientConfig	0..1	aggr	The readiness to receive events is defined by the Service Discovery of the ConsumedEventGroup. The Event Handler shall know about this announcement to decide about the submission of events. Therefore the Event Handler may be configured with Service-Discovery Client attributes.

Table 6.181: ConsumedEventGroup

[TPS_SYST_02113] Usage of `ConsumedEventGroup.applicationEndpoint` reference ⌈ `ConsumedEventGroup.applicationEndpoint` shall only be used if the `eventGroup` is consumed via IP multicast. In this case the `ConsumedEventGroup` shall point to an `ApplicationEndpoint` that defines the AEP Multicast. In all other cases this reference can be ignored. ⌋*()*

Figure 6.52 shows a scenario where Events are provided only via IP Unicast. On the Consumer side the `ConsumedServiceInstance` with the `ConsumedEventGroup` is aggregated by an `ApplicationEndpoint` that points to a `NetworkEndpoint` that describes an IP Unicast Address. The `ConsumedEventGroup.applicationEndpoint` is not used in this scenario and therefore the client will not receive any data over IP Multicast.

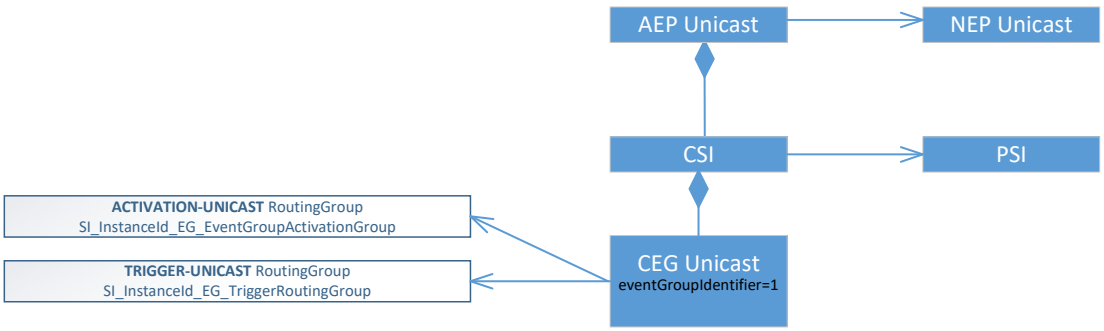

Figure 6.52: Example for ConsumedEventGroup modeling in case that the Events are received only via IP Unicast

Figure 6.53 shows a scenario where Events may be provided via IP Unicast or via IP Multicast. On the Consumer side the `ConsumedServiceInstance` with the `ConsumedEventGroup` is aggregated by an `ApplicationEndpoint` that points to a `NetworkEndpoint` that describes an IP Unicast Address. Over this IP Unicast Address the Method Calls and Responses may be communicated. The Service Provider may also transport events over this Address until the `multicastThreshold` is reached. The `ConsumedEventGroup` in this scenario points to a second `ApplicationEndpoint` that refers to a `NetworkEndpoint` that defines an IP Multicast Address. So in this scenario the Client is prepared to receive Events via IP Unicast and via IP Multicast. This is also shown by the referenced `activationUnicast` and `activationMulticast` `SoAdRoutingGroup`s.

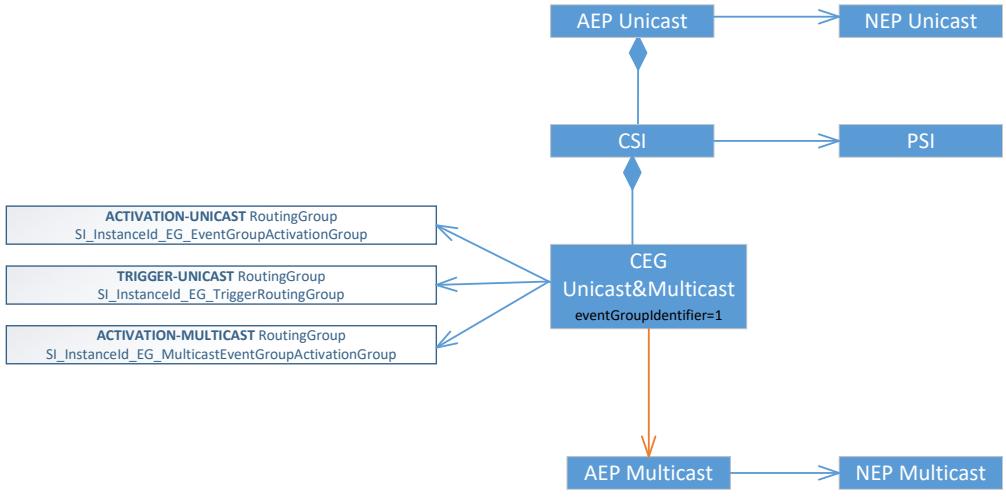

Figure 6.53: Example for ConsumedEventGroup modeling that allow the Client to receive Events over IP Uncast and IP Multicast

Figure 6.54 shows a scenario where two different `ConsumedEventGroup`s are defined, both with own `eventGroupIdentifier`s. The Client is prepared to receive

Events of ConsumedEventGroup with eventGroupIdentifier = 1 over IP Unicast only since this ConsumedEventGroup is not using the ConsumedEventGroup.applicationEndpoint reference. The Client is prepared to receive Events of ConsumedEventGroup with eventGroupIdentifier = 2 over IP Multicast only since for this ConsumedEventGroup the applicationEndpoint reference is defined and in addition the ConsumedEventGroup is pointing only to a activationMulticastSoAdRoutingGroup.

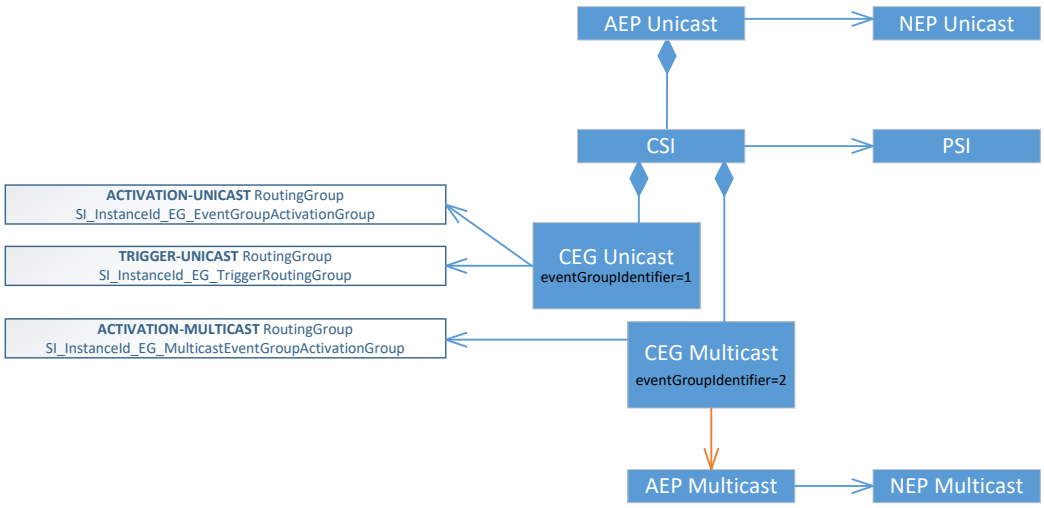

Figure 6.54: Example for ConsumedEventGroup modeling in case that one CEG is defined to receive Events only via IP Unicast and a second CEG is defined to receive Events only via IP Multicast

[constr_3262] ConsumedEventGroup.eventGroupIdentifier is mandatory ⌈ The ConsumedEventGroup.eventGroupIdentifier is mandatory. ⌋*()*

[constr_3457] Uniqueness of ConsumedEventGroup.eventGroupIdentifier in the scope of a ConsumedServiceInstance ⌈ Each ConsumedEventGroup that is aggregated by a ConsumedServiceInstance shall have a unique eventGroupIdentifier value in the scope of the aggregating ConsumedServiceInstance. ⌋ *()*

[TPS_SYST_01151] DataMapping reference to an EventHandler ⌈ If the DataMapping references an EventHandler in the role eventHandler the serviceInstance reference to the ProvidedServiceInstance or ConsumedServiceInstance that aggregates this specific EventHandler could be skipped. ⌋*()*

[TPS_SYST_01152] DataMapping reference to a ConsumedEventGroup ⌈ If the DataMapping references a ConsumedEventGroup in the role eventGroup the serviceInstance reference to the ProvidedServiceInstance or ConsumedServiceInstance that aggregates this specific ConsumedEventGroup could be skipped. ⌋*()*

[TPS_SYST_02014] ConsumedEventGroup priority ⌈ The priority in the ConsumedEventGroup shall be used as Ethernet Header information together with the vlanIdentifier. If defined the priority overwrites the defaultPriority that is defined in the VlanMembership, the priority that is defined at the NetworkEndpoint and the priority that is defined at the ApplicationEndpoint. ⌋()

6.7.5.6 Service Discovery Server Configuration

For every ProvidedServiceInstance on a Server different phases are existing where a suitable Service Discovery Message sending behavior is configurable:

- Down
- Available
  - Initial Wait Phase
  - Repetition Phase
  - Main Phase

[TPS_SYST_02174] Initial Wait Phase configuration for a ProvidedServiceInstance ⌈ The Initial Wait Phase for a ProvidedServiceInstance is configured with the initialOfferBehavior and the two attributes initialDelayMinValue and initialDelayMaxValue. ⌋()

When a calculated random timer based on these min and max values expires, the first OfferService message will be sent out.

[TPS_SYST_02175] Repetition Wait Phase configuration for a ProvidedServiceInstance ⌈ The Repetition Wait Phase for a ProvidedServiceInstance is configured with the initialOfferBehavior and the two attributes initialRepetitionsMax and initialRepetitionsBaseDelay. ⌋()

If the Repetition Phase is entered the Service Discovery waits for the initialRepetitionsBaseDelay and transmits an OfferService entry. If the amount of sent OfferService entries reaches initialRepetitionsMax the Main Phase will be entered.

If initialRepetitionsMax is configured to 0 the Repetition Phase will be skipped and the Main Phase will be entered.

[TPS_SYST_02176] Main Phase configuration for a ProvidedServiceInstance ⌈ The Main Phase for a ProvidedServiceInstance is configured with the offerCyclicDelay attribute of SdServerConfig. ⌋()

The OfferService entry will be sent cyclically with an interval that is defined by the value of attribute offerCyclicDelay.

[TPS_SYST_02177] TTL for Offer Service Entries ⌈ The lifetime of a ProvidedServiceInstance is configurable with the ttl attribute of SdServerConfig. ⌋()

If the time that is configured by ttl expires the ProvidedServiceInstance will no longer be offered.

[TPS_SYST_02178] Servers RequestResponseDelay for received FindService entries ⌈ The Server will delay the OfferService answer to a received multicast FindService entry by the configured SdServerConfig.requestResponseDelay.

The actual delay will be randomly chosen between the maxValue and minValue. ⌋()

SOME/IP allows to specify additional information about the ProvidedServiceInstance with the Configuration Option that allows to transport arbitrary configuration strings (key/value pairs). This allows to encode additional information like the name of a service or its configuration.

[TPS_SYST_02179] Server Capability Records ⌈ A Capability Record (key/value pair) on the Server side is configurable with the capabilityRecord and the two attributes key and value. ⌋()

[TPS_SYST_02180] Usage of EventHandler.multicastThreshold ⌈ The switching between IP-Unicast and IP-Multicast is guided by the server with the EventHandler.multicastThreshold attribute and by the number of subscribed clients to the EventHandler.

The Server will change the transmission of events to Multicast if the multicastThreshold of the corresponding EventHandler is reached by the number of subscribed clients. If the number of subscribed clients is smaller then the configured multicastThreshold, the transmission of events takes place via unicast communication. ⌋()

[TPS_SYST_02181] TTL for SubscribeEventGroupAck Entries ⌈ The lifetime of an event subscription acknowledge message is configurable with the ttl attribute of SdServerConfig that is aggregated by an EventHandler in the role sdServerConfig.

If the time that is configured by ttl expires the event subscription acknowledge is canceled. ⌋()

[TPS_SYST_02182] Servers RequestResponseDelay for received SubscribeEventGroup entries ⌈ The Server will delay the SubscribeEventGroupAck answer to a received SubscribeEventGroup message that was triggered by a multicast ServiceOffer by the configured SdServerConfig.requestResponseDelay that is aggregated by the EventHandler in the role sdServerConfig.

The actual delay will be randomly chosen between the maxValue and minValue. ⌋()

[constr_3401] Usage of SdServerConfig attributes in ProvidedServiceInstance and EventHandler ⌈ Usage of SdServerConfig attributes in ProvidedServiceInstance and EventHandler shall follow the restrictions given in Table 6.182. ⌋()

	Element	
Attributes	**ProvidedServiceInstance**	**EventHandler**
serverServiceMinorVersion	1	0
serverServiceMajorVersion	1	0
initialOfferBehavior.initialDelayMinValue	1	0
initialOfferBehavior.initialDelayMaxValue	1	0
initialOfferBehavior.initialRepetitionsBaseDelay	0..1	0
initialOfferBehavior.initialRepetitionsMax	1	0
offerCyclicDelay	0..1	0
requestResponseDelay.maxValue	1	1
requestResponseDelay.minValue	1	1
ttl	1	1
capabilityRecord.key	0..1	0
capabilityRecord.value	0..1	0

Table 6.182: Allowed usage of `SdServerConfig` attributes in `ProvidedServiceInstance` and `EventHandler`

6.7.5.7 Service Discovery Client Configuration

For every `ConsumedServiceInstance` on a Client different phases are existing:

- Down
- Requested
  - Initial Wait Phase
  - Repetition Phase
  - Main Phase

[TPS_SYST_02183] Initial Wait Phase configuration for a `ConsumedServiceInstance` ⌈ The Initial Wait Phase for a `ConsumedServiceInstance` is configured with the `initialFindBehavior` and the two attributes `initialDelayMinValue` and `initialDelayMaxValue`. ⌋*()*

If a calculated random timer based on these min and max values expires the first `FindService` entry will be sent out. When the calculated random timer expires and no `OfferService` is received the Repetition Phase will be entered.

[TPS_SYST_02184] Repetition Wait Phase configuration for a `ConsumedServiceInstance` ⌈ The Repetition Wait Phase for a `ConsumedServiceInstance` is configured with the `initialFindBehavior` and the two attributes `initialRepetitionsMax` and `initialRepetitionsBaseDelay`. ⌋*()*

If the Repetition Phase is entered, the Service Discovery waits the `initialRepetitionsBaseDelay` and sends an `FindService` entry.

If the amount of sent FindService entries reaches initialRepetitionsMax and no OfferService is received the Main Phase will be entered. In the Main Phase no further FindService entries are sent by the client.

[TPS_SYST_02185] TTL for Find Service Entries ⌈ The lifetime of a ConsumedServiceInstance is configurable with the ttl attribute of SdClientConfig. ⌋()

If the time that is configured by ttl expires the FindService entry shall be considered not existing.

SOME/IP allows to specify additional information about the ConsumedServiceInstance with the Capability Record that allows to transport arbitrary configuration strings (key/value pairs).

This allows to encode additional information like the name of a service or its configuration.

[TPS_SYST_02186] Client Capability Records ⌈ A Capability Record (key/value pair) on the Client side is configurable with the capabilityRecord and the two attributes key and value. ⌋()

The ConsumedServiceInstance aggregates a ConsumedEventGroup in the role consumedEventGroup that allows to define service instance specific configuration settings for a SOME/IP EventGroup.

[TPS_SYST_02187] SdClientConfig.ttl for SubscribeEventGroup Entries ⌈ The lifetime of an event subscription is configurable with the ttl attribute of SdClientConfig that is aggregated by an ConsumedEventGroup in the role sdClientConfig.

If the time that is configured by ttl expires the event subscription is canceled. ⌋()

[TPS_SYST_02188] Clients RequestResponseDelay for received ServiceOffer entries ⌈ The Client will delay the SubscribeEventGroup answer to a received ServiceOffer message by the configured SdClientConfig.requestResponseDelay that is aggregated by the ConsumedEventGroup in the role sdClientConfig.

The actual delay will be randomly chosen between the maxValue and minValue. ⌋()

[constr_3400] Usage of SdClientConfig attributes in ConsumedServiceInstance and ConsumedEventGroup ⌈ Usage of SdClientConfig attributes in ConsumedServiceInstance and ConsumedEventGroup shall follow the restrictions given in Table 6.183. ⌋()

Table 6.183: Allowed usage of SdClientConfig attributes in ConsumedServiceInstance and ConsumedEventGroup

6.7.5.8 Service Discovery Message Configuration

If Service Discovery is used a Service Discovery instance is configurable on an EcuInstance for a certain VLAN using the respecting ApplicationEndpoint.

[TPS_SYST_02116] Modeling of Service Discovery Pdus ⌈ A Service Discovery Instance configuration requires:

- one Tx Pdu that is modeled as GeneralPurposePdu with category = SD
- one Rx Pdu (unicast reception) that is modeled as GeneralPurposePdu with category = SD
- one Rx Pdu (multicast reception) that is modeled as GeneralPurposePdu with category = SD

⌋()

[TPS_SYST_02117] Length of GeneralPurposePdu with category SD ⌈ The length attribute for GeneralPurposePdus with category = SD shall be set to at most EthernetCommunicationConnector.maximumTransmissionUnit - 36 Byte. ⌋()

[TPS_SYST_02118] Rules for the creation of references to IPduPorts from PduTriggerings related to GeneralPurposePdus with category SD ⌈ For each GeneralPurposePdu with category SD a PduTriggering needs to be defined on the EthernetPhysicalChannel (VLAN) that is referenced from the CommunicationConnector of the EcuInstance on which the Service Discovery Instance is configured:

- the PduTriggering for the Tx GeneralPurposePdu references the OUT IPduPort of the EcuInstance
- the PduTriggering for the Rx GeneralPurposePdu (unicast reception) references the IN IPduPort of the EcuInstance

- the PduTriggering for the Rx GeneralPurposePdu (multicast reception) references the IN IPduPort of the EcuInstance

⌋()

[TPS_SYST_02119] SocketConnectionBundles for GeneralPurposePdus with category SD ⌈ UDP Sockets are used for the transmission of SD messages and the following SocketConnectionBundles shall be created:

- SocketConnectionBundle A with one SocketConnection for all Tx and unicast Rx GeneralPurposePdus
- SocketConnectionBundle B with one SocketConnection for multicast Rx GeneralPurposePdu

The PduTriggering for the Tx GeneralPurposePdu and the PduTriggering for the Rx GeneralPurposePdu (unicast reception) are assigned to the SocketConnectionBundle A. The PduTriggering for Rx Multicast GeneralPurposePdu is assigned to the SocketConnectionBundle B. ⌋()

[constr_3267] PduTriggerings in Service Discovery SocketConnectionBundles ⌈ SD SocketConnectionBundles defined in [TPS_SYST_02119] shall only refer to PduTriggerings which point to GeneralPurposePdus of category SD. ⌋()

[constr_3268] Service Discovery SocketConnectionBundle serverPort reference to a TpPort ⌈ Each SD SocketConnectionBundle defined in [TPS_SYST_02119] shall refer with the serverPort reference to an ApplicationEndpoint (via SocketAddress) with a Udp Port. ⌋()

[constr_3269] Service Discovery SocketConnection clientPort reference to a TpPort ⌈ Each SD SocketConnection defined in [TPS_SYST_02119] shall refer with the clientPort reference to an ApplicationEndpoint (via SocketAddress) with Udp Port dynamicallyAssigned set to true. ⌋()

[constr_3270] Service Discovery SocketConnection clientPort reference to an IP Address ⌈ Each SD SocketConnection defined in [TPS_SYST_02119] shall refer with the clientPort reference to a NetworkEndpoint (via SocketAddress.applicationEndpoint) with IP Address ANY (IPv4 or IPv6). ⌋()

[constr_3271] clientIpAddrFromConnectionRequest and clientPortFromConnectionRequest settings for SD SocketConnections ⌈ SD SocketConnections defined in [TPS_SYST_02119] shall define clientIpAddrFromConnectionRequest set to true and clientPortFromConnectionRequest set to true. ⌋()

[constr_3272] SocketConnectionIpduIdentifier.headerId setting for SD SocketConnectionBundles ⌈ The SocketConnectionIpduIdentifier.headerId of SD SocketConnectionBundles defined in [TPS_SYST_02119] shall always be set to 0xFFFF8100 for SD messages. ⌋()

[constr_3273] Service Discovery multicast SocketConnectionBundle's serverPort reference to an IP Address ⌈ The SD SocketConnectionBundle

for multicast defined in [TPS_SYST_02119] (SocketConnectionBundle B) shall refer via the serverPort to a SocketAddress representing a Multicast Address. ⌋()

[constr_3274] Service Discovery unicast SocketConnectionBundle's serverPort reference to an IP Address ⌈ The SD SocketConnectionBundle for unicast defined in [TPS_SYST_02119] (SocketConnectionBundle A) shall refer via the serverPort to a SocketAddress representing a Unicast Address. ⌋()

[TPS_SYST_02120] runtimeIpAddressConfiguration and runtimePortConfiguration settings for SD SocketConnections ⌈ For SD SocketConnections defined in [TPS_SYST_02119] the values of runtimeIpAddressConfiguration and runtimePortConfiguration can be omitted and, if exist, shall be ignored. ⌋()

6.7.5.9 Diagnostics over IP

DoIpTpConnection describes a unidirectional connection between a doIpSourceAddress and a doIpTargetAddress and the exchange of DcmIPdus between the PduR and DoIP. The DiagnosticConnection with references to DoIpTpConnections defines the related request and response messages.

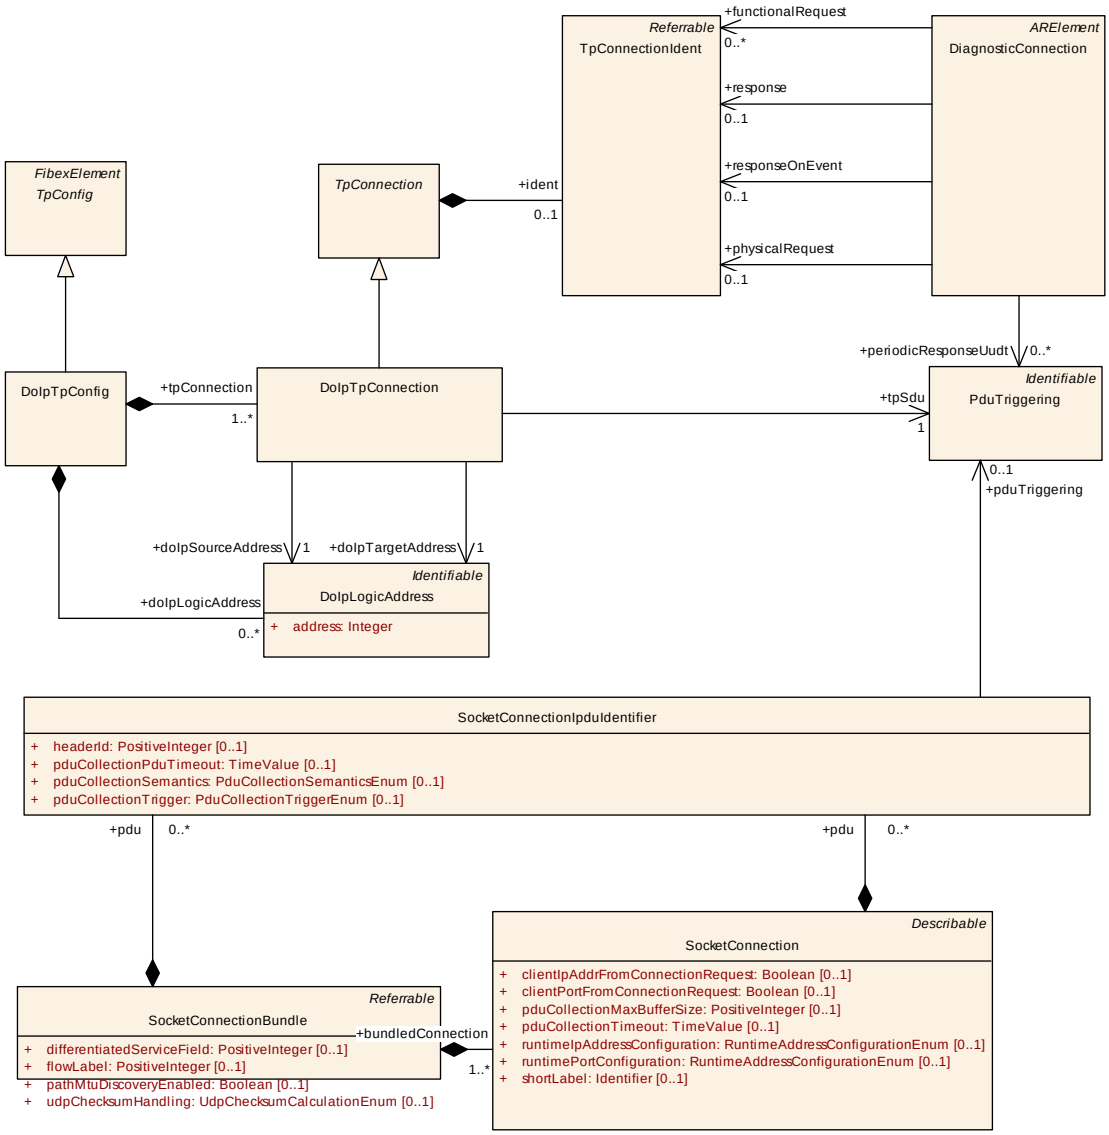

Figure 6.55: DoIP

Table 6.186: DoIpLogicAddress

[constr_3212] Limitation of DoIpTpConnection.tpSdu ⌈ `DoIpTpConnection` shall only reference `PduTriggering`s of `DcmIPdu`s in the role `tpSdu`. ⌋*()*

The diagnostic data is routed from the DoIP module to SoAd and back. The communication of diagnostic data via TCP/UDP is described with `SocketConnectionBundle`s and `SocketConnection`s that contain `SocketConnectionIpduIdentifier`s with references to `PduTriggering`s of `GeneralPurposePdu`s of category DoIP. Please note that there is no connection between `GeneralPurposePdu`s of category DoIP and the `DoIpTpConnection` in the System Description. The DoIP module evaluates the header of an incoming `GeneralPurposePdu` and knows from the included information the further processing.

6.7.5.10 Transport Layer Security

AUTOSAR supports the configuration of *Transport Layer Security* for the information exchange between two *sockets*[3] that are modeled as `ApplicationEndpoint`s.

Please note that currently the DTLS (***Datagram*** *Transport Layer Security*) variant is not supported on the *AUTOSAR classic platform*.

[3]TLS connections are - by design - limited to a 1:1 pattern. A 1:n or n:1 communication pattern is not supported by TLS

It is a common use case that only one end of a TLS-based connection is actually modeled in an AUTOSAR model. The other end may exist off-board, e.g. as a diagnostic tester.

It is therefore important that the modeling does not rely on or imply knowledge about both ends of such a TLS-based connection.

An AUTOSAR model that only describes one end of the communication is positively required to work, independently of the availability of a formal modeling of the other end.

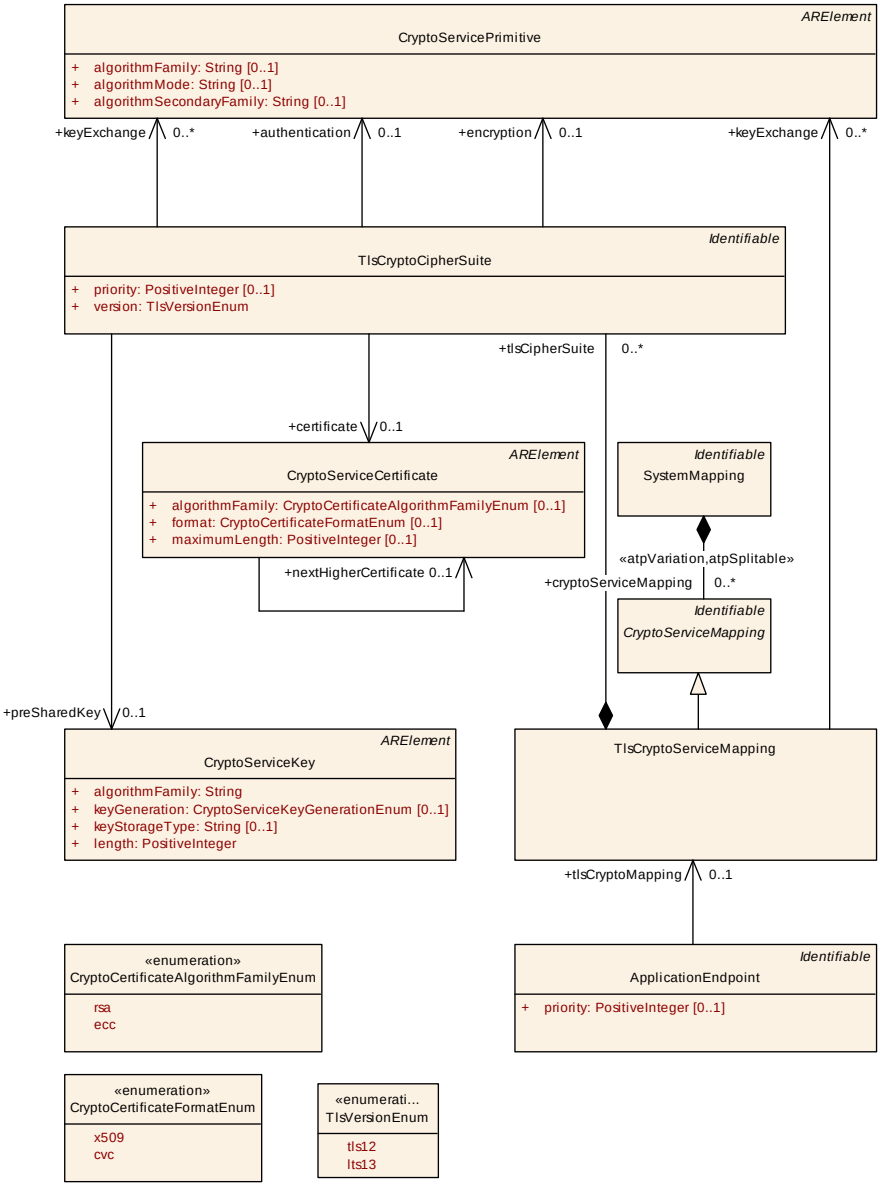

Figure 6.56: Modeling of crypto infrastructure for *Transport Layer Security*

Attribute	***Type***	***Mul.***	***Kind***	***Note***
keyExchange	CryptoServicePrimitive	*	ref	This reference identifies the shared(i.e. applicable for each of the aggreated cipher suites) crypto service primitive for the execution of key exchange during the handshake phase. **Tags:** atp.Status=draft
tlsCipherSuite	TlsCryptoCipherSuite	*	aggr	This aggregation represents the collection of supported cipher suites. **Tags:** atp.Status=draft

Table 6.187: TlsCryptoServiceMapping

A TLS connection is established between two communication endpoints that assume the dedicated roles of *server* and *client*.

These roles cannot be swapped while the connection exists, i.e. a *server* remains the *server* for the full amount of time the connection exists.

[TPS_SYST_05029]{DRAFT} **Semantics of meta-class `TlsCryptoServiceMapping`** ⌈ As a sub-class of `CryptoServiceMapping`, meta-class `TlsCryptoServiceMapping` has the ability to collect the TLS-related configuration aspects from either the perspective of the client or the server.

In the case of TLS, the collection boils down to the aggregation of meta-class `TlsCryptoCipherSuite` in the role `tlsCipherSuite` plus the ability (by means of the role `keyExchange`) to define handshake properties that are shared for each of the aggregated `tlsCipherSuite`s. ⌋*()*

[constr_1670]{DRAFT} **Prohibition of usage of `tlsCryptoMapping` in case of UDP socket connections** ⌈ A `TlsCryptoServiceMapping` may only be referenced by an `ApplicationEndpoint` in the role `tlsCryptoMapping` if that `ApplicationEndpoint` aggregates a `TcpTp` in the role `tpConfiguration`. ⌋*()*

[constr_1671]{DRAFT} **Supported values of `TlsCryptoServiceMapping.category`** ⌈ The only supported values of attribute `TlsCryptoServiceMapping.category` are:

- **`TLS_SERVER`**: the `TlsCryptoServiceMapping` assumes the role of the *server* in the TLS connection.
- **`TLS_CLIENT`**: the `TlsCryptoServiceMapping` assumes the role of the *client* in the TLS connection.

⌋*()*

The usage of a cipher suite in the context of setting up a TLS connection is formalized by means of meta-class TlsCryptoCipherSuite.

[TPS_SYST_05030]{DRAFT} **Semantics of TlsCryptoCipherSuite** ⌈ The creation of a TLS connection requires the usage of a suite of cryptographic operations in specific roles, also known as a *cipher suite*.

Meta-class TlsCryptoCipherSuite represents a given cipher suite for a TLS connection. TlsCryptoCipherSuite references meta-class CryptoServicePrimitive in three dedicated roles that represent the steps of the creation of a TLS connection.

More specifically, the cryptographic operations for setting up a TLS connection involve the following steps:

- **Key exchange**: these CryptoServicePrimitives may be used for the handshake phase of the TLS connection. Different alternatives exist for executing this phase and therefore the multiplicity of this reference is 0..*.
- **Authentication** of communication partners during the operational phase of the TLS connection. This part is similar to freshness calculation for SecOC-based communication. For this purpose a single CryptoServicePrimitive is used on each end of the communication.
- **Encryption** of content exchanged between the communication partners that have established the TLS connection. For this purpose a single CryptoServicePrimitive is used on each end of the communication.

⌋()

x509	The certificate is created in X.509 format. **Tags:** atp.EnumerationValue=1

Table 6.191: CryptoCertificateFormatEnum

The existence of a certificate is required for the *server* role in order to be able to authenticate itself towards the *client*.

[constr_1672]{DRAFT} **Existence of `TlsCryptoCipherSuite.certificate` in the *server* role** ⌈ **Either of** the references to

- `CryptoServiceCertificate` in the role `TlsCryptoCipherSuite.certificate`
- `CryptoServiceKey` in the role `TlsCryptoCipherSuite.preSharedKey`

shall exist if the `CryptoServiceCertificate` is referenced from a `TlsCryptoServiceMapping` that has attribute `category` set to the value `TLS_SERVER`. ⌋ *()*

The *client* may also use a certificate to authenticate itself to the *server*, but this is not mandatory. If this option is not used then other documented approaches for completing the handshake phase is foreseen for the specific case.

[TPS_SYST_05033]{DRAFT} **Existence of `TlsCryptoCipherSuite.certificate` in the *client* role** ⌈ **Either of** the references to

- `CryptoServiceCertificate` in the role `TlsCryptoCipherSuite.certificate`
- `CryptoServiceKey` in the role `TlsCryptoCipherSuite.preSharedKey`

may exist if the `CryptoServiceCertificate` is referenced from a `TlsCryptoServiceMapping` that has attribute `category` set to the value `TLS_CLIENT`.

If the reference exists then the *client* intends to authenticate itself against the server during the handshake phase using a cryptographic certificate. ⌋*()*

6.8 Transport Layer

In AUTOSAR, the Transport Layer has two main purposes: The segmentation and reassembly of messages that are too long to fit into one frame on the underlying communication cluster, and the re-use of fixed frame identifiers for different message content.

According to the AUTOSAR Layered Software Architecture [15], each type of communication cluster has its own definition of the Transport Layer. Consequently, the peculiarities of the cluster types are addressed in the System Template by having different detailed models for FlexRay, CAN, LIN and J1939. However, all models are embedded into the communication model: They use specialized classes of TpConfig as a root element into the TP configuration.

[TPS_SYST_01099] Context of TpConfig ⌈ A TpConfig element is existing always in the context of exactly one CommunicationCluster. ⌋*(RS_SYST_00014)*

All Transport Layers will take IPdus as input elements, which will be transferred in the form of one or more NPdus. A TpConnection (FlexrayTpConnection, CanTpConnection, LinTpConnection, J1939TpConnection) identifies a connection link between different communication nodes and routes the Pdus between them.

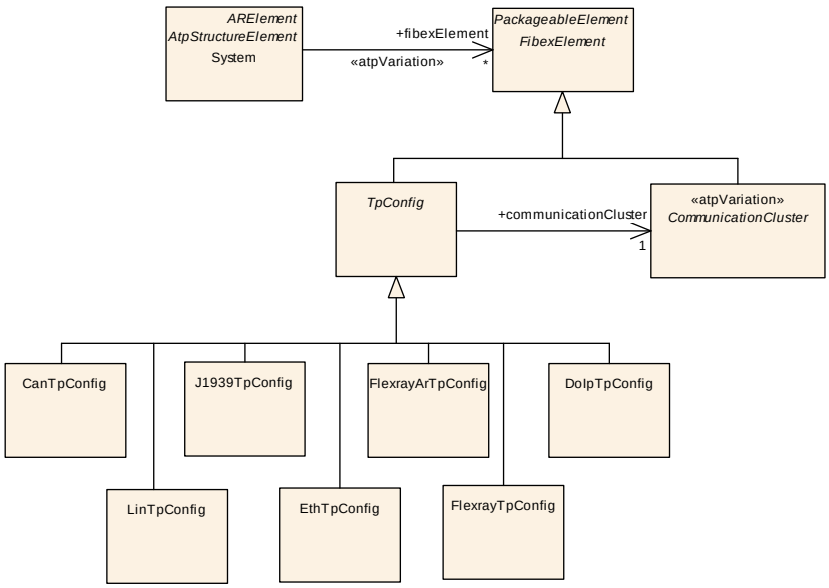

Figure 6.57: Transport Layer Overview

Examples in chapter 6.8.9 and chapter 6.8.10 illustrate the usage of the TP model.

Class	***TpConfig*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	Contains all configuration elements for AUTOSAR TP.			
Base	*ARObject*, *CollectableElement*, *FibexElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Subclasses	CanTpConfig, DoIpTpConfig, EthTpConfig, FlexrayArTpConfig, FlexrayTpConfig, J1939TpConfig, LinTp Config, SomeipTpConfig			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
communication Cluster	CommunicationCluster	1	ref	A TpConfig is existing always in the context of exactly one CommunicationCluster.

Table 6.192: TpConfig

Class	**TpAddress**			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	An ECUs TP address on the referenced channel. This represents the diagnostic Address.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
tpAddress	Integer	1	attr	An ECUs TP address on the referenced channel. This represents the diagnostic Address.

Table 6.193: TpAddress

[constr_3025] Usage of `NPdu`s in `TpConnections` ⌈ In case several `TpConnections` use the same Frame ID for their communication needs only one `NPdu` element per Frame Id shall exist. This constraint applies for all supported AUTOSAR transport protocols (CanTp, LinTp, FrTp, FrArTp and J1939Tp). ⌋*()*

Note: Depending on the capabilities of the Basic Software implementations of Tp and Interface the ECU Configuration of the respective BSW Modules may utilize more communication elements (`NPdu`s).

Example for an allowed System Template description where the same FrameId is used by two different `TpConnection`s:

```
TpConnection1 --(dataPdu)--> NPdu1 ----> FrameId1
TpConnection1 --(flowControl)--> NPdu2 ----> FrameId2
TpConnection2 --(dataPdu)--> NPdu2 ----> FrameId2
TpConnection2 --(flowControl)--> NPdu1 ----> FrameId1
```

The following Ecu configuration with additional `NPdu`s can still be derived from the above system description:

```
TpConnection1 --(dataPdu)--> NPdu1 ----> FrameId1
TpConnection1 --(flowControl)--> NPdu2 ----> FrameId2
TpConnection2 --(dataPdu)--> NPdu3 ----> FrameId2
TpConnection2 --(flowControl)--> NPdu4 ----> FrameId1
```

[constr_3090] `TpSdu` transmission on a `PhysicalChannel` ⌈ The `IPdu` that is referenced by a `TpConnection` in the role `tpSdu` shall be referenced by exactly one `PduTriggering` aggregated on the `PhysicalChannel` of the `TpConnection`. ⌋*()*

The corresponding PduTriggering for the IPdu referenced from the TpConnection in the role tpSdu is aggregated by the PhysicalChannel which points to the same CommunicationConnector which is referenced by TpNode that this TpConnection points to.

Please note that with [constr_3090] the multiple transmission of the same TpSdu over a specific channel using TP is only possible if several IPdus and TpConnections are created.

6.8.1 Transport Layer Routing

The transformations in the TP modules take a significant amount of time and resources and therefore two different Transport Layer routing approaches are supported by AUTOSAR.

[TPS_SYST_01100] TP routing without using transport protocol modules (low-level routing) ⌈ The behavior can be optimized if source and target use the same transport protocol (e.g. CanTp-to-CanTp routing). In this case the inbound NPDU can be directly forwarded to the PduR and then sent on the outbound bus without any (resource consuming) TP module involvement. ⌋*(RS_SYST_00014)*

[TPS_SYST_01101] TP routing using transport protocol modules ⌈ In case that transport protocol modules are involved in the routing operation the incoming NPDUs need to be:

- forwarded to corresponding inbound TP module and reassembled into an SDU (represented as IPdu)
- the SDU needs to be forwarded to the PduR
- the PduR routes the SDU to the outgoing TP module
- the outbound TP module segments the SDU into NPDUs which are then sent on the target bus.

⌋*(RS_SYST_00014)*

6.8.2 FlexRay ISO Transport Layer

The FlexRay ISO 10681-2 Transport Layer supports multiple sessions, i.e. multiple segmented transfers can be handled at the same time. Thus, multiple FlexrayTpConnections can be defined on the same ECU. Each FlexrayTpConnection is controlled by configuration parameters defined in FlexrayTpConnectionControl.

[TPS_SYST_01102] FlexrayTpConnectionControl reuse ⌈ The same FlexrayTpConnectionControl may be reused for an arbitrary number of FlexrayTpConnections. ⌋*(RS_SYST_00014)*

A FlexrayTpConnection defines the way of communication between a sender and a receiver and uses a FlexrayTpPduPool of NPdus to transmit data to the FlexRay Interface.

[TPS_SYST_01103] FlexrayTpConnection shall specify one txPduPool ⌈ Each FlexrayTpConnection shall specify one txPduPool with at least one nPdu. ⌋ *(RS_SYST_00014)*

In order to achieve a higher bandwidth a txPduPool may contain more than one transmit NPdu, e.g. if all referenced NPdus are transmitted in different FlexrayFrames in the same cycle.

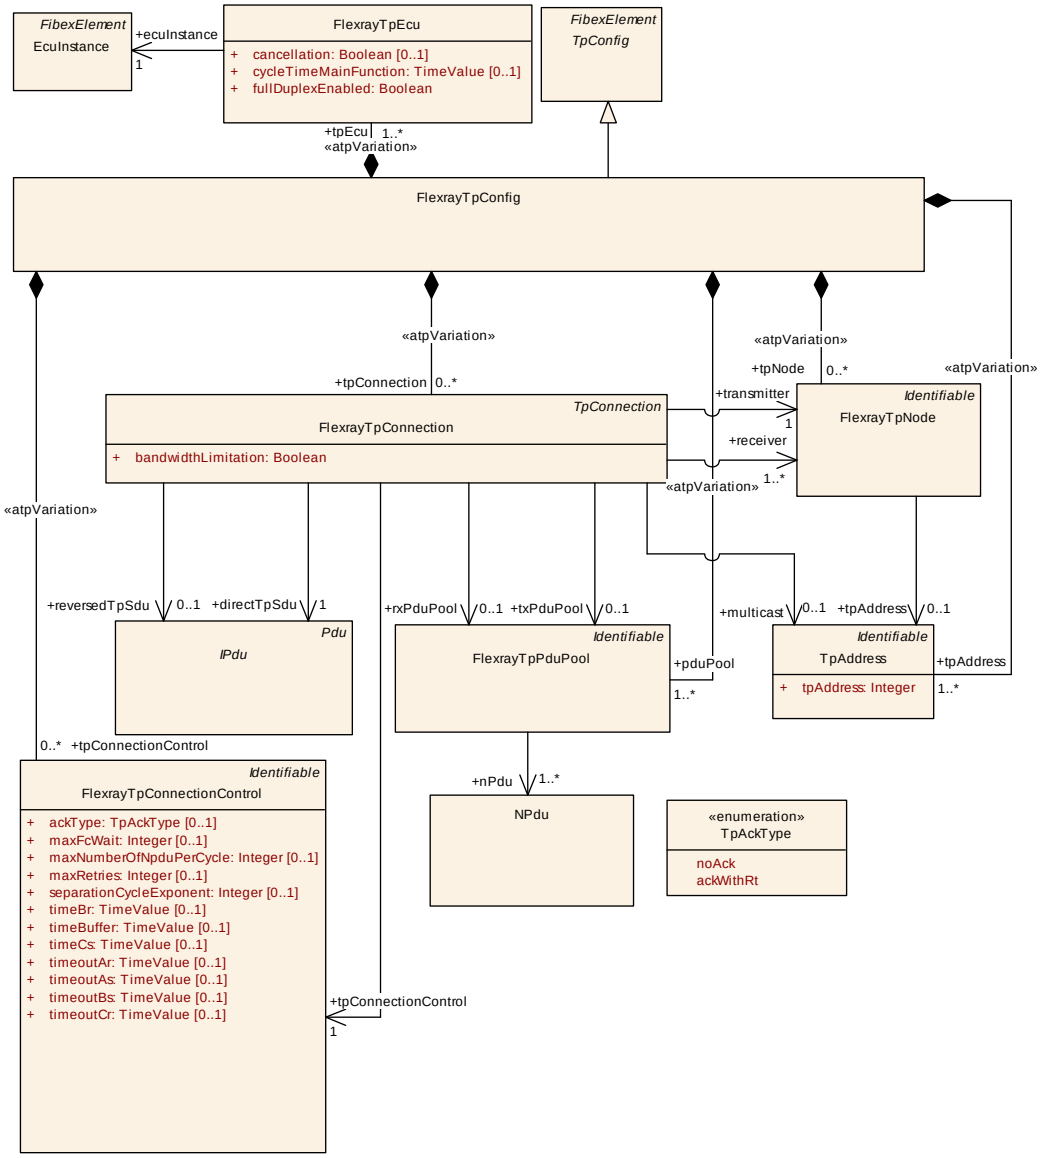

Figure 6.58: FlexRay ISO Transport Layer Configuration (TransportProtocols: FlexRayIsoTransportProtocol)

FlexrayTpConnections are specifically used for communication between one source and one or several target devices. These communication partners are specified

using the transmitter and receiver associations to FlexrayTpNodes, providing the diagnostic tpAddress and the connection to the topology.

[TPS_SYST_01104] FlexrayTpConnection with several receivers ⌈ In case of several receivers a multicast tpAddress shall be used. ⌋*(RS_SYST_00014)*

The actual payload to be transported by the FlexrayTpConnection is specified by using either one or two references to IPdus, depending on whether the connection shall be used unidirectional (one reference) or bidirectional (two references).

Class	**FlexrayTpConfig**

Table 6.194: FlexrayTpConfig

Class	**FlexrayTpConnectionControl**			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	Configuration parameters to control a FlexRay TP connection.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
ackType	TpAckType	0..1	attr	This parameter defines the type of acknowledgement which is used for the specific channel.
maxFcWait	Integer	0..1	attr	This attribute defines the maximum number of Flow Control N-PDUs with FlowState "WAIT".
maxNumberOf NpduPerCycle	Integer	0..1	attr	This parameter limits the number of N-Pdus the sender is allowed to transmit within a FlexRay cycle.
maxRetries	Integer	0..1	attr	This parameter defines the maximum number of retries (if retry is configured for the particular channel).
separationCycle Exponent	Integer	0..1	attr	Exponent to calculate the minimum number of "Separation Cycles" the sender has to wait for the next transmission of an FrTp N-Pdu.
timeBr	TimeValue	0..1	attr	Time (in seconds) until transmission of the next Flow Control N-PDU.
timeBuffer	TimeValue	0..1	attr	This parameter defines the time of waiting for the next try to get a Tx or Rx buffer. This parameter is equivalent to the temporal distance between two FC.WT N-Pdus in case the buffer request returns busy. Specified in seconds.
timeCs	TimeValue	0..1	attr	Time (in seconds) until transmission of the next ConsecutiveFrame NPdu / LastFrame NPdu.
timeoutAr	TimeValue	0..1	attr	This parameter states the timeout between the PDU transmit request of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the Flex Ray Interface on the receiver side (for FC or AF). Specified in seconds.
timeoutAs	TimeValue	0..1	attr	This attribute states the timeout between the PDU transmit request for the first PDU of the group used in the current connection of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the Flex Ray Interface (when having sent the last PDU of the group used in this connection) on the sender side (SF-x, FF-x, CF or FC (in case of Transmit Cancellation)). Specified in seconds.
timeoutBs	TimeValue	0..1	attr	This parameter defines the timeout in seconds for waiting for an FC or AF on the sender side in a 1:1 connection.
timeoutCr	TimeValue	0..1	attr	This parameter defines the timeout value in seconds for waiting for a CF or FF-x (in case of retry) after receiving the last CF or after sending an FC or AF on the receiver side. Specified in seconds.

Table 6.195: FlexrayTpConnectionControl

Class	**FlexrayTpConnection**
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols

▽

△

Class	**FlexrayTpConnection**			
Note	A connection identifies the sender and the receiver of this particular communication. The FlexRayTp module routes a Pdu through this connection. In a System Description the references to the PduPools are mandatory. In an ECU Extract these references can be optional: On unicast connections these references are always mandatory. On multicast the txPduPool is mandatory on the sender side. The rxPduPool is mandatory on the receiver side. On Gateway ECUs both references are mandatory.			
Base	*ARObject*, *TpConnection*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
bandwidth Limitation	Boolean	1	attr	Specifies whether the connection requires a bandwidth limitation or not.
directTpSdu	IPdu	1	ref	Reference to the IPdu that is segmented by the Transport Protocol.
multicast	TpAddress	0..1	ref	TP address for 1:n connections.
receiver	FlexrayTpNode	1..*	ref	The target of the TP connection.
reversedTpSdu	IPdu	0..1	ref	Reference to the IPdu that is segmented by the Transport Protocol. If support of both sending and receiving is used, this association references the IPdu used for the additional second direction.
rxPduPool	FlexrayTpPduPool	0..1	ref	A connection has a reference to a set of NPdus (FrTpRx PduPool) which are defined for receiving data via this particular connection. The following constraint is valid only for the System Extract/ECU Extract: In case this connection is applied to the transmitter the rx PduPool holds the actually received NPdus. In case this connection is applied to the receiver the rxPduPool holds the actually sent NPdus.
tpConnection Control	FlexrayTpConnection Control	1	ref	Reference to the connection control.
transmitter	FlexrayTpNode	1	ref	The source of the TP connection.
txPduPool	FlexrayTpPduPool	0..1	ref	A connection has a reference to a set of NPdus (FrTpTx PduPool) which are defined for sending data via this particular connection. The following constraint is valid only for the System Extract/ECU Extract: In case this connection is applied to the transmitter the tx PduPool holds the actually sent NPdus. In case this connection is applied to the receiver the txPduPool holds the actually received NPdus.

Table 6.196: FlexrayTpConnection

The `FlexrayTpConnection` refers to the `FlexrayTpPduPool` in two roles: `rxPduPool` and `txPduPool`.

[TPS_SYST_01064] Transmit/Receive Semantics of Pdu Pools ⌈ The transmit/receive semantics of Pdu Pools depends on the role of the regarded ECU:

- If the ECU is the transmitter then the `txPduPool` holds the sent `NPdu`s and the `rxPduPool` holds the received `NPdu`s.
- If the ECU is the receiver then the the `txPduPool` holds the received `NPdu`s and the `rxPduPool` holds the sent `NPdu`s.

⌋()

The following example shows how this differentiation may be used:

System Description:
SENDER = A
RECEIVER = B
TxPool = PDU_1
RxPool = PDU_2

ECU Extract of A:
SENDER = A
TxPool = PDU_1 -> sent Pdus
RxPool = PDU_2 -> received Pdus

Since on receiver side the PDU_1 is received and PDU_2 is sent (from a local point of view) the export shall look like this:
ECU Extract of B:
RECEIVER = B
TxPool = PDU_1 -> received Pdus
RxPool = PDU_2 -> sent Pdus

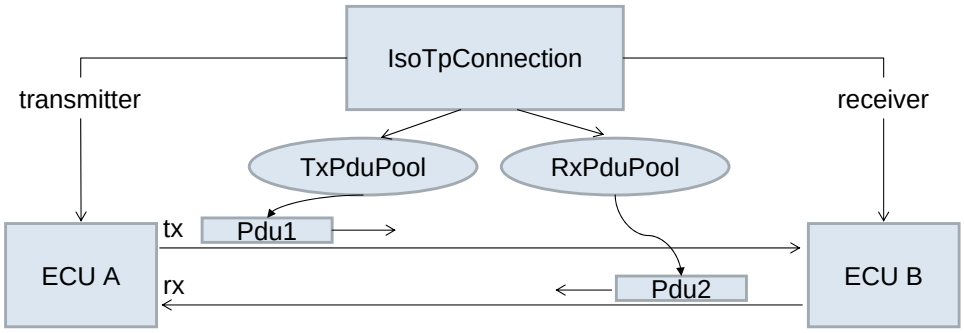

Figure 6.59: IsoTp Example

Class	**FlexrayTpPduPool**

Attribute	***Type***	***Mul.***	***Kind***	***Note***
cancellation	Boolean	0..1	attr	With this switch Tx and Rx Cancellation can be turned on or off.
cycleTimeMain Function	TimeValue	0..1	attr	The period between successive calls to the Main Function of the AUTOSAR TP. Specified in seconds.
ecuInstance	EcuInstance	1	ref	Connection to the ECUInstance in the Topology
fullDuplex Enabled	Boolean	1	attr	The full duplex mechanisms is enabled if this attribute is set to true. Otherwise half duplex is enabled.

Table 6.199: FlexrayTpEcu

6.8.3 FlexRay AUTOSAR Transport Layer

This section describes a Non-ISO FlexRay TP protocol that is supported by AUTOSAR in addition to the FlexRay ISO 10681-2 TP (see section 6.8.2). The Non-ISO FlexRay Transport Layer supports multiple sessions, i.e. multiple segmented transfers can be handled at the same time.

A `FlexrayArTpChannel` provides a Tx and an Rx pool of `NPdu`s which are used by the associated `FlexrayArTpConnection`s.

`FlexrayArTpConnection`s are used for communication between one `source` and one or more `target` device(s). These communication partners are specified by the `source` and `target` associations to `FlexrayArTpNode`s, providing the diagnostic `TpAddress`es and the connection to the topology description. The actual payload to be transported by the `FlexrayArTpConnection` is identified by the references `directTpSdu` and `reversedTpSdu` to `IPdu`s. When one of the two SDUs is omitted, the connection shall be used unidirectional.

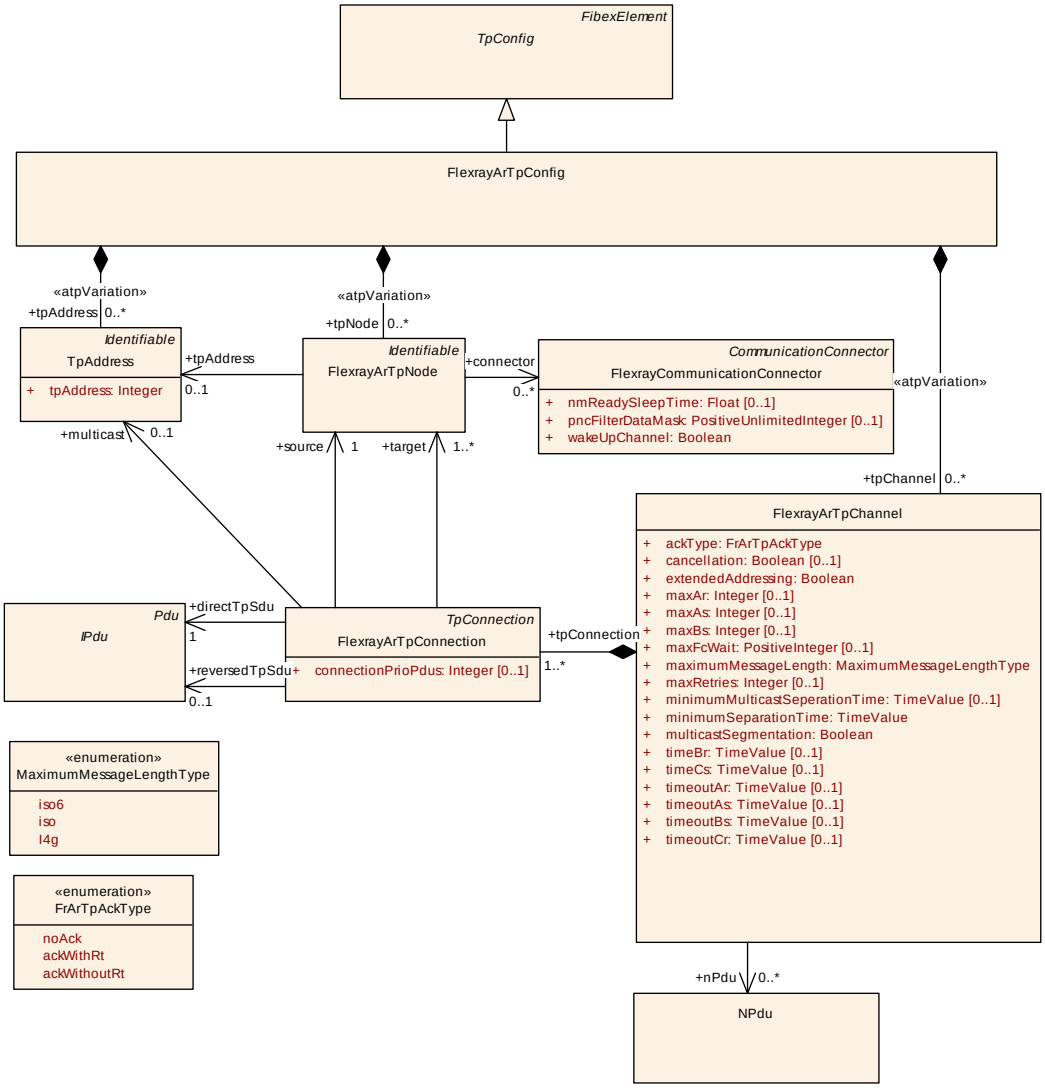

Figure 6.60: FlexRay Autosar Transport Layer Configuration (TransportProtocols: FlexRayAutosarTransportProtocol)

Class	FlexrayArTpConfig			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	This element defines exactly one FlexRay Autosar TP Configuration. One FlexrayArTpConfig element shall be created for each FlexRay Network in the System that uses Flex Ray Autosar TP. **Tags:** atp.recommendedPackage=TpConfigs

Table 6.200: FlexrayArTpConfig

Class	FlexrayArTpChannel			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	A channel is a group of connections sharing several properties. The FlexRay AutosarTransport Layer supports several channels. These channels can work concurrently, thus each of them requires its own state machine and management data structures and its own PDU-IDs.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
ackType	FrArTpAckType	1	attr	Type of Acknowledgement.
cancellation	Boolean	0..1	attr	With this switch Tx and Rx Cancellation can be turned on or off.
extended Addressing	Boolean	1	attr	Adressing Type of this connection: true: Two Bytes false: One Byte
maxAr	Integer	0..1	attr	This attribute defines the maximum number of trying to send a frame when a TIMEOUT AR occurs (depending on whether retry is configured).
maxAs	Integer	0..1	attr	This attribute defines the maximum number of trying to send a frame when a TIMEOUT AS occurs (depending on whether retry is configured).
maxBs	Integer	0..1	attr	This attribute defines the number of consecutive CFs between two FCs (block size). Valid values are 1 .. 16 when retry is activated, and 0 .. 255 otherwise.
maxFcWait	PositiveInteger	0..1	attr	This attribute defines the maximal number of wait frames to be sent for a pending connection. Range is 0..255.
maxRetries	Integer	0..1	attr	This attribute defines the maximum number of retries (if retry is configured for the particular channel).
maximum MessageLength	MaximumMessage LengthType	1	attr	This specifies the maximum message length for the particular channel.

△

Class	**FlexrayArTpChannel**			
minimum Multicast SeperationTime	TimeValue	0..1	attr	This attribute defines the minimum amount of time between two succeeding CFs of a 1:n segmented transmission in seconds. Valid values are 0, 100μs, 200μs ... 900μs, 1ms, 2ms .. 127ms. The value can be changed at runtime using the FrArTp_ChangeParameter interface. minimumMulticastSeparationTime must be an integer multiple of the cycle length multiplied with the multiplexing factor, i.e. minimumMulticastSeparationTime = n * cycle * m, where n is an integer >= 0, cycle is Flexray Cluster.cycle, and m is the cycle multiplexor of those cycles where PDUs of the PDU pool are scheduled. Please note: Due to the scheduling strategies of FrTp, minimumMulticastSeparationTime can only be kept to a degree defined by the maximum temporal distance of the PDUs of a PDU pool within one FlexRay cycle. Range: 0 .. 0.127
minimum SeparationTime	TimeValue	1	attr	This attribute defines the minimum amount of time between two succeeding CFs of a 1:1 segmented transmission in seconds. Valid values are 0, 100μs, 200μs .. 900μs, 1ms, 2ms .. 127ms. The value can be changed at runtime using the FrArTp_ChangeParameter interface. The minimumSeparationTime must be an integer multiple of the cycle length multiplied with the multiplexing factor, i.e. minimumSeparationTime = n * cycle * m, where n is an integer >=0, cycle is FlexrayCluster.cycle, and m is the cycle multiplexor of those cycles where PDUs of the PDU pool are scheduled. Please note: Due to the scheduling strategies of FrTp, minimumSeparationTime can only be kept to a degree defined by the maximum temporal distance of the PDUs of a PDU pool within one FlexRay cycle. Range: 0 .. 0.127
multicast Segmentation	Boolean	1	attr	This attribute defines whether segmentation within a 1:n connection is allowed or not.
nPdu	NPdu	*	ref	A FlexRayTpChannel references a set of NPdus. These NPdus are logically assembled into a pool of Rx NPdus and another pool of Tx NPdus. It must be ensured that a second channel either references all NPdus of such a pool, or none.
timeBr	TimeValue	0..1	attr	This attribute defines the time in seconds between receiving the last CF of a block or an FF-x (or SF-x) and sending out an FC or AF.
timeCs	TimeValue	0..1	attr	This attribute defines the time in seconds between the sending of two consecutive frames or between a consecutive frame and a flow control (for Transmit Cancellation) or between reception of an flow control or Acknowledgement Frame and sending of the next consecutive frame or a flow control (for Transmit Cancellation).
timeoutAr	TimeValue	0..1	attr	This attribute states the timeout in seconds between the PDU transmit request of the Transport Layer to the Flex Ray Interface and the corresponding confirmation of the FlexRay Interface on the receiver side (for FC or AF).

▽

△

Class	FlexrayArTpChannel			
timeoutAs	TimeValue	0..1	attr	This attribute states the timeout in seconds between the PDU transmit request for the first PDU of the group used in the current connection of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface (when having sent the last PDU of the group used in this connection) on the sender side (SF-x, FF-x, CF).
timeoutBs	TimeValue	0..1	attr	This attribute defines the timeout in seconds for waiting for an FC or AF on the sender side in a 1:1 connection.
timeoutCr	TimeValue	0..1	attr	This attribute defines the timeout value in seconds for waiting for a CF or FF-x (in case of retry) after receiving the last CF or after sending an FC or AF on the receiver side.
tpConnection	FlexrayArTpConnection	1..*	aggr	Group of connections that can be used in this channel.

Table 6.201: FlexrayArTpChannel

iso	Up to (2**12)-1 Byte message length (No FF-Ex or SF-E or AF shall be used and recognized). **Tags:** atp.EnumerationValue=1
iso6	As ISO, but the maximum payload length is limited to 6 byte (SF-I, FF-I, CF). This is necessary to route TP on CAN when using Extended Addressing or Mixed Addressing on CAN. **Tags:** atp.EnumerationValue=2

Table 6.205: MaximumMessageLengthType

6.8.4 CAN Transport Layer

The CAN Transport Layer supports multiple sessions by means of CanTpChannels: Each CanTpChannel uses its own resources, such as internal buffer, timer, state machine and thus can operate independently and simultaneously to other CanTpChannels. The same session can be reused for an arbitrary number of CanTpConnections.

Each CanTpConnection uses its own pair of NPdus: One NPdu, the dataPdu is mandatory for each CanTpConnection, the flowControlPdu is optional depending whether only Single Frames are transferred over the connection.

A CanTpConnection is specifically used for communication between source and target devices. These communication partners are specified using the transmitter and receiver associations to CanTpNode, providing the diagnostic tpAddress and the connection to the topology.

[TPS_SYST_01146] Generic CanTpConnections ⌈ If the transmitter or the receiver of a CanTpConnection is not specified then the CanTpConnection is a generic one (address information is not determined). ⌋*()*

[TPS_SYST_01105] CanTpConnection with several receivers ⌈ In case of several receivers a multicast tpAddress shall be used. ⌋*(RS_SYST_00014)*

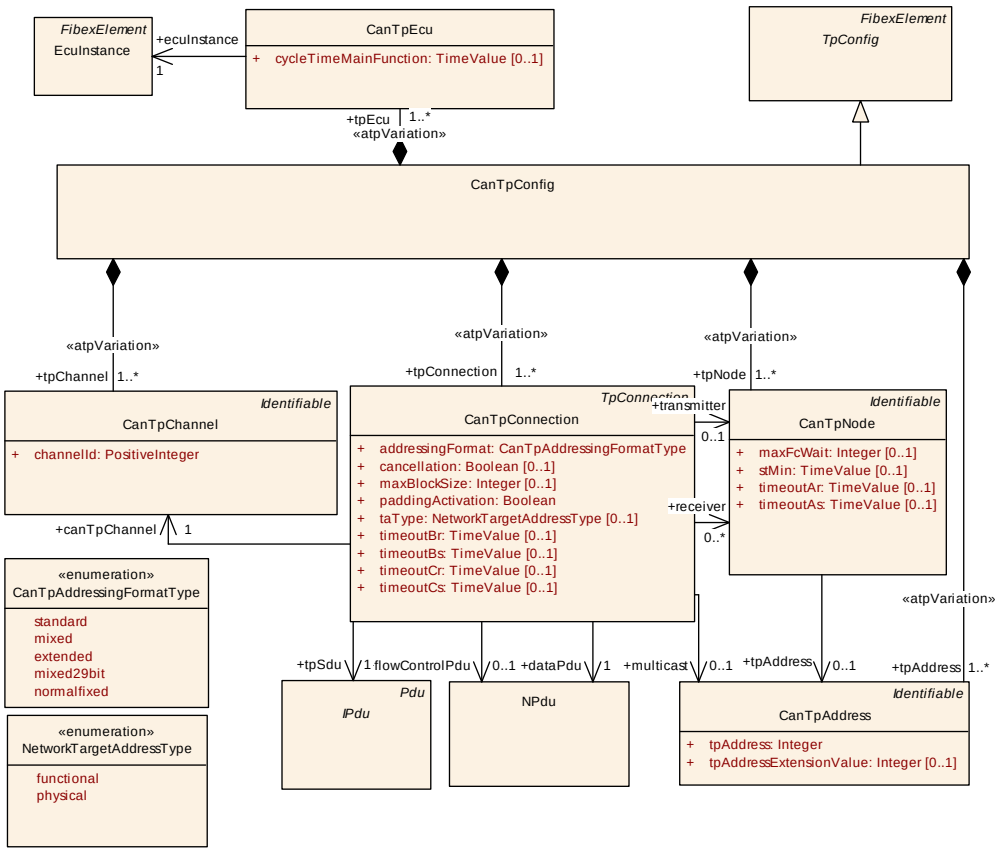

Figure 6.61: CAN Transport Layer Configuration (TransportProtocols: CanTransportProtocol)

The actual payload to be transported by the CanTpConnection is specified by the reference tpSdu to IPdu.

The N_TAtype communication models as defined in ISO 15765-2 [23] can be expressed using a combination of the attributes addressingFormat (CanTpAddressingFormatType) and taType (NetworkTargetAddressType).

Class	**CanTpConfig**			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols

Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	Configuration parameters of the CanTp channel.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
channelId	PositiveInteger	1	attr	The id of the channel. The value shall be unique for each channel.

Table 6.207: CanTpChannel

Class	**CanTpConnection**			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	A connection identifies the sender and the receiver of this particular communication. The CanTp module routes a Pdu through this connection. atpVariation: Derived, because TpNode can vary.			
Base	*ARObject*, *TpConnection*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
addressing Format	CanTpAddressing FormatType	1	attr	Declares which communication addressing mode is supported.
canTpChannel	CanTpChannel	1	ref	Reference to the CanTpChannel on which this CanTp Connection is realized.
cancellation	Boolean	0..1	attr	With this switch Tx Cancellation can be turned on or off. Please note that the Rx Cancellation is always enabled.
dataPdu	NPdu	1	ref	Reference to an Data NPdu.
flowControlPdu	NPdu	0..1	ref	Reference to the Flow Control NPdu.
maxBlockSize	Integer	0..1	attr	The maximum number of N-PDUs the CanTp receiver allows the sender to send, before waiting for an authorization to continue transmission of the following N-PDUs. For further details on this parameter value see ISO 15765-2 specification. Note: For reasons of buffer length, the CAN Transport Layer can adapt the BS value within the limit of this maximum BS
multicast	CanTpAddress	0..1	ref	TP address for 1:n connections.
padding Activation	Boolean	1	attr	This specifies wheter or not Sfs, FCs and the last CF shall be padded to 8 bytes length in case it contains less payload. true: The N-PDU received uses padding for SF, FC and the last CF. (N-PDU length is always 8 bytes) false: The N-PDU received does not use padding for SF, CF and the last CF. (N-PDU length is dynamic)
receiver	CanTpNode	*	ref	The target of the TP connection.
taType	NetworkTargetAddress Type	0..1	attr	Network Target Address type.
timeoutBr	TimeValue	0..1	attr	Value in seconds of the performance requirement for (N_Br + N_Ar). N_Br is the elapsed time between the receiving indication of a FF or CF or the transmit confirmation of a FC, until the transmit request of the next FC.

△

Class	**CanTpConnection**			
timeoutBs	TimeValue	0..1	attr	This parameter defines the timout for waiting for an FC or AF on the sender side in an 1:1 connection. Specified in seconds.
timeoutCr	TimeValue	0..1	attr	This parameter defines the timeout value for waiting for a CF or FF-x (in case of retry) after receiving the last CF or after sending an FC or AF on the receiver side. Specified in seconds.
timeoutCs	TimeValue	0..1	attr	The attribute timeoutCs represents the time (in seconds) which elapses between the transmit request of a CF N-PDU until the transmit request of the next CF N-PDU.
tpSdu	IPdu	1	ref	Reference to an IPdu that is segmented by the Transport Protocol.
transmitter	CanTpNode	0..1	ref	The source of the TP connection.

Table 6.208: CanTpConnection

physical	Physical request type **Tags:** atp.EnumerationValue=2

Table 6.213: NetworkTargetAddressType

6.8.5 LIN Transport Layer

LinTpConnection is used for modeling communication resources required for using the LIN Transport Layer. Contrary to the FlexRay and CAN Transport Layers, LIN TP only supports one session per PhysicalChannel.

An arbitrary number of LinTpConnections per LinTpConfig can be defined since the transmission of data from master to slave, using the MasterRequest frame, and the transmission of data from slave to master, using the SlaveResponse frame, needs to be described per NAD the LinMaster uses to address one or more of its LinSlaves.

LinTpConnection uses the dataPdu reference for specifying exactly one NPdu which is to be used for transmitting the data, and it optionally references a flowControl NPdu in order to handle Flow Control Frames if required.

One LinTpConnection is specifically used for communication between one source and one or several target devices. These communication partners are specified using the transmitter and receiver associations to LinTpNode, providing the diagnostic tpAddress and the connection to the topology. In case of several receivers a multicast tpAddress shall be used.

The actual payload to be transported by the LinTpConnection is specified by the reference linTpNSdu to IPdu.

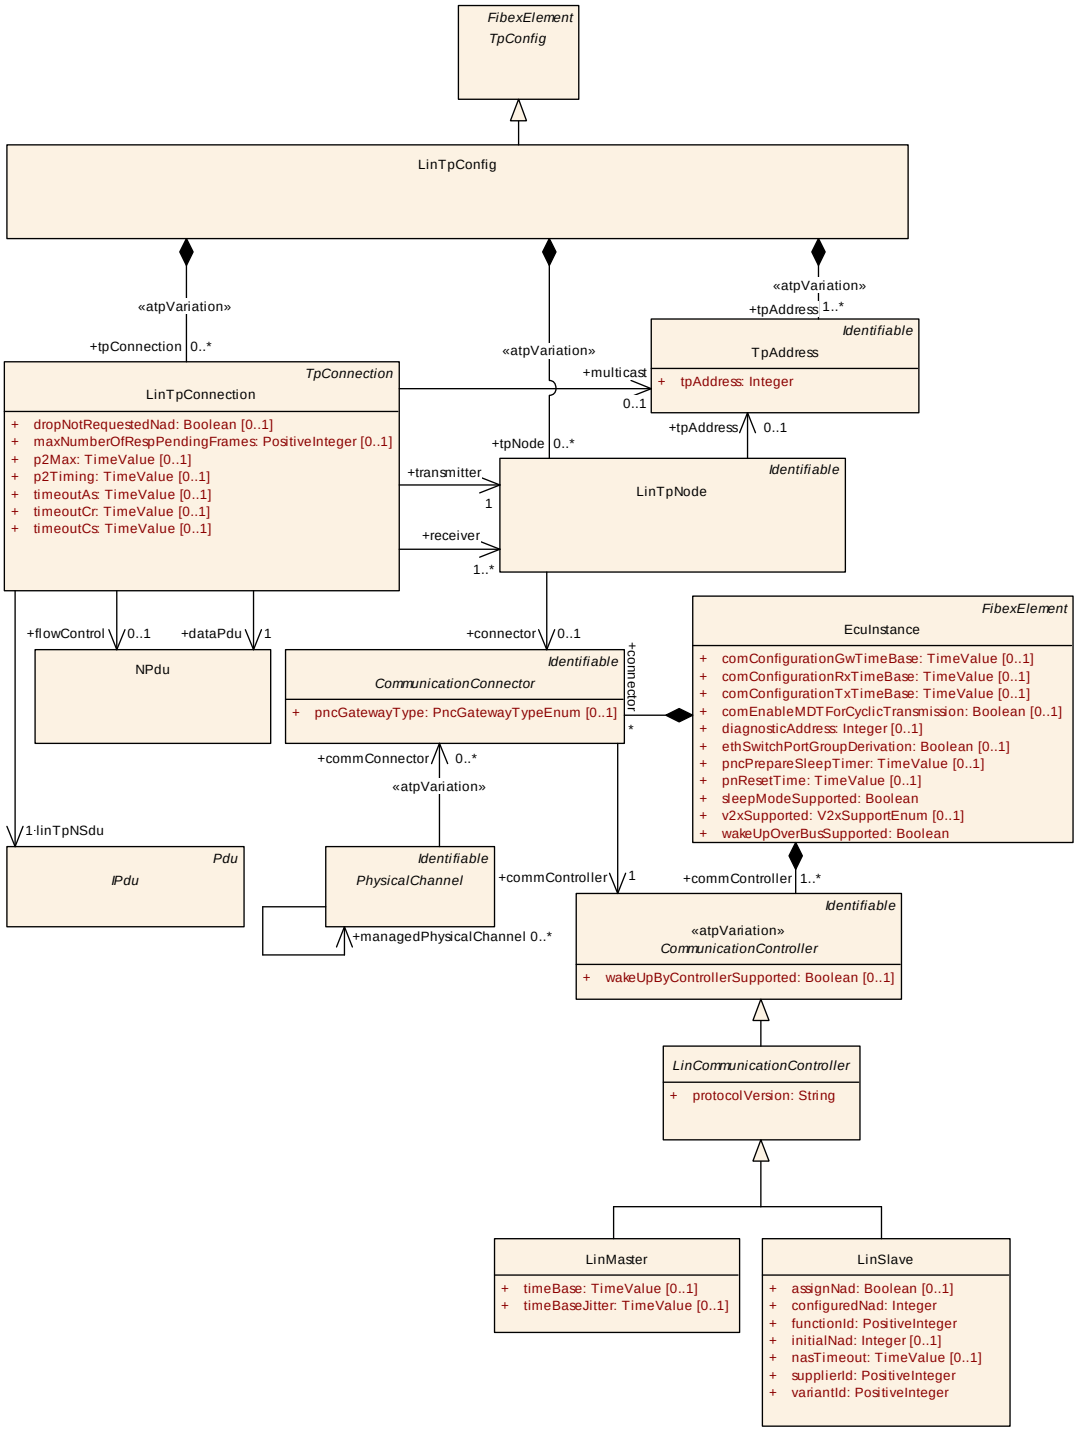

Figure 6.62: LIN Transport Layer Configuration

Class	LinTpConfig

Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
connector	Communication Connector	0..1	ref	Asscociation to a CommunicationConnector in the topology description. In a System Description this reference is mandatory. In an ECU Extract this reference is optional (references to ECUs that are not part of the ECU Extract shall be avoided).
tpAddress	TpAddress	0..1	ref	Reference to the TP Address that is used by the TpNode. This reference is optional in case that the multicast TP Address is used (reference from TpConnection).

Table 6.215: LinTpNode

Class	LinTpConnection
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols
Note	A LinTP channel represents an internal path for the transmission or reception of a Pdu via LinTp and describes the the sender and the receiver of this particular communication. LinTp supports (per Lin Cluster) the configuration of one Rx Tp-SDU and one Tx Tp-SDU per NAD the LinMaster uses to address one or more of its Lin Slaves. To support this an arbitrary number of LinTp Connections shall be described.

▽

△

Class	**LinTpConnection**			
Base	*ARObject*, *TpConnection*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dataPdu	NPdu	1	ref	Reference to an NPdu (Single Frame, First Frame or Consecutive Frame). The Single Frame network protocol data unit (SF N_PDU) shall be sent out by the sending network entity and can be received by one or multiple receiving network entities. The Single Frame (SF N_PDU) shall be sent out to transfer a service data unit that can be transferred via a single service request to the data link layer. This network protocol data unit shall be sent to transfer unsegmented messages. The First Frame network protocol data unit (FF N_PDU) identifies the first network protocol data unit (N_PDU) of a segmented message transmitted by a network sending entity and received by a receiving network entity. The Consecutive Frame network protocol data unit (CF N_PDU) transfers segments (N_Data) of the service data unit message data (<MessageData>). All network protocol data units (N_PDUs) transmitted by the sending entity after the First Frame network protocol data unit (FF N_PDU) shall be encoded as Consecutive Frames network protocol data units (CF N_PDUs).
dropNot RequestedNad	Boolean	0..1	attr	Configures if TP Frames of not requested LIN-Slaves are dropped or not.
flowControl	NPdu	0..1	ref	Reference to the Flow Control NPdu. The Flow Control network protocol data unit (FC N_PDU) is identified by the Flow Control protocol control information (FC N_PCI). The Flow Control network protocol data unit (FC N_PDU) instructs a sending network entity to start, stop or resume transmission of CF N_PDUs. The Flow Control network protocol data unit shall be sent by the receiving network layer entity to the sending network layer entity, when ready to receive more data, after correct reception of: a) First Frame network protocol data unit (FF N_PDU) b) the last Consecutive Frame network protocol data unit (CF N_PDU) of a block of Consecutive Frames (CF N_PDU) if further Consecutive Frame network protocol data unit (CF N_PDU) need(s) to be sent.
linTpNSdu	IPdu	1	ref	Reference to the IPdu that is segmented by the Transport Protocol.
maxNumberOf RespPending Frames	PositiveInteger	0..1	attr	Configures the maximum number of allowed response pending frames.
multicast	TpAddress	0..1	ref	TP address for 1:n connections.
p2Max	TimeValue	0..1	attr	After reception of a response pending frame the P2 timeout counter is reloaded with the timeout time P2max.
p2Timing	TimeValue	0..1	attr	P2 timeout observation parameter.
receiver	LinTpNode	1..*	ref	The target of the TP connection.
timeoutAs	TimeValue	0..1	attr	Time for transmission of the LIN frame (any N-PDU) on the sender side. Specified in seconds.
timeoutCr	TimeValue	0..1	attr	This attribute defines the timeout value for waiting for a CF or FF-x (in case of retry) after receiving the last CF or after sending an FC or AF on the receiver side. Specified in seconds.

▽

△

Class	**LinTpConnection**			
timeoutCs	TimeValue	0..1	attr	The attribute timeoutCs represents the time (in seconds) which elapses between the transmit request of a CF N-PDU until the transmit request of the next CF N-PDU.
transmitter	LinTpNode	1	ref	The source of the TP connection.

Table 6.216: LinTpConnection

6.8.6 Ethernet Transport Layer

The Transport Layer in the AUTOSAR Ethernet protocol stack is defined by the TcpIp module. For the transmission of an upper layer module Pdu via an UDP or TCP socket, the AUTOSAR Socket Adaptor specifies a Pdu route which is linked to a socket connection. The upper layer module of the SoAd may use the Interface (IF) API or the Transport Protocol (TP) API for the transmit request and data provision respectively.

With the `EthTpConnection` it is possible to describe in a System Description that the TP API shall be used for a specific Pdu route. If a `PduTriggering` is not referenced by a `EthTpConnection` the IF API will be used.

Table 6.218: EthTpConnection

6.8.7 SOME/IP segmenter

On the transmission side SOME/IP TP segments an incoming SOME/IP `IPdu` that does not fit into a single UDP Package into smaller `GeneralPurposeIPdu`s with category SOMEIP_SEGMENTED_IPDU and allows to transport SOME/IP messages over UDP that are greater than 128KB. On the reception side the large `IPdu` is reassembled again. The Message Type field of the SOME/IP header contains a bit, which marks the SOME/IP message as a segment of an original SOME/IP message. Every segmented SOME/IP message adds SOME/IP TP specific fields to the SOME/IP header. These fields contain control information for the segmentation and the reassembly of original, large SOME/IP messages.

tpSdu	PduTriggering	0..1	ref	Reference to an IPdu that is segmented by the Transport Protocol.
transportPdu	PduTriggering	0..1	ref	Reference to the segmented IPdu.

Table 6.220: SomeipTpConnection

Class	SomeipTpChannel			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	This element is used to assign properties to SomeipTpConnections that are referencing this SomeipTp Channel.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
rxTimeoutTime	TimeValue	0..1	attr	Timer to monitor the successful reception. It is started when the first NPdu is received, restarted after reception of intermediate NPdus, and is stopped when the last NPdu has been received.
separationTime	TimeValue	0..1	attr	Sets the duration of the minimum time in seconds the SOME/IP TP module shall wait between the transmissions of NPdus.

Table 6.221: SomeipTpChannel

[constr_3328] `SomeipTpConnection.transportPdu` reference restriction ⌈ A `PduTriggering` that is referenced by a `SomeipTpConnection` in the role `transportPdu` shall reference a `GeneralPurposeIPdu` with category SOMEIP_SEGMENTED_IPDU in the role `iPdu`. ⌋*()*

[constr_3329] `SomeipTpConnection.tpSdu` reference restriction ⌈ A `PduTriggering` that is referenced by a `SomeipTpConnection` in the role `tpSdu` shall reference an `IPdu` in the role `iPdu`. ⌋*()*

[TPS_SYST_02156] Length of `GeneralPurposeIPdu` with category SOMEIP_SEGMENTED_IPDU ⌈ The `length` of `GeneralPurposeIPdu` with category SOMEIP_SEGMENTED_IPDU that is referenced by a `PduTriggering` in the role `iPdu` that in turn is referenced by a `SomeipTpConnection` in the role `transportPdu` defines the maximum size in bytes of a segment. ⌋*(RS_SYST_00050, RS_SYST_00039, RS_SYST_00014)*

Please note that the `length` of a `GeneralPurposeIPdu` with category SOMEIP_SEGMENTED_IPDU covers 8 bytes of the SOME/IP header, 4 bytes of the TP header, and the segment itself.

[constr_3330] Same `transportPdu` shall not be used in different `SomeipTpConnections` ⌈ A `PduTriggering` that is referencing a `GeneralPurposeIPdu` with

category SOMEIP_SEGMENTED_IPDU in the role `iPdu` shall be referenced at most once by a `SomeipTpConnection` in the role `transportPdu`. ⌋()

6.8.8 SAE J1939 Transport Layer

There are two transport protocol variants defined by J1939: BAM (Broadcast Announce Message), which is a broadcast protocol that does not use any flow control, and CMDT (Connection Mode Data Transfer), which is a point-to-point protocol with flow control and acknowledgment.

BAM uses two NPdus for transport, TP.CM (Transport Protocol Command, flowControlPdu) and TP.DT (Transport Protocol Data, dataPdu). CMDT uses three NPdus, because an additional TP.CM (flowControlPdu) in reverse direction is needed for flow control. The length of TP.CM and TP.DT NPdus is fixed to 8 bytes.

[TPS_SYST_01106] Usage of additional directPdu in case of variable length sdu
⌈ In case of variable length sdu (with system signals of variable length) an additional directPdu is required:

- it is used if the current length of this sdu is up to 8 bytes.
- if the current length of this sdu is higher than 8 bytes the sdu will be transported via the dataPdu.

⌋*(RS_SYST_00014, RS_SYST_00038)*

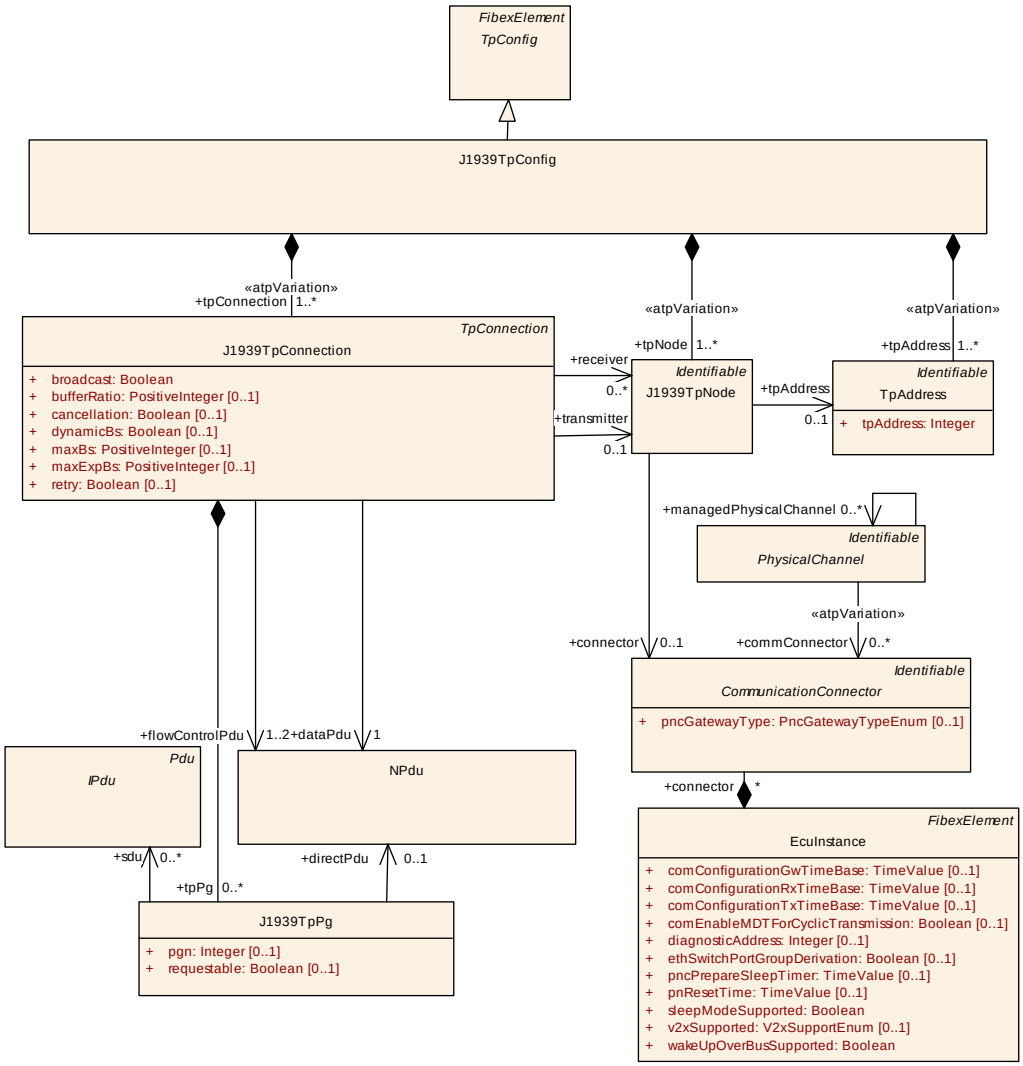

Figure 6.65: J1939 Transport Layer Configuration

A J1939TpConnection is specifically used for communication between source and target devices. These communication partners are specified using the transmitter and receiver associations to J1939TpNode, providing the diagnostic tpAddress and the connection to the topology.

[TPS_SYST_02190] J1939TpConnection.transmitter reference in case of broadcast connection ⌈ In case of a broadcast connection the J1939TpConnection shall only reference the J1939TpNode in the role transmitter. The reason is that BAM (Broadcast Announce Message) is always directed at the target address 0xff and therefore no receiver reference is necessary. ⌋*(RS_SYST_00014, RS_SYST_00038)*

[TPS_SYST_02191] J1939TpConnection.transmitter reference in case that the source is an unknown node ⌈ In case that the source is an unknown node, e.g. an arbitrary tester, the J1939TpConnection is allowed to omit the transmitter reference to J1939TpNode. ⌋*(RS_SYST_00014, RS_SYST_00038)*

[TPS_SYST_02192] `J1939TpConnection.receiver` reference in case that the destination is an unknown node ⌈ In case that the destination is an unknown node, e.g. an arbitrary tester, the `J1939TpConnection` is allowed to omit the `receiver` reference to `J1939TpNode`. ⌋*(RS_SYST_00014, RS_SYST_00038)*

[TPS_SYST_02193] `J1939TpConnection.receiver` reference in case that the destination is connected to a configured `J1939NmNode` ⌈ In case that the destination is connected to a configured `J1939NmNode`, the `J1939TpConnection` shall reference the `J1939TpNode` in the role `receiver`. It means that the receiving `J1939TpNode` is associated with an `EcuInstance` via the `CommunicationConnector` and this `EcuInstance` is associated with a `J1939NmNode` via the `NmEcu`. In this case the `nmNodeId` of the `J1939NmNode` corresponds to the `TpAddress` defined by `J1939TpNode`. ⌋*(RS_SYST_00014, RS_SYST_00038)*

The Parameter Group (PG) to be transported by the `J1939TpConnection` is specified by the `tpPg` aggregation.

[TPS_SYST_01147] Generic `J1939TpConnection`s ⌈ If the `transmitter` or the `receiver` of a `J1939TpConnection` is not specified then the `J1939TpConnection` is a generic one (address information is not determined). ⌋*()*

Class	**J1939TpConfig**			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	This element defines exactly one J1939 TP Configuration. One J1939TpConfig element shall be created for each J1939 Network in the System. **Tags:** atp.recommendedPackage=TpConfigs

Table 6.222: J1939TpConfig

Class	J1939TpConnection			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	A J1939TpConnection represents an internal path for the transmission or reception of a Pdu via J1939Tp and describes the the sender and the receiver of this particular communication. The J1939Tp module routes a Pdu (J1939 PGN) through the connection.			
Base	*ARObject*, *TpConnection*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
broadcast	Boolean	1	attr	BAM (Broadcast Announce Message) is a broadcast protocol. If this attribute is set to true broadcast is used. Since address FF is the only broadcast address, there's no reason to configure it.
bufferRatio	PositiveInteger	0..1	attr	Defines usage of available data for dynamic block size calculation when protocol retry is enabled. This attribute describes in percent of available buffer that shall be used for retry.
cancellation	Boolean	0..1	attr	Enable support for Tx/Rx cancellation.
dataPdu	NPdu	1	ref	Data Message (TP.DT) used by CMDT and BAM. The DataNPdu has a fixed length of 8 bytes.
dynamicBs	Boolean	0..1	attr	Enable support for dynamic block size calculation.
flowControlPdu	NPdu	1..2	ref	Reference to the Command NPdus (TP.CM) that are used in the CMDT (Connection Mode Data Transfer) in both directions. BAM uses one TP.CM (Transport Protocol Command). The flowControlNPdu has a fixed length of 8 bytes. Please note that the role name "flowControlIPdu" is misleading and is kept for backward compatibilty reasons.
maxBs	PositiveInteger	0..1	attr	Set maximum block size (number of packets in TP.CM_CTS).
maxExpBs	PositiveInteger	0..1	attr	Set maximum for expected block size (maximum number of packets in TP.CM_RTS).
receiver	J1939TpNode	*	ref	The target of the TP connection.
retry	Boolean	0..1	attr	Enable support for protocol retry.
tpPg	J1939TpPg	*	aggr	J1939 messages (parameter groups, PGs) that can be transferred via this connection.
transmitter	J1939TpNode	0..1	ref	The source of the TP connection.

Table 6.223: J1939TpConnection

Class	J1939TpPg			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	A J1939TpPg represents one J1939 message (parameter group, PG) identified by the PGN (parameter group number) that can be received or transmitted via J1939Tp.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
directPdu	NPdu	0..1	ref	In case of variable length IPdus (with system signals of variable length), an additional NPdu (with the PGN in the CAN ID) is used for messages with up to 8 bytes.
pgn	Integer	0..1	attr	Parameter group number (PGN) of a J1939 message (parameter group, PG) that can be received or transmitted via J1939Tp. The PGN may be omitted when the a directPdu is referenced and is mapped into a Can FrameTriggering with an identifier.

△

Class	**J1939TpPg**			
requestable	Boolean	0..1	attr	Parameter Group can be triggered by the J1939 request message.
sdu	IPdu	*	ref	Reference to IPdus that are segmented by the Transport Protocol. If more than one IPdu is referenced, the IPdus are used when the same PGN is received in parallel via different transport protocols (BAM, CMDT, direct) on the same J1939TpConnection.

Table 6.224: J1939TpPg

Class	**J1939TpNode**			
Package	M2::AUTOSARTemplates::SystemTemplate::TransportProtocols			
Note	TP Node (Sender or Receiver) provides the TP Address and the connection to the Topology description.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
connector	Communication Connector	0..1	ref	Asscociation to a CommunicationConnector in the topology description. In a System Description this reference is mandatory. In an ECU Extract this reference is optional (references to ECUs that are not part of the ECU Extract shall be avoided).
tpAddress	TpAddress	0..1	ref	Reference to the TP Address that is used by the TpNode. This reference is optional only when no TP is sent and only BAM is received.

Table 6.225: J1939TpNode

[constr_3210] `J1939TpPg`s with identical `pgn` value ⌈ For all `J1939TpPg`s where the attribute `pgn` has an identical value the attribute `requestable` shall also have an identical value. ⌋*()*

6.8.9 Unicast TP Example

The example in Figure 6.66 illustrate the usage of the System Template TP model. In this System Description example the Sender ECU (Tester) communicates with the Receiver ECU (Diagnostic Server) via two Gateways (GW1 and GW2).

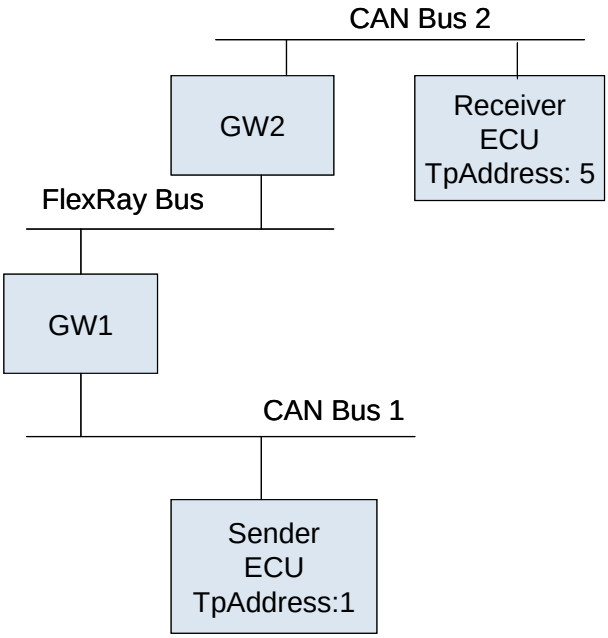

Figure 6.66: TP unicast Example

```
CAN Bus 1 (CanTpConfig 1):
  CanTpConnection (CanTpConnection1)
    transmitter TpNode: Sender ECU, TpAddress: 1
    receiver TpNode: GW1, TpAddress: 5
  CanTpConnection (CanTpConnection2):
    transmitter TpNode: GW1, TpAddress: 5
    receiver TpNode: Sender ECU, TpAddress: 1

FlexRay Bus (FlexRayTpConfig):
  FlexRayTpConnection (FlexrayTpConnection1):
    transmitter TpNode: GW1, TpAddress: 1
    receiver TpNode: GW2, TpAddress: 5

CAN Bus 2 (CanTpConfig 2):
  CanTpConnection (CanTpConnection3):
    transmitter TpNode: GW2, TpAddress: 1
    receiver TpNode: Receiver ECU, TpAddress: 5
  CanTpConnection (CanTpConnection4):
    transmitter TpNode: Receiver ECU, TpAddress: 5
    receiver TpNode: GW2, TpAddress: 1

DiagnosticConnection:
  physicalRequest TpConnection: CanTpConnection3
  response TpConnection: CanTpConnection4
```

Please note that two different CanTpConfig elements are created for the two CAN networks. The TpAddress of the transmitter TpNode is always 1 and the TpAddress of the receiver TpNode is always 5, even in the FlexrayTpConfig where Gateway ECU1 communicates with Gateway ECU2. The original transmitter and the final receiver are addressed in each connection. Please note that for CanTp for each direction an own CanTpConnection is used.

The DiagnosticConnection is modeled only for the the last segment to which the Receiver ECU that represents the diagnostic server is connected.

6.8.10 Multicast TP Example

A second example illustrates the usage of the multicast reference.

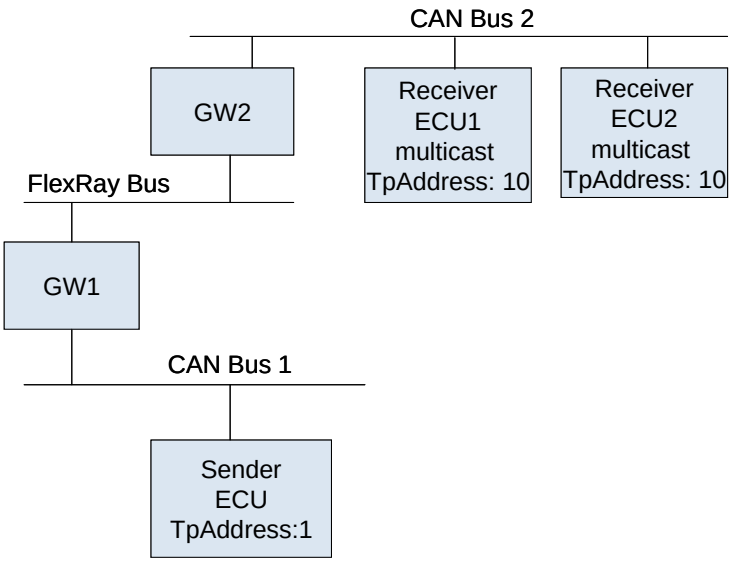

Figure 6.67: TP multicast Example

```
Can Bus 1 (CanTpConfig1):
CanTpConnection
  source TpNode: Sender ECU, TpAddress: 1
  target TpNode: GW1
  multicast TpAddress: 10

FlexRay Bus  (FlexRayTpConfig):
FlexRayTpConnection
  source TpNode: GW1, TpAddress: 1
  target TpNode: GW2
  multicast TpAddress: 10

CAN Bus 2 (CanTpConfig 2):
CanTpConnectionChannel
  source TpNode: GW2, TpAddress: 1
  target TpNode: Receiver ECU1
  target TpNode: Receiver ECU2
```

```
multicast TpAddress: 10
```

Please note that the target TpNode does not contain a reference to the TpAddress. The multicast TpAddress is described by a direct reference from the connection.

6.8.11 Diagnostic Connection

A prominent use of the TP in automotive systems is the implementation of diagnostic communication. Data send from and to the tester frequently exceeds the native size of a communication package on typical bus systems used for this purpose.

However, the mere usage of TP channels for diagnostic purposes is missing one important aspect: TP channels, as defined by the AUTOSAR standard, are unidirectional by nature.

For diagnostic communication, it is very important to be able to define pairs of TP connections that can be taken to send related *request* and *response* messages.

In order to support this use case the meta-class `DiagnosticConnection` has been introduced.

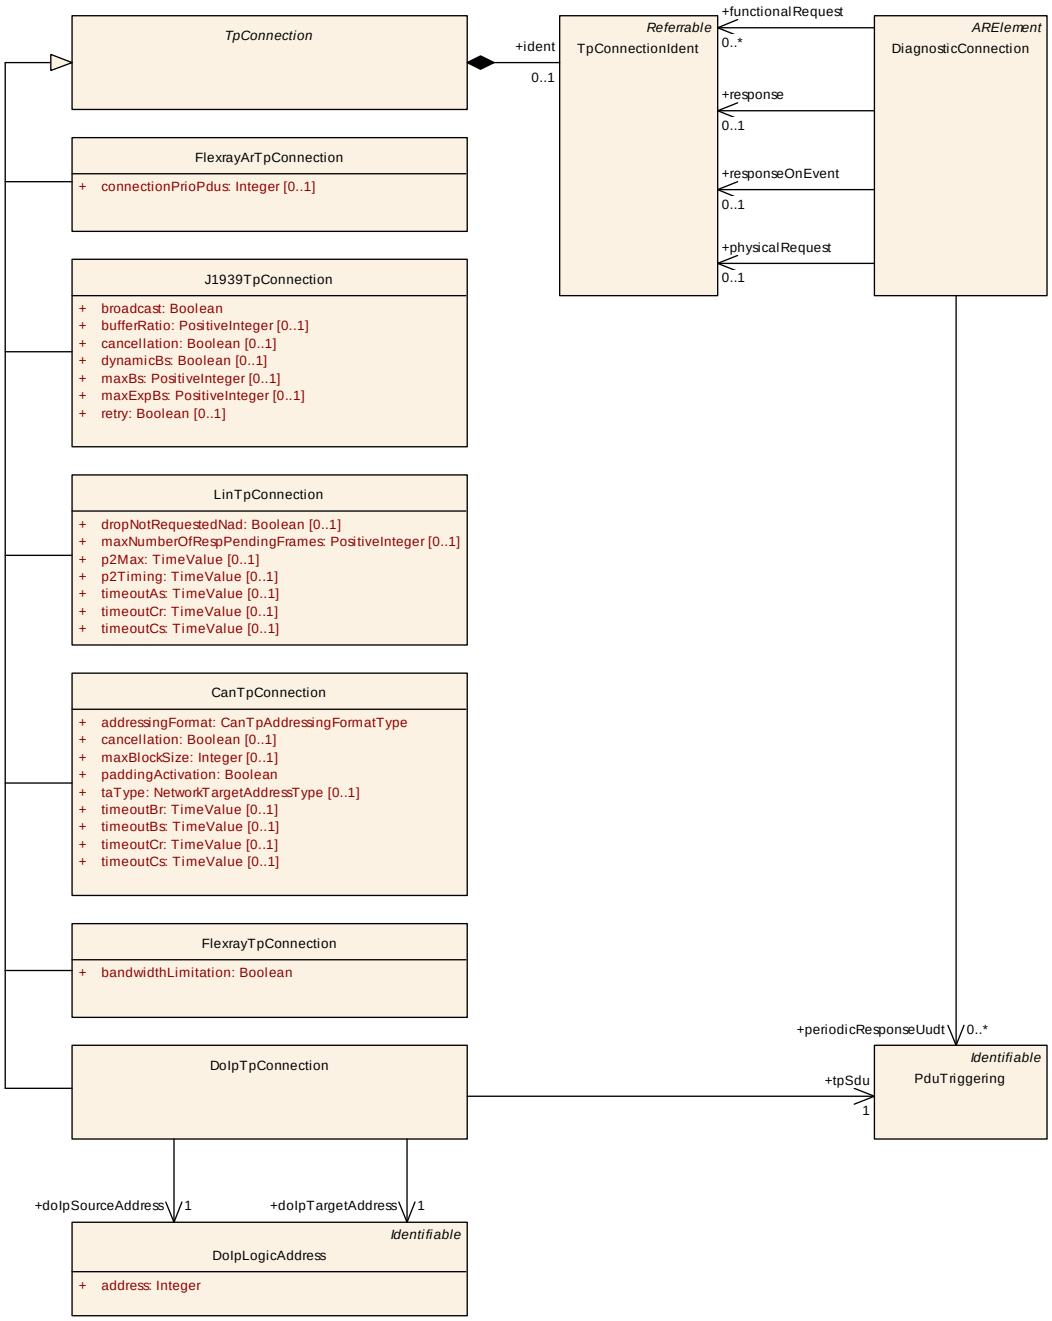

Figure 6.68: Modeling of `DiagnosticConnection`

[TPS_SYST_05003] Usage of `DiagnosticConnection` in combination with a TP

⌈ `DiagnosticConnection` allows for the dedicated identification of TP connections used for the various diagnostic message sending use cases:

- `functionalRequest`
- `physicalRequest`
- `responseOnEvent`
- `response`

⌋()

[TPS_SYST_05004] Usage of DiagnosticConnection in combination with UUDT ⌈ In addition to the usage of TP connections, the DiagnosticConnection foresees the transmission of UUDT message for **periodic response**. For this purpose, the role periodicResponseUudt is supported. ⌋()

[constr_1367] periodicResponseUudt.periodicResponseUudt shall only refer to a DcmIPdu ⌈ If the role periodicResponseUudt exists then every PduTriggering referenced in the role periodicResponseUudt shall only refer to a DcmIPdu. ⌋()

Please note that the meta-class TpConnectionIdent (derived from Referrable) has been introduced for the purpose of allowing sub-classes of TpConnection to become the target of a reference while preserving full backwards-compatibility to the previous modeling.

This means in particular that the existence of a shortName is only required if the sub-class of TpConnection shall actually represent the target of a reference in the context of the definition of a DiagnosticConnection.

This, however, is kind of self-evident (because the reference would not work without the existence of a shortName at the reference target) and therefore it is not necessary to formulate an explicit constraint that clarifies this issue.

[constr_1368] Limitation of the target of references from DiagnosticConnection ⌈ DiagnosticConnection shall only reference (via the indirection created by TpConnectionIdent) the following sub-classes of the meta-class TpConnection:

- CanTpConnection
- FlexrayTpConnection
- FlexrayArTpConnection
- DoIpTpConnection

⌋()

Class	**DiagnosticConnection**

Table 6.229: NmConfig

Class	***NmCluster*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement			
Note	Set of NM nodes coordinated with use of the NM algorithm. **Tags:** atp.ManifestKind=MachineManifest			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	CanNmCluster, FlexrayNmCluster, J1939NmCluster, LinNmCluster, UdpNmCluster			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
communication Cluster	CommunicationCluster	1	ref	Asscociation to a CommunicationCluster in the topology description.
nmChannel SleepMaster	Boolean	1	attr	This parameter shall be set to indicate if the sleep of this network can be absolutely decided by the local node only and that no other nodes can oppose that decision.
nmNode	NmNode	*	aggr	Collection of NmNodes of the NmCluster. atpVariation: Derived, because NmNode can be variable. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=postBuild
nmNode Detection Enabled	Boolean	0..1	attr	Enables the Request Repeat Message Request support. Only valid if nmNodeIdEnabled is set to true.
nmNodeId Enabled	Boolean	0..1	attr	Enables the source node identifier.
nmPnc Participation	Boolean	0..1	attr	Defines whether this NmCluster contributes to the partial network mechanism.

△

Class	*NmCluster* (abstract)			
nmRepeatMsg IndEnabled	Boolean	0..1	attr	Switch for enabling the Repeat Message Bit Indication.
nm Synchronizing Network	Boolean	1	attr	If this parameter is true, then this network is a synchronizing network for the NM coordination cluster which it belongs to. The network is expected to call Nm_SynchronizationPoint() at regular intervals.

Table 6.230: NmCluster

[constr_3035] CanNm user data configuration in case NID/CBV are enabled ⌈If NID/CBV are enabled (nmCbvPosition and nmNidPosition are configured), there shall not be any user data configured at the position of the respective NID/CBV bytes. ⌋*()*

[constr_3044] CBV configuration in case partial network is used ⌈ In case a partial network is used the control bit vector (CBV) shall be defined in Byte 0 of the NmPdu (nmCbvPosition = 0). ⌋*()*

[constr_3227] NmNode.nmPassiveModeEnabled setting ⌈ NmNode.nmPassive-ModeEnabled shall be set to the same value in all NmClusters with the same bus protocol in the scope of one NmEcu. ⌋*()*

Class	**NmEcu**			
Package	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement			
Note	ECU on which NM is running.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
busDependent NmEcu	BusspecificNmEcu	*	aggr	Cluster specific NmEcu attributes
ecuInstance	EcuInstance	1	ref	Asscociation to an ECUInstance in the topology description.
nmBus Synchronization Enabled	Boolean	0..1	attr	Enables bus synchronization support.
nmComControl Enabled	Boolean	0..1	attr	Enables the Communication Control support.
nmCoordinator	NmCoordinator	0..1	aggr	Nm ECU may coordinate different clusters.
nmCycletime MainFunction	TimeValue	0..1	attr	The period between successive calls to the Main Function of the NM Interface in seconds.
nmPduRx Indication Enabled	Boolean	0..1	attr	Switch for enabling the PDU Rx Indication.
nmRemote SleepInd Enabled	Boolean	0..1	attr	Switch for enabling remote sleep indication support.
nmStateChange IndEnabled	Boolean	0..1	attr	Enables the CAN Network Management state change notification.
nmUserData Enabled	Boolean	0..1	attr	Switch for enabling user data support.

6.9.1 FlexRay Network Management

The following class tables specify the configuration parameters of FlexRay Nm.

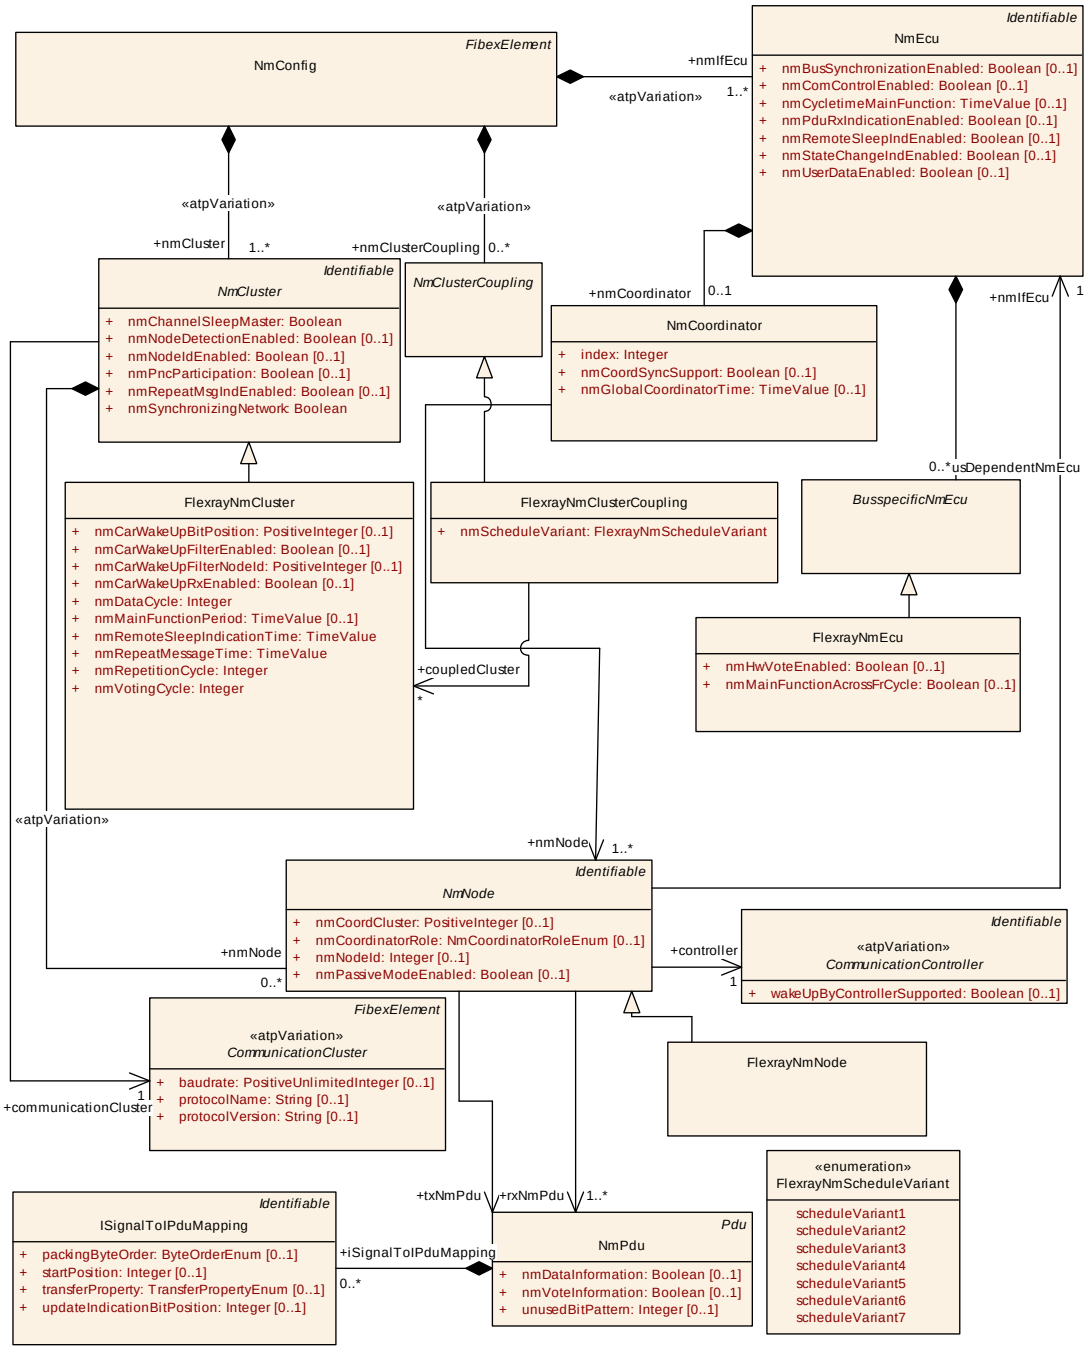

Figure 6.71: FlexRay Network Management Configuration (TransportProtocols: Nm-FlexRayConfiguration)

Class	**FlexrayNmCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement			
Note	FlexRay specific NM cluster attributes.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *NmCluster*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
nmCarWakeUp BitPosition	PositiveInteger	0..1	attr	Specifies the bit position of the CarWakeUp within the Nm Pdu.
nmCarWakeUp FilterEnabled	Boolean	0..1	attr	If this attribute is set to true the CareWakeUp filtering is supported. In this case only the CarWakeUp bit within the NmPdu with source node identifier nmCarWakeUpFilter NodeId is considered as CarWakeUp request.
nmCarWakeUp FilterNodeId	PositiveInteger	0..1	attr	Source node identifier for CarWakeUp filtering. If Car WakeUp filtering is supported (nmCarWakeUpFilter Enabled), only the CarWakeUp bit within the NmPdu with source node identifier nmCarWakeUpFilterNodeId is considered as CarWakeUp request.
nmCarWakeUp RxEnabled	Boolean	0..1	attr	If set to true this attribute enables the support of CarWake Up bit evaluation in received NmPdus.
nmDataCycle	Integer	1	attr	Number of FlexRay Communication Cycles needed to transmit the Nm Data PDUs of all FlexRay Nm Ecus of this FlexRayNmCluster.
nmMain FunctionPeriod	TimeValue	0..1	attr	Defines the processing cycle of the main function of FrNm module.
nmRemote SleepIndication Time	TimeValue	1	attr	Timeout for Remote Sleep Indication in seconds. It defines the time how long it shall take to recognize that all other nodes are ready to sleep.
nmRepeat MessageTime	TimeValue	1	attr	Timeout for Repeat Message State in seconds. Defines the time how long the NM shall stay in the Repeat Message State.
nmRepetition Cycle	Integer	1	attr	Number of FlexRay Communication Cycles used to repeat the transmission of the Nm vote Pdus of all Flex Ray NmEcus of this FlexRayNmCluster. This value must be an integral multiple of nmVotingCycle.
nmVotingCycle	Integer	1	attr	Number of FlexRay CommunicationCycles needed to transmit the Nm vote of Pdus of all FlexRay NmEcus of this FlexRayNmCluster.

Table 6.240: FlexrayNmNode

Enumeration	**FlexrayNmScheduleVariant**
Package	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement
Note	FrNm schedule variant according to FrNm SWS.
Literal	***Description***
scheduleVariant1	NM-Vote and NM Data transmitted within one PDU in static segment. The NM-Vote has to be realized as separate bit within the PDU. **Tags:** atp.EnumerationValue=0
scheduleVariant2	NM-Vote and NM-Data transmitted within one PDU in dynamic segment. The presence (or non-presence) of the PDU corresponds to the NM-Vote **Tags:** atp.EnumerationValue=1
scheduleVariant3	NM-Vote and NM-Data are transmitted in the static segment in separate PDUs. This alternative is not recommended => Alternative 1 should be used instead. **Tags:** atp.EnumerationValue=2
scheduleVariant4	NM-Vote transmitted in static and NM-Data transmitted in dynamic segment. **Tags:** atp.EnumerationValue=3
scheduleVariant5	NM-Vote is transmitted in dynamic and NM-Data is transmitted in static segment. This alternative is not recommended => Variants 2 or 6 should be used instead. **Tags:** atp.EnumerationValue=4
scheduleVariant6	NM-Vote and NM-Data are transmitted in dynamic segment in separate PDUs. **Tags:** atp.EnumerationValue=5
scheduleVariant7	NM-Vote and a copy of the CBV are transmitted in the static segment (using the FlexRay NM Vector support) and NM-Data is transmitted in the dynamic segment **Tags:** atp.EnumerationValue=6

Table 6.241: FlexrayNmScheduleVariant

6.9.2 CAN Network Management

The following class tables specify the configuration parameters of CAN Nm.

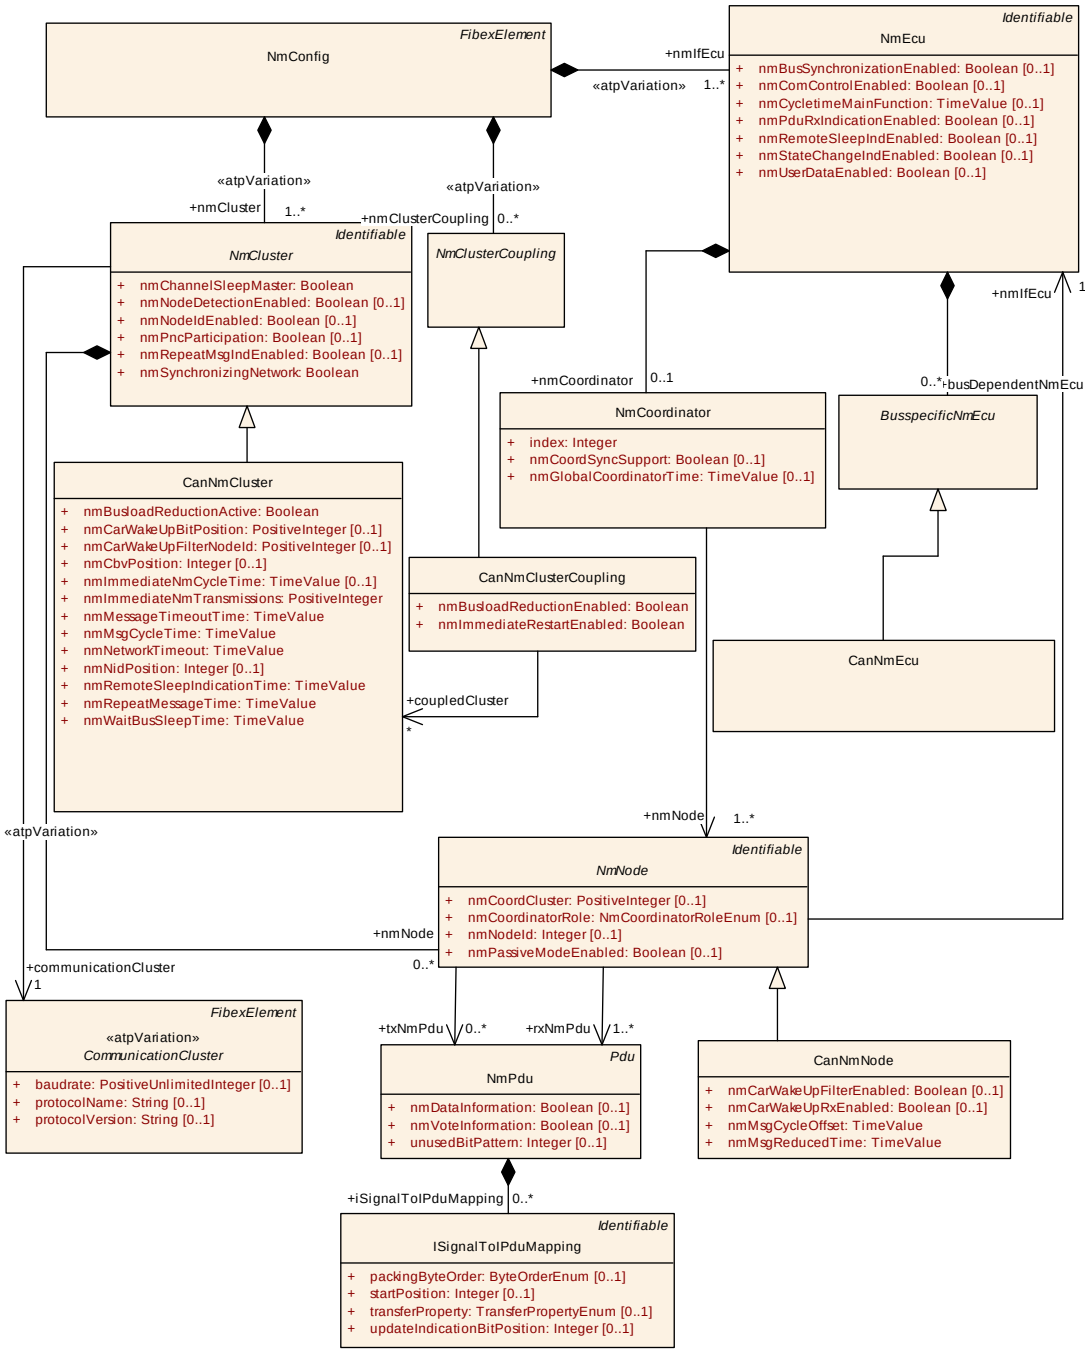

Figure 6.72: CAN Network Management Configuration (TransportProtocols: NmCanConfiguration)

Class	**CanNmCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement			
Note	Can specific NmCluster attributes			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *NmCluster*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
nmBusload ReductionActive	Boolean	1	attr	It determines if bus load reduction for the respective Can Nm channel is active or not.
nmCarWakeUp BitPosition	PositiveInteger	0..1	attr	Specifies the bit position of the CarWakeUp within the Nm Pdu.
nmCarWakeUp FilterNodeId	PositiveInteger	0..1	attr	Source node identifier for CarWakeUp filtering.
nmCbvPosition	Integer	0..1	attr	Defines the position of the control bit vector within the Nm Pdu (Byte position). If this attribute is not configured, the Control Bit Vector is not used.
nmImmediate NmCycleTime	TimeValue	0..1	attr	Defines the immediate NmPdu cycle time in seconds which is used for nmImmediateNmTransmissions NmPdu transmissions. This parameter is only valid if CanNm ImmediateNmTransmissions is greater one.
nmImmediate Nm Transmissions	PositiveInteger	1	attr	Defines the number of immediate NmPdus which shall be transmitted. If the value is zero no immediate NmPdus are transmitted. The cycle time of immeditate NmPdus is defined by nmImmediateNmCycleTime.
nmMessage TimeoutTime	TimeValue	1	attr	Timeout of an NmPdu in seconds. It determines how long the NM shall wait with notification of transmission failure while communication errors occur on the bus.
nmMsgCycle Time	TimeValue	1	attr	Period of a NmPdu in seconds. It determines the periodic rate in the periodic transmission mode with bus load reduction and is the basis for transmit scheduling in the periodic transmission mode without bus load reduction.
nmNetwork Timeout	TimeValue	1	attr	Network Timeout for NmPdus in seconds It denotes the time how long the CanNm shall stay in the Network Mode before transition into Prepare Bus-Sleep Mode shall take place.
nmNidPosition	Integer	0..1	attr	Defines the byte position of the source node identifier within the NmPdu. If this attribute is not configured, the Node Identification is not used.
nmRemote SleepIndication Time	TimeValue	1	attr	Timeout for Remote Sleep Indication in seconds. It defines the time how long it shall take to recognize that all other nodes are ready to sleep.
nmRepeat MessageTime	TimeValue	1	attr	Timeout for Repeat Message State in seconds. Defines the time how long the NM shall stay in the Repeat Message State.
nmWaitBus SleepTime	TimeValue	1	attr	Timeout for bus calm down phase in seconds. It denotes the time how long the CanNm shall stay in the Prepare Bus-Sleep Mode before transition into Bus-Sleep Mode shall take place.

Table 6.242: CanNmCluster

[constr_3069] Allowed `CanNmCluster.nmNidPosition` values ⌈ The value of `CanNmCluster.nmNidPosition` shall only be set to either 0 or 1. ⌋*()*

[constr_3070] Allowed `CanNmCluster.nmCbvPosition` values ⌈ The value of `CanNmCluster.nmCbvPosition` shall only be set to either 0 or 1. ⌋*()*

[constr_3071] `CanNmCluster.nmCbvPosition` and `CanNmCluster.nmNidPosition` shall never have the same value ⌈ `CanNmCluster.nmCbvPosition` and `CanNmCluster.nmNidPosition` shall never have the same value. ⌋()

Note	CAN specific NM Node attributes.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *NmNode*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
nmCarWakeUp FilterEnabled	Boolean	0..1	attr	If this attribute is set to true the CareWakeUp filtering is supported.
nmCarWakeUp RxEnabled	Boolean	0..1	attr	If set to true this attribute enables the support of CarWake Up bit evaluation in received NmPdus.
nmMsgCycle Offset	TimeValue	1	attr	Node specific time offset in the periodic transmission node. It determines the start delay of the transmission. Specified in seconds.
nmMsg ReducedTime	TimeValue	1	attr	Node specific bus cycle time in the periodic transmission mode with bus load reduction. Specified in seconds.

Table 6.245: CanNmNode

6.9.3 LIN Network Management

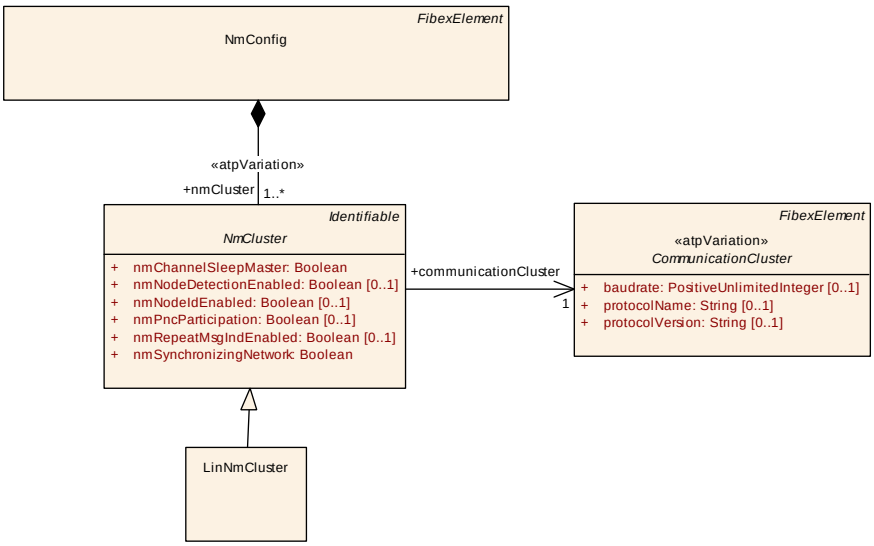

Figure 6.73: LIN Network Management Configuration

A LinNmCluster can be defined to describe on which channels LinNm needs to be configured. In AUTOSAR there is no communication defined between LinNm and LinIf. Therefore there is no need to describe NmNodes and corresponding NmPdus on the LinNmCluster.

Class	**LinNmCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement			
Note	Lin specific NmCluster attributes.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *NmCluster*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table 6.246: LinNmCluster

6.9.4 UDP Network Management

The UPD Nm model is similar to the Nm models of the other communication buses but there are some specific characteristics due to the modeling of `EthernetCluster` and `EthernetPhysicalChannel` (see also chapter 3.3.6).

The `UdpNmCluster` corresponds to one `EthernetPhysicalChannel` (VLAN). Therefore it is required that for each `EthernetPhysicalChannel` on one `EthernetCluster` a respective `UdpNmCluster` with a reference to the `EthernetPhysicalChannel` is created. All of these `UdpNmCluster`s point to the same `EthernetCluster` which the `EthernetPhysicalChannel`s are contained in.

Thus, additionally to the reference from `NmCluster` to the `CommunicationCluster` (which applies to all Nm models), there is need for an Ethernet specific reference from the `UdpNmCluster` to the `EthernetPhysicalChannel`. This allows to specify for which VLAN this `UdpNmCluster` applies.

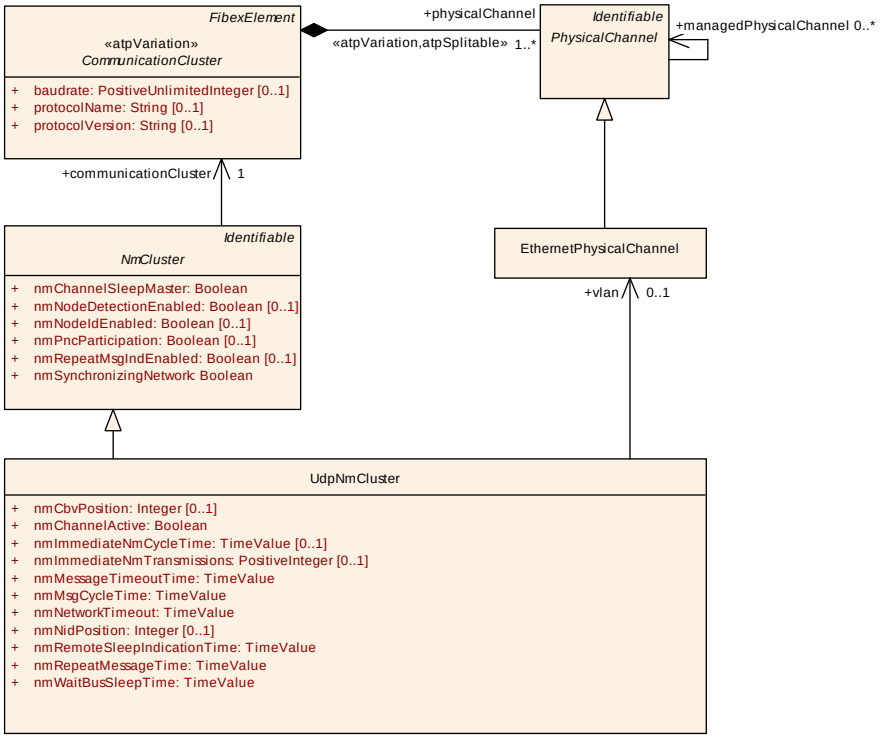

Figure 6.74: UdpNmCluster structure

The following class tables specify the configuration parameters of UDP Nm.

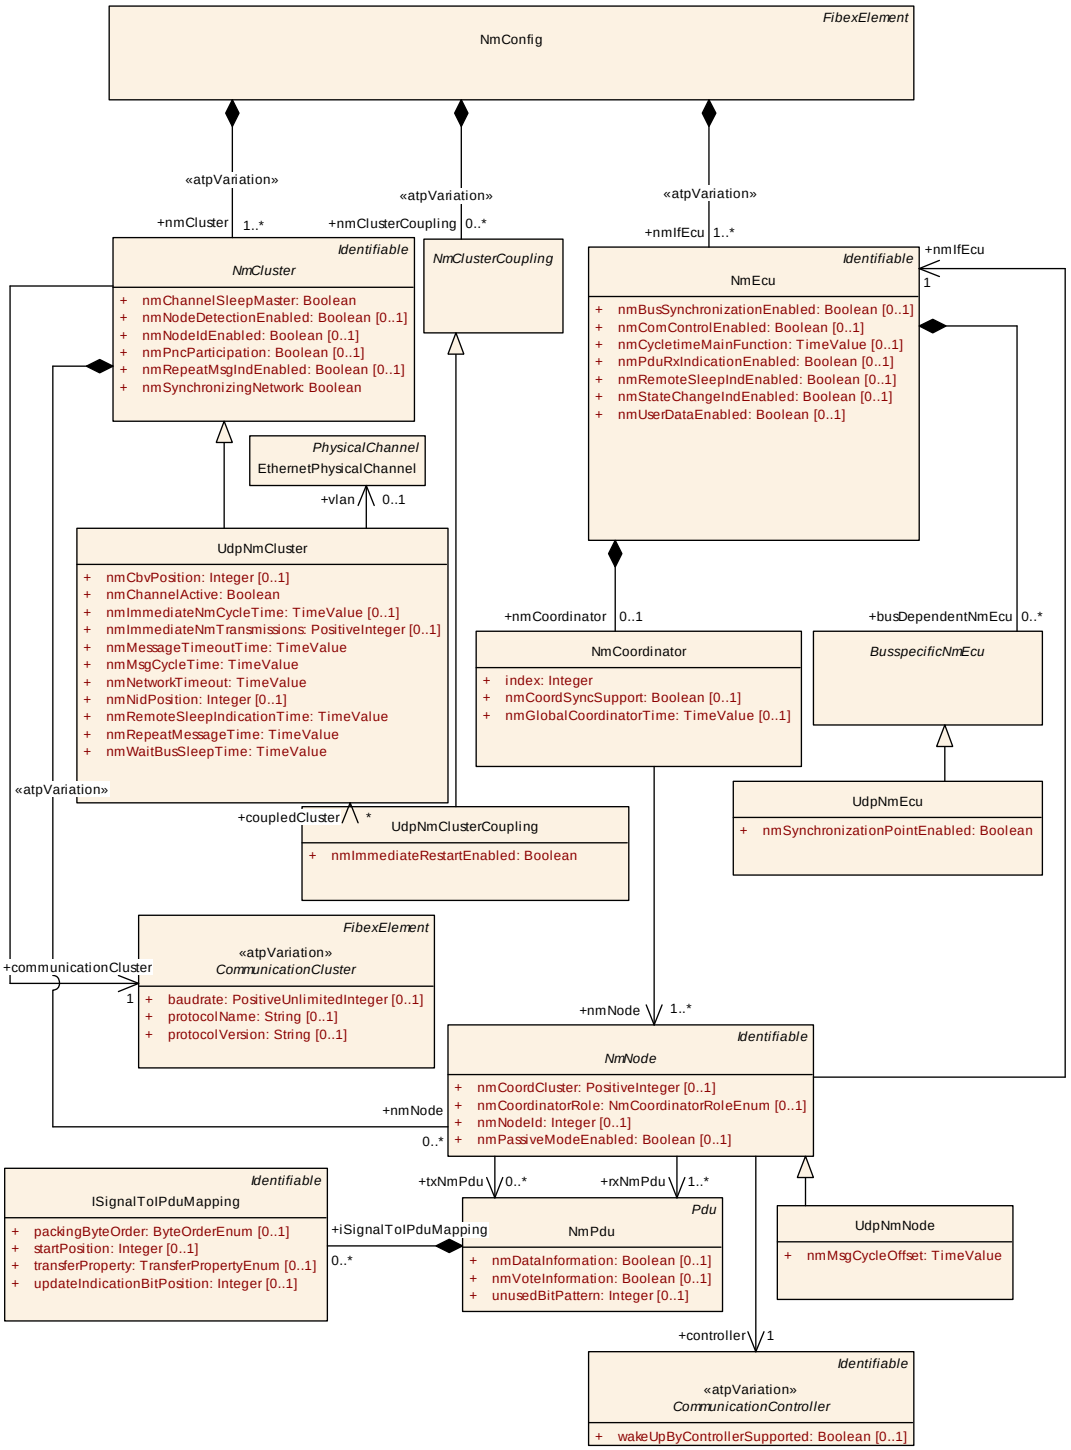

Figure 6.75: UDP Network Management Configuration (TransportProtocols: NmUdpConfiguration)

Class	**UdpNmCluster**			
Package	M2::AUTOSARTemplates::SystemTemplate::NetworkManagement			
Note	Udp specific NmCluster attributes **Tags:** atp.ManifestKind=MachineManifest			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *NmCluster*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
nmCbvPosition	Integer	0..1	attr	Defines the position of the control bit vector within the Nm Pdu (Byte positon).
nmChannel Active	Boolean	1	attr	This switch determines if the respective UdpNm channel is active or not. Indicates whether a particular UdpNm channel shall be initialized (TRUE) or not (FALSE). If this parameter is set to FALSE the respective NM instance shall not be used during runtime.
nmImmediate NmCycleTime	TimeValue	0..1	attr	Defines the immediate NmPdu cycle time in seconds which is used for nmImmediateNmTransmissions NmPdu transmissions. This attribute is only valid if nmImmediate NmTransmissions is greater one.
nmImmediate Nm Transmissions	PositiveInteger	0..1	attr	Defines the number of immediate NmPdus which shall be transmitted. If the value is zero no immediate NmPdus are transmitted. The cycle time of immediate NmPdus is defined by nmImmediateNmCycleTime.
nmMessage TimeoutTime	TimeValue	1	attr	Timeout of a NmPdu in seconds. It determines how long the NM shall wait with notification of transmission failure while communication errors occur on the bus.
nmMsgCycle Time	TimeValue	1	attr	Period of a NmPdu in seconds. It determines the periodic rate in the periodic transmission mode with bus load reduction and is the basis for transmit scheduling in the periodic transmission mode without bus load reduction.
nmNetwork Timeout	TimeValue	1	attr	Network Timeout for NmPdus in seconds. It denotes the time how long the UdpNm shall stay in the Network Mode before transition into Prepare Bus-Sleep Mode shall take place.
nmNidPosition	Integer	0..1	attr	Defines the byte position of the source node identifier within the NmPdu.
nmRemote SleepIndication Time	TimeValue	1	attr	Timeout for Remote Sleep Indication in seconds. It defines the time how long it shall take to recognize that all other nodes are ready to sleep.
nmRepeat MessageTime	TimeValue	1	attr	Timeout for Repeat Message State in seconds. Defines the time how long the NM shall stay in the Repeat Message State.
nmWaitBus SleepTime	TimeValue	1	attr	Timeout for bus calm down phase in seconds. It denotes the time how long the CanNm shall stay in the Prepare Bus-Sleep Mode before transition into Bus-Sleep Mode shall take place.
vlan	EthernetPhysical Channel	0..1	ref	Reference to the vlan (represented by the Ethernet PhysicalChannel) this UdpNmCluster shall apply to.

participating J1939Cluster	J1939Cluster	*	ref	This identifies the J1939Clusters that share a common address space

Table 6.255: J1939SharedAddressCluster

[TPS_SYST_02107] Shared address space for J1939 routing relations ⌈ Address claims are routed between several CommunicationClusters independent of whether there are actual routings between individual nodes on respective CommunicationClusters. This means that the overall number of nodes in the shared CommunicationCluster cannot exceed 254, independently of the routing relations. ⌋ *(RS_SYST_00038)*

[TPS_SYST_02108] Address proxying for J1939 routing relations ⌈ The gateway claims all addresses used in routed messages on those CommunicationClusters to which the actual nodes are not connected. Thereby the address spaces are separate and only the nodes participating in a routing appear on more than one CommunicationCluster. The total number of nodes in the participating CommunicationClusters can be higher than 254, and the address arbitration is faster with less conflicts. ⌋ *(RS_SYST_00038)*

[TPS_SYST_02109] Absence of participatingJ1939Cluster to a J1939Cluster ⌈ If J1939Clusters exist that participate in a routing relation but are not referenced in the role J1939SharedAddressCluster.participatingJ1939Cluster by the same J1939SharedAddressCluster then gateway shall apply the address proxying according to [TPS_SYST_02108]. ⌋ *(RS_SYST_00038)*

6.9.6 Managed Channels

There is the use case to transmit NM frames on one VLAN (EthernetPhysicalChannel) and the application data on different VLANs. At the same time it shall be possible to indicate that a VLAN uses Network Management although no NmPdus are defined on this channel.

A reference between PhysicalChannels is used to express such a setting: The managing PhysicalChannel that contains configured NmPdus references PhysicalChannels in the role managedPhysicalChannel.

Since the reference managedPhysicalChannel is available on the abstract PhysicalChannel element it is not only usable in case of UdpNm and VLANs but also for similar cases on other bus networks.

[constr_3479] PhysicalChannel is not allowed to be a managedPhysicalChannel and a managing PhysicalChannel ⌈ If a PhysicalChannel is referenced in role managedPhysicalChannel, then it shall not be the source of another managedPhysicalChannel relation. ⌋*()*

[constr_3480] PhysicalChannel shall be referenced in the role managedPhysicalChannel only once ⌈ A PhysicalChannel shall be referenced in the role managedPhysicalChannel only up to once. ⌋*()*

[constr_3481] UdpNmCluster is not allowed to reference a managedPhysicalChannel in the role vlan ⌈ If an EthernetPhysicalChannel is target of a managedPhysicalChannel reference, then no UdpNmCluster shall reference this managedPhysicalChannel in the role vlan. ⌋*()*

[constr_3482] NmCluster is not allowed to reference a CommunicationCluster that aggregates a managedPhysicalChannel ⌈ If a PhysicalChannel, except EthernetPhysicalChannel, is target of a managedPhysicalChannel, then the aggregating CommunicationCluster shall not be referenced by any NmCluster in the role communicationCluster. ⌋*()*

[constr_3483] The same PhysicalChannel is not allowed to be the source and the target of managedPhysicalChannel references ⌈ If a PhysicalChannel is source of any managedPhysicalChannel reference, then it shall not be the target of any managedPhysicalChannel relation. ⌋*()*

6.10 Bus Mirroring

Many communication buses in a vehicle are not directly accessible by a tester. To allow a tester to listen to the traffic on such internal communication buses the bus mirroring is introduced. The bus mirroring collects traffic from such an internal communication bus and forwards it to an intermediate destination bus or to a destination bus that is accessible by the tester.

Testers connected via CAN will receive unmodified CAN frames and LIN frames with special CAN IDs. Testers connected via Ethernet will receive a stream containing current time, identification, and content of CAN, LIN, and FlexRay frames.

On intermediate FlexRay buses, a set of PDUs is used to transport streams of mirrored frames with the same layout as on Ethernet.

[TPS_SYST_02202] Modeling of bus mirroring ⌈ The `BusMirrorChannelMapping` defines the bus mirroring in which the communication traffic of the `sourceChannel` is forwarded to the `targetChannel`. ⌋*()*

6.11 Fan-out

AUTOSAR supports three different fan-outs:

- Signal fan-out
- Pdu fan-out
- Frame fan-out

6.11.1 Signal fan-out

A Signal fan-out can either be RTE fan-out or COM Signal Gateway fan-out. The details are explained in the following subchapters.

6.11.1.1 RTE fan-out

The RTE supports a "signal fan-out" where one `SystemSignal` is sent in several `IPdu`s.

[TPS_SYST_01109] RTE fan-out support ⌈ The RTE fan-out (signal fan-out) is described by the relation between `SystemSignal` and `ISignal`.

In the case of a "signal fan-out", several `ISignal`s refer to the same `SystemSignal` as shown in the following example. ⌋*()*

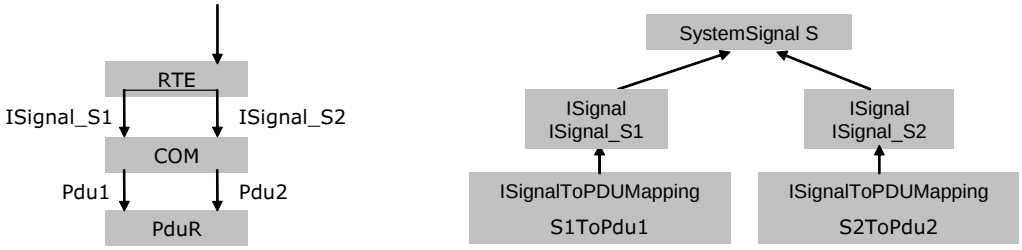

Figure 6.83: RTE fan-out

6.11.1.2 COM Signal Gateway fan-out

In Com [20] the Signal Gateway supports a fan-out where an incoming signal is routed to several destinations.

[TPS_SYST_01110] Com Signal Gateway fan-out support ⌈ A `Signal Gateway` fan-out (1:n routing) is described with the definition of several `ISignalMapping`s in the `Gateway` description, which all refer to the same source `ISignalTriggering`. ⌋ *()*

Note that [constr_3514] applies for the relation between `ISignalToIPduMapping` to `ISignal`.

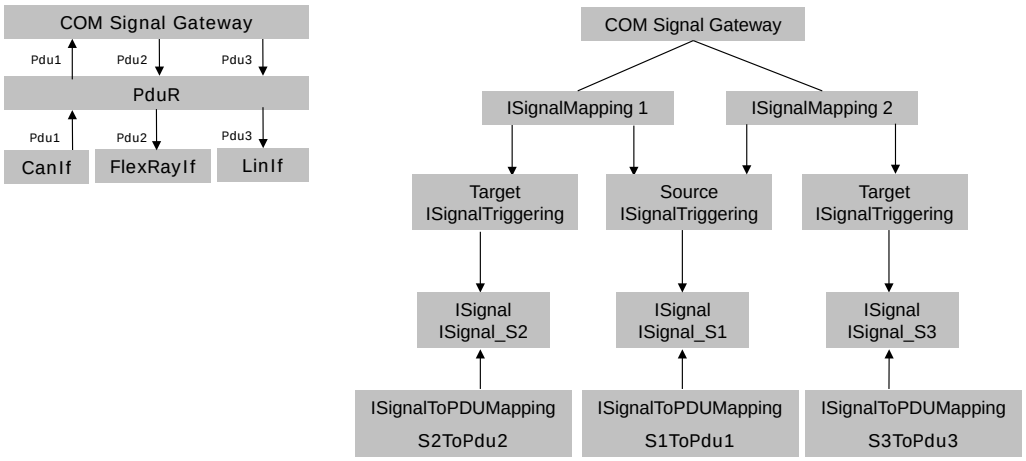

Figure 6.84: Com Gateway fan-out

6.11.2 Pdu fan-out

6.11.2.1 Pdu Router fan-out

The `Pdu Router` supports the "PDU fan-out" where one `IPdu` is sent to multiple destinations.

[TPS_SYST_01111] Pdu Router fan-out support ⌈ The `Pdu Router` fan-out is described by several `PduTriggering` elements pointing to the same `Pdu`[4].

The sending ECU/PDU router has an output `IPduPort` that has the value of `communicationDirection` set to `out` and is referenced by the `PduTriggering`. According to the Cluster/Channel aggregation, the `Pdu Router` determines the clusters to use in its routing. ⌋*()*

[TPS_SYST_01112] `FlexrayCluster` Pdu Router interaction ⌈ The following condition applies only in case of FlexRay on the same `FlexrayCluster` if two `PduTriggering`s refer to the same `Pdu`: this `Pdu` shall only be sent once to the FlexRay Interface. In other words the Pdu Router sends only one Pdu Transmission request to the FlexRay Interface. ⌋*()*

[4] AUTOSAR Layered Architecture [15] defines which `Pdu` types are routed by the `Pdu Router`

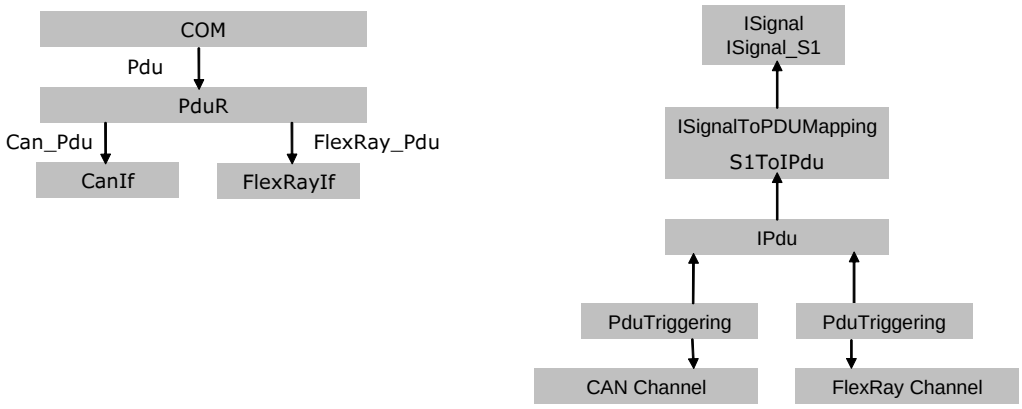

Figure 6.85: Pdu Router fan-out

6.11.2.2 Flexray Interface fan-out

The Flexray interface supports a fan-out where one `Pdu` is mapped into more than one frame on the same `CommunicationCluster`.

[TPS_SYST_01113] FlexRay Interface fan-out support ⌈ The redundant transmission in the FlexRay Interface in the static segment is described by

- one `FlexrayFrameTriggering` on each `PhysicalChannel`
- both `FlexrayFrameTriggering`s refer to the same `FlexrayFrame` with the same `Pdu`
- each `FlexrayFrameTriggering` aggregates the same number of `FlexrayAbsolutelyScheduledTiming`s
- for every `FlexrayAbsolutelyScheduledTiming` on one `PhysicalChannel` a corresponding `FlexrayAbsolutelyScheduledTiming` with identical values shall be defined on the other `PhysicalChannel`

⌋()

If the fan-out is specified between different FlexRay channels of the same cluster it shall be handled by the FlexRay Interface.

The Flexray Interface does NOT handle fan-out/in between different clusters.

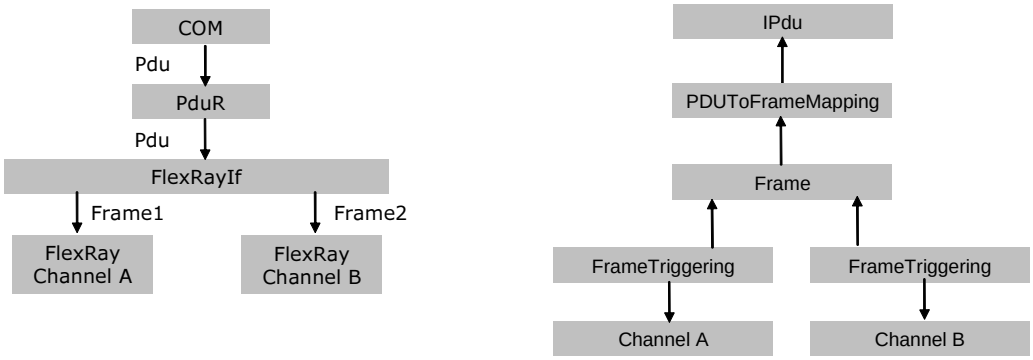

Figure 6.86: Bus Interface fan-out

6.11.3 Frame fan-out

[TPS_SYST_01114] Frame fan-out support ⌈ AUTOSAR supports the Frame fan-out only on the `FlexrayCluster` (see [TPS_SYST_01113]). ⌋*()*

6.12 Support of Complex Drivers

The System Template allows the integration of custom communication means into AUTOSAR `EcuInstance`s.

[TPS_SYST_01115] CDD communication support ⌈ The elements `UserDefinedPdu` and `UserDefinedIPdu` shall be used to describe the Pdu-based communication via Complex Drivers. ⌋*(RS_SYST_00043)*

The `UserDefinedPdu` and `UserDefinedIPdu` elements are described in chapter 6.3 in more detail.

The `UserDefinedIPdu` can be used to describe the communication if a new BSW module was added above the PduR, e.g a Diagnostic Service.

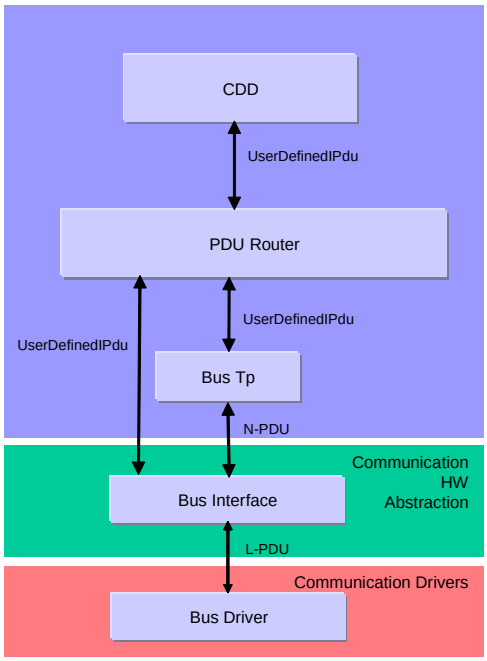

Figure 6.87: CDD over PduR

The `UserDefinedPdu` can be used to describe the communication if a new BSW module was added above an Interface, e.g. a new Nm module or XCP.

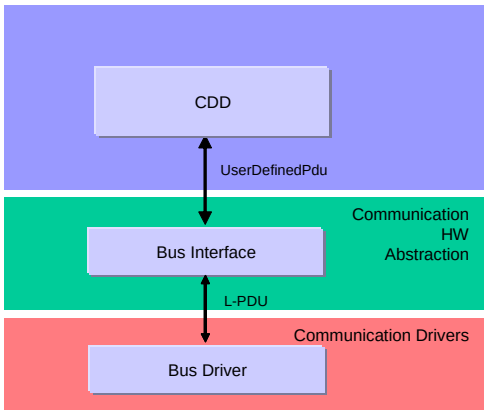

Figure 6.88: CDD over Bus Interface

7 Data Transformation

7.1 Outline

The transmission of data over a communication bus requires some effort to convey the information about the nature of the transmitted data from the sender to the receiver. Both sides need to agree on this part or else the communication will fail.

This aspect is complicated by the fact that in most cases it is uncommon to transmit information in an atomic manner piece by piece. For the sake of properly utilizing the available communication resources, pieces of data that may or may not have any semantic relationship with each other are packed into a single transmission unit.

In this case, the receiver does not only have to be informed about the nature of the individual pieces of information but also about the packing of these pieces into the transmission unit.

There are different approaches of how this goal can be achieved, these are described in the following sub-chapters.

7.1.1 Configuration of the Communication Layout

Use a configurable software package on both the sender and the receiver side that can adapt to virtually any possible packing of data. In this case the packing must be described in machine-readable form on a very detailed level in order to allow for the communication software to adapt to it.

For the sake of this argument, it doesn't really matter whether the adaption to the configuration is done at run-time or whether the configuration ends up in dedicated source code. The point is that the very detailed machine-readable configuration description is required to exist.

This approach used to be one of the pillars of the AUTOSAR standard as it entitled the players in the business with a maximum amount of flexibility and especially the OEMs are able to develop specific patterns for the design of their communication matrices that can, despite the diversity, be expressed with this approach.

This approach also facilitates the monitoring of transmission during development and deployment of the automotive software because monitoring tools can use the same configuration information to set themselves up for the task. This aspect is very important for debugging and quality assurance.

The downside, however, is that the act of laying out pieces of information in a limited number of transmission units becomes cumbersome and time-consuming. This effect becomes even more prominent with the advent of more advanced communication technologies that allow for a much bigger payload in single transmission units.

7.1.2 Data Transformation by Software

Don't care about the individual layout of information on the bus and let a piece of software take care of marshaling data onto the communication bus on the sender side and the reverse process on the receiver side.

This approach gains attractiveness in an environment where large and complicated pieces of information need to be transmitted.

Of course, in order to make this approach work it is necessary to standardize the behavior of the marshaling software to the necessary extent such that sender and receiver agree on how data needs to be processed.

With this approach, the amount of configuration can be reduced dramatically at the potential expense of efficiency and code size.

But this is not the end of the story as the idea of letting software take care of data "manipulation" can **following pretty much the same pattern** be utilized for further use cases:

End-to-end Protection Data is wrapped into a harness of meta-data that allows for checking data integrity at the receiver side.

Data Security Data is cryptographically processed such that it shall become impossible for unauthorized parties to intercept the communication process.

In other words, the approach is not limited to marshaling of data but can in the same way also be used for an array of other useful data transformations. This is why the terminology in this regard is not limited to the marshaling but to data transformation in general, hence the term **`Data Transformer`** is coined.

`Data Transformer`s can be chained such that, on the sender side, one `Data Transformer` picks up the result of the transformation of another `Data Transformer` and applies a specific transformation to the already processed data.

The receiver then is required to apply the `Data Transformer`s in reverse order in order to finally yield the actual data and provide it to the consumer (e.g. an `ApplicationSwComponentType`).

A basic principle of the `Data Transformer` approach, however, is that the `Data Transformer` is only responsible for the actual data transformation but **not** concerned about the communication of data. This can be taken care of by other software modules.

In total, the second approach provides a sufficient level of utility that it becomes part of the AUTOSAR standard. This chapter lays out the details of how `Data Transformer`s can be used in the context of this document.

Further information can also be found in the SWS RTE [24].

7.2 Use Cases

This chapter describes Transformer use cases that are supported by AUTOSAR.

7.2.1 Transmission of large composite data types over networks with large PDUs (e.g Ethernet)

With a serializing transformer, it is not necessary any more to map the atomic sub-elements of composite data types to individual signals in the RTE. The sending application SWC sends the composite data element using Sender/Receiver communication and hands the data over to the RTE. Then the complex data get transformed to a linear byte array and handed over to Com which sends the data to the receiving ECU. There, the Com stack receives the serialized data and notifies the RTE. The Rte reads the data and calls the deserializing transformer. The deserializing transformer transforms them back into the composite data element and gives the result to the RTE. The receiving SWC can now read the data and access it in the same form the sending SWC has sent them.

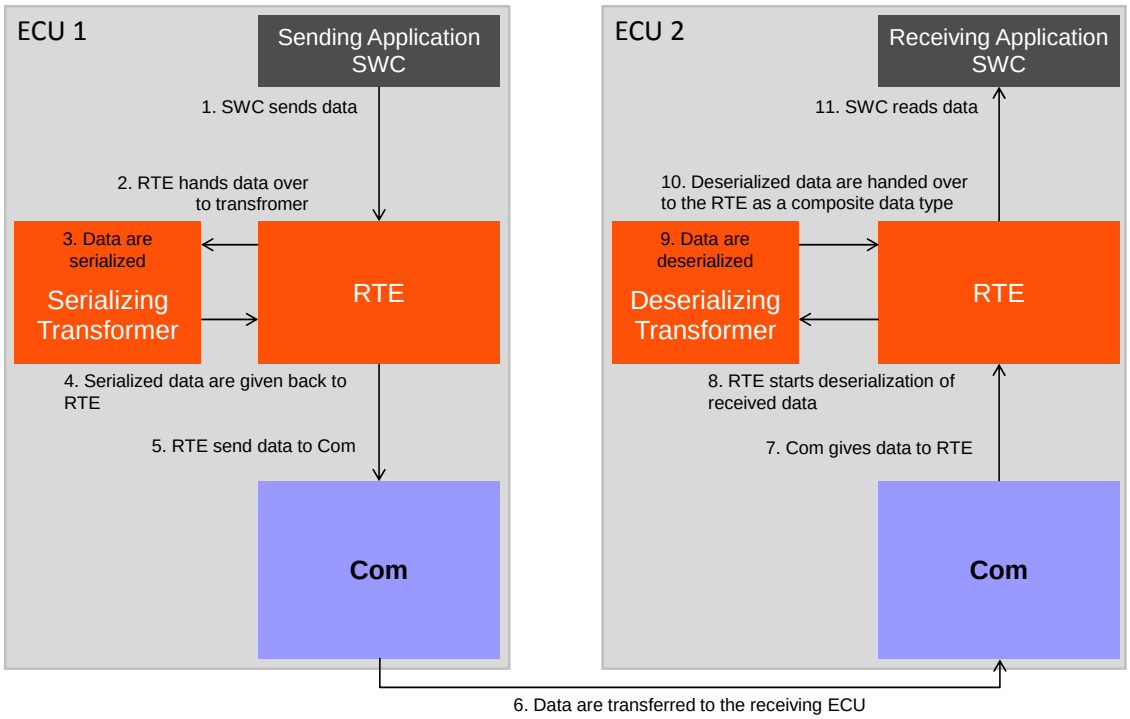

Figure 7.1: Transformer Use Case: Transmission of large composite data types over networks with large PDUs (e.g Ethernet)

7.2.2 Support of transmission from one sender to multiple receivers with Signal Fan-out

If a signal fan-out is configured in the System Description, the RTE has to hand over the data which should be transmitted multiple times to the Com stack. This is the case if multiple `ISignal`s reference the same `SystemSignal` in the System Description.

For each `ISignal` the following steps have to be performed individually:

- transform the data
- hand it over to COM

Every receiver has to deserialize the ISignal in its transformer independently.

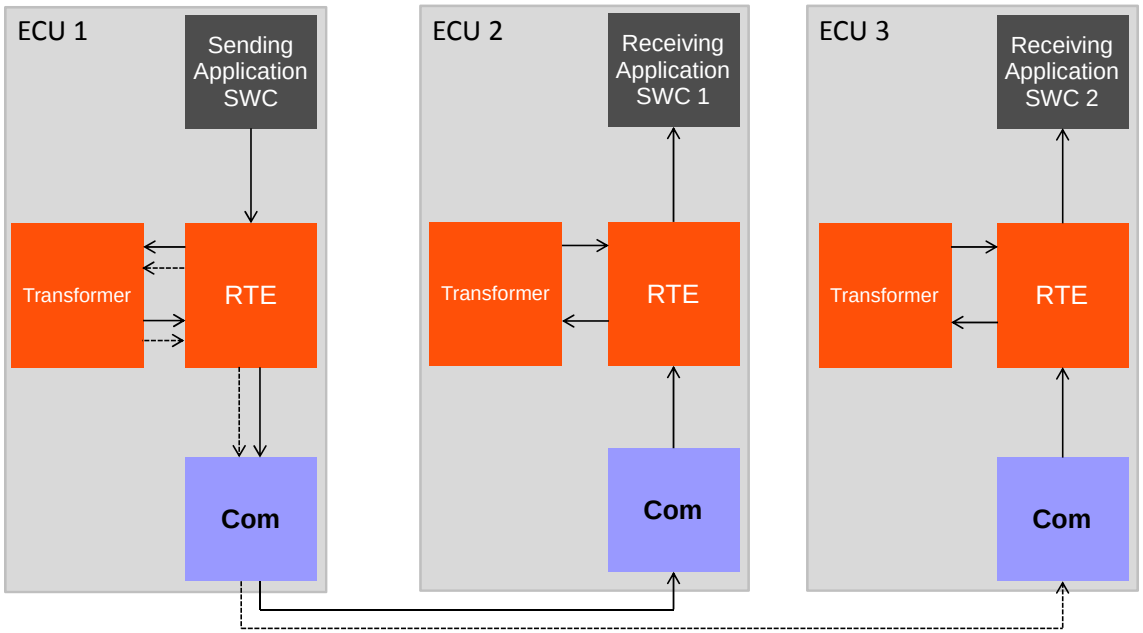

Figure 7.2: Transformer Use Case: RTE Fanout

7.2.3 Support of transmission from one sender to multiple receivers with PDU Fan-out

The transformation of inter-ECU Sender/Receiver communication should also work together with configurations that include `Pdu` fan-outs inside the COM stack (PduR fan-out). This is the case if multiple `PduTriggering`s reference the same `Pdu` in the System Description. In that scenario the data are sent by the sending application SWC to the RTE and transformed by the data transformer which is called by the RTE. Then the RTE hands the data over the Com. This happens only once. Due to the Pdu fan-out, the PduR sends the data multiple times to the Bus Interfaces using different Pdus.

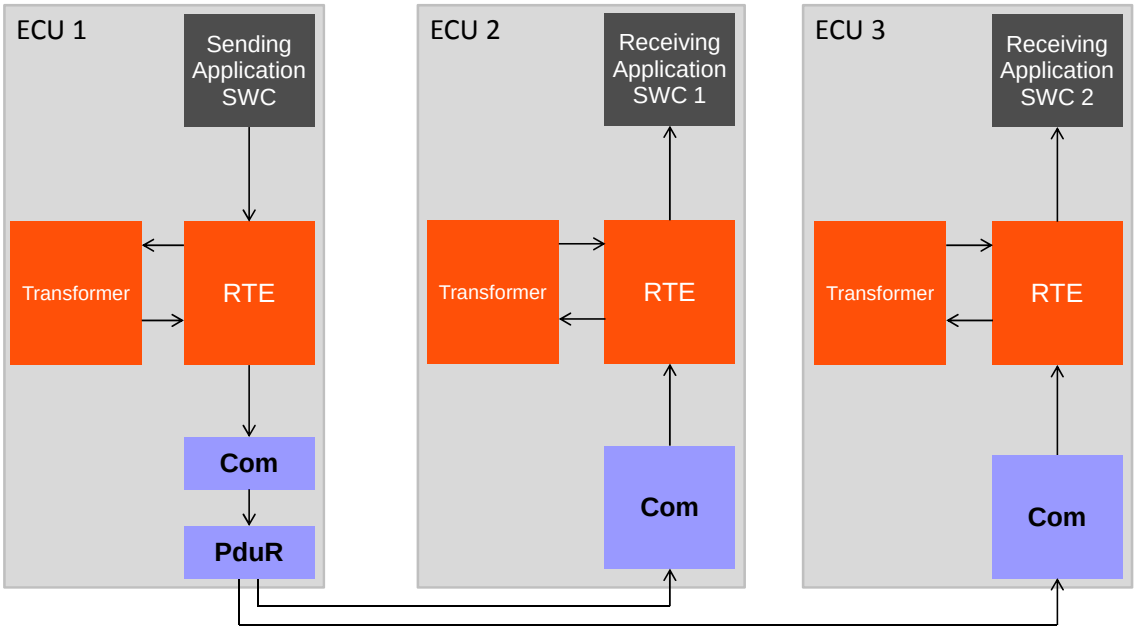

Figure 7.3: Transformer Use Case: PduR Fanout

7.2.4 Transformer Chaining

It is possible to chain multiple transformers. The output of one transformer then will be the input of the next transformer in the chain. Transformer for serialization data, for encrypting, digitally signing or compressing data can be implemented and used together. Such architecture could be used to assemble a system, where you can flexibly add functionality like compression or encryption to a serialized stream. In AUTOSAR the E2E-protection is implemented by an additional serializer which is appended to the chain.

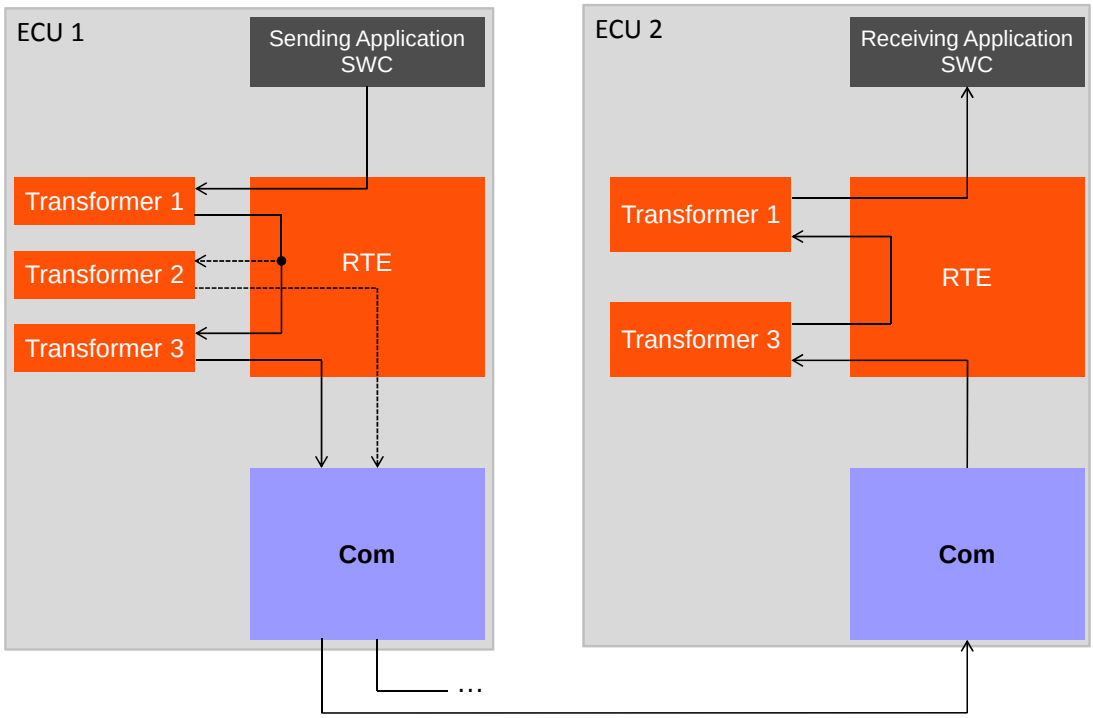

Figure 7.4: Transformer Use Case: Transformer Chain

7.2.5 Signal Group Based interaction of the transformer with the Com module

An initial transformer (serializer) performs the serialization according to the ISignal-ToIPduMapping from the system description. For each application data element the corresponding mapping to an ISignalIPdu position is respected. After the transformation chain is processed the serialized data is provided to the Com module. The Com module can have a signal based transmission mode selection defined and determines the respective transmission mode to be applied.

7.3 Transformer configuration

As a transformer provides well defined function signatures per each communication relation (ISignal based), which is marked for transformation, the function signature is NOT dependent from the transformation technology used, but only from the transmitted data elements (Client/Server operation signature or Sender/Receiver interface signature). The output of a transformer will be always a linear byte array.

Configuration of data transformation consists of three parts:

1. definition of the transformer chains with their transformers
2. configuration which communication is subject to transformation

3. configuration of the transformer properties for the transformed communication

The configuration of single transformers and whole transformer chains is shown in figure 7.5.

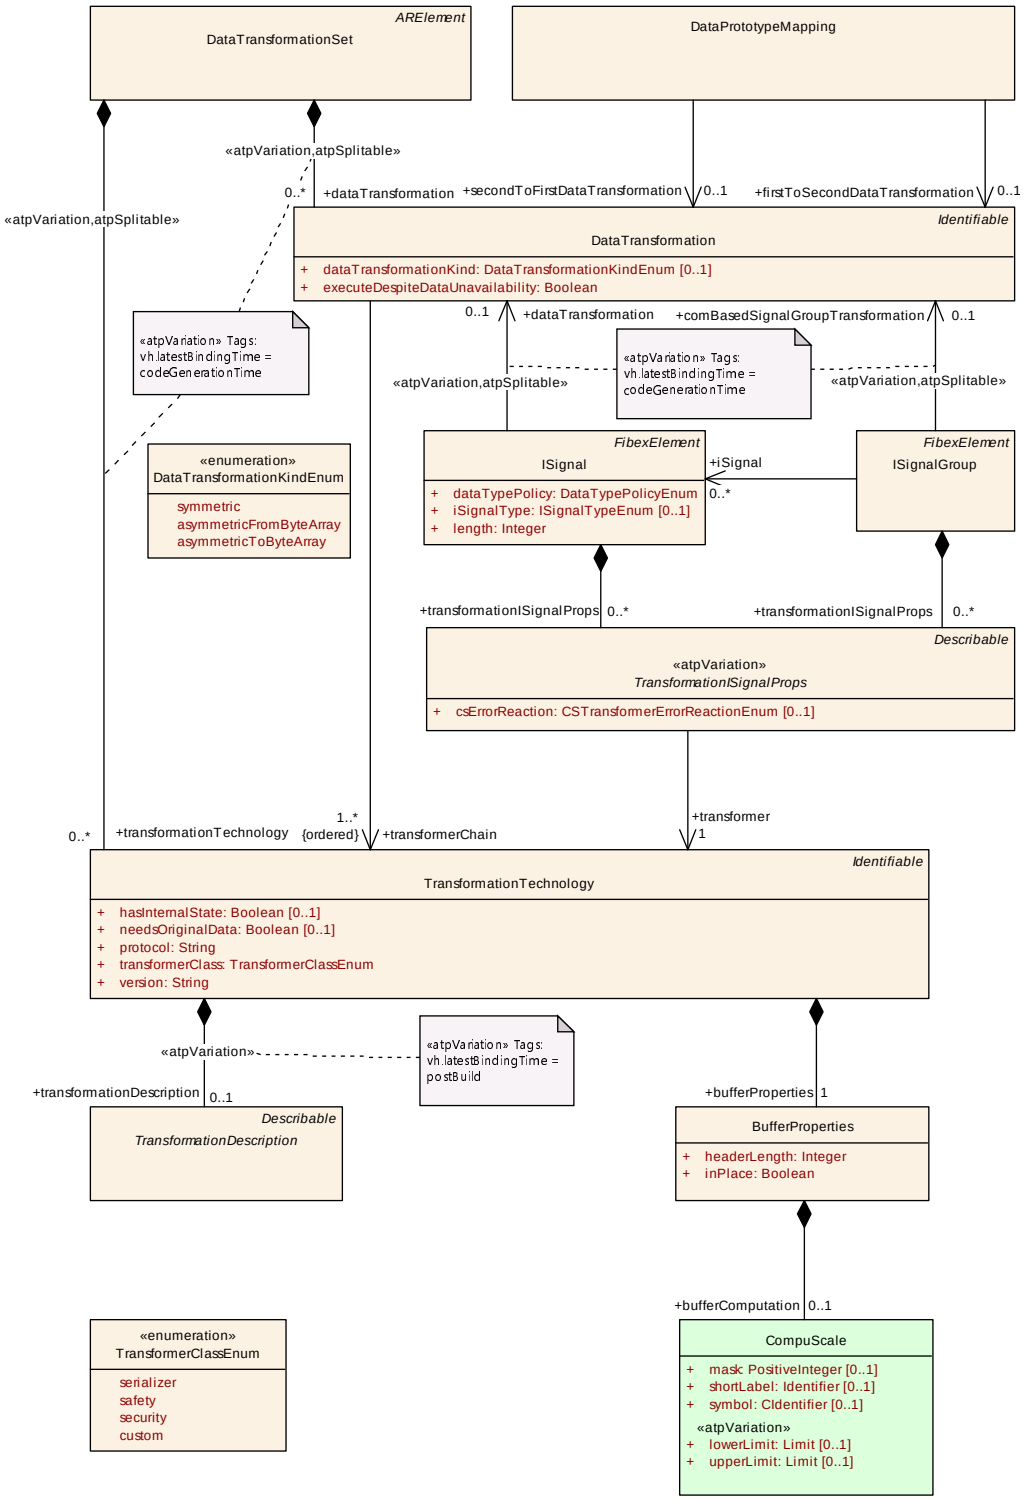

Figure 7.5: Configuration of transformers and transformer chains

The DataTransformationSet acts as a central container for the configuration of data transformation.

data Transformation Kind	DataTransformationKind Enum	0..1	attr	This attribute controls the kind of DataTransformation to be applied.
executeDespite Data Unavailability	Boolean	1	attr	Specifies whether the transformer chain is executed even if no input data are available.
transformer Chain (ordered)	Transformation Technology	1..*	ref	This attribute represents the definition of a chain of transformers that are supposed to be executed according to the order of being referenced from DataTransformation.

Table 7.2: DataTransformation

[TPS_SYST_02030] The DataTransformationSet contains all transformer chains ⌈ The DataTransformationSet contains transformer chains represented by DataTransformation elements. ⌋*(RS_SYST_00050)*

For each transformer chain it can be decided via the attribute executeDespite-DataUnavailability whether the RTE should try to execute the transformers of the transformer chain, even when no data are available as input. e.g. the queue is empty or there was an error in the COM stack. This is needed when no data are available but a transformer has to be executed anyway because it maintains an internal state which has to be updated to consider that data was expected but not available. This might be used in transformers which maintain an internal state. Of course the specifications and implementations of all transformers in the chain have to be able to cope with execution without valid input data.

[constr_3208] executeDespiteDataUnavailability usage restriction ⌈ In the set of more than one ISignal which reference the same SystemSignal in the role systemSignal, there shall be no ISignal which references a DataTransformation where executeDespiteDataUnavailability is set to true. ⌋*()*

In other words: There shall be no transformer chain which "belong" to the same SystemSignal due to signal fan-in where the attribute executeDespiteDataUnavailability is set to true.

[TPS_SYST_02031] A transformer is represented by a TransformationTechnology ⌈ A transformer is represented by a TransformationTechnology. ⌋ *(RS_SYST_00050)*

Class	**TransformationTechnology**			
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer			
Note	A TransformationTechnology is a transformer inside a transformer chain. **Tags:** xml.namePlural=TRANSFORMATION-TECHNOLOGIES

Note	Specifies the transformer class of a transformer.
Literal	***Description***
custom	The transformer is a custom transformer. **Tags:** atp.EnumerationValue=0
safety	The transformer is a safety transformer. **Tags:** atp.EnumerationValue=1
security	The transformer is a security transformer. **Tags:** atp.EnumerationValue=2

▽

△

Enumeration	TransformerClassEnum
serializer	The transformer is a serializing transformer. **Tags:** atp.EnumerationValue=3

Table 7.4: TransformerClassEnum

[constr_3265] `TransformationTechnology.hasInternalState` setting for an E2E transformer ⌈ The value of `hasInternalState` shall be set to true for a `TransformationTechnology` with `transformerClass` set to `safety`. ⌋*()*

[constr_3266] `TransformationTechnology.hasInternalState` setting for a SOME/IP Transformer ⌈ The value of `hasInternalState` shall be set to true for a SOME/IP Transformer if `SOMEIPTransformationISignalProps.sessionHandlingSR` for the `ISignal` is set to active. ⌋*()*

[TPS_SYST_02032] Transformer chains are ordered list of transformers ⌈ A transformer chain consists of an ordered list of `TransformationTechnology`s (transformers). ⌋*(RS_SYST_00050)*

[constr_3121] The length of transformer chains is limited to 255 transformers ⌈ The maximum number of `DataTransformation.transformerChain` references in the context of one `DataTransformation` shall be limited to 255. ⌋*()*

[constr_3122] At most one transformer of each transformer class inside a transformer chain ⌈ If the value of a `transformerClass` of a `TransformationTechnology` referenced by a `DataTransformation` does not equal `custom`, it shall be different from all other `transformerClass` values of `TransformationTechnology`s referenced by the same `DataTransformation`. ⌋*()*

Only for `custom` transformers it is possible to specify more than one transformer of the same class in the same transformer chain. For all other transformer classes, at most one transformer of a transformer class is allowed to exist in the same transformer chain.

[constr_3123] Serializer transformer shall be the first in a chain ⌈ A serializer transformer (`TransformationTechnology` with attribute `transformerClass` set to `serializer`) shall be the first transformer in a transformer chain. ⌋*()*

[TPS_SYST_02033] Order of the `transformerChain` references in the configuration represents the order on the sending side ⌈ The order of `DataTransformation.transformerChain` references in the context of one `DataTransformation` represents the transformation order on the sending side. ⌋*(RS_SYST_00050)*

[TPS_SYST_02034] Order of the transformers on the receiving side is the reverse of the sending side ⌈ The order of the transformers on the receiving side of the data shall be the inverse order of the order of the sending side. ⌋*(RS_SYST_00050)*

[TPS_SYST_02035] `protocol` contains the human readable protocol identifier ⌈ The attribute `protocol` of a `TransformationTechnology` contains the protocol

name as a String which this transformer implements. ⌋(*RS_SYST_00050*) This attribute is used to distinguish transformers in a human readable way.

[TPS_SYST_02036] `version` contains the version of the `protocol` ⌈ The attribute `version` of a `TransformationTechnology` contains the version of the protocol as a String implemented by this transformer. ⌋(*RS_SYST_00050*) This attribute is used to distinguish transformers.

[TPS_SYST_02037] The attribute `needsOriginalData` configures a transformer's access to the original data ⌈ The attribute `needsOriginalData` of a `TransformationTechnology` specifies whether transformer needs access to the original data. ⌋(*RS_SYST_00050*)

If it is set to true, the transformer will gain access to the original data. If it is set to false, the transformer will not gain access to the original data.

[constr_3124] Applicability of `needsOriginalData` ⌈ The attribute `needsOriginalData` of a `TransformationTechnology` shall only be used for the non-first transformers in the transformer chain. ⌋()

This will only influence the signatures of the transformer on the sender or client side, not on the receiver or server side of a communication.

[TPS_SYST_02038] Specification of transformer class ⌈ The transformer class to which this transformer belongs to is specified in the attribute `transformerClass` of a `TransformationTechnology` ⌋(*RS_SYST_00050*)

[TPS_SYST_02039] Specification of transformer specific properties ⌈ Further transformer specific properties can be stated inside the `TransformationDescription` in the role `transformationDescription` of a `TransformationTechnology` ⌋(*RS_SYST_00050*)

Note:
This is an abstract class without any specified content. If AUTOSAR specifies a transformer and this transformer need configuration possibilities, this class can be inherited to hold those as some kind of container.

[TPS_SYST_02040] Specification of transformer buffer handling ⌈ The `BufferProperties` in the role `bufferProperties` of a `TransformationTechnology` specify the buffer handling which shall be executed by the RTE for this transformer. ⌋(*RS_SYST_00050*)

Class	**BufferProperties**			
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer			
Note	Configuration of the buffer properties the transformer needs to work.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***

▽

△

Class	**BufferProperties**			
buffer Computation	CompuScale	0..1	aggr	If the transformer changes the size of the data, the CompuScale can be used to specify a rule to derive the size of the output data based on the size of the input data.
headerLength	Integer	1	attr	Defines the length of the header (in bits) this transformer will add in front of the data.
inPlace	Boolean	1	attr	If set, the transformer uses the input buffer as output buffer.

Table 7.5: BufferProperties

[TPS_SYST_02041] In-place buffer handling of transformers ⌈ The attribute `inPlace` of `BufferProperties` specifies whether the transformation happens in-place. ⌋*(RS_SYST_00050)*

[constr_3125] Value of attribute `inPlace` for the first transformer in a chain ⌈ The attribute `inPlace` shall be set to `false` if the `TransformationTechnology` of the `BufferProperties` is referenced as first reference in the ordered list of references `transformerChain` from a `DataTransformation`. ⌋*()*

[TPS_SYST_02042] Header length to be considered by transformers ⌈ The attribute `headerLength` of `BufferProperties` specifies the length of the header (in bits) which the transformer adds. ⌋*(RS_SYST_00050)*

[constr_3126] `headerLength` shall be less or equal output buffer size ⌈ The `headerLength` shall be less or equal of the worst case output buffer size which is specified in `bufferComputation` in `BufferProperties`. ⌋*()*

[constr_3364] `headerLength` shall be a multiple of 8 ⌈ The header length in bits specified by `headerLength` shall be a multiple of 8. ⌋*()*

[TPS_SYST_02043] Buffer computation of transformer ⌈ The `CompuScale` aggregated as `bufferComputation` in `BufferProperties` specifies the computation formula how the transformer changes the buffer length between input and output. This enables the calculation of a safe worst case output size. ⌋*(RS_SYST_00050)*

[constr_3314] `BufferProperties.bufferComputation` is mandatory ⌈ The `BufferProperties` that is aggregated by `TransformationTechnology` in the role `bufferProperties` shall always define the `bufferComputation`. ⌋*()*

[TPS_SYST_02044] Buffer computation of transformer ⌈ The `bufferComputation` in `BufferProperties` shall specify the formula: $OutputBufferLength = CompuScale(InputBufferLength)$, where InputBufferLength is computed according to [SWS_Rte_03867]. ⌋*(RS_SYST_00050)*

The `CompuScale` in the role `bufferComputation` defines the list of polynomial factors. The first factor represents the power of zero. Please note that the `headerLength` does NOT separately affect the size of the output buffer.

The following series of XML fragments exemplifies how the `CompuScale` in the role `bufferComputation` can be used to describe the buffer needs of a transformer.

The following XML in Listing 7.1 shows the buffer properties of transformer which extends the input data length by adding a header with the length of 8 bytes and a tail of 4 bytes. Therefore the buffer needs to grow by 12 bytes.

$$OutputBufferSize = 8Bytes + 1 * InputDataLength + 4Bytes$$

Listing 7.1: Example for a `CompuScale` which specifies a buffer that grows by 12

```
<TRANSFORMATION-TECHNOLOGY>

  <TRANSFORMER-CLASS>SERIALIZER</TRANSFORMER-CLASS>
```

```
<VERSION>1.0.0</VERSION>
</TRANSFORMATION-TECHNOLOGY>
```

Note: Listing 7.1 and Listing 7.2 deliberately leave out any TransformationTechnology specific attributes, since both listings are about BufferProperties.bufferComputation only.

[constr_3286] ISignal.length shall be consistent to transformer configuration
⌈ For ISignals that are used for transformed data, the value ISignal.length shall be greater or equal to the maximum possible size of the transformed data (including alignment). This size can be calculated by using the formulas specified in the TransformationTechnology.bufferProperties.bufferComputation of all TransformationTechnologies in the ordered list DataTransformation.transformerChain for the length that is determined from the mapped VariableDataPrototype. ⌋*()*

The following examples are showing the calculation of the length of an ISignal that transports a VariableDataPrototype of ImplementationDataType of category STRUCTURE via a SOME/IP Transformer.

The example struct consists of five members:

Member1: UINT16

Member2: Struct with a UINT16 length field and a one-dimensional variableSize Array with UINT8 elements and arraySize = 8

Member3: UINT32

Member4: UINT64

Member5: Struct with a UINT16 length field and a one-dimensional variableSize Array with UINT8 elements and arraySize = 8

The SOME/IP Transformer takes the InputData and adds additional 8 bytes as header. In case of SOME/IP the signal based SOMEIPTransformationISignalProps and the DataPrototype based SOMEIPTransformationProps need to be considered as well for the calculation of the ISignal.length (see chapter 7.3.2.2 for more details). In our example the following SOMEIPTransformationProps settings are valid for the variableSize Array:

- SOMEIPTransformationProps.alignment = 64

All these settings lead to the ISignal.length of 368 bits as shown in figure Figure 7.6. A padding element is inserted after the first variable size array as described in [PRS_SOMEIP_00611]. The second variable size array is the last element in the serialized data stream and therefore no padding element is inserted afterwards. The automatic padding in SOME/IP after variable size data is described in more detail in [25].

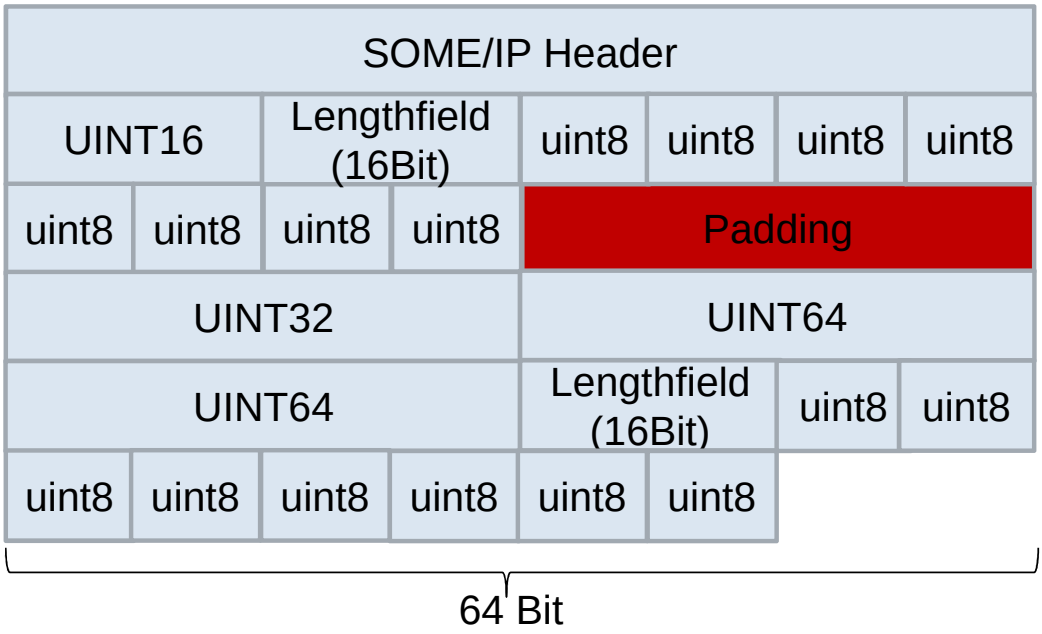

Figure 7.6: Example for calculation of the `ISignal.length`

Please note that the padding in the SOME/IP data stream depends on the actual number of elements that are transmitted in the variable data. Figure Figure 7.7 shows an example where only three elements are transmitted in the first variable size array and therefore the padding is restricted to 1 byte.

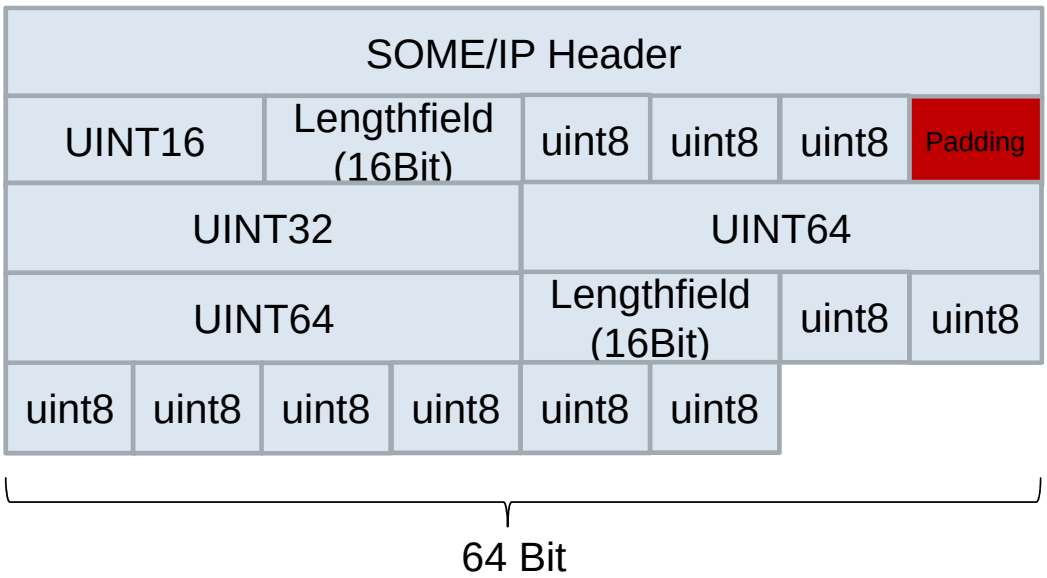

Figure 7.7: SOME/IP Padding Example

Transformer specific configuration can be done in the `TransformationDescription`.

autonomous	RTE and Transformer coordinate an autonomous error reaction on their own. **Tags:** atp.EnumerationValue=1

Table 7.9: CSTransformerErrorReactionEnum

[TPS_SYST_02048] `ISignal` specific transformation configuration ⌈ If an `ISignal` references a `TransformationTechnology` in the role `dataTransformation` and this transformation shall be configured `ISignal` specific, the `ISignal` shall aggregate a `TransformationISignalProps` element. ⌋*(RS_SYST_00050)*

[TPS_SYST_02049] Transformer specific `TransformationISignalProps` ⌈ The attribute `transformer` of `TransformationISignalProps` shall reference the `TransformationTechnology` in the transformer chain (`DataTransformation`) for which the `ISignal` specific configuration shall be given. ⌋*(RS_SYST_00050)*

[constr_3213] `TransformationISignalProps.csErrorReaction` setting in case that the `serializer` `transformerClass` and Client/Server communication is used ⌈ In `TransformationISignalProps` the attribute `csErrorReaction` shall be set if the `TransformationISignalProps` specifies the details for a `TransformationTechnology` with `transformerClass` equal to `serializer` and the `ISignal` that aggregates the `TransformationISignalProps` transports a client/server communication. ⌋*()*

[constr_3214] `TransformationISignalProps.csErrorReaction` setting in case that a `transformerClass` different from `serializer` is used or the Client/Server communication is not used ⌈ In `TransformationISignalProps` the attribute `csErrorReaction` shall not be used if the `TransformationISignalProps` specifies the details for a `TransformationTechnology` with `transformerClass` not equal to `serializer` or the `ISignal` that aggregates the `TransformationISignalProps` does not transport a client/server communication. ⌋*()*

[TPS_SYST_02074] Precedence of transformer configuration settings ⌈ The same transformer configuration settings may exist in the `TransformationDescription`, `TransformationISignalProps` and `TransformationComSpecProps` elements. The following precedence is valid for such settings:

- `TransformationDescription`: configuration valid for several `ISignal`s (in case the SOME/IP Transformer or Custom Transformer is used) or `ISignalGroup`s (in case the ComBasedTransformer is used).
- `TransformationISignalProps`: defines the configuration options valid for a specific referenced `ISignal` or `ISignalGroup`. This settings override possible settings in the `TransformationDescription`.
- `TransformationComSpecProps`: defines the configuration settings valid for the port to which the `ReceiverComSpec` belongs (for more details see [5]). This settings override possible settings in the `TransformationDescription` and `TransformationISignalProps`.

⌋*(RS_SYST_00050)*

[TPS_SYST_02075] Mandatory attributes in transformer configuration elements ⌈ If a transformer configuration attribute is mandatory due to a particular constraint it means that it shall be defined in at least one of the three possible locations: `TransformationDescription`, `TransformationISignalProps` or `TransformationComSpecProps`. ⌋*(RS_SYST_00050)*

Please note that it is not required to define the complete attribute set on each of those locations. It means that it is allowed to overwrite single attributes in elements according to the precedence defined in [TPS_SYST_02074].

[TPS_SYST_02050] `ISignal` specific configuration of the SOME/IP Transformer ⌈ The `ISignal` specific configuration of the SOME/IP Transformer shall be configured using `SOMEIPTransformationISignalProps`. ⌋*(RS_SYST_00050)*

[TPS_SYST_02051] `ISignal` specific configuration of the E2E Transformer ⌈ The `ISignal` specific configuration of the E2E Transformer shall be configured using `EndToEndTransformationISignalProps`. ⌋*(RS_SYST_00050)*

For details how to configure those transformers `ISignal` specific please see chapter 7.3.2 and chapter 7.3.4.

[TPS_SYST_02052] `ISignal` specific configuration of custom transformers ⌈ The `ISignal` specific configuration of custom transformers shall be configured using `UserDefinedTransformationISignalProps`. ⌋*(RS_SYST_00050)*

To place the custom data in `UserDefinedTransformationDescription` the `AdminData` could be used for example.

To configure which communication shall be subject to transformation is done via references from `ISignal`s and `ISignalGroup`s to `DataTransformation`s. An overview is shown in figure 7.10.

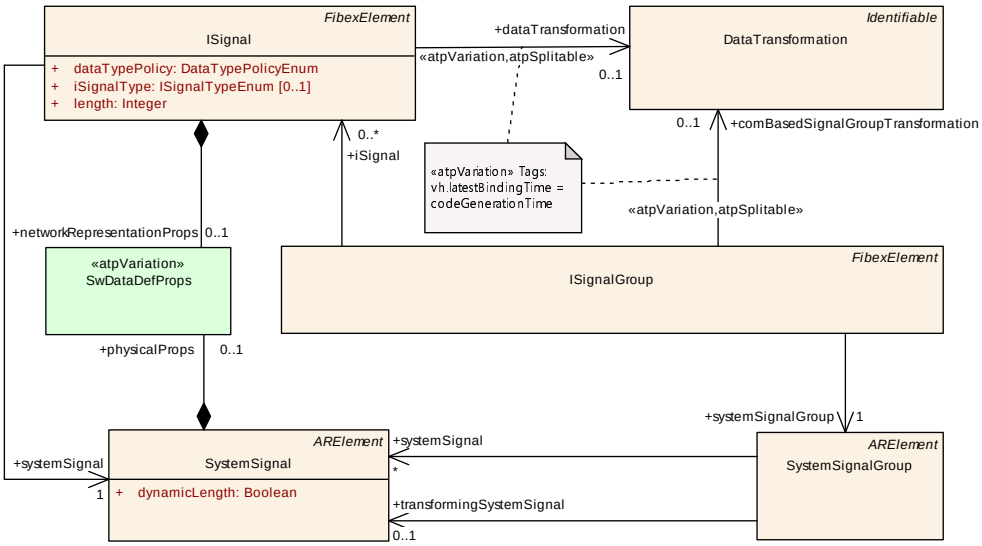

Figure 7.10: Configuration which communication shall be transformed

The `DataTransformation` element (which represents a transformer chain) is

- either referenced by the `ISignal` in the role `dataTransformation` which holds the transformed representation of the data
- referenced by the `ISignalGroup` in the role `comBasedSignalGroupTransformation` which holds the custom mapping of the data to the transformed representation or
- referenced by a `DataPrototypeMapping` in the role `firstToSecondDataTransformation`,

as defined in [constr_1400] in [5].

A `VariableDataPrototype` can either become a part of a `DataPrototypeMapping` based data transformation or of an `ISignal`-based data transformation as defined in [constr_1401] in [5].

[constr_1387] Transmission of `Variable-Size Array Data Type`s by means of a Transformer ⌈ If a Transformer is used for the transmission of a `Variable-Size Array Data Type`s then the `Variable-Size Array Data Type` shall be a “new-world” variable-size array data type according to [TPS_SWCT_01644]

and [TPS_SWCT_01645]. “Old-world” dynamic-size array data types according to [TPS_SWCT_01642] and [TPS_SWCT_01643] are not supported. ⌋()

7.3.1 Generic Transformer

[TPS_SYST_02053] A reference from ISignal to DataTransformation in the role dataTransformation enables data transformation ⌈ To enable the transformation of data, the ISignal which shall hold the transformed data shall reference a DataTransformation in the role dataTransformation. ⌋(*RS_SYST_00050*)

[TPS_SYST_02054] Definition of data which shall be transformed ⌈ If

1. an ISignal references a DataTransformation and
2. this ISignal references a SystemSignal and
3. the referenced SystemSignal is referenced by a SenderReceiverToSignalMapping in the role systemSignal or referenced by a ClientServerToSignalMapping in the role returnSignal and in the role callSignal

then the VariableDataPrototype referenced by the SenderReceiverToSignalMapping or the ClientServerOperation referenced by the ClientServerToSignalMapping shall be transformed. ⌋(*RS_SYST_00050*)

Using this configuration the result of the transformation will be put into the ISignal even if the data type is a composite type.

Furthermore, another SystemSignal can be added to a SystemSignalGroup in the role transformingSystemSignal to support the configuration where a complex data element is transferred via Sender/Receiver communication both using transformation and traditional mapping of RTE and COM.
The ISignal which references the SystemSignal which is referenced by a SystemSignalGroup in the role transformingSystemSignal shall reference a DataTransformation to transport the transformed data.
In parallel, the traditional mapping of RTE and COM maps all other SystemSignals of the SystemSignalGroup which are referenced in the role systemSignal.

[constr_3127] Certain ISignals always need a reference to DataTransformation ⌈ An ISignal which references a SystemSignal which is referenced by a SystemSignalGroup in the role transformingSystemSignal shall always reference a DataTransformation. ⌋()

7.3.2 SOME/IP Transformer

The specific configuration for SOME/IP transformers takes place in SOMEIPTransformationDescription and SOMEIPTransformationISignalProps shown in Figure 7.11.

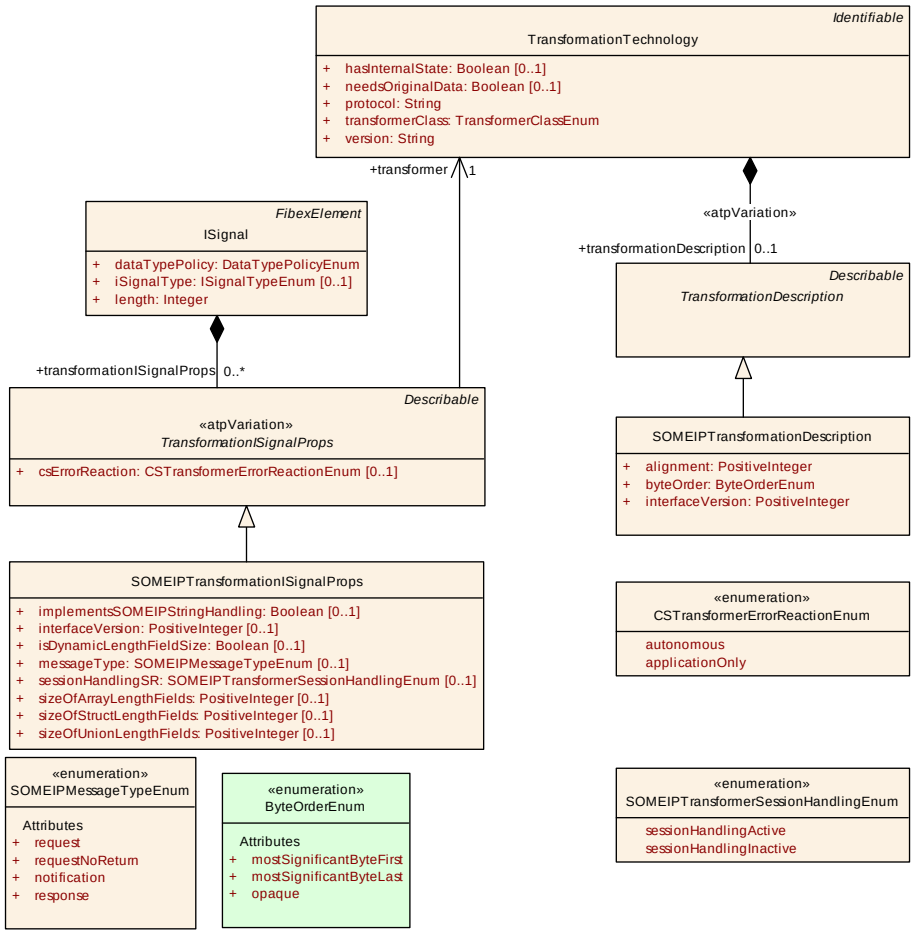

Figure 7.11: SOME/IP specific configuration

Class	**SOMEIPTransformationDescription**			
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer			
Note	The SOMEIPTransformationDescription is used to specify SOME/IP transformer specific attributes.			
Base	*ARObject*, *Describable*, *TransformationDescription*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
alignment	PositiveInteger	1	attr	Specifies the alignment of dynamic data in the serialized data stream. The alignment shall be specified in Bits.
byteOrder	ByteOrderEnum	1	attr	Defines which byte order shall be serialized by the SOME/IP transformer
interfaceVersion	PositiveInteger	1	attr	The interface version the SOME/IP transformer shall use.

Table 7.10: SOMEIPTransformationDescription

Class	«atpVariation» **SOMEIPTransformationISignalProps**			
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer			
Note	The class SOMEIPTransformationISignalProps specifies ISignal specific configuration properties for SOME/IP transformer attributes.			
Base	*ARObject*, *Describable*, *TransformationISignalProps*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
implements SOMEIPString Handling	Boolean	0..1	attr	This attribute indicates whether Strings in the SOME/IP message shall be processed according to the SOME/IP specification for Strings. This attribute has been introduced due to compatibility reasons for AUTOSAR before R4.3. If this attribute is set to true Strings in the payload shall be handled according to the SOME/IP specification on Strings. If this attribute is set to false (or not set) no special handling for Strings in the payload shall be performed.
interfaceVersion	PositiveInteger	0..1	attr	The interface version the SOME/IP transformer shall use.
isDynamic LengthFieldSize	Boolean	0..1	attr	This attribute shall be used to determine the wire type in the context of using the TLV encoding.
messageType	SOMEIPMessageType Enum	0..1	attr	The Message Type which shall be placed into the SOME/IP header.
session HandlingSR	SOMEIPTransformer SessionHandlingEnum	0..1	attr	Defines whether the SOME/IP transformer shall use session handling for Sender/Receiver communication.
sizeOfArray LengthFields	PositiveInteger	0..1	attr	The size of all length fields (in Bytes) of fixed-size arrays in the SOME/IP message. This attribute is valid for all available occurrences of fixed-size arrays in the SOME/IP message. For a more fine granular modeling on the level of DataPrototypes the DataPrototypeTransformationProps shall be used.
sizeOfStruct LengthFields	PositiveInteger	0..1	attr	The size of all length fields (in Bytes) of structs in the SOME/IP message. This attribute is valid for all available occurrences of structures in the SOME/IP message. For a more fine granular modeling on the level of Data Prototypes the DataPrototypeTransformationProps shall be used.
sizeOfUnion LengthFields	PositiveInteger	0..1	attr	The size of all length fields (in Bytes) of unions in the SOME/IP message. This attribute is valid for all available occurrences of Unions in the SOME/IP message. For a more fine granular modeling on the level of Data Prototypes the DataPrototypeTransformationProps shall be used.
tlvDataId	TlvDataIdDefinition	*	aggr	This aggregation represents the collection of tlvDataIds defined in the enclosing context. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=tlvDataId atp.Status=draft

Table 7.11: SOMEIPTransformationISignalProps

Enumeration	**ByteOrderEnum**
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::PrimitiveTypes
Note	When more than one byte is stored in the memory the order of those bytes may differ depending on the architecture of the processing unit. If the least significant byte is stored at the lowest address, this architecture is called little endian and otherwise it is called big endian. ByteOrder is very important in case of communication between different PUs or ECUs.

▽

△

Enumeration	**ByteOrderEnum**
Literal	***Description***
mostSignificantByte First	Most significant byte shall come at the lowest address (also known as BigEndian or as Motorola-Format) **Tags:** atp.EnumerationValue=0
mostSignificantByte Last	Most significant byte shall come highest address (also known as LittleEndian or as Intel-Format) **Tags:** atp.EnumerationValue=1
opaque	For opaque data endianness conversion has to be configured to Opaque. See AUTOSAR COM Specification for more details. **Tags:** atp.EnumerationValue=2

Table 7.12: ByteOrderEnum

Enumeration	**SOMEIPMessageTypeEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer
Note	Depending on the style of the communication different message types shall be set in the header of a SOME/IP message.
Literal	***Description***
notification	A request of a notification expecting no response. **Tags:** atp.EnumerationValue=1
request	A request expecting a response. **Tags:** atp.EnumerationValue=2
requestNoReturn	A fire&forget request. **Tags:** atp.EnumerationValue=3
response	The response message. **Tags:** atp.EnumerationValue=4

Table 7.13: SOMEIPMessageTypeEnum

Enumeration	**SOMEIPTransformerSessionHandlingEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer
Note	Enables or disable session handling for SOME/IP transformer
Literal	***Description***
sessionHandling Active	The SOME/IP Transformer shall use session handling **Tags:** atp.EnumerationValue=0
sessionHandling Inactive	The SOME/IP Transformer doesn't use session handling **Tags:** atp.EnumerationValue=1

Table 7.14: SOMEIPTransformerSessionHandlingEnum

[constr_3128] SOME/IP transformer configuration ⌈ For each `TransformationDescription` variant that is a `SOMEIPTransformationDescription`

- attribute `protocol` of `TransformationTechnology` shall be set to `SOMEIP`
- attribute `version` of `TransformationTechnology` shall be set to `1.0.0`
- attribute `transformerClass` of `TransformationTechnology` shall be set to `serializer`

- attribute headerLength of BufferProperties shall be set to 64 (bits).

⌋()

The SOMEIPTransformationDescription contains the configuration for the transformer which shall be applied to all transformations. ISignal specific transformer configuration (which "override" the general ones) shall be done in SOMEIPTransformationISignalProps.

[TPS_SYST_02055] Alignment of SOME/IP ⌈ The attribute alignment defines the alignment used in the SOME/IP transformer in Bits. ⌋(*RS_SYST_00050*)

[TPS_SYST_02056] Byte Order of SOME/IP ⌈ The attribute byteOrder defines the byte order used in the SOME/IP transformer for creating the on wire format. ⌋ (*RS_SYST_00050*)

[constr_3129] Byte Order of SOME/IP transformer ⌈ The attribute byteOrder of SOMEIPTransformationDescription shall be different from opaque. ⌋()

[TPS_SYST_02057] Interface Version of SOME/IP ⌈ The attribute interfaceVersion of SOMEIPTransformationDescription as well as interfaceVersion of SOMEIPTransformationISignalProps defines the interface version used by the SOME/IP transformer. ⌋(*RS_SYST_00050*)

[constr_3130] Range of Interface Version ⌈ The value of the attribute interfaceVersion shall be in the range $[0; 255]$ ⌋()

[TPS_SYST_02092] Size of Fixed-size Array Length Fields ⌈ The attribute sizeOfArrayLengthFields of SOMEIPTransformationISignalProps defines the size of an length field generated by the SOME/IP transformer in front of all available fixed-size arrays in the ISignal. See also [constr_3282]. ⌋(*RS_SYST_00050*)

[TPS_SYST_02093] Size of Structure Length Fields ⌈ The attribute sizeOfStructLengthFields of SOMEIPTransformationISignalProps defines the size of an length field generated by the SOME/IP transformer in front of all available structures in the ISignal. See also [constr_3283]. ⌋(*RS_SYST_00050*)

[constr_1441] In AUTOSAR, the transmission of union data types over the network is only supported by the SOME/IP Transformer ⌈ If an ImplementationDataType according to [TPS_SWCT_01700], i.e. of category STRUCT that encloses an ImplementationDataTypeElement of category UNION, is used to directly or (via a DataTypeMap) indirectly type an AutosarDataPrototype and the latter is mapped to a SystemSignal then the ISignal that references that SystemSignal shall aggregate transformationISignalProps. ⌋()

[TPS_SYST_02094] Size of Union Length Fields ⌈ The attribute sizeOfUnionLengthFields of SOMEIPTransformationISignalProps defines the size of an length field generated by the SOME/IP transformer in front of all available unions in the ISignal. See also [constr_3284]. ⌋(*RS_SYST_00050*)

In principle there is no need to define a size of the length indicator because the size can be computed from the data structure itself. However there is a use case to extend

on the sender side while keeping the receiver side as it is. This means that there is the need to express the size of the length indicator because the extended data structure may reach a length that exceeds the capacity of the original computed size indicator.

[constr_3218] Range of Size of Fixed-size Array Length Fields ⌈ The value of attribute sizeOfArrayLengthFields of SOMEIPTransformationISignalProps shall be either 0, 1, 2 or 4. ⌋*()*

[constr_3220] Range of Size of Structure Length Fields ⌈ The value of attribute sizeOfStructLengthFields of SOMEIPTransformationISignalProps shall be either 0, 1, 2 or 4. ⌋*()*

[constr_3221] Range of Size of Union Length Fields ⌈ The value of attribute sizeOfUnionLengthFields of SOMEIPTransformationISignalProps shall be either 0, 1, 2 or 4. ⌋*()*

[TPS_SYST_02080] Message type of SOME/IP ⌈ The attribute messageType of SOMEIPTransformationISignalProps defines the message type used by the SOME/IP transformer for the serialized ISignal. ⌋*(RS_SYST_00050)*

[constr_3216] Usage of SOMEIPTransformationISignalProps.sessionHandlingSR ⌈ The attribute sessionHandlingSR of SOMEIPTransformationISignalProps shall only be used for ISignals which reference SystemSignals which are mapped via a SenderReceiverToSignalMapping. ⌋*()*

Note: This means that sessionHandlingSR shall only be used for transformed Sender/Receiver communication.

7.3.2.1 Handling of Strings

Prior to AUTOSAR Release 4.3 the SOME/IP Transformer did not specify any special handling for how String data types shall be serialized. This leads to the situation that no BOM is introduced. The SOME/IP standard however does expect a BOM for String data type, this is also how AUTOSAR Release 4.3 defines the serialization of Strings.

The attribute SOMEIPTransformationISignalProps.implementsSOMEIPStringHandling enables the compatibility of string handling between AUTOSAR pre Release 4.3 and standard SOME/IP serializers. An AUTOSAR ECU according to Release 4.2 would not define any String specific behavior, thus it is possible to enforce this for Release 4.3 implementations as well by simply omitting the attribute or by setting the attribute to false.

7.3.2.2 SOME/IP Transformation Properties on the level of DataPrototypes

The serialization of SOME/IP is based on the interface specification. For certain datatypes like structures, unions and arrays SOME/IP supports the configuration of

length fields that will be put in front of the serialized data. AUTOSAR supports the configuration of such SOME/IP settings on two different levels:

- modeling on ISignal level that is valid for all available occurrences of a datatype in the SOME/IP message (see [TPS_SYST_02092], [TPS_SYST_02093] and [TPS_SYST_02094])
- fine granular modeling on the level of DataPrototypes (see [TPS_SYST_02121])

To allow such a fine granular modeling SOMEIPTransformationProps are defined and collected in TransformationPropsSets.

Class	**TransformationPropsSet**

[constr_3285] Alignment of variable data length data elements in the context of an ISignal ⌈ The definition of DataPrototypeTransformationProps.transformationProps.alignment is only allowed if the SOMEIPTransformationDescription.alignment is not defined. ⌋()

7.3.2.3 Network Representation

In order to assure that the serialization of the transported data on the sender side and its deserialization on the receiver side(s) is done correctly, system designers need to assure that the same datatypes (i.e., SwBaseTypes) are used for the serialization/deserialization on both sides. However, this agreement does not imply the use or equality of the SwBaseTypes defined by the ImplementationDataType used by the application software on the sender and (possibly multiple) receiver sides. This means that each EcuInstance, regardless if it belongs to a sender or receiver, can use one datatype for the serialization/deserialization (e.g., UInt16 in the actual SOME/IP transformer code) and another datatype in the application software (e.g., Float32 in the actual application software component code).

In order to define the commonly agreed datatypes for the serialization/deserialization of the transported data by the sender and possibly multiple receivers, AUTOSAR defines the following two approaches:

- serialization based on the network representation ([TPS_SYST_02136])
- serialization based on the ImplementationDataTypes ([TPS_SYST_02137])

[TPS_SYST_02136] Serialization based on the network representation ⌈ If a network representation that defines a SwBaseType and optionally a CompuMethod is provided for each DataPrototype typed by a primitive data type that is part of the serialized ISignal (ISignal.transformationISignalProps.dataPrototypeTransformationProps.networkRepresentationProps), these SwBaseTypes shall be used for the serialization/deserialization. ⌋()

[TPS_SYST_02137] Serialization based on the ImplementationDataTypes ⌈ For primitive DataPrototypes that are part of the serialized ISignal where no network representation is provided (ISignal.transformationISignalProps.dataPrototypeTransformationProps.networkRepresentationProps), SwBaseType shall be provided by the ImplementationDataTypes that either types the corresponding PortPrototypes on the top level Software Composition that represents the communicating EcuInstances, or it is mapped to the ApplicationDataType that types it. ⌋()

[constr_3317] Assuring the same data interpretation on the sender and receiver sides in case of serialization based on the ImplementationDataTypes ⌈ In order to assure the same interpretation of the serialized data by the SOME/IP transformers on the sender and receiver sides in case of serialization based on either a primitive or a composite ImplementationDataType, the same SwBaseType shall be defined

- for this primitive DataPrototype or
- for each primitive DataPrototype of the leaf elements of the composite DataPrototype starting from the first element until and including the last element that is requested by the receiver,

by the ImplementationDataTypes that either types the corresponding PortPrototypes on the top level Software Composition of the communicating EcuInstances, or it is mapped to the ApplicationDataType that types it. ⌋()

If the serialization is based on the ImplementationDataTypes, the same data has to be transmitted on all buses, i.e., it is not possible to transmit different precision (i.e., number of bits) on different buses, as with the serialization based on the network representation on the ISignal level.

ImplementationDataTypes used by the actual application for the transported data shall be defined by the corresponding PortPrototypes on the AtomicSwComponentTypes of the communicating EcuInstances. The RTE is responsible for the possible type conversion and scaling in case of different ImplementationDataTypes used for the serialization/deserialization and in the application.

[TPS_SYST_02138] Definition of the network representation ⌈ The network representation for each DataPrototype typed by a primitive data type in the serialized data shall be defined by the SwDataDefProps that is aggregated by the DataPrototypeTransformationProps in the role networkRepresentationProps. ⌋()

In other words: If a DataPrototype is transported in the ISignal the DataPrototypeTransformationProps can be used to assign a network representation to each primitive DataPrototype that is part of the enclosing DataPrototype.

Table 7.23: Allowed SwDataDefProps Attributes on DataPrototypeTransformationProps

The following settings apply in table 7.23:

D Attribute can be **defined** in the scope of this element.

NA Attribute is **not applicable** for usage in the scope of this element.

[TPS_SYST_02139] Applicability of the SwDataDefProps attributes for the network representation of the serialized data ⌈ Usage of DataPrototypeTransformationProps.networkRepresentationProps shall follow the restrictions given in table Table 7.23. ⌋()

[constr_3318] Allowed use of ISignal.networkRepresentationProps ⌈ If a reference from ISignal to DataTransformation in the role dataTransformation exists, this ISignal SHALL NOT aggregate SwDataDefProps in the role networkRepresentationProps. ⌋()

This means that aggregating SwDataDefProps by an ISignal is applicable only if this ISignal is not transformed.

[constr_3319] Existence of DataPrototypeTransformationProps.networkRepresentationProps ⌈ ISignal.transformationISignalProps.dataPrototypeTransformationProps.networkRepresentationProps shall either

- not exist at all or
- shall be defined for all leaf elements of the root DataPrototype transmitted in the ISignal

⌋()

This means that either all leaf elements of the transformed ISignal shall have a network representation, or none.

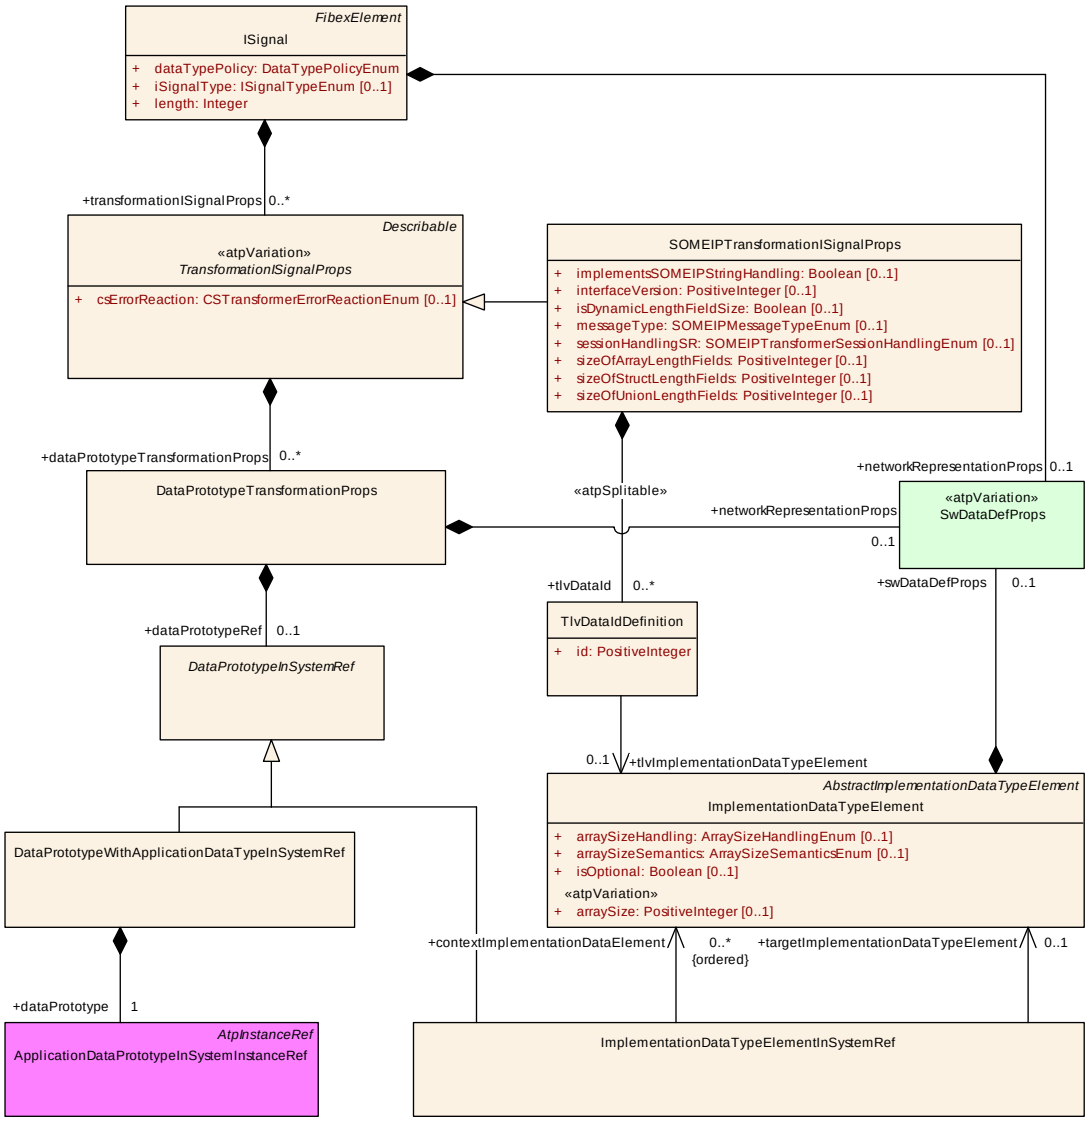

Figure 7.13: Transformer Network Representation

7.3.2.3.1 Example - Serialization based on the network representation

An example with concrete methodological steps in a common OEM-Tier 1 development process for the serialization based on the network representation is presented in Figure 7.14. The steps are as follows:

1. OEM decides on a common `SwBaseType` and `CompuMethod` for each bus, as part of the network representation, used for serialization/deserialization of one concrete complex data type.

2. OEM provides an `ImplementationDataType`, with `SwBaseType` and optional `CompuMethod`, on the `PortPrototype`s on the `RootSwCompositions` of the communicating `EcuInstance`s (sender and possibly multiple receivers). The

step is optional and PortPrototypes can also be typed by an ApplicationDataType that has a mapping to an ImplementationDataType.

3. Tier 1s are free to define arbitrary ImplementationDataType (with SwBaseType and optional CompuMethod) in the application software components. If this SwBaseType is different than the one used for the serialization/deserialization, RTE is responsible for the type conversion together with possible scaling defined by the CompuMethods, as part of the network representation and PortPrototypes on the RootSwComposition and SwComponentPrototype that is typed by ApplicationSwComponentType. Please note that on the receiver side it is possible that the SwComponentPrototype that is typed by ApplicationSwComponentType receives only a subset of data defined on the RootSwComposition. In this case, this needs be described by the PortInterfaceMapping.

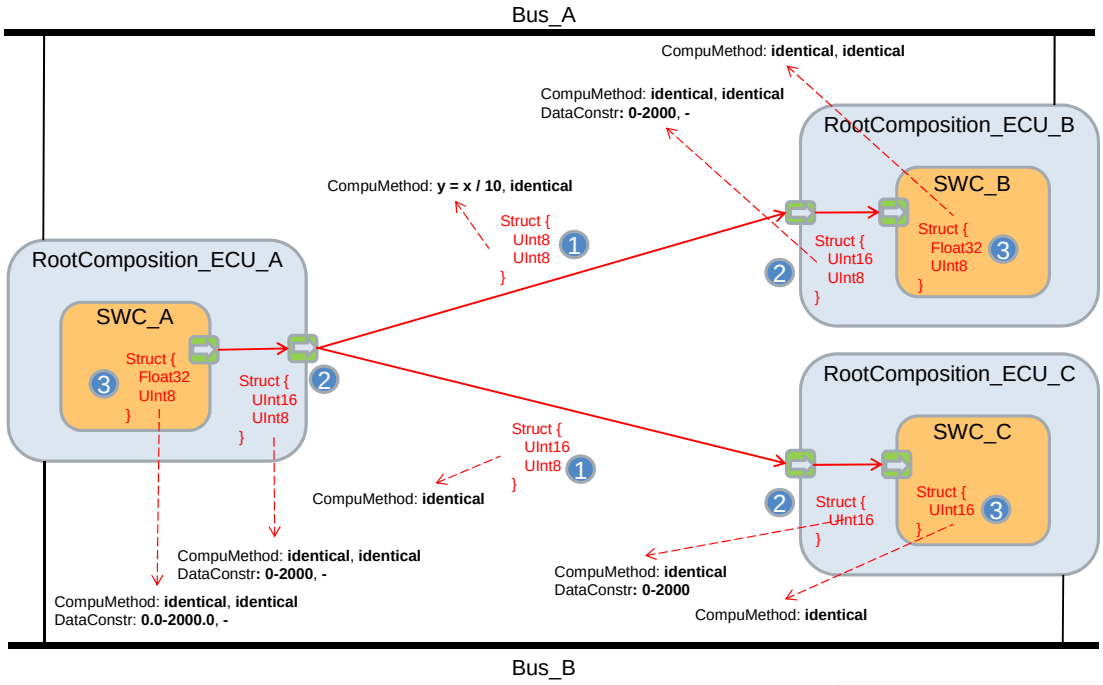

Figure 7.14: Serialization based on the network representation

The actual steps that need to be performed at runtime are presented in Figure 7.15 and they are as follows:

1. Application of the sending software component provides the data to be transmitted to the RTE and stores it in SWC internal buffer.

2. If SwBaseType defined by the ImplementationDataType on the PortPrototype of the ApplicationSwComponentType is different then the one optionally defined by the ImplementationDataType on the PortPrototype of the RootSwComposition, the RTE performs type conversion, and scaling if CompuMethods are also defined on these PortPrototypes, and stores the values internally in the RTE.

3. If network representation defines a SwBaseType that is different from the one optionally defined by the ImplementationDataType on the PortPrototype on the RootSwComposition, the RTE performs another type conversion, and scaling if CompuMethod is also defined as part of the network representation, and stores the value internally in the RTE. This internal value is used for the serialization.

4. On the receiver side, the RTE stores the serialized data in the RTE internal buffer. When the receiver SWC wants to read the data, the RTE first de-serializes the values received from the bus whose type is specified by the SwBaseType that is part of the network representation. If the SwBaseType is different then the one optionally defined by the ImplementationDataType on the PortPrototype of the RootSwComposition, the RTE performs type conversion, and scaling if CompuMethods are also defined on the PortPrototype and in the network representation, and stores the values internally in the RTE.

5. If SwBaseType defined by the ImplementationDataType on the PortPrototype of the SwComponentPrototype that is typed by ApplicationSwComponentType is different then the one defined by the ImplementationDataType on the PortPrototype of the RootSwComposition, the RTE performs another type conversion, and scaling if CompuMethods are also defined on these PortPrototype, and stores the final values internally in the buffer of the application. The RTE is also able to deliver only a subset of data to the SwComponentPrototype that is typed by ApplicationSwComponentType, if that is required by the description of the PortInterfaceMapping.

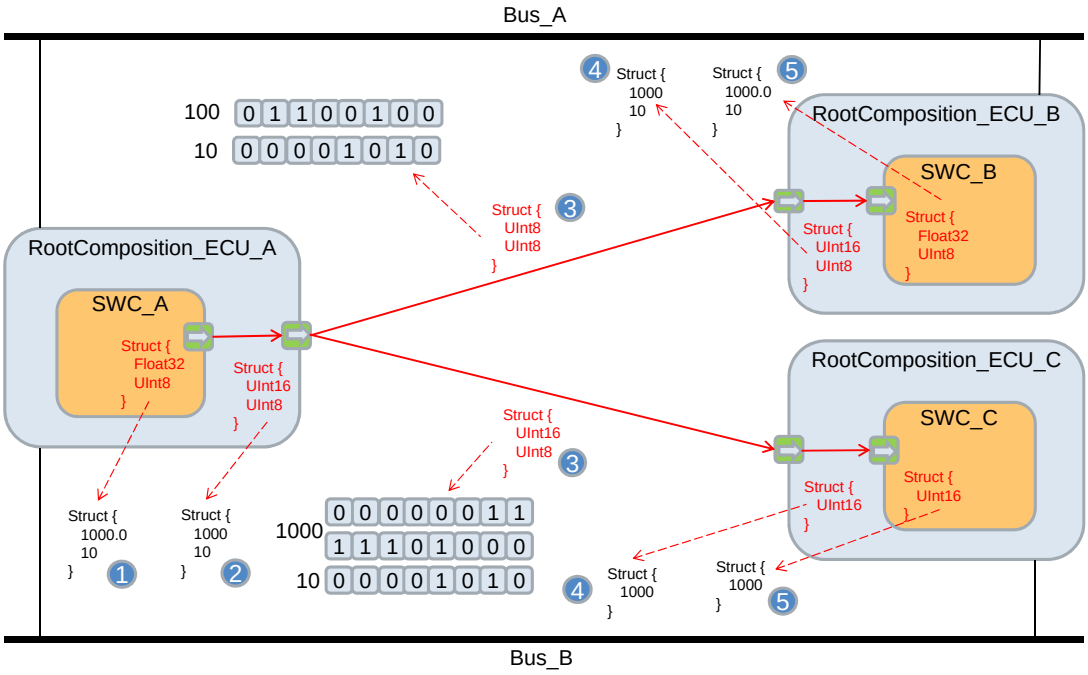

Figure 7.15: Serialization based on the network representation

7.3.2.3.2 Example - Serialization based on the ImplementationDataTypes

An example with concrete methodological steps in a common OEM-Tier 1 development process for the serialization based on the ImplementationDataTypes is presented in Figure 7.16. The steps are as follows:

1. OEM provides the same ImplementationDataType, with SwBaseType and optional CompuMethod, on the PortPrototypes on the RootSwCompositions of the communicating EcuInstances (sender and possibly multiple receivers). The PortPrototypes can also be typed by an ApplicationDataType that has a mapping to an ImplementationDataType.
2. Tier 1s are free to define arbitrary ImplementationDataType (with SwBaseType and optional CompuMethod) in the application software components. If this SwBaseType is different than the one used for the serialization/deserialization, RTE is responsible for the type conversion together with possible scaling defined by the CompuMethods, as part of PortPrototypes on the RootSwComposition and AtomicSwComponentTypes. Please note that on the receiver side it is possible that the SwComponentPrototype that is typed by ApplicationSwComponentTypereceives only a subset of data defined on the RootSwComposition. In this case, this needs be described by the PortInterfaceMapping.

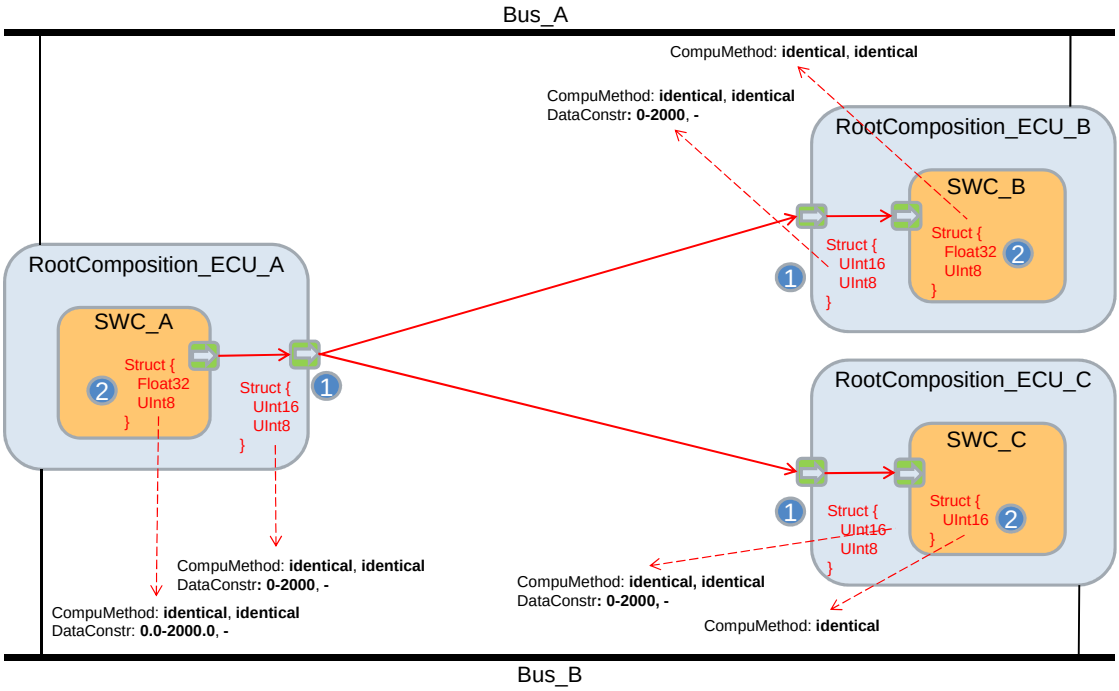

Figure 7.16: Serialization based on the ImplementationDataTypes

The actual steps that need to be performed at runtime are presented in Figure 7.17 and they are as follows:

1. Application of the sending software component provides the data to be transmitted to the RTE and stores it in SWC internal buffer.

2. If SwBaseType defined by the ImplementationDataType on the PortPrototype of the SwComponentPrototype that is typed by ApplicationSwComponentType is different then the one defined by the ImplementationDataType on the PortPrototype of the RootSwComposition, the RTE performs type conversion, and scaling if CompuMethods are also defined on these PortPrototypes, and stores the values internally in the RTE.
3. As no network representation is provided, the internal value from step 2 is used for the serialization and transmission on the bus.
4. On the receiver side, the RTE stores the serialized data received from the bus in the RTE internal buffer. When the receiver SWC wants to read the data, the RTE de-serializes these values as defined by the ImplementationDataType on the PortPrototype of the RootSwComposition.
5. If SwBaseType defined by the ImplementationDataType on the PortPrototype of the SwComponentPrototype that is typed by ApplicationSwComponentType is different then the one defined by the ImplementationDataType on the PortPrototype of the RootSwComposition, the RTE performs another type conversion, and scaling if CompuMethods are also defined on these PortPrototype, and stores the final values internally in the buffer of the application. The RTE is also able to deliver only a subset of data to the SwComponentPrototype that is typed by ApplicationSwComponentType, if that is required by the description of the PortInterfaceMapping.

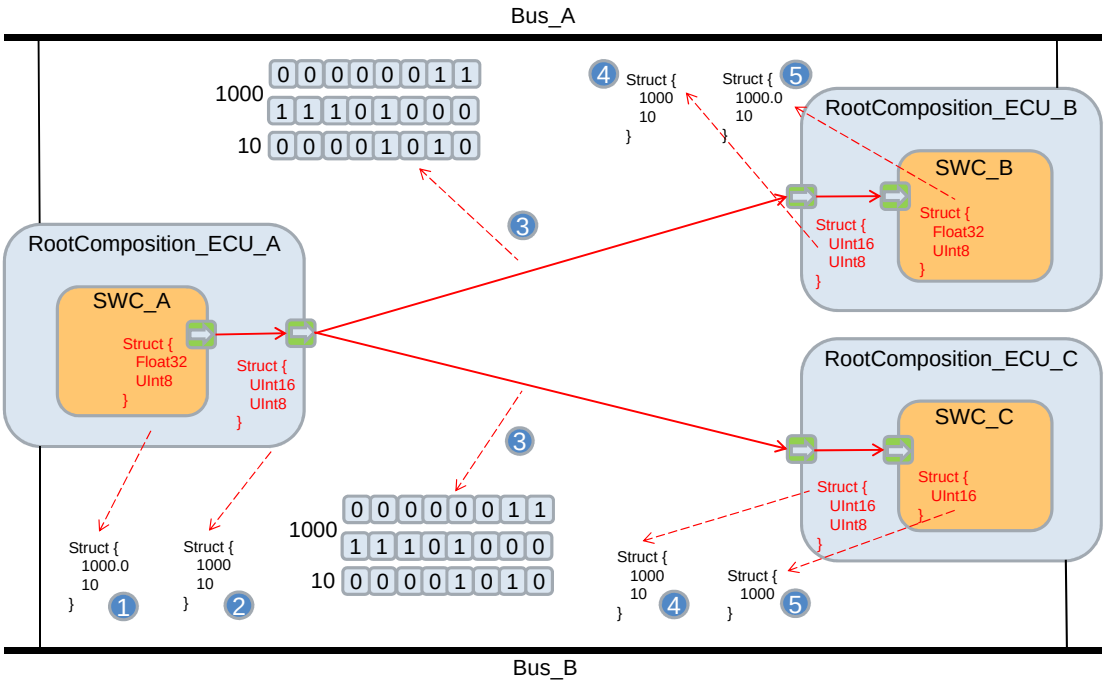

Figure 7.17: Serialization based on the ImplementationDataTypes

7.3.3 COM Based Transformer

In order to support the signal group based interaction of the transformer with the COM module as defined in the COM Based Transformer specification [17] a further modeling is supported:
In case the array based signal group API of Com shall be used the ISignalGroup has a reference to the DataTransformation element in the role comBasedSignalGroupTransformation. This defines that the RTE shall use the array based signal group API of Com [20] in order to transport the transformed data.

[TPS_SYST_02058] Usage of COM Based Transformer ⌈ If

1. an ISignalGroup references a DataTransformation in the role comBasedSignalGroupTransformation and
2. this ISignalGroup references a SystemSignalGroup and
3. the referenced SystemSignalGroup is referenced by a SenderReceiverToSignalGroupMapping in the role signalGroup

then the VariableDataPrototype referenced by the SenderReceiverToSignalGroupMapping shall be transformed using the COM Based Transformer [17]. ⌋ *(RS_SYST_00051)*

[TPS_SYST_02133] BufferProperties.bufferComputation setting for a COM Based transformer ⌈ The BufferProperties.bufferComputation of a COM Based transformer shall be configured in the following way:

```
<BUFFER-COMPUTATION>
 <COMPU-RATIONAL-COEFFS>
  <COMPU-NUMERATOR>
   <V>{ISignalIPdu.length}</V>
   <V>1</V>
  </COMPU-NUMERATOR>
  <COMPU-DENOMINATOR>
   <V>1</V>
  </COMPU-DENOMINATOR>
 </COMPU-RATIONAL-COEFFS>
</BUFFER-COMPUTATION>
```

where {ISignalIPdu.length} shall be the value derived from ISignalIPdu.length. ⌋*()*

[constr_3315] The value of V0 in BufferProperties.bufferComputation setting for a COM Based transformer ⌈ The value of V0 of bufferComputation of a TransformationTechnology which has the protocol attribute set to COM-Based shall have the same value as the length attribute of the ISignalIPdu to which the ISignalGroup is mapped. The ISignalGroup refers to the DataTransformation in the role comBasedSignalGroupTransformation which refers to a TransformationTechnology in the transformerChain. ⌋*()*

[constr_3132] Required COM Based Transformation for `comBasedSignalGroupTransformation` ⌈ If a `ISignalGroup` has a reference to the `DataTransformation` element in the role `comBasedSignalGroupTransformation` then this `DataTransformation` shall be the handled by the COM Based Transformer [17]. ⌋*()*

Note that the `SystemSignalGroup` in this case not only contains the application data element signals mapped by the `SenderReceiverToSignalGroupMapping` but also the data which has been added by the transformers (e.g. crc, sequence counter, ...).

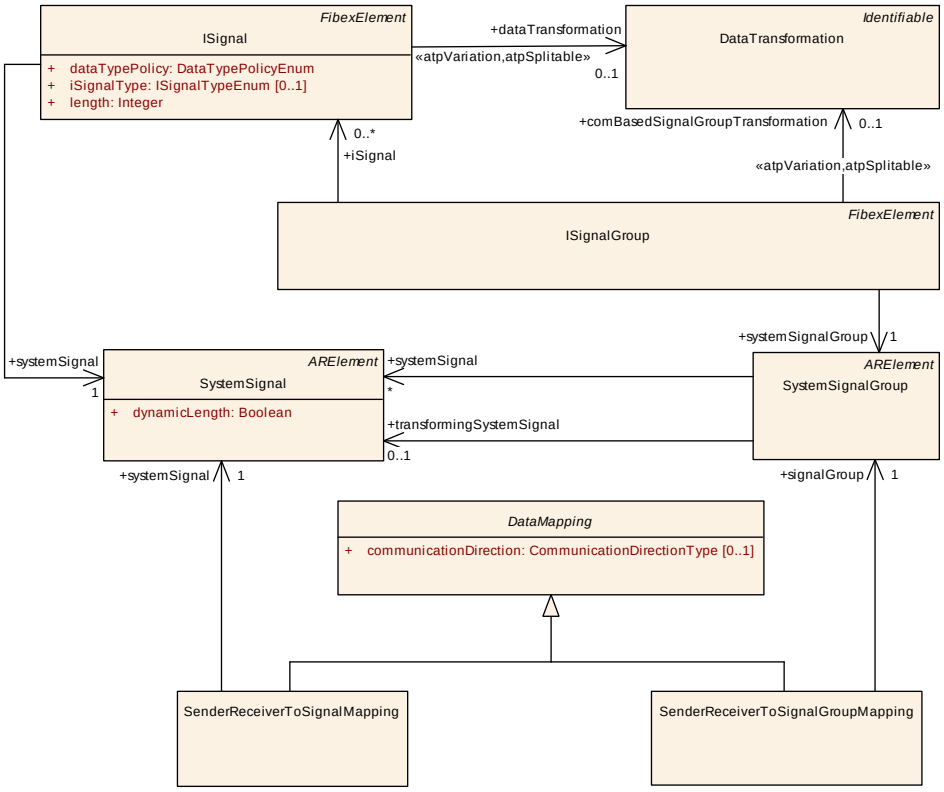

Figure 7.18: Transformer Data Mapping

[constr_3183] `ISignalGroup` with `transformationISignalProps` ⌈ An `ISignalGroup` that aggregates `transformationISignalProps` shall reference the `DataTransformation` in the role `comBasedSignalGroupTransformation`. ⌋*()*

[TPS_SYST_02068] Transformer header field representation in an `ISignalGroup` ⌈ In case `ISignalGroup` has a reference to a `DataTransformation` in the role `comBasedSignalGroupTransformation` and the `DataTransformation` has further `TransformationTechnology`s defined in the role `transformerChain` then space for the individual headers shall be allocated by defining one `ISignal` per header part that is member of the `ISignalGroup`. ⌋*(RS_SYST_00056)*

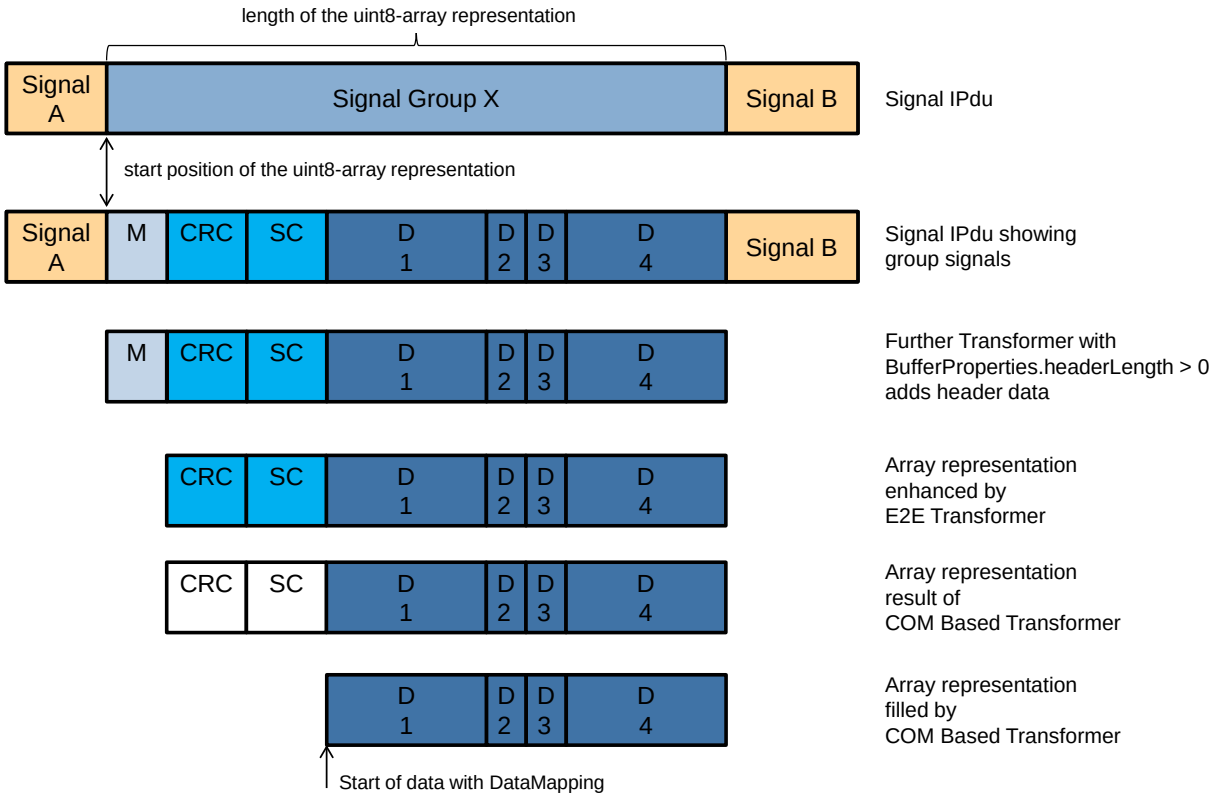

Figure 7.19: Example of COM Based Transformer buffer layout

As shown in figure 7.19 the example illustrates that for the E2E header (’CRC’ and ’SC’) and the ’M’ header three further `ISignal`s are defined within the `ISignalGroup` in order to compensate the space required by the additional transformers.

7.3.4 E2E Transformer

This section specifies the configuration of the E2E protection that is invoked "out-of-box" by RTE and realized by E2E Transformer [26], E2E Library [19] and CRC Library [27].

The specific configuration for an E2E transformer takes place in `EndToEndTransformationDescription` and `EndToEndTransformationISignalProps` shown in Figure 7.20 and in `EndToEndTransformationComSpecProps` (see more details in [5])

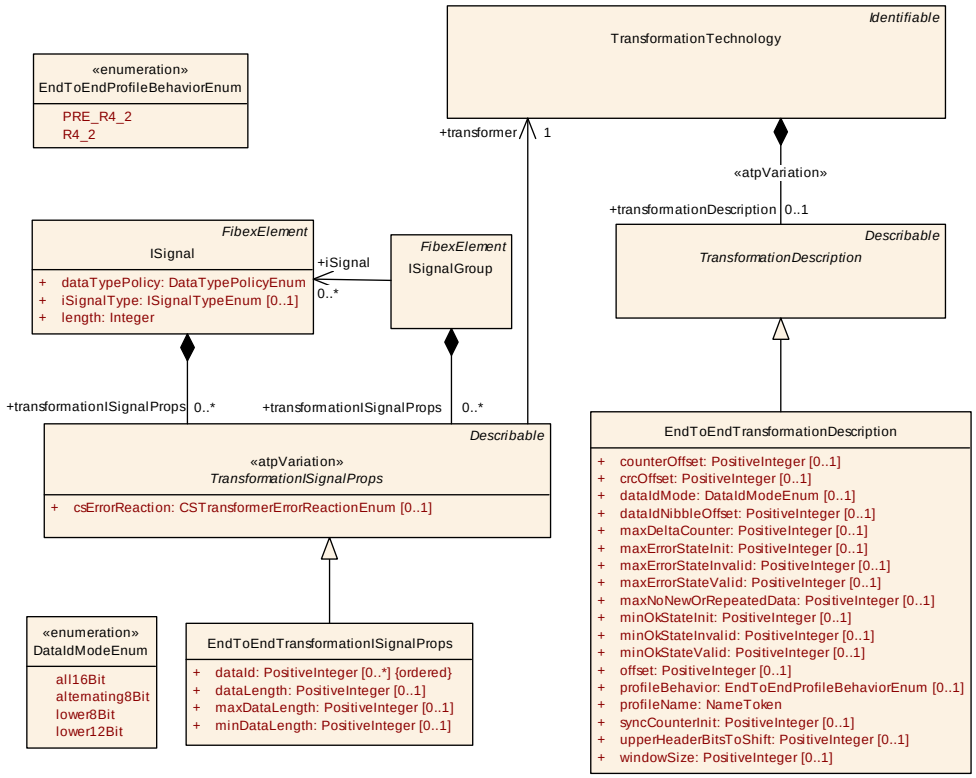

Figure 7.20: E2E Transformer Configuration

Class	**EndToEndTransformationDescription**			
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer			
Note	EndToEndTransformationDescription holds these attributes which are profile specific and have the same value for all E2E transformers.			
Base	*ARObject*, *Describable*, *TransformationDescription*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
counterOffset	PositiveInteger	0..1	attr	Offset of the counter in the Data[] array in bits.
crcOffset	PositiveInteger	0..1	attr	Offset of the CRC in the Data[] array in bits.
dataIdMode	DataIdModeEnum	0..1	attr	This attribute describes the inclusion mode that is used to include the implicit two-byte Data ID in the one-byte CRC.
dataIdNibble Offset	PositiveInteger	0..1	attr	Offset of the Data ID nibble in the Data[] array in bits.

△

Class	**EndToEndTransformationDescription**			
maxDelta Counter	PositiveInteger	0..1	attr	Maximum allowed difference between two counter values of two consecutively received valid messages. For example, if the receiver gets data with counter 1 and Max DeltaCounter is 3, then at the next reception the receiver can accept Counters with values 2, 3 or 4.
maxErrorState Init	PositiveInteger	0..1	attr	Maximal number of checks in which ProfileStatus equal to E2E_P_ERROR was determined, within the last Window Size checks, for the state E2E_SM_INIT.
maxErrorState Invalid	PositiveInteger	0..1	attr	Maximal number of checks in which ProfileStatus equal to E2E_P_ERROR was determined, within the last Window Size checks, for the state E2E_SM_INVALID.
maxErrorState Valid	PositiveInteger	0..1	attr	Maximal number of checks in which ProfileStatus equal to E2E_P_ERROR was determined, within the last Window Size checks, for the state E2E_SM_VALID.
maxNoNewOr RepeatedData	PositiveInteger	0..1	attr	The maximum allowed amount of consecutive failed counter checks.
minOkStateInit	PositiveInteger	0..1	attr	Minimal number of checks in which ProfileStatus equal to E2E_P_OK was determined, within the last WindowSize checks, for the state E2E_SM_INIT.
minOkState Invalid	PositiveInteger	0..1	attr	Minimal number of checks in which ProfileStatus equal to E2E_P_OK was determined, within the last WindowSize checks, for the state E2E_SM_INVALID.
minOkState Valid	PositiveInteger	0..1	attr	Minimal number of checks in which ProfileStatus equal to E2E_P_OK was determined, within the last WindowSize checks, for the state E2E_SM_VALID.
offset	PositiveInteger	0..1	attr	Offset of the E2E header in the Data[] array in bits.
profileBehavior	EndToEndProfile BehaviorEnum	0..1	attr	Behavior of the check functionality
profileName	NameToken	1	attr	Definition of the E2E profile.
syncCounterInit	PositiveInteger	0..1	attr	Number of checks required for validating the consistency of the counter that must be received with a valid counter (i.e. counter within the allowed lock-in range) after the detection of an unexpected behavior of a received counter.
upperHeader BitsToShift	PositiveInteger	0..1	attr	This attribute describes the number of upper-header bits to be shifted. value = 0 or not present: shift of upper header is NOT performed. value > 0: the E2E Transformer on the protect-side, takes the first upperHeaderBitsToShift bits from the upper buffer (e.g. SOME/IP header part generated by SOME/IP transformer) and shifts them towards the lower bytes and bits within the Data[] for the length of the E2E header (e.g. 12 bytes in case of E2E Profile 4). This means the shift distance is fixed - it depends on the E2E header size - what is configured here is the number of bits that are to be shifted. This option is defined because the Some/IP header generated by SOME/IP transformer must be, due to compatibility between non-protected and E2E-protected communication, at the same position, which is before E2E header.
windowSize	PositiveInteger	0..1	attr	Size of the monitoring window for the E2E state machine.

Table 7.24: EndToEndTransformationDescription

Enumeration	**DataIdModeEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer
Note	Supported inclusion modes to include the implicit two-byte Data ID in the one-byte CRC.
Literal	***Description***
all16Bit	Two bytes are included in the CRC (double ID configuration). **Tags:** atp.EnumerationValue=0
alternating8Bit	One of the two bytes byte is included, alternating high and low byte, depending on parity of the counter (alternating ID configuration). For even counter low byte is included; For odd counters the high byte is included. **Tags:** atp.EnumerationValue=1
lower12Bit	The low byte is included in the implicit CRC calculation, the low nibble of the high byte is transmitted along with the data (i.e. it is explicitly included), the high nibble of the high byte is not used. This is applicable for the IDs up to 12 bits. **Tags:** atp.EnumerationValue=2
lower8Bit	Only low byte is included, high byte is never used. This is applicable if the IDs in a particular system are 8 bits. **Tags:** atp.EnumerationValue=3

Table 7.25: DataIdModeEnum

Enumeration	**EndToEndProfileBehaviorEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer
Note	Behavior of the check functionality
Literal	***Description***
PRE_R4_2	Check has the legacy behavior, before AUTOSAR Release 4.2. **Tags:** atp.EnumerationValue=0
R4_2	Check behaves like new P4/P5/P6 profiles introduced in AUTOSAR Release 4.2. **Tags:** atp.EnumerationValue=1

Table 7.26: EndToEndProfileBehaviorEnum

Class	«atpVariation» **EndToEndTransformationISignalProps**			
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer			
Note	Holds all the ISignal specific attributes for the EndToEndTransformer.			
Base	*ARObject*, *Describable*, *TransformationISignalProps*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dataId (ordered)	PositiveInteger	*	attr	This represents a unique numerical identifier. Note: ID is used for protection against masquerading. The details concerning the maximum number of values (this information is specific for each E2E profile) applicable for this attribute are controlled by a semantic constraint that depends on the category of the EndToEnd Protection.
dataLength	PositiveInteger	0..1	attr	Length of payload and E2E header in bits.
maxDataLength	PositiveInteger	0..1	attr	Maximum length of payload and E2E header in bits.
minDataLength	PositiveInteger	0..1	attr	Minimum length of payload and E2E header in bits.

Table 7.27: EndToEndTransformationISignalProps

[constr_3313] E2E transformer configuration ⌈ For each `TransformationDescription` variant that is a `EndToEndTransformationDescription`

- attribute `protocol` of `TransformationTechnology` shall be set to `E2E`
- attribute `version` of `TransformationTechnology` shall be set to `1.0.0`
- attribute `transformerClass` of `TransformationTechnology` shall be set to `safety`

⌋*()*

[TPS_SYST_02067] E2E profile ⌈ The E2E profile is defined by `EndToEndTransformationDescription.profileName`. ⌋*(RS_SYST_00056)*

[TPS_SYST_02073] **`EndToEndTransformationDescription.profileName`** ⌈ `EndToEndTransformationDescription.profileName` can have the following values: PROFILE_01, PROFILE_02, PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, PROFILE_11, PROFILE_22. ⌋*(RS_SYST_00056)*

[TPS_SYST_02072] **`profileName` of `EndToEndTransformationDescription`** ⌈ The values for the `profileName` of `EndToEndTransformationDescription`

mentioned in [TPS_SYST_02073] are standardized and reserved for being used in the way the AUTOSAR standard foresees. In addition, it is positively possible to use other than the standardized values for the profileName. ⌋*(RS_SYST_00056)*

The setting of the EndToEndTransformationDescription.profileName has an influence on the upper- and lower multiplicities of certain attributes of EndToEndTransformationDescription and EndToEndTransformationISignalProps.

[constr_3185] Multiplicity of EndToEndTransformationDescription.dataIdMode in PROFILE_01 and PROFILE_11 ⌈ If the EndToEndTransformationDescription.profileName attribute is set to PROFILE_01 or PROFILE_11 then the multiplicity of the EndToEndTransformationDescription.dataIdMode attribute shall be 1. ⌋*()*

[constr_3189] Multiplicity of EndToEndTransformationDescription.crcOffset in PROFILE_01 and PROFILE_11 ⌈ If the EndToEndTransformationDescription.profileName attribute is set to PROFILE_01 or PROFILE_11 then the multiplicity of the EndToEndTransformationDescription.crcOffset attribute shall be 1. ⌋*()*

[constr_3190] Multiplicity of EndToEndTransformationDescription.crcOffset in PROFILE_02, PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute is set to a value of PROFILE_02, PROFILE_04, PROFILE_05, PROFILE_06,

PROFILE_07, or PROFILE_22 then the multiplicity of the EndToEndTransformationDescription.crcOffset attribute shall be 0. ⌋()

[constr_3193] Multiplicity of EndToEndTransformationDescription.offset in PROFILE_01 and PROFILE_11 ⌈ If the EndToEndTransformationDescription.profileName attribute is set to PROFILE_01 or PROFILE_11 then the multiplicity of the EndToEndTransformationDescription.offset attribute shall be 0. ⌋()

[constr_3194] Multiplicity of EndToEndTransformationDescription.offset in PROFILE_02, PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute is set to a value PROFILE_02, PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, or PROFILE_22 then the multiplicity of the EndToEndTransformationDescription.offset attribute shall be 1. ⌋()

[constr_3191] Multiplicity of EndToEndTransformationDescription.dataIdNibbleOffset in PROFILE_01, PROFILE_11 and dataIdMode equal to lower12Bit ⌈ If the EndToEndTransformationDescription.profileName attribute is set to PROFILE_01 or PROFILE_11 and the value of the EndToEndTransformationDescription.dataIdMode attribute is set to lower12Bit then the multiplicity of the EndToEndTransformationDescription.dataIdNibbleOffset attribute shall be 1. ⌋()

[constr_3192] Multiplicity of EndToEndTransformationDescription.dataIdNibbleOffset in PROFILE_02, PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, PROFILE_22 or dataIdMode different from lower12Bit ⌈ If the EndToEndTransformationDescription.profileName attribute is set to a value of PROFILE_02, PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, or PROFILE_22 or the EndToEndTransformationDescription.dataIdMode attribute is set to value different from lower12Bit then the multiplicity of the EndToEndTransformationDescription.dataIdNibbleOffset attribute shall be 0. ⌋()

[constr_3148] executeDespiteDataUnavailability setting in case an E2E Transformer is used ⌈ A transformer chain using E2E shall be configured with DataTransformation.executeDespiteDataUnavailability = TRUE. ⌋()

[constr_3149] TransformationTechnology.needsOriginalData settings for E2E Transformer ⌈ The TransformationTechnology.needsOriginalData attribute of a TransformationTechnology element of an E2E transformer shall be set to FALSE. ⌋()

[constr_3151] BufferProperties.headerLength settings for an E2E transformer used in combination with a SOME/IP transformer ⌈ The BufferProperties.headerLength for an E2E transformer located in a transformer chain with a SOME/IP transformer shall be configured with the following values depending on the value of the EndToEndTransformationDescription.profileName attribute:

1. PROFILE_01: BufferProperties.headerLength = 16 bits

2. PROFILE_02: BufferProperties.headerLength = 16 bits
3. PROFILE_04: BufferProperties.headerLength = 96 bits
4. PROFILE_05: BufferProperties.headerLength = 24 bits
5. PROFILE_06: BufferProperties.headerLength = 40 bits
6. PROFILE_07: BufferProperties.headerLength = 160 bits
7. PROFILE_11: BufferProperties.headerLength = 16 bits
8. PROFILE_22: BufferProperties.headerLength = 16 bits

⌋()

This means that the E2E header in profiles 1 and 2 use 2 bytes when using SOME/IP transformer. This yields four unused bits in case of some recommended configuration settings of Profile 1 and 2. Those unused bits are set to 0xF by the E2E transformer on the sender side.

[constr_3152] BufferProperties.headerLength settings for an E2E transformer used in combination with a COM Based transformer ⌈ An E2E transformer used in a transformer chain with a COM Based transformer shall be configured with the following values:

- BufferProperties.headerLength = 0

⌋()

This is because the space for the E2E header needs to be allocated by a proper ISignalGroup layout according to [TPS_SYST_02068].

[constr_3153] E2E header field reservation required by COM Based transformer ⌈ A COM Based transformer that is used in a transformer chain with an E2E transformer requires that the following amount of space is allocated for the E2E header fields using a proper ISignalGroup layout according to [TPS_SYST_02068]:

PROFILE_1: if dataIdMode == lower12Bit: 16 bits

PROFILE_1: if dataIdMode != lower12Bit: 12 bits

PROFILE_2: 16 bits

PROFILE_4: 96 bits

PROFILE_5: 24 bits

PROFILE_6: 40 bits

PROFILE_7: 160 bits

PROFILE_11: if dataIdMode == lower12Bit: 16 bits

PROFILE_11: if dataIdMode == all16Bit: 12 bits

PROFILE_22: 16 bits

⌋()

[constr_3154] BufferProperties.bufferComputation setting for an E2E transformer when used together with a Com-based transformer ⌈ The BufferProperties.bufferComputation of an E2E transformer used in a transformer chain with a COM Based transformer shall be configured in the following way:

```
<BUFFER-COMPUTATION>
  <COMPU-RATIONAL-COEFFS>
    <COMPU-NUMERATOR>
       <V>0</V>
       <V>1</V>
    </COMPU-NUMERATOR>
    <COMPU-DENOMINATOR>
       <V>1</V>
    </COMPU-DENOMINATOR>
  </COMPU-RATIONAL-COEFFS>
</BUFFER-COMPUTATION>
```

⌋()

[constr_3184] Only one EndToEndTransformationISignalProps.dataId element in PROFILE_01 and PROFILE_11 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_01 or PROFILE_11 then the multiplicity of the EndToEndTransformationISignalProps.dataId attribute shall be 1. ⌋()

[constr_3156] Allowed values for EndToEndTransformationISignalProps.dataId in PROFILE_01 and PROFILE_11 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_01 or PROFILE_11 then the value of the EndToEndTransformationISignalProps.dataId attribute shall be in the range of 0-65535. ⌋()

[constr_3157] Allowed values for EndToEndTransformationISignalProps.dataId in PROFILE_01 and PROFILE_11 in case dataIdMode is set to lower12Bit ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_01 or PROFILE_11 and the value of EndToEndTransformationDescription.dataIdMode attribute has a value of lower12Bit then the value of the EndToEndTransformationISignalProps.dataId attribute shall be in the range of 256-65535. ⌋()

[constr_3195] Allowed values for EndToEndTransformationDescription.maxDeltaCounter in PROFILE_02 and PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of

PROFILE_02 or PROFILE_22 then the attribute maxDeltaCounter shall be in the range 1-15. ⌋()

[constr_3159] Allowed values for EndToEndTransformationDescription.maxDeltaCounter in PROFILE_04 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_04 the value of maxDeltaCounter attribute shall be in the range 1-65535. ⌋()

[constr_3196] Allowed values for EndToEndTransformationDescription.maxDeltaCounter in PROFILE_05 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_05 then the attribute maxDeltaCounter shall be in the range 1-255. ⌋()

[constr_3197] Allowed values for EndToEndTransformationDescription.maxDeltaCounter in PROFILE_06 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_06 then the attribute maxDeltaCounter shall be in the range 1-255. ⌋()

[constr_3316] Allowed values for EndToEndTransformationDescription.maxDeltaCounter in PROFILE_07 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_07 the value of maxDeltaCounter attribute shall be in the range 1-4‘294‘967‘295. ⌋()

[constr_3160] EndToEndTransformationISignalProps.dataId in PROFILE_02 and PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_02 or PROFILE_22 then the multiplicity of the dataId attribute shall be 16 and the value of each instance shall be in the range 0..255. ⌋()

[constr_3161] EndToEndTransformationISignalProps.dataLength in PROFILE_01, PROFILE_02, PROFILE_05, PROFILE_11, PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_01, PROFILE_02, PROFILE_05, PROFILE_11, or PROFILE_22 then the multiplicity of the EndToEndTransformationISignalProps.dataLength attribute shall be 1. ⌋()

[constr_3162] EndToEndTransformationISignalProps.minDataLength and EndToEndTransformationISignalProps.maxDataLength in PROFILE_01, PROFILE_02, PROFILE_05, PROFILE_11, PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_01, PROFILE_02, PROFILE_05, PROFILE_11, or PROFILE_22 then the multiplicity of the attributes EndToEndTransformationISignalProps.minDataLength and EndToEndTransformationISignalProps.maxDataLength shall be 0. ⌋()

[constr_3163] EndToEndTransformationISignalProps.minDataLength and EndToEndTransformationISignalProps.maxDataLength in PROFILE_04, PROFILE_06, PROFILE_07 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_04, PROFILE_06, or

PROFILE_07 then the multiplicity of the attributes EndToEndTransformationISignalProps.minDataLength and EndToEndTransformationISignalProps.maxDataLength shall be 1. ⌋()

[constr_3164] EndToEndTransformationISignalProps.dataLength in PROFILE_04, PROFILE_06, PROFILE_07 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_04, PROFILE_06, or PROFILE_07 then the multiplicity of the attribute EndToEndTransformationISignalProps.dataLength shall be 0. ⌋()

[constr_3533] EndToEndTransformationISignalProps.dataLength shall be a multiple of 8 ⌈ The value of EndToEndTransformationISignalProps.dataLength, EndToEndTransformationISignalProps.maxDataLength, and EndToEndTransformationISignalProps.minDataLength shall be a multiple of 8. ⌋()

[constr_3155] Allowed values for EndToEndTransformationDescription.upperHeaderBitsToShift ⌈ The value of of the EndToEndTransformationDescription.upperHeaderBitsToShift attribute depends on the used serializing transformer:

COM based transformer: 0 (no bits are shifted)

SOME/IP transformer: 64 (to support the header shift of SOME/IP).

Custom transformer: no restriction (depends on header length and placement of custom transformer)

⌋()

[constr_3165] Effect of EndToEndTransformationDescription.upperHeaderBitsToShift value in PROFILE_01, PROFILE_11 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_01 or PROFILE_11 and the serializing transformer is different than the ComBasedTransformer then:

1. EndToEndTransformationDescription.crcOffset shall be set to the same value of upperHeaderBitsToShift.
2. EndToEndTransformationDescription.counterOffset shall be set to the value of upperHeaderBitsToShift + 8.
3. (if used) EndToEndTransformationDescription.dataIdNibbleOffset shall be set to the value of upperHeaderBitsToShift + 12.

⌋()

[constr_3327] Effect of EndToEndTransformationDescription.upperHeaderBitsToShift value in PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_22 and the

serializing transformer is different than the ComBasedTransformer, then EndToEndTransformationDescription.offset shall be set to the same value of upperHeaderBitsToShift. ⌋()

This means that the E2E header of profile 1 and profile 11, when used with SOME/IP Transformer or a Custom Transformer, is not spread across application data, but is a consecutive block of bytes. The layout flexibility available with these E2E protection profiles is therefore only supported if the ComBasedTransformer is used in combination with the E2E Transformer.

[constr_3166] EndToEndTransformationDescription.upperHeaderBitsToShift in PROFILE_02 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_02 then the value of the upperHeaderBitsToShift attribute shall be 0. ⌋()

[constr_3169] Attribute multiplicities and values in PROFILE_02 and PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_02 or PROFILE_22 then:

1. the multiplicity of the EndToEndTransformationDescription.crcOffset attribute shall be 0.
2. the multiplicity of the EndToEndTransformationDescription.counterOffset attribute shall be 0.
3. the multiplicity of the EndToEndTransformationDescription.dataIdNibbleOffset attribute shall be 0.
4. the value of the EndToEndTransformationDescription.offset attribute shall be 0.

⌋()

[constr_3167] Effect of EndToEndTransformationDescription.upperHeaderBitsToShift value in PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_04, PROFILE_05, PROFILE_06, or PROFILE_07 the value of the EndToEndTransformationDescription.offset attribute shall be equal to the value of the EndToEndTransformationDescription.upperHeaderBitsToShift attribute. ⌋()

[TPS_SYST_02194] Identification of E2E protected data in case of PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PPROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07 the E2E protected data is identified by a EndToEndTransformationISignalProps.dataId. ⌋()

In other words if a SystemSignal defines the E2E protected data and a fanout is described by several ISignals that point to this SystemSignal, the dataId in each of those ISignals may have the same value.

[constr_3172] Effect of EndToEndTransformationDescription.profileBehavior value in PROFILE_01 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_01 and the value of the profileBehavior attribute is R4_2 then:

- the value of the EndToEndTransformationDescription.maxNoNewOrRepeatedData attribute shall be 14.
- the value of the EndToEndTransformationDescription.syncCounterInit attribute shall be 1.

⌋()

[constr_3173] Effect of EndToEndTransformationDescription.profileBehavior value in PROFILE_02 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_02 and the value of the profileBehavior attribute is R4_2 then:

- the value of the EndToEndTransformationDescription.maxNoNewOrRepeatedData attribute shall be 15.
- the value of the EndToEndTransformationDescription.syncCounterInit attribute shall be 1.

⌋()

[constr_3174] EndToEndTransformationDescription settings not allowed in PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, PROFILE_11, PROFILE_22 ⌈ If the EndToEndTransformationDescription.profileName attribute has a value of PROFILE_04, PROFILE_05, PROFILE_06, PROFILE_07, PROFILE_11, or PROFILE_22 then:

1. the multiplicity of the EndToEndTransformationDescription.maxNoNewOrRepeatedData attribute shall be 0.
2. the multiplicity of the EndToEndTransformationDescription.syncCounterInit attribute shall be 0.
3. the multiplicity of the EndToEndTransformationDescription.profileBehavior attribute shall be 0.

⌋()

The EndToEndTransformationDescription may be differently chosen for a given ISignal or ISignalGroup depending on selected variant, with the following exceptions:

[constr_3182] Restriction on TransformationTechnology.transformationDescription VariationPoint ⌈ The EndToEndTransformationDescription.profileName attribute shall not be subject to variability for a given ISignal / ISignalGroup, i.e., the value of the EndToEndTransformationDescription.profileName attribute shall be the same in all different variants. ⌋()

In other words, it is not possible that in one variant PROFILE_04 is used, and in another variant PROFILE_05 is used for the same ISignal or ISignalGroup.

7.3.4.1 E2E state machine settings

E2E state machine settings are set in EndToEndTransformationDescription and a subset of them can be overridden in EndToEndTransformationComSpecProps. The E2E state machine is described in more detail in the E2E Library [19].

[constr_3176] Value range of windowSize ⌈ The value of the windowSize attribute shall be greater or equal to 1. ⌋*()*

[constr_3177] Dependency between maxErrorStateValid, maxErrorStateInit and maxErrorStateInvalid ⌈ The following restriction shall be respected:
maxErrorStateValid >= maxErrorStateInit >= maxErrorStateInvalid >= 0 ⌋*()*

[constr_3178] Dependency between minOkStateValid, minOkStateInit and minOkStateInvalid ⌈ The following restriction shall be respected:
1 <= minOkStateValid <= minOkStateInit <= minOkStateInvalid ⌋*()*

[constr_3179] Dependency between minOkStateInit, maxErrorStateInit and windowSize ⌈ The following restriction shall be respected:
minOkStateInit + maxErrorStateInit <= windowSize ⌋*()*

[constr_3180] Dependency between minOkStateValid, maxErrorStateValid and windowSize ⌈ The following restriction shall be respected:
minOkStateValid + maxErrorStateValid <= windowSize ⌋*()*

[constr_3181] Dependency between minOkStateInvalid, maxErrorStateInvalid and windowSize ⌈ The following restriction shall be respected: minOkStateInvalid + maxErrorStateInvalid <= windowSize ⌋*()*

7.3.4.2 E2E recommended configuration settings

This chapter provides different configuration settings for particular E2E Profiles. Please note that in future additional recommended configuration settings might be added.

7.3.4.2.1 E2E Profile 1 configuration setting C

The E2E Profile 1 configuration setting C is foreseen for CAN/FlexRay messages that are serialized by the COM based transformer and should be used with RTE

event-based communication, i.e. queued communication with queue size = 1, using Rte_Send / Rte_Receive.

[TPS_SYST_02069] Recommended configuration settings for E2E Profile 1 configuration setting C ⌈ The recommended configuration settings for E2E Profile 1 configuration setting C are defined in Table 7.28. ⌋*(RS_SYST_00056)*

Attribute	Allowed value	Comment
EndToEndTransformationDescription.profileName	PROFILE_01	Profile 1
EndToEndTransformationDescription.crcOffset	0	CRC offset
EndToEndTransformationDescription.counterOffset	8	Counter offset
EndToEndTransformationDescription.dataIdNibbleOffset	12	Data Id high nibble offset
EndToEndTransformationDescription.maxDeltaCounter	2	Maximum jump considered to be OK is 2, i.e. one lost message.
EndToEndTransformationDescription.minOkStateInit	1	At least one OK message
EndToEndTransformationDescription.maxErrorStateInit	1	One error allowed
EndToEndTransformationDescription.windowSize	3	Last 3 messages are considered
EndToEndTransformationDescription.minOkStateValid	1	At least one OK message
EndToEndTransformationDescription.maxErrorStateValid	1	One error allowed
EndToEndTransformationDescription.minOkStateInvalid	2	At least two OK messages
EndToEndTransformationDescription.maxErrorStateInvalid	1	One error allowed
EndToEndTransformationDescription.upperHeaderBitsToShift	0	no bits are shifted
BufferProperties.headerLength	16	16 bits is the length of E2E profile 1C header.
EndToEndTransformationDescription.profileBehavior	R4_2	Behavior of Profile P1 adjusted for the state machine.
EndToEndTransformationDescription.maxNoNewOrRepeatedData	14	Behavior of Profile P1 adjusted for the state machine.
EndToEndTransformationDescription.syncCounterInit	1	Behavior of Profile P1 adjusted for the state machine.

Table 7.28: Configuration of E2E Profile 1 configuration setting C

7.3.4.2.2 E2E Profile 4 configuration setting A

The E2E Profile 4 configuration setting A is foreseen for long messages that are serialized by the SOME/IP transformer. The configuration setting 4A should be used with RTE event-based communication, i.e. queued communication with queue size = 1, using Rte_Send / Rte_Receive.

This configuration setting is quite strict as it does not allow any errors, i.e.:

1. Repetitions
2. Counter jumps bigger than 1.
3. Errors not related to counters (e.g. CRC, data ID, length)

As soon as any error is detected, there is a transition to invalid state.

[TPS_SYST_02070] Recommended configuration settings for E2E Profile 4 configuration setting A ⌈ The recommended configuration settings for E2E Profile 4 configuration setting A are defined in Table 7.29. ⌋*(RS_SYST_00056)*

Attribute	Allowed value	Comment
EndToEndTransformationDescription.profileName	PROFILE_04	Profile 4
EndToEndTransformationDescription.offset	64	To support the fixed location of Some/IP header

EndToEndTransformationDescription.minOkStateInit	1	received message shall be OK.
EndToEndTransformationDescription.maxErrorStateInit	0	No errors allowed
EndToEndTransformationDescription.windowSize	1	Only the last message is considered
EndToEndTransformationDescription.minOkStateValid	1	received message shall be OK.
EndToEndTransformationDescription.maxErrorStateValid	0	No errors allowed
EndToEndTransformationDescription.minOkStateInvalid	1	received message shall be OK.
EndToEndTransformationDescription.maxErrorStateInvalid	0	No errors allowed
EndToEndTransformationDescription.upperHeaderBitsToShift	64	64 bits from Some/IP header to be shifted
BufferProperties.headerLength	96	96 bits is the length of E2E profile 4 header.

Table 7.29: Configuration of E2E configuration setting 4A

7.3.4.2.3 E2E Profile 4 configuration setting B

The E2E Profile 4 configuration setting B is foreseen for long messages that are serialized by the SOME/IP transformer. The configuration setting 4B should be used with RTE event-based communication, i.e. queued communication with queue size = 1, using Rte_Send / Rte_Receive.

This configuration setting requires having within the monitoring window the following properties:

1. At least one OK message
2. At most one error not related to counters (e.g. CRC, data ID, length)
3. the remaining data in the monitoring window may be
   - repetitions or
   - jumps above 1.

As soon as any error is detected, there is a transition to invalid state.

[TPS_SYST_02071] Recommended configuration settings for E2E Profile 4 configuration setting B ⌈ The recommended configuration settings for E2E Profile 4 configuration setting B are defined in Table 7.30. ⌋*(RS_SYST_00056)*

7.3.5 UserDefined Transformer

Autosar allows to describe custom Transformers that are not standardized by AUTOSAR. This is done by the usage of the following elements:

- UserDefinedTransformationDescription
- UserDefinedTransformationISignalProps
- UserDefinedTransformationProps

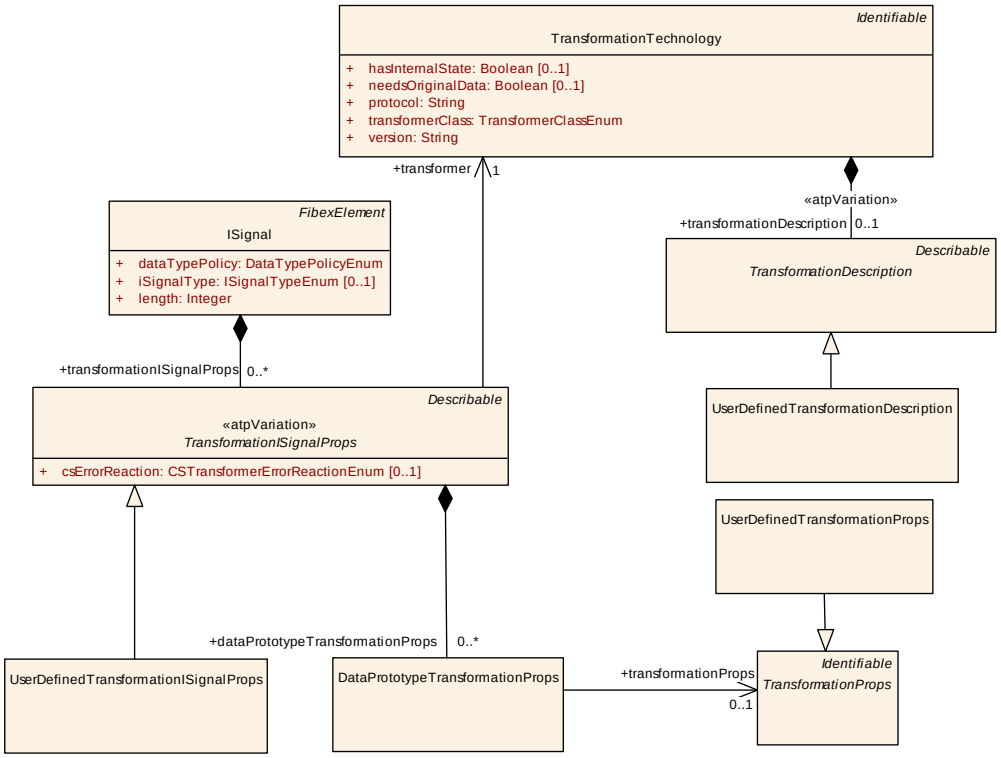

Figure 7.21: User Defined Transformation configuration

Please note that all these UserDefined classes are Identifiable or Describable and therefore are able to describe special data (sdg) which is not represented by the standard model.

7.3.6 Support for TLV Encoding

AUTOSAR supports the usage of the so-called *Tag-Length-Value* (TLV) encoding. The following sub-sections explain the details and the extent of the support for TLV encoding.

7.3.6.1 Assignment of TLV Data Ids

[TPS_SYST_05016]{DRAFT} **Assignment of TLV data ids** ⌈ The assignment of TLV data ids is done in the context of the specification of `SOMEIPTransformationISignalProps`, namely by means of the attribute `SOMEIPTransformationISignalProps.tlvDataId.id`. ⌋*(RS_SYST_00058)*

This approach takes benefit from the fact that the `TlvDataIdDefinition` is able to create references to relevant model elements.

The assignment of the TLV data id is therefore done by creating such a reference and assigning a TLV data id to it by means of the attribute `TlvDataIdDefinition.id`.

Please note that the assignment of TLV data ids is compulsory for an entire data structure that has at least one optional member. In a nutshell, this conclusion (that is also backed by [PRS_SOMEIP_00230], see [25]) is the motivation for the existence of [constr_1641] and [constr_1642].

Please note further that the assignment of TLV data ids is not restricted to data structures with optional members. There is also a use case to support sending the elements of a specific data structure in arbitrary order even if none of the elements is considered optional.

Moreover, TLV data ids can also be assigned to arguments of a `ClientServerOperation`. Using TLV data ids for arguments supports that arguments can be sent in arbitrary order and that new arguments can be added at arbitrary positions during the evolution of the interface. Note that optional arguments are not supported.

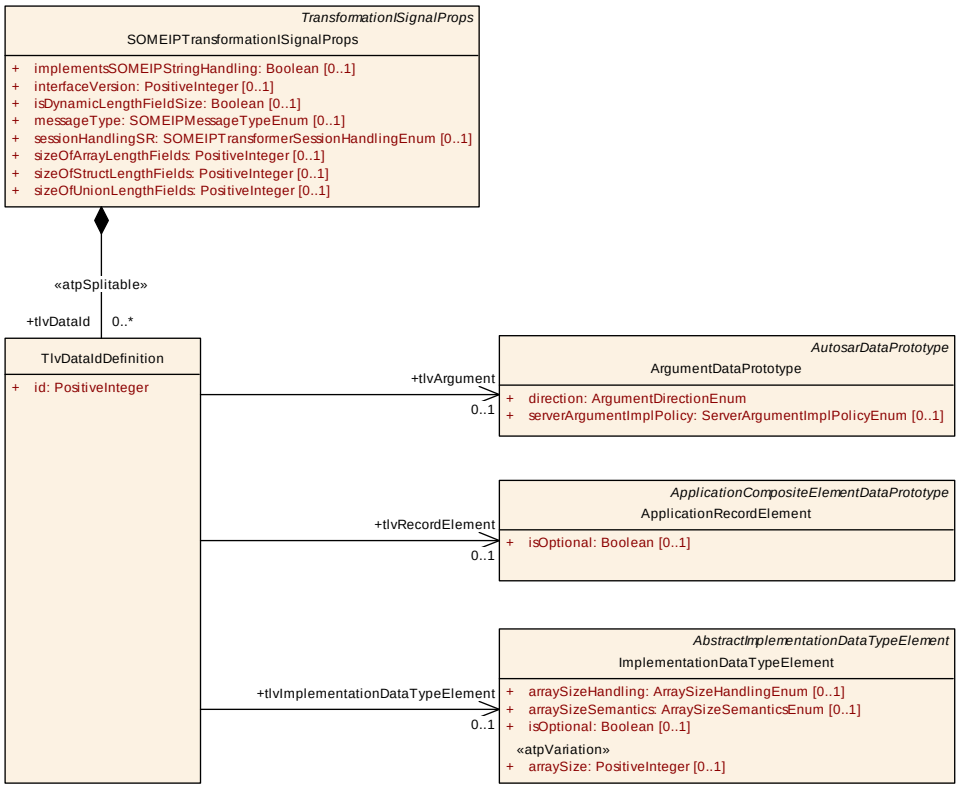

Figure 7.22: Definition of data ids for the TLV encoding inside a SOME/IP message

To sum it up: the usage of TLV data ids and optional members are two different features. Optional members require the usage of TLV data ids, but TLV data ids can also be used without having optional members.

Class	**TlvDataIdDefinition**			
Package	M2::AUTOSARTemplates::AdaptivePlatform::ApplicationDesign::SerializationProperties			
Note	This meta-class represents the ability to define the tlvDataId. **Tags:** atp.Status=draft			
Base	*ARObject*

id	PositiveInteger	1	attr	This attribute represents the definition of the value of the TlvDataId
tlvArgument	ArgumentDataPrototype	0..1	ref	This reference assigns a tlvDataId to a given argument of a ClientServerOperation. **Tags:** atp.Status=draft
tlv Implementation DataType Element	ImplementationData TypeElement	0..1	ref	This reference associates the definition of a TLV data id with a given ImplementationDataTypeElement. **Tags:** atp.Status=draft
tlvRecord Element	ApplicationRecord Element	0..1	ref	This reference associates the definition of a TLV data id with a given ApplicationRecordElement. **Tags:** atp.Status=draft

Table 7.36: TlvDataIdDefinition

[constr_1641]{DRAFT} **Consistent assignment of TLV data ids to ApplicationRecordDataType** ⌈ For every ApplicationRecordDataType where direct members set the attribute ApplicationRecordElement.isOptional to the value True references to all direct members of this ApplicationRecordDataType shall be created on the basis of the definition of TlvDataIdDefinition. ⌋()

[constr_1642]{DRAFT} **Consistent assignment of TLV data ids to ImplementationDataType or ImplementationDataTypeElement** ⌈ For every ImplementationDataType or ImplementationDataTypeElement of category STRUCTURE where direct members set the attribute ImplementationDataTypeElement.isOptional to the value True references to all direct members of this ImplementationDataType resp ImplementationDataTypeElement shall be created on the basis of the definition of TlvDataIdDefinition. ⌋()

The definition of a TlvDataIdDefinition that refers to an eligible model element is not limited to scenarios where optional elements are defined. It is also possible to define TlvDataIdDefinition for arbitrary methods or data structures.

A typical use case could be to prepare the argument list or subelements for future extensions. However, if one argument or sub-element is referenced then it is necessary to define references from TlvDataIdDefinitions to all other arguments or subelements as well.

[constr_1643]{DRAFT} **Completeness of the existence of a set of TlvDataIdDefinition.tlvArguments** ⌈ If the reference TlvDataIdDefinition.tlvArguments exists for one argument of a given ClientServerOperation then further TlvDataIdDefinition.tlvArguments shall exist for all arguments of the given ClientServerOperation and all affected TlvDataIdDefinition shall be aggregated by the same SOMEIPTransformationISignalProps. ⌋()

[constr_1644]{DRAFT} **Completeness of the existence of a set of TlvDataIdDefinition.tlvRecordElements** ⌈ If the reference TlvDataIdDefinition.tlvRecordElement exists for one element of a given ApplicationRecordDataType then further TlvDataIdDefinition.tlvRecordElement shall exist for all elements of the given ApplicationRecordDataType and all affected TlvDataIdDefinition shall be aggregated by the same SOMEIPTransformationISignalProps. ⌋()

[constr_1645]{DRAFT} **Completeness of the existence of a set of TlvDataIdDefinition.tlvImplementationDataTypeElements** ⌈ Completeness of the existence of a set of TlvDataIdDefinition.tlvImplementationDataTypeElements If the reference TlvDataIdDefinition.tlvImplementationDataTypeElement exists for one subElement of a given ImplementationDataType or ImplementationDataTypeElement then further TlvDataIdDefinition.tlvImplementationDataTypeElement shall exist for all subElements of the given ImplementationDataType or ImplementationDataTypeElement and all affected TlvDataIdDefinition shall be aggregated by the same SOMEIPTransformationISignalProps. ⌋()

The definition of a TlvDataIdDefinition.id has the purpose to provide means to unambiguously identify the argument or sub-element. For this purpose, the value of the id needs to be unique in the respective context.

[constr_1646]{DRAFT} **Scope of the uniqueness of the value of TlvDataIdDefinition.id for references to ArgumentDataPrototype** ⌈ For all TlvDataIdDefinition that are referencing ArgumentDataPrototypes of a given ClientServerOperation in the role tlvArgument the attribute TlvDataIdDefinition.id shall exist and have a unique value in the context of respective arguments of the enclosing ClientServerOperation where attribute direction is set to the value in/inout or out/inout.

Note: an argument where attribute direction is set to the value in may have the same data id as an argument where attribute direction is set to the value out since the two are transferred in separate messages. ⌋*()*

[constr_1647]{DRAFT} **Scope of the uniqueness of the value of TlvDataIdDefinition.id for references to ApplicationRecordElement** ⌈ For all TlvDataIdDefinition that are referencing ApplicationRecordElements of a given ApplicationDataType in the role tlvRecordElement the attribute TlvDataIdDefinition.id shall exist and have a unique value in the context of respective enclosing ApplicationRecordDataType. ⌋*()*

[constr_1648]{DRAFT} **Scope of the uniqueness of the value of TlvDataIdDefinition.id for references to ImplementationDataTypeElement** ⌈ For all TlvDataIdDefinition that are referencing ImplementationDataTypeElements of a given ImplementationDataType/ImplementationDataTypeElement in the role tlvImplementationDataTypeElement the attribute TlvDataIdDefinition.id shall exist and have a unique value in the context of respective enclosing ImplementationDataType or ImplementationDataTypeElement. ⌋*()*

Obviously, it is necessary to avoid ambiguity with respect to the definition of TLV data ids. Each model element that can be assigned such an id shall only be assigned one id.

[constr_1649]{DRAFT} **TlvDataIdDefinition referencing ArgumentDataPrototype** ⌈ Each ArgumentDataPrototype shall be referenced at most once in the role tlvArgument in the context of the same SOMEIPTransformationISignalProps. ⌋*()*

[constr_1650]{DRAFT} **TlvDataIdDefinition referencing ApplicationRecordElement** ⌈ Each ApplicationRecordElement shall be referenced at most once in the role tlvRecordElement in the context of the same SOMEIPTransformationISignalProps. ⌋*()*

[constr_1651]{DRAFT} **TlvDataIdDefinition referencing ImplementationDataTypeElement** ⌈ Each ImplementationDataTypeElement shall be referenced at most once in the role tlvImplementationDataTypeElement in the context of the same SOMEIPTransformationISignalProps. ⌋*()*

As depicted in Figure 7.22, the meta-model supports the TlvDataIdDefinition to refer both to an ApplicationRecordElement as well as an ImplementationDataTypeElement.

In a typical case either the one or the other reference will be used and there is intentionally no constraint to explicitly use both references in a concrete model.

It would mean a significant markup in real-world AUTOSAR models to explicitly require that TlvDataIdDefinitions shall exist that assign concrete ids to both a given ApplicationRecordDataType as well as the mapped ImplementationDataType.

However, scenarios are conceivable that the assignment of TLV data ids may be done based on ApplicationDataType plus networkRepresentationProps on one end of the communication and based on ImplementationDataType on the other end.

In this case, a constraint to keep TLV data ids in sync between ApplicationDataType and ImplementationDataType would not even be helpful because either side might not know about the actual data type used as the basis of the creation of the Transformer at the other end.

Nevertheless, if both an ApplicationDataType and the mapped ImplementationDataType are annotated with TLV data Ids within the same model then the associated values shall obviously be identical for corresponding sub-elements.

7.3.6.2 Assignment of TLV Wire Type

The TLV encoding supports the definition of a so-called wire type that controls how the information about the length of length fields shall be interpreted. The meaning of specific settings of the wire type is defined in [25].

[TPS_SYST_05017]{DRAFT} **Definition of the applicable wire type attribute SOMEIPTransformationISignalProps.isDynamicLengthFieldSize shall be used to define the applicable wire type** ⌈ If the value of attribute SOMEIPTransformationISignalProps.isDynamicLengthFieldSize is set to True then **wire type 5-7** shall be used.

If the value of attribute SOMEIPTransformationISignalProps.isDynamicLengthFieldSize does not exist or is set to False then **wire type 4** shall be used. ⌋*(RS_SYST_00058)*

[constr_1652]{DRAFT} **Definition of static length fields sizes in case of TLV usage** ⌈ If TlvDataIdDefinitions are defined for a SOMEIPTransformationISignalProps, the attributes sizeOfArrayLengthFields, sizeOfStructLengthFields, and sizeOfUnionLengthFields shall be greater than 0. ⌋*()*

Rationale for the existence of [constr_1652]: The TLV serialization requires the usage of length fields. If wire type 4 is used the length field size must be statically configured.

If wire types 5-7 (dynamic length field size) are used the static configuration of the length field size must also be present since not all length fields are preceded by a tag, e.g. structures contained in an array or the top-level struct contained in a SOME/IP event. Not using length fields here would result in ambiguities.

[constr_1653]{DRAFT} **Identical values for length fields sizes in case of TLV usage** ⌈ If `TlvDataIdDefinition`s are defined for a `SOMEIPTransformationISignalProps`, the attributes `sizeOfArrayLengthFields`, `sizeOfStructLengthFields`, and `sizeOfUnionLengthFields` shall have an identical value. ⌋*()*

Rationale for the existence of [constr_1653]: if an unknown member or argument is encountered the deserializer cannot determine the actual datatype of the member/argument when wire type 4 is used.

[constr_1654]{DRAFT} **No definition of length field sizes on `DataPrototype` level in case of TLV usage** ⌈ If `TlvDataIdDefinition`s are defined for a `SOMEIPTransformationISignalProps`, the attributes `sizeOfArrayLengthFields`, `sizeOfStructLengthFields` and `sizeOfUnionLengthFields` shall not be defined on `DataPrototype` level but only on `ISignal` level. ⌋*()*

Rationale for the existence of [constr_1654]: if an unknown member or argument is encountered the deserializer needs to know the size of the length field when wire type 4 is used. The easiest way is that the size of the length field is then only defined at the top-level element.

8 Gateways

A gateway is a function within an EcuInstance that performs as a FrameMapping, IPduMapping or ISignalMapping function between two or more CommunicationClusters.

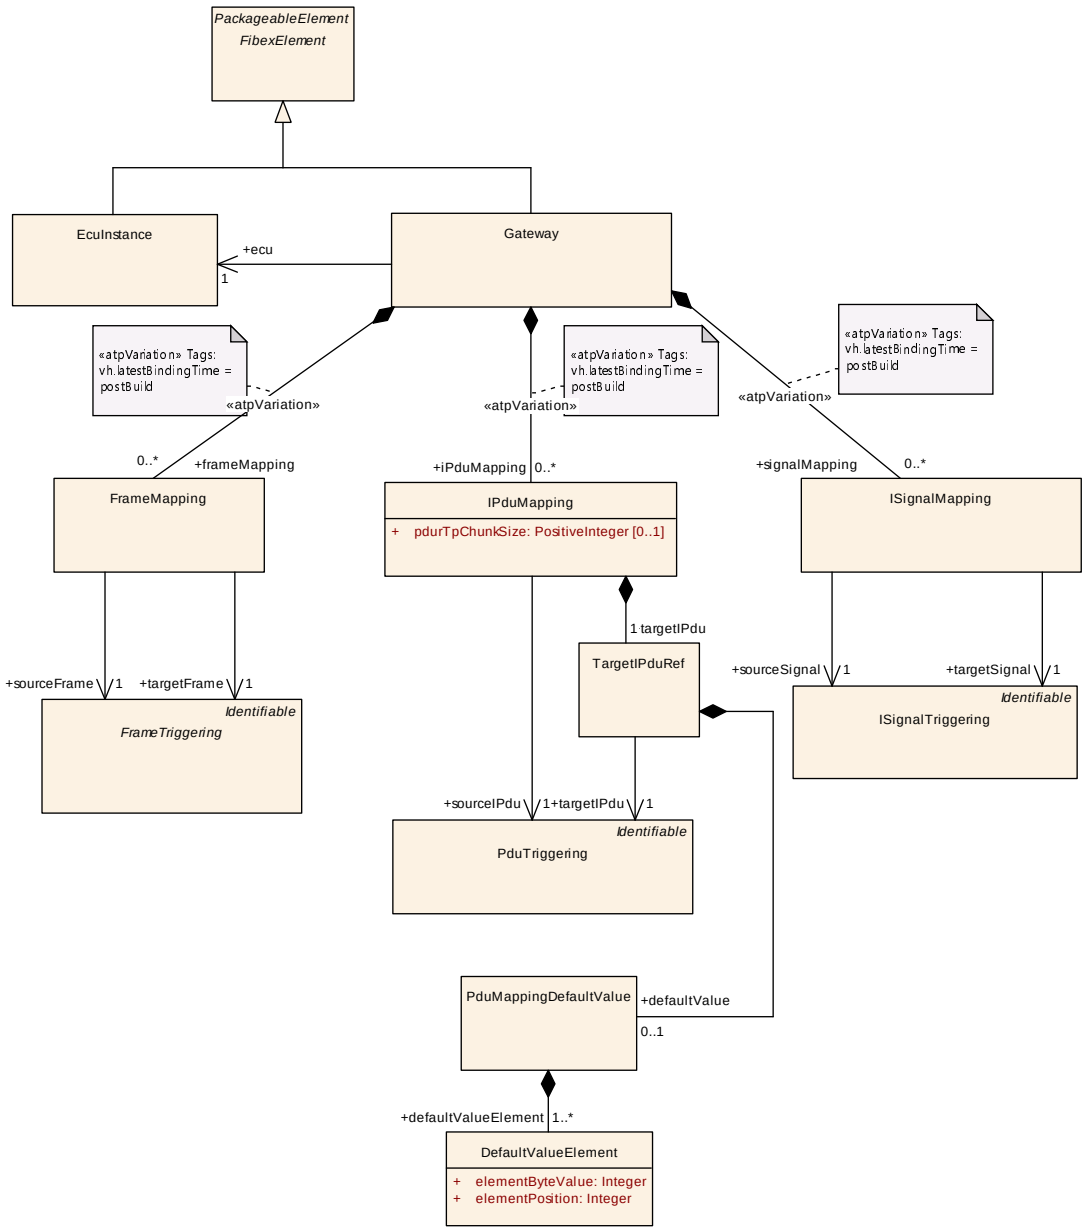

Figure 8.1: Communication Overview (Fibex4Multiplatform: Gateway)

Figure 8.1 shows the meta-model for the Gateway description in the System Template.

Class	**Gateway**			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Multiplatform			
Note	A gateway is an ECU that is connected to two or more clusters (channels, but not redundant), and performs a frame, Pdu or signal mapping between them. **Tags:** atp.recommendedPackage=Gateways

8.2.1 Routing and processing of Diagnostics Pdus

An `EcuInstance` routes a source `DcmIPdu` to a destination `DcmIPdu` if there is an `IPduMapping` in place that is configured according to [TPS_SYST_01117]. The `EcuInstance` also processes the `DcmIPdu` locally if the source `DcmIPdu` is assigned a functional destination address.

8.3 Signal Mapping

[TPS_SYST_01119] Signal Gateway support ⌈ The ISignalMapping defines the mapping between ISignals and ISignalGroups that are transferred by the Gateway from one PhysicalChannel to the other (or the same) PhysicalChannel. Each mapping pair consists of a sourceSignal and a targetSignal referencing an ISignalTriggering. Each ISignalTriggering points to either an ISignal or an ISignalGroup. The ISignal refers to the to be routed SystemSignal, the ISignalGroup refers to the to be routed SystemSignalGroup. ⌋()

[constr_3051] Restriction of ISignalMapping references ⌈ If the sourceSignal references an ISignal then the targetSignal shall also reference an ISignal. ⌋ ()

[TPS_SYST_01155] Routing of ISignalGroups ⌈ If the sourceSignal references an ISignalGroup then the targetSignal can reference either an ISignalGroup or an ISignal. ⌋()

[constr_3052] Complete ISignalMapping of ISignalGroup signals ⌈ If an ISignalMapping to an ISignal that is a member of a ISignalGroup exists then (see [TPS_SYST_01120]) an ISignalMapping to the enclosing ISignalGroup shall exist as well. ⌋()

[TPS_SYST_02162] Routing of ISignals of ISignalGroups ⌈ When performing a signal group routing two approaches are supported for the pairing of the included ISignals:

- implicit mapping: the ISignalMapping points in the sourceSignal role to an ISignalTriggering of an ISignalGroup and no ISignalMappings are defined for the included ISignals. Identical shortNames of ISignal elements identify correlating ISignals between the source and the target in the scope of the ISignalMapping.
- explicit mapping: the ISignalMapping points in the sourceSignal role to an ISignalTriggering of an ISignalGroup and in addition explicitly specified ISignalMappings define which ISignals correlate to each other.

⌋()

Please note that SWS_COM [20] does not support the “implicit mapping” of [TPS_SYST_02162]. Thus it is required in the upstream mapping to derive individual ISignalMappings for all the members of a to be routed ISignalGroup.

[TPS_SYST_01120] Precedence of ISignalMappings ⌈ If a dedicated ISignalMapping for at least one ISignal within an ISignalGroup exists the implicit mapping on the basis of shortNames is no longer applicable for any ISignal within that ISignalGroup. ⌋()

[TPS_SYST_01121] Support of Mulicast signal routing ⌈ The 1:n multicast routing is supported with the definition of several ISignalMappings. See also the COM Signal Gateway fan-out description in [TPS_SYST_01110]. ⌋()

9 Global Time Synchronization

9.1 Introduction

This chapter describes the modeling of how a global time synchronization in an AUTOSAR system can be achieved. There are two kinds of time bases: synchronized time base and offset time base. This manifests in two possible values for the attribute category (see [constr_3519]).

[constr_3519] Value of `category` of `GlobalTimeDomain` ⌈ The attribute `category` of `GlobalTimeDomain` can have the following values:

- SYNCHRONIZED: this time base does not depend on the existence of another time base
- OFFSET: this time base depends on the existence of another time base. It delivers a value that represents an offset relative to the referenced (`GlobalTimeDomain.offsetTimeDomain`) synchronized time base.

⌋()

There are several use cases for implementing a system-wide global time in an vehicle:

- In case of an accident it may be necessary to post-mortem analyze whether the vehicle ECUs performed according to specification. This implies that it shall be possible to unambiguously determine the sequence of activities before a crash. This sequence can only be determined if all components in the distributed system depend on a reliable global time basis.
- It may be necessary that several ECUs in the distributed system need to act in concert with respect to the time that a specific activity is executed. A very trivial example for this requirement is the activation of turn indicators in a car. These are rarely connected to a single ECU (which could take care of synchronously flashing the turn indicators) but their synchronized execution is still very essential for the vehicle operation.
- The distribution of several global time bases shall be possible (e.g. a vehicle local time based on the runtime of the car and a GPS-based time).
- It shall be possible to define offset time bases which have the property that they are based on a synchronized time base and distribute the offset time value as difference to the synchronized time base.

It is obvious that the distribution of global time within a vehicle requires a system-wide context and therefore, the AUTOSAR System Template defines relevant meta-classes and their relations for this purpose.

Of course, the actual implementation of global time distribution is done in a couple of basic-software modules that need to be configured in the context of integrating a particular ECU. The purpose of the meta-model described in chapter 9 is to support the configuration of these basic-software modules.

The modeling of how the distribution of global time is supposed to work can roughly be distributed into two parts, the discussion of the *big picture* (see 9.2) and the description of the details that eventually will support the configuration of the corresponding basic-software modules. The latter can be found in chapter 9.3.

9.2 The big Picture

The central part of the formalization of global time synchronization is the existence of a *global time domain*, formalized as `GlobalTimeDomain`.

However, the fragment *global* in *global time domain* primarily stresses the fact that it is supposed to support the distribution of a *global* time rather than implying an information about the scope or visibility of a `GlobalTimeDomain`[1].

In other words, there is typically more than a single `GlobalTimeDomain` available in the `System`.

[TPS_SYST_05005] Relation of `GlobalTimeDomain` to `CommunicationCluster` ⌈ The concept of the `GlobalTimeDomain` roughly corresponds to the existence of a `CommunicationCluster`, i.e. it takes at least one `CommunicationCluster` to implement a *global time domain*. ⌋*()*

[TPS_SYST_05006] Chaining of `GlobalTimeDomain`s ⌈ It is possible to extend the *global time domain* to several `CommunicationCluster`s that are interconnected by means of a `Gateway`.

In other words, the global time base is routed from one `CommunicationCluster` to another, whereas the Time Slave resp. Time Slave Port updates its local time base by using the received global time base and takes into account, whether a time base correction has to be considered or not.

There are certainly use-cases for implementing a `GlobalTimeDomain` that extends to several `CommunicationCluster`s, but in many (if not in the majority of) cases it will be necessary to update the time information for the sake of precision.

In this case, however, two separate `GlobalTimeDomain`s rather than a single `GlobalTimeDomain` exist. The `GlobalTimeDomain` relate to each other such that one `GlobalTimeDomain` refers to the other in the role `globalTimeSubDomain`. ⌋*()*

In order to understand the way how `GlobalTimeDomain`s refer to each other, it is important to understand that the concept of a *global time domain* has an underlying asymmetric approach of how the time information is distributed.

That is, not all participants in the communication of global time information are able and/or entitled to update the time information and send it around for others to consume.

[1] For the intents and purposes of this chapter, always make sure to read **global-time domain** rather than **global time-domain**.

[TPS_SYST_02103] Semantics of `GlobalTimeDomain.domainId` ⌈ `GlobalTimeDomain.domainId` represents a specific time source, e.g. GPS time. ⌋*()*

The modeling of `GlobalTimeDomain`s and SubDomains describes the propagation of time values of a time source through the networks. Since the specific time source corresponds to the value of `GlobalTimeDomain.domainId` [constr_3251] is formulated.

[constr_3251] Value of `GlobalTimeDomain.domainId` in `globalTimeSubDomain` chains ⌈ In a chain of `GlobalTimeDomain.globalTimeSubDomain` the value of the attribute `GlobalTimeDomain.domainId` shall be identical. ⌋*()*

[TPS_SYST_05007] separation of roles within a `GlobalTimeDomain` ⌈ Within a single *global time domain*, There is a strict separation of roles into a single *global time master* (formalized by the meta-class `GlobalTimeMaster`) and a collection of so-called *global time slaves* (formalized by means of the meta-class `GlobalTimeSlave`).

The role of the `GlobalTimeMaster` is to provide the global time information and the role of the collection of `GlobalTimeSlave`s is to consume the information. The chaining of `GlobalTimeDomain`s needs to be understood as the intention to implement the following information flow:

1. from the `GlobalTimeMaster` of one `GlobalTimeDomain` to the `GlobalTimeSlave`s of the same `GlobalTimeDomain`
2. via the `GlobalTimeMaster` of the `GlobalTimeDomain` referenced in the role `globalTimeSubDomain` to the `GlobalTimeSlave`s of the `globalTimeSubDomain`

⌋*()*

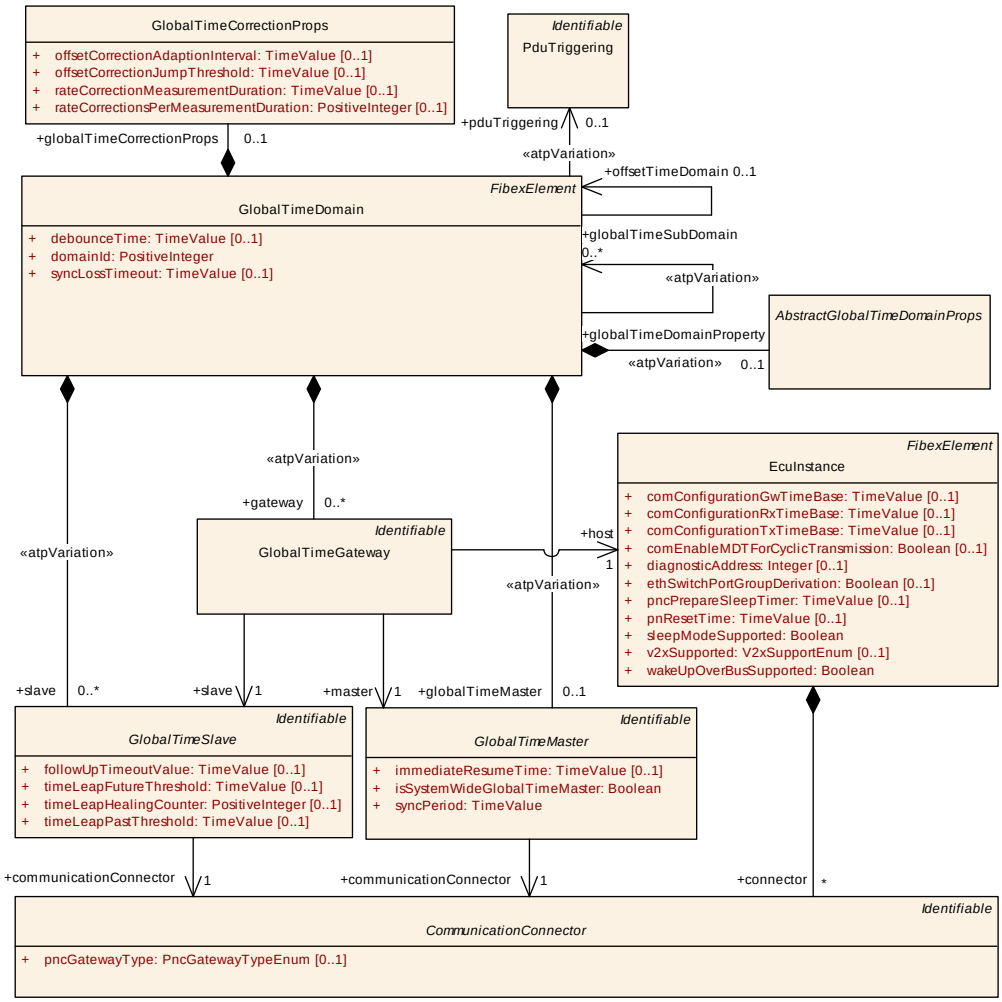

Figure 9.1: Big Picture of AUTOSAR global time synchronization

[TPS_SYST_05008] Semantics of a `GlobalTimeGateway` ⌈ In order to achieve the flow of information between a `GlobalTimeSlave` of a given `GlobalTimeDomain` to the `GlobalTimeMaster` of another `GlobalTimeDomain`, it is necessary to establish the existence of a so-called `GlobalTimeGateway`.

In terms of functionality, a `GlobalTimeGateway` complements the functionality of the underlying `Gateway` such that, on top of the mere routing from one `Communication-Cluster` to another, the time information is actively updated in the process of passing it from one `GlobalTimeDomain` to the other. ⌋*()*

[TPS_SYST_05009] `GlobalTimeDomain.pduTriggering` for transmitting global time information ⌈ The flow of global time information is unidirectional, i.e. the `GlobalTimeSlave`s consume the information without providing any form of feedback to the corresponding `GlobalTimeMaster`.

Thanks to this conceptual detail, there is only the need for **one** dedicated `Pdu` for the transmission of the actual global time information in the context of one `GlobalTimeDomain`.

The characteristics of accessing the information contained in this Pdu do make any requirements on the nature of the Pdu. Therefore, it is sufficient and applicable to use the GeneralPurposePdu for this use case.

To make this possible, it is necessary to include the global time use case in the set of standardized values of the attribute GeneralPurposePdu.category. In other words, [constr_3081] applies. ⌋()

[constr_3261] GlobalTimeDomain.pduTriggering category ⌈ The Pdu that is referenced by the PduTriggering that in turn is referenced by GlobalTimeDomain in the role pduTriggering shall be a GeneralPurposePdu of category GLOBAL_TIME. ⌋()

[TPS_SYST_05010] GlobalTimeDomain.pduTriggering is not required on Ethernet ⌈ The Pdu for transmitting global time information is not required on the Ethernet bus. Here, the information is accessed directly from the Ethernet Interfaces, i.e. the hardware already keeps track of the global time. ⌋()

[constr_1369] CommunicationConnectors shall be attached to the same CommunicationCluster ⌈ All CommunicationConnectors referenced from GlobalTimeMaster and GlobalTimeSlaves aggregated in one GlobalTimeDomain shall be referenced in the role commConnector by the same PhysicalChannel aggregated by the same CommunicationCluster. ⌋()

[constr_1370] Consistency of GlobalTimeDomain ⌈ The GlobalTimeSlave referenced in the role GlobalTimeGateway.slave and the GlobalTimeMaster referenced in the role GlobalTimeGateway.master shall **not** be aggregated by the same GlobalTimeDomain. ⌋()

The background of [constr_1370] is that the GlobalTimeGateway is supposed to connect two GlobalTimeDomains it is hardly possible that the GlobalTimeGateway.slave and the GlobalTimeMaster can be aggregated by the same GlobalTimeDomain.

[TPS_SYST_05011] Ownership of GlobalTimeGateway ⌈ Since the existence of a GlobalTimeGateway is only justified if a GlobalTimeDomain exists that is referenced by a GlobalTimeDomain in the role globalTimeSubDomain it seems appropriate to aggregate the GlobalTimeGateway at the GlobalTimeDomain referenced in the role globalTimeSubDomain. ⌋()

In other words, the GlobalTimeGateway shall be aggregated at the GlobalTimeDomain that also aggregates the master.

Please note that GlobalTimeDomain.gateway effectively has a 0..1 multiplicity since no more than one globalTimeMaster is allowed per GlobalTimeDomain.

[constr_1371] Consistency of attribute host ⌈ Within the context of an aggregating GlobalTimeDomain, the CommunicationConnectors referenced in the role GlobalTimeGateway.master.communicationConnector and GlobalTimeGateway.slave.communicationConnector shall be aggregated by the same EcuInstance that is referenced in the role GlobalTimeGateway.host. ⌋()

[constr_1372] Consistency of attribute `pduTriggering` ⌈ Within the context of an aggregating `GlobalTimeDomain`, the `pduTriggering` shall be owned by `PhysicalChannel` that is also referencing the `CommunicationConnector`s referenced in the roles `GlobalTimeSlave.communicationConnector` and `GlobalTimeMaster.communicationConnector`. ⌋*()*

[TPS_SYST_05013] Semantics of `GlobalTimeMaster.isSystemWideGlobalTimeMaster` ⌈ The attribute `GlobalTimeMaster.isSystemWideGlobalTimeMaster` indicates whether a given `GlobalTimeMaster` is considered an independent (i.e. [constr_1373] applies) source of global time information. ⌋*()*

[constr_1373] `GlobalTimeMaster` with attribute `isSystemWideGlobalTimeMaster` set to `TRUE` ⌈ `GlobalTimeMaster` with attribute `isSystemWideGlobalTimeMaster` set to `TRUE` shall not be referenced in the role `GlobalTimeGateway.master`. ⌋*()*

[TPS_SYST_05014] `GlobalTimeMaster.isSystemWideGlobalTimeMaster` ⌈ There is no limitation regarding the number of `GlobalTimeMaster`s that have attribute `isSystemWideGlobalTimeMaster` set to `TRUE`. The attribute does not imply that there can only be one `GlobalTimeMaster` within the context of a `System`. ⌋*()*

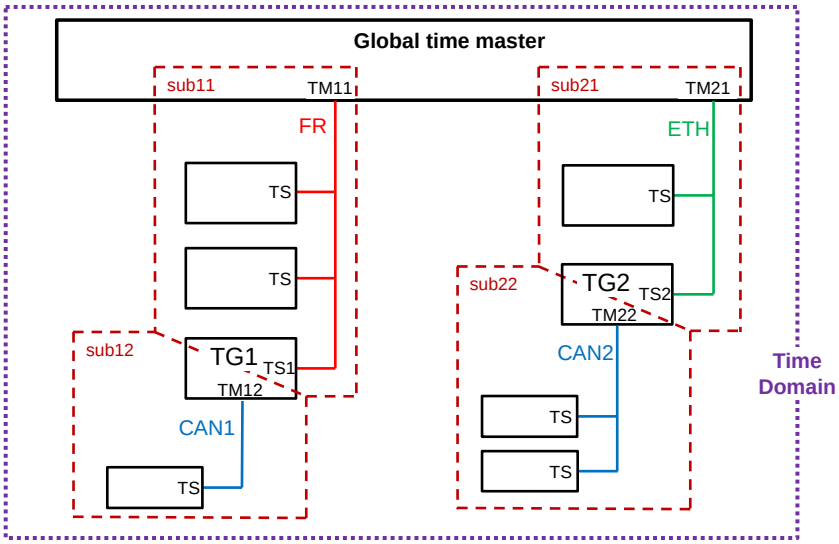
[constr_1374] Only fan-out possible for `GlobalTimeGateway` ⌈ For all `GlobalTimeGateway`s that refer to the same `EcuInstance` the condition applies that no two `GlobalTimeGateway`s shall refer to the same `GlobalTimeMaster`. ⌋*()*

In other words, a fan-in of time information such that time information is received from several sources is not supported.

In figure 9.2 an example of a Global Time Sync setup is shown. The *Global time master* ECU creates the *TimeDomain* and provides it to several `globalTimeSubDomain`s. The `GlobalTimeMaster`s for the `globalTimeSubDomain`s take the *TimeDomain* and distribute it to their networks.

The time for the `GlobalTimeMaster`s *TM11* and *TM21* is based on the *TimeDomain* and therefore they have the attribute `isSystemWideGlobalTimeMaster` set to *true*.

The time for the `GlobalTimeMaster`s *TM12* and *TM22* are based on a `GlobalTimeGateway` and therefore they have the attribute `isSystemWideGlobalTimeMaster` set to *false*.



TS: GlobalTime slave
TM: GlobalTime master
TG: GlobalTime gateway

Figure 9.2: Example Global Time Sync topology

A partial outline of the example system description structure is shown in figure 9.3.

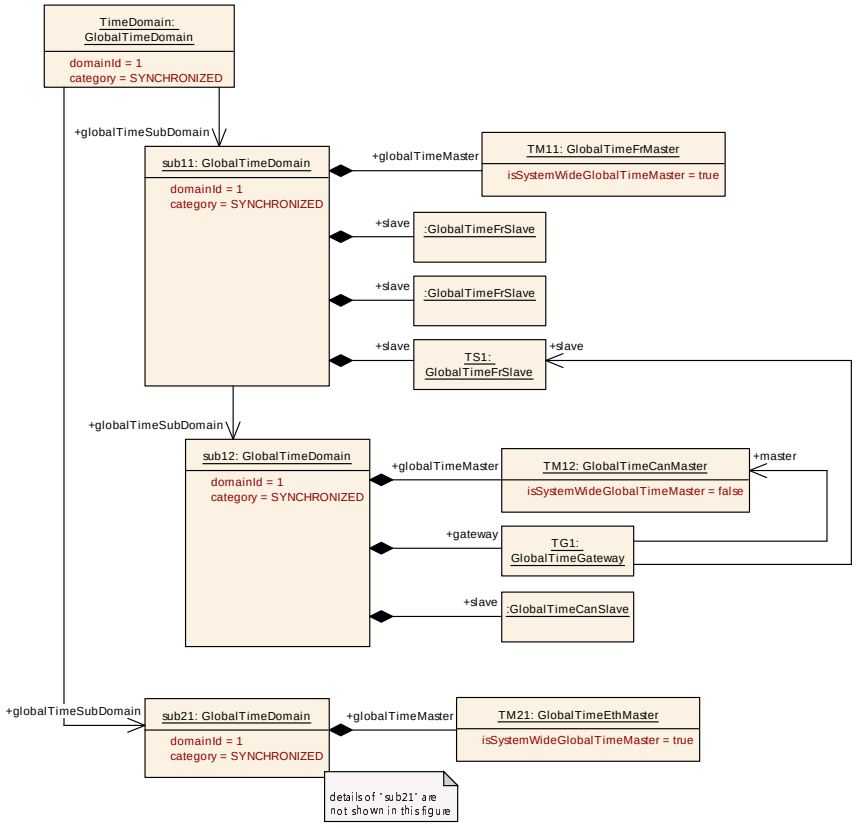


Figure 9.3: System Description of Global Time Sync example

An offset time domain is defined by an reference from a `GlobalTimeDomain` to another `GlobalTimeDomain` in the role `GlobalTimeDomain.offsetTimeDomain`.

This makes the reference source the offset time domain and the reference target the synchronized time domain.

[constr_3520] Offset time domain shall be based on a synchronized time domain ⌈ If a `GlobalTimeDomain` has a reference with the role `GlobalTimeDomain.offsetTimeDomain` the reference source shall have a `GlobalTimeDomain.domainId` in the range of 16-31 and the reference target shall have a `GlobalTimeDomain.domainId` in the range of 0-15. ⌋()

Rationale: In the [28] Specification the ranges are fixed for synchronized and offset time domains.

Note that the same synchronized time domain can be referenced by several different offset time domains.

[TPS_SYST_03015] Offset time domain requires synchronized time domain ⌈ Since the calculation of the actual offset time domain time requires the presence of the synchronized time domain as well as the offset time domain it is required that every ECU which receives an offset time domain also receives the respective synchronized time domain. ⌋()

In figure 9.4, an example of a Offset Time Sync setup is shown. The example is based on the setup shown in figure 9.2 and extends this with the definition of an offset time domain.

The *Global time master* ECU creates the synchronized *TimeDomain* and provides it to several `globalTimeSubDomain`s. The figure needs to be interpreted in the way that the *OffsetTimeDomain* is based on the *TimeDomain* and is sort of overlaid, although drawn side by side.

The time slave *TS_O* receives the *TimeDomain* as a `GlobalTimeSlave` and also provides the *OffsetTimeDomain* as *TM51* in the role of a `GlobalTimeMaster` on the same network *FR*.

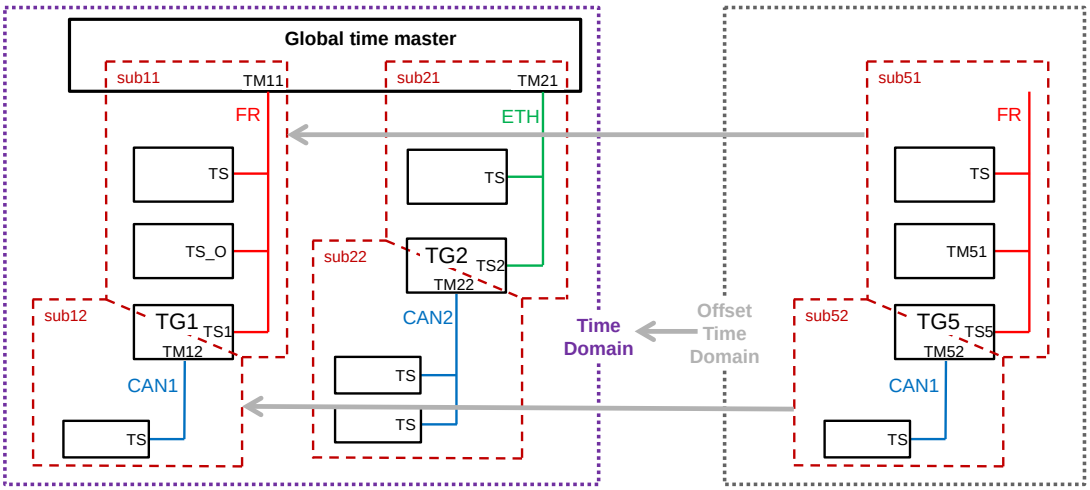

Figure 9.4: Example Offset Time Sync topology

A partial outline of the example system description structure is shown in figure 9.5.

[TPS_SYST_02115] Applicability of `GlobalTimeDomain.globalTimeDomainProperty` ⌈ The defined properties at `GlobalTimeDomain.globalTimeDomainProperty` may be defined individually per `GlobalTimeDomain`. This allows to define different value sets for each `GlobalTimeDomain` and any of the sub-domains. ⌋()

[TPS_SYST_02163] Applicability of `syncLossTimeout` ⌈ `GlobalTimeDomain.syncLossTimeout` shall be specified for `GlobalTimeDomain`s that have an aggregated slave and for all other cases this attribute is not applicable. ⌋()

Class	**GlobalTimeCorrectionProps**			
Package	M2::AUTOSARTemplates::SystemTemplate::GlobalTime			
Note	This meta-class defines the attributes for rate and offset correction.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
offsetCorrection AdaptionInterval	TimeValue	0..1	attr	Defines the interval during which the adaptive rate correction cancels out the rate- and time deviation.
offsetCorrection JumpThreshold	TimeValue	0..1	attr	Threshold for the correction method. Deviations below this value will be corrected by a linear reduction over a defined timespan. Values equal- and greater than this value will be corrected by immediately setting the correct time- and rate in form of a jump.
rateCorrection Measurement Duration	TimeValue	0..1	attr	Definition of the time span which is used to calculate the rate deviation.
rateCorrections Per Measurement Duration	PositiveInteger	0..1	attr	Defines the number of simultaneous rate measurements to determine the current rate deviation.

Table 9.6: GlobalTimeCorrectionProps

9.3 Detailed Description of Global Time Synchronization

This chapter describes how the concept of *global time synchronization* is applied to various communication bus systems.

Although the characteristics of the supported bus systems differ widely in terms of their communication behavior, the modeling is actually quite similar for all of the supported bus systems.

9.3.1 Time Synchronization over CAN

This chapter described the detailing of how the concept of *global time synchronization* is applied to the CAN bus in particular.

The implementation of *global time synchronization* on the CAN bus is modeled by means of `GlobalTimeCanMaster`, a concrete subclass of `GlobalTimeMaster`. A similar approach applies for the `GlobalTimeCanSlave`, which is derived from `GlobalTimeSlave`.

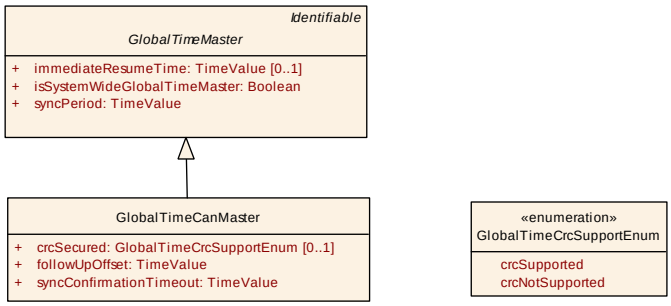

Figure 9.6: Modeling of the `GlobalTimeCanMaster`

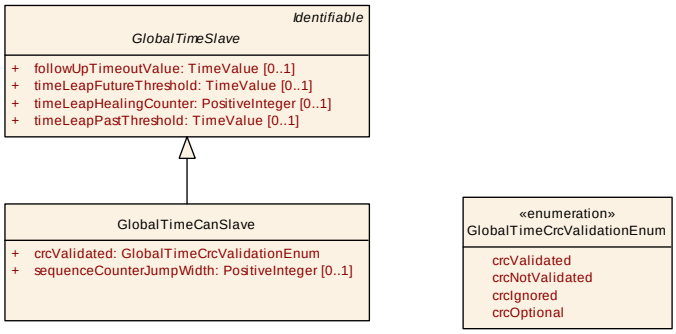

Figure 9.7: Modeling of the `GlobalTimeCanSlave`

In addition to the CAN specific Master and Slave properties CAN specific `CanGlobalTimeDomainProps` can be described.

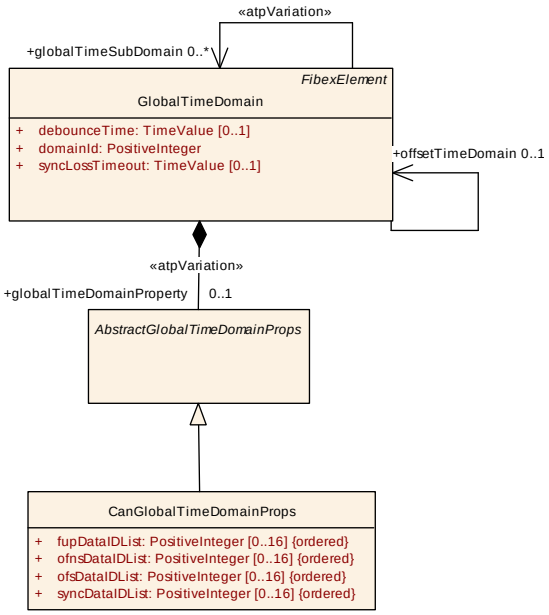

Figure 9.8: Modeling of the CAN specific `CanGlobalTimeDomainProps`

Class	**GlobalTimeCanMaster**			
Package	M2::AUTOSARTemplates::SystemTemplate::GlobalTime::CAN			
Note	This represents the specialization of the GlobalTimeMaster for the CAN communication.			
Base	*ARObject*, *GlobalTimeMaster*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
crcSecured	GlobalTimeCrcSupport Enum	0..1	attr	Definition of whether or not CRC is supported. This is only relevant for selected bus systems.
followUpOffset	TimeValue	1	attr	This represents the offset of the Follow-Up message with respect to the SYNC message
sync Confirmation Timeout	TimeValue	1	attr	This represents the value for the confirmation timeout. Unit: seconds.

Table 9.7: GlobalTimeCanMaster

9.3.2 Time Synchronization over Ethernet

This chapter described the detailing of how the concept of *global time synchronization* is applied to the Ethernet bus in particular. For details concerning the functional behavior please refer to [29].

The implementation of *global time synchronization* on the Ethernet bus is modeled by means of GlobalTimeEthMaster, a concrete subclass of GlobalTimeMaster. A similar approach applies for the GlobalTimeEthSlave, which is derived from GlobalTimeSlave.

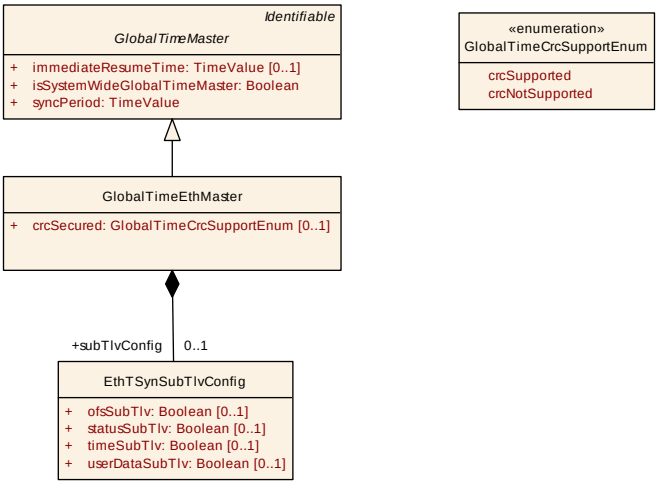

Figure 9.9: Modeling of the GlobalTimeEthMaster

Enumeration	**EthGlobalTimeMessageFormatEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::GlobalTime::ETH
Note	Specifies which message formats are available to for the Ethernet time sync protocol.
Literal	***Description***
IEEE802_1AS	Message format according to IEEE 802.1AS standard. **Tags:** atp.EnumerationValue=0 xml.name=IEEE802-1AS
IEEE802_1AS_AUTOSAR	Message format according to IEEE 802.1AS standard with AUTOSAR extensions. **Tags:** atp.EnumerationValue=1 xml.name=IEEE802-1AS-AUTOSAR

Table 9.15: EthGlobalTimeMessageFormatEnum

[constr_3312] Consistency of `vlanPriority` and `EthernetCommunicationConnector` ⌈ A `GlobalTimeEthMaster` refers to an `EthernetCommunicationConnector` in the role `communicationConnector`. If that `EthernetCommunicationConnector` is referenced by an `EthernetPhysicalChannel` in the role `commConnector` and the `EthernetPhysicalChannel` has a vLan tag defined via the `VlanConfig` then the `GlobalTimeDomain` of the `GlobalTimeEthMaster` shall aggregate `EthGlobalTimeDomainProps` in the role `globalTimeDomainProperty` and the attribute `EthGlobalTimeDomainProps.vlanPriority` shall exist. ⌋*()*

In Ethernet networks the usage of Ethernet switches introduces another layer of delay in the transportation of data. This of course also applies to the global time synchronization messages and there are means to compensate these delays available in AUTOSAR.

In order to cope with delays on global time sync of Ethernet transport technology two use-cases are supported:

- an ECU is connected to an Ethernet switch but does not manage the switch (see section 9.3.2.2)
- an ECU is connected to an Ethernet switch and also manages this switch (see section 9.3.2.3)

The `CouplingPort` is used in either use-case to describe the connection of the ECU to the Ethernet network / switch. Thus there are some attributes related to the `CouplingPort` which apply to both use-cases.

9.3.2.1 Time Synchronization and Ethernet propagation delay

The propagation delay measurement is applicable to the `CouplingPort` in scope of the global time synchronization.

The default propagation delay time (which is used if propagation delay measurement is disabled or is not yet measured) is defined at the `GlobalTimeCouplingPortProps`

with the attribute propagationDelay. The GlobalTimeCouplingPortProps are aggregated at the CouplingPortDetails in the role globalTimeProps.

Whether an ECU shall initiate a propagation delay measurement at a certain CouplingPort and on a specific GlobalTimeDomain is defined by the attribute pdelayRequestPeriod at the EthGlobalTimeManagedCouplingPort.

[TPS_SYST_03016] Applicability of EthGlobalTimeManagedCouplingPort.pdelayRequestPeriod ⌈ When EthGlobalTimeManagedCouplingPort.pdelayRequestPeriod is not defined or has the value 0 then initiation of propagation delay measurement is disabled for the CouplingPort referenced by couplingPort and the GlobalTimeDomain the EthGlobalTimeManagedCouplingPort belongs to. ⌋()

Whether an ECU shall respond to propagation delay measurement at a certain CouplingPort and on a specific GlobalTimeDomain is defined by the attribute pdelayResponseEnabled at the EthGlobalTimeManagedCouplingPort.

9.3.2.2 Time Synchronization and Ethernet connection

In case the ECU is directly connected to the Ethernet network and does not manage an Ethernet switch (of course there may be Ethernet switches used in the topology, but for this use-case these switches are not visible to the description of this ECU) the Ethernet time synchronization only needs to cope with the connection of this ECU to the Ethernet network. Considering the example in figure 9.13 this applies to the ECUs TS1, TS2, TS3, and TM which are just connected to the Ethernet switches but do not manage any Ethernet switch.

[TPS_SYST_03017] Reference to CouplingPort in the context of a GlobalTimeDomain ⌈ In case a GlobalTimeDomain is communicated via a CouplingPort and the respective ECU does not manage an Ethernet switch then the reference EthGlobalTimeManagedCouplingPort.couplingPort shall reference a CouplingPort which is aggregated by the EthernetCommunicationController in the role couplingPort. The EthernetCommunicationController itself shall be referenced by a GlobalTimeMaster or GlobalTimeEthSlave (via the CommunicationConnector) and that GlobalTimeMaster or GlobalTimeEthSlave shall be aggregated by the GlobalTimeDomain initially mentioned. ⌋()

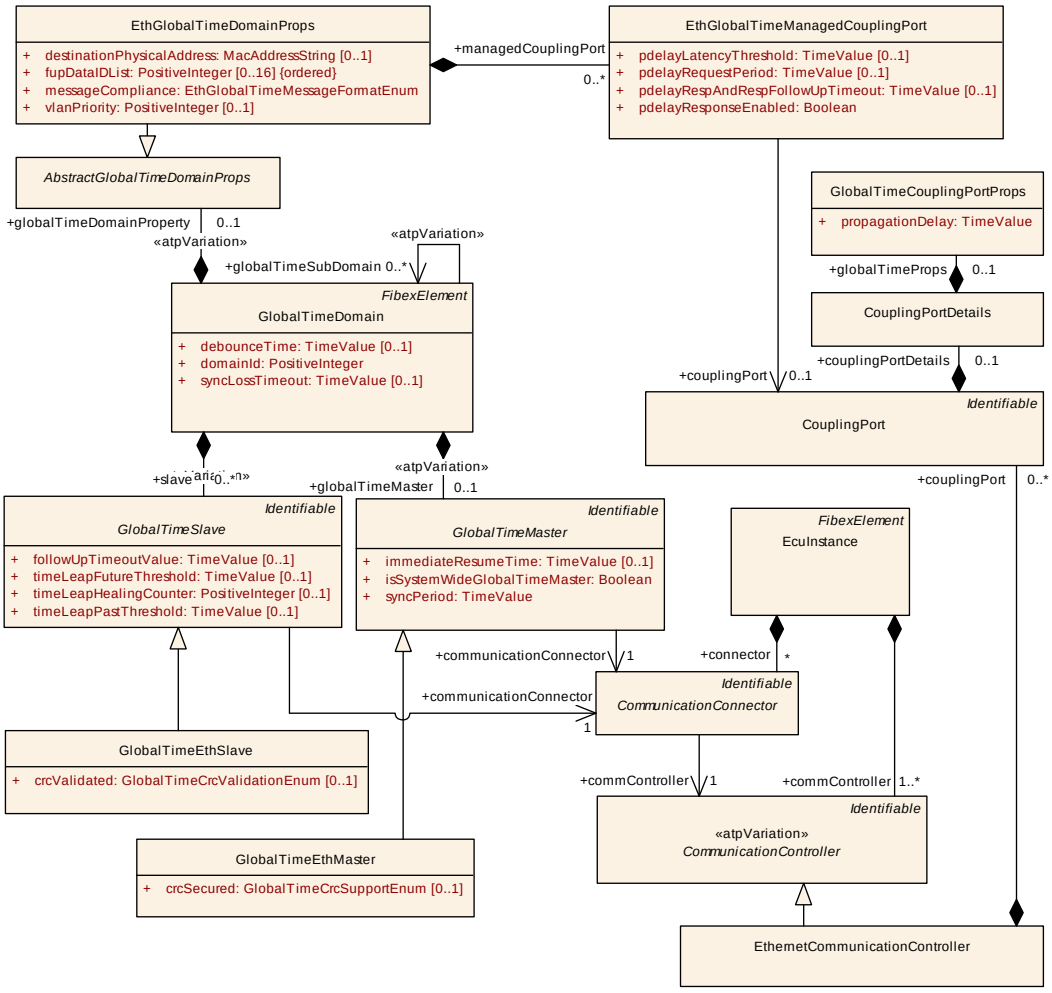

Figure 9.12: Overview of the Ethernet time sync in relation with a `CouplingPort` of an ECU

9.3.2.3 Time Synchronization and managed Ethernet switch

In case an ECU manages an Ethernet switch then that management ECU can basically be the `GlobalTimeEthMaster` or the `GlobalTimeEthSlave` located (see also figure 9.13). For the description of the time delay compensation on System Template level this does not matter.

It is essential to configure all possible time synchronization communication paths between the involved entities.

In case of `ECU A` in figure 9.13 the `GlobalTimeEthMaster` shall

- refer to the `CouplingPort 0` since this is where
  - all time sync messages will be sent out by the `GlobalTimeEthMaster`
  - all adjusted follow up messages will be sent out by the `GlobalTimeEthMaster`

- refer to the CouplingPort 1 because this is where the Ethernet switch is connected to the management ECU A
- refer to the CouplingPorts 2, 3, and 4 since this is where the time sync messages will be forwarded by the switch
- not refer to the CouplingPort 5 because this one is not involved in that GlobalTimeDomains communication

In case of ECU B in figure 9.13 the GlobalTimeEthSlave shall

- refer to the CouplingPort 0 since this is where
  - the time sync messages will be received by the GlobalTimeEthSlave
  - all adjusted follow up messages will be sent out by the GlobalTimeEthSlave
- refer to the CouplingPort 1 because this is where the Ethernet switch is connected to the management ECU B
- refer to the CouplingPort 3 because this is where the time sync messages will be received from the GlobalTimeEthMaster on ECU TM
- refer to the CouplingPorts 2 and 4 since this is where the time sync messages will be forwarded by the switch
- not refer to the CouplingPort 5 because this one is not involved in that GlobalTimeDomains communication

Please note that the non-involvement of the CouplingPort 5 is used for illustration purposes. It would also be possible to involve CouplingPort 5 in that GlobalTimeDomain definition although currently there is no ECU as an GlobalTimeEthSlave defined. In that case the CouplingPort 5 is prepared to be connected to an ECU with an GlobalTimeEthSlave later.

9.3.3 Time Synchronization over FlexRay

This chapter described the detailing of how the concept of *global time synchronization* is applied to the Flexray bus in particular.

The implementation of *global time synchronization* on the Flexray bus is modeled by means of `GlobalTimeFrMaster`, a concrete subclass of `GlobalTimeMaster`. A similar approach applies for the `GlobalTimeFrSlave`, which is derived from `GlobalTimeSlave`.

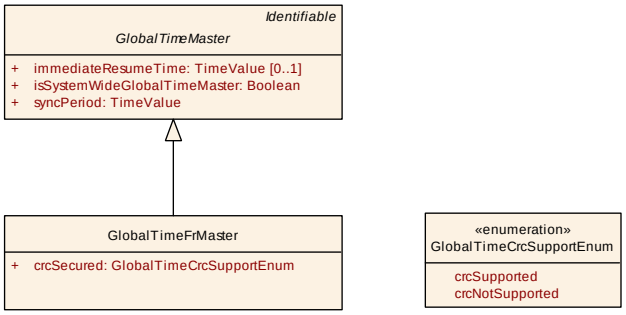

Figure 9.15: Modeling of the `GlobalTimeFrMaster`

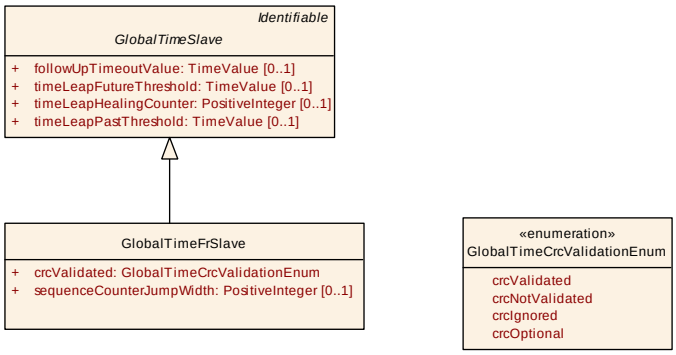

Figure 9.16: Modeling of the `GlobalTimeFrSlave`

In addition to the FlexRay specific Master and Slave properties FlexRay specific `FrGlobalTimeDomainProps` can be described.

9.3.4 Time Synchronization by user defined Timebase Provider

This chapter describes the details of how the concept of global time synchronization is applied to user defined Timebase Providers. The implementation of global time synchronization by user defined timebase providers is modeled by means of `UserDefinedGlobalTimeMaster`, a concrete subclass of `GlobalTimeMaster`. A similar approach applies for the `UserDefinedGlobalTimeSlave`, which is derived from `GlobalTimeSlave`.

9.3.5 Time Synchronization Common Properties

The purpose of this chapter is basically to provide the class tables of meta-classes taken to implement configuration properties in the context of *global time synchronization*. The specifics about how these meta-classes are used is explained in the bus-specific chapters (i.e. chapters 9.3.1, 9.3.2, and 9.3.3).

Enumeration	**GlobalTimeCrcSupportEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::GlobalTime
Note	This enumeration is used to define whether and how CRC on the TX side shall be utilized.
Literal	***Description***
crcNotSupported	This indicates that CRC is not supported **Tags:** atp.EnumerationValue=0
crcSupported	This indicates that CRC is supported **Tags:** atp.EnumerationValue=1

Table 9.23: GlobalTimeCrcSupportEnum

Enumeration	**GlobalTimeCrcValidationEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::GlobalTime
Note	This enumeration provides values for the evaluation of the CRC
Literal	***Description***
crcIgnored	The CRC is supposed to be ignored **Tags:** atp.EnumerationValue=0
crcNotValidated	The CRC is not supposed to be present. If CRC is present the message is ignored. **Tags:** atp.EnumerationValue=1
crcOptional	Either the CRC is present and then shall be validated or the CRC is not present and no CRC check is done. **Tags:** atp.EnumerationValue=3
crcValidated	This CRC is supposed to be validated. **Tags:** atp.EnumerationValue=2

10 Usage of the System Template

As introduced in [TPS_SYST_01003] the System Template is used to describe a System with category SYSTEM_CONSTRAINT_DESCRIPTION, a System with category ABSTRACT_SYSTEM_DESCRIPTION and a System with category SYSTEM_DESCRIPTION. System with category SYSTEM_EXTRACT is described in more detail in chapter 11. System with category ECU_EXTRACT is described in more detail in chapter 12.

Certain elements of the System Template may have a different meaning at the different stages of the AUTOSAR Methodology. The following sections describe the differences.

10.1 System Constraint Description

Meta-classes, Chapters	Usage to describe the System Contraints	Usage to describe the System Configuration
CommunicationCluster, EcuInstance (chapter 3)	The Topology is completely described in the System Constraint Description.	The Topology description will be unchanged copied to the System Configuration description. The Topology may only be changed during another iteration development step of the whole system.
FrameTriggering, PduTriggering, ISignalTriggering (chapter 6)	The System with category SYSTEM_CONSTRAINT_DESCRIPTION describes all FrameTriggerings that are predefined on all CommunicationClusters of a vehicle. The predefinition of the communication matrix forces the system generator to use the given FrameTriggerings. Constraints for the system generator arise here e.g. from the used bus bandwidth, used identifiers as well as from the timing and at which position in a Frame a Pdu is transmitted on a PhysicalChannel on a CommunicationCluster. Such a manual definition of the communication can be made for any reason where it is necessary to restrict the system generator. One example is the usage of legacy EcuInstances in an AUTOSAR System. The FrameTriggerings that are transmitted or received by these legacy EcuInstances are constraints for the system generator because they cannot be changed, if the compatibility is supposed to be achieved without any changes at the legacy EcuInstances.	In contrary to the System with category SYSTEM_CONSTRAINT_DESCRIPTION the final System with category SYSTEM_DESCRIPTION contains all FrameTriggerings, PduTriggerings, ISignalTriggerings that will be sent by any EcuInstance in the car. No matter if they were predefined (system constraint) or if they were generated by the system generator. The available information, in addition to the information, which is inserted by the AUTOSAR Ecu configuration generator step, will be used as input to configure the Basic SW for the communication.
Gateway (chapter 8)	The System with category SYSTEM_CONSTRAINT_DESCRIPTION describes all Gateways in the system including their IPduMappings and ISignalMappings that are predefined. The reasons for such predefinitions are quite the same as for the predefinitions of the FrameTriggerings.	In contrary to the System with category SYSTEM_CONSTRAINT_DESCRIPTION the final System with category SYSTEM_DESCRIPTION describes all Gateways with all their IPduMappings and ISignalMappings. No matter if they were predefined (System Constraint) or if they were generated by the System Generator.

SwcToEcuMapping (subsection 5.1.1)	The mapping of Software Components to EcuInstances may be predefined. The predefinition will force the system generator to use the specified mapping. Thus, with the SwcToEcuMapping element it is possible to describe that one or more Software Components must be mapped to a specific EcuInstance.	In a complete System with category SYSTEM_DESCRIPTION, all Software Components are mapped to EcuInstances.
MappingConstraint (subsection 5.1.4) ComponentClustering (subsubsection 5.1.4.1) ComponentSeparation (subsubsection 5.1.4.2)	There may be system constraints that limit the system generators freedom to map Software Components to arbitrary EcuInstances. These system constraints can be necessary e.g. for optimization and safety reasons to make additional guidelines for the System Generator.	After the mapping has been completed, the System with category SYSTEM_DESCRIPTION will contain mapping descriptions for all elements, and the mapping constraints are obsolete. But that does not mean that mapping constraints have to be deleted after the system generation step. By deleting the mapping constraints you would lose the information why a mapping of a Software Component to an EcuInstance is chosen.
DataMapping (section 5.2) SenderReceiverToSignalMapping (subsubsection 5.2.1.1) SenderReceiverToSignalGroupMapping (subsubsection 5.2.1.2) ClientServerToSignalMapping (subsubsection 5.2.1.3)	The System with category SYSTEM_CONSTRAINT_DESCRIPTION may describe the predefined mapping of Software Components to certain EcuInstances (see chapter 5.1.1). Only if such a mapping exists, it is reasonable to define the DataMapping of the data exchanged between the Software Components.	In contrary to the System with category SYSTEM_CONSTRAINT_DESCRIPTION the final System with category SYSTEM_DESCRIPTION shall contain all DataMapping definitions. No matter if they were predefined (system constraint) or if they were generated by the System-Generator.

SignalPathConstraint (subsection 5.2.2) CommonSignalPath (subsubsection 5.2.2.1) ForbiddenSignalPath (subsubsection 5.2.2.2) PermissibleSignalPath (subsubsection 5.2.2.3) SeparateSignalPath (subsubsection 5.2.2.4)	It can be necessary e.g. for optimization and safety reasons to make additional guidelines for the System Generator, which specific way a VariableDataPrototype or ClientServerOperation should take in the network without defining in which Pdu and Frame it is transmitted.	SignalPathConstraints are not an obligatory part of the System with category SYSTEM_DESCRIPTION. In the final System with category SYSTEM_DESCRIPTION every ISignal is assigned to a Pdu and every Pdu is assigned to a Frame. Thereby the paths of VariableDataPrototypes or ClientServerOperations on the network are implicitly described. But that does not mean that the SignalPathConstraints have to be deleted after the system generation step. By deleting the SignalPathConstraints you would lose the information why you have chosen e.g. a specific mapping of an ISignal into a Pdu. If you extend or change the system at a later stage the missing SignalPathConstraints could lead to not wanted signal mappings by the System Generator.

Table 10.1: Usage of the System Template

10.2 Abstract System Description

[TPS_SYST_01134] Abstract System Description ⌈ Due to the fact that the functional view on vehicle system can differ from the actual technical definition of the software-architectures of individual EcuInstances the System Template optionally allows to define a System with category ABSTRACT_SYSTEM_DESCRIPTION. ⌋*()*

[TPS_SYST_01135] Refactoring of an Abstract System Description into a project specific technical view of the software architecture ⌈ The System with category ABSTRACT_SYSTEM_DESCRIPTION concentrates on the functional aspects of the system design and provides an own abstract VFB. During the further activities this abstract view shall be refactored into a more project specific technical view of the software architecture.

It is important to note that during the refactoring of the System with category ABSTRACT_SYSTEM_DESCRIPTION into the System with category SYSTEM_DESCRIPTION no restrictions to the allowed actions apply (This is in contrast to the activity of deriving the System with category SYSTEM_EXTRACT from the System with category SYSTEM_DESCRIPTION, see [TPS_SYST_01123]. ⌋*()*

[TPS_SYST_01136] ViewMapSet and ViewMap are used to trace the transformations between different models ⌈ The ViewMapSet and ViewMap elements are used

to trace the transformations between different models within the AUTOSAR environment. ⌋()

These classes are described in more detail in the Generic Structure Template [2].

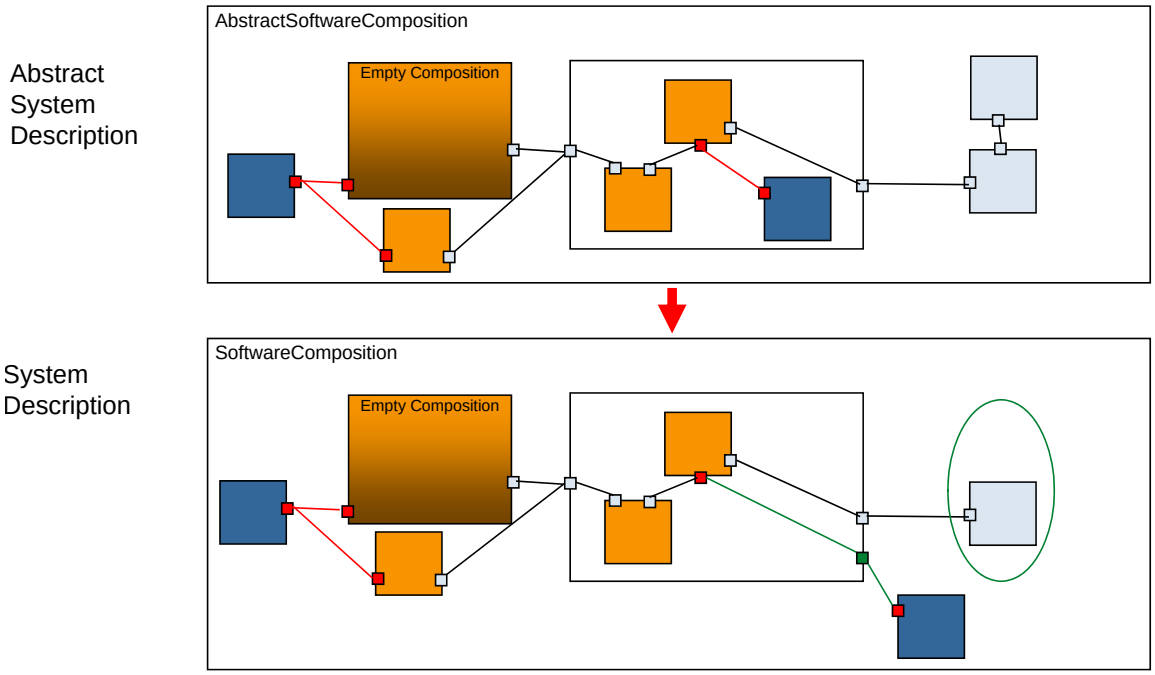

Figure 10.1: Abstract System Description refactoring to a System Description

11 System Extract of the System Configuration Description

This chapter describes contents and creation of the AUTOSAR work product System with category SYSTEM_EXTRACT, based on Meta Model elements contained in the System Template and Software Component Template.

The System with category SYSTEM_EXTRACT is introduced to allow a collaboration between an OEM and a Supplier.[1] The OEM/Supplier Collaboration scenario is described in more detail in chapter 11.1.

The OEM is often only interested in the required functionality and the integration of the functionality into the System. Thus the OEM provides a basis for designing a subsystem, which is developed by the supplier. One difference to the System with category ECU_EXTRACT is that the System with category SYSTEM_EXTRACT is not fully decomposed and still needs to be refined before it forms the basis for the ECU configuration. Another difference is that a System with category SYSTEM_EXTRACT is not fixed to an EcuInstance.

[TPS_SYST_01123] System Extract may cover one or many EcuInstances ⌈ The System with category SYSTEM_EXTRACT may cover one or many EcuInstances. ⌋*()*

The System with category SYSTEM_EXTRACT is using the same meta model elements as the System with category SYSTEM_DESCRIPTION. The System with category SYSTEM_DESCRIPTION is a special case of a System with category SYSTEM_EXTRACT. From the technical point of view there is no difference. The distinction is only made for the sake of Methodology [4].

In the System with category SYSTEM_EXTRACT the OEM strips all information from the System with category SYSTEM_DESCRIPTION that is not needed for the definition of the subsystem. There is one exception to this simple ”remove” rule: the communication mapping may need to be extended, which will be described in more detail in chapter 11.2.

[TPS_SYST_03000] Co-existing System with category SYSTEM_DESCRIPTION and System with category SYSTEM_EXTRACT ⌈ In order to be able to handle one System with category SYSTEM_DESCRIPTION and one or several Systems with category SYSTEM_EXTRACT within the same workspace it shall be possible to provide different full qualified names to the elements of System with category SYSTEM_EXTRACT. ⌋*(RS_SYST_00045)*

When different Systems with various categories co-exist it is possible to define ViewMap and ViewMapSet between their elements according to [TPS_SYST_01136].

[1] Collaboration scenarios between different departments of an OEM are also supported by the System with category SYSTEM_EXTRACT. For the sake of simplicity such scenarios are not addressed here.

In contrast to the System with category ECU_EXTRACT the System with category SYSTEM_EXTRACT may contain CompositionSwComponentTypes. Empty CompositionSwComponentTypes in the System with category SYSTEM_EXTRACT represent subsystems that need to be refined by a Supplier. Figure 11.1 shows an example where a System with category SYSTEM_DESCRIPTION is stripped down to a subsystem.

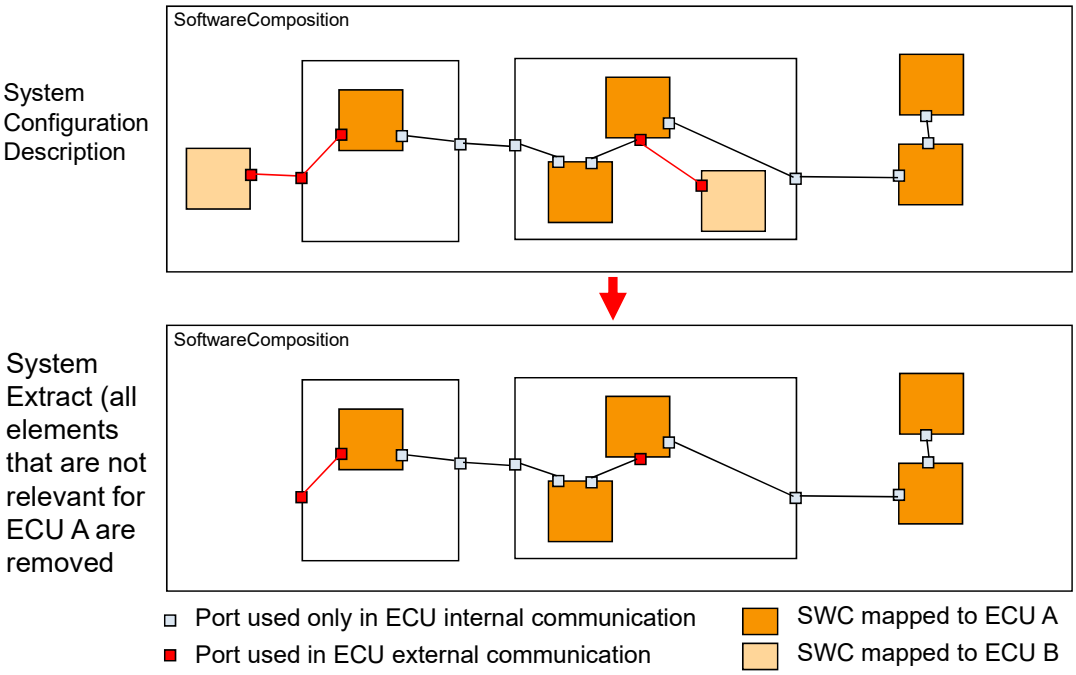

Figure 11.1: System Extract creation: irrelevant elements are removed from the System Description

11.1 OEM/Supplier Collaboration Scenario

In an important collaboration scenario, an OEM commissions a supplier to provide implementations of one or more functionalities to be integrated into an AUTOSAR system in the form of Application Components. The OEM is primarily interested in the required functionality and the interfaces defining the integration of the Software Component into the System VFB rather than the internal structure of such a component. On the other hand, the supplier, delivering both the component implementation in combination with the ECU it is destined to run on, may claim the internal structure of such a higher-level component contains substantial intellectual property, and hence may not want to disclose its internal works to the OEM.

Effectively, the use case can be described in the following manner:

- The OEM generates a System with category SYSTEM_EXTRACT from the System with category SYSTEM_DESCRIPTION. From the System with category SYSTEM_DESCRIPTION all elements are removed that are not relevant for the design of the subsystem, such as SW components or topology elements.

- The OEM can deliver a sub-structure of Software Compositions or even Atomic Software Components in the System with category SYSTEM_EXTRACT. But the System with category SYSTEM_EXTRACT can also contain empty Software Compositions. The OEM shall have the possibility to define only the outer shell of a Software Composition that is to implement a certain functionality. Such an empty CompositionSwComponentType does contain all the provided and required ports with the included ReceiverComSpecs and SenderComSpecs describing the requested component's outside communication needs. But it does not need to contain SwComponentPrototypes or SwConnectors at this stage.
- Such empty components are added to a System's VFB, the outside ports are connected with other components in the VFB. However, at this stage the inner structure of such CompositionSwComponentType can still be left empty.
- The System with category SYSTEM_EXTRACT contains the mapping of components to the target EcuInstances, including the empty compositions. Signal mappings affecting the empty compositions are targeting the CompositionSwComponentType's ports.
- The OEM delivers the System with category SYSTEM_EXTRACT to the Supplier.
- The Supplier adds the substructure to the empty CompositionSwComponentTypes by adding SwComponentPrototypes and SwConnectors. This once more leads to a hierarchical VFB, effectively the Supplier creates a local System Description for his subsystem.
- The Supplier adjusts the Signal mappings to the actual ports of the inner AtomicSwComponentType prototype.
- The Supplier generates the System with category ECU_EXTRACT from his ECU-local system description. The resulting System with category ECU_EXTRACT does not include prototypes of type CompositionSwComponentType any longer.
- Based on this System with category ECU_EXTRACT the actual ECU configuration is done.

When the supplier receives the System with category SYSTEM_EXTRACT from the OEM he has basically two choices how to proceed:

1. The Supplier takes the System with category SYSTEM_EXTRACT of the OEM as the structural basis for the ECU development. In this case the following steps may follow:
   - The Supplier adds the substructure to the empty CompositionSwComponentTypes by adding SwComponentPrototypes and SwConnectors. This once more leads to a hierarchical VFB, effectively the Supplier creates a local System Description for his subsystem (System with category ECU_SYSTEM_DESCRIPTION).

- The Supplier adjusts the Signal mappings to the actual ports of the inner AtomicSwComponentType prototype.

2. The Supplier creates an own structure to base the ECU development on System with category ECU_SYSTEM_DESCRIPTION and perform a view mapping between the OEM's System with category SYSTEM_EXTRACT and the System with category ECU_SYSTEM_DESCRIPTION. In this case the following steps may follow:
   - The Supplier develops an own structure how the ECU shall be designed but needs to respect the required outer boundary of the OEM's required communication behavior (ReceiverComSpecs and SenderComSpecs).
   - The Supplier adjusts the Signal mappings to the actual ports of the inner AtomicSwComponentType prototype.

When the design of the System with category ECU_SYSTEM_DESCRIPTION is complete the following steps follow:

- The Supplier generates the System with category ECU_EXTRACT from his System with category ECU_SYSTEM_DESCRIPTION. The resulting System with category ECU_EXTRACT does not include prototypes of type CompositionSwComponentType any longer.
- Based on this System with category ECU_EXTRACT the actual ECU configuration is done.

11.2 Data Mapping in the System Extract

As mentioned before, there is a slight complication to the simple "remove" rule. This can be shown best with an example.

Example: Assume a simple topology with two EcuInstances A and B and three Pdus X (sent from A to B), Y (sent from B to A) and Z (sent from B to A) as shown in Figure 11.2.

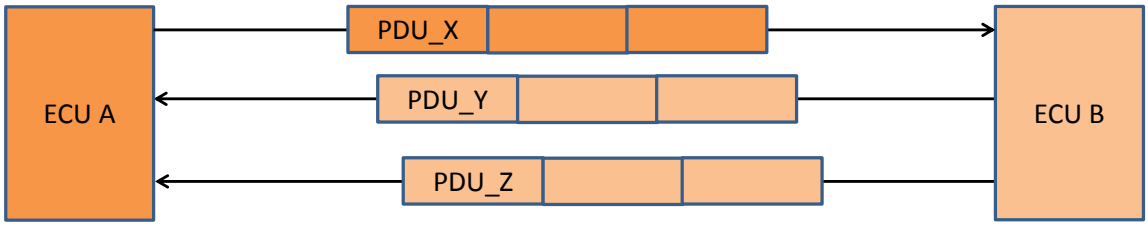

Figure 11.2: Example topology with two EcuInstances and three Pdus exchanged between them

Furthermore assume a composition of software-components realized by the meta-class CompositionSwComponentType as shown in Figure 11.3. It consists of six SwComponentPrototypes 'A1' to 'A3' (aggregated in composition 'SwCompA'),

'B1' / 'B2' (aggregated in composition 'SWCompB'), 'C1' (aggregated in composition 'SWCompAplusBplusC') and an empty composition 'SWCompC'.

The overall composition 'SWCompAplusBplusC' aggregates 'SwCompA', 'SWCompB', the empty 'SWCompC' and the SwComponentPrototype 'C1'.

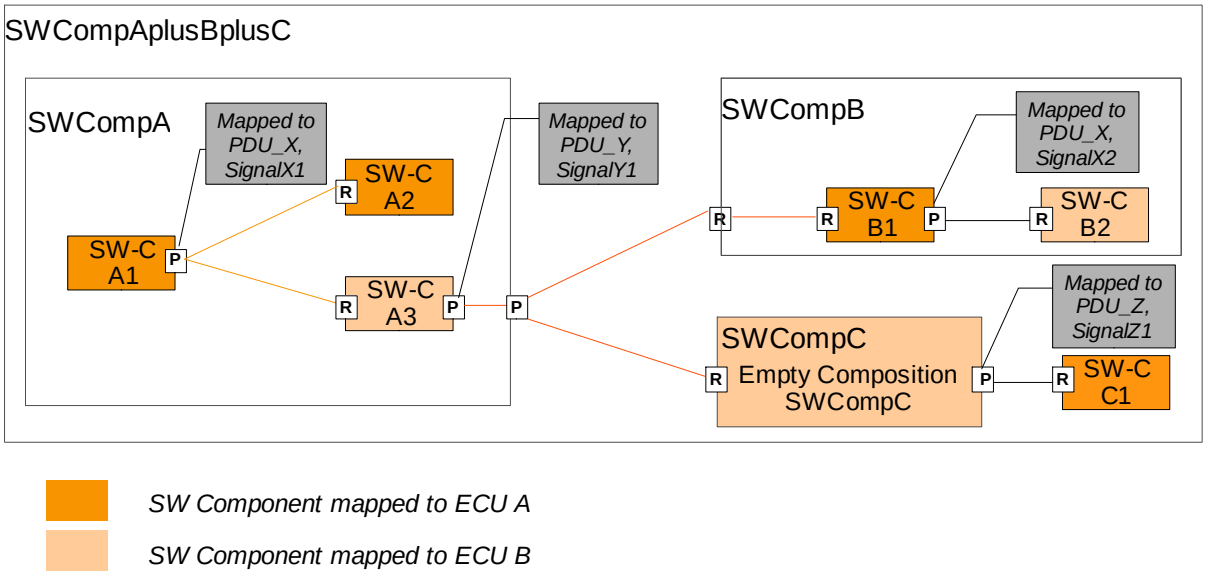

Figure 11.3: Example SW composition with mapping information

The atomic SwComponentPrototypes 'A1', 'A2', 'B1' and 'C1' are mapped to 'ECU A'. The atomic SwComponentPrototypes 'A3', 'B2' and the empty composition 'SWCompC' are mapped to 'ECU B'. The data sent from

- 'A1' to 'A3' is mapped to 'PDU_X', 'SignalX1',
- 'B1' to 'B2' is mapped to 'PDU_X', 'SignalX2' and
- 'A3' to 'B1' and 'A3' to 'SWCompC' is mapped to 'PDU_Y', 'SignalY1'
- 'SWCompC' to 'C1' is mapped to 'PDU_Z', 'SignalZ1'

As usual, the data mapping rules refer to the VariableDataPrototype in the PPortPrototype of the sending SW component. Note that DataMappings can be performed on compositions and on atomic SwComponentPrototypes as described in chapter 5.2.1. [2]

Figure 11.4 shows how the System extract for ECU A and for ECU B of this SW composition would look like: Only those elements are included that are relevant for the subsystem.

[2]Data mapping is allowed on empty compositions and on compositions that contain atomic SwComponentPrototypes.

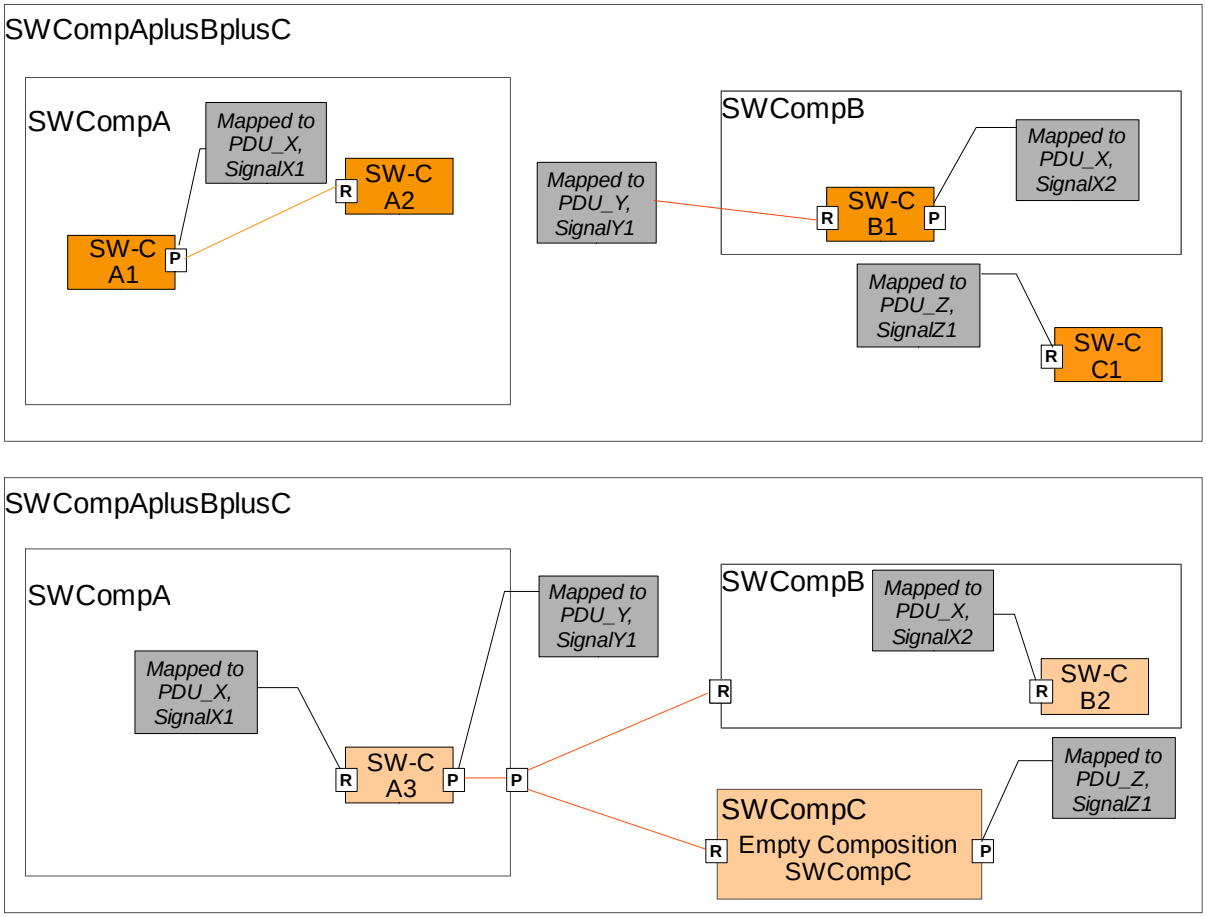

Figure 11.4: Example System extract for ECU A (upper figure) and ECU B (lower figure) of above introduced composition

In both figures all `SwComponentPrototype`s and compositions that are mapped onto the `EcuInstance` are included. The `SwConnector` between these `SwComponentPrototype`s are also included. Furthermore, the relevant topology information and communication matrix have to be included, but they are out of scope of this example.

`SwConnector`s that were used to connect to SW components that are not included in the System Extract are not included. Instead, the mapping to an `ISignal` in a `Pdu` is used to identify the source/destination of that data.

The problem that new mapping rules have to be added arises for example in the System Extract for ‘ECU A’ with the mapping to ‘PDU Y’, ‘SignalY1’: Since SW component ‘A3’, which was referenced in the original mapping, is no longer included, the data mapping needs a new data element in a port to reference to. In the example, it is the required port of ‘B1’, so that the Supplier has the information that B1 receives the data via ‘PDU Y’.

11.3 SW component inclusion and top level data mapping

In section 11.2 the approach is to provide the DataMapping on the PortPrototypes of the SwComponentPrototypes which are mapped to one EcuInstance. Since the granularity of mapping SwComponentPrototypes to EcuInstances is possible for individual atomic SwComponentPrototypes this approach may result in many DataMappings from different software component PortPrototypes to the same SystemSignal (depending where in the hierarchical structure they are located).

An alternative approach is to provide the complete communication information of the whole System Extract on the RootSwCompositionPrototype and perform the DataMapping on the PortPrototypes of the RootSwCompositionPrototype only. This approach is illustrated in figure 11.5.

PortPrototypes are created on the RootSwCompositionPrototype representing the external communication of this EcuInstance. DelegationSwConnectors are created to establish the communication of the external software components with the software components inside the local EcuInstance.

In figure 11.5 the software components X, Y and Z are mapped to remote EcuInstances. Their communication needs are collected in PortPrototypes on the RootSwCompositionPrototype and the communication is delegated via SwConnectors inside the hierarchical software component structure.

In this example the approach for X and Y is trivial since there are only some DelegationSwConnectors required to connect the PortPrototypes of the RootSwCompositionPrototype with the PortPrototypes of the respective SwComponentPrototypes.

But for SwComponentPrototype Z the approach needs to be extended, because the communication on system level is designed to happen inside the composition V. In this case the communication needs to be delegated out of the composition (creation of DelegationSwConnectors inside the composition V) to be visible in the RootSwCompositionPrototype. Then again the approach of connection to the RootSwCompositionPrototype can be applied.

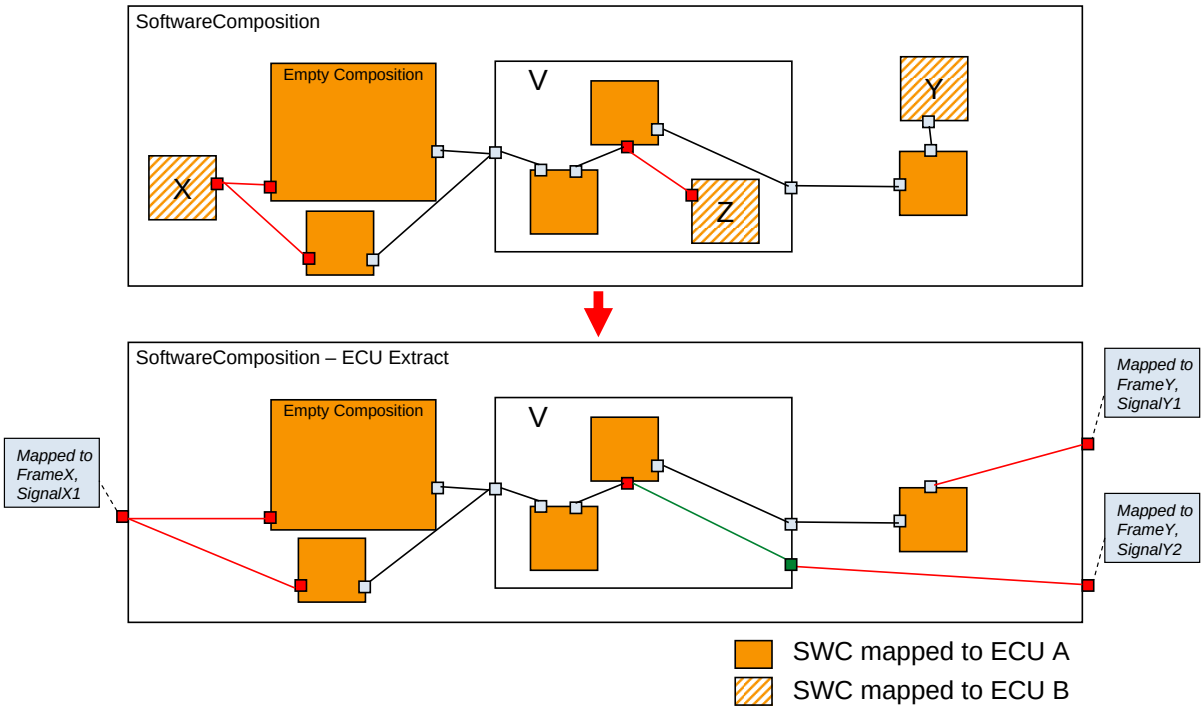

Figure 11.5: Example with software components mapped to two ECUs

11.4 Port-Interface Mapping in the System Extract

A similar problem as the one with DataMappings described in chapter 11.2 and chapter 11.3 exists for the PortInterfaceMappings as well. To illustrate this Figure 11.6 depicts an example with software components mapped to two different ECUs.

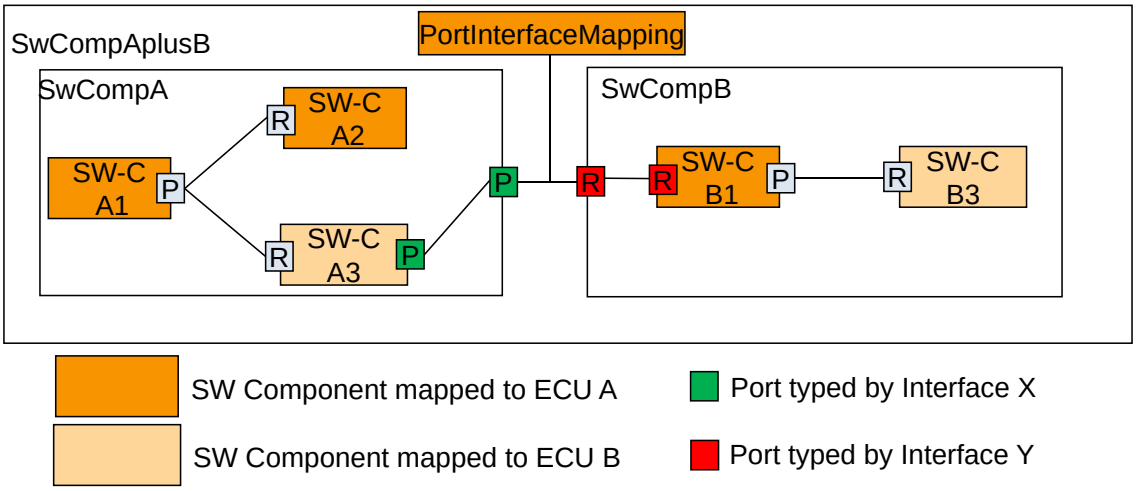

Figure 11.6: Example with software components mapped to two ECUs

Hereby the PPortPrototype typed with PortInterface *X* of *SWCompA* is connected with the RPortPrototype typed with PortInterface *Y* of *SWCompB* by means of an AssemblySwConnector. This AssemblySwConnector has an attached PortInterfaceMapping to perform a mapping between the elements (see chapter 4.3.1.5 of [5]) of the two otherwise incompatible PortInterfaces *X* and *Y*.

A System Extract for ECU *A* is now created by applying the approach described in chapter 11.3, i.e., by providing the complete communication information of the whole System Extract on the RootSwCompositionPrototype and performing the DataMapping on the PortPrototypes of the RootSwCompositionPrototype only.

When doing this however the following two additional things have to be considered:

- The PortInterfaceMapping shall be preserved during this process
- The information about the PortInterfaces referenced by the PortPrototypes connected by the AssemblySwConnector referencing the PortInterfaceMapping shall be preserved during this process

Just as in the approach described in chapter 11.3 PortPrototypes are created on the RootSwCompositionPrototype representing the external communication of this EcuInstance. The RPortPrototypes however are not typed by the PortInterface *X* of the RPortPrototypes of the SwComponentPrototypes inside

ECU A (*SWCompB* in the example) but by the PortInterface *Y* of the PPortPrototype which was connected to the RPortPrototypes by means of the AssemblySwConnector. Afterwards the just like in the approach described in chapter 11.3 DelegationSwConnectors are created to connect the PortPrototypes of the RootSwCompositionPrototype with the corresponding RPortPrototypes of the SwComponentPrototypes inside *ECU A*.

This however yields a DelegationSwConnector between RPortPrototype typed by PortInterface *Y* (which has been created on the RootSwCompositionPrototype) and the RPortPrototype typed by PortInterface *X* of *SWCompB*. In order to perform a mapping between the elements of these otherwise incompatible interfaces, the PortInterfaceMapping which has initially been referred to by the AssemblySwConnector needs to be referenced by the DelegationSwConnector.

The final result of this process in depicted in Figure 11.7

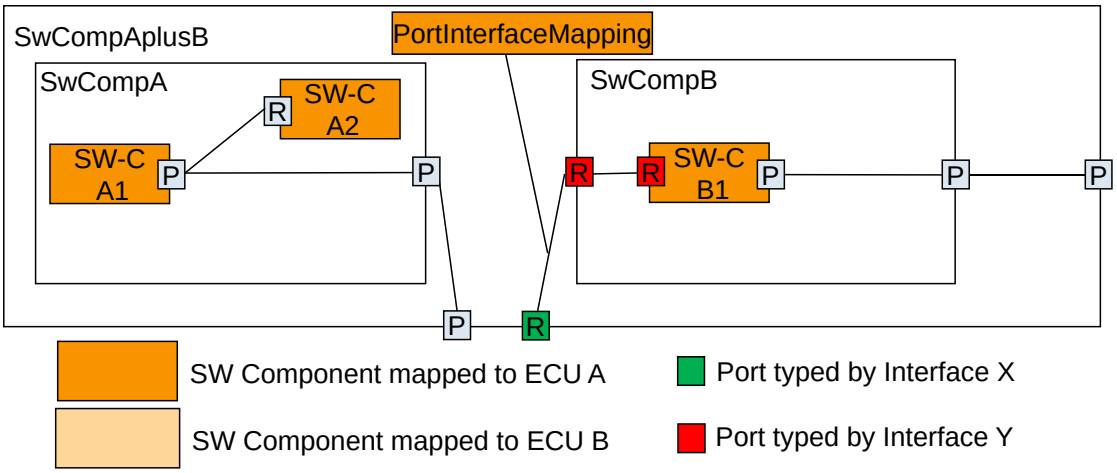

Figure 11.7: Example with software components mapped to two ECUs

12 ECU Extract of the System Configuration Description

This chapter describes contents and creation of the AUTOSAR System with category ECU_EXTRACT, based on Meta Model elements contained in the System Template and Software Component Template.

The System with category ECU_EXTRACT represents the view of one specific EcuInstance onto the overall System with category SYSTEM_DESCRIPTION. The System with category ECU_EXTRACT forms the basis for configuring that particular EcuInstance in focus.

For instance, RTE configuration fundamentally depends on the number and types of SwComponentPrototypes deployed onto the EcuInstance; Services are configured according to those Software Components' ServiceNeeds; the COM-stack BSW modules will be configured considering the EcuInstance's participation in the overall System Network Topology and Communication.

[TPS_SYST_01139] Ecu Extract covers exactly one EcuInstance ⌈ The System with category ECU_EXTRACT shall only contain the subset of information derived from the System with category SYSTEM_DESCRIPTION or System with category SYSTEM_EXTRACT relevant for configuring the targeted EcuInstance. ⌋*()*

In order to keep ECU configuration focused and manageable despite the complexity of a full System Configuration, all other information shall be stripped from the System with category SYSTEM_DESCRIPTION or from the System with category SYSTEM_EXTRACT when creating the System with category ECU_EXTRACT.

AUTOSAR VFB Descriptions naturally form hierarchies of CompositionSwComponentTypes. Consequently, in the System Configuration the SWC-related information for different EcuInstances is not separated but in general is intermingled. In contrast, for the task of ECU configuration (RTE configuration, Service Configuration, Measurement and Calibration) a hierarchically "flat view" on the SwComponentPrototypes running on the EcuInstances is preferable over a hierarchical view, which is more favored by application-software development. Thus, deriving an System with category ECU_EXTRACT actually is a model transformation, following a set of rules described in the following sections.

As System- and ECU development typically happens in iterations, the use case of repeatedly extracting the information from an incrementally changing System Configuration needs to be considered. In particular, it must be possible to detect changes between consecutively generated ECU extracts in order to selectively update the existing ECU configuration (12.5).

AUTOSAR supports the definition and consequently the handling of Variability in the System Configuration. According to the specified binding time associated with a particular VariationPoint, typically some of these variants will already be resolved at the time of a System with category ECU_EXTRACT. If however the binding time occurs in a later stage of the AUTOSAR methodology, i.e. during ECU Configuration or later, the variability needs to be carried over to the System with category ECU_EXTRACT. This also holds true for Variation points that ultimately are resolved at system configuration time but affect post-build configuration parameters. (12.6)

The System with category ECU_EXTRACT logically forms one entity. Therefore, for ease of readability the rest of the chapter assumes just one file, "the XML file". However, it explicitly is allowed to split the System with category ECU_EXTRACT over several files.

12.1 Topology

Only those Topology elements relevant for the EcuInstance in scope are taken over from the System with category SYSTEM_DESCRIPTION into the System with category ECU_EXTRACT.

- The System with category ECU_EXTRACT is always associated with exactly one EcuInstance. Therefore exactly one EcuInstance is included along with all classes included in EcuInstance by composition: CommunicationControllers and CommunicationConnectors with all their CommConnectorPorts.
- A CommunicationCluster is included along with all its PhysicalChannels if at least one PhysicalChannel is used by the EcuInstance. In other words, if at least one of the included CommunicationConnectors is referenced by any of a CommunicationCluster's PhysicalChannels, the whole CommunicationCluster and all its PhysicalChannels are included.
- From the used PhysicalChannels, only those FrameTriggerings, PduTriggerings, ISignalTriggerings shall be included that are used by the EcuInstance, e.g. they are associated with a FramePort, IPduPort, ISignalPort belonging to one of the EcuInstance's CommunicationConnectors. *Note:* Including just a subset of a PhysicalChannel's FrameTriggerings, PduTriggerings, ISignalTriggerings is possible without changing the PhysicalChannel itself because of the ≪splitable≫ stereotype applied on the PhysicalChannel / FrameTriggering, PduTriggering, ISignalTriggering composition.

As the Topology elements are not modified when taken over into the System with category ECU_EXTRACT, their package structure and short names are not touched (see section 12.4.1).

12.2 Top-level Software Composition

In the System with category SYSTEM_DESCRIPTION the application software composition is hierarchic by nature as described in chapter 4. When mapping SwComponentPrototypes onto concrete EcuInstances using the SwcToEcuMapping class (section 5.1.1), either SwComponentPrototypes of type AtomicSwComponentType, or SwComponentPrototypes of type CompositionSwComponentType are deployed onto one specified EcuInstance.

In order to obtain this ECU-centric view, the hierarchical structure of the System with category SYSTEM_DESCRIPTION needs to be transformed into a 1-layer representation, where one distinguished CompositionSwComponentType hosts all SwComponentPrototypes of type AtomicSwComponentType to run on the EcuInstance. In the System with category ECU_EXTRACT the resulting RootSwCompositionPrototype is a flat structure where the included SwComponentPrototypes become

real SWC instances, reflecting the actual resource needs on the targeted EcuInstance.

[TPS_SYST_01140] Ecu Extract contains only SwComponentPrototypes of type AtomicSwComponentType in the RootSwCompositionPrototype ⌈ The System with category ECU_EXTRACT only contains SwComponentPrototypes of type AtomicSwComponentType in the RootSwCompositionPrototype which are effectively mapped onto the EcuInstance in focus. ⌋()

The transformation from hierarchical to flat Software Component structure includes a number of steps, to be performed per ECU. The list below outlining this process assumes that the extraction is done for the first time; if an System with category ECU_EXTRACT already exists from a previous development cycle, the extract shall merely be updated instead of created; for more details on iterative development see section 12.5.

- Create the one CompositionSwComponentType which will represent the ECU's SW subsystem (in further steps referred to as ECU flat view)
- To this ECU flat view, add a SwComponentPrototype for each instance of any AtomicSwComponentType mapped onto the EcuInstance. Copy all the identifiable information from the originating SwComponentPrototype, but assign an unique short name to the new element. The newly created SwComponentPrototypes are typed by the original AtomicSwComponentType.
- Unroll the connector paths leading to and from the included components:
  - For ECU internal communication, use AssemblySwConnector to connect PortPrototypes.
  - For ECU external communication, add delegated PortPrototypes to the ECU flat view CompositionSwComponentType. The delegated PPortPrototypes shall be typed with the PortInterface of the corresponding PPortPrototype of the included SwComponentPrototypes that are used for the external communication. If the original AssemblySwConnector references a PortInterfaceMapping then the delegated RPortPrototypes shall be typed with the PortInterface of the PPortPrototype initially connected (possibly by a chain of multiple original DelegationSwConnectors and the one original AssemblySwConnector referencing the PortInterfaceMapping) to this PPortPrototype of the included SwComponentPrototypes that are used for the external communication. Each delegated PortPrototype shall be connected via a DelegationSwConnector with PortPrototypes of the included SwComponentPrototypes that are used for the external communication.
  - VariableDataPrototypes and ClientServerOperations of the delegated PortPrototypes are mapped to SystemSignals.
- If the System with category SYSTEM_DESCRIPTION prescribes an Implementation for a SwComponentPrototype by using SwcToImplMapping, a

corresponding constraint needs to be created in the System with category ECU_EXTRACT of the targeted EcuInstance. The SwcToImplMapping's component reference needs to be adjusted to the flat representation, while maintaining the original reference to the Implementation.

- Only ComSpecs on the PortPrototypes of atomic software components are relevant for the RTE generator (see [TPS_SWCT_01568]). The existence of ComSpecs on composition level can be taken into account for setting the values on the atomic level as the atomic level gets created. On the other hand there is no obligation to respect the ComSpec settings on the composition level for the creation of the atomic level. Finally the approach for the creation of ComSpec values on atomic level depends on OEM preferences.

Figure 12.1 illustrates the process of flattening the hierarchical Software Composition into an ECU Flat View representation, as outlined in the previous paragraphs. The following sections explain the concrete transformation steps in more detail.

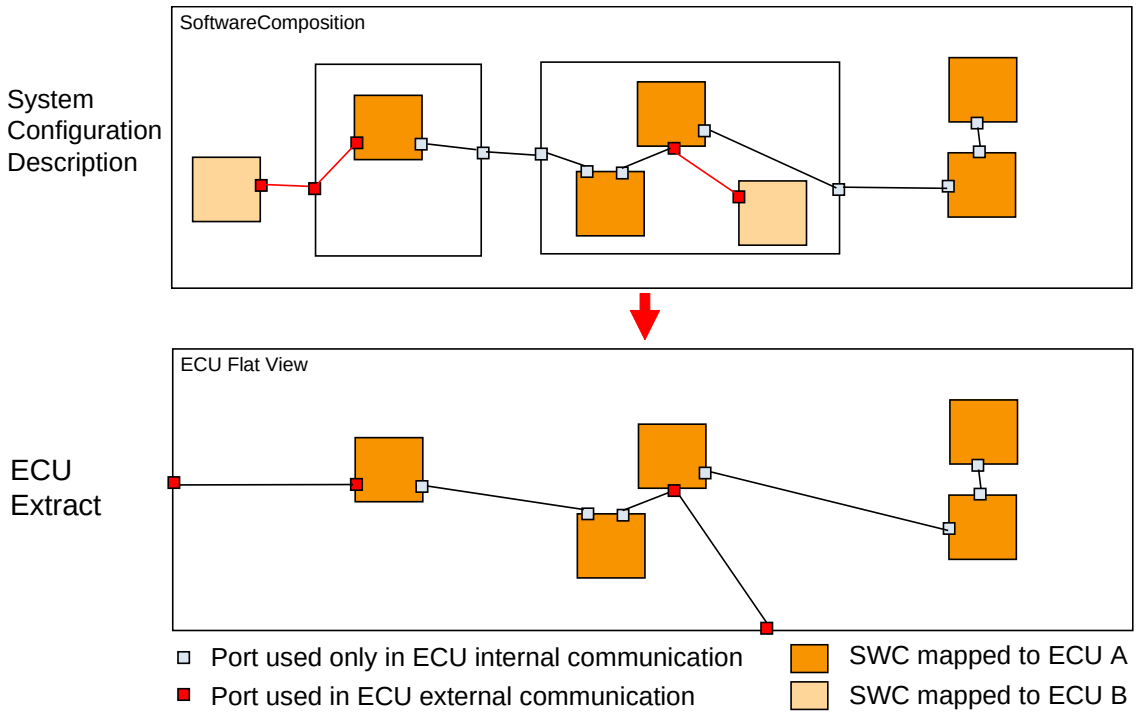

Figure 12.1: Flattening of a hierarchic Software Composition into an ECU Flat View, and the distinction between ports used in internal and those used in external communication.

Please note that instantiation specific scheduling of runnables shall be maintained when generating a System with category ECU_EXTRACT. This maintenance covers the rewrite of the instanceRef to the RTEEvent respectively the aggregation of the instantiationRTEEventProps to the next CompositionSwComponentType.

12.2.1 ECU Flat view

The first step of extracting the ECU specific Software View is the creation of a new CompositionSwComponentType (further referred to as ECU flat view). This new element serves as a container for collecting all SwComponentPrototypes of type AtomicSwComponentType deployed on the EcuInstance. In order to include the ECU flat view into the actual System with category ECU_EXTRACT, the System must have its child class RootSwCompositionPrototype pointing to this ECU flat view.

Next, all SwcToEcuMappings present in the System with category SYSTEM_DESCRIPTION need to be analyzed according to the precedence rules (Section 5.1.1) in order to establish the exact set of AtomicSwComponentType instances to be included on this EcuInstance.

For each of these component instances, regardless of their order of depth in the System Configuration Description's Component hierarchy, exactly one SwComponentPrototype shall be created in the ECU flat view CompositionSwComponentType. The new element's description and type information shall be taken over from the original SwComponentPrototype as present in the System with category SYSTEM_DESCRIPTION. As an important exception to this rule, the SwComponentPrototype's shortName must be unique in the name space formed by the ECU flat view.

The special case of prototypes of ParameterSwComponentTypes and ServiceProxySwComponentTypes is treated in almost the same way. The only difference is that these component types can be instantiated at most once per EcuInstance and that for a given prototype in the System, instances on several EcuInstances can be created. The replication of ParameterSwComponentTypes and ServiceProxySwComponentTypes on several EcuInstances does not require any special treatment of their communication properties. For ParameterSwComponentTypes there are SwConnectors defined but no communication is involved. For more details see [TPS_SWCT_01422] in the SwComponentTemplate [5].

12.2.2 Internal Communication

When flattening the RootSwCompositionPrototype for the System with category ECU_EXTRACT, not only all of the ECU's Software Components are to be collected in the ECU flat view, but also any connection existing between PortPrototypes of the included SwComponentPrototypes needs to be projected onto the same RootSwCompositionPrototype.

In the hierarchical RootSwCompositionPrototype, communication between Software Components is specified by a combination of AssemblySwConnectors and DelegationSwConnectors. Several DelegationSwConnectors may be combined in case of a multiple-level delegation, however there will always be exactly one AssemblySwConnector on the outermost CompositionSwComponentType the port is delegated to.

In the ECU flat view, any such number of stringed together SwConnectors effectively connecting two PortPrototypes of SwComponentPrototypes mapped to the same EcuInstance are resolved to exactly one AssemblySwConnector per connected port pair. As there are no additional levels of "inner SwComponentPrototypes". DelegationSwConnectors are only used to display the outside communication of an ECU in the ECU flat view.

[constr_3019] In the flat ECU extract each required interface must be satisfied by connected provided interfaces ⌈ In case of the flat System with category ECU_EXTRACT all VariableDataPrototypes specified by the SenderReceiverInterface of the RPortPrototype need to be supplied by some of the PPortPrototypes being connected with SwConnectors. ⌋*()*

For the System with category SYSTEM_DESCRIPTION, the Software Component Template Specification [5] allows a CompositionSwComponentType's outer PortPrototype to be connected to more than one inner port, observing a set of compatibility rules between the outer and the inner port's SenderReceiverInterfaces. Such a "merge" and "split" functionality for mixing VariableDataPrototypes is used to limit the number of SwConnectors required to connect PortPrototypes on higher VFB levels and thus reduce complexity in the wiring of such higher-level CompositionSwComponentTypes. On the other hand this means that an AssemblySwConnector in a hierarchical VFB may expand to more than one Port-Port pair. Naturally, in the ECU flat view such "hidden" additional connections need to be made explicit by unrolling them into concrete AssemblySwConnectors.

Additionally PassThroughSwConnector may be used to map PortInterface elements between require and provide outer ports of CompositionSwComponentTypes in order to use RTE features for mapping or conversion instead of real software components. The following paragraph suggests a way how such an unrolling of SwConnectors may be accomplished.

Starting with the top-level RootSwCompositionPrototype indicating the outermost CompositionSwComponentType, the hierarchical software model of SwComponentPrototypes is recursively iterated; for each prototype of CompositionSwComponentType, all its AssemblySwConnectors are being iterated. For each such found AssemblySwConnector both connector ends are evaluated for DelegationSwConnectors further delegating the connection: In order to consider the use cases of signal "merge" and "split", all possible communication partners need to be identified, recursively following DelegationSwConnectors in both directions. For each identified pair of PPortPrototypes and RPortPrototypes *actually exchanging* Information one AssemblySwConnector will be created in the ECU flat view.

In case that a string of SwConnectors started by AssemblySwConnector connects - directly or via DelegationSwConnectors - to a PassThroughSwConnector the SwConnector string is conjunct with the SwConnector string of the other end of the PassThroughSwConnector. Please note that the "merge" and "split" capability of

DelegationSwConnectors and PassThroughSwConnectors requires an individual treatment of the single PortInterface elements for the evaluation of the SwConnector string.

The following rules must be followed when PortInterfaceMappings are converted for the flat view. PortInterfaceMappings supports the connection of Ports typed by two different PortInterfaces with unequal named PortInterface elements. More details can be found in [5].

- When unrolling a string of SwConnectors into a single SwConnectors all compatibility rules and PortInterfaceMappings of the individual SwConnector need to be considered for determining which VariableDataPrototypes are being transferred between provider and requester. If VariableDataPrototypes are to be filtered out a PortInterfaceMapping shall be provided to the flatten connector such that only the transfered VariableDataPrototypes are included in the mapping.
- When unrolling a string of SwConnectors into a single SwConnector all of the PortInterfaceMappings of the individual SwConnectors need to be considered for combining them into a single PortInterfaceMapping to be associated with a new SwConnector.

12.2.3 External Communication

In a System with category SYSTEM_DESCRIPTION , whenever two SwComponentPrototypes are specified to communicate across EcuInstances, the details of this communication need to be fully specified: VariableDataPrototypes of SenderReceiverInterfaces and ClientServerOperations of ClientServerInterfaces are mapped onto SystemSignals as carriers of information transported across the network. According to 5.2, each instance of a AutosarDataPrototype that is to be sent over AUTOSAR COM shall be mapped exactly once onto its individual SystemSignal, regardless of how many components receive the information or over how many PhysicalChannels the SystemSignal is transported.

As described above, deriving the System with category ECU_EXTRACT from System with category SYSTEM_DESCRIPTION or from System with category SYSTEM_EXTRACT means that all SwComponentPrototypes to be included in the Ecu extract are recreated in an ECU flat view. Consequently, each DataMapping concerning a SwComponentPrototype to be mapped onto the EcuInstance requires that a corresponding DataMapping be created in the System with category ECU_EXTRACT.

The ECU flat view contains delegated PortPrototypes to display the outside communication of an EcuInstance. VariableDataPrototypes and ClientServerOperations of these delegated PortPrototypes are mapped to SystemSignals. The original instance references indicating the mapped AutosarDataPrototype need to be adjusted to the new “flat” location in the ECU flat view.

While for the System with category SYSTEM_DESCRIPTION it is sufficient to describe DataMappings only on the provider side, the System with category ECU_EXTRACT additionally requires such DataMappings on the requiring side's ports. In this case, a new DataMapping maps to the existing SystemSignal, previously defined in the System with category SYSTEM_DESCRIPTION on the provider side. This is explained in more detail in figure 12.6, that is a continuation of the example from figure 11.3 in chapter 11.2.

To derive an ECU_EXTRACT from a System with category SYSTEM_DESCRIPTION or SYSTEM_EXTRACT unambiguous ClientServerToSignalMappings are required for inter-ECU n:1 client-server communication. In particular the communication path from the server to each client must be uniquely mapped.

In this context, "communication path" encompasses the set of delegation/assembly connectors that connect the server (provide-port on SWC) through to the client (require-port on SWC).

[constr_3264] Server side ClientServerToSignalMappings in case of a n:1 inter-ECU client-server communication ⌈ If within the System with category SYSTEM_DESCRIPTION or SYSTEM_EXTRACT the ClientServerToSignalMappings for inter-ECU n:1 client-server communication are placed on the provider (server) side, then each of these ClientServerToSignalMappings shall (in the hierarchy of SwComponentPrototypes) refer to a "unique communication path" w.r.t. the EcuInstances the client SwComponentPrototypes are mapped to. ⌋*()*

Note: A "unique communication path" has the property that, starting from the ClientServerOperation of a PortPrototype, a sequence of DelegationSwConnectors and AssemblySwConnectors leads to the client side and terminates at either at most one PortPrototype that is owned by the AtomicSwComponentType of the client's SwComponentPrototype or, if the path terminates at more than one PortPrototype, then the following must hold: The clients' SwComponentPrototypes typed by AtomicSwComponentTypes owning these PortPrototypes must be mapped to the same EcuInstance and the client identifier is used to distinguish the different clients (see [TPS_SYST_01087]).

The following example scenarios will show at which PortPrototypes the ClientServerToSignalMappings are allowed to be specified in a System with category SYSTEM_DESCRIPTION or SYSTEM_EXTRACT to derive an ECU_EXTRACT.

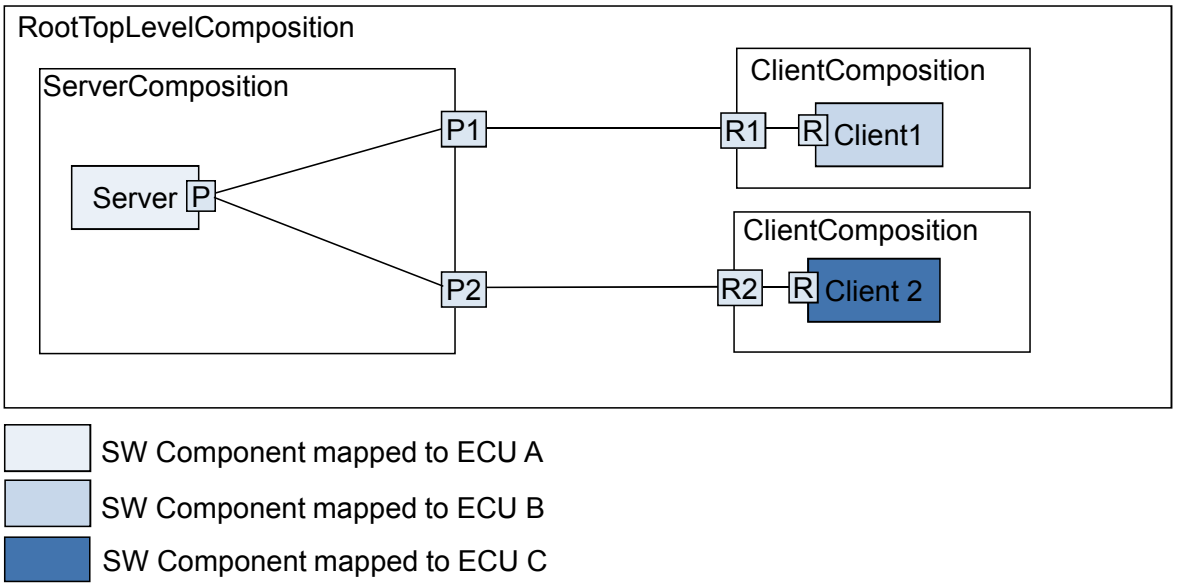

Figure 12.2: Client Server Scenario 1

For the scenario described in figure 12.2 the following statements apply:

- `ClientServerToSignalMapping`s for the provide-port Server.P are ambiguous and thus [constr_3243] exists to forbid this situation.
- `ClientServerToSignalMapping`s are permitted for ClientComposition.R1/ClientComponsition.R2 and Client1.R/Client2.R (client-side) or for ServerComposition.P1/ServerComposition.P2 (provider-side) since there is no ambiguity.

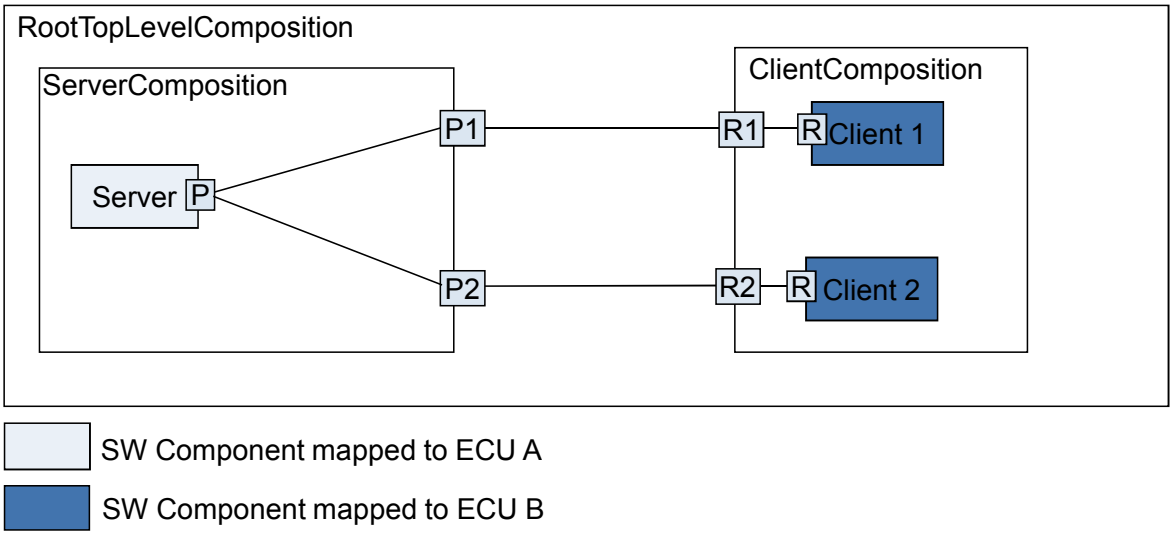

Figure 12.3: Client Server Scenario 2

For the scenario described in figure 12.3 the following statements apply:

- ClientServerToSignalMappings for the provide-port Server.P are not ambiguous (since although there is fork in the communication path, both sub-paths end up at the same ECU).
- ClientServerToSignalMappings are permitted for ClientComposition.R1/ClientComponsition.R2 and Client1.R/Client2.R (client-side) or for ServerComposition.P1/ServerComposition.P2 (provider-side) since there is no ambiguity.

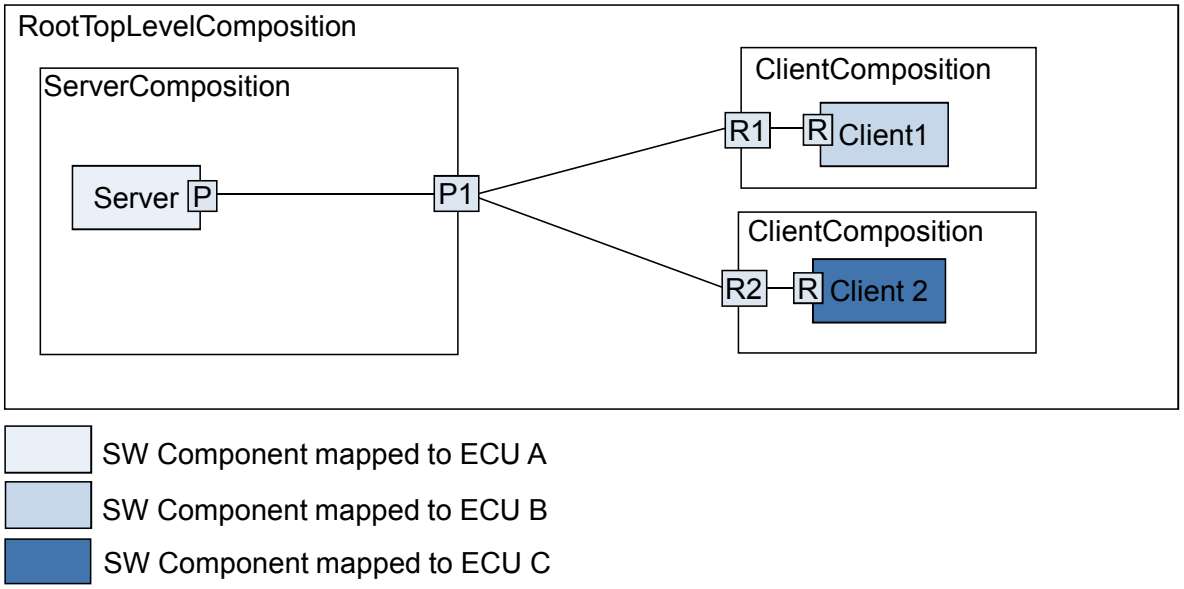

Figure 12.4: Client Server Scenario 3

For the scenario described in figure 12.4 the following statements apply:

- ClientServerToSignalMappings for the provide-ports Server.P and ServerComposition.P1 are ambiguous and thus [constr_3243] exists to forbid this situation.
- ClientServerToSignalMappings are permitted for ClientComposition.R1/ClientComposition.R2 and Client1.R/Client2.R (client-side) since there is no ambiguity.

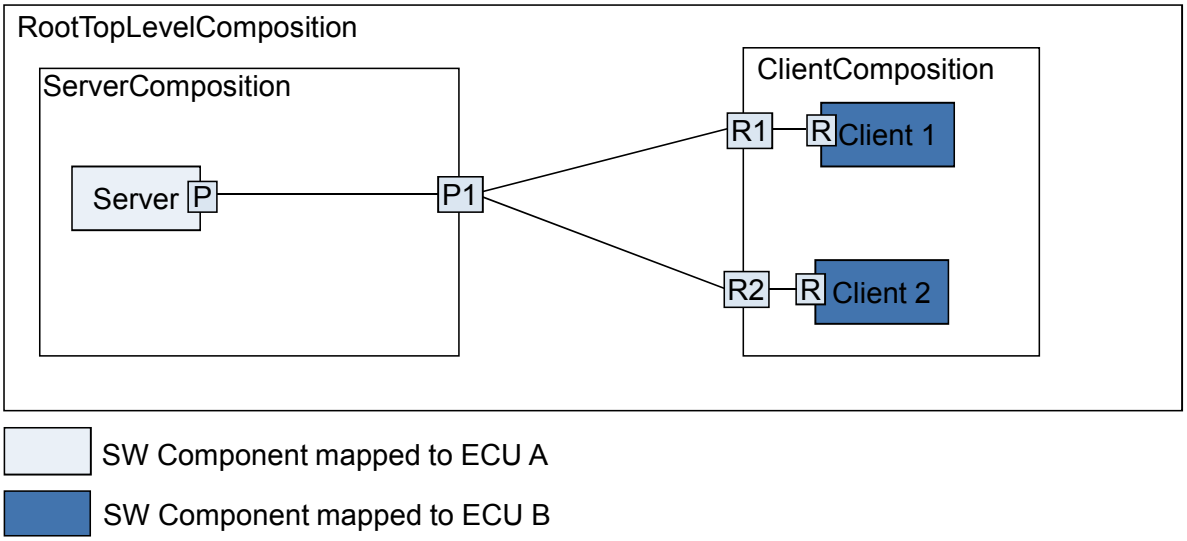

Figure 12.5: Client Server Scenario 4

For the scenario described in figure 12.5 the following statements apply:

- `ClientServerToSignalMapping`s for the provide-ports Server.P and ServerComposition.P1 are not ambiguous (since although there is fork in the communication path, both sub-paths end up at the same ECU).
- `ClientServerToSignalMapping`s are permitted for ClientComposition.R1/ClientComponsition.R2 and Client1.R/Client2.R (client-side) or for ServerComposition.P1/ServerComposition.P2 (provider-side) since there is no ambiguity.

[TPS_SYST_01145] `PortInterfaceMapping`s in the ECU Extract ⌈ In the `System` with `category` `ECU_EXTRACT` the missing `PortInterfaceMapping`s on the complementary side needs to be supplemented to `DelegationSwConnector`s. ⌋*()*

Figure 12.6 shows how the `System` with `category` `ECU_EXTRACT` for ECU A of the SW composition that is defined in figure 11.3 would look like: Only those `SwComponentPrototype`s are included that are mapped to ECU A. The hierarchy present in the `System` with `category` `SYSTEM_DESCRIPTION` has been flattened into `CompositionSwComponentType` 'EcuAFlatView', including newly created `SwComponentPrototype` 'A1E', 'A2E', 'B1E' and 'C1E' for the component instances mapped to ECU A.

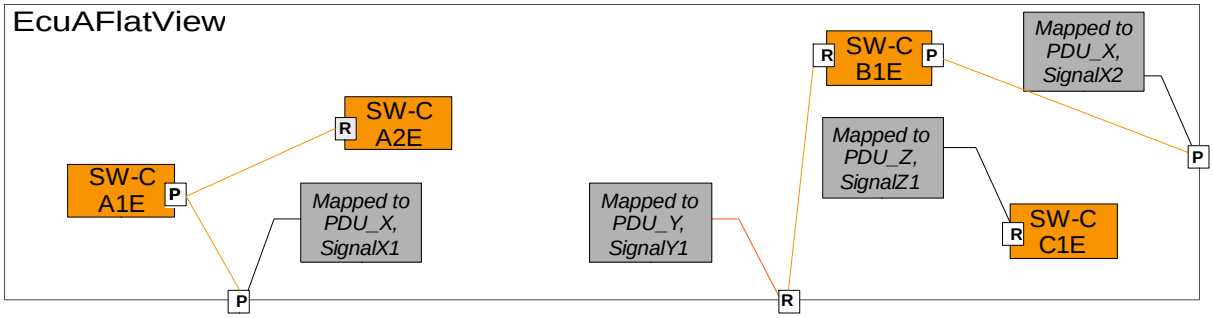

Figure 12.6: Example ECU extract for ECU A of above introduced composition

The SwConnectors to the outside ports (ECUFlatView composition ports) and SwConnectors that represent intra-ECU communication (in our example, only 'A1E' to 'A2E') are included. The VariableDataPrototypes and ClientServerOperations in the outside ports are mapped to SystemSignals. This DataMapping and the communication description is used to identify the source/destination of that data.

Furthermore, the relevant topology information and communication matrix have to be included, but they are out of scope of this example.

The problem that new mapping rules have to be added arises with the mapping to 'PDU_Y', 'SignalY1': Since SW component 'A3', which was referenced in the original mapping, is no longer included, the DataMapping needs a new VariableDataPrototype in a PortPrototype to reference to. In the example, the data of the required port of 'B1E' is referenced, so that the ECU generator has the information that 'B1E' receives the data via 'PDU_Y'.

12.2.4 Port Groups

A SwComponentType can optionally define PortGroups which allow to group PortPrototypes according to logical criteria, e.g. according to shared communication resources (see [5]). A PortGroup of a CompositionSwComponentType can be linked to "inner" PortGroups of the aggregated SwComponentPrototypes. Since the main purpose of this grouping is to configure the behavior of mode managers on an EcuInstance, this information must be preserved and broken down into the System with category ECU_EXTRACT.

The resulting CompositionSwComponentType in the ECU flat view will contain a set of PortGroups which refer to the linked inner port groups of the SwComponentPrototypes with AtomicSwComponentType. To get to this result, the following steps must be applied in the extraction process:

- Recursively ignore all PortGroups in CompositionSwComponentTypes in the hierarchical structure, which are not linked to any inner groups to be mapped on this EcuInstance.

- In the remaining structure of linked PortGroups find out the top level PortGroups (i.e. which are not referred by any higher level PortGroup on this EcuInstance) and put an element representing each top level PortGroup into the CompositionSwComponentType of the ECU flat view. This can result in name conflicts, which should be resolved by a suitable algorithm.
- Link these top level PortGroups to the inner PortGroups of the atomic component instances of the flat view according to the links found in the hierarchical structure. Naturally, the top level PortGroups in the ECU flat view are not directly referring any PortPrototypes and due to the first step they should be linked to at least one inner PortGroup.
- The PortGroups in SwComponentPrototypes with an AtomicSwComponentType on the EcuInstance should be unchanged.

12.2.5 Service Needs

Each software component might need services which are provided by the ECU Basic Software through AUTOSAR Services. ServiceNeeds are used to provide detailed information what the software component expects from the AUTOSAR Services when integrated on an actual ECU (see SWComponentTemplate [5] for more details). If an ECU Extract is created the following rules apply to the existing ServiceNeeds:

[constr_3068] DoIpPowerModeStatusNeeds in the category ECU_EXTRACT ⌈ If and only if DoIP (i.e. any of the subclasses of DoIpServiceNeeds are present) is used on an Ecu then the DoIpPowerModeStatusNeeds shall exist exactly once in a System of category ECU_EXTRACT. ⌋*()*

[constr_1265] DoIpGidSynchronizationNeeds can only exist once per ECU_EXTRACT ⌈ Within the context of one System of category ECU_EXTRACT, there can only be at most one DoIpGidSynchronizationNeeds. ⌋*()*

[constr_1266] DoIpGidNeeds can only exist once per ECU_EXTRACT ⌈ Within the context of one System of category ECU_EXTRACT, there can only be at most one DoIpGidNeeds. ⌋*()*

[constr_1267] DoIpActivationLineNeeds can only exist once per ECU_EXTRACT ⌈ Within the context of one System of category ECU_EXTRACT, there can only be at most one DoIpActivationLineNeeds. ⌋*()*

[constr_3083] Exactly one AtomicSwComponentType on an EcuInstance may use GeneralCallbackEventDataChanged / GeneralCallbackEventStatusChange ⌈ The Dem only supports exactly one AtomicSwComponentType using GeneralCallbackEventDataChanged / GeneralCallbackEventStatusChange on one EcuInstance. ⌋*()*

12.3 Communication

In explaining how SystemSignals are handled in the System with category ECU_EXTRACT, Section 12.2.3 touched on the topic of inter-ECU Communication. However, in order to enable the ECU Configuration of the COM-Stack, the relevant information of all layers of the AUTOSAR COM-Stack needs to be present in the System with category ECU_EXTRACT, including the central Communication classes ISignal, Pdu and Frame.

The above mentioned Communication elements have dependencies on each other, for ordinary COM-communication this means:

- Frames are assembled from one or more Pdus.
- ISignalIPdus carry their information in form of ISignals.
- ISignals as interaction points between RTE and COM refer to SystemSignals.

Note that the above list is not complete; TP and NM require additional elements. However, for the sake of clarity the following paragraphs describes the standard use case of a direct Signal-based communication between two EcuInstances. Once the handling of this case is understood, the additional model elements as NPdu, NmPdu, SystemSignalGroup etc. can be handled following the same basic principles.

For the System with category ECU_EXTRACT only the ECU-relevant subset of information present in the system-wide communication is to be considered. In order to establish this set of information, the dependencies in the list above are being followed.

12.3.1 Frame

In a complete System with category SYSTEM_DESCRIPTION, every outside communication of an EcuInstance will either be associated with an outgoing or and incoming Frame. The exact number and types of Frames to be received or sent by an EcuInstance is determined by the Communication Matrix (Chapter 6).

According to the selection rules for the Topology (12.1), the System with category ECU_EXTRACT contains all FrameTriggerings associated with Frames that are of any interest to the EcuInstance: If a particular FrameTriggering refers to a FramePort of type ‘out’ the associated Frame is to be sent by the EcuInstance, if it refers to an ‘in’ port the Frame is to be received. Therefore, the following selection rule applies:

- The System with category ECU_EXTRACT shall contain all Frame elements which are referenced by any included FrameTriggering.

12.3.2 PDU

Frames are assembled from one or more Pdus. In order to include all required Pdu elements, the following selection criteria apply:

- The System with category ECU_EXTRACT shall contain all Pdu elements which are referenced by any included Frame's PduToFrameMapping.
- The System with category ECU_EXTRACT shall contain all Pdu elements which are referenced by any included PduTriggering.
- For multiplexed Pdus, additionally all ISignalIPdus referenced by the MultiplexedIPdu's static and dynamic parts need to be included.

The second criterion is e.g. required in a pure post-build configuration scenario, where the frame-layout may not be completed at the time of System with category ECU_EXTRACT creation.

12.3.3 ISignals and ISignalGroups

ISignalIPdus carry their information in form of ISignals or ISignalGroups. In order to include all required ISignal and ISignalGroup elements, the following selection criteria apply:

- The System with category ECU_EXTRACT shall contain ISignal elements which are referenced by included ISignalIPdu's ISignalToIPduMapping. One exception are Pdu Gateways. Signal definitions that are not directly relevant for Gateways in case that the Pdu is routed as a whole (Pdu Routing) shall be omitted. See Section 12.3.5 for more details.
- The System with category ECU_EXTRACT shall contain all ISignal elements which are referenced by any included ISignalTriggering.
- The System with category ECU_EXTRACT shall contain ISignalGroup elements which are referenced by included ISignalIPdu's ISignalToIPduMapping. One exception are Pdu Gateways. Signal Group definitions that are not directly relevant for Gateways in case that the Pdu is routed as a whole (Pdu Routing) shall be omitted. See Section 12.3.5 for more details.
- The System with category ECU_EXTRACT shall contain all ISignalGroup elements which are referenced by any included ISignalTriggering.

Like in the case of the Pdu inclusion rules, the second and fourth criterion is required in scenarios with incomplete Pdu modeling due to post-build configurability of the communication matrix.

12.3.4 SystemSignal and SystemSignalGroup

Whereas the rules specified in Section 12.2.3 for the inclusion of SystemSignal comprise all SystemSignals that are being used by the Software Components in the ECU, the inclusion rules above stated for ISignalIPdus and ISignals may require the inclusion of additional SystemSignals. Also, strictly speaking both SystemSignals and SystemSignalGroup need to be considered. The complete inclusion rules for SystemSignals and SystemSignalGroups are:

- The System with category ECU_EXTRACT shall contain all SystemSignals and SystemSignalGroup elements which are referenced by any included DataMapping.
- The System with category ECU_EXTRACT shall contain all SystemSignal elements which are referenced by any included ISignal.
- The System with category ECU_EXTRACT shall contain all SystemSignalGroup elements which are referenced by any included ISignalGroup.

In addition on the receiving EcuInstance the following cases exist:

- only one SystemSignal out of the transmitted SystemSignalGroup is received: no SystemSignalGroup is required in the Ecu Extract of the receiving EcuInstance.
- more than one but not all SystemSignals out of the transmitted SystemSignalGroup are received: new SystemSignalGroup shall be created in the System with category ECU_EXTRACT of the receiving EcuInstance containing the received SystemSignals.
- all SystemSignals out of the transmitted SystemSignalGroup are received: the original SystemSignalGroup shall be the taken over to the System with category ECU_EXTRACT of the receiving EcuInstance.

12.3.5 Gateways

Gateways that refer the EcuInstance shall be included in the System with category ECU_EXTRACT. The complete inclusion rules for Gateways are:

- The System with category ECU_EXTRACT shall contain all FrameMapping elements that are aggregated by the Gateway element.
- The System with category ECU_EXTRACT shall contain all IPduMapping elements that are aggregated by the Gateway element.
- The System with category ECU_EXTRACT shall contain all ISignalMapping elements that are aggregated by the Gateway element.

- ISignal definitions that are not directly relevant for the Gateway in case that the Pdu containing these ISignals is routed as a whole (Pdu Routing) shall be omitted .
- ISignalGroup definitions that are not directly relevant for the Gateways in case that the Pdu containing these ISignalGroups is routed as a whole (Pdu Routing) shall be omitted .

12.3.6 TP configuration

The TP-configuration element TpConfig and all its associated elements shall be included into the System with category ECU_EXTRACT if the EcuInstance has an TpAddress configured in this TpConfig.

12.3.7 NM configuration

The Nm configuration part of the System with category ECU_EXTRACT shall include the NmEcu that references the included EcuInstance. In addition a NmCoordinator composed by this NmEcu shall be included. Furthermore any NmNode referenced by the NmCoordinator shall be included. For each included NmNode the composing NmCluster shall be included. For each included NmCluster the composing NmConfig shall be included.

12.4 Naming Issues

[TPS_SYST_05015] Naming conventions ⌈ The definition of naming conventions may facilitate the avoidance of name clashes to the further degree. However, these naming conventions can only be defined on the model level and the System Template does not define any specific naming conventions. ⌋*(RS_SYST_00053)*

Please note that a detailed information about mechanisms to resolve naming conflicts is given in [4]: [TR_METH_03005], [TR_METH_03006], [TR_METH_03007], [TR_METH_03008], [TR_METH_03009], [TR_METH_03010].

12.4.1 Package Structure

As detailed in the sections above, extracting information from the System with category SYSTEM_DESCRIPTION into an System with category ECU_EXTRACT is a non-trivial transformation: While some of the model elements are simply copied verbatim into the System with category ECU_EXTRACT, it is additionally necessary to create new elements reducing parts of system-wide structures, most noticeably in flattening of the hierarchical VFB view to the ECU Flat View.

All such elements being created or modified in the process of generating the System with category ECU_EXTRACT shall reside in the same ARPackage. In order to avoid namespace conflicts with existing elements, the package shall exclusively be used for this purpose.

By creating derivation elements from elements originally contained in the System with category SYSTEM_DESCRIPTION package structure, duplications of names may occur. This kind of name clashes shall be resolved by a suitable naming algorithm (see section 12.4.3).

All Elements that are taken over from the System with category SYSTEM_DESCRIPTION unchanged (e.g. AtomicSwComponentType, PortInterface, ApplicationDataType, EcuInstance, CommunicationCluster) shall remain in their original packages.

ARElements not used in the System with category ECU_EXTRACT shall not be copied to the ECU Extract XML file.

In more detail, ARPackages taken over from System with category SYSTEM_DESCRIPTION will not be altered by the ECU extraction process, except that some ARElements will not be included in the actual XML file of the extract: ARElements which exist in the System with category SYSTEM_DESCRIPTION but have been stripped for the System with category ECU_EXTRACT are not actually deleted from their ARPackage, but merely are skipped in the XML file forming the extract. Note that having such a partial view on an ARPackage doesn't break the original ARPackage definition because the composition of PackageableElement, responsible for adding ARElements to ARPackage, is stereotyped ≪splitable≫; this means several XML files can contribute to an ARPackage, or in case of the ECU Extract an AUTOSAR description file may contain only a subset of the complete ARPackage.

12.4.2 Naming of Measurement and Calibration Data

The software component descriptions provide several means to declare data prototypes which have to be available for measurement and calibration (MCD) tools on the EcuInstance. Together with the System with category ECU_EXTRACT it is required to provide a list of references to the description of these data for further processing in the scope of the EcuInstance. In addition, the MCD tools need a unique name for each instance of such a data prototype. Since the data descriptions are part of the nested composition structure and are contained in reusable types (components or port interfaces), the system description itself does in general not provide unique names for those.

This means, providing such a list with references and unique names for MCD data is also a task of the ECU extractor tool. This list is part of the artifact ECU Flat Map, which is further explained below.

12.4.3 Naming of Derived Elements

When performing the extract process, name clashes may occur, necessitating a naming scheme for elements derived in ECU generation: By flattening the Software Composition hierarchy all component instances present on the considered EcuInstance are put in one ECU-wide software composition. Name clashes may occur for the following reasons:

1. SwComponentPrototypes taken from different Software Compositions are allowed to have identical short names in the hierarchical structure. As all SwComponentPrototypes will be located in the same ECU Flat View, the original name spaces separation no longer exists.
2. Multiple instances of the same CompositionSwComponentType are mapped to an EcuInstance: In this case, duplicates of all contained SwComponentPrototypes will be placed next to each other in the ECU flat composition.
3. The two mechanisms just mentioned may also lead to name clashes in AutosarDataPrototypes if their names shall be used as MCD data names. In addition, reuse of a PortInterface can also lead to name clashes if it provides data elements to be used by MCD.
4. The setup of PortGroups in the ECU flat view can result in name clashes, because two port groups originating from different component types (i.e. different name spaces) may be aggregated within the flat view.

Therefore the System with category ECU_EXTRACT generator shall take care that all elements derived or created during the extraction process have unique short names. These unique names shall be created in an initial step of the extraction process which leads to the creation of an initial ECU Flat Map. Some ways to satisfy this requirement may be:

- Use globally unique identifiers (GUID) for generating short names.
- Add a number to the original name; if done consistently the flat map approach makes this reproducable.
- Expand the name recursively by the names of the containing elements (e.g. compositions) until is is unique.
- Allow human interaction (this may be combined with an initially proposed name expansion).

The creation of a new short name is compulsory only if otherwise a clash would occur.

[constr_2025] Uniqueness of symbol attributes ⌈ With the exception of RunnableEntities that are subject to [constr_1234] (RunnableEntities owned by NvBlockSwComponentTypes), in the context of a single EcuInstance the values of the RunnableEntity.symbol in combination with the attribute symbol of the meta-class SymbolProps owned by AtomicSwComponentType of all deployed RunnableEntities shall be unique such that no two (or more) combinations of

RunnableEntity.symbol and the symbol of the meta-class SymbolProps owned by AtomicSwComponentType in the role symbolProps share the same value. ⌋()

12.4.4 Re-use of short names assigned in previous iterations

As described in the previous section, potential name clashes during ECU extraction must be avoided by assigning unique names to the elements specifically created for the System with category ECU_EXTRACT and for the list of MCD data per EcuInstance. Considering the use case of iterative development (also see Section 12.5), the same names shall be assigned to existing elements in consecutive iterations. Elements which have been modified or newly introduced between two ECU extract iterations shall not use an existing short name. Additionally, the ECU extractor tool shall not re-use any short name used in any iteration from previous development phases if the meaning of the element is not exactly the same (i.e. the element's back reference into the System Configuration Description is not the same.)

12.5 ECU Extract in subsequent Cycles of Iterative Development

12.5.1 Traceability of model elements created in ECU Extract

For development scenarios in real life projects iterative development must be supported.

The following use case shall be considered:

Changes in the System with category SYSTEM_DESCRIPTION require the recreation of an System with category ECU_EXTRACT. In the successive re-run of ECU configuration, ECU configuration parameters which were configured based on the previous System with category ECU_EXTRACT need to be maintained for those parts in the System with category ECU_EXTRACT that didn't change between iterations.

Consequently, there are two requirements on the extraction process:

- Elements that are present in both versions of the System with category SYSTEM_DESCRIPTION must not change their short names between the two ECU Extracts either.
- If changes between the two versions of the System with category SYSTEM_DESCRIPTION lead to the creation of new model elements in the System with category ECU_EXTRACT, then these newly created elements must have new names that have not been used in previous iterations of the System with category ECU_EXTRACT. (See also Section 12.4.4).

In order to fulfill these requirements, a back-tracing of the relevant model elements in the System with category ECU_EXTRACT to their counterparts in the System with category SYSTEM_DESCRIPTION shall be established. Based on these back

references, short names shall consistently be re-used in iterations. Relevant elements are all those which potentially have been modified in the extraction process.

All back-tracing references are collected in one central table per System with category ECU_EXTRACT based on the meta-class FlatMap. This table collects “instance” entries for each Ecu Extract element that is being created in the System with category ECU_EXTRACT transformation and for each MCD data object that has to be available in the EcuInstance. These entries are called FlatInstanceDescriptor.

Each mapping entry owns two references per mapped element, one reference pointing to the target element in the System with category ECU_EXTRACT, the other one pointing to the origin in the System with category SYSTEM_DESCRIPTION. Both of these references are deep “instance" references, requiring a tuple of context/target description.

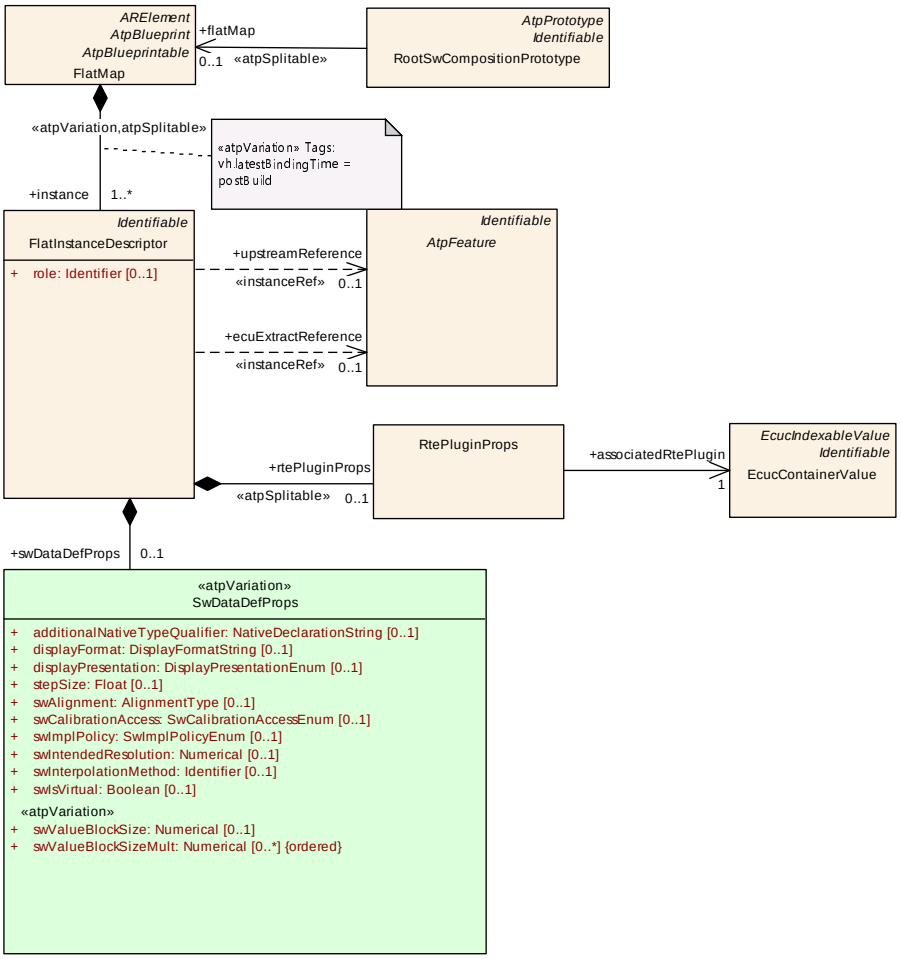

Figure 12.7: Flat Map (CommonStrucure: FlatMap)

Class	**FlatMap**			
Package	M2::AUTOSARTemplates::CommonStructure::FlatMap			
Note	Contains a flat list of references to software objects. This list is used to identify instances and to resolve name conflicts. The scope is given by the RootSwCompositionPrototype for which it is used, i.e. it can be applied to a system, system extract or ECU-extract. An instance of FlatMap may also be used in a preliminary context, e.g. in the scope of a software component before integration into a system. In this case it is not referred by a RootSwComposition Prototype. **Tags:** atp.recommendedPackage=FlatMaps			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
instance	FlatInstanceDescriptor	1..*	aggr	A descriptor instance aggregated in the flat map. The variation point accounts for the fact, that the system in scope can be subject to variability, and thus the existence of some instances is variable. The aggregation has been made splitable because the content might be contributed by different stakeholders at different times in the workflow. Plus, the overall size might be so big that eventually it becomes more manageable if it is distributed over several files. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild

Table 12.1: FlatMap

Class	**FlatInstanceDescriptor**			
Package	M2::AUTOSARTemplates::CommonStructure::FlatMap			
Note	Represents exactly one node (e.g. a component instance or data element) of the instance tree of a software system. The purpose of this element is to map the various nested representations of this instance to a flat representation and assign a unique name (shortName) to it. Use cases: • Specify unique names of measurable data to be used by MCD tools • Specify unique names of calibration data to be used by MCD tool • Specify a unique name for an instance of a component prototype in the ECU extract of the system description Note that in addition it is possible to assign alias names via AliasNameAssignment.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
ecuExtract Reference	AtpFeature	0..1	iref	Refers to the instance in the ECU extract. This is valid only, if the FlatMap is used in the context of an ECU extract. The reference shall be such that it uniquely defines the object instance. For example, if a data prototype is declared as a role within an SwcInternalBehavior, it is not enough to state the SwcInternalBehavior as context and the aggregated data prototype as target. In addition, the reference shall also include the complete path identifying ▽

▽

△

Class	**FlatInstanceDescriptor**			
				△ instance of the component prototype and the Atomic SoftwareComponentType, which is refered by the particular SwcInternalBehavior. **Tags:** xml.sequenceOffset=40
role	Identifier	0..1	attr	The role denotes the particular role of the downstream memory location described by this FlatInstanceDescriptor. It applies to use case where one upstream object results in multiple downstream objects, e.g. ModeDeclaration GroupPrototypes which are measurable. In this case the RTE will provide locations for current mode, previous mode and next mode.
rtePluginProps	RtePluginProps	0..1	aggr	The properties of a communication graph with respect to the utilization of RTE Implementation Plug-in. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=rtePluginProps
swDataDef Props	SwDataDefProps	0..1	aggr	The properties of this FlatInstanceDescriptor.
upstream Reference	AtpFeature	0..1	iref	Refers to the instance in the context of an "upstream" descriptions, wich could be the system or system extract description, the basic software module description or (if a flat map is used in preliminary context) a description of an atomic component or composition. This reference is optional in case the flat map is used in ECU context. The reference shall be such that it uniquely defines the object instance in the given context. For example, if a data prototype is declared as a role within an SwcInternal Behavior, it is not enough to state the SwcInternal Behavior as context and the aggregated data prototype as target. In addition, the reference shall also include the complete path identifying the instance of the component prototype that contains the particular instance of Swc InternalBehavior. **Tags:** xml.sequenceOffset=20

Table 12.2: FlatInstanceDescriptor

[TPS_SYST_01000] `FlatInstanceDescriptor` **roles** ⌈ If a `ModeDeclarationGroupPrototype` is measurable the `FlatMap` shall contain three entries where the particular roles are set to

- CURRENT_MODE specifies the `FlatInstanceDescriptor` applicable for current mode value of the `ModeDeclarationGroupPrototype`
- PREVIOUS_MODE specifies the `FlatInstanceDescriptor` applicable for previous mode value of the `ModeDeclarationGroupPrototype`
- NEXT_MODE specifies the `FlatInstanceDescriptor` applicable for next mode value of the `ModeDeclarationGroupPrototype`

Please note that these entries may exist in a `FlatMap` even if the `ModeDeclarationGroupPrototype` is not measurable. ⌋*(RS_SYST_00003, RS_SYST_00027)*

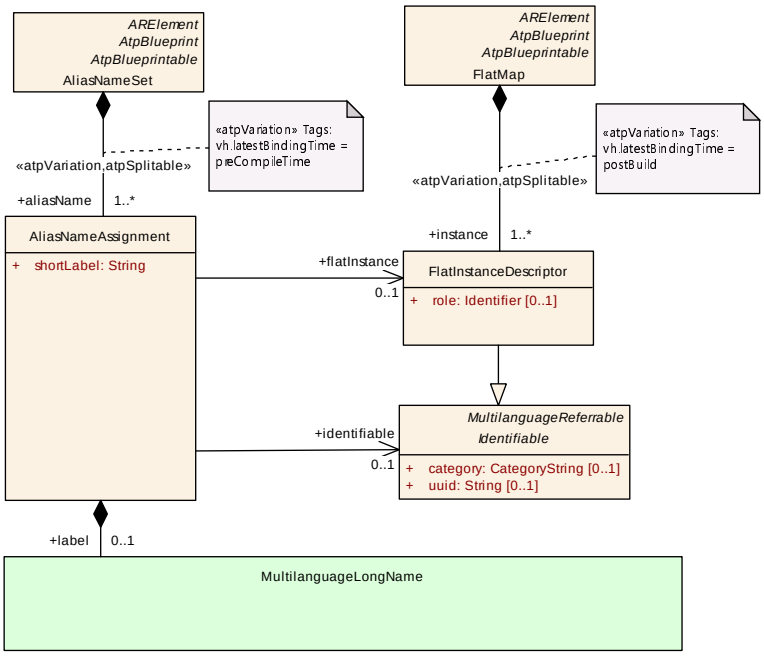

Figure 12.8: Alias Name Assignment (CommonStrucure: AliasNameAssignment)

Class	**AliasNameSet**			
Package	M2::AUTOSARTemplates::CommonStructure::FlatMap			
Note	This meta-class represents a set of AliasNames. The AliasNameSet can for example be an input to the A2L-Generator. **Tags:** atp.recommendedPackage=AliasNameSets			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
aliasName	AliasNameAssignment	1..*	aggr	AliasNames contained in the AliasNameSet. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortLabel vh.latestBindingTime=preCompileTime

Table 12.3: AliasNameSet

Class	**AliasNameAssignment**			
Package	M2::AUTOSARTemplates::CommonStructure::FlatMap			
Note	This meta-class represents the ability to associate an alternative name to a flat representations or an Identifiable. The usage of this name is defined outside of AUTOSAR. For example this name can be used by MCD tools or as a name for component instances in the ECU extract. Note that flatInstance and identifiable are mutually exclusive.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
flatInstance	FlatInstanceDescriptor	0..1	ref	Assignment of a unique name to a flat representation. **Tags:** xml.sequenceOffset=60

△

Class	**AliasNameAssignment**			
identifiable	Identifiable	0..1	ref	Assignment of a unique name to an Identifiable. **Tags:** xml.sequenceOffset=50
label	MultilanguageLongName	0..1	aggr	This represents an "Alias LongName". **Tags:** xml.sequenceOffset=20
shortLabel	String	1	attr	This attribute represents the alias name. It is modeled as string because the alias name is used outside of AUTOSAR and therefore no naming conventions can be applied within AUTOSAR. **Tags:** xml.sequenceOffset=10

Table 12.4: AliasNameAssignment

During the ECU extraction process, the ECU `FlatMap` will be processed in the following steps:

1. Create the entries `shortName` and `upstreamReference` of the `FlatMap` or, if a previous version exists, try to reuse them. Resolve name conflicts.
2. Generate the ECU Software Composition.
3. Create the entries `ecuExtractReference` of the ECU `FlatMap`.

More details are define be the AUTOSAR methodology, see [4]. The methodology also allows to have a `FlatMap` for the whole system. This System `FlatMap` can be created and maintained independently from the ECU extraction process, but can be used as an input for the creation of the ECU `FlatMap`.

[constr_3378] Maximal one `AliasNameAssignment` allowed per `FlatInstanceDescriptor` ⌈ In a given instance of `AliasNameSet` in the bound system there shall be at most one `aliasName` per `FlatInstanceDescriptor`. ⌋*()*

12.5.2 Mapping of AUTOSAR attributes to ASAM ASAP2

With the MC Support information AUTOSAR builds a bridge to tools processing ASAM ASAP2 files. In order to support the interoperability of converter tools the following mapping of AUTOSAR attributes to ASAM ASAP2 [30] (also known as "A2l" respectively "ASAM MCD 2MC") is recommended:

- If the `FlatInstanceDescriptor` references `DataPrototypes`:

  `FlatInstanceDescriptor.shortName` ->
  MEASUREMENT Name
  CHARACTERISTIC Name

  `FlatInstanceDescriptor`.(longName + desc |upstreamReference.desc) ->
  MEASUREMENT LongIdentifier
  CHARACTERISTIC LongIdentifier

AliasNameAssignment.shortLabel ->
MEASUREMENT [-> DISPLAY_IDENTIFIER]
CHARACTERISTIC [-> DISPLAY_IDENTIFIER]

AliasNameAssignment.label(if provided) +
FlatInstanceDescriptor.(desc |upstreamReference.desc) ->
MEASUREMENT LongIdentifier
CHARACTERISTIC LongIdentifier

- If AliasNameAssignment references a SwSystemconstant:

  AliasNameAssignment.shortLabel ->
  SYSTEM_CONSTANT -> Name for SwSystemconstants

- If AliasNameAssignment references a Unit:

  AliasNameAssignment.shortLabel ->
  UNIT -> Name for Units

12.5.3 Assigning communication graphs to RTE Implementation Plug-Ins

When RTE Implementation Plug-Ins are used to modularize the RTE implementation, it's required to decide which communication graphs are implemented by the RTE or by an specific RTE Implementation Plug-In. Thereby an RTE Implementation Plug-In is a part of the overall RTE implementation which is not provided by the RTE Generator but from an additional source (e.g. a Plug-In Generator or a manually implemented source code).

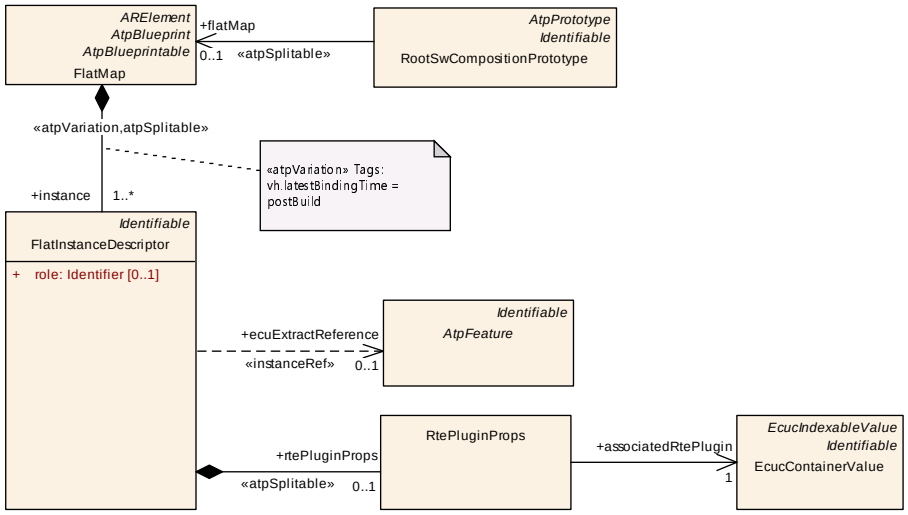

Figure 12.9: ECU Flat Map and rtePluginProps

Class	RtePluginProps			
Package	M2::AUTOSARTemplates::CommonStructure::FlatMap			
Note	The properties of a communication graph with respect to the utilization of RTE Implementation Plug-in.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
associatedRte Plugin	EcucContainerValue	1	ref	This associates a communication graph to a specific RTE Implementation Plug-in.

Table 12.5: RtePluginProps

This assignment is described with the FlatInstanceDescriptor.rtePluginProps, where the RtePluginProps.associatedRtePlugin references the EcucContainerValue representing the identity of an RTE Implementation Plug-In.

Assigning an communication graphs has following underlying semantic:

[TPS_SYST_02197] DRAFT ⌈Assigning communication graphs to RTE Implementation Plug-Ins The FlatInstanceDescriptor.ecuExtractReference points to an instance of a VariableDataPrototype and the FlatInstanceDescriptor.rtePluginProps.associatedRtePlugin references the EcucContainerValue which defines the identity of the RTE Implementation Plug-In. This assigns the full communication graph to the specific RTE Implementation Plug-Ins represented by according EcucContainerValue. ⌋ *(RS_SYST_00057)*

For instance the FlatInstanceDescriptor.ecuExtractReference points to instance of a VariableDataPrototype defined by the AnyInstanceRef using

- contextElement: RootSwCompositionPrototype
- contextElement: SwComponentPrototype
- contextElement: PPortPrototype
- target: VariableDataPrototype

According the AUTOSAR Meta-Model various further model elements are exist to describe the complete communication graph, for instance with the means of AssemblySwConnectors, SwComponentType.ports, RunnableEntitys and VariableAccesses. Nevertheless all such related elements of this communication graph are addressed by this single FlatInstanceDescriptor and all access of ExecutableEntitys to this communication graph are handled by the associated RTE Implementation Plug-In.

[constr_3458] DRAFT ⌈FlatInstanceDescriptor.rtePluginProps shall only reference a EcucContainerValue representing a RteRipsPlugin FlatInstanceDescriptor.rtePluginProps shall only reference an EcucContainerValue which defines the identity of the RTE Implementation Plug-In. This requires that the according EcucContainerValue's definition references a EcucContainerDef having a destinationUri set to /AUTOSAR/EcucDestinationUriDefSets/RteRipsUriDefSet/RteRipsPlugin ⌋*()*

To support different work-flows the FlatInstanceDescriptor.rtePluginProps is defined as ≪atpSplitable≫. Therefore it's possible the do the assignment of communication graphs immediately during the creation of the ECU Flat Map or in a second processing step after the ECU Flat Map is already created.

Further information is provided in the document SWS RTE [24] at which specific anchor points of an communication graphs the assignment shall be described.

Some further notes about the chosen modeling pattern

In general it is an unusual pattern, that a meta class not being related to ECU configuration references an EcucContainerValue. But the FlatInstanceDescriptor of the ECU Extract is in any case closely related to the configuration of the ECU. Furthermore in case of data conversion it's mandatory to provide for each different representation a FlatInstanceDescriptor for the communication graph. Further information about such configurations is provided in the document SWS RTE [24].

The alternative approach to describe the RTE Implementation Plug-In as meta class is not the right approach since only very few properties of RTE Implementation Plug-Ins are standardized. There is also no need to exchange information between different development parties about those properties. Due to this reason RTE Implementation Plug-Ins are described by the means of ECU Configuration elements.

The alternative approach to model the relationship between FlatInstanceDescriptors and the container which represents the RTE Implementation Plug-In with a mapping pattern was rejected due to the very high number of expected configuration elements.

12.6 Variant Handling in ECU Extract

The System Template supports the creation of variants in many of its model elements. Depending on the binding time, some of this variability may have been already resolved within the System with category SYSTEM_DESCRIPTION at the time of creating the System with category ECU_EXTRACT, and a cleanup step may have removed some of the complexity by removing the out-configured variability.

If however binding of a concrete variation condition happens in a later stage of the AUTOSAR methodology (e.g. during ECU Configuration or even post build), or if for other process reasons such a cleanup step is not applicable, the variability needs to be carried over to the System with category ECU_EXTRACT.

12.6.1 System Constants

In the AUTOSAR variant handling concept, SwSystemconst represents a variant selector which needs to have its value assigned latest at binding time of any expression

which refers to it. Such a value assignment may be done literally using a fixed value, or by specifying a formula, depending on the values of other variant selectors. The elements to do this are collected in a SwSystemconstantValueSet, aggregating individual value assignment expressions in the form of SwSystemconstValue.

In the System with category ECU_EXTRACT, all SwSystemconst elements are included that influence its variable content. In detail the following rules for the inclusion of SwSystemconst apply:

- System with category ECU_EXTRACT shall contain all SwSystemconst elements that are being referenced directly by variable elements contained in the System with category ECU_EXTRACT.
- Additionally, whenever a SwSystemconst's value is assigned indirectly using an SwSystemconstValue's ConditionByFormula expression, each SwSystemconstValue referred to in the assignment formula needs to be included, too. As such assignments may be nested in multiple levels, the whole directed acyclic graph of SwSystemconst elements influencing the System with category ECU_EXTRACT variability need to be included.

Additionally to the SwSystemconst elements also all relevant SwSystemconstValue assignments need to be included. As they are aggregated by SwSystemconstantValueSet, the whole Value Set is included whenever one of its SwSystemconstValue assignments is relevant for the System with category ECU_EXTRACT.

Note: Typically, the assignment of Variants (“Binding´´) will be done in a Variant Configuration work product, separate from the actual System with category ECU_EXTRACT. In this case, the relevant information from the Variant Configuration also needs to be extracted and delivered in combination with the System with category ECU_EXTRACT. From the model point of view it doesn't matter whether System with category ECU_EXTRACT and Variant Configuration are contained in the same file or in separate files.

12.6.2 Nested Whole/Part class variants

In case of flattening the hierarchical VFB view to the ECU flat view representation, the case may appear that one conditional SwComponentPrototype is nested within another SwComponentPrototype depending on another variance condition. As the resulting ECU flat view only has a flat representation of SwComponentPrototypes, such a double condition needs to be resolved to a single condition in the resulting SwComponentPrototypes.

In this case, the variation condition formula needs to be altered such that the two (or more) individual conditions are combined in a boolean AND function.

12.6.3 Multiple instances of calibration parameters in system scope

Use case: In complex systems the problem occurs that parameter values may depend on the configuration of the vehicle due to functional side effects. E.g. the calibration of a lambda sensor depends from the kind of transmission due to mechanical impacts (e.g due to additional / different curvatures in the exhaust pipe)

The difficulty is that those dependencies are typically detected after design of the software components and shall not change the software component design. Furthermore this is typical use case for post build variability since the ECU SW should not change due to environmental variability.

[TPS_SYST_02029] Multiple `ParameterDataPrototype` instances in an EcuExtract ⌈ It shall be possible to instruct the RTE Generator to provide various instances for a `ParameterDataPrototype` in the `System` with `category` `ECU_EXTRACT`. Therefore one `FlatInstanceDescriptor` per expected data instance has to point to the `ParameterDataPrototype` as an atpTarget. ⌋*()*

[constr_3114] `FlatInstanceDescriptor`s pointing to the same `ParameterDataPrototype` shall have different `postBuildVariantCondition`s ⌈ `FlatInstanceDescriptor`s that are pointing as an atpTarget to the same `ParameterDataPrototype` instance shall have different `postBuildVariantCondition`s. ⌋*()*

Note: When several instances of a `ParameterDataPrototype` are created it shall be ensured that at most one parameter instance is active in a post build variant.

[constr_3115] `FlatInstanceDescriptor`s pointing to the same `ParameterDataPrototype` instance ⌈ When several `FlatInstanceDescriptor`s point to the same `ParameterDataPrototype` instance as an atpTarget in the context of a `ParameterInterface` the different `FlatInstanceDescriptor`s shall point to the `PPortPrototype` of the owning `ParameterSwComponentType`. In this case the `PPortPrototype` typed by the `ParameterInterface` is part of the context of the according `AnyInstanceRef`. ⌋*()*

Please note that the individual `FlatInstanceDescriptor`s are utilized to provide unique names for the MCD tool as well as individual `CalibrationParameterValue`s typically refer to the `FlatInstanceDescriptor`s to provide instance specific initialization values.

13 Supported special use-cases

The description means of the communication matrix in the System Template potentially support a variety of use-cases. Some combinations of description means are explicitly ruled-out by semantical constraints. But the remaining space for the possible descriptions is so huge, that certain use-cases are actually not supported by tool-vendors because they did not consider them. This chapter describes special use-cases that can be specified in the System Template in order to get a harmonized support by tools.

13.1 Support of sending / receiving same Can/Flexray Frame on same channel (Pdu Gateway Use-Case)

Description: The System Template supports the definition of a communication where the same Can/Flexray `FrameTriggering` is sent and received on the same `PhysicalChannel` of one Pdu Gateway `EcuInstance`.

Rationale: This use-case occurs in gateway `EcuInstance`s which are used in several vehicle platforms.

Implementation: This usage shall be supported by defining one `Frame` and one `FrameTriggering` with different directions on the referenced `FramePort`s for the same `PhysicalChannel`. Also one `Pdu` and one `PduTriggering` with different directions on the referenced `IPduPort`s for the same `PhysicalChannel` shall be used.

Example: In figure 13.1 a sample network setup is shown. The ECU1 is designed to send the Frame_X on the `PhysicalChannel`. The ECU2, ECU3 and ECU4 do receive the information. But since ECU1 is optional, ECU4 is also designed to send the Frame_X on the network (in case ECU1 is not present). Please note that in in this example ECU4 is a gateway `EcuInstance` that is connected to an additional channel.

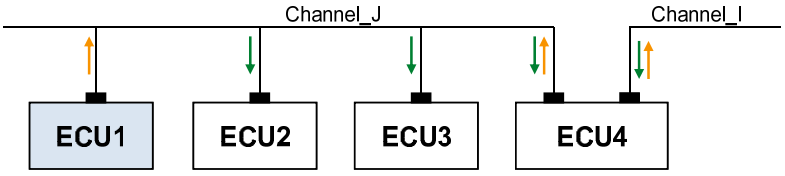

Figure 13.1: Example of network setup with one Frame being received and sent on the same ECU and channel

In the system description there exists one definition for the Frame_X and one `FrameTriggering` for the `PhysicalChannel` (figure 13.2). Each `EcuInstance` sending or receiving the `FrameTriggering` does define one `FramePort` per direction, thus for ECU4 there are two `FramePort`s defined.

For each Pdu mapped to the Frame there exists one definition for the Pdu_X and one PduTriggering for the PhysicalChannel. Each EcuInstance sending or receiving the Pdu does define one IPduPort per direction, thus for ECU4 there are two IPduPorts defined.

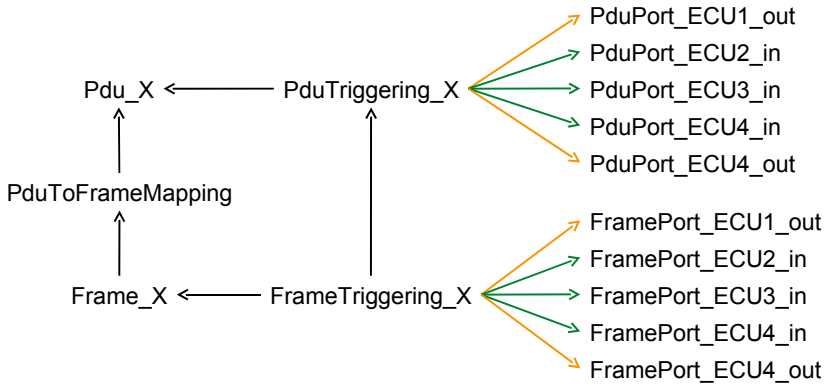

Figure 13.2: Structure to reflect the frame- and pdu-triggering setup of one Frame being received and sent by the same Gateway ECU

In case a System Extract / ECU Extract is build, only the relevant FramePorts and IPduPorts for the corresponding EcuInstance are extracted. Especially in case an additional EcuInstance is designed to send and receive the same Frame all the other ECU extracts will not be affected by this change.

13.2 Support of sending / receiving same Can/Flexray Frame on same channel (bidirectional routing in COM)

Description: The System Template supports the definition of a communication where the same Can/Flexray FrameTriggering is sent and received on the same PhysicalChannel of one EcuInstance and the content of this Frame is processed by an Application.

Rationale: This use-case occurs in case of runtime variation where the same data is transmitted or received by the same ECU.

Implementation in a System Description: This use-case is supported with the following modelling:

- One Frame and one FrameTriggering with different directions on the referenced FramePorts for the same PhysicalChannel shall be defined.
- One Pdu and one PduTriggering with different directions on the referenced IPduPorts for the same PhysicalChannel shall be defined.
- One ISignal and one ISignalTriggering with different directions on the referenced ISignalPorts for the same PhysicalChannel shall be defined.

Please note that in case of a bidirectional routing on the ISignal level the COM Configuration (ComIPdus) needs to be derived from the PduTriggering and from IPduPorts.

Example: In figure 13.3 a sample network setup is shown. The same data (Frame_X) is transmitted by Ecu4 and by Ecu1 (runtime variation). Ecu4 is designed to send and to receive the Frame_X on the network. For Ecu2 and Ecu3 it is transparent from which sender (Ecu1 or Ecu4) the data is transmitted.

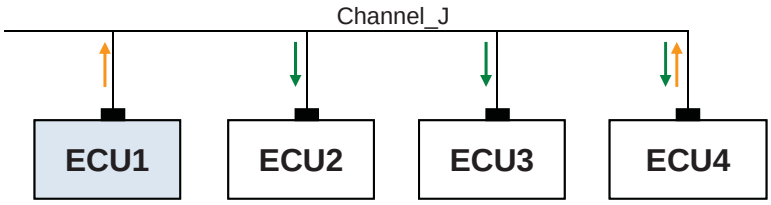

Figure 13.3: Example of network setup with one Frame being received and sent on the same ECU and channel

In the system description there exists one definition for the Frame_X and one FrameTriggering for the PhysicalChannel (figure 13.4). Each EcuInstance sending or receiving the FrameTriggering does define one FramePort per direction, thus for ECU4 there are two FramePorts defined.

For each Pdu mapped to the Frame there exists one definition for the Pdu_X and one PduTriggering for the PhysicalChannel. Each EcuInstance sending or receiving the Pdu does define one IPduPort per direction, thus for ECU4 there are two IPduPorts defined.

For each ISignal mapped to the Pdu there exists one definition for the Signal_X and one ISignalTriggering for the PhysicalChannel. Each EcuInstance sending or receiving the ISignal does define one ISignalPort per direction, thus for ECU4 there are two ISignalPorts defined.

Example 13.4 shows a System Description where only the DataMapping for the PPorts is defined. Please note that in the COM configuration a ComIPdu has a ComIPduDirection. Therefore two ComIPdus (Tx and Rx) need to be created from such a System Description.

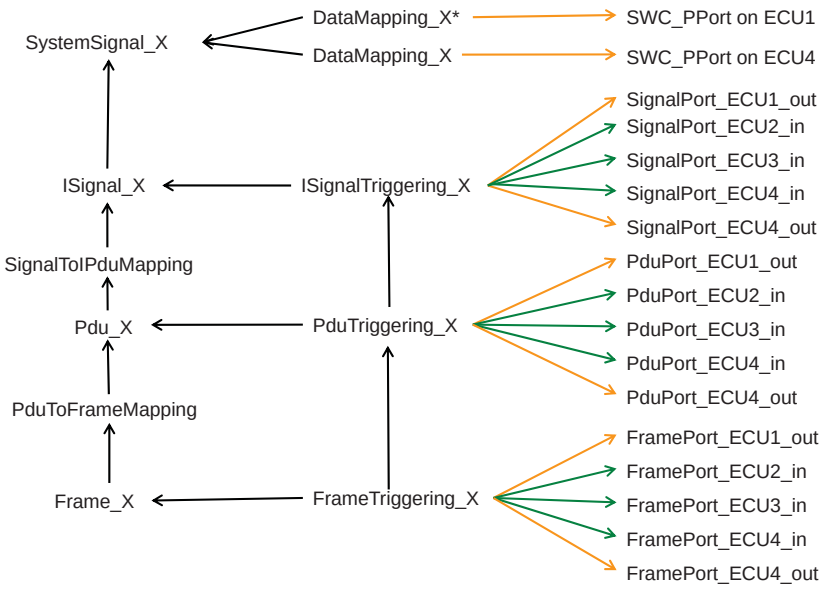

Figure 13.4: Structure to reflect the frame- and pdu-triggering setup of one Frame being received and sent on the same ECU and channel (System Description with ECU1, ECU2, ECU3 and ECU4)

In case a System Extract / ECU Extract is build, only the relevant `FramePort`s, `IPduPort`s and `ISignalPort`s for the corresponding `EcuInstance` are extracted. Especially in case an additional `EcuInstance` is designed to send and receive the same `Frame` all the other ECU extracts will not be affected by this change. Figure 13.5 shows a System Extract where only the description for ECU4 is available. Please note that in this example the `VariableDataPrototype` in the PPort and the `VariableDataPrototype` in the RPort of the Software Component are mapped to the same `SystemSignal`.

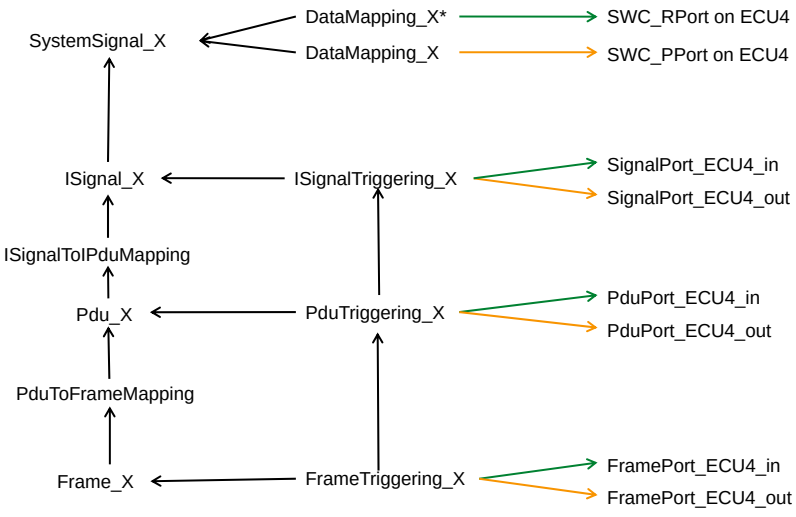

Figure 13.5: Structure to reflect the frame- and pdu-triggering setup of one Frame being received and sent on the same ECU and channel (System Extract with ECU4 only)

13.3 Support of dynamic CAN IDs

To support efficient diagnostics with on-board clients, efficient routing, and efficient SAE J1939 transport protocol and request handling, AUTOSAR provides access to dynamic CAN identifier parts in upper layers of the COM stack. This is achieved by appending parts of the identifier (or the complete identifier) as MetaData to the Pdu payload. The usage of MetaData is an Ecu Configuration decision. A System Description does not define whether MetaData shall be used or not.

The System Template uses the following attributes for the configuration of dynamic CAN IDs:

- The rxMask of a CanFrameTriggering defines the relevant bits in a CAN identifier and thus defines a range of CAN identifiers that match these bits and may vary in the other bits.
- The txMask of a CanFrameTriggering defines the static bits in a CAN identifier and thus allows to set the other bits using the data appended to the payload.

These parameters are sufficient to support the following scenarios:

- A Pdu is transmitted from one AUTOSAR node to another with variable ID parts. In this case, rxMask and txMask will be identical, and the variable identifier parts placed in the Pdu MetaData by the sender will be routed transparently and received in the same way.
- A Pdu is transmitted by one node with a static identifier and received using the rxMask. In this case, the MetaData is not used, and the receiver is tolerant regarding dynamic address parts.
- J1939 Pdu is sent with fixed priority, but priority is ignored by the receiver. Here, the MetaData may or may not be used, and the rxMask differs from the txMask just in the three priority bits.

13.4 N:1 Sender Receiver communication description in a System Extract over one PhysicalChannel

Description: The System Template supports a System Extract description of a n:1 sender-receiver communication over one PhysicalChannel where each sender and the receiver are located on different Ecus. Each sender Ecu sends the same data marked with a different frame identifier (e.g. CAN Identifier) to the receiver Ecu over the PhysicalChannel.

Implementation: This usage shall be supported by defining one Frame and several FrameTriggerings on the same PhysicalChannel. Each defined FrameTriggering refers to the same Frame. The senders and receivers of a specific FrameTriggering are defined with references to FramePorts.

For every defined Pdu that is contained in the Frame exactly one PduTriggering is defined. This also means that all defined FrameTriggerings refer to the same PduTriggerings with the FrameTriggering.pduTriggering reference.

The communication direction of the Pdu is defined by PduTriggering references to IPduPorts. All sender IPduPorts and receiver IPduPorts are referenced by the same PduTriggering.

The description of ISignals and ISignalTriggerings shall be defined accordingly. Please also note that in case of n:1 sender-receiver communication each sender shall be represented by the same SystemSignal according to [constr_3086].

Example: In figure 13.6 a small example is shown. Three different Ecus (Ecu1, Ecu2, Ecu3) are sending the same Frame to Ecu4.

- Ecu1 sends the Frame with CanId = 3 as described with FrameTriggering3.
- Ecu2 sends the Frame with CanId = 2 as described with FrameTriggering2.
- Ecu3 sends the Frame with CanId = 1 as described with FrameTriggering1.

The Frame contains one single Pdu. Only one PduTriggering is defined here that refers to three IPduPorts with communicationDirection "out" (Ecu1OutPort, Ecu2OutPort and Ecu3OutPort) and to one IPduPort with communicationDirection "in" (Ecu4InPort). Please note that the references between the Triggering elements (FrameTriggering.pduTriggering and PduTriggering.iSignalTriggering) are not visible in figure 13.6 for the sake of clarity.

The description of the ISignal that is included in the Pdu and the ISignalTriggering is defined accordingly.

Upstream Mapping: In the basic Ecu configuration for the receiving Ecu that is derived from such a System Extract all FrameTriggerings shall be mapped to the same Pdu that is passed to a upper layer module (e.g. Nm, PduR). This corresponds to the upstream mapping rules for COM Signals defined in [TPS_SYST_01066] and [TPS_SYST_01067].

- CanIf: several CanIfRxPduCfg containers need to be created with different CanIfRxPduCanIds that all point to the same Pdu (CanIfRxPduRef).
- FrIf: several FrIfFrameTriggering containers need to be created that all point to the same Pdu (FrIfFrameStructure/FrIfPdusInFrame/FrIfPduRef)

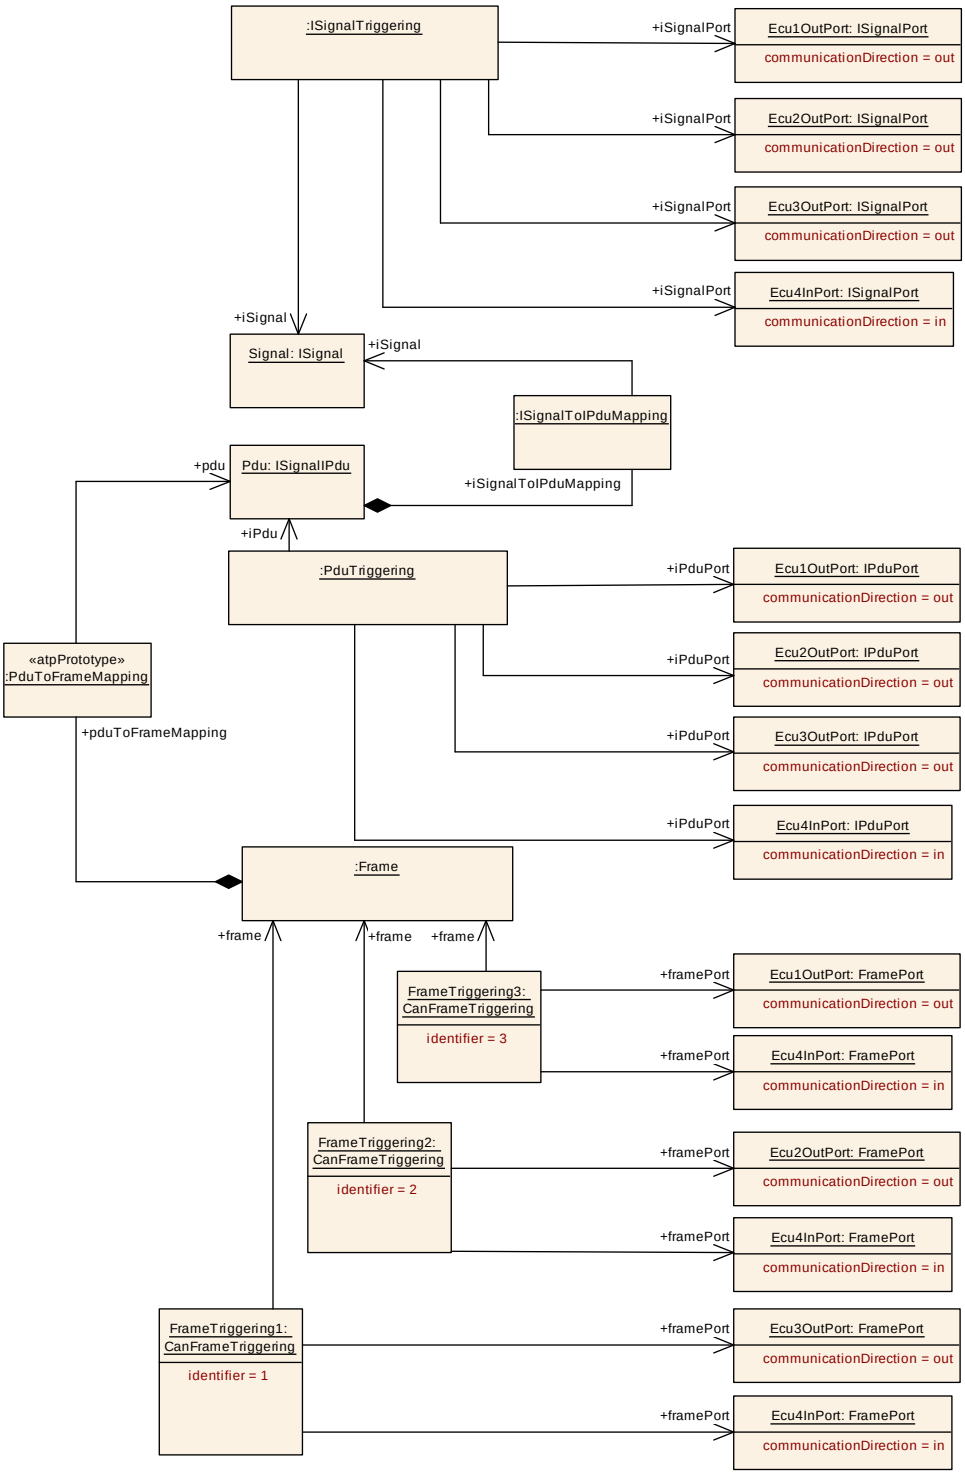

Figure 13.6: Example for a N:1 Sender Receiver communication description in a System Extract

13.5 Description of MOST Functions

The MOST communication protocol is not supported by the AUTOSAR Basic Software but it is possible to convert FIBEX [9] descriptions with MOST content to an AUTOSAR description. This chapter describes how MOST Functions may be described with the means of the Software Component Template [5].

FIBEX supports the description of SW-PACKAGES (represents a bundle of FBlocks and implemented MOST functions), MOST-FUNCTION-BLOCKs (contain functions with operation types and finally parameters, e.g. CD Player), MOST-FUNCTIONs (e.g. a CD player possesses functions such as Play, Stop, Eject, and Time Played) and OP-TYPEs (operations that are applied to the respective function, e.g. Play.Set(tracknumber)). The following table shows how the FIBEX elements may be converted into an AUTOSAR description.

MOST FIBEX Element	Description	AUTOSAR Element	Mapping Rule
FUNCTION-BLOCK	A MOST device contains multiple components that are called function blocks, for example, tuner, amplifier, or CD player.	SwComponentType	Each FunctionBlock shall be described as a SwComponentType
FUNCTION-BLOCK-INSTANCE	There may be several Instances with the same FBlockID in the system (two CD changers, four active speakers, several diagnosis blocks)	SwComponentPrototype	Each FunctionBlockInstance shall be described as a SwComponentPrototype
MOST-FUNCTION	Methods and Properties of a Function Block (e.g. Play, Stop...)	ClientServerInterface	Methods and Properties shall be described as ClientServerInterfaces
OP-TYPE	The OPType indicates which operation must be applied to the property or method (e.g. Play.Start, Property.Get)	ClientServerOperation	Methods and Properties shall be described as ClientServerOperations.
OP-TYPE Parameter	Parameters of OP-TYPE (e.g. tracknumber)	ArgumentDataPrototype	OP-TYPE Parameters shall be described as ArgumentDataPrototypes of ClientServerOperations.

CLUSTER (MOST-Cluster)	MOST CommunicationCluster	UserDefinedCluster	A MOST CommunicationCluster shall be described as UserDefinedCluster that allows the modeling of arbitrary Communication Clusters. A MOST-Cluster may aggregate several PhysicalChannels
CHANNEL	The CHANNEL object is used to specify the communications channel used by individual OPTypes.	UserDefinedPhysicalChannel	A UserDefinedPhysicalChannel shall be described for each CHANNEL (Control Channel and/or a MOST High Protocol) that is used by the MOST CommunicationCluster.
PDU TRIGGERING	The PDU-TRIGGERING is created for every OP-TYPE that is transported on this CHANNEL.	PduTriggering	A PduTriggering shall be created for every Pdu that contains ClientServerOperations that correspond to a OP-Type and shall be transported on the PhysicalChannel that aggregates this PduTriggering.
PDU	In FIBEX the OP-TYPE corresponds to a PDU in the communication description	Pdu	In AUTOSAR the ClientServerOperation representing the OP-TYPE shall be mapped with the ClientServer-ToSignalMapping to a SystemSignal. For the SystemSignal an ISignal shall be created. The ISignal is mapped into an ISignalIPdu.

Table 13.1: Mapping of MOST FIBEX elements to AUTOSAR elements

A Glossary

Artifact This is a Work Product Definition that provides a description and definition for tangible work product types. Artifacts may be composed of other artifacts ([31]).

At a high level, an artifact is represented as a single conceptual file.

AUTOSAR Tool This is a software tool which supports one or more tasks defined as AUTOSAR tasks in the methodology. Depending on the supported tasks, an AUTOSAR tool can act as an authoring tool, a converter tool, a processor tool or as a combination of those (see separate definitions).

AUTOSAR Authoring Tool An AUTOSAR Tool used to create and modify AUTOSAR XML Descriptions. Example: System Description Editor.

AUTOSAR Converter Tool An AUTOSAR Tool used to create AUTOSAR XML files by converting information from other AUTOSAR XML files. Example: ECU Flattener

AUTOSAR Definition This is the definition of parameters which can have values. One could say that the parameter values are Instances of the definitions. But in the meta model hierarchy of AUTOSAR, definitions are also instances of the meta model and therefore considered as a description. Examples for AUTOSAR definitions are: `EcucParameterDef`, `PostBuildVariantCriterion`, `SwSystemconst`.

AUTOSAR XML Description In AUTOSAR this means "filled Template". In fact an AUTOSAR XML description is the XML representation of an AUTOSAR model.

The AUTOSAR XML description can consist of several files. Each individual file represents an AUTOSAR partial model and shall validate successfully against the AUTOSAR XML schema.

AUTOSAR Meta-Model This is an UML2.0 model that defines the language for describing AUTOSAR systems. The AUTOSAR meta-model is an UML representation of the AUTOSAR templates. UML2.0 class diagrams are used to describe the attributes and their interrelationships. Stereotypes, UML tags and OCL expressions (object constraint language) are used for defining specific semantics and constraints.

AUTOSAR Meta-Model Tool The AUTOSAR Meta-Model Tool is the tool that generates different views (class tables, list of constraints, diagrams, XML Schema etc.) on the AUTOSAR meta-model.

AUTOSAR Model This is a representation of an AUTOSAR product. The AUTOSAR model represents aspects suitable to the intended use according to the AUTOSAR methodology.

Strictly speaking, this is an instance of the AUTOSAR meta-model. The information contained in the AUTOSAR model can be anything that is representable according to the AUTOSAR meta-model.

AUTOSAR Partial Model In AUTOSAR, the possible partitioning of models is marked in the meta-model by ≪atpSplitable≫. One partial model is represented in an AUTOSAR XML description by one file. The partial model does not need to fulfill all semantic constraints applicable to an AUTOSAR model.

AUTOSAR Processor Tool An AUTOSAR Tool used to create non-AUTOSAR files by processing information from AUTOSAR XML files. Example: RTE Generator

AUTOSAR Specification Element An AUTOSAR Specification Element is a named element that is part of an AUTOSAR specification. Examples: requirement, constraint, specification item, class or attribute in the meta model, methodology, deliverable, methodology activity, model element, bsw module etc.

AUTOSAR Template The term "Template" is used in AUTOSAR to describe the format different kinds of descriptions. The term template comes from the idea, that AUTOSAR defines a kind of form which shall be filled out in order to describe a model. The filled form is then called the description.

In fact the AUTOSAR templates are now defined as a meta-model.

AUTOSAR Validation Tool A specialized AUTOSAR Tool which is able to check an AUTOSAR model against the rules defined by a profile.

AUTOSAR XML Schema This is a W3C XML schema that defines the language for exchanging AUTOSAR models. This Schema is derived from the AUTOSAR meta-model. The AUTOSAR XML Schema defines the AUTOSAR data exchange format.

Blueprint This is a model from which other models can be derived by copy and refinement. Note that in contrast to meta model resp. types, this process is *not* an instantiation.

Instance Generally this is a particular exemplar of a model or of a type.

Life Cycle Life Cycle is the course of development/evolutionary stages of a model element during its life time.

Meta-Model This defines the building blocks of a model. In that sense, a Meta-Model represents the language for building models.

Meta-Data This includes pertinent information about data, including information about the authorship, versioning, access-rights, timestamps etc.

Model A Model is an simplified representation of reality. The model represents the aspects suitable for an intended purpose.

Partial Model This is a part of a model which is intended to be persisted in one particular artifact.

Pattern in GST : This is an approach to simplify the definition of the meta model by applying a model transformation. This transformation creates an enhanced model out of an annotated model.

Profile Authoring Support Data Data that is used for efficient authoring of a profile. E.g. list of referable constraints, meta-classes, meta-attributes or other reusable model assets (blueprints)

Profile Authoring Tool A specialized `AUTOSAR Tool` which focuses on the authoring of profiles for data exchange points. It e.g. provides support for the creation of profiles from scratch, modification of existing profiles or composition of existing profiles.

Profile Compatibility Checker Tool A specialized `AUTOSAR Tool` which focuses on checking the compatibility of profiles for data exchange. Note that this compatibility check includes manual compatibility checks by engineers and automated assistance using more formal algorithms.

Profile Consistency Checker Tool A specialized `AUTOSAR Tool` which focuses on checking the consistency of profiles.

Property A property is a structural feature of an object. As an example a “connector” has the properties “receive port” and “send port”

Properties are made variant by the ≪`atpVariation`≫.

Prototype This is the implementation of a role of a type within the definition of another type. In other words a type may contain Prototypes that in turn are typed by "Types". Each one of these prototypes becomes an instance when this type is instantiated.

Type A type provides features that can appear in various roles of this type.

Value This is a particular value assigned to a “Definition”.

Variability Variability of a system is its quality to describe a set of variants. These variants are characterized by variant specific property settings and / or selections. As an example, such a system property selection manifests itself in a particular “receive port” for a connection.

This is implemented using the ≪`atpVariation`≫.

Variant A system variant is a concrete realization of a system, so that all its properties have been set respectively selected. The software system has no variability anymore with respect to the binding time.

This is implemented using `EvaluatedVariantSet`.

Variation Binding A variant is the result of a variation binding process that resolves the variability of the system by assigning particular values/selections to all the system’s properties.

This is implemented by `VariationPoint`.

Variation Binding Time The variation binding time determines the step in the methodology at which the variability given by a set of variable properties is resolved.

This is implemented by `vh.LatestBindingtime` at the related properties .

Variation Definition Time The variation definition time determines the step in the methodology at which the variation points are defined.

Variation Point A variation point indicates that a property is subject to variation. Furthermore, it is associated with a condition and a binding time which define the system context for the selection / setting of a concrete variant.

This is implemented by `VariationPoint`.

B Detailed Representation of InstanceRef Associations in the System Template

As a special type of association "instanceRef" refers to an exact instance of the referenced class, requiring additional information of the target and the context. This is explained in detail in the AUTOSAR Generic Structure Template [2]. This chapter contains the detailed InstanceRef Diagrams.

B.1 Usage of InstanceRefs in Data Mapping diagrams

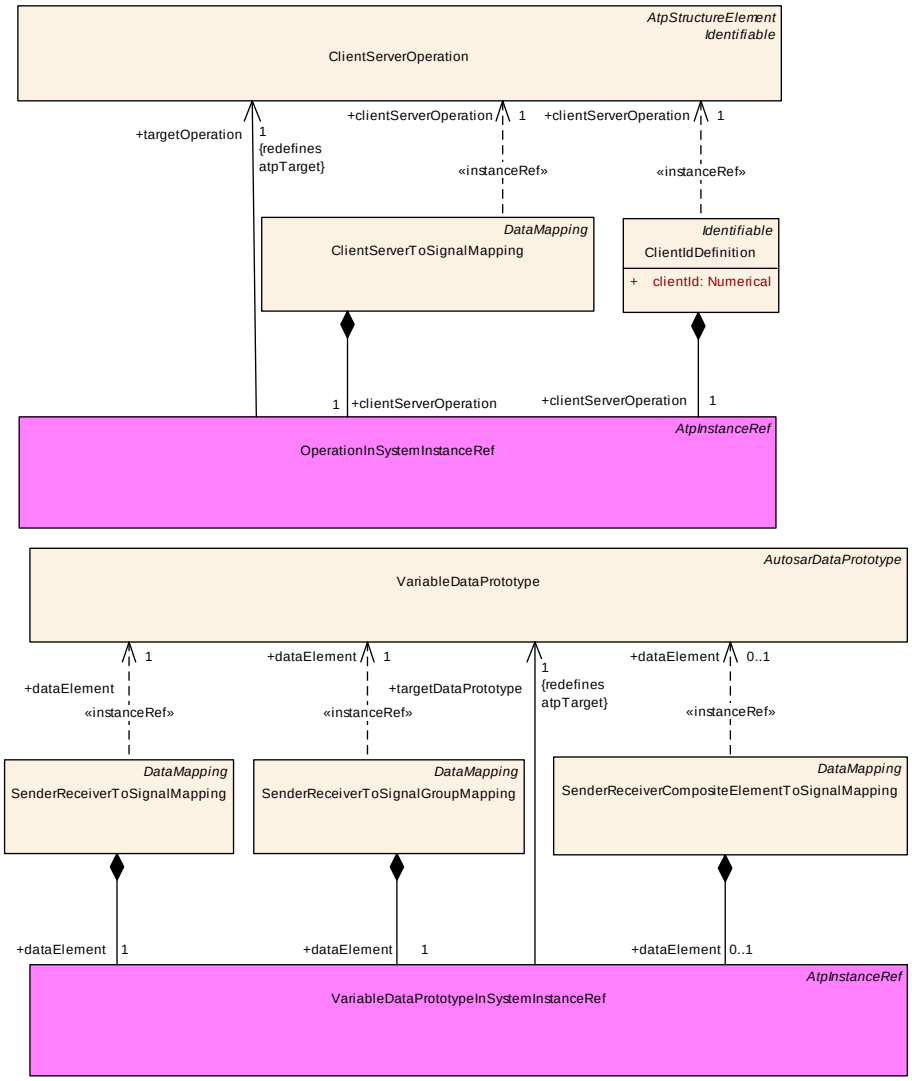

Figure B.1: Data Mapping Instance Ref Usage

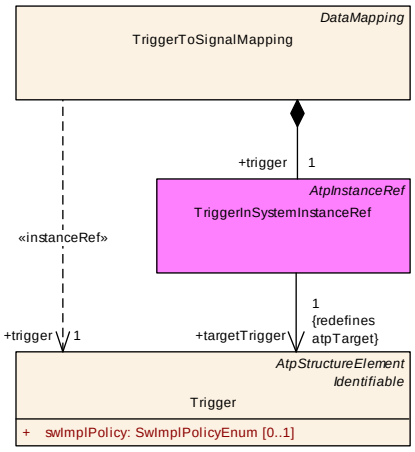

Figure B.2: Modeling of InstanceRef usage for `TriggerInSystemInstanceRef`

B.2 Usage of InstanceRefs in SW Mapping diagrams

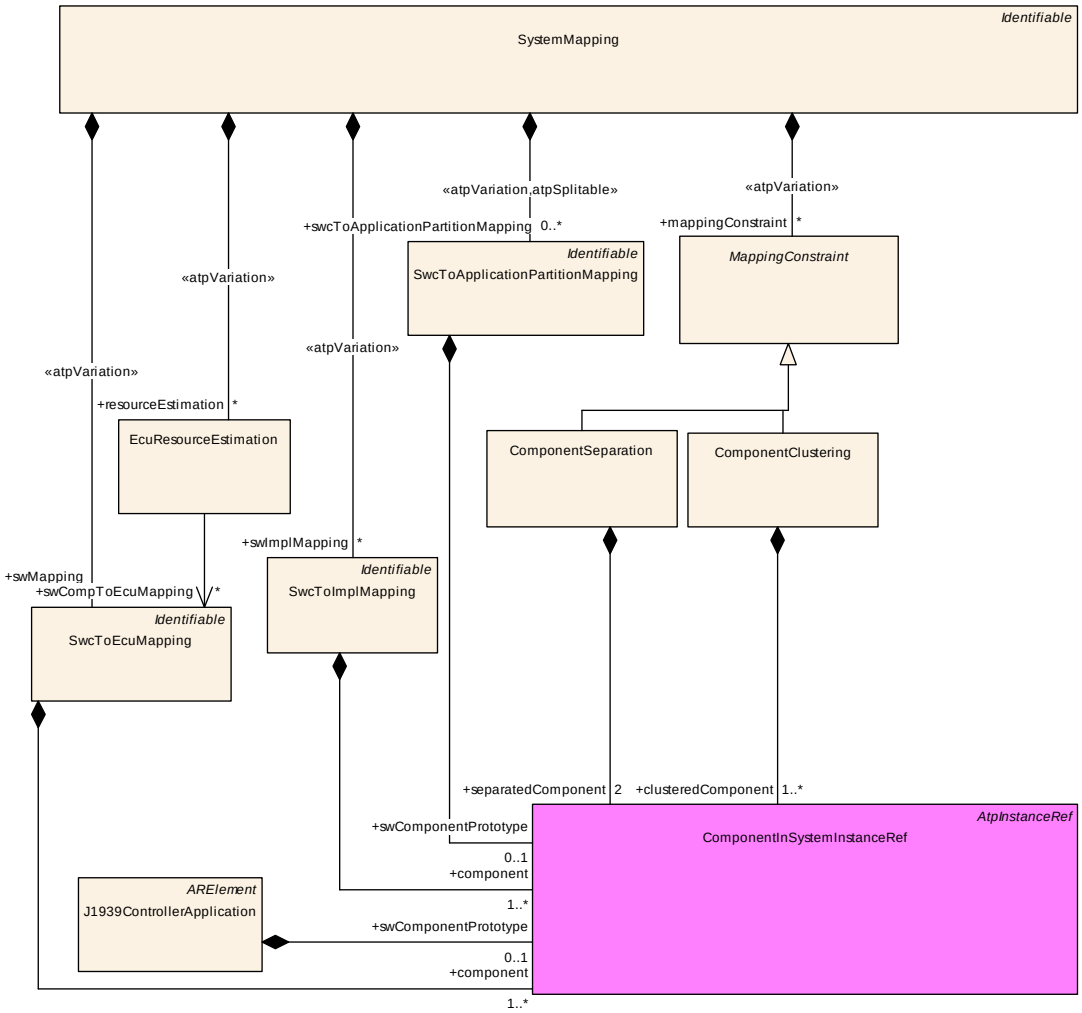

Figure B.3: SW Mapping Instance Ref Usage

B.3 Usage of InstanceRefs in Signal Path Constraint diagrams

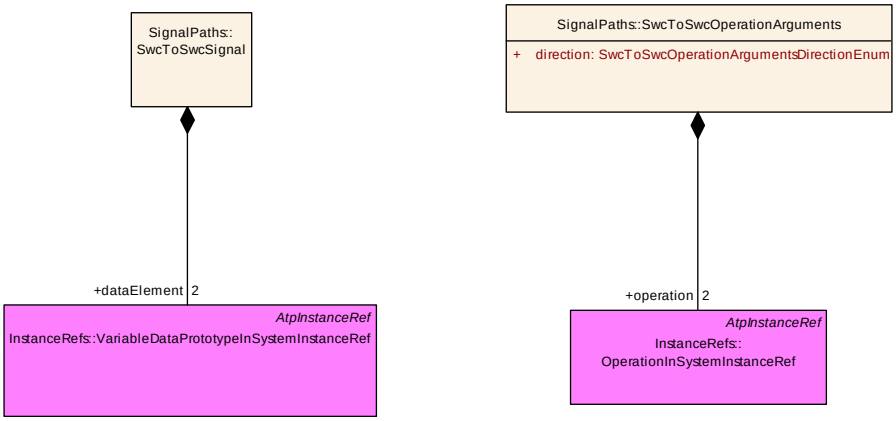

Figure B.4: SW Mapping Instance Ref Usage

B.4 Usage of InstanceRefs in PncMapping

contextComponent (ordered)	SwComponentPrototype	*	ref	**Tags:** xml.sequenceOffset=30
contextComposition	RootSwCompositionPrototype	0..1	ref	**Tags:** xml.sequenceOffset=20
targetComponent	SwComponentPrototype	1	ref	**Tags:** xml.sequenceOffset=40

Table B.1: ComponentInSystemInstanceRef

If the referenced SwComponentPrototype is located within the RootSwCompositionPrototype of a System then the contextComposition to the RootSwCompositionPrototype shall be provided. In this scenario we have a System Extract where the RootSwComposition may contain other compositions. If the referenced SwComponentPrototype is the RootSwCompositionPrototype itself then contextComposition reference to the RootSwCompositionPrototype shall be skipped and only the targetComponent to the RootSwCompositionPrototype shall be used. In this scenario we have an Ecu Extract where the RootSwComposition contains PortPrototypes that describe the external communication.

B.7 "Operation in System" InstanceRef

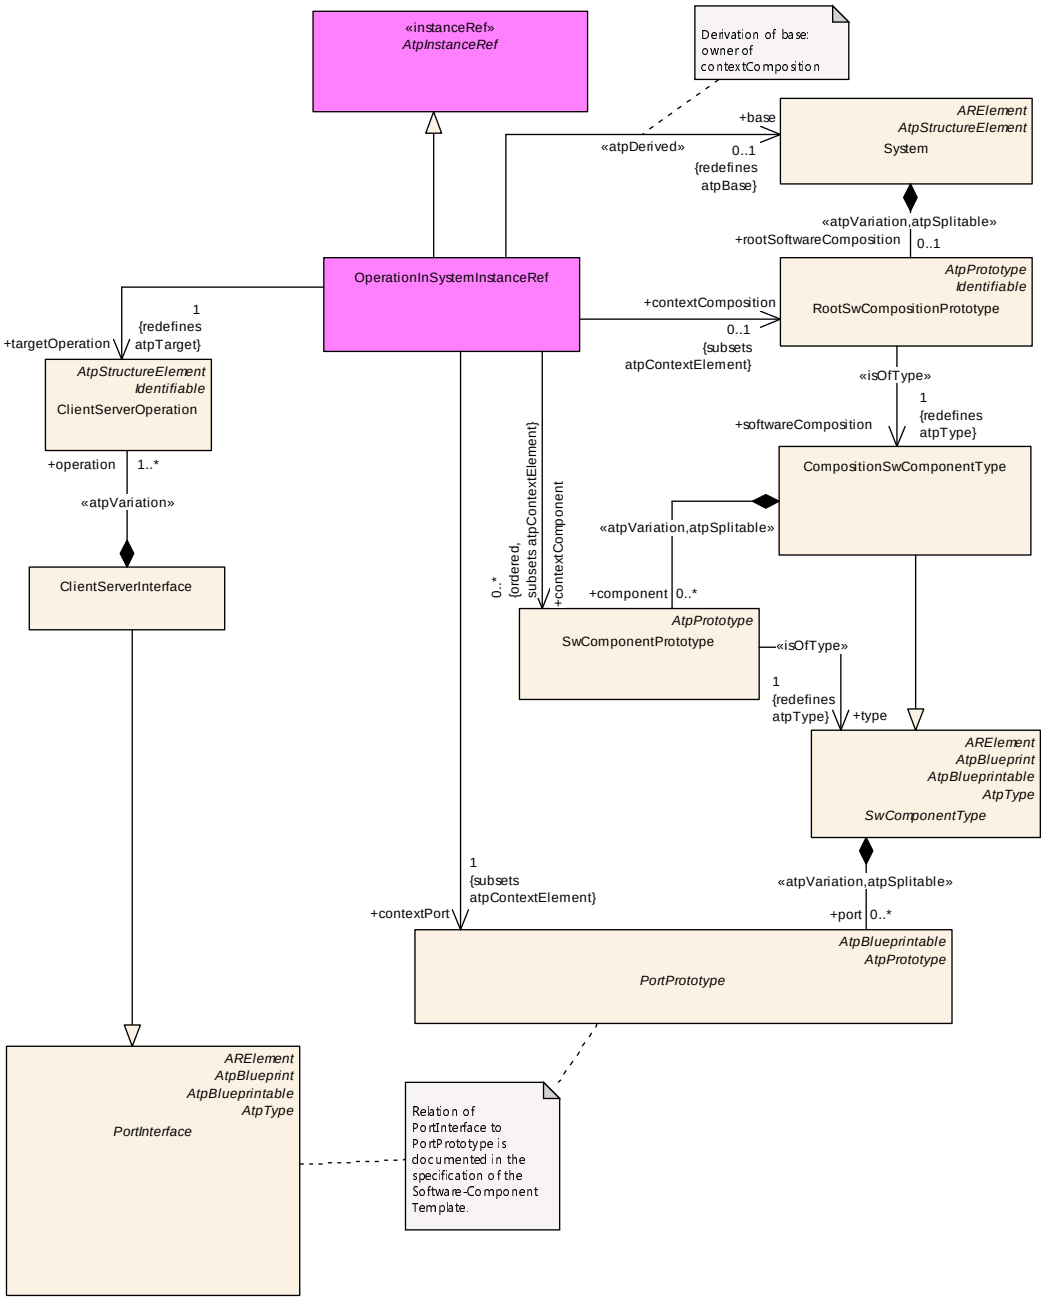

Figure B.8: OperationInSystem InstanceRef

Table B.6: ApplicationDataPrototypeInSystemInstanceRef

If the referenced target DataPrototype is the root AutosarDataPrototype that is part of a PortInterface in a SwComponentPrototype then the contextComponent reference and the contextPort reference shall be provided.

If the referenced DataPrototype is part of a root AutosarDataPrototype that is part of a PortInterface in a SwComponentPrototype then the contextComponent reference, the contextPort reference and the rootDataPrototype shall be provided. The referenced ApplicationCompositeElementDataPrototype can be arbitrarily nested within a DataPrototype. In such a case additional contextDataPrototype references shall be provided.

C Harmonisation between Upstream Templates and ECU Configuration

This chapter describes the mapping of the ECU Configuration parameters (M1 model) onto the meta-classes and attributes of the AUTOSAR upstream templates (System Template, SW Component Template and ECU Resource Template).

The relationships between upstream templates and ECU Configuration are described in order to answer typical questions like:

- How shall a supplier use the information in a System Description in order to fulfill the needs defined by the systems engineer?
- How is a tool vendor supposed to generate an ECU Configuration Description out of ECU Extract of System Description?

In addition to adhering to the mapping rules defined in this appendix an automated generation of an ECU Configuration Description out of ECU Extract of System Description should apply a certain implementation-specific name mangling when deriving the `shortName` of the `EcucContainerValue` elements to ensure that the resulting ECU Configuration Description is valid with respect to constr_2508 of [2].

Please note that the tables contain the following columns:

bsw module: Name of BSW module

bsw context: Reference to parameter container

bsw type: Type of parameter

bsw param: Name of the BSW parameter

bsw desc: Description from the configuration document

m2 template: System Template, SW Component Template, ECU Resource Template

m2 param: Name of the upstream template parameter

m2 description: Description from the upstream template definition

mapping rule: Textual description on how to transform between M2 and BSW domains

mapping type:

- local: no mapping needed since parameter local to BSW
- partial: some data can be automatically mapped but not all
- full: all data can be automatically mapped

C.1 ComStack

C.1.1 Com Mapping

BSW Module	BSW Context	
Com	Com	
BSW Parameter		**BSW Type**
ComConfig		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters and sub containers of the AUTOSAR COM module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Com	Com/ComConfig	
BSW Parameter		**BSW Type**
ComDataMemSize		EcucIntegerParamDef
BSW Description		
Size of internal Com data in units of bytes (static memory allocation) - memory required by post-build configuration must be smaller than this constant. This parameter is needed only in case of post-build loadable implementation using static memory allocation.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Com	Com/ComConfig	
BSW Parameter		**BSW Type**
ComGwMapping		EcucParamConfContainerDef
BSW Description		
Each instance of this container defines one mapping of the integrated Signal Gateway.		
Template Description		
Arranges those signals (or SignalGroups) that are transferred by the gateway from one channel to the other in pairs and defines the mapping between them. Each pair consists in a source and a target referencing to a ISignalTriggering.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Multiplatform::ISignalMapping		
Mapping Rule		**Mapping Type**

In the System Extract an explicit ISignalMapping or an implicit ISignalMapping may be defined. Explicit Mapping: Create Container for each ISignalMapping.sourceSignal where the referenced ISignalTriggering refers to an ISignal. Implicit Mapping: Ifthe ISignalMapping.sourceSignal refers to an ISignal Triggering where the ISignalTriggering refers to an ISignalGroup (and no explicit mapping is defined for the ISignalGroup), then create Container for each ISignal referenced by the ISignalGroup where the shortName of the source ISignal matches the shortName of a destination ISignal of the ISignal Mapping.targetSignal ISignalGroup.	full
Mapping Status	**Mapping ID**
valid	up_Com_00003

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping
BSW Parameter	**BSW Type**
ComGwDestination	EcucChoiceContainerDef
BSW Description	
Each instance of this choice container allows to define one routing destination either by reference to an already configured COM signal / group signal or by a destination description container.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Multiplatform::ISignalMapping.targetSignal	

Mapping Rule	**Mapping Type**
Explicit Mapping: Create Container for each targetSignal reference that is defined in the ISignalMapping. Implicit Mapping: If the ISignalMapping.targetSignal refers to an ISignal Triggering where the ISignalTriggering refers to an ISignalGroup (and no explicit mapping is defined for the ISignalGroup), then create Container for each ISignal referenced by the ISignalGroup where the shortName of the target ISignal matches the shortName of a source ISignal of the ISignal Mapping.sourceSignal ISignalGroup.	full
Mapping Status	**Mapping ID**
valid	up_Com_00004

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwDestination
BSW Parameter	**BSW Type**
ComGwDestinationDescription	EcucParamConfContainerDef
BSW Description	
Description of a gateway destination. This container allows defining a gateway destination without the configuration of a complete COM signal. This allows adding / changing gateway relations post build without the configuration of new signals.	
Template Description	
An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping	

Mapping Rule	Mapping Type
Informations can be derived from ISignalToIPduMapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00005

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description

BSW Parameter	BSW Type
ComBitPosition	EcucIntegerParamDef

BSW Description

Starting position within the I-PDU. This parameter refers to the position in the I-PDU and not in the shadow buffer. If the endianness conversion is configured to Opaque the parameter ComBitPosition shall define the bit0 of the first byte like in little endian byte order

Template Description

This parameter is necessary to describe the bitposition of a signal within an SignalIPdu.
It denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.

Please note that the way the bytes will be actually sent on the bus does not impact this representation: they will always be seen by the software as a byte array.

If a mapping for the ISignalGroup is defined, this attribute is irrelevant and shall be ignored.

M2 Parameter

SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.startPosition

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00062

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description

BSW Parameter	BSW Type
ComFilter	EcucParamConfContainerDef

BSW Description

This container contains the configuration parameters of the AUTOSAR COM module's Filters.

Note: On sender side the container is used to specify the transmission mode conditions.

Template Description

Base class for data filters. The type of the filter is specified in attribute dataFilterType. Some of the filter types require additional arguments which are specified as attributes of this class.

M2 Parameter

CommonStructure::Filter::DataFilter

Mapping Rule	Mapping Type
Create container on the receiver side if the NonqueuedReceiverComSpec contains a DataFilter. Create Container on the sender side if the TransmissionMode Condition element contains a reference to this signal.	full
Mapping Status	**Mapping ID**
valid	up_Com_00073

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description/ComFilter

BSW Parameter	BSW Type
ComFilterAlgorithm	EcucEnumerationParamDef

BSW Description
The range of values is specified in the [17] specification, chapter 2.2.2, Reception Filtering.
Template Description
This attribute specifies the type of the filter.
M2 Parameter
CommonStructure::Filter::DataFilter.dataFilterType

Mapping Rule	Mapping Type
Mapping between DataFilterTypeEnum and ComFilterAlgorithm Enum is necessary.	full
Mapping Status	**Mapping ID**
valid	up_Com_00075

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description/ComFilter

BSW Parameter	BSW Type
ComFilterMask	EcucIntegerParamDef

BSW Description
The name of this attribute corresponds to the parameter name in the [17] specification of Reception Filtering.
Template Description
Mask for old and new value.
M2 Parameter
CommonStructure::Filter::DataFilter.mask

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00078

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description/ComFilter

BSW Parameter	BSW Type
ComFilterMax	EcucIntegerParamDef

BSW Description
The name of this attribute corresponds to the parameter name in the [17] specification of Reception Filtering.
Template Description
Value to specify the upper boundary
M2 Parameter
CommonStructure::Filter::DataFilter.max

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00077

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description/ComFilter

BSW Parameter	BSW Type
ComFilterMin	EcucIntegerParamDef

BSW Description
The name of this attribute corresponds to the parameter name in the [17] specification of Reception Filtering.
Template Description
Value to specify the lower boundary
M2 Parameter
CommonStructure::Filter::DataFilter.min

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00080

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description/ComFilter

BSW Parameter	BSW Type
ComFilterOffset	EcucIntegerParamDef

BSW Description
The name of this attribute corresponds to the parameter name in the [17] specification of Reception Filtering. Range = 0..(ComFilterPeriod-1)
Template Description
Specifies the initial number of messages to occur before the first message is passed
M2 Parameter
CommonStructure::Filter::DataFilter.offset

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00076

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description/ComFilter

BSW Parameter	BSW Type
ComFilterPeriod	EcucIntegerParamDef

BSW Description
This parameter defines the period of the ComFilterAlgorithm ONE_EVERY_N.
Template Description
Specifies number of messages to occur before the message is passed again
M2 Parameter
CommonStructure::Filter::DataFilter.period

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00079

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description/ComFilter

BSW Parameter	BSW Type
ComFilterX	EcucIntegerParamDef

BSW Description
The name of this attribute corresponds to the parameter name in the [17] specification of Reception Filtering.

Template Description
Value to compare with

M2 Parameter
CommonStructure::Filter::DataFilter.x

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00074

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description

BSW Parameter	BSW Type
ComGwIPduRef	EcucReferenceDef

BSW Description
Reference to an I-PDU of a Signal Gateway source or destination description.

Template Description
An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.

M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping

Mapping Rule	Mapping Type
Create reference for each existing ISignalToIPduMapping that is referenced from the regarded Signal Gateway.	full
Mapping Status	**Mapping ID**
valid	up_Com_00026

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description

BSW Parameter	BSW Type
ComSignalEndianness	EcucEnumerationParamDef

BSW Description
Defines the endianness of the signal's network representation.

Template Description
This parameter defines the order of the bytes of the signal and the packing into the SignalIPdu. The byte ordering "Little Endian" (MostSignificantByteLast), "Big Endian" (MostSignificantByteFirst) and "Opaque" can be selected. For opaque data endianness conversion shall be configured to Opaque. The value of this attribute impacts the absolute position of the signal into the SignalIPdu (see the startPosition attribute description). For an ISignalGroup the packingByteOrder is irrelevant and shall be ignored.

M2 Parameter

SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.packingByteOrder	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00061

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestinationDescription
BSW Parameter	**BSW Type**
ComSignalInitValue	EcucStringParamDef
BSW Description	
Initial value for this signal. In case of UINT8_N the default value is a string of length ComSignalLength with all bytes set to 0x00. In case of UINT8_DYN the initial size shall be 0. In case the ComSignalType is UINT8, UINT16, UINT32, UINT64, SINT8, SINT16, SINT32, SINT64 the string shall be interpreted as defined in the chapter Integer Type in the AUTOSAR EcuC specification. In case the ComSignalType is FLOAT32, FLOAT64 the string shall be interpreted as defined in the chapter Float Type in the AUTOSAR EcuC specification. In case the ComSignalType is BOOLEAN the string shall be interpreted as defined in the chapter Boolean Type in the AUTOSAR EcuC specification. In case the ComSignal is a UINT8_N, UINT8_DYN the string shall be interpreted as a decimal representation of the characters separated by blanks, e.g. "97 98 100" means a string "abd", where the char "a" is in byte 0(lowest address), "b" is in byte 1, and "d" is in byte 2 and (highest address). For the ComSignalType UINT8_DYN the dynamic length shall be set to the number of configured characters. An empty string "" shall be interpreted as 0-sized dynamic signal.	
Template Description	
Initial value to be sent if sender component is not yet fully initialized, but receiver needs data already.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.initValue,SWComponentTemplate::Communication::NonqueuedSenderComSpec.initValue	
Mapping Rule	**Mapping Type**
It is possible to aggregate an initValue at the level of a ComSpec in the SW C Template. in case the System Description doesn't use a complete Software Component Description (VFB View) the initValue is defined in the System Template.	full
Mapping Status	**Mapping ID**
valid	up_Com_00081

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestinationDescription
BSW Parameter	**BSW Type**
ComTransferProperty	EcucEnumerationParamDef
BSW Description	
Defines if a write access to this signal can trigger the transmission of the corresponding I-PDU. If the I-PDU is triggered, depends also on the transmission mode of the corresponding I-PDU.	
Template Description	
Defines how the referenced ISignal contributes to the send triggering of the ISignalIPdu.	
M2 Parameter	

SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.transferProperty	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00069

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwDestination Description
BSW Parameter	**BSW Type**
ComUpdateBitPosition	EcucIntegerParamDef
BSW Description	
Bit position of update-bit inside I-PDU. If this attribute is omitted then there is no update-bit. This setting must be consistently on sender and on receiver side. Range: 0..63 for CAN and LIN, 0..511 for CAN FD, 0..2031 for FlexRay, 0..4294967295 for TP.	
Template Description	
The UpdateIndicationBit indicates to the receivers that the signal (or the signal group) was updated by the sender. Length is always one bit. The UpdateIndicationBitPosition attribute describes the position of the update bit within the SignalIPdu. For Signals of a ISignalGroup this attribute is irrelevant and shall be ignored. Note that the exact bit position of the updateIndicationBitPosition is linked to the value of the attribute packingByteOrder because the method of finding the bit position is different for the values mostSignificantByteFirst and mostSignificantByteLast. This means that if the value of packingByteOrder is changed while the value of updateIndicationBitPosition remains unchanged the exact bit position of updateIndicationBitPosition within the enclosing ISignalIPdu still undergoes a change. This attribute denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.updateIndicationBitPosition	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00064

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwDestination
BSW Parameter	**BSW Type**
ComGwSignal	EcucParamConfContainerDef
BSW Description	
This container allows specifying a gateway source or destination respectively with a reference to a ComSignal or a ComGroupSignal.	

Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalTriggering.iSignal	
Mapping Rule	**Mapping Type**
Explicit Mapping: Create Container if ISignal is referenced from ISignalMapping.sourceSignal or ISignalMapping.targetSignal via ISignalTriggering. Implicit Mapping: If the ISignalMapping.sourceSignal refers to an ISignalTriggering where the ISignalTriggering refers to an ISignalGroup (and no explicit mapping is defined for the ISignalGroup), then create Container for each ISignal referenced by the ISignalGroup where the shortName of the source ISignal matches the shortName of a destination ISignal of the ISignalMapping.targetSignal ISignalGroup. If the ISignalMapping.targetSignal refers to an ISignalTriggering where the ISignalTriggering refers to an ISignalGroup (and no explicit mapping is defined for the ISignalGroup), then create Container for each ISignal referenced by the ISignalGroup where the shortName of the target ISignal matches the shortName of a source ISignal of the ISignalMapping.sourceSignal ISignalGroup.	full
Mapping Status	**Mapping ID**
valid	up_Com_00023

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwDestination/ComGwSignal
BSW Parameter	**BSW Type**
ComGwSignalRef	EcucChoiceReferenceDef
BSW Description	
Reference to an object of a gateway relation. Either to a ComSignal or a ComGroupSignal.	
Template Description	
An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping	
Mapping Rule	**Mapping Type**
Refers to the to be routed ComSignal or ComGroupSignal.	full
Mapping Status	**Mapping ID**
valid	up_Com_00024

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping
BSW Parameter	**BSW Type**
ComGwSource	EcucChoiceContainerDef
BSW Description	
This choice container allows the definition of the gateway source signal either by reference to an already configured COM signal / group signal or by a source description container.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Multiplatform::ISignalMapping.sourceSignal	
Mapping Rule	**Mapping Type**

Explicit Mapping: Create Container for sourceSignal reference that is defined in the ISignalMapping. Implicit Mapping: If the ISignalMapping.sourceSignal refers to an ISignal Triggering where the ISignalTriggering refers to an ISignalGroup (and no explicit mapping is defined for the ISignalGroup), then create Container for each ISignal referenced by the ISignalGroup where the shortName of the source ISignal matches the shortName of a destination ISignal of the ISignal Mapping.targetSignal ISignalGroup.	full
Mapping Status	**Mapping ID**
valid	up_Com_00022

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwSource
BSW Parameter	**BSW Type**
ComGwSignal	EcucParamConfContainerDef
BSW Description	
This container allows specifying a gateway source or destination respectively with a reference to a ComSignal or a ComGroupSignal.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalTriggering.iSignal	

Mapping Rule	**Mapping Type**
Explicit Mapping: Create Container if ISignal is referenced from ISignalMapping.sourceSignal or ISignalMapping.targetSignal via ISignalTriggering. Implicit Mapping: If the ISignalMapping.sourceSignal refers to an ISignalTriggering where the I SignalTriggering refers to an ISignalGroup (and no explicit mapping is defined for the ISignalGroup), then create Container for each ISignal referenced by the ISignalGroup where the shortName of the source ISignal matches the short Name of a destination ISignal of the ISignalMapping.targetSignal ISignalGroup. If the ISignalMapping.targetSignal refers to an ISignalTriggering where the I SignalTriggering refers to an ISignalGroup (and no explicit mapping is defined for the ISignalGroup), then create Container for each ISignal referenced by the ISignalGroup where the shortName of the target ISignal matches the short Name of a source ISignal of the ISignalMapping.sourceSignal ISignalGroup.	full

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwSource/ComGwSignal
BSW Parameter	**BSW Type**
ComGwSignalRef	EcucChoiceReferenceDef
BSW Description	
Reference to an object of a gateway relation. Either to a ComSignal or a ComGroupSignal.	
Template Description	
An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping	

Mapping Rule	Mapping Type
Refers to the to be routed ComSignal or ComGroupSignal.	full
Mapping Status	**Mapping ID**
valid	up_Com_00024

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwSource
BSW Parameter	**BSW Type**
ComGwSourceDescription	EcucParamConfContainerDef
BSW Description	
Description of a gateway source. This container allows defining a gateway source without the configuration of a complete COM signal. This allows adding / changing gateway relations post build without the configuration of new signals.	
Template Description	
An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping	
Mapping Rule	**Mapping Type**
Informations can be derived from ISignalToIPduMapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00025

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwSource/ComGwSourceDescription
BSW Parameter	**BSW Type**
ComBitPosition	EcucIntegerParamDef
BSW Description	
Starting position within the I-PDU. This parameter refers to the position in the I-PDU and not in the shadow buffer. If the endianness conversion is configured to Opaque the parameter ComBitPosition shall define the bit0 of the first byte like in little endian byte order	
Template Description	
This parameter is necessary to describe the bitposition of a signal within an SignalIPdu. It denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7. Please note that the way the bytes will be actually sent on the bus does not impact this representation: they will always be seen by the software as a byte array. If a mapping for the ISignalGroup is defined, this attribute is irrelevant and shall be ignored.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.startPosition	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00062

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwSource/ComGwSourceDescription

BSW Parameter	BSW Type
ComBitSize	EcucIntegerParamDef
BSW Description	
Size in bits, for integer signal types. For ComSignalType UINT8_N and UINT8_DYN the size shall be configured by ComSignalLength. For ComSignalTypes FLOAT32 and FLOAT64 the size is already defined by the signal type and therefore may be omitted.	
Template Description	
Size of the signal in bits. The size needs to be derived from the mapped VariableDataPrototype according to the mapping of primitive DataTypes to BaseTypes as used in the RTE. Indicates maximum size for dynamic length signals. The ISignal length of zero bits is allowed.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.length	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**

ComGwIPduRef	EcucReferenceDef
BSW Description	
Reference to an I-PDU of a Signal Gateway source or destination description.	
Template Description	
An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping	
Mapping Rule	**Mapping Type**
Create reference for each existing ISignalToIPduMapping that is referenced from the regarded Signal Gateway.	full
Mapping Status	**Mapping ID**
valid	up_Com_00026

BSW Module	BSW Context
Com	Com/ComConfig/ComGwMapping/ComGwSource/ComGwSourceDescription
BSW Parameter	**BSW Type**
ComSignalEndianness	EcucEnumerationParamDef
BSW Description	
Defines the endianness of the signal's network representation.	
Template Description	
This parameter defines the order of the bytes of the signal and the packing into the SignalIPdu. The byte ordering "Little Endian" (MostSignificantByteLast), "Big Endian" (MostSignificantByteFirst) and "Opaque" can be selected. For opaque data endianness conversion shall be configured to Opaque. The value of this attribute impacts the absolute position of the signal into the SignalIPdu (see the startPosition attribute description). For an ISignalGroup the packingByteOrder is irrelevant and shall be ignored.	
M2 Parameter	

SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.packingByteOrder	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00061

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwSource/ComGwSourceDescription
BSW Parameter	**BSW Type**
ComSignalLength	EcucIntegerParamDef
BSW Description	
Description: For ComSignalType UINT8_N this parameter specifies the length n in bytes. For ComSignalType UINT8_DYN it specifies the maximum length in bytes. For all other types this parameter shall be ignored. The supported maximum length is restricted by the used transportation system. For non TP-PDUs the maximum size of a PDU, and therefore also of any included signal, is limited by the concrete bus characteristic. For example, the limit is 8 bytes for CAN and LIN, 64 bytes for CAN FD and 254 for FlexRay.	
Template Description	
Size of the signal in bits. The size needs to be derived from the mapped VariableDataPrototype according to the mapping of primitive DataTypes to BaseTypes as used in the RTE. Indicates maximum size for dynamic length signals. The ISignal length of zero bits is allowed.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.length	
Mapping Rule	**Mapping Type**
ComSignalLength = ISignal.length / 8 (i.e. value of baseTypeSize)	full
Mapping Status	**Mapping ID**
valid	up_Com_00065

BSW Module	**BSW Context**
Com	Com/ComConfig/ComGwMapping/ComGwSource/ComGwSourceDescription
BSW Parameter	**BSW Type**
ComSignalType	EcucEnumerationParamDef
BSW Description	
The AUTOSAR type of the signal. Whether or not the signal is signed or unsigned can be found by examining the value of this attribute. This type could also be used to reserved appropriate storage in AUTOSAR COM.	
Template Description	

With the aggregation of SwDataDefProps an ISignal specifies how it is represented on the network. This representation follows a particular policy. Note that this causes some redundancy which is intended and can be used to support flexible development methodology as well as subsequent integrity checks. If the policy "networkRepresentationFromComSpec" is chosen the network representation from the ComSpec that is aggregated by the PortPrototype shall be used. If the "override" policy is chosen the requirements specified in the PortInterface and in the ComSpec are not fulfilled by the networkRepresentationProps. In case the System Description doesn't use a complete Software Component Description (VFB View) the "legacy" policy can be chosen.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.dataTypePolicy

Mapping Rule	**Mapping Type**

The mapping depends from the setting in the ISignal.dataTypePolicy:
 	
- ISignal.dataTypePolicy = override or legacy:
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.networkRepresentationProps.swBaseType
 	
- ISignal.dataTypePolicy = networkRepresentationFromComSpec:
if defined on ComSpec:
SWComponentTemplate::Communication::SenderComSpec.networkRepresentation.swBaseType
SWComponentTemplate::Communication::SenderComSpec.compositeNetworkRepresentation.networkRepresentation.swBaseType
 	
SWComponentTemplate::Communication::ReceiverComSpec.networkRepresentation.swBaseType SWComponentTemplate::Communication::ReceiverComSpec.compositeNetworkRepresentation.networkRepresentation.swBaseType
 	
if not defined on ComSpec:
CommonStructure::ImplementationDataTypes::ImplementationDataType.swDataDefProps.swBaseType
Find the ImplementationDataType according to TPS_SYST_02079 and access SwDataDefProps.swBaseType.
 	
Consequence: If two SenderReceiverToSignalMappings that point to the same SystemSignal result in incompatible BaseTypes (see constr_1220 in SoftwareComponentTemplate) => ComSignalType should not be configured.
 	
- ISignal.dataTypePolicy = portInterfaceDefinition --> option has atpStatus "removed", in consequence no mapping is available."
 	
- ISignal.dataTypePolicy = transformingISignal
Hardcoded to UINT8_N or UINT8_DYN.
Datatype can be derived from SystemSignal.dynamicLength:
UINT8_N should be used if SystemSignal.dynamicLength = false
UINT8_DYN should be used if SystemSignal.dynamicLength = true
	full

BSW Module	**BSW Context**

Com	Com/ComConfig/ComGwMapping/ComGwSource/ComGwSourceDescription	
BSW Parameter		**BSW Type**
ComUpdateBitPosition		EcucIntegerParamDef
BSW Description		
Bit position of update-bit inside I-PDU. If this attribute is omitted then there is no update-bit. This setting must be consistently on sender and on receiver side. Range: 0..63 for CAN and LIN, 0..511 for CAN FD, 0..2031 for FlexRay, 0..4294967295 for TP.		
Template Description		
The UpdateIndicationBit indicates to the receivers that the signal (or the signal group) was updated by the sender. Length is always one bit. The UpdateIndicationBitPosition attribute describes the position of the update bit within the SignalIPdu. For Signals of a ISignalGroup this attribute is irrelevant and shall be ignored. Note that the exact bit position of the updateIndicationBitPosition is linked to the value of the attribute packingByteOrder because the method of finding the bit position is different for the values mostSignificantByteFirst and mostSignificantByteLast. This means that if the value of packingByteOrder is changed while the value of updateIndicationBitPosition remains unchanged the exact bit position of updateIndicationBitPosition within the enclosing ISignalIPdu still undergoes a change. This attribute denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.

valid		up_Com_00060

BSW Module	BSW Context	
Com	Com/ComConfig/ComSignal	
BSW Parameter		**BSW Type**
ComBitPosition		EcucIntegerParamDef
BSW Description		
Starting position within the I-PDU. This parameter refers to the position in the I-PDU and not in the shadow buffer. If the endianness conversion is configured to Opaque the parameter ComBitPosition shall define the bit0 of the first byte like in little endian byte order		
Template Description		
This parameter is necessary to describe the bitposition of a signal within an SignalIPdu. It denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7. Please note that the way the bytes will be actually sent on the bus does not impact this representation: they will always be seen by the software as a byte array. If a mapping for the ISignalGroup is defined, this attribute is irrelevant and shall be ignored.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.startPosition		
Mapping Rule		**Mapping Type**

ComSignalInitValue	EcucStringParamDef

BSW Description
Initial value for this signal. In case of UINT8_N the default value is a string of length ComSignalLength with all bytes set to 0x00. In case of UINT8_DYN the initial size shall be 0. In case the ComSignalType is UINT8, UINT16, UINT32, UINT64, SINT8, SINT16, SINT32, SINT64 the string shall be interpreted as defined in the chapter Integer Type in the AUTOSAR EcuC specification. In case the ComSignalType is FLOAT32, FLOAT64 the string shall be interpreted as defined in the chapter Float Type in the AUTOSAR EcuC specification. In case the ComSignalType is BOOLEAN the string shall be interpreted as defined in the chapter Boolean Type in the AUTOSAR EcuC specification. In case the ComSignal is a UINT8_N, UINT8_DYN the string shall be interpreted as a decimal representation of the characters separated by blanks, e.g. "97 98 100" means a string "abd", where the char "a" is in byte 0(lowest address), "b" is in byte 1, and "d" is in byte 2 and (highest address). For the ComSignalType UINT8_DYN the dynamic length shall be set to the number of configured characters. An empty string "" shall be interpreted as 0-sized dynamic signal.
Template Description
Initial value to be sent if sender component is not yet fully initialized, but receiver needs data already.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.initValue,SWComponentTemplate::Communication::NonqueuedSenderComSpec.initValue

Mapping Rule	**Mapping Type**
It is possible to aggregate an initValue at the level of a ComSpec in the SW C Template. in case the System Description doesn't use a complete Software Component Description (VFB View) the initValue is defined in the System Template.	full
Mapping Status	**Mapping ID**
valid	up_Com_00081

BSW Module	**BSW Context**
Com	Com/ComConfig/ComSignal

BSW Parameter	**BSW Type**
ComSignalLength	EcucIntegerParamDef

BSW Description	
Description: For ComSignalType UINT8_N this parameter specifies the length n in bytes. For ComSignalType UINT8_DYN it specifies the maximum length in bytes. For all other types this parameter shall be ignored. The supported maximum length is restricted by the used transportation system. For non TP-PDUs the maximum size of a PDU, and therefore also of any included signal, is limited by the concrete bus characteristic. For example, the limit is 8 bytes for CAN and LIN, 64 bytes for CAN FD and 254 for FlexRay.	
Template Description	
Size of the signal in bits. The size needs to be derived from the mapped VariableDataPrototype according to the mapping of primitive DataTypes to BaseTypes as used in the RTE. Indicates maximum size for dynamic length signals. The ISignal length of zero bits is allowed.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.length	
Mapping Rule	**Mapping Type**
ComSignalLength = ISignal.length / 8 (i.e. value of baseTypeSize)	full
Mapping Status	**Mapping ID**
valid	up_Com_00065

BSW Module	BSW Context
Com	Com/ComConfig/ComSignal
BSW Parameter	**BSW Type**
ComSignalType	EcucEnumerationParamDef
BSW Description	
The AUTOSAR type of the signal. Whether or not the signal is signed or unsigned can be found by examining the value of this attribute. This type could also be used to reserved appropriate storage in AUTOSAR COM.	
Template Description	
With the aggregation of SwDataDefProps an ISignal specifies how it is represented on the network. This representation follows a particular policy. Note that this causes some redundancy which is intended and can be used to support flexible development methodology as well as subsequent integrity checks. If the policy "networkRepresentationFromComSpec" is chosen the network representation from the ComSpec that is aggregated by the PortPrototype shall be used. If the "override" policy is chosen the requirements specified in the PortInterface and in the ComSpec are not fulfilled by the networkRepresentationProps. In case the System Description doesn't use a complete Software Component Description (VFB View) the "legacy" policy can be chosen.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.dataTypePolicy	
Mapping Rule	**Mapping Type**

The mapping depends from the setting in the ISignal.dataTypePolicy:
 	
- ISignal.dataTypePolicy = override or legacy:
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.networkRepresentationProps.swBaseType
 	
- ISignal.dataTypePolicy = networkRepresentationFromComSpec:
if defined on ComSpec:
SWComponentTemplate::Communication::SenderComSpec.networkRepresentation.swBaseType
SWComponentTemplate::Communication::SenderComSpec.compositeNetworkRepresentation.networkRepresentation.swBaseType
 	
SWComponentTemplate::Communication::ReceiverComSpec.networkRepresentation.swBaseType SWComponentTemplate::Communication::ReceiverComSpec.compositeNetworkRepresentation.networkRepresentation.swBaseType
 	
if not defined on ComSpec:
CommonStructure::ImplementationDataTypes::ImplementationDataType.swDataDefProps.swBaseType
Find the ImplementationDataType according to TPS_SYST_02079 and access SwDataDefProps.swBaseType.
 	
Consequence: If two SenderReceiverToSignalMappings that point to the same SystemSignal result in incompatible BaseTypes (see constr_1220 in SoftwareComponentTemplate) => ComSignalType should not be configured.
 	
- ISignal.dataTypePolicy = portInterfaceDefinition --> option has atpStatus "removed", in consequence no mapping is available."
 	
- ISignal.dataTypePolicy = transformingISignal
Hardcoded to UINT8_N or UINT8_DYN.
Datatype can be derived from SystemSignal.dynamicLength:
UINT8_N should be used if SystemSignal.dynamicLength = false
UINT8_DYN should be used if SystemSignal.dynamicLength = true

BSW Module	BSW Context
Com	Com/ComConfig/ComSignal
BSW Parameter	**BSW Type**
ComUpdateBitPosition	EcucIntegerParamDef
BSW Description	
Bit position of update-bit inside I-PDU. If this attribute is omitted then there is no update-bit. This setting must be consistently on sender and on receiver side. Range: 0..63 for CAN and LIN, 0..511 for CAN FD, 0..2031 for FlexRay, 0..4294967295 for TP.	
Template Description	
The UpdateIndicationBit indicates to the receivers that the signal (or the signal group) was updated by the sender. Length is always one bit. The UpdateIndicationBitPosition attribute describes the position of the update bit within the SignalIPdu. For Signals of a ISignalGroup this attribute is irrelevant and shall be ignored. Note that the exact bit position of the updateIndicationBitPosition is linked to the value of the attribute packingByteOrder because the method of finding the bit position is different for the values mostSignificantByteFirst and mostSignificantByteLast. This means that if the value of packingByteOrder is changed while the value of updateIndicationBitPosition remains unchanged the exact bit position of updateIndicationBitPosition within the enclosing ISignalIPdu still undergoes a change. This attribute denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.

BSW Parameter	BSW Type
ComSignalGroup	EcucParamConfContainerDef
BSW Description	
Contains the configuration parameters of the AUTOSAR COM module's signal groups.	
Template Description	
SignalGroup of the Interaction Layer. The RTE supports a "signal fan-out" where the same System Signal Group is sent in different SignalIPdus to multiple receivers. An ISignalGroup refers to a set of ISignals that shall always be kept together. A ISignal-Group represents a COM Signal Group. Therefore it is recommended to put the ISignalGroup in the same Package as ISignals (see atp.recommendedPackage)	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalGroup	
Mapping Rule	**Mapping Type**
Create this container for each ISignalGroup that exist in the ECU Extract.	full

BSW Parameter	**BSW Type**
ComDataInvalidAction	EcucEnumerationParamDef
BSW Description	
This parameter defines the action performed upon reception of an invalid signal. Relating to signal groups the action in case if one of the included signals is an invalid signal. If Replace is used the ComSignalInitValue will be used for the replacement.	
Template Description	
Specifies whether the component can actively invalidate a particular dataElement. If no invalidationPolicy points to a dataElement this is considered to yield the identical result as if the handleInvalid attribute was set to dontInvalidate.	
M2 Parameter	
SWComponentTemplate::PortInterface::InvalidationPolicy	
Mapping Rule	**Mapping Type**
If strategy HandleInvalidEnum.keep is defined then set parameter to notify. If strategy HandleInvalidEnum.replace is defined then set parameter to replace. If the parameter does not exist this corresponds to the value HandleInvalid Enum.dontInvalidate.	full

BSW Parameter		**BSW Type**
ComGroupSignal		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters of group signals. I.e. signals that are included within a signal group.		
Template Description		
Signal of the Interaction Layer. The RTE supports a "signal fan-out" where the same System Signal is sent in different SignalIPdus to multiple receivers. To support the RTE "signal fan-out" each SignalIPdu contains ISignals. If the same System Signal is to be mapped into several SignalIPdus there is one ISignal needed for each ISignalToIPduMapping. ISignals describe the Interface between the Precompile configured RTE and the potentially Postbuild configured Com Stack (see ECUC Parameter Mapping). In case of the SystemSignalGroup an ISignal must be created for each SystemSignal contained in the SystemSignalGroup.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal		
Mapping Rule		**Mapping Type**
Create Container for each ISignal that is contained in the ISignalGroup.		full
Mapping Status		**Mapping ID**
valid		up_Com_00040

BSW Module	BSW Context	
Com	Com/ComConfig/ComSignalGroup/ComGroupSignal	
BSW Parameter		**BSW Type**
ComBitPosition		EcucIntegerParamDef
BSW Description		
Starting position within the I-PDU. This parameter refers to the position in the I-PDU and not in the shadow buffer. If the endianness conversion is configured to Opaque the parameter ComBitPosition shall define the bit0 of the first byte like in little endian byte order		
Template Description		
This parameter is necessary to describe the bitposition of a signal within an SignalIPdu. It denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7. Please note that the way the bytes will be actually sent on the bus does not impact this representation: they will always be seen by the software as a byte array. If a mapping for the ISignalGroup is defined, this attribute is irrelevant and shall be ignored.		
M2 Parameter

BSW Parameter	**BSW Type**
ComSignalInitValue	EcucStringParamDef
BSW Description	

Initial value for this signal. In case of UINT8_N the default value is a string of length ComSignal-Length with all bytes set to 0x00. In case of UINT8_DYN the initial size shall be 0. In case the ComSignalType is UINT8, UINT16, UINT32, UINT64, SINT8, SINT16, SINT32, SINT64 the string shall be interpreted as defined in the chapter Integer Type in the AUTOSAR EcuC specification. In case the ComSignalType is FLOAT32, FLOAT64 the string shall be interpreted as defined in the chapter Float Type in the AUTOSAR EcuC specification. In case the ComSignalType is BOOLEAN the string shall be interpreted as defined in the chapter Boolean Type in the AUTOSAR EcuC specification. In case the ComSignal is a UINT8_N, UINT8_DYN the string shall be interpreted as a decimal representation of the characters separated by blanks, e.g. "97 98 100" means a string "abd", where the char "a" is in byte 0(lowest address), "b" is in byte 1, and "d" is in byte 2 and (highest address). For the ComSignalType UINT8_DYN the dynamic length shall be set to the number of configured characters. An empty string "" shall be interpreted as 0-sized dynamic signal.
Template Description
Initial value to be sent if sender component is not yet fully initialized, but receiver needs data already.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.initValue,SWComponentTem-plate::Communication::NonqueuedSenderComSpec.initValue

Mapping Rule	**Mapping Type**
It is possible to aggregate an initValue at the level of a ComSpec in the SW C Template. in case the System Description doesn't use a complete Software Component Description (VFB View) the initValue is defined in the System Tem-plate.	full
Mapping Status	**Mapping ID**
valid	up_Com_00081

BSW Module	**BSW Context**
Com	Com/ComConfig/ComSignalGroup/ComGroupSignal

BSW Parameter	**BSW Type**
ComSignalLength	EcucIntegerParamDef

BSW Description
Description: For ComSignalType UINT8_N this parameter specifies the length n in bytes. For ComSignalType UINT8_DYN it specifies the maximum length in bytes. For all other types this parameter shall be ignored. The supported maximum length is restricted by the used transportation system. For non TP-PDUs the maximum size of a PDU, and therefore also of any included signal, is limited by the concrete bus characteristic. For example, the limit is 8 bytes for CAN and LIN, 64 bytes for CAN FD and 254 for FlexRay.
Template Description
Size of the signal in bits. The size needs to be derived from the mapped VariableDataPrototype according to the mapping of primitive DataTypes to BaseTypes as used in the RTE. Indicates maximum size for dynamic length signals. The ISignal length of zero bits is allowed.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.length

Mapping Rule	**Mapping Type**
ComSignalLength = ISignal.length / 8 (i.e. value of baseTypeSize)	full
Mapping Status	**Mapping ID**

valid	up_Com_00065

BSW Module	**BSW Context**
Com	Com/ComConfig/ComSignalGroup/ComGroupSignal
BSW Parameter	**BSW Type**
ComSignalType	EcucEnumerationParamDef
BSW Description	
The AUTOSAR type of the signal. Whether or not the signal is signed or unsigned can be found by examining the value of this attribute. This type could also be used to reserved appropriate storage in AUTOSAR COM.	
Template Description	
With the aggregation of SwDataDefProps an ISignal specifies how it is represented on the network. This representation follows a particular policy. Note that this causes some redundancy which is intended and can be used to support flexible development methodology as well as subsequent integrity checks. If the policy "networkRepresentationFromComSpec" is chosen the network representation from the ComSpec that is aggregated by the PortPrototype shall be used. If the "override" policy is chosen the requirements specified in the PortInterface and in the ComSpec are not fulfilled by the networkRepresentationProps. In case the System Description doesn't use a complete Software Component Description (VFB View) the "legacy" policy can be chosen.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.dataTypePolicy	
Mapping Rule	**Mapping Type**

The mapping depends from the setting in the ISignal.dataTypePolicy:
 	
- ISignal.dataTypePolicy = override or legacy:
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal.networkRepresentationProps.swBaseType
 	
- ISignal.dataTypePolicy = networkRepresentationFromComSpec:
if defined on ComSpec:
SWComponentTemplate::Communication::SenderComSpec.networkRepresentation.swBaseType
SWComponentTemplate::Communication::SenderComSpec.compositeNetworkRepresentation.networkRepresentation.swBaseType
 	
SWComponentTemplate::Communication::ReceiverComSpec.networkRepresentation.swBaseType SWComponentTemplate::Communication::ReceiverComSpec.compositeNetworkRepresentation.networkRepresentation.swBaseType
 	
if not defined on ComSpec:
CommonStructure::ImplementationDataTypes::ImplementationDataType.swDataDefProps.swBaseType
Find the ImplementationDataType according to TPS_SYST_02079 and access SwDataDefProps.swBaseType.
 	
Consequence: If two SenderReceiverToSignalMappings that point to the same SystemSignal result in incompatible BaseTypes (see constr_1220 in SoftwareComponentTemplate) => ComSignalType should not be configured.
 	
- ISignal.dataTypePolicy = portInterfaceDefinition --> option has atpStatus "removed", in consequence no mapping is available."
 	
- ISignal.dataTypePolicy = transformingISignal
Hardcoded to UINT8_N or UINT8_DYN.
Datatype can be derived from SystemSignal.dynamicLength:
UINT8_N should be used if SystemSignal.dynamicLength = false
UINT8_DYN should be used if SystemSignal.dynamicLength = true

1:1 mapping		full
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Com	Com/ComConfig/ComSignalGroup	
BSW Parameter		**BSW Type**
ComTimeout		EcucFloatParamDef
BSW Description		

Defines the length of the deadline monitoring timeout period in seconds. The period for the first timeout period can be configured separately by ECUC_Com_00183.
Template Description
NonqueuedReceiverComSpec.aliveTimeout: Specify the amount of time (in seconds) after which the software component (via the RTE) needs to be notified if the corresponding data item have not been received according to the specified timing description. If the aliveTimeout attribute is 0 no timeout monitoring shall be performed. **ISignalPort.timeout**: Optional timeout value in seconds for the reception of the ISignal. In case the System Description doesn't use a complete Software Component Description (VFB View). This supports the inclusion of legacy system signals. If a full DataMapping exist for the SystemSignal this information may be available from a configured ReceiverComSpec, in this case the timeout value in ReceiverComSpec override this optional timeout specification.
M2 Parameter
SWComponentTemplate::Communication::NonqueuedReceiverComSpec.aliveTimeout,System Template::Fibex::FibexCore::CoreCommunication::ISignalPort.timeout

Mapping Rule	**Mapping Type**
If a full DataMapping exist for the SystemSignal this information may be available from a configured NonqueuedReceiverComSpec. In this case the timeout value in ReceiverComSpec overrides the optional timeout specification in the System Template. Please note that the SWS_RTE defines an algorithm to finally set the applicable timeout value.	full
Mapping Status	**Mapping ID**
valid	up_Com_00068

BSW Module	**BSW Context**
Com	Com/ComConfig/ComSignalGroup

BSW Parameter	**BSW Type**
ComTimeoutNotification	EcucFunctionNameDef
BSW Description	
On sender side: Name of Com_CbkTxTOut callback function to be called. On receiver side: Name of Com_CbkRxTOut callback function to be called.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Com	Com/ComConfig/ComSignalGroup

BSW Parameter	**BSW Type**
ComTransferProperty	EcucEnumerationParamDef
BSW Description	

Defines if a write access to this signal can trigger the transmission of the corresponding I-PDU. If the I-PDU is triggered, depends also on the transmission mode of the corresponding I-PDU.
Template Description
Defines how the referenced ISignal contributes to the send triggering of the ISignalIPdu.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.transferProperty

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Com_00069

BSW Module	**BSW Context**
Com	Com/ComConfig/ComSignalGroup

BSW Parameter	**BSW Type**
ComUpdateBitPosition	EcucIntegerParamDef

BSW Description
Bit position of update-bit inside I-PDU. If this attribute is omitted then there is no update-bit. This setting must be consistently on sender and on receiver side. Range: 0..63 for CAN and LIN, 0..511 for CAN FD, 0..2031 for FlexRay, 0..4294967295 for TP.
Template Description
The UpdateIndicationBit indicates to the receivers that the signal (or the signal group) was updated by the sender. Length is always one bit. The UpdateIndicationBitPosition attribute describes the position of the update bit within the SignalIPdu. For Signals of a ISignalGroup this attribute is irrelevant and shall be ignored. Note that the exact bit position of the updateIndicationBitPosition is linked to the value of the attribute packingByteOrder because the method of finding the bit position is different for the values mostSignificantByteFirst and mostSignificantByteLast. This means that if the value of packingByteOrder is changed while the value of updateIndicationBitPosition remains unchanged the exact bit position of updateIndicationBitPosition within the enclosing ISignalIPdu still undergoes a change. This attribute denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping.updateIndication BitPosition

C.1.2 LdCom Mapping

BSW Module	BSW Context
LdCom	LdCom

BSW Parameter	BSW Type
LdComConfig	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters and sub containers of the AUTOSAR LdCom module.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LdCom	LdCom/LdComConfig
BSW Parameter	**BSW Type**
LdComIPdu	EcucParamConfContainerDef
BSW Description	
Contains the configuration parameters of the IPdu inside LdCom.	
Template Description	
Represents the IPdus handled by Com. The ISignalIPdu assembled and disassembled in AUTOSAR COM consists of one or more signals. In case no multiplexing is performed this IPdu is routed to/from the Interface Layer. A maximum of one dynamic length signal per IPdu is allowed.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalIPdu	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LdCom_00001

BSW Module	BSW Context
LdCom	LdCom/LdComConfig/LdComIPdu
BSW Parameter	**BSW Type**
LdComApiType	EcucEnumerationParamDef
BSW Description	
Defines if this I-PDU is a normal I-PDU that shall be sent unfragmented or if this is a large I-PDU that shall be sent via the Transport Protocol of the underlying bus. This setting is used by RTE to invoke the proper API.	
Template Description	
Contains all configuration elements for AUTOSAR TP.	
M2 Parameter	
SystemTemplate::TransportProtocols::TpConfig	

Mapping Rule	Mapping Type
If this LdComIPdu is mapped in the System Description by a TpConnection to NPdus then set LdComApiType to TP. Otherwise set LdComApiType to IF.	full
Mapping Status	**Mapping ID**
valid	up_LdCom_00002

BSW Module	BSW Context	
LdCom	LdCom/LdComConfig/LdComIPdu	
BSW Parameter		**BSW Type**
LdComHandleId		EcucIntegerParamDef
BSW Description		
This is the ID used by RTE to invoke LdCom. A corresponding shortName is created, which is used for the invocations of the RTE. The same ID is used for invocations by PduR.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**

BSW Module	BSW Context
IpduM	IpduM/IpduMConfig/IpduMRxPathway/IpduMRxIndication
BSW Parameter	**BSW Type**
IpduMByteOrder	EcucEnumerationParamDef
BSW Description	
This parameter defines the ByteOrder for all segments (static and dynamic part) and for the selectorField within the MultiplexedPdu. The absolute position of a segment in the MultiplexedIPdu is determined by the definition of the ByteOrder parameter: If BIG_ENDIAN is specified, the SegmentPosition indicates the bit position of the most significant bit in an IPDU. If LITTLE_ENDIAN is specified, the SegmentPosition indicates the bit position of the least significant bit in an IPDU.	
Template Description	
MultiplexedIPdu.selectorFieldByteOrder: This attribute defines the order of the bytes of the selectorField and the packing into the MultiplexedIPdu. Please consider that [constr_3247] and [constr_3223] are restricting the usage of this attribute. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1. **SegmentPosition.segmentByteOrder**: This attribute defines the order of the bytes of the segment and the packing into the MultiplexedIPdu. Please consider that [constr_3247] and [constr_3224] are restricting the usage of this attribute.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::MultiplexedIPdu.selectorFieldByteOrder, SystemTemplate::Fibex::FibexCore::CoreCommunication::SegmentPosition.segmentByteOrder	
Mapping Rule	**Mapping Type**

A mix between Little Endian and Big Endian within a MultiplexedIPdu is not allowed.	full

BSW Module	**BSW Context**
IpduM	IpduM/IpduMConfig/IpduMRxPathway/IpduMRxIndication
BSW Parameter	**BSW Type**
IpduMRxDynamicPart	EcucParamConfContainerDef
BSW Description	
This container contains the configuration for the dynamic part of incoming RxIndication calls. When an incoming received I-PDU's selector field matches the IpduMRxSelectorValue, the new outgoing I-PDU for the dynamic part is constructed as defined by the segments (defined in the IpduMDynamicSegment container) and sent out with the I-PDU ID referenced by IpduMOutgoingDynamicPduRef. In case no dynamic part shall be extracted from this received I-PDU this container does not exist. This use-case can occur in case a MultiplexedIPdu is received by an ECU which is only interested in the static part of the MultiplexedIPdu.	
Template Description	
One of the Com IPdu alternatives that are transmitted in the Dynamic Part of the MultiplexedIPdu. The selectorFieldCode specifies which Com IPdu is contained in the DynamicPart within a certain transmission of a multiplexed PDU.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::DynamicPartAlternative	
Mapping Rule	**Mapping Type**
Create container for each DynamicPartAlternative of the MultiplexedIPdu.	full

BSW Module	**BSW Context**
IpduM	IpduM/IpduMConfig/IpduMRxPathway/IpduMRxIndication
BSW Parameter	**BSW Type**
IpduMRxDynamicSegment	EcucParamConfContainerDef
BSW Description	
The dynamic part of the multiplexed incoming I-Pdu (referenced by IpduMRxIndicationPduRef) can be separated into several segments. For each segment one IpduMRxDynamicSegment container shall be created that contains the location and the length of the segment. Please note that each configured segment will be copied into the destination I-Pdu that is referenced in the IpduMRxDynamicPart container and will be copied from the same location in the multiplexed incoming I-Pdu. The segment layout for all dynamic Parts is always identical.	
Template Description	
The StaticPart and the DynamicPart can be separated in multiple segments within the multiplexed PDU. The ISignalIPdus are copied bit by bit into the MultiplexedIPdu. If the space of the first segment is 5 bits large than the first 5 bits of the ISignalIPdu are copied into this first segment and so on.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::SegmentPosition

BSW Module	**BSW Context**
IpduM	IpduM/IpduMConfig/IpduMTxPathway/IpduMTxRequest
BSW Parameter	**BSW Type**
IpduMByteOrder	EcucEnumerationParamDef
BSW Description	
This parameter defines the ByteOrder for all segments (static and dynamic part) and for the selectorField within the MultiplexedPdu. The absolute position of a segment in the MultiplexedIPdu is determined by the definition of the ByteOrder parameter: If BIG_ENDIAN is specified, the SegmentPosition indicates the bit position of the most significant bit in an IPDU. If LITTLE_ENDIAN is specified, the SegmentPosition indicates the bit position of the least significant bit in an IPDU.	
Template Description	

MultiplexedIPdu.selectorFieldByteOrder: This attribute defines the order of the bytes of the selectorField and the packing into the MultiplexedIPdu. Please consider that [constr_3247] and [constr_3223] are restricting the usage of this attribute. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1. **SegmentPosition.segmentByteOrder**: This attribute defines the order of the bytes of the segment and the packing into the MultiplexedIPdu. Please consider that [constr_3247] and [constr_3224] are restricting the usage of this attribute.

IpduM	IpduM/IpduMConfig/IpduMTxPathway/IpduMTxRequest/IpduMTxDynamic Segment
BSW Parameter	**BSW Type**
IpduMSegmentPosition	EcucIntegerParamDef
BSW Description	
Segments bit position in the multiplexed Pdu.	
Template Description	

Segments bit position relatively to the beginning of a multiplexed IPdu. Note that the absolute position of the segment in the MultiplexedIPdu is determined by the definition of the segmentByteOrder attribute of the SegmentPosition. If Big Endian is specified, the start position indicates the bit position of the most significant bit in the IPdu. If Little Endian is specified, the start position indicates the bit position of the least significant bit in the IPdu. In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::SegmentPosition.segmentPosition

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_IpduM_00043

BSW Module	**BSW Context**
IpduM	IpduM/IpduMConfig/IpduMTxPathway/IpduMTxRequest

BSW Parameter	**BSW Type**
IpduMTxStaticPart	EcucParamConfContainerDef

BSW Description
Configuration parameters for an instance of a Tx_Request call into the IpduM. When a Tx Request with the IpduMTxStaticHandleId is received by the IpduM, all segments (defined in the IpduMStaticSegment container) are copied from the incoming I-PDU into the outgoing I-PDU buffer and then the send mode honored. This container is used for the static part of a TxRequest configuration. Therefore, for each outgoing I-PDU there will be one instance of this container for the static part if it exists.
Template Description
Some parts/signals of the I-PDU may be the same regardless of the selector field. Such a part is called static part. The static part is optional.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::StaticPart

Mapping Rule	**Mapping Type**
Create container if StaticPart exists in the MultiplexedIPdu.	full
Mapping Status	**Mapping ID**
valid	up_IpduM_00009

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
IpduM	IpduM/IpduMConfig/IpduMTxPathway/IpduMTxRequest

BSW Parameter	BSW Type
IpduMTxStaticSegment	EcucParamConfContainerDef
BSW Description	
The static part of the multiplexed outgoing I-Pdu (referenced by IpduMOutgoingPduRef) can be separated into several segments. For each segment one IpduMTxStaticSegment container shall be created that contains the location and the length of the segment. Please note that each segment in the source I-Pdu that is referenced in the IpduMTxStaticPart container will be copied to the same location in the multiplexed outgoing I-Pdu.	
Template Description	
The StaticPart and the DynamicPart can be separated in multiple segments within the multiplexed PDU. The ISignalIPdus are copied bit by bit into the MultiplexedIPdu. If the space of the first segment is 5 bits large than the first 5 bits of the ISignalIPdu are copied into this first segment and so on.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::SegmentPosition	
Mapping Rule	**Mapping Type**
Shall be derived from segmentPosition elements that are aggregated by the StaticPart.	full

IpduM	IpduM/IpduMConfig/IpduMTxPathway/IpduMTxRequest

BSW Parameter	**BSW Type**
IpduMTxTriggerMode	EcucEnumerationParamDef

BSW Description
Selects whether to send the multiplexed I-PDU immediately or at some later date.
Template Description
IPduM can be configured to send a transmission request for the new multiplexed IPdu to the PDU-Router because of the trigger conditions/ modes that are described in the TriggerMode enumeration. In a complete System Description this attribute is mandatory. If a MultiplexedPdu is received by a Pdu Gateway and is not delivered to the IPduM but routed directly to a bus interface then the content of the MulitplexedPdu doesn't need to be described in the System Extract/Ecu Extract. To support this use case the multiplicity is set to 0..1.
M2 Parameter

BSW Module	BSW Context
SecOC	SecOC/SecOCTxPduProcessing/SecOCTxSecuredPduLayer/SecOCTxSecuredPdu
BSW Parameter	**BSW Type**
SecOCAuthPduHeaderLength	EcucIntegerParamDef
BSW Description	
This parameter indicates the length (in bytes) of the Secured I-PDU Header in the Secured I-PDU. The length of zero means there's no header in the PDU.	
Template Description	
This attribute defines the size of the header which is inserted into the SecuredIPdu. If this attribute is set to anything but noHeader, the SecuredIPdu contains the Secured I-PDU Header to indicate the length of the AuthenticIPdu. The AuthenticIPdu contains the original payload, i.e. the secured data.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::SecuredIPdu.useSecuredPduHeader	
Mapping Rule	**Mapping Type**
The SecOCAuthPduHeaderLength value shall be derived from useSecuredPduHeader in the following way: If useSecuredIPduHeader is set to "noHeader" the value shall be 0. If useSecuredIPduHeader is set to "securedPduHeader08Bit" the value shall be 1. If useSecuredIPduHeader is set to "securedPduHeader16Bit" the value shall be 2. C.1.5 PduR

BSW Module	BSW Context
PduR	PduR
BSW Parameter	**BSW Type**
PduRBswModules	EcucParamConfContainerDef
BSW Description	

Each container describes a specific BSW module (upper/CDD/lower/IpduM) that the PDU Router shall interface to. The reason to have it as own configuration container instead of implication of the routing path is to be able to configure CDDs properly and to force module's to be used in a post-build situation even though no routing is made to/from this module (future configurations may include these modules).
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
PduR	PduR/PduRBswModules

BSW Parameter	**BSW Type**
PduRBswModuleRef	EcucForeignReferenceDef

BSW Description
This is a reference to one BSW module's configuration (i.e. not the ECUC parameter definition template). Example, there could be several configurations of LinIf and this reference selects one of them.
Template Description
Head of the configuration of one Module. A Module can be a BSW module as well as the RTE and ECU Infrastructure. As part of the BSW module description, the EcucModuleConfigurationValues element has two different roles: The recommendedConfiguration contains parameter values recommended by the BSW module vendor. The preconfiguredConfiguration contains values for those parameters which are fixed by the implementation and cannot be changed. These two EcucModuleConfigurationValues are used when the base EcucModuleConfigurationValues (as part of the base ECU configuration) is created to fill parameters with initial values.
M2 Parameter
ECUCDescriptionTemplate::EcucModuleConfigurationValues

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
PduR	PduR/PduRBswModules

BSW Parameter	**BSW Type**
PduRCancelReceive	EcucBooleanParamDef
BSW Description	

Specifies if the Transport protocol module supports the CancelReceive API or not. Value true the API is supported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
PduR	PduR/PduRBswModules
BSW Parameter	**BSW Type**
PduRCancelTransmit	EcucBooleanParamDef
BSW Description	
Specifies if the BSW module supports the CancelTransmit API or not. Value true the API is supported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
PduR	PduR/PduRBswModules
BSW Parameter	**BSW Type**
PduRCommunicationInterface	EcucBooleanParamDef
BSW Description	
Specifies if the BSW module supports the Communication Interface APIs or not. Value true the APIs are supported. A module can have both Communication Interface APIs and Transport Protocol APIs (e.g. the COM module).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
PduR	PduR/PduRBswModules
BSW Parameter	**BSW Type**
PduRLowerModule	EcucBooleanParamDef

BSW Description
The PduRLowerModule will decide who will call the APIs and who will implement the APIs. For example, if the CanIf module is referenced then the PDU Router module will implement the PduR_CanIfRxIndication API. And the PDUR module will call the CanIf_Transmit API. Other APIs are of course also covered. An upper module can also be an lower module (e.g. the IpduM module).
Template Description

BSW Module	BSW Context	
PduR	PduR/PduRRoutingPaths	
BSW Parameter		**BSW Type**
PduRRoutingPath		EcucParamConfContainerDef
BSW Description		
This container is a subcontainer of PduRRoutingTable and specifies the routing path of a PDU.		
Template Description		
IPduMapping: Arranges those IPdus that are transferred by the gateway from one channel to the other in pairs and defines the mapping between them. **PduTriggering**: The PduTriggering describes on which channel the IPdu is transmitted. The Pdu routing by the PduR is only allowed for subclasses of IPdu. Depending on its relation to entities such channels and clusters it can be unambiguously deduced whether a fan-out is handled by the Pdu router or the Bus Interface. If the fan-out is specified between different clusters it shall be handled by the Pdu Router. If the fan-out is specified between different channels of the same cluster it shall be handled by the Bus Interface. **TpConfig**: Contains all configuration elements for AUTOSAR TP.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Multiplatform::IPduMapping,SystemTemplate::Fibex::FibexCore::CoreCommunication::PduTriggering,SystemTemplate::TransportProtocols::TpConfig		
Mapping Rule		**Mapping Type**
For each MultiplatformGateway.pduMapping; for each SignalPdu-Multiplexed Pdu Connection; for each IPduTriggering; for each TpConfig create one PduRRoutingPath.		full

PduRDefaultValue		EcucParamConfContainerDef
BSW Description		

Specifies the default value of the I-PDU. Only required for gateway operation and if at least one PDU specified by PduRDestPdu uses TriggerTransmit Data provision. Represented as an array of IntegerParamDef.
Template Description
M2 Parameter
SystemTemplate::Fibex::Fibex4Multiplatform::TargetIPduRef.defaultValue

Mapping Rule	**Mapping Type**
Container should be created if PduMappingDefaulValue is described in the Sys-T	full
Mapping Status	**Mapping ID**
valid	up_PduR_00004

BSW Module	**BSW Context**
PduR	PduR/PduRRoutingPaths/PduRRoutingPath/PduRDefaultValue

BSW Parameter	**BSW Type**
PduRDefaultValueElement	EcucParamConfContainerDef

BSW Description
Each value element is represented by the element and the position in an array.
Template Description
The default value consists of a number of elements. Each element is one byte long and the number of elements is specified by SduLength.
M2 Parameter
SystemTemplate::Fibex::Fibex4Multiplatform::DefaultValueElement

Mapping Rule	**Mapping Type**
Container must be created for each DefaultValueElement that is aggregated by PduMappingDefaultValue	full
Mapping Status	**Mapping ID**
valid	up_PduR_00005

BSW Module	**BSW Context**
PduR	PduR/PduRRoutingPaths/PduRRoutingPath/PduRDefaultValue/PduRDefault ValueElement

BSW Parameter	**BSW Type**
PduRDefaultValueElement	EcucIntegerParamDef

BSW Description
The default value consists of a number of elements. Each element is one byte long and the number of elements is specified by SduLength. The position of this parameter in the container is specified by the PduRElementBytePosition parameter.
Template Description
The integer value of a freely defined data byte.
M2 Parameter
SystemTemplate::Fibex::Fibex4Multiplatform::DefaultValueElement.elementByteValue

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_PduR_00006

valid	

BSW Module	**BSW Context**
PduR	PduR/PduRRoutingPaths/PduRRoutingPath
BSW Parameter	**BSW Type**
PduRTpThreshold	EcucIntegerParamDef
BSW Description	

This parameter is only relevant for TP routings. When configured, it enables on-the-fly routing and defines the number of bytes which must have been received before transmission on the destination bus may start. When omitted, direct TP routing is enforced. The PduRouter shall ensure that a buffer is allocated for this routing path which is at least as large as the threshold.
Template Description
Optionally defines the to be configured Pdu Router TpChunkSize for this routing relation.
M2 Parameter
SystemTemplate::Fibex::Fibex4Multiplatform::IPduMapping.pdurTpChunkSize

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_PduR_00008

BSW Module	**BSW Context**
PduR	PduR/PduRRoutingPaths

BSW Parameter	**BSW Type**
PduRRoutingPathGroup	EcucParamConfContainerDef

BSW Description
This container groups routing path destinations. Destinations are used instead of routing paths since a routing path can be 1:n. It is desirable to be able to enable/disable a specific bus (i.e. a destination) rather than a routing path. Of course it is possible to create groups that covers specific routing paths as well. Enabling and disabling of routing path groups are made using the PduR API
Template Description
The AUTOSAR PduR will enable and disable the sending of configurable groups of IPdus during runtime according to the AUTOSAR PduR specification.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::PdurIPduGroup

Mapping Rule	**Mapping Type**
Create container for each existing PduRIPduGroup that is connected to the regarded Ecu	full
Mapping Status	**Mapping ID**
valid	up_PduR_00001

BSW Module	**BSW Context**
PduR	PduR/PduRRoutingPaths/PduRRoutingPathGroup

BSW Parameter	**BSW Type**
PduRIsEnabledAtInit	EcucBooleanParamDef

BSW Description
If set to true this routing path group will be enabled after initializing the PDU Router module (i.e. enabled in the PduR_Init function).
Template Description

BSW Parameter	**BSW Type**
PduRPduMaxLength	EcucIntegerParamDef
BSW Description	
Length of the Tx buffer in bytes. This parameter limits the size of buffered routed PDUs.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

C.1.6 Nm Interface

BSW Module	**BSW Context**
Nm	Nm
BSW Parameter	**BSW Type**
NmChannelConfig	EcucParamConfContainerDef
BSW Description	
This container contains the configuration (parameters) of the bus channel(s). The channel parameter shall be harmonized within the whole communication stack.	
Template Description	
Set of NM nodes coordinated with use of the NM algorithm.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster	
Mapping Rule	**Mapping Type**
Create Container for each existing NmCluster.	full
Mapping Status	**Mapping ID**
valid	up_Nm_00015

BSW Module	**BSW Context**
Nm	Nm/NmChannelConfig
BSW Parameter	**BSW Type**
NmActiveCoordinator	EcucBooleanParamDef
BSW Description	

This parameter indicates whether a NM channel - part of a Nm Coordination cluster - will be coordinated actively (NmActiveCoordinator = TRUE) or passively (NmActiveCoordinator = FALSE).	
Template Description	
This attribute indicates the role the NM Coordinator will have on this channel.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.nmCoordinatorRole	
Mapping Rule	**Mapping Type**
If nmCoordinatorRole is set to Active then NmActiveCoordinator shall be present and set to true. If nmCoordinatorRole is set to Passive then NmActiveCoordinator shall be present and set to false.	full
Mapping Status	**Mapping ID**
valid	up_Nm_00020

BSW Module	**BSW Context**
Nm	Nm/NmChannelConfig
BSW Parameter	**BSW Type**
NmBusType	EcucChoiceContainerDef
BSW Description	
Template Description	
CanNmCluster: Can specific NmCluster attributes **FlexrayNmCluster**: FlexRay specific NM cluster attributes. **UdpNmCluster**: Udp specific NmCluster attributes	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster,SystemTemplate::NetworkManagement::FlexrayNmCluster,SystemTemplate::NetworkManagement::UdpNmCluster	
Mapping Rule	**Mapping Type**
Bus Type can be derived from the BusNm Configuration in the System Description.	full
Mapping Status	**Mapping ID**

BSW Module	BSW Context	
EcuC	EcuC/EcucConfigSet/EcucPduCollection/Pdu	
BSW Parameter		**BSW Type**
SysTPduToFrameTriggeringRef		EcucForeignReferenceDef
BSW Description		

Reference to the FrameTriggering from the SystemTemplate which this Pdu belongs to. SysTPduToFrameTriggeringRef shall be used for UserDefinedPdus, NmPdus and NPdus which are not going through the Pdu Router. This reference shall not be used if SysTPduToPduTriggeringRef exists.
Template Description
The FrameTriggering describes the instance of a frame sent on a channel and defines the manner of triggering (timing information) and identification of a frame on the channel, on which it is sent. For the same frame, if FrameTriggerings exist on more than one channel of the same cluster the fan-out/in is handled by the Bus interface.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::FrameTriggering

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EcuC	EcuC/EcucConfigSet/EcucPduCollection/Pdu

BSW Parameter	**BSW Type**
SysTPduToPduTriggeringRef	EcucForeignReferenceDef

BSW Description
Reference to the PduTriggering from the SystemTemplate which this Pdu represents. SysTPduToPduTriggeringRef shall be used for all Pdus except UserDefinedPdus, NmPdus and NPdus which are not going through the Pdu Router. For these Pdus, SysTPduToFrameTriggeringRef shall be used.
Template Description
The PduTriggering describes on which channel the IPdu is transmitted. The Pdu routing by the PduR is only allowed for subclasses of IPdu. Depending on its relation to entities such channels and clusters it can be unambiguously deduced whether a fan-out is handled by the Pdu router or the Bus Interface. If the fan-out is specified between different clusters it shall be handled by the Pdu Router. If the fan-out is specified between different channels of the same cluster it shall be handled by the Bus Interface.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreCommunication::PduTriggering

Mapping Rule	**Mapping Type**

valid	

BSW Module	**BSW Context**
EcuC	EcuC/EcucConfigSet/EcucPduCollection

BSW Parameter	**BSW Type**
PduIdTypeEnum	EcucEnumerationParamDef
BSW Description	

The PduIdType is used within the entire AUTOSAR Com Stack except for bus drivers. The size of this global type depends on the maximum number of PDUs used within one software module. If no software module deals with more PDUs that 256, this type can be set to uint8. If at least one software module handles more than 256 PDUs, this type must be set to uint16. See AUTOSAR_SWS_CommunicationStackTypes for more details.

Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EcuC	EcuC/EcucConfigSet/EcucPduCollection

BSW Parameter	**BSW Type**
PduLengthTypeEnum	EcucEnumerationParamDef

BSW Description
The PduLengthType is used within the entire AUTOSAR Com Stack except for bus drivers. The size of this global type depends on the maximum length of PDUs to be sent by an ECU. If no segmentation is used the length depends on the maximum payload size of a frame of the underlying communication system (for FlexRay maximum size is 255 bytes, therefore uint8). If segmentation is used it depends on the maximum length of a segmented N-SDU (in general uint16 is used). See AUTOSAR_SWS_CommunicationStackTypes for more details.

BSW Module	BSW Context
EcuC	EcuC/EcucUnitGroupAssignment
BSW Parameter	**BSW Type**
EcucUnitGroupRef	EcucForeignReferenceDef
BSW Description	
Optional reference to the UnitGroup to support the generation of ASAM MCD file. These UnitGroups are selecting a set of units for a specific country.	
Template Description	
This meta-class represents the ability to specify a logical grouping of units.The category denotes the unit system that the referenced units are associated to. In this way, e.g. country-specific unit systems (CATEGORY="COUNTRY") can be defined as well as specific unit systems for certain application domains. In the same way a group of equivalent units, can be defined which are used in different countries, by setting CATEGORY="EQUIV_UNITS". KmPerHour and MilesPerHour could such be combined to one group named "vehicle_speed". The unit MeterPerSec would not belong to this group because it is normally not used for vehicle speed. But all of the mentioned units could be combined to one group named "speed". Note that the UnitGroup does not ensure the physical compliance of the units. This is maintained by the physical dimension.

Reference to the ComMUser that corresponds to this channel user. ImplementationType: COMM_UserHandleType	
Template Description	
Mode Management PortGroup to be mapped onto a communication channel. This reference is optional in case that the System Description doesn't use a complete Software Component Description (VFB View). This supports the inclusion of legacy systems.	
M2 Parameter	
SystemTemplate::ComManagementMapping.comManagementPortGroup	
Mapping Rule	**Mapping Type**
The ComMUser reference shall be derived from the ComMgrUserNeeds which are referenced by the ComManagementMapping. Further mappings may be required from an ECU integration point of view.	partial
Mapping Status	**Mapping ID**
valid	up_ComM_00011

BSW Module	**BSW Context**
ComM	ComM/ComMConfigSet
BSW Parameter	**BSW Type**
ComMPnc	EcucParamConfContainerDef
BSW Description	
This container contains the configuration of the partial network cluster (PNC).	
Template Description	
Describes a mapping between one or several Virtual Function Clusters onto Partial Network Clusters. A Virtual Function Cluster is realized by a PortGroup. A Partial Network Cluster is realized by one or more IPduGroups.	
M2 Parameter	
SystemTemplate::PncMapping::PncMapping	

Mapping Rule	Mapping Type
Create ComMPnc container for each PncMapping element.	full
Mapping Status	**Mapping ID**
valid	up_ComM_00004

BSW Module	BSW Context	
ComM	ComM/ComMConfigSet/ComMPnc	
BSW Parameter		**BSW Type**
ComMChannelPerPnc		EcucReferenceDef
BSW Description		
Reference to the ComMChannel that is required for this PNC. ImplementationType: NetworkHandleType		
Template Description		
PncMapping.pncGroup: IPduGroup participating in a Partial Network Cluster. This reference is optional in case an ecu extract has only indirect pnc access, i.e. ecu is not directly conntected to a network which supports partial network. **PncMapping.physicalChannel**: This reference maps the partial network to a communication channel.		
M2 Parameter		
SystemTemplate::PncMapping::PncMapping.pncGroup,SystemTemplate::PncMapping::PncMapping.physicalChannel		
Mapping Rule		**Mapping Type**
The ComMChannels that need to be referenced shall be derived from the PhysicalChannels that are either reachable by PncMapping.pncGroup or by PncMapping.physicalChannel. From the pncGroup reference all ISignalIPduGroups can be retrieved to which the PncMapping refers to. From the ISignalIPduGroup all ISignalIPdus shall be collected that are contained in the ISignalIPduGroup or one of the sub ISignalIPduGroups. The search for all PduTriggerings associated with these ISignalIPdus provides a set of PhysicalChannels since the PduTriggerings are directly aggregated by a PhysicalChannel. In addition to the PhysicalChannels that are retrieved from the PncMapping.pncGroup the directly referenced PncMapping.physicalChannel shall be added. Please note that the PncMapping.physicalChannel reference was introduced in Release 4.4.0 and for backward compatibility reasons nobody is forced to configure this new reference. Therefore the old approach via the Pnc Mapping.pncGroup shall still be respected.		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
ComM	ComM/ComMConfigSet/ComMPnc	
BSW Parameter		**BSW Type**
ComMPncComSignal		EcucParamConfContainerDef

BSW Description	
Represents the PncComSignals which are used to communicate the EIRA and ERA status of this PNC.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMConfigSet/ComMPnc/ComMPncComSignal
BSW Parameter	**BSW Type**
ComMPncComSignalChannelRef	EcucReferenceDef
BSW Description	
Reference to the ComMChannel which is used to determine whether this PncComSignal shall participate in the active or passive role (via the parameter ComMPncGatewayType of the ComMChannel).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMConfigSet/ComMPnc/ComMPncComSignal
BSW Parameter	**BSW Type**
ComMPncComSignalDirection	EcucEnumerationParamDef
BSW Description	
Indicates the communication direction of this PncComSignal.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMConfigSet/ComMPnc/ComMPncComSignal
BSW Parameter	**BSW Type**
ComMPncComSignalKind	EcucEnumerationParamDef
BSW Description	

Indicates whether this PncComSignal represents EIRA or ERA PNC information. This parameter ComMPncComSignalKind is optional and shall be ignored when ComMPncComSignalDirection equals TX.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
ComM	ComM/ComMConfigSet/ComMPnc/ComMPncComSignal

BSW Parameter	**BSW Type**
ComMPncComSignalRef	EcucReferenceDef
BSW Description	
Reference to the ComSignal which is used to transport the partial network channel request information.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
ComM	ComM/ComMConfigSet/ComMPnc

BSW Parameter	**BSW Type**
ComMPncEthIfSwitchPortGroupRef	EcucReferenceDef
BSW Description	
Reference to the PortGroups that correspond to this PNC. Note: This is only for documentation.	
Template Description	
Reference to the partial networks this CouplingPort participates in.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort.pncMapping	

Mapping Rule	**Mapping Type**
The references are derived from the reference CouplingPort to PNC_Mapping.	full
Mapping Status	**Mapping ID**
valid	up_ComM_00009

BSW Module	**BSW Context**
ComM	ComM/ComMConfigSet/ComMPnc

BSW Parameter	**BSW Type**
ComMPncId	EcucIntegerParamDef
BSW Description	
Partial network cluster identification number.	

Template Description	
Identifer of the Partial Network Cluster. This number represents the absolute bit position of this Partial Network Cluster in the NM Pdu.	
M2 Parameter	
SystemTemplate::PncMapping::PncMapping.pncIdentifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_ComM_00005

BSW Module	BSW Context
ComM	ComM/ComMConfigSet/ComMPnc
BSW Parameter	**BSW Type**
ComMUserPerPnc	EcucReferenceDef
BSW Description	
Reference to the ComMUsers that correspond to this PNC. ImplementationType: COMM_UserHandleType	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMConfigSet
BSW Parameter	**BSW Type**
ComMPncEnabled	EcucBooleanParamDef
BSW Description	
Defines whether in this configuration set the partial networking is enabled. true: Enabled false: Disabled	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMConfigSet
BSW Parameter	**BSW Type**
ComMUser	EcucParamConfContainerDef
BSW Description	

This container contains a list of identifiers that are needed to refer to a user in the system which is designated to request Communication modes.	
Template Description	
Specifies the abstract needs on the configuration of the Communication Manager for one "user".	
M2 Parameter	
CommonStructure::ServiceNeeds::ComMgrUserNeeds	
Mapping Rule	**Mapping Type**
In case the owner of the ComMgrUserNeeds is a BSW module then the ComMUser.shortName = {capitalizedMip}_{ServiceDependency.symbolicNameProps.symbol}.	full
Mapping Status	**Mapping ID**
valid	up_ComM_00003

BSW Module	**BSW Context**
ComM	ComM/ComMConfigSet/ComMUser
BSW Parameter	**BSW Type**
ComMUserEcucPartitionRef	EcucReferenceDef
BSW Description	
Denotes in which "EcucPartition" the requester is executed. When the partition is stopped, the communication request shall be cancelled in the ComM to avoid a stay-awake situation of the bus due to a stopped partition.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
ComM	ComM/ComMConfigSet/ComMUser
BSW Parameter	**BSW Type**
ComMUserIdentifier	EcucIntegerParamDef
BSW Description	
An identifier that is needed to refer to a user in the system which is designated to request Communication Modes. ImplementationType: ComM_UserHandleType	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
ComM	ComM

BSW Parameter	BSW Type
ComMGeneral	EcucParamConfContainerDef
BSW Description	
General configuration parameters of the Communication Manager.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComM0PncVectorAvoidance	EcucBooleanParamDef
BSW Description	
This parameter avoids sending of 0-PNC-Vectors in case ComMPncGatewayEnabled is enabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMDirectUserMapping	EcucBooleanParamDef
BSW Description	

If this parameter is set to true the configuration tool shall automatically create a ComMUser per ComMPnc and a ComMUser per ComMChannel. The shortName of the generated ComMUsers shall follow the following naming convention: PNCUser_ComMPncId, e.g. PNCUser_13 ChannelUser_ComMChannelId, e.g. ChannelUser_25 Restriction: ComMUser, which are created due to this configuration parameter, shall not be used by SWCs (only available for BswM).
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
ComM	ComM/ComMGeneral

BSW Parameter	**BSW Type**
ComMEcuGroupClassification	EcucIntegerParamDef

BSW Description
Defines whether a mode inhibition affects the ECU or not. Examples: 000: No mode inhibition can be activated 001: Wake up inhibition can be enabled
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
ComM	ComM/ComMGeneral

BSW Parameter	**BSW Type**
ComMGlobalNvMBlockDescriptor	EcucReferenceDef

BSW Description
Reference to NVRAM block containing the none volatile data. If this parameter is not configured it means that no NVRam is used at all.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMModeLimitationEnabled	EcucBooleanParamDef
BSW Description	
true if mode limitation functionality shall be enabled. true: Enabled false: Disabled	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMPncGatewayEnabled	EcucBooleanParamDef
BSW Description	
Enables or disables support of Partial Network Gateway. False: Partial Networking Gateway is disabled True: Partial Networking Gateway is enabled	
Template Description	
Defines if this EcuInstance shall implement the PncGateway functionality on this CommunicationConnector and its respective PhysicalChannel. Several EcuInstances on the same PhysicalChannel can have the PncGateway functionality enabled, but only one of them shall have the pncGatewayType "active".	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::CommunicationConnector.pncGatewayType	
Mapping Rule	**Mapping Type**
If at least one pncGatewayType attribute is defined, then ComMPncGatewayEnabled shall be set to true, if at least one CommunicationConnector of the EcuInstance has the pncGatewayType set to either active or passive. If all pncGatewayType attributes are set to none or are not defined, the value shall be set to false.	full
Mapping Status	**Mapping ID**
valid	up_ComM_00002

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMPncPrepareSleepTimer	EcucFloatParamDef
BSW Description	
Time in seconds the PNC state machine shall wait in COMM_PNC_PREPARE_SLEEP.	

Template Description	
Time in seconds the PNC state machine shall wait in PNC_PREPARE_SLEEP.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::EcuInstance.pncPrepareSleepTimer	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_ComM_00001

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMPncSupport	EcucBooleanParamDef
BSW Description	
Enables or disables support of partial networking. False: Partial Networking is disabled True: Partial Networking is enabled	
Template Description	
Describes a mapping between one or several Virtual Function Clusters onto Partial Network Clusters. A Virtual Function Cluster is realized by a PortGroup. A Partial Network Cluster is realized by one or more IPduGroups.	
M2 Parameter	
SystemTemplate::PncMapping::PncMapping	
Mapping Rule	**Mapping Type**
If at least one Pnc is configured this parameter shall be set to true. Otherwise false.	full
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMResetAfterForcingNoComm	EcucBooleanParamDef
BSW Description	
ComM shall perform a reset after entering "No Communication" mode because of an active mode limitation to "No Communication" mode. true: Enabled false: Disabled	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral

BSW Parameter	BSW Type
ComMSynchronousWakeUp	EcucBooleanParamDef
BSW Description	
Wake up of one channel shall lead to a wake up of all channels if true. true: Enabled false: Disabled	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
ComM	ComM/ComMGeneral
BSW Parameter	**BSW Type**
ComMTMinFullComModeDuration	EcucFloatParamDef
BSW Description	
Minimum time duration in seconds, spent in the COMM_FULL_COMMUNICATION sub-state COMM_FULL_COM_NETWORK_REQUESTED.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**

valid		

C.1.9 Xcp

BSW Module	BSW Context	
Xcp	Xcp	
BSW Parameter		**BSW Type**
XcpConfig		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters and sub containers of the AUTOSAR Xcp module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xcp	Xcp/XcpConfig	
BSW Parameter		**BSW Type**
XcpCommunicationChannel		EcucParamConfContainerDef
BSW Description		
This container represents the configuration of the communication channel of XCP.		
Template Description		
This meta-class allows to describe the relationship between several PduTriggerings that are defined on the same PhysicalChannel, e.g. to create a link between Rx and Tx Pdu that are used for request/response.		
M2 Parameter		
SystemTemplate::GeneralPurposeConnection::GeneralPurposeConnection		
Mapping Rule		**Mapping Type**
For each GeneralPurposeConnection of category XcpChannel one XcpCommunicationChannel shall be created.		

Mapping Status	Mapping ID
valid	up_Xcp_00004

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpCommunicationChannel
BSW Parameter	**BSW Type**
XcpChannelRxPduRef	EcucReferenceDef
BSW Description	
Optional reference to the XCP Rx PDU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpCommunicationChannel
BSW Parameter	**BSW Type**
XcpChannelTxPduRef	EcucReferenceDef
BSW Description	
Reference to the XCP Tx PDU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpCommunicationChannel
BSW Parameter	**BSW Type**
XcpComMChannelRef	EcucReferenceDef
BSW Description	
Reference to the ComM channel the PDUs belong to.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

Xcp	Xcp/XcpConfig	
BSW Parameter		**BSW Type**
XcpDaqList		EcucParamConfContainerDef
BSW Description		
This container contains the configuration of the DAQs.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Xcp	Xcp/XcpConfig/XcpDaqList	
BSW Parameter		**BSW Type**
XcpDaqListNumber		EcucIntegerParamDef
BSW Description		
Index number of the DAQ list		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Xcp	Xcp/XcpConfig/XcpDaqList	
BSW Parameter		**BSW Type**
XcpDaqListType		EcucEnumerationParamDef
BSW Description		
This indicates whether this DAQ list represents a DAQ or a STIM.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Xcp	Xcp/XcpConfig/XcpDaqList	
BSW Parameter		**BSW Type**
XcpDto		EcucParamConfContainerDef
BSW Description		
This container collects data transfer object specific parameters for the DAQ list.		

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
Xcp	Xcp/XcpConfig/XcpDaqList/XcpDto	
BSW Parameter		**BSW Type**
XcpDto2PduMapping		EcucChoiceReferenceDef
BSW Description		
This reference specifies the mapping of the DTO to the PDUs from the lower-layer interfaces (CanIf, FrIf, SoAd and Cdd). A reference to a XcpRxPdu is only feasible if the the DaqListType is DAQ_STIM. A reference to a XcpTxPdu is only feasible if the DaqListType is DAQ.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xcp	Xcp/XcpConfig/XcpDaqList/XcpDto	
BSW Parameter		**BSW Type**
XcpDtoPid		EcucIntegerParamDef
BSW Description		
Packet identifier (PID) of the DTO that identifies the ODT the content of the DTO.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xcp	Xcp/XcpConfig/XcpDaqList	
BSW Parameter		**BSW Type**
XcpMaxOdt		EcucIntegerParamDef
BSW Description		
MAX_ODT indicates the maximum amount of ODTs in this DAQ list (STATIC configuration)		

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList
BSW Parameter	**BSW Type**
XcpMaxOdtEntries	EcucIntegerParamDef
BSW Description	
This parameter indicates the maximum amount of entries in an ODT of this DAQ list (STATIC configuration).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList
BSW Parameter	**BSW Type**
XcpOdt	EcucParamConfContainerDef
BSW Description	
This container contains ODT-specific parameter for the DAQ list.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt
BSW Parameter	**BSW Type**
XcpOdt2DtoMapping	EcucReferenceDef
BSW Description	
This reference maps the ODT to the according DTO in which it will be transmitted.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt
BSW Parameter	**BSW Type**
XcpOdtEntry	EcucParamConfContainerDef
BSW Description	
This container collects all configuration parameters that comprise an ODT entry.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt/XcpOdtEntry
BSW Parameter	**BSW Type**
XcpOdtEntryAddress	EcucLinkerSymbolDef
BSW Description	
Memory address that the ODT entry is referencing to.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt/XcpOdtEntry
BSW Parameter	**BSW Type**
XcpOdtEntryBitOffset	EcucIntegerParamDef
BSW Description	
Represent the bit offset in case of the element represents status bit.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt/XcpOdtEntry
BSW Parameter	**BSW Type**
XcpOdtEntryLength	EcucIntegerParamDef
BSW Description	
Length of the referenced memory area that is referenced by the ODT entry.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt/XcpOdtEntry
BSW Parameter	**BSW Type**
XcpOdtEntryNumber	EcucIntegerParamDef
BSW Description	
Index number of the ODT entry	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt
BSW Parameter	**BSW Type**
XcpOdtEntryMaxSize	EcucIntegerParamDef
BSW Description	
This parameter indicates the upper limit for the size of the element described by an ODT entry. Depending on the DaqListType this ODT belongs to it describes the limit for a DAQ (MAX_ODT_ENTRY_SIZE_DAQ) or a STIM (MAX_ODT_ENTRY_SIZE_STIM).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpDaqList/XcpOdt
BSW Parameter	**BSW Type**

XcpOdtNumber	EcucIntegerParamDef
BSW Description	
Index number of this ODT within the DAQ list.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpConfig
BSW Parameter	**BSW Type**
XcpEventChannel	EcucParamConfContainerDef
BSW Description	
This container contains the configuration of event channels on the XCP slave.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelConsistency	EcucEnumerationParamDef
BSW Description	
Type of consistency used by event channel	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelMaxDaqList	EcucIntegerParamDef
BSW Description	
Maximum amount of DAQ lists that are handled by this event channel.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelNumber	EcucIntegerParamDef
BSW Description	
Index number of the event channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelPriority	EcucIntegerParamDef
BSW Description	
Priority of the event channel	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelTimeCycle	EcucIntegerParamDef
BSW Description	
The event channel time cycle indicates which sampling period is used to process this event channel. A value of 0 means 'Not cyclic'.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelTimeUnit	EcucEnumerationParamDef
BSW Description	
This configuration parameter indicates the unit of the event channel time cycle.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelTriggeredDaqListRef	EcucReferenceDef
BSW Description	
References all DAQ lists that are trigged by this event channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpConfig/XcpEventChannel
BSW Parameter	**BSW Type**
XcpEventChannelType	EcucEnumerationParamDef
BSW Description	
This configuration parameter indicates what kind of DAQ list can be allocated to this event channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

Xcp	Xcp/XcpConfig	
BSW Parameter		**BSW Type**
XcpPdu		EcucChoiceContainerDef
BSW Description		
Contains PDU information. A PDU may be either a transmission PDU or a reception PDU.		
Template Description		
This element is used for AUTOSAR Pdus without attributes that are routed by the PduR. Please note that the category name of such Pdus is standardized in the AUTOSAR System Template.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::GeneralPurposeIPdu		
Mapping Rule		**Mapping Type**
Create this container if a GeneralPurposeIPdu with the category "Xcp" is defined in the Ecu Extract.		full
Mapping Status		**Mapping ID**
valid		up_Xcp_00001

BSW Module	**BSW Context**	
Xcp	Xcp/XcpConfig/XcpPdu	
BSW Parameter		**BSW Type**
XcpRxPdu		EcucParamConfContainerDef
BSW Description		
This container specifies received PDUs.		
Template Description		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::PduTriggering.iPduPort		
Mapping Rule		**Mapping Type**
The direction of the Pdu can be derived from the PduTriggering that refers to the GeneralPurposePdu that represents the XcpPdu.		full
Mapping Status		**Mapping ID**
valid		up_Xcp_00002

BSW Module	**BSW Context**	
Xcp	Xcp/XcpConfig/XcpPdu/XcpRxPdu	
BSW Parameter		**BSW Type**
XcpRxPduId		EcucIntegerParamDef
BSW Description		
ID of the PDU that will be received via a Xcp_<module>RxIndication.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Xcp	Xcp/XcpConfig/XcpPdu/XcpRxPdu	
BSW Parameter		**BSW Type**

XcpRxPduRef	EcucReferenceDef
BSW Description	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpConfig/XcpPdu
BSW Parameter	**BSW Type**
XcpTxPdu	EcucParamConfContainerDef
BSW Description	
This container specifies transmission PDUs.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::PduTriggering.iPduPort	
Mapping Rule	**Mapping Type**
The direction of the Pdu can be derived from the PduTriggering that refers to the GeneralPurposePdu that represents the XcpPdu.	full
Mapping Status	**Mapping ID**
valid	up_Xcp_00003

BSW Module	**BSW Context**
Xcp	Xcp/XcpConfig/XcpPdu/XcpTxPdu
BSW Parameter	**BSW Type**
XcpTxPduId	EcucIntegerParamDef
BSW Description	
The PDU identifier, which has to be used by the lower layer BSW module for TxConfirmations or TriggerTransmits.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpConfig/XcpPdu/XcpTxPdu
BSW Parameter	**BSW Type**
XcpTxPduRef	EcucReferenceDef
BSW Description	
Reference to the external PDU definition.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
Xcp	Xcp	
BSW Parameter		**BSW Type**
XcpGeneral		EcucParamConfContainerDef
BSW Description		
This container contains the general configuration parameters of the XCP.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpCounterRef		EcucReferenceDef
BSW Description		
This parameter contains a reference to the counter, which is used by XCP.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpDaqConfigType		EcucEnumerationParamDef
BSW Description		
Sets the DAQ_CONFIG_TYPE bit within the DAQ_PROPERTIES parameter to "static" or to "dynamic". If DAQ_STATIC is selected, the DAQ_CONFIG_TYPE bit is set to "0". If DAQ_DYNAMIC is selected, the DAQ_CONFIG_TYPE bit is set to "1".		
Template Description		
M2 Parameter		

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpDaqCount	EcucIntegerParamDef
BSW Description	
Indicates the number of DAQ lists for dynamic configuration.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpFlashProgrammingEnabled	EcucBooleanParamDef
BSW Description	
Enabling of XCP Flash programming functionality	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpIdentificationFieldType	EcucEnumerationParamDef
BSW Description	
Type of Identification Field the slave will use when transferring DAQ Packets to the master. The master has to use the same Type of Identification Field when transferring STIM Packets to the slave.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpMainFunctionPeriod	EcucFloatParamDef
BSW Description	
The XCP does not require this information but the BSW scheduler, which invokes the main function, needs it in order to plan its tasks.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpMaxCto	EcucIntegerParamDef
BSW Description	
MAX_CTO shows the maximum length of a CTO packet in bytes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpMaxDto	EcucIntegerParamDef
BSW Description	
MAX_DTO shows the maximum length of a DTO packet in bytes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpMaxEventChannel	EcucIntegerParamDef
BSW Description	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpMinDaq	EcucIntegerParamDef
BSW Description	
Indicates the number of predefined, read only DAQ lists on the XCP slave.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpNvRamBlockIdRef	EcucReferenceDef
BSW Description	

This reference contains the link to a non-volatile memory block to be used in the feature "RESUME MODE" so this information has to be stored non volatile to be available directly after start-up of the ECU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpOdtCount	EcucIntegerParamDef
BSW Description	
This parameter indicates the amount of ODTs of a DAQ list using dynamic DAQ list configuration.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpOdtEntriesCount	EcucIntegerParamDef
BSW Description	
Indicates the amount of entries into an ODT using dynamic DAQ list configuration.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpOdtEntrySizeDaq	EcucIntegerParamDef
BSW Description	
Indicates the size of an element described by an ODT entry to the DaqListType for a DAQ.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpOdtEntrySizeStim	EcucIntegerParamDef
BSW Description	
Indicates the size of an element described by an ODT entry to the DaqListType for a stim.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpOnCanEnabled	EcucBooleanParamDef
BSW Description	
Enabling of XCPonCAN functionality	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpOnCddEnabled	EcucBooleanParamDef
BSW Description	
Enabling of XCPonCdd functionality	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpOnEthernetEnabled		EcucBooleanParamDef
BSW Description		
Enabling of XCPonEthernet functionality		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpOnFlexRayEnabled		EcucBooleanParamDef
BSW Description		
Enabling of XCPonFlexRay functionality		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpPrescalerSupported		EcucBooleanParamDef
BSW Description		
This parameter enables and disables the support for Prescaler support. True is Enabled, False is disabled		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context

Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpSuppressTxSupport		EcucBooleanParamDef
BSW Description		
Switches the support of suppressing transmission of PDUs per communication channel on or off. TRUE: Suppressing of TxPDUs supported FALSE: Suppressing of TxPDUs not supported		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpTimestampTicks		EcucIntegerParamDef
BSW Description		
This parameter defines the timestamp that will increment based TIMESTAMP_TICKS per unit and wrap around if an overflow occurs.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Xcp	Xcp/XcpGeneral	
BSW Parameter		**BSW Type**
XcpTimestampType		EcucEnumerationParamDef
BSW Description		
This parameter indicates the number of bytes used for the timestamp field. In case No_TIME_STAMP is selected the timestamp field is not available.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**
Xcp	Xcp/XcpGeneral

BSW Parameter	BSW Type
XcpTimestampUnit	EcucEnumerationParamDef
BSW Description	
This parameter indicates the resolution of the data acquisition clock of the slave when transferring data to master.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xcp	Xcp/XcpGeneral
BSW Parameter	**BSW Type**
XcpVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables/disables the existence of the XCP_GetVersionInfo() API service. TRUE: XCP_GetVersionInfo() API service exists FALSE: XCP_GetVersionInfo() API service does not exist	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

C.1.10 Bus Mirroring

BSW Module	BSW Context
Mirror	Mirror
BSW Parameter	**BSW Type**
MirrorConfigSet	EcucParamConfContainerDef
BSW Description	
Contains the configuration parameters and sub containers of the Bus Mirroring module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

Mirror	Mirror/MirrorConfigSet	
BSW Parameter		**BSW Type**
MirrorDestNetwork		EcucChoiceContainerDef
BSW Description		
Destination bus to which frames are sent by the Bus Mirroring module.		
Template Description		
This element defines a bus mirroring in which the traffic from one communication bus (sourceChannel) is forwarded to another one (targetChannel).		
M2 Parameter		
SystemTemplate::BusMirror::BusMirrorChannelMapping		
Mapping Rule		**Mapping Type**
Create a container for each BusMirrorChannel that is composed by an instance of a concrete subclass of BusMirrorChannelMapping in role targetChannel which is available in the System Extract.		full
Mapping Status		**Mapping ID**
valid		up_Mirror_00005

BSW Module	**BSW Context**	
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork	
BSW Parameter		**BSW Type**
MirrorDestNetworkCan		EcucParamConfContainerDef
BSW Description		
Destination bus representing a CAN network.		
Template Description		
This element defines the bus mirroring between a CAN or LIN sourceChannel and a CAN targetChannel.		
M2 Parameter		
SystemTemplate::BusMirror::BusMirrorChannelMappingCan		
Mapping Rule		**Mapping Type**
Create a container for each BusMirrorChannel that is composed by an instance of a BusMirroChannelMappingCan in the role targetChannel which is available in the SystemExtract.		full
Mapping Status		**Mapping ID**
valid		up_Mirror_00001

BSW Module	**BSW Context**	
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkCan	
BSW Parameter		**BSW Type**
MirrorComMNetworkHandleRef		EcucReferenceDef
BSW Description		
Reference to the ComMChannel that represents the bus.		
Template Description		
Reference to PhysicalChannel that is used in the bus mirroring as sourceChannel or targetChannel.		
M2 Parameter		
SystemTemplate::BusMirror::BusMirrorChannel.channel		
Mapping Rule		**Mapping Type**

This reference shall be derived from the: - CanCluster that aggregates the AbstractCanPhysicalChannel that is referenced by the BusMirrorChannel in case that this reference is used in the Mirror DestNetworkCan container - FlexrayCluster that aggregates the PhysicalChannel that is referenced by the BusMirrorChannel in case that this reference is used in the MirrorDestNetwork Flexray container - EthernetPhysicalChannel that is referenced by the BusMirrorChannel in case that this reference is used in the MirrorDestNetworkIp container - UserDefinedCluster that aggregates the PhysicalChannel that is referenced by the BusMirrorChannel in case that this reference is used in the MirrorDest NetworkCdd container	full
Mapping Status	**Mapping ID**
valid	up_Mirror_00024

BSW Module	**BSW Context**
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkCan
BSW Parameter	**BSW Type**
MirrorDestPdu	EcucParamConfContainerDef
BSW Description	
I-PDU used for transmission of the mirrored frames on the destination bus. For FlexRay, an arbitrary number of I-PDUs can be configured. For the other bus types, only one I-PDU is supported per destination bus.	
Template Description	
Reference to the PduTriggering that is used for transmission of the mirrored frames on the targetChannel. Please note that on FlexRay several targetPduTriggerings may be used. For all other communcation channels only a single targetPduTriggering is supported.	
M2 Parameter	
SystemTemplate::BusMirror::BusMirrorChannelMapping.targetPduTriggering	
Mapping Rule	**Mapping Type**
Create container for the Pdu that is referenced by the PduTriggering that is referenced by the instance of the BusMirrorChannelMapping in the targetPdu Triggering role.	full
Mapping Status	**Mapping ID**
valid	up_Mirror_00007

BSW Module	**BSW Context**
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkCan/MirrorDest Pdu
BSW Parameter	**BSW Type**
MirrorDestPduId	EcucIntegerParamDef
BSW Description	
I-PDU identifier used for TxConfirmation from PduR.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkCan/MirrorDestPdu

BSW Parameter	BSW Type
MirrorDestPduRef	EcucReferenceDef

BSW Description
Reference to the Pdu object representing the I-PDU.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkCan/MirrorDestPdu

BSW Parameter	BSW Type
MirrorDestPduUsesTriggerTransmit	EcucBooleanParamDef

BSW Description
Switches transmission via TriggerTransmit. * true: The I-PDU is transmitted using TriggerTransmit. * false: The I-PDU is transmitted directly with the Transmit call.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkCan

BSW Parameter	BSW Type
MirrorDestQueueSize	EcucIntegerParamDef

BSW Description
Number of frames that can be stored in the output queue for the destination bus.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context	
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkCan	
BSW Parameter	**BSW Type**	
MirrorNetworkId	EcucIntegerParamDef	
BSW Description		
Network ID of the bus.		
Template Description		
This attribute defines the networkId of the communication channel.		
M2 Parameter		
SystemTemplate::BusMirror::BusMirrorChannel.busMirrorNetworkId		
Mapping Rule		**Mapping Type**
If this parameter is aggregated by MirrorDestNetworkCan container take the value from the BusMirrorChannel that is aggregated in the role targetChannel by the instance of BusMirrorChannelMappingCan. If this parameter is aggregated by MirrorDestNetworkFlexray container take the value from the BusMirrorChannel that is aggregated in the role target Channel by the instance of BusMirrorChannelMappingFlexray. If this parameter is aggregated by MirrorDestNetworkIp container take the value from the BusMirrorChannel that is aggregated in the role targetChannel by the instance of BusMirrorChannelMappingIp. If this parameter is aggregated by MirrorDestNetworkCdd container take the value from the BusMirrorChannel that is aggregated in the role target Channel by the instance of BusMirrorChannelMappingUserDefined. If this parameter is aggregated by MirrorSourceNetworkCan container take the value from the BusMirrorChannel that is aggregated in the role sourceChannel by the instance of BusMirrorChannelMapping. If this parameter is aggregated by MirrorSourceNetworkFlexray container take the value from the BusMirrorChannel that is aggregated in the role source Channel by the instance of BusMirrorChannelMapping. If this parameter is aggregated by MirrorSourceNetworkLin container take the value from the BusMirrorChannel that is aggregated in the role sourcet Channel by the instance of BusMirrorChannelMapping.		full

valid	

BSW Module	**BSW Context**
Mirror	Mirror/MirrorConfigSet/MirrorDestNetwork/MirrorDestNetworkFlexRay
BSW Parameter	**BSW Type**
MirrorDestTransmissionDeadline	EcucFloatParamDef

BSW Description

Time in seconds after which the collection of source frames into the destination frame stopped and the frame is sent at the latest.

If omitted, destination frames are only sent when full or when the time stamp overflows after 655.35ms.

Template Description

BusMirrorChannelMappingFlexray.transmissionDeadline:
Time in seconds after which the collection of source frames into the destination frame is stopped and the frame is sent at the latest.

If omitted, destination frames are only sent when full or when the time stamp overflows.

BusMirrorChannelMappingIp.transmissionDeadline:
Time in seconds after which the collection of source frames into the destination frame is stopped and the frame is sent at the latest.

If omitted, destination frames are only sent when full or when the time stamp overflows.

BusMirrorChannelMappingUserDefined.transmissionDeadline:
Time in seconds after which the collection of source frames into the destination frame is stopped and the frame is sent at the latest.

If omitted, destination frames are only sent when full or when the time stamp overflows.

M2 Parameter

SystemTemplate::BusMirror::BusMirrorChannelMappingFlexray.transmissionDeadline,SystemTemplate::BusMirror::BusMirrorChannelMappingIp.transmissionDeadline,SystemTemplate::BusMirror::BusMirrorChannelMappingUserDefined.transmissionDeadline

Mapping Rule	**Mapping Type**
Please note that this parameter is aggregated in different containers: - if aggregated by MirrorDestNetworkFlexRay take value from BusMirrorChannelMappingFlexray.transmissionDeadline - if aggregated by MirrorDestNetworkIp take value from BusMirrorChannelMappingIp.transmissionDeadline - if aggregated by MirrorDestNetworkCdd take value from BusMirrorChannelMappingUserDefined.transmissionDeadline	full

BSW Parameter	BSW Type
CanControllerSeg2	EcucIntegerParamDef

BSW Description

Specifies phase segment 2 in time quantas.

Template Description

Specifies phase segment 2 in time quantas.

M2 Parameter

SystemTemplate::Fibex::Fibex4Can::CanTopology::CanControllerFdConfiguration.timeSeg2

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Can_00020

BSW Module	BSW Context
Can	Can/CanConfigSet/CanController/CanControllerBaudrateConfig/CanControllerFdBaudrateConfig

BSW Parameter	BSW Type
CanControllerSspOffset	EcucIntegerParamDef

BSW Description

Specifies the Transmitter Delay Compensation Offset in minimum time quanta (see [17]). Transmitter Delay Compensation Offset is used to adjust the position of the Secondary Sample Point (SSP), relative to the beginning of the received bit. If this parameter is configured, the Transmitter Delay Compensation is done by measurement of the CAN controller. If not specified, Transmitter Delay Compensation is disabled.

Note:
MTQ == Minimum Time Quanta in seconds == 1/(frequency of the CAN controller clock)
Secondary Sample Point Offset in seconds = CanControllerSspOffset * MTQ

Example:
CAN controller clock frequency = 20MHz => MTQ = 1/20 * 10^ (-6) s = 0,05 us = 50ns
Baud rate = 1MBit/s => BitTime = 1/(1 * 10^ 6) s/Bit = 1 * 10^ (-6) = 1us/Bit
SSP = 75% => SSP in seconds = 0,75 * 1us = 750 ns
CanControllerSspOffset in MTQ = 750ns / 50ns = 15

Note: Please consider the minimum range (0..63) stated in [17] and the range definition (0..127) used as per [19].

Template Description

Specifies the Transmitter Delay Compensation Offset in minimum time quanta. Transmitter Delay Compensation Offset is used to adjust the position of the Secondary Sample Point (SSP), relative to the beginning of the received bit. If this parameter is configured, the Transmitter Delay Compensation is done by measurement of the CAN controller. If not specified Transmitter Delay Compensation is disabled.

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerLevel2	EcucBooleanParamDef
BSW Description	
Defines whether Level 2 or Level 1 is used. TRUE: Level 2. FALSE: Level 1. If this parameter is set to FALSE then all parameters with dependency to CanTTControllerLevel2 need not be configured.	
Template Description	
One bit shall be used to distinguish between Level 1 and Level 2.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology::TtcanCommunicationController.timeTriggeredCanLevel	

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Can_00013

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**

CanTTControllerNTUConfig	EcucFloatParamDef
BSW Description	
Defines the config value for NTU (network time unit). Value given in microseconds. The value configured shall be greater than 0. Together with the local oscillator period, the TUR (time unit ratio) can be derived from the NTU. This parameter shall only be configurable if parameter CanTTControllerLevel2 equals TRUE.	
Template Description	
Unit measuring all times and providing a constant of the whole network. For level 1, this is always the CAN bit time. Unit: seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology::TtcanCluster.ntu	
Mapping Rule	**Mapping Type**
NTU = system clock period x (TUR Numerator / TUR Denominator)	full
Mapping Status	**Mapping ID**
valid	up_Can_00007

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerOperationMode	EcucEnumerationParamDef
BSW Description	
Defines the operation mode.	
Template Description	
Possible operation modes True: Time-Triggered False: Event-Synchronised-Time-Triggered	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology::TtcanCluster.operationMode	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Can_00012

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerSyncDeviation	EcucFloatParamDef
BSW Description	
Defines the maximum synchronization deviation: Given as a percentage value of the NTU (network time unit). The value configured shall be greater than 0. This parameter shall only be configurable if parameter CanTTControllerLevel2 equals TRUE.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Synchronisation Deviation <= 2^ (CanTTSyncDeviation + 5).	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerTURRestore	EcucBooleanParamDef
BSW Description	
Enables/disables the TUR restore. Note that the value configured for TUR can be derived from the value configured for NTU and the local oscillator preriod. TRUE: TUR restore enabled. FALSE: TUR restore disabled. This parameter shall only be configurable if parameter CanTTControllerLevel2 equals TRUE.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerTimeMaster	EcucBooleanParamDef
BSW Description	
Defines whether the controller acts as a potential time master. TRUE: Potential time master. FALSE: Time slave.	
Template Description	
One bit shall be used to distinguish between (potential) time masters and time slaves. This can be derived from the frame-triggering's triggers.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology::TtcanCommunicationController.master	
Mapping Rule	**Mapping Type**

Mapping Status	**Mapping ID**
valid	up_Can_00005

BSW Module	BSW Context
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerTimeMasterPriority	EcucIntegerParamDef
BSW Description	
Defines the time master priority.	
Template Description	
The time master priority shall contain a three bit value for the priority of the current time master (the last three bits of the identifier of the reference message). This can be derived from the frame-triggering's triggers.	
M2 Parameter	

SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology::TtcanCommunicationController.timeMaster Priority	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Can_00008

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerTxEnableWindowLength	EcucIntegerParamDef
BSW Description	
Length of the tx enable window given in CAN bit times. Definition parameter "CanTTControllerTxEnableWindowlength" is used such that: Length of enable window = CanTTControllerTxEnableWindowLength + 1	
Template Description	
The length of the Tx_Enable window shall be a four (4) bit value specifying the length of the time period (1-16 nominal CAN bit times) in which a transmission may be started.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ttcan::TtcanTopology::TtcanCommunicationController.txEnable WindowLength	
Mapping Rule	**Mapping Type**
Length of enable window = CanTTControllerTxEnableWindowLength + 1	full
Mapping Status	**Mapping ID**
valid	up_Can_00011

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanController/CanTTController
BSW Parameter	**BSW Type**
CanTTControllerWatchTriggerGapTimeMark	EcucIntegerParamDef

BSW Parameter	**BSW Type**
CanTTHardwareObjectTimeMark	EcucIntegerParamDef
BSW Description	
Defines the point in time, when the trigger will be activated. Value is given in cycle time.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanHardwareObject/CanTTHardwareObjectTrigger
BSW Parameter	**BSW Type**
CanTTHardwareObjectTriggerId	EcucIntegerParamDef
BSW Description	
Sequential number which allows separation of different TTCAN triggers configured for one and the same hardware object.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanHardwareObject/CanTTHardwareObjectTrigger

BSW Parameter	**BSW Type**
CanTTHardwareObjectTriggerType	EcucEnumerationParamDef

BSW Description

Defines the type of the trigger associated with the hardware object. This parameter depends on plain CAN parameter CAN_OBJECT_TYPE.
If CAN_OBJECT_TYPE equals RECEIVE than this parameter is fixed to CAN_TT_RX_TRIGGER.
If CAN_OBJECT_TYPE equals TRANSMIT than one of the following literals is configurable:
CAN_TT_TX_REF_TRIGGER,
CAN_TT_TX_REF_TRIGGER_GAP,
CAN_TT_TX_TRIGGER_MERGED,
CAN_TT_TX_TRIGGER_SINGLE,
CAN_TT_TX_TRIGGER_EXCLUSIVE.

BSW Module	BSW Context
Can	Can/CanConfigSet/CanIcom/CanIcomConfig
BSW Parameter	**BSW Type**
CanIcomConfigId	EcucIntegerParamDef
BSW Description	
This parameter identifies the ID of the ICOM configuration.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanIcom/CanIcomConfig
BSW Parameter	**BSW Type**
CanIcomWakeOnBusOff	EcucBooleanParamDef
BSW Description	
This parameter defines that the MCU shall wake if the bus off is detected or not.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanIcom/CanIcomConfig
BSW Parameter	**BSW Type**
CanIcomWakeupCauses	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters of the wakeup causes to leave the power saving mode.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses
BSW Parameter	**BSW Type**
CanIcomRxMessage	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters for the wakeup causes for matching received messages. It has to be configured as often as received messages are defined as wakeup cause. constraint: For all CanIcomRxMessage instances the Message IDs which are defined in CanIcomMessageId and in CanIcomRxMessageIdMask shall not overlap.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage
BSW Parameter	**BSW Type**
CanIcomCounterValue	EcucIntegerParamDef
BSW Description	
This parameter defines that the MCU shall wake if the message with the ID is received n times on the communication channel.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage

BSW Parameter	**BSW Type**
CanIcomMessageId	EcucIntegerParamDef

BSW Description
This parameter defines the message ID the wakeup causes of this CanIcomRxMessage are configured for. In addition a mask (CanIcomMessageIdMask) can be defined, in that case it is possible to define a range of rx messages, which can create a wakeup condition.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage

BSW Parameter	**BSW Type**
CanIcomMessageIdMask	EcucIntegerParamDef

BSW Description
Describes a mask for filtering of CAN identifiers. The CAN identifiers of incoming messages are masked with this CanIcomMessageIdMask. If the masked identifier matches the masked value of CanIcomMessageId, it can create a wakeup condition for this CanIcomRxMessage. Bits holding a 0 mean don't care, i.e. do not compare the message's identifier in the respective bit position. The mask shall be build by filling with leading 0.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage

BSW Parameter	**BSW Type**
CanIcomMissingMessageTimerValue	EcucFloatParamDef

BSW Description	
This parameter defines that the MCU shall wake if the message with the ID is not received for a specific time in s on the communication channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage
BSW Parameter	**BSW Type**
CanIcomPayloadLengthError	EcucBooleanParamDef
BSW Description	
This parameter defines that the MCU shall wake if a payload error occurs	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage
BSW Parameter	**BSW Type**
CanIcomRxMessageSignalConfig	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters for the wakeup causes for matching signals. It has to be configured as often as a signal is defined as wakeup cause. If at least one Signal conditions defined in a CanIcomRxMessageSignalConfig evaluates to true or if no CanIcomRxMessageSignalConfig are defined, the whole wakeup condition is considered to be true. All instances of this container refer to the same frame/pdu (see CanIcomMessageId).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage/CanIcomRxMessageSignalConfig

BSW Parameter	BSW Type
CanIcomSignalMask	EcucIntegerParamDef

BSW Description

This parameter shall be used to mask a signal in the payload of a CAN message.
The mask is binary AND with the signal payload. The result will be used in combination of the operations defined in CanIcomSignalOperation with the CanIcomSignalValue.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage/CanIcomRxMessageSignalConfig

BSW Parameter	BSW Type
CanIcomSignalOperation	EcucEnumerationParamDef

BSW Description

This parameter defines the operation, which shall be used to verify the signal value creates a wakeup condition.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanConfigSet/CanIcom/CanIcomConfig/CanIcomWakeupCauses/CanIcomRxMessage/CanIcomRxMessageSignalConfig

BSW Parameter	BSW Type
CanIcomSignalRef	EcucReferenceDef

BSW Description

This parameter defines a reference to the signal which shall be checked additional to the message id (CanIcomMessageId).
This reference is used for documentation to define which ComSignal originates this filter setting. All signals being referred by this reference shall point to the same PDU.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

Can	Can/CanGeneral	
BSW Parameter		**BSW Type**
CanEcucPartitionRef		EcucReferenceDef
BSW Description		
Maps the CAN driver to zero or multiple ECUC partitions to make the modules API available in this partition. The CAN driver will operate as an independent instance in each of the partitions.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Can	Can/CanGeneral	
BSW Parameter		**BSW Type**
CanIcomGeneral		EcucParamConfContainerDef
BSW Description		
This container contains the general configuration parameters of the ICOM Configuration.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Can	Can/CanGeneral/CanIcomGeneral	
BSW Parameter		**BSW Type**
CanIcomLevel		EcucEnumerationParamDef
BSW Description		
Defines the level of Pretended Networking. This parameter is reserved for future implementations (Pretended Networking level 2).		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
Can	Can/CanGeneral/CanIcomGeneral	
BSW Parameter		**BSW Type**
CanIcomVariant		EcucEnumerationParamDef

BSW Description	
Defines the variant, which is supported by this CanController	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanIndex	EcucIntegerParamDef
BSW Description	
Specifies the InstanceId of this module instance. If only one instance is present it shall have the Id 0.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanLPduReceiveCalloutFunction	EcucFunctionNameDef
BSW Description	
This parameter defines the existence and the name of a callout function that is called after a successful reception of a received CAN Rx L-PDU. If this parameter is omitted no callout shall take place.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanMainFunctionBusoffPeriod	EcucFloatParamDef
BSW Description	
This parameter describes the period for cyclic call to Can_MainFunction_Busoff. Unit is seconds.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanMainFunctionModePeriod	EcucFloatParamDef
BSW Description	
This parameter describes the period for cyclic call to Can_MainFunction_Mode. Unit is seconds.

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanMainFunctionRWPeriods	EcucParamConfContainerDef
BSW Description	
This container contains the parameter for configuring the period for cyclic call to Can_MainFunction_Read or Can_MainFunction_Write depending on the referring item.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral/CanMainFunctionRWPeriods
BSW Parameter	**BSW Type**
CanMainFunctionPeriod	EcucFloatParamDef
BSW Description	
This parameter describes the period for cyclic call to Can_MainFunction_Read or Can_MainFunction_Write depending on the referring item. Unit is seconds. Different poll-cycles will be configurable if more than one CanMainFunctionPeriod is configured. In this case multiple Can_MainFunction_Read() or Can_MainFunction_Write() will be provided by the CAN Driver module.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanMainFunctionWakeupPeriod	EcucFloatParamDef
BSW Description	
This parameter describes the period for cyclic call to Can_MainFunction_Wakeup. Unit is seconds.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanMultiplexedTransmission	EcucBooleanParamDef
BSW Description	
Specifies if multiplexed transmission shall be supported.ON or OFF	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanOsCounterRef	EcucReferenceDef
BSW Description	
This parameter contains a reference to the OsCounter, which is used by the CAN driver.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanPublicIcomSupport	EcucBooleanParamDef
BSW Description	
Selects support of Pretended Network features in Can driver. True: Enabled False: Disabled	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanSetBaudrateApi	EcucBooleanParamDef
BSW Description	
The support of the Can_SetBaudrate API is optional. If this parameter is set to true the Can_SetBaudrate API shall be supported. Otherwise the API is not supported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanSupportTTCANRef	EcucReferenceDef
BSW Description	
The parameter refers to CanIfSupportTTCAN parameter in the CAN Interface Module configuration. The CanIfSupportTTCAN parameter defines whether TTCAN is supported.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Can	Can/CanGeneral
BSW Parameter	**BSW Type**
CanTimeoutDuration	EcucFloatParamDef

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

C.2.2 Can Interface Mapping

BSW Module	BSW Context
CanIf	CanIf
BSW Parameter	**BSW Type**
CanIfCtrlDrvCfg	EcucParamConfContainerDef
BSW Description	
Configuration parameters for all the underlying CAN Driver modules are aggregated under this container. For each CAN Driver module a seperate instance of this container has to be provided.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context	
CanIf	CanIf/CanIfCtrlDrvCfg	
BSW Parameter		**BSW Type**
CanIfCtrlCfg		EcucParamConfContainerDef
BSW Description		
This container contains the configuration (parameters) of an adressed CAN controller by an underlying CAN Driver module. This container is configurable per CAN controller.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanIf	CanIf/CanIfCtrlDrvCfg/CanIfCtrlCfg	
BSW Parameter		**BSW Type**
CanIfCtrlCanCtrlRef		EcucReferenceDef
BSW Description		
This parameter references to the logical handle of the underlying CAN controller from the CAN Driver module to be served by the CAN Interface module. The following parameters of CanController config container shall be referenced by this link: CanControllerId, CanWakeupSourceRef Range: 0..max. number of underlying supported CAN controllers		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanIf	CanIf/CanIfCtrlDrvCfg/CanIfCtrlCfg	
BSW Parameter		**BSW Type**
CanIfCtrlId		EcucIntegerParamDef
BSW Description		
This parameter abstracts from the CAN Driver specific parameter Controller. Each controller of all connected CAN Driver modules shall be assigned to one specific ControllerId of the CanIf. Range: 0..number of configured controllers of all CAN Driver modules		
Template Description		
M2 Parameter		

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanIf	CanIf/CanIfCtrlDrvCfg/CanIfCtrlCfg
BSW Parameter	**BSW Type**
CanIfCtrlWakeupSupport	EcucBooleanParamDef
BSW Description	
This parameter defines if a respective controller of the referenced CAN Driver modules is queriable for wake up events. True: Enabled False: Disabled	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanIf	CanIf/CanIfCtrlDrvCfg
BSW Parameter	**BSW Type**
CanIfCtrlDrvInitHohConfigRef	EcucReferenceDef
BSW Description	
Reference to the Init Hoh Configuration	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanIf	CanIf/CanIfCtrlDrvCfg
BSW Parameter	**BSW Type**
CanIfCtrlDrvNameRef	EcucReferenceDef
BSW Description	
CAN Interface Driver Reference. This reference can be used to get any information (Ex. Driver Name, Vendor ID) from the CAN driver. The CAN Driver name can be derived from the ShortName of the CAN driver module.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanIf	CanIf
BSW Parameter	**BSW Type**
CanIfDispatchCfg	EcucParamConfContainerDef
BSW Description	
Callback functions provided by upper layer modules of the CanIf. The callback functions defined in this container are common to all configured CAN Driver / CAN Transceiver Driver modules.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanIf	CanIf/CanIfDispatchCfg
BSW Parameter	**BSW Type**
CanIfDispatchUserCheckTrcvWakeFlagIndicationName	EcucFunctionNameDef
BSW Description	
This parameter defines the name of <User_CheckTrcvWakeFlagIndication>. If CanIfDispatchUserCheckTrcvWakeFlagIndicationUL equals CAN_SM the name of <User_CheckTrcvWakeFlagIndication> is fixed. If it equals CDD, the name is selectable. If CanIfPublicPnSupport equals False, this parameter shall not be configurable.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanIf	CanIf/CanIfDispatchCfg
BSW Parameter	**BSW Type**
CanIfDispatchUserCheckTrcvWakeFlagIndicationUL	EcucEnumerationParamDef
BSW Description	
This parameter defines the upper layer module to which the CheckTrcvWakeFlagIndication from the Driver modules have to be routed. If CanIfPublicPnSupport equals False, this parameter shall not be configurable.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanIf	CanIf/CanIfDispatchCfg
BSW Parameter	**BSW Type**
CanIfDispatchUserClearTrcvWufFlagIndicationName	EcucFunctionNameDef
BSW Description	
This parameter defines the name of <User_ClearTrcvWufFlagIndication>. If CanIfDispatchUserClearTrcvWufFlagIndicationUL equals CAN_SM the name of <User_ClearTrcvWufFlagIndication> is fixed. If it equals CDD, the name is selectable. If CanIfPublicPnSupport equals False, this parameter shall not be configurable.	
Template Description	
M2 Parameter

Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanIf	CanIf/CanIfInitCfg/CanIfInitHohCfg/CanIfHrhCfg

BSW Parameter	BSW Type
CanIfHrhIdSymRef	EcucReferenceDef

BSW Description

The parameter refers to a particular HRH object in the CanDrv configuration (see CanHardwareObject ECUC_Can_00324).

CanIf receives the following information of the CanDrv module by this reference:
- CanHandleType (see ECUC_Can_00323)
- CanObjectId (see ECUC_Can_00326)

Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanIf	CanIf/CanIfInitCfg/CanIfTxPduCfg
BSW Parameter	**BSW Type**
CanIfTxPduCanId	EcucIntegerParamDef

BSW Description	
CAN Identifier of transmit CAN L-PDUs used by the CAN Driver for CAN L-PDU transmission. Range: 11 Bit For Standard CAN Identifier ... 29 Bit For Extended CAN identifier The CAN Identifier may be omitted for dynamic transmit L-PDUs.	
Template Description	
This attribute is used to define the identifier this frame shall use on the CAN network.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanCommunication::CanFrameTriggering.identifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanIf_00008

BSW Module	BSW Context
CanIf	CanIf/CanIfInitCfg/CanIfTxPduCfg
BSW Parameter	**BSW Type**
CanIfTxPduCanIdMask	EcucIntegerParamDef
BSW Description	
Identifier mask which denotes relevant bits in the CAN Identifier. This parameter may be used to keep parts of the CAN Identifier of dynamic transmit L-PDUs static. Range: 11 bits for Standard CAN Identifier, 29 bits for Extended CAN Identifier.	
Template Description	
Identifier mask which denotes static bits in the CAN identifier. The other bits can be set dynamically.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanCommunication::CanFrameTriggering.txMask	
Mapping Rule	**Mapping Type**
1:1 mapping	full

valid	

BSW Module	**BSW Context**
CanIf	CanIf/CanIfInitCfg/CanIfTxPduCfg

BSW Parameter	**BSW Type**
CanIfTxPduUserTriggerTransmitName	EcucFunctionNameDef

BSW Description

This parameter defines the name of the <User_TriggerTransmit>. This parameter depends on the parameter CanIfTxPduUserTxConfirmationUL. If CanIfTxPduUserTxConfirmationUL equals CAN_TP, CAN_NM, PDUR, XCP, CAN_TSYN, J1939NM or J1939TP, the name of the <User_TriggerTransmit> is fixed. If CanIfTxPduUserTxConfirmationUL equals CDD, the name of the <User_TxConfirmation> is selectable.

Please be aware that this parameter depends on the same parameter as CanIfTxPduUserTxConfirmationName. It shall be clear which upper layer is responsible for that PDU.

Template Description

BSW Module	**BSW Context**
CanIf	CanIf/CanIfInitCfg/CanIfTxPduCfg

BSW Parameter	**BSW Type**
CanIfTxPduUserTxConfirmationName	EcucFunctionNameDef

BSW Description

This parameter defines the name of the <User_TxConfirmation>.
This parameter depends on the parameter CanIfTxPduUserTxConfirmationUL.
If CanIfTxPduUserTxConfirmationUL equals CAN_TP, CAN_NM, PDUR, XCP, CAN_TSYN, J1939NM or J1939TP, the name of the <User_TxConfirmation> is fixed. If CanIfTxPduUserTxConfirmationUL equals CDD, the name of the <User_TxConfirmation> is selectable.

Template Description

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanIf	CanIf/CanIfInitCfg/CanIfTxPduCfg

BSW Parameter	BSW Type
CanIfTxPduUserTxConfirmationUL	EcucEnumerationParamDef

BSW Description

This parameter defines the upper layer (UL) module to which the confirmation of the successfully transmitted CanTxPduId has to be routed via the <User_TxConfirmation>.
This <User_TxConfirmation> has to be invoked when the confirmation of the configured CanTxPduId will be received by a Tx confirmation event from the CAN Driver module.
If no upper layer (UL) module is configured, no <User_TxConfirmation> has to be called in case of a Tx confirmation event of the CanTxPduId from the CAN Driver module.

Template Description

C.2.3 Can Transceiver Mapping

BSW Module	**BSW Context**
CanTrcv	CanTrcv

BSW Parameter	**BSW Type**
CanTrcvConfigSet	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters and sub containers of the AUTOSAR WdgM module.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvConfigSet

BSW Parameter	**BSW Type**
CanTrcvChannel	EcucParamConfContainerDef
BSW Description	
Container gives CAN transceiver driver information about a single CAN transceiver (channel).	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel

BSW Parameter	BSW Type
CanTrcvAccess	EcucChoiceContainerDef
BSW Description	
Container gives CanTrcv Driver information about access to a single CAN transceiver.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess
BSW Parameter	**BSW Type**
CanTrcvDioAccess	EcucParamConfContainerDef
BSW Description	
Container gives CAN transceiver driver information about accessing ports and port pins. In addition relation between CAN transceiver hardware pin names and Dio port access information is given. If a CAN transceiver hardware has no Dio interface, there is no instance of this container.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess/CanTrcvDio Access
BSW Parameter	**BSW Type**
CanTrcvDioChannelAccess	EcucParamConfContainerDef
BSW Description	
Container gives DIO channel access by single Can transceiver channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess/CanTrcvDio Access/CanTrcvDioChannelAccess
BSW Parameter	**BSW Type**

CanTrcvDioSymNameRef	EcucChoiceReferenceDef
BSW Description	
Choice Reference to a DIO Port, DIO Channel or DIO Channel Group. This reference replaces the CANTRCV_DIO_PORT_SYM_NAME, CANTRCV_DIO_CHANNEL_SYM_NAME and CANTRCV_DIO_GROUP_SYM_NAME references in the Can Trcv SWS.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess/CanTrcvDioAccess/CanTrcvDioChannelAccess
BSW Parameter	**BSW Type**
CanTrcvHardwareInterfaceName	EcucStringParamDef
BSW Description	
CAN transceiver hardware interface name. It is typically the name of a pin. From a Dio point of view it is either a port, a single channel or a channel group. Depending on this fact either CANTRCV_DIO_PORT_SYMBOLIC_NAME or CANTRCV_DIO_CHANNEL_SYMBOLIC_NAME or CANTRCV_DIO_CHANNEL_GROUP_SYMBOLIC_NAME shall reference a Dio configuration. The CAN transceiver driver implementation description shall list up this name for the appropriate CAN transceiver hardware.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess
BSW Parameter	**BSW Type**
CanTrcvSpiAccess	EcucParamConfContainerDef
BSW Description	
Container gives CAN transceiver driver information about accessing Spi. If a CAN transceiver hardware has no Spi interface, there is no instance of this container.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess/CanTrcvSpiAccess

BSW Parameter	BSW Type
CanTrcvSpiSequence	EcucParamConfContainerDef

BSW Description

Container gives CAN transceiver driver information about one SPI sequence.
One SPI sequence used by CAN transceiver driver is in exclusive use for it. No other driver is allowed to access this sequence. CAN transceiver driver may use one sequence to access n CAN transceiver hardwares chips of the same type or n sequences are used to access one single CAN transceiver hardware chip.
If a CAN transceiver hardware has no SPI interface, there is no instance of this container.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess/CanTrcvSpiAccess/CanTrcvSpiSequence

BSW Parameter	BSW Type
CanTrcvSpiAccessSynchronous	EcucBooleanParamDef

BSW Description

This parameter is used to define whether the access to the Spi sequence is synchronous or asynchronous.

true: SPI access is synchronous.
false: SPI access is asynchronous.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvAccess/CanTrcvSpiAccess/CanTrcvSpiSequence

BSW Parameter	BSW Type
CanTrcvSpiSequenceName	EcucReferenceDef

BSW Description

Reference to a Spi sequence configuration container.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvChannelEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps the CAN transceiver channel to zero or one ECUC partitions. The ECUC partition referenced is a subset of the ECUC partitions where the CAN transceiver driver is mapped to.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvChannelId	EcucIntegerParamDef
BSW Description	
Unique identifier of the CAN Transceiver Channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvChannelUsed	EcucBooleanParamDef
BSW Description	
Shall the related CAN transceiver channel be used?	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvControlsPowerSupply	EcucBooleanParamDef
BSW Description	
Is ECU power supply controlled by this transceiver? TRUE = Controlled by transceiver. FALSE = Not controlled by transceiver.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvDemEventParameterRefs	EcucParamConfContainerDef
BSW Description	
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvDemEventParameterRefs
BSW Parameter	**BSW Type**
CANTRCV_E_BUS_ERROR	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when bus error has occurred.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvHwPnSupport	EcucBooleanParamDef
BSW Description	
Indicates whether the HW supports the selective wake-up function TRUE = Selective wakeup feature is supported by the transceiver FALSE = Selective wakeup functionality is not available in transceiver	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvIcuChannelRef	EcucReferenceDef
BSW Description	
Reference to the IcuChannel to enable/disable the interrupts for wakeups.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvInitState	EcucEnumerationParamDef
BSW Description	
State of CAN transceiver after call to CanTrcv_Init.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel	
BSW Parameter		**BSW Type**
CanTrcvMaxBaudrate		EcucIntegerParamDef
BSW Description		
Indicates the data transfer rate in kbps. Maximum data transfer rate in kbps for transceiver hardware type. Only used for validation purposes. This value can be used by configuration tools.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel	
BSW Parameter		**BSW Type**
CanTrcvPartialNetwork		EcucParamConfContainerDef
BSW Description		
Container gives CAN transceiver driver information about the configuration of Partial Networking functionality.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork	
BSW Parameter		**BSW Type**
CanTrcvBaudRate		EcucIntegerParamDef
BSW Description		
Indicates the data transfer rate in kbps.		
Template Description		
Channels speed in bits/s.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreTopology::CommunicationCluster.baudrate		
Mapping Rule		**Mapping Type**
CanTrcvBaudRate = SystemTemplate baudrate is in bps, so divide it by 1000 to get kbps		full
Mapping Status		**Mapping ID**
valid		up_CanTrcv_00010

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork

BSW Parameter	BSW Type
CanTrcvBusErrFlag	EcucBooleanParamDef
BSW Description	
Indicates if the Bus Error (BUSERR) flag is managed by the BSW. This flag is set if a bus failure is detected by the transceiver. TRUE = Supported by transceiver and managed by BSW. FALSE = Not managed by BSW.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork
BSW Parameter	**BSW Type**
CanTrcvPnCanIdIsExtended	EcucBooleanParamDef
BSW Description	
Indicates whether extended or standard ID is used. TRUE = Extended Can identifier is used. FALSE = Standard Can identifier is used	
Template Description	
Defines whether pncWakeupCanId and pncWakeupCanIdMask shall be interpreted as extended or standard CAN ID.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupCanIdExtended	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTrcv_00001

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork
BSW Parameter	**BSW Type**
CanTrcvPnEnabled	EcucBooleanParamDef
BSW Description	
Indicates whether the selective wake-up function is enabled or disabled in HW. TRUE = Selective wakeup feature is enabled in the transceiver hardware FALSE = Selective wakeup feature is disabled in the transceiver hardware	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork
BSW Parameter	**BSW Type**
CanTrcvPnFrameCanId	EcucIntegerParamDef
BSW Description	
CAN ID of the Wake-up Frame (WUF).	
Template Description	
CAN Identifier used to configure the CAN Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupCanId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTrcv_00005

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork
BSW Parameter	**BSW Type**
CanTrcvPnFrameCanIdMask	EcucIntegerParamDef
BSW Description	
ID Mask for the selective activation of the transceiver. It is used to enableFrame Wake-up (WUF) on a group of IDs.	
Template Description	
Bit mask for CAN Identifier used to configure the CAN Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupCanIdMask	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTrcv_00007

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork
BSW Parameter	**BSW Type**
CanTrcvPnFrameDataMaskSpec	EcucParamConfContainerDef
BSW Description	
Defines data payload mask to be used on the received payload in order to determine if the transceiver must be woken up by the received Wake-up Frame (WUF).	
Template Description	
Bit mask for CAN Payload used to configure the CAN Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupDataMask	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTrcv_00002

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork/CanTrcvPnFrameDataMaskSpec

BSW Parameter	BSW Type
CanTrcvPnFrameDataMask	EcucIntegerParamDef

BSW Description
Defines the n byte (Byte0 = LSB) of the data payload mask to be used on the received payload in order to determine if the transceiver must be woken up by the received Wake-up Frame (WUF).

Template Description
Bit mask for CAN Payload used to configure the CAN Transceiver for partial network wakeup.

M2 Parameter
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupDataMask

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTrcv_00004

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork/CanTrcvPnFrameDataMaskSpec

BSW Parameter	BSW Type
CanTrcvPnFrameDataMaskIndex	EcucIntegerParamDef

BSW Description
holds the position n in frame of the mask-part

Template Description
Bit mask for CAN Payload used to configure the CAN Transceiver for partial network wakeup.

M2 Parameter
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupDataMask

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTrcv_00003

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork

BSW Parameter	BSW Type
CanTrcvPnFrameDlc	EcucIntegerParamDef

BSW Description
Data Length of the Wake-up Frame (WUF).

Template Description
Data Length of the remote data frame used to configure the CAN Transceiver for partial network wakeup in Bytes.

M2 Parameter
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupDlc

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTrcv_00008

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel/CanTrcvPartialNetwork
BSW Parameter	**BSW Type**
CanTrcvPowerOnFlag	EcucBooleanParamDef
BSW Description	
Description: Indicates if the Power On Reset (POR) flag is available and is managed by the transceiver. TRUE = Supported by Hardware. FALSE = Not supported by Hardware	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvPorWakeupSourceRef	EcucReferenceDef
BSW Description	
Symbolic name reference to specify the wakeup sources that should be used in the calls to EcuM_SetWakeupEvent as specified in [SWS_CanTrcv_00183] and [SWS_CanTrcv_00184]. This reference is mandatory if the HW supports POR or SYSERR flags	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel
BSW Parameter	**BSW Type**
CanTrcvSyserrWakeupSourceRef	EcucReferenceDef
BSW Description	
Symbolic name reference to specify the wakeup sources that should be used in the calls to EcuM_SetWakeupEvent as specified in [SWS_CanTrcv_00183] and [SWS_CanTrcv_00184] This reference is mandatory if the HW supports POR or SYSERR flags	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context	
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel	
BSW Parameter		**BSW Type**
CanTrcvWakeupByBusUsed		EcucBooleanParamDef
BSW Description		
Is wake up by bus supported? If CAN transceiver hardware does not support wake up by bus value is always FALSE. If CAN transceiver hardware supports wake up by bus value is TRUE or FALSE depending whether it is used or not. TRUE = Is used. FALSE = Is not used.		
Template Description		
Defines whether the ECU shall be woken up by this CommunicationController. TRUE: wake up is possible FALSE: wake up is not supported Note: If wakeUpByControllerSupported is set to TRUE the feature shall be supported by both hardware and basic software.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreTopology::CommunicationController.wakeUpByControllerSupported		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanTrcv_00009

BSW Module	BSW Context	
CanTrcv	CanTrcv/CanTrcvConfigSet/CanTrcvChannel	
BSW Parameter		**BSW Type**
CanTrcvWakeupSourceRef		EcucReferenceDef
BSW Description		
Reference to a wakeup source in the EcuM configuration. This reference is only needed if CanTrcvWakeupByBusUsed is true.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanTrcv	CanTrcv/CanTrcvConfigSet	
BSW Parameter		**BSW Type**
CanTrcvSPICommRetries		EcucIntegerParamDef
BSW Description		

Indicates the maximum number of communication retries in case of a failed SPI communication (applies both to timed out communication and to errors/NACK in the response data). If configured value is '0', no retry is allowed (communication is expected to succeed at first try).
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvConfigSet

BSW Parameter	**BSW Type**
CanTrcvSPICommTimeout	EcucIntegerParamDef

BSW Description
Indicates the maximum time allowed to the CanTrcv for replying (either positively or negatively) to a SPI command. Timeout is configured in milliseconds. Timeout value of '0' means that no specific timeout is to be used by CanTrcv and the communication is executed at the best of the SPI HW capacity.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv

BSW Parameter	**BSW Type**
CanTrcvGeneral	EcucParamConfContainerDef

BSW Description
Container gives CAN transceiver driver basic information.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvGeneral

BSW Parameter	**BSW Type**
CanTrcvDevErrorDetect	EcucBooleanParamDef

BSW Description

Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvGeneral

BSW Parameter	**BSW Type**
CanTrcvEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps the CAN transceiver driver to zero or multiple ECUC partitions to make the modules API available in this partition. The module will operate as an independent instance in each of the partitions.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvGeneral

BSW Parameter	**BSW Type**
CanTrcvIndex	EcucIntegerParamDef
BSW Description	
Specifies the InstanceId of this module instance. If only one instance is present it shall have the Id 0.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTrcv	CanTrcv/CanTrcvGeneral

BSW Parameter	**BSW Type**
CanTrcvMainFunctionDiagnosticsPeriod	EcucFloatParamDef
BSW Description	
This parameter describes the period for cyclic call to CanTrcv_MainFunctionDiagnostics. Unit is seconds.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
CanTrcv	CanTrcv/CanTrcvGeneral	
BSW Parameter		**BSW Type**
CanTrcvMainFunctionPeriod		EcucFloatParamDef
BSW Description		
This parameter describes the period for cyclic call to CanTrcv_MainFunction. Unit is seconds.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanTrcv	CanTrcv/CanTrcvGeneral	
BSW Parameter		**BSW Type**
CanTrcvTimerType		EcucEnumerationParamDef
BSW Description		
Type of the Time Service Predefined Timer.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanTrcv	CanTrcv/CanTrcvGeneral	
BSW Parameter		**BSW Type**
CanTrcvVersionInfoApi		EcucBooleanParamDef
BSW Description		
Switches version information API on and off. If switched off, function need not be present in compiled code.		
Template Description		
M2 Parameter		

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvGeneral
BSW Parameter	**BSW Type**
CanTrcvWaitTime	EcucFloatParamDef
BSW Description	
Wait time for transceiver state changes in seconds.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTrcv	CanTrcv/CanTrcvGeneral
BSW Parameter	**BSW Type**
CanTrcvWakeUpSupport	EcucEnumerationParamDef
BSW Description	
Informs whether wake up is supported by polling or not supported. In case no wake up is supported by the hardware, setting has to be NOT_SUPPORTED. Only in the case of wake up supported by polling, function CanTrcv_MainFunction has to be present and to be invoked by the scheduler.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

C.2.4 CanNm Mapping

BSW Module	BSW Context
CanNm	CanNm
BSW Parameter	**BSW Type**
CanNmGlobalConfig	EcucParamConfContainerDef
BSW Description	
This container contains the global configuration parameter of the CanNm. The parameters and the parameters of the sub containers shall be mapped to the C data type CanNm_ConfigType (for parameters where it is possible) which is passed to the CanNm_Init function.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig	
BSW Parameter		**BSW Type**
CanNmBusLoadReductionEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling busload reduction support.		
Template Description		
Enables busload reduction support		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmClusterCoupling.nmBusloadReductionEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00036

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig	
BSW Parameter		**BSW Type**
CanNmBusSynchronizationEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling bus synchronization support. This feature is required for gateway nodes only.		
Template Description		
Enables bus synchronization support.		
M2 Parameter		
SystemTemplate::NetworkManagement::NmEcu.nmBusSynchronizationEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00033

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig	
BSW Parameter		**BSW Type**
CanNmChannelConfig		EcucParamConfContainerDef
BSW Description		
This container contains the channel specific configuration parameter of the CanNm.		
Template Description		
Can specific NmCluster attributes		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmCluster		
Mapping Rule		**Mapping Type**
Create container for each existing CanNmCluster.		full

Mapping Status	Mapping ID
valid	up_CanNm_00002

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmActiveWakeupBitEnabled		EcucBooleanParamDef
BSW Description		
Enables/Disables the handling of the Active Wakeup Bit in the CanNm module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmAllNmMessagesKeepAwake		EcucBooleanParamDef
BSW Description		
Specifies if CanNm drops irrelevant NM PDUs. false: Only NM PDUs with a PNI bit = true and containing a PN request for this ECU triggers the standard RX indication handling true: Every NM PDU triggers the standard RX indication handling		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmBusLoadReductionActive		EcucBooleanParamDef
BSW Description		
This parameter defines if bus load reduction for the respective NM channel is active or not.		
Template Description		
It determines if bus load reduction for the respective CanNm channel is active or not.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmCluster.nmBusloadReductionActive		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**

valid	up_CanNm_00010

CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter	**BSW Type**	
CanNmCarWakeUpBitPosition	EcucIntegerParamDef	
BSW Description		
Specifies the Bit position of the CWU within the NM PDU.		
Template Description		
Specifies the bit position of the CarWakeUp within the NmPdu.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmCluster.nmCarWakeUpBitPosition		
Mapping Rule		**Mapping Type**
The position of the Car Wakeup bit in the Ecuc is defined by the configuration parameters CanNmCarWakeUpBytePosition and CanNmCarWakeUpBitPosition (position in wakeUpByte). In the SysT the position is described only by the bit position in the NmMessage.		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00019

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter	**BSW Type**	
CanNmCarWakeUpBytePosition	EcucIntegerParamDef	
BSW Description		
Specifies the Byte position of the CWU within the NM PDU.		
Template Description		
Specifies the bit position of the CarWakeUp within the NmPdu.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmCluster.nmCarWakeUpBitPosition		
Mapping Rule		**Mapping Type**
The position of the Car Wakeup bit in the Ecuc is defined by the configuration parameters CanNmCarWakeUpBytePosition and CanNmCarWakeUpBitPosition (position in wakeUpByte). In the SysT the position is described only by the bit position in the NM PDU.		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00006

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter	**BSW Type**	
CanNmCarWakeUpFilterEnabled	EcucBooleanParamDef	
BSW Description		
If CWU filtering is supported, only the CWU bit within the NM PDU with source node identifier CanNmCarWakeUpFilterNodeId is considered as CWU request. FALSE - CWU filtering is not supported TRUE - CWU filtering is supported		
Template Description		
If this attribute is set to true the CareWakeUp filtering is supported.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmNode.nmCarWakeUpFilterEnabled		

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00024

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmCarWakeUpFilterNodeId	EcucIntegerParamDef
BSW Description	
Source node identifier for CWU filtering. If CWU filtering is supported, only the CWU bit within the NM PDU with source node identifier CanNmCarWakeUpFilterNodeId is considered as CWU request.	
Template Description	
Source node identifier for CarWakeUp filtering.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmCarWakeUpFilterNodeId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00013

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmCarWakeUpRxEnabled	EcucBooleanParamDef
BSW Description	
Enables or disables support of CarWakeUp bit evaluation in received NM PDUs. FALSE - CarWakeUp not supported TRUE - CarWakeUp supported	
Template Description	
If set to true this attribute enables the support of CarWakeUp bit evaluation in received NmPdus.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmNode.nmCarWakeUpRxEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00017

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmComMNetworkHandleRef	EcucReferenceDef
BSW Description	
This reference points to the unique channel defined by the ComMChannel and provides access to the unique channel index value in ComMChannelId.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmImmediateNmCycleTime	EcucFloatParamDef
BSW Description	
Defines the immediate NM PDU cycle time in seconds which is used for CanNmImmediateNmTransmissions NM PDU transmissions.	
Template Description	
Defines the immediate NmPdu cycle time in seconds which is used for nmImmediateNmTransmissions NmPdu transmissions. This parameter is only valid if CanNmImmediateNmTransmissions is greater one.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmImmediateNmCycleTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00015

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmImmediateNmTransmissions	EcucIntegerParamDef
BSW Description	
Defines the number of immediate NM PDUs which shall be transmitted. If the value is zero no immediate NM PDUs are transmitted. The cycle time of immeditate NM PDUs is defined by CanNmImmediateNmCycleTime.	
Template Description	
Defines the number of immediate NmPdus which shall be transmitted. If the value is zero no immediate NmPdus are transmitted. The cycle time of immeditate NmPdus is defined by nmImmediateNmCycleTime.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmImmediateNmTransmissions	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00004

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmMsgCycleOffset	EcucFloatParamDef
BSW Description	
Time offset in the periodic transmission node. It determines the start delay of the transmission. Specified in seconds.	
Template Description	
Node specific time offset in the periodic transmission node. It determines the start delay of the transmission. Specified in seconds.	

M2 Parameter	
SystemTemplate::NetworkManagement::CanNmNode.nmMsgCycleOffset	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00020

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmMsgCycleTime		EcucFloatParamDef
BSW Description		
Period of a NM PDU in seconds. It determines the periodic rate in the "periodic transmission mode with bus load reduction" and is the basis for transmit scheduling in the "periodic transmission mode without bus load reduction".		
Template Description		
Period of a NmPdu in seconds. It determines the periodic rate in the periodic transmission mode with bus load reduction and is the basis for transmit scheduling in the periodic transmission mode without bus load reduction.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmCluster.nmMsgCycleTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00021

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmMsgReducedTime		EcucFloatParamDef
BSW Description		
Node specific bus cycle time in the periodic transmission mode with bus load reduction. Specified in seconds.		
Template Description		
Node specific bus cycle time in the periodic transmission mode with bus load reduction. Specified in seconds.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmNode.nmMsgReducedTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00003

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmMsgTimeoutTime		EcucFloatParamDef
BSW Description		
When using Partial Network and this timeout is defined then CanNm monitors that a NM-PDU is transmitted successfully within this Transmission Timeout Time and provides an error notification otherwise.		

Template Description	
Timeout of an NmPdu in seconds. It determines how long the NM shall wait with notification of transmission failure while communication errors occur on the bus.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmMessageTimeoutTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00014

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmNodeDetectionEnabled	EcucBooleanParamDef
BSW Description	
Precompile time switch to enable the node detection feature.	
Template Description	
Enables the Request Repeat Message Request support. Only valid if nmNodeIdEnabled is set to true.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmNodeDetectionEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00045

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmNodeId	EcucIntegerParamDef
BSW Description	
Node identifier of local node.	
Template Description	
Node identifier of local NmNode. Must be unique in the NmCluster.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.nmNodeId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00023

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmNodeIdEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the source node identifier.	
Template Description	
Enables the source node identifier.	
M2 Parameter	

SystemTemplate::NetworkManagement::NmCluster.nmNodeIdEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00047

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmPduCbvPosition	EcucEnumerationParamDef
BSW Description	
Defines the position of the control bit vector within the NM PDU. The value of the parameter represents the location of the Control Bit Vector in the NM PDU (CanNmPduByte0 means byte 0, CanNmPduByte1 means byte 1, CanNmPduOff means source node identifier is not part of the NM PDU) ImplementationType: CanNm_PduPositionType	
Template Description	
Defines the position of the control bit vector within the NmPdu (Byte position). If this attribute is not configured, the Control Bit Vector is not used.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmCbvPosition	
Mapping Rule	**Mapping Type**
Derive byte position from nmCbvPosition attribute. If this optional attribute is missing set CANNM_PDU_OFF as value.	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00012

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmPduNidPosition	EcucEnumerationParamDef
BSW Description	
Defines the position of the source node identifier within the NM PDU. The value of the parameter represents the location of the source node identifier in the NM PDU (CANNM_PDU_BYTE_0 means byte 0, CANNM_PDU_BYTE_1 means byte 1, CANNM_PDU_OFF means source node identifier is not part of the NM PDU) ImplementationType: CanNm_PduPositionType	
Template Description	
Defines the byte position of the source node identifier within the NmPdu. If this attribute is not configured, the Node Identification is not used.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmNidPosition	
Mapping Rule	**Mapping Type**
Derive byte position from nmNidPosition attribute. If this optional attribute is missing set CANNM_PDU_OFF as value.	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00025

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmPnEnabled		EcucBooleanParamDef
BSW Description		
Enables or disables support of partial networking. false: Partial networking Range not supported true: Partial networking supported		
Template Description		
Defines whether this NmCluster contributes to the partial network mechanism.		
M2 Parameter		
SystemTemplate::NetworkManagement::NmCluster.nmPncParticipation		
Mapping Rule		**Mapping Type**
If NmCluster.nmPncParticipation has the value "true" or is not defined then CanNmPnEnabled shall be set to true.		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00011

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmPnEraCalcEnabled		EcucBooleanParamDef
BSW Description		
Specifies if CanNm calculates the PN request information for external requests. (ERA) false: PN request are not calculated true: PN request are calculated		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmPnEraRxNSduRef		EcucReferenceDef
BSW Description		
Reference to a Pdu in the COM-Stack. The SduRef is required for every CanNm Channel, because ERA is reported per channel.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmPnHandleMultipleNetworkRequests		EcucBooleanParamDef
BSW Description		
Specifies if CanNm performs an additional transition from Network Mode to Repeat Message State (true) or not (false).		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmRemoteSleepIndTime		EcucFloatParamDef
BSW Description		
Timeout for Remote Sleep Indication. It defines the time in seconds how long it shall take to recognize that all other nodes are ready to sleep.		
Template Description		
Timeout for Remote Sleep Indication in seconds. It defines the time how long it shall take to recognize that all other nodes are ready to sleep.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmCluster.nmRemoteSleepIndicationTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00022

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmRepeatMessageTime		EcucFloatParamDef
BSW Description		
Timeout for Repeat Message State. It defines the time in seconds how long the NM shall stay in the Repeat Message State.		
Template Description		
Timeout for Repeat Message State in seconds. Defines the time how long the NM shall stay in the Repeat Message State.		
M2 Parameter		
SystemTemplate::NetworkManagement::CanNmCluster.nmRepeatMessageTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00005

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmRepeatMsgIndEnabled		EcucBooleanParamDef
BSW Description		
Enable/disable the notification that a RepeatMessageRequest bit has been received.		
Template Description		
Switch for enabling the Repeat Message Bit Indication.		
M2 Parameter		
SystemTemplate::NetworkManagement::NmCluster.nmRepeatMsgIndEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00046

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig	
BSW Parameter		**BSW Type**
CanNmRxPdu		EcucParamConfContainerDef
BSW Description		
This container is used to configure the Rx PDU properties that are used for the CanNm Channel.		
Template Description		
M2 Parameter		
SystemTemplate::NetworkManagement::NmNode.rxNmPdu		
Mapping Rule		**Mapping Type**
Create container for each NmPdu that is received on the regarded Nm cluster		full
Mapping Status		**Mapping ID**
valid		up_CanNm_00026

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig/CanNmRxPdu	
BSW Parameter		**BSW Type**
CanNmRxPduId		EcucIntegerParamDef
BSW Description		
This parameter defines the Rx PDU ID of the CanIf L-PDU range that is associated with this CanNm channel.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig/CanNmRxPdu	
BSW Parameter		**BSW Type**
CanNmRxPduRef		EcucReferenceDef

BSW Description	
Reference to the global PDU that is used by this CanNm channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmTimeoutTime	EcucFloatParamDef
BSW Description	
Network Timeout for NM PDUs. It denotes the time in seconds how long the NM shall stay in the Ready Sleep State before transition into the Prepare Bus-Sleep Mode is initiated.	
Template Description	
Network Timeout for NmPdus in seconds It denotes the time how long the CanNm shall stay in the Network Mode before transition into Prepare Bus-Sleep Mode shall take place.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmNetworkTimeout	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00008

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmTxPdu	EcucParamConfContainerDef
BSW Description	
This container contains the CanNmTxConfirmationPduId and the CanNmTxPduRef.	
Template Description	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.txNmPdu	
Mapping Rule	**Mapping Type**
Create container for each NmPdu that is transmitted on the regarded Nmcluster	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00018

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig/CanNmTxPdu
BSW Parameter	**BSW Type**
CanNmTxConfirmationPduId	EcucIntegerParamDef
BSW Description	

Handle Id to be used by the Lower Layer to confirm the transmission of the CanNmTxPdu to the LowerLayer.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig/CanNmTxPdu
BSW Parameter	**BSW Type**
CanNmTxPduRef	EcucReferenceDef
BSW Description	
The reference to the common PDU structure.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmUserDataTxPdu	EcucParamConfContainerDef
BSW Description	
This optional container is used to configure the UserNm PDU. This container is only available if CanNmComUserDataSupport is enabled.	
Template Description	
An ISignalToIPduMapping describes the mapping of ISignals to ISignalIPdus and defines the position of the ISignal within an ISignalIPdu.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalToIPduMapping	
Mapping Rule	**Mapping Type**
Create container for each NmPdu that aggregates the ISignalToIPduMapping element. The configuration for these Pdus (e.g. Transfer Properties) shall be derived from this information.	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00016

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig/CanNmUserDataTxPdu
BSW Parameter	**BSW Type**
CanNmTxUserDataPduId	EcucIntegerParamDef
BSW Description	

This parameter defines the Handle ID of the NM User Data I-PDU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig/CanNmUserDataTxPdu
BSW Parameter	**BSW Type**
CanNmTxUserDataPduRef	EcucReferenceDef
BSW Description	
Reference to the NM User Data I-PDU in the global PDU collection.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig/CanNmChannelConfig
BSW Parameter	**BSW Type**
CanNmWaitBusSleepTime	EcucFloatParamDef
BSW Description	
Timeout for bus calm down phase. It denotes the time in seconds how long the NM shall stay in the Prepare Bus-Sleep Mode before transition into Bus-Sleep Mode shall take place.	
Template Description	
Timeout for bus calm down phase in seconds. It denotes the time how long the CanNm shall stay in the Prepare Bus-Sleep Mode before transition into Bus-Sleep Mode shall take place.	
M2 Parameter	
SystemTemplate::NetworkManagement::CanNmCluster.nmWaitBusSleepTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00009

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig
BSW Parameter	**BSW Type**
CanNmComControlEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the Communication Control support.	
Template Description	

Enables the Communication Control support.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmComControlEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00043

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig
BSW Parameter	**BSW Type**
CanNmComUserDataSupport	EcucBooleanParamDef
BSW Description	
Preprocessor switch for enabling the Tx path of Com User Data. Use case: Setting of NMUserData via SWC.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.iSignalToIPduMapping	
Mapping Rule	**Mapping Type**
If an NmPdu contains user data defined via the existence of NmPdu.iSignalToI PduMapping and is consequently handled via the PduR and Com this attribute shall be set to true.	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00044

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig
BSW Parameter	**BSW Type**
CanNmCoordinatorSyncSupport	EcucBooleanParamDef
BSW Description	
Enables/disables the coordinator synchronization support.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig
BSW Parameter	**BSW Type**
CanNmDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanNm	CanNm/CanNmGlobalConfig

BSW Parameter	**BSW Type**
CanNmGlobalPnSupport	EcucBooleanParamDef

BSW Description
Pre-processor switch for enabling partial networking support globally.
Template Description

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig
BSW Parameter	**BSW Type**
CanNmPassiveModeEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling support of the Passive Mode.	
Template Description	
Enables support of the Passive Mode. The passive mode is configurable per channel.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.nmPassiveModeEnabled	

Mapping Rule	Mapping Type
1:1 mapping. nmNode.nmPassiveModeEnabled shall always have the same value in all Nm Clusters with the same bus protocol in the scope of one EcuInstance.	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00028

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig
BSW Parameter	**BSW Type**
CanNmPduRxIndicationEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the PDU Rx Indication.	
Template Description	
Switch for enabling the PDU Rx Indication.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmPduRxIndicationEnabled	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**

valid	up_CanNm_00001

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig	
BSW Parameter		**BSW Type**
CanNmPnEiraCalcEnabled		EcucBooleanParamDef
BSW Description		
Specifies if CanNm calculates the PN request information for internal an external requests. (EIRA) true: PN request are calculated false: PN request are not calculated		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanNm	CanNm/CanNmGlobalConfig	
BSW Parameter		**BSW Type**
CanNmPnEiraRxNSduRef		EcucReferenceDef
BSW Description		
Reference to a Pdu in the COM-Stack. Only one SduRef is required for CanNm because the EIRA is the aggregation over all Can Channels.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context

valid		

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmPnInfo
BSW Parameter	**BSW Type**
CanNmPnFilterMaskByte	EcucParamConfContainerDef
BSW Description	
PN information configuration	
Template Description	
Bit mask for CAN Payload used to configure the CAN Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupDataMask	
Mapping Rule	**Mapping Type**
For one EcuInstance all contributing CanCommunicationConnector.pncWakeupDataMask will be bitwise ORed to obtain aggregated pncWakeupDataMask value for this ECU. Since the pncWakeupDataMask is calculated over the whole payload of the NmPdu, the leading Bytes of this aggregated pncWakeupDataMask shall be ignored based on the System.pncVectorOffset value. In order to get the CanNmPnFilterMaskByteIndex and CanNmPnFilterMaskByteValue for all the bytes aggregated pncWakeupDataMask shall be processed in a littleEndian way. E.g. if pncVectorOffset = 2 and aggregated pncWakeupDataMask has the value 2^ 63 this will end up in a CanNmPnFilterMaskByte with CanNmPnFilterMaskByteIndex = 5 and CanNmPnFilterMaskByteValue = 128.	full
Mapping Status	**Mapping ID**
valid	up_CanNm_00039

BSW Module	BSW Context
CanNm	CanNm/CanNmGlobalConfig/CanNmPnInfo/CanNmPnFilterMaskByte
BSW Parameter	**BSW Type**
CanNmPnFilterMaskByteIndex	EcucIntegerParamDef
BSW Description	
Index of the filter mask byte. Specifies the position within the filter mask byte array.	
Template Description	
Bit mask for CAN Payload used to configure the CAN Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanCommunicationConnector.pncWakeupDataMask	
Mapping Rule	**Mapping Type**
For one EcuInstance all contributing CanCommunicationConnector.pncWakeupDataMask will be bitwise ORed to obtain aggregated pncWakeupDataMask value for this ECU. Since the pncWakeupDataMask is calculated over the whole payload of the NmPdu, the leading Bytes of this aggregated pncWakeupDataMask shall be ignored based on the System.pncVectorOffset value. In order to get the CanNmPnFilterMaskByteIndex and CanNmPnFilterMaskByteValue for all the bytes aggregated pncWakeupDataMask shall be processed in a littleEndian way. E.g. if pncVectorOffset = 2 and aggregated pncWakeupDataMask has the value 2^ 63 this will end up in a CanNmPnFilterMaskByte with CanNmPnFilterMaskByteIndex = 5 and CanNmPnFilterMaskByteValue = 128.	full

C.2.5 CanTp Mapping

BSW Module	**BSW Context**	
CanTp	CanTp	
BSW Parameter		**BSW Type**
CanTpConfig		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters and sub containers of the AUTOSAR CanTp module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**

valid	up_CanTp_00001

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig	
BSW Parameter		**BSW Type**
CanTpChannel		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters of the CanTp channel.		
Template Description		
Configuration parameters of the CanTp channel.		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpChannel		
Mapping Rule		**Mapping Type**
Create Container ifor each CanTpChannel that exist in ECU Extract.		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00002

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel	
BSW Parameter		**BSW Type**
CanTpRxNSdu		EcucParamConfContainerDef
BSW Description		
The following parameters needs to be configured for each CAN N-SDU that the CanTp module receives via the CanTpChannel. This N-SDU produces meta data items of type SOURCE_ADDRESS_16, TARGET_ADDRESS_16 and ADDRESS_EXTENSION_8.		
Template Description		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpConnection.tpSdu		
Mapping Rule		**Mapping Type**
Create container for each existing CanTpConnection that contains a reference to an N-SDU that is received.		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00003

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpBs	EcucIntegerParamDef
BSW Description	
Sets the number of N-PDUs the CanTp receiver allows the sender to send, before waiting for an authorization to continue transmission of the following N-PDUs.For further details on this parameter value see ISO 15765-2 specification.	
Template Description	
The maximum number of N-PDUs the CanTp receiver allows the sender to send, before waiting for an authorization to continue transmission of the following N-PDUs. For further details on this parameter value see ISO 15765-2 specification. Note: For reasons of buffer length, the CAN Transport Layer can adapt the BS value within the limit of this maximum BS	
M2 Parameter	

SystemTemplate::TransportProtocols::CanTpConnection.maxBlockSize	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00013

BSW Module	**BSW Context**
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpNAe	EcucParamConfContainerDef
BSW Description	
This container is required for each RxNSdu and TxNSdu with AddressingFormat CANTP_MIXED or CANTP_MIXED29BIT.	
Template Description	
Declares which communication addressing mode is supported.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpConnection.addressingFormat	
Mapping Rule	**Mapping Type**
Create container if addressingFormat is set to "mixed".	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00028

BSW Module	**BSW Context**
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu/CanTpNAe
BSW Parameter	**BSW Type**
CanTpNAe	EcucIntegerParamDef
BSW Description	
This parameter contains the transport protocol address extension value.	
Template Description	
If the mixed addressing format is used, this parameter contains the transport protocol address extension value.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpAddress.tpAddressExtensionValue	
Mapping Rule	**Mapping Type**
The CanTPConnection contains a reference to the SDU and a relation to the Tp Node that contains the TpAddressExtension.	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00029

BSW Module	**BSW Context**
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpNSa	EcucParamConfContainerDef
BSW Description	
This container is required for each RxNSdu and TxNSdu with RxTaType CANTP_PHYSICAL and CanTpAddressingFormat CANTP_EXTENDED. When DynIdSupport is enabled, this container is also required for each TxNSdu with AddressingFormat CANTP_NORMALFIXED or CANTP_MIXED29BIT. When DynIdSupport is enabled and GenericConnectionSupport is not enabled, this container is also required for each RxNSdu with AddressingFormat CANTP_NORMALFIXED or CANTP_MIXED29BIT.	

Template Description	
Declares which communication addressing mode is supported.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpConnection.addressingFormat	
Mapping Rule	**Mapping Type**
Create container if addressingFormat is set to "extended".	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00025

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu/CanTpNSa
BSW Parameter	**BSW Type**
CanTpNSa	EcucIntegerParamDef
BSW Description	
This parameter contains the transport protocol source address value.	
Template Description	
An ECUs TP address on the referenced channel. This represents the diagnostic Address.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpAddress.tpAddress	
Mapping Rule	**Mapping Type**
The CanTPConnection contains a reference to the SDU and a relation to the Tp Node that contains the TpAddress.	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00026

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpNTa	EcucParamConfContainerDef
BSW Description	
This container is required for each RxNSdu and TxNSdu with AddressingFormat CANTP_EXTENDED. When DynIdSupport is enabled, this container is also required for each RxNSdu with AddressingFormat CANTP_NORMALFIXED or CANTP_MIXED29BIT. When DynIdSupport is enabled and GenericConnectionSupport is not enabled, this container is also required for each TxNSdu with AddressingFormat CANTP_NORMALFIXED or CANTP_MIXED29BIT.	
Template Description	
Declares which communication addressing mode is supported.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpConnection.addressingFormat	
Mapping Rule	**Mapping Type**
Create container if addressingFormat is set to "extended".	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00032

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu/CanTpNTa
BSW Parameter	**BSW Type**
CanTpNTa	EcucIntegerParamDef
BSW Description	
This parameter contains the transport protocol target address value.	

Template Description	
An ECUs TP address on the referenced channel. This represents the diagnostic Address.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpAddress.tpAddress	
Mapping Rule	**Mapping Type**
The CanTPConnection contains a reference to the SDU and a relation to the Tp Node that contains the TpAddress.	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00033

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpNar	EcucFloatParamDef
BSW Description	
Value in seconds of the N_Ar timeout. N_Ar is the time for transmission of a CAN frame (any N_PDU) on the receiver side.	
Template Description	
This attribute states the timeout between the PDU transmit request of the Transport Layer to the Can Interface and the corresponding confirmation of the Can Interface on the receiver side (for FC or AF). Specified in seconds.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpNode.timeoutAr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00012

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpNbr	EcucFloatParamDef
BSW Description	
Value in seconds of the performance requirement for (N_Br + N_Ar). N_Br is the elapsed time between the receiving indication of a FF or CF or the transmit confirmation of a FC, until the transmit request of the next FC.	
Template Description	
Value in seconds of the performance requirement for (N_Br + N_Ar). N_Br is the elapsed time between the receiving indication of a FF or CF or the transmit confirmation of a FC, until the transmit request of the next FC.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpConnection.timeoutBr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00014

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**

CanTpNcr	EcucFloatParamDef
BSW Description	
Value in seconds of the N_Cr timeout. N_Cr is the time until reception of the next Consecutive Frame N_PDU.	
Template Description	
This parameter defines the timeout value for waiting for a CF or FF-x (in case of retry) after receiving the last CF or after sending an FC or AF on the receiver side. Specified in seconds.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpConnection.timeoutCr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00010

BSW Module	**BSW Context**
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpRxAddressingFormat	EcucEnumerationParamDef
BSW Description	
Declares which communication addressing mode is supported for this RxNSdu. Definition of Enumeration values: CanTpStandard to use normal addressing format. CanTpExtended to use extended addressing format. CanTpMixed to use mixed 11 bit addressing format. CanTpNormalFixed to use normal fixed addressing format. CanTpMixed29Bit to use mixed 29 bit addressing format.	
Template Description	
Declares which communication addressing mode is supported.	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpConnection.addressingFormat	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00007

BSW Module	**BSW Context**
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu
BSW Parameter	**BSW Type**
CanTpRxNPdu	EcucParamConfContainerDef
BSW Description	
Used for grouping of the ID of a PDU and the Reference to a PDU. This N-PDU consumes a meta data item of type CAN_ID_32.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::CanTpConnection.dataPdu	
Mapping Rule	**Mapping Type**
Create container if the CanTpConnection contains a reference to a DataNpdu that is received by the regarded ECU.	full
Mapping Status	**Mapping ID**
valid	up_CanTp_00021

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu/CanTpRxNPdu	
BSW Parameter		**BSW Type**
CanTpRxNPduId		EcucIntegerParamDef
BSW Description		
The N-PDU identifier attached to the RxNsdu is identified by CanTpRxNSduId. Each RxNsdu identifier is linked to only one SF/FF/CF N-PDU identifier. Nevertheless, in the case of extended or mixed addressing format, the same N-PDU identifier can be used for several N-SDU identifiers. The distinction is made by the N_TA or N_AE value (first data byte of SF or FF frames).

		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpRxNSdu	
BSW Parameter		**BSW Type**
CanTpRxPaddingActivation		EcucEnumerationParamDef
BSW Description		
Defines if the receive frame uses padding or not. This parameter is restricted to 8 byte N-PDUs. Definition of enumeration values: CanTpOn: The N-PDU received uses padding for SF, FC and the last CF. (N-PDU length is always >= 8 bytes in case of CAN 2.0) CanTpOff: The N-PDU received does not use padding for SF, CF and the last CF. (N-PDU length is dynamic - any valid DLC value). Note: The mandatory mapping to the next higher valid DLC value for N-PDUs with a length > 8 bytes is not affected by this parameter.		
Template Description		
This specifies wheter or not Sfs, FCs and the last CF shall be padded to 8 bytes length in case it contains less payload. true: The N-PDU received uses padding for SF, FC and the last CF. (N-PDU length is always 8 bytes) false: The N-PDU received does not use padding for SF, CF and the last CF. (N-PDU length is dynamic)

CanTpNSa	EcucIntegerParamDef	
BSW Description		
This parameter contains the transport protocol source address value.		
Template Description		
An ECUs TP address on the referenced channel. This represents the diagnostic Address.		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpAddress.tpAddress		
Mapping Rule		**Mapping Type**
The CanTPConnection contains a reference to the SDU and a relation to the Tp Node that contains the TpAddress.		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00026

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu	
BSW Parameter	**BSW Type**	
CanTpNTa	EcucParamConfContainerDef	
BSW Description		
This container is required for each RxNSdu and TxNSdu with AddressingFormat CANTP_EXTENDED. When DynIdSupport is enabled, this container is also required for each RxNSdu with AddressingFormat CANTP_NORMALFIXED or CANTP_MIXED29BIT. When DynIdSupport is enabled and GenericConnectionSupport is not enabled, this container is also required for each TxNSdu with AddressingFormat CANTP_NORMALFIXED or CANTP_MIXED29BIT.		
Template Description		
Declares which communication addressing mode is supported.		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpConnection.addressingFormat		
Mapping Rule		**Mapping Type**
Create container if addressingFormat is set to "extended".		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00032

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu/CanTpNTa	
BSW Parameter	**BSW Type**	
CanTpNTa	EcucIntegerParamDef	
BSW Description		
This parameter contains the transport protocol target address value.		
Template Description		
An ECUs TP address on the referenced channel. This represents the diagnostic Address.		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpAddress.tpAddress		
Mapping Rule		**Mapping Type**
The CanTPConnection contains a reference to the SDU and a relation to the Tp Node that contains the TpAddress.		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00033

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu	
BSW Parameter		**BSW Type**
CanTpNas		EcucFloatParamDef
BSW Description		
Value in second of the N_As timeout. N_As is the time for transmission of a CAN frame (any N_PDU) on the part of the sender.		
Template Description		
This attribute states the timeout between the PDU transmit request for the first PDU of the group used in the current connection of the Transport Layer to the Can Interface and the corresponding confirmation of the Can Interface (when having sent the last PDU of the group used in this connection) on the sender side (SF-x, FF-x, CF or FC (in case of Transmit Cancellation)). Specified in seconds.		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpNode.timeoutAs		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00034

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu	
BSW Parameter		**BSW Type**
CanTpNbs		EcucFloatParamDef
BSW Description		
Value in seconds of the N_Bs timeout. N_Bs is the time of transmission until reception of the next Flow Control N_PDU.		
Template Description		
This parameter defines the timout for waiting for an FC or AF on the sender side in an 1:1 connection. Specified in seconds.		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpConnection.timeoutBs		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00038

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu	
BSW Parameter		**BSW Type**
CanTpNcs		EcucFloatParamDef
BSW Description		
Value in seconds of the performance requirement of (N_Cs + N_As). N_Cs is the time in which CanTp is allowed to request the Tx data of a Consecutive Frame N_PDU.		
Template Description		
The attribute timeoutCs represents the time (in seconds) which elapses between the transmit request of a CF N-PDU until the transmit request of the next CF N-PDU.		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpConnection.timeoutCs		
Mapping Rule		**Mapping Type**
1:1 mapping		full

valid	up_CanTp_00027

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu	
BSW Parameter		**BSW Type**
CanTpRxFcNPdu		EcucParamConfContainerDef
BSW Description		
Used for grouping of the ID of a PDU and the Reference to a PDU. This N-PDU consumes a meta data item of type CAN_ID_32.		
Template Description		
M2 Parameter		
SystemTemplate::TransportProtocols::CanTpConnection.flowControlPdu		
Mapping Rule		**Mapping Type**
Create container if the CanTpConnection contains a reference to a FlowControl NPdu that is received by the regarded ECU.		full
Mapping Status		**Mapping ID**
valid		up_CanTp_00024

BSW Module	BSW Context	
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu/CanTpRxFcNPdu	
BSW Parameter		**BSW Type**
CanTpRxFcNPduId		EcucIntegerParamDef
BSW Description		
N-PDU identifier attached to the FC N-PDU of this TxNsdu identified by CanTpTxNSduId. Each TxNsdu identifier is linked to one Rx FC N-PDU identifier only. However, in the case of extended addressing format, the same FC N-PDU identifier can be used for several N-SDU identifiers. The distinction is made by means of the N_TA value (first data byte of FC frames).

valid	

BSW Module	BSW Context
CanTp	CanTp/CanTpConfig/CanTpChannel/CanTpTxNSdu
BSW Parameter	**BSW Type**
CanTpTxPaddingActivation	EcucEnumerationParamDef
BSW Description	
Defines if the transmit frame use padding or not. This parameter is restricted to 8 byte N-PDUs. Definition of Enumeration values: CanTpOn The transmit N-PDU uses padding for SF, FC and the last CF. (N-PDU length is always 8 bytes in case of CAN 2.0) CanTpOff The transmit N-PDU does not use padding for SF, CF and the last CF. (N-PDU length is dynamic - any valid DLC value). Note: The mandatory mapping to the next higher valid DLC value for N-PDUs with a length > 8 bytes is not affected by this parameter.	
Template Description	
This specifies wheter or not Sfs, FCs and the last CF shall be padded to 8 bytes length in case it contains less payload. true: The N-PDU received uses padding for SF, FC and the last CF. (N-PDU length is always 8 bytes) false: The N-PDU received does not use padding for SF, CF and the last CF. (N-PDU length is dynamic)	
M2 Parameter

BSW Parameter	**BSW Type**
CanSMBorTimeL2	EcucFloatParamDef
BSW Description	
This time parameter defines in seconds the duration of the bus-off recovery time in level 2 (long recovery time).	
Template Description	
This attribute defines the duration of the bus-off recovery time in level 2 (long recovery time) in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanClusterBusOffRecovery.borTimeL2	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanSM_00004

BSW Module	**BSW Context**
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork
BSW Parameter	**BSW Type**
CanSMBorTimeTxEnsured	EcucFloatParamDef
BSW Description	
This parameter defines in seconds the duration of the bus-off event check. This check assesses, if the recovery has been successful after the recovery reenables the transmit path. If a new bus-off occurs during this time period, the CanSM assesses this bus-off as sequential bus-off without successful recovery. Because a bus-off only can be detected, when PDUs are transmitted, the time has to be great enough to ensure that PDUs are transmitted again (e. g. time period of the fastest cyclic transmitted PDU of the COM module / ComTxModeTimePeriodFactor).	
Template Description	
This attribute defines the duration of the bus-off event check in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Can::CanTopology::CanClusterBusOffRecovery.borTimeTxEnsured	
Mapping Rule	**Mapping Type**
If borTimeTxEnsured is defined set this parameter to true otherwise to false.	full
Mapping Status	**Mapping ID**
valid	up_CanSM_00005

BSW Module	**BSW Context**
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork

BSW Parameter	BSW Type
CanSMBorTxConfirmationPolling	EcucBooleanParamDef
BSW Description	
This parameter shall configure, if the CanSM polls the CanIf_GetTxConfirmationState API to decide the bus-off state to be recovered instead of using the CanSMBorTimeTxEnsured parameter for this decision.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork
BSW Parameter	**BSW Type**
CanSMComMNetworkHandleRef	EcucReferenceDef
BSW Description	
Unique handle to identify one certain CAN network. Reference to one of the network handles configured for the ComM.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork
BSW Parameter	**BSW Type**
CanSMController	EcucParamConfContainerDef
BSW Description	
This container contains the controller IDs assigned to a CAN network.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork/CanSMController
BSW Parameter	**BSW Type**
CanSMControllerId	EcucReferenceDef

BSW Description	
Unique handle to identify one certain CAN controller. Reference to one of the CAN controllers managed by the CanIf module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork
BSW Parameter	**BSW Type**
CanSMDemEventParameterRefs	EcucParamConfContainerDef
BSW Description	
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.

valid	

BSW Module	BSW Context
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork/CanSMDemEvent ParameterRefs
BSW Parameter	**BSW Type**
CANSM_E_BUS_OFF	EcucReferenceDef
BSW Description	
Reference to configured DEM event to report bus off errors for this CAN network.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork/CanSMDemEvent ParameterRefs
BSW Parameter	**BSW Type**

CANSM_E_MODE_REQUEST_TIMEOUT	EcucReferenceDef
BSW Description	
Reference to configured DEM event to report bus off errors for this CAN network.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork
BSW Parameter	**BSW Type**
CanSMEnableBusOffDelay	EcucBooleanParamDef
BSW Description	
This parameter defines if the <User_GetBusOffDelay> shall be called for this network.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanSM	CanSM/CanSMConfiguration/CanSMManagerNetwork
BSW Parameter	**BSW Type**
CanSMTransceiverId	EcucReferenceDef
BSW Description	
ID of the CAN transceiver assigned to the configured network handle. Reference to one of the transceivers managed by the CanIf module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanSM	CanSM/CanSMConfiguration
BSW Parameter	**BSW Type**
CanSMModeRequestRepetitionMax	EcucIntegerParamDef
BSW Description	

Specifies the maximal amount of mode request repetitions without a respective mode indication from the CanIf module until the CanSM module reports a Development Error to the Det and tries to go back to no communication.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanSM	CanSM/CanSMConfiguration

BSW Parameter	**BSW Type**
CanSMModeRequestRepetitionTime	EcucFloatParamDef

BSW Description
Specifies in which time duration the CanSM module shall repeat mode change requests by using the API of the CanIf module.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**

C.3 J1939

C.3.1 J1939Tp Mapping

BSW Module	BSW Context	
J1939Tp	J1939Tp	
BSW Parameter		**BSW Type**
J1939TpConfiguration		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters and sub containers of the J1939Tp module that define the communication paths.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
J1939Tp	J1939Tp/J1939TpConfiguration	
BSW Parameter		**BSW Type**
J1939TpRxChannel		EcucParamConfContainerDef
BSW Description		
This container describes a reception channel of the J1939Tp module. A channel referencing N-PDUs without MetaData is used for all N-SDUs that share the same source address (SA) and the same destination address (BAM: DA = 0xFF, CMDT: DA != 0xFF). A channel with N-PDUs with MetaData is used for all possible source and destination addresses.		
Template Description		
A J1939TpConnection represents an internal path for the transmission or reception of a Pdu via J1939Tp and describes the the sender and the receiver of this particular communication. The J1939Tp module routes a Pdu (J1939 PGN) through the connection.		
M2 Parameter		
SystemTemplate::TransportProtocols::J1939TpConnection		
Mapping Rule		**Mapping Type**
Create container for each existing J1939TpConnection that is used to transmit a NSdu.		full
Mapping Status		**Mapping ID**
valid		up_J1939Tp_00001

BSW Module	BSW Context	
J1939Tp	J1939Tp/J1939TpConfiguration/J1939TpRxChannel	
BSW Parameter		**BSW Type**
J1939TpRxCancellationSupport		EcucBooleanParamDef
BSW Description		
Enable receive cancellation using the API J1939Tp_CancelReceive() for this channel.		
Template Description		
Enable support for Tx/Rx cancellation.		
M2 Parameter		
SystemTemplate::TransportProtocols::J1939TpConnection.cancellation		

Mapping Rule	Mapping Type
Please note that in the System Template the cancellation support is defined per J1939TpConnection. All J1939TpConnections in an ECU shall have the same value.	full
Mapping Status	**Mapping ID**
valid	up_J1939Tp_00015

BSW Module	BSW Context
J1939Tp	J1939Tp/J1939TpConfiguration/J1939TpRxChannel
BSW Parameter	**BSW Type**
J1939TpRxCmNPdu	EcucParamConfContainerDef
BSW Description	
This N-PDU represents the TP.CM frame of a J1939 transport protocol session. TP.CM is used both by BAM and CMDT to initialize the connection. For CMDT, it is also used to abort the connection. This N-PDU consumes a meta data item of type CAN_ID_32.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::J1939TpConnection.flowControlPdu	
Mapping Rule	**Mapping Type**
Information can be derived from a received directINPdu that is referenced by the J1939TpConnection.	full

J1939Tp	J1939Tp/J1939TpConfiguration/J1939TpTxChannel
BSW Parameter	**BSW Type**
J1939TpTxMaxPacketsPerBlock	EcucIntegerParamDef
BSW Description	
Maximum number of TP.DT frames the transmitting J1939Tp module is ready to send before waiting for another TP.CM_CTS. This parameter is transmitted in the TP.CM_RTS frame, and is thus only relevant for transmission of messages via CMDT. When J1939TpTxDynamicBlockCalculation is enabled, this parameter specifies a maximum for the calculated value. For further details on this parameter value see SAE J1939/21.	
Template Description	
Set maximum for expected block size (maximum number of packets in TP.CM_RTS).	
M2 Parameter	
SystemTemplate::TransportProtocols::J1939TpConnection.maxExpBs	
Mapping Rule	**Mapping Type**
Please note that in the System Template the maximum for expected block size is defined per J1939TpConnection. All J1939TpConnections in an ECU shall have the same value.	full

BSW Parameter		**BSW Type**
J1939NmSharedChannelRef		EcucReferenceDef
BSW Description		
Reference to a channel that belongs to the shared address space.		
Template Description		
This identifies the J1939Clusters that share a common address space		
M2 Parameter		
SystemTemplate::J1939SharedAddressCluster.participatingJ1939Cluster		
Mapping Rule		**Mapping Type**
Reference shall be created for each J1939 cluster that is referenced by J1939 SharedAddressCluster in the role participating1939Cluster.		full
Mapping Status		**Mapping ID**
valid		up_J1939Nm_00025

C.3.3 J1939Dcm Mapping

BSW Module	BSW Context	
J1939Dcm	J1939Dcm/J1939DcmConfigSet/J1939DcmNode	
BSW Parameter		**BSW Type**
J1939DcmDiagnosticMessageSupport		EcucParamConfContainerDef
BSW Description		
Contains parameters to configure the diagnostic message support		
Template Description		
Represents the IPdus handled by J1939Dcm.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::J1939DcmIPdu		

Mapping Rule	Mapping Type
The container shall be created for every J1939DcmIPdu that is transmitted oder received by the regarded Ecu.	full
Mapping Status	**Mapping ID**
valid	up_J1939Dcm_00001

BSW Module	BSW Context
J1939Dcm	J1939Dcm/J1939DcmConfigSet/J1939DcmNode/J1939DcmDiagnosticMessageSupport
BSW Parameter	**BSW Type**
J1939DcmDmxSupport	EcucEnumerationParamDef
BSW Description	
This parameter is used to identify the actual DMx message.	
Template Description	
This attribute is used to identify the actual DMx message, e.g 1 means DM01, etc.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::J1939DcmIPdu.diagnosticMessageType	
Mapping Rule	**Mapping Type**
1:1 mapping	full

C.3.4 J1939Rm Mapping

BSW Module	**BSW Context**	
J1939Rm	J1939Rm/J1939RmConfigSet	
BSW Parameter		**BSW Type**
J1939RmChannel		EcucParamConfContainerDef
BSW Description		
Contains the parameters for a CAN channel supported by the J1939 Request Manager.		
Template Description		
J1939 specific NmCluster attributes		
M2 Parameter		
SystemTemplate::NetworkManagement::J1939NmCluster		
Mapping Rule		**Mapping Type**
Container shall be created for each J1939NmCluster that is available in the Ecu Extract.		full
Mapping Status		**Mapping ID**
valid		up_J1939Rm_00004

BSW Module	**BSW Context**	
J1939Rm	J1939Rm/J1939RmConfigSet/J1939RmChannel	
BSW Parameter		**BSW Type**
J1939RmRqst2RxPdu		EcucParamConfContainerDef
BSW Description		
Contains the configuration of the I-PDU used to receive the Request2 PG. This PDU consumes a meta data item of type CAN_ID_32.		
Template Description		
Enables support for the Request2 PGN (RQST2).		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Can::CanTopology::J1939Cluster.request2Support		
Mapping Rule		**Mapping Type**
Create container if J1939Cluster.request2Support is set to true.		full
Mapping Status		**Mapping ID**
valid		up_J1939Rm_00008

BSW Module	**BSW Context**

J1939Rm	J1939Rm/J1939RmConfigSet/J1939RmChannel	
BSW Parameter		**BSW Type**
J1939RmRqst2TxPdu		EcucParamConfContainerDef
BSW Description		
Contains the configuration of the I-PDU used to transmit the Request2 PG. This PDU produces a meta data item of type CAN_ID_32.		
Template Description		
Enables support for the Request2 PGN (RQST2).		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Can::CanTopology::J1939Cluster.request2Support		
Mapping Rule		**Mapping Type**
Create container if J1939Cluster.request2Support is set to true.		full
Mapping Status		**Mapping ID**
valid		up_J1939Rm_00007

BSW Module	**BSW Context**	
J1939Rm	J1939Rm/J1939RmConfigSet	
BSW Parameter		**BSW Type**
J1939RmNode		EcucParamConfContainerDef
BSW Description		
Contains the parameters for the support of a logical J1939 node (identified by an ECU address).		
Template Description		
J1939 specific NM Node attributes.		
M2 Parameter		
SystemTemplate::NetworkManagement::J1939NmNode		
Mapping Rule		**Mapping Type**
J1939RmNode shall be derived from existing J1939NmNodes that are available in the ExuExtract. Please note that J1939NmNodes that have the same short Name and nmNodeId that are located on different NmClusters shall be combined to one J1939RmNode.		full

	local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
Fr	Fr/FrGeneral
BSW Parameter	**BSW Type**
FrRxStringentCheck	EcucBooleanParamDef
BSW Description	
If stringent check is enabled (true), received frames are accepted only if no slot status error occurred.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Fr	Fr/FrGeneral
BSW Parameter	**BSW Type**
FrRxStringentLengthCheck	EcucBooleanParamDef
BSW Description	
If stringent check is enabled (true), received frames are accepted only if the received payload length matches the configured payload length.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Fr	Fr/FrGeneral
BSW Parameter	**BSW Type**
FrVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables/disables the existence of the Fr_GetVersionInfo API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Fr	Fr
BSW Parameter	**BSW Type**
FrMultipleConfiguration	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters and sub containers of the AUTOSAR Fr module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Fr	Fr/FrMultipleConfiguration
BSW Parameter	**BSW Type**
FrController	EcucParamConfContainerDef
BSW Description	
Configuration of the individual controller.	
Template Description	
FlexRay bus specific communication port attributes.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationController	
Mapping Rule	**Mapping Type**
Container must be created if the ECU contains a FlexRay communication controller that is connected to the regarded communication cluster.	full
Mapping Status	**Mapping ID**
valid	up_Fr_00001

BSW Module	BSW Context
Fr	Fr/FrMultipleConfiguration/FrController
BSW Parameter	**BSW Type**
FrAbsoluteTimer	EcucParamConfContainerDef
BSW Description	
Specifies the absolute timer configuration parameters of the Fr.	
Template Description

FrPWakeupPattern		EcucIntegerParamDef
BSW Description		
Number of repetitions of the wakeup symbol that are combined to form a wakeup pattern when the node enters the POC:wakeup send state. Remark: Lower limit 2 for FlexRay Protocol 2.1 Rev A compliance.		
Template Description		
Number of repetitions of the Tx-wakeup symbol to be sent during the CC_WakeupSend state of this Node in the cluster		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationController.wakeUpPattern		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_Fr_00012

BSW Module	BSW Context	
Fr	Fr/FrMultipleConfiguration/FrController	
BSW Parameter		**BSW Type**
FrPdAcceptedStartupRange		EcucIntegerParamDef
BSW Description		
Expanded range of measured clock deviation allowed for startup frames during integration [Microticks]. Remark: Upper limit 1875 for FlexRay Protocol 2.1 Rev A compliance. Remark: Lower limit 29 for FlexRay Protocol 3.0 compliance.		
Template Description		
Expanded range of measured clock deviation allowed for startup frames during integration. Unit:microtick		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationController.acceptedStartupRange		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_Fr_00011

BSW Module	BSW Context	
Fr	Fr/FrMultipleConfiguration/FrController	
BSW Parameter		**BSW Type**
FrPdListenTimeout		EcucIntegerParamDef
BSW Description		
Value for the startup listen timeout and wakeup listen timeout. Although this is a node local parameter, the real time equivalent of this value should be the same for all nodes in the cluster [Microticks]. Remark: Lower limit 1926 for FlexRay Protocol 3.0 compliance. Upper limit 1283846 for FlexRay Protocol 2.1 Rev. A compliance.		
Template Description		
Value for the startup listen timeout and wakeup listen timeout. Although this is a node local parameter, the real time equivalent of this value should be the same for all nodes in the cluster. Unit: Microticks		

M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationController.listenTimeout

valid	up_Fr_00015

C.4.2 FlexRay Interface Mapping

BSW Module	BSW Context
FrIf	FrIf
BSW Parameter	**BSW Type**
FrIfConfig	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters and sub containers of the AUTOSAR FrIf module.	
Template Description	
FlexRay specific attributes to the physicalCluster	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCluster	
Mapping Rule	**Mapping Type**
Container must be created if the ECU is connected to a FlexRay Cluster	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00002

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig
BSW Parameter	**BSW Type**
FrIfCluster	EcucParamConfContainerDef
BSW Description	

This container specifies a FrIf Cluster and all related data which is required to enable communication of the Cluster. A Cluster may consist of more than one Controller.	
Template Description	
FlexRay specific attributes to the physicalCluster	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCluster	
Mapping Rule	**Mapping Type**
Container must be created if the ECU is connected to a FlexRay Cluster	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00010

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster
BSW Parameter	**BSW Type**
FrIfClstIdx	EcucIntegerParamDef
BSW Description	
This parameter provides a zero-based consecutive index of the FlexRay Clusters. Upper layer BSW modules and the FrIf itself use this index to identify a FlexRay Cluster.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster
BSW Parameter	**BSW Type**
FrIfClusterDemEventParameterRefs	EcucParamConfContainerDef
BSW Description	
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfClusterDemEventParameterRefs
BSW Parameter	**BSW Type**
FRIF_E_ACS_CH_A	EcucReferenceDef
BSW Description	

Reference to the DemEventParameter which shall be issued when an error in ACS on channel A was detected. If the reference is not configured the error shall not be reported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfClusterDemEventParameterRefs
BSW Parameter	**BSW Type**
FRIF_E_ACS_CH_B	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when an error in ACS on channel B was detected. If the reference is not configured the error shall not be reported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfClusterDemEventParameterRefs
BSW Parameter	**BSW Type**
FRIF_E_NIT_CH_A	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when an error in NIT on channel A was detected. If the reference is not configured the error shall not be reported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfClusterDemEventParameterRefs
BSW Parameter	**BSW Type**
FRIF_E_NIT_CH_B	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when an error in NIT on channel B was detected. If the reference is not configured the error shall not be reported.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

BSW Module	BSW Context	
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfClusterDemEventParameterRefs	
BSW Parameter		**BSW Type**
FRIF_E_SW_CH_A		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when an error in SW on channel A was detected. If the reference is not configured the error shall not be reported.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfClusterDemEventParameterRefs	
BSW Parameter		**BSW Type**
FRIF_E_SW_CH_B		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when an error in SW on channel B was detected. If the reference is not configured the error shall not be reported.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrIf	FrIf/FrIfConfig/FrIfCluster	
BSW Parameter		**BSW Type**
FrIfController		EcucParamConfContainerDef
BSW Description		
This container contains the configuration of FlexRay CC.		
Template Description		
FlexRay bus specific communication port attributes.		
M2 Parameter		

SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationController	
Mapping Rule	**Mapping Type**
Container must be created if the ECU contains a FlexRay communication controller that is connected to the regarded communication cluster.	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00031

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController
BSW Parameter	**BSW Type**
FrIfCtrlIdx	EcucIntegerParamDef
BSW Description	
This parameter provides a zero-based consecutive index of the FlexRay Communication Controllers. Upper layer BSW modules and the FrIf itself use this index to identify a FlexRay CC.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController
BSW Parameter	**BSW Type**
FrIfFrCtrlRef	EcucReferenceDef
BSW Description	
Reference to a Controller, which is handled by a specific Driver. This reference is unique for the ECU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController
BSW Parameter	**BSW Type**
FrIfFrameTriggering	EcucParamConfContainerDef
BSW Description	
A Frame triggering contains the communication parameters of the FlexRay Frame as well as a reference to the Frame Construction Plan.	
Template Description	
FlexRay specific attributes to the FrameTriggering	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayCommunication::FlexrayFrameTriggering	

Mapping Rule	Mapping Type
If a FlexrayFrameTriggering exists in the System Extract that is connected via a FramePort reference to the regarded Ecu the following two cases exist: 1) If the FlexrayFrameTriggering contains exactly one FlexrayAbsolutelyScheduledTiming then only one FrIfFrameTriggering container shall be created. 2) If the FlexrayFrameTriggering contains more than one FlexrayAbsolutely ScheduledTiming (e.g. to describe a multiple sending within one communication cycle) this FrIfFrameTriggering container shall be created once per defined FlexrayAbsolutelyScheduledTiming. Each created FrIfFrameTriggering container shall refer to the same FrIfFrameStructure.	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00032

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering
BSW Parameter	**BSW Type**
FrIfAllowDynamicLSduLength	EcucBooleanParamDef
BSW Description	
Allows L-PDU length reduction ('FrIfLSduLength' defines max. length) and indicates that the related CC buffer has to be reconfigured for the actual length and Header-CRC before transmission of the L-PDU.	
Template Description	
Allows L-PDU length reduction and indicates that the related CC buffer has to be reconfigured for the actual length and Header-CRC before transmission of the L-PDU. If this attribute is set to true than the referenced Frame length attribute defines the max. length.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayCommunication::FlexrayFrameTriggering.allow DynamicLSduLength	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00038

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering
BSW Parameter	**BSW Type**
FrIfAlwaysTransmit	EcucBooleanParamDef
BSW Description	
Defines whether the driver's API function Fr_TransmitTxLPdu() shall always be called for this L-PDU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering

BSW Parameter	BSW Type
FrIfBaseCycle	EcucIntegerParamDef
BSW Description	
This parameter contains the FlexRay Base Cycle used to transmit this FlexRay Frame.	
Template Description	
The first communication cycle where the frame is sent. This value is incremented at the beginning of each new cycle, ranging from 0 to 63, and is reset to 0 after a sequence of 64 cycles.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::CycleRepetition.BaseCycle	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00039

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering
BSW Parameter	**BSW Type**
FrIfChannel	EcucEnumerationParamDef
BSW Description	
This parameter contains the FlexRay Channel used to transmit this FlexRay Frame.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::PhysicalChannel.frameTriggering	
Mapping Rule	**Mapping Type**
FrameTriggering element in the System Template is aggregated by the Physical Channel that is used to transmit this FlexRay Frame	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00034

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering
BSW Parameter	**BSW Type**
FrIfCycleRepetition	EcucIntegerParamDef
BSW Description	
This parameter contains the FlexRay Cycle Repetition used to transmit this FlexRay Frame. Possible values for FlexRay Protocol version 2.1: 1,2,4,8,16,32,64 Possible values for FlexRay Protocol version 3.0: 1,2,4,5,8,10,16,20,32,40,50,64	
Template Description	
The number of communication cycles (after the first cycle) whenever the frame described by this timing is sent again.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::CycleRepetition.CycleRepetition	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00036

BSW Module	BSW Context	
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering	
BSW Parameter		**BSW Type**
FrIfFrameStructureRef		EcucReferenceDef
BSW Description		
Reference to the Construction Plan of the FlexRay Frame.		
Template Description		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::FrameTriggering.frame		
Mapping Rule		**Mapping Type**
Reference must comply to the reference in the System Description between the FrameTriggering element and the Frame.element		full
Mapping Status		**Mapping ID**
valid		up_FrIf_00041

BSW Module	BSW Context	
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering	
BSW Parameter		**BSW Type**
FrIfFrameTriggeringDemEventParameterRefs		EcucParamConfContainerDef
BSW Description		
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.

FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering/FrIfFrameTriggeringDemEventParameterRefs	
BSW Parameter		**BSW Type**
FRIF_E_LPDU_SLOTSTATUS		EcucReferenceDef
BSW Description		
Reference to DEM event Id that is reported when FlexRay driver module detects slot errors. If this parameter is not configured, no event reporting happens.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering	
BSW Parameter		**BSW Type**
FrIfLSduLength		EcucIntegerParamDef
BSW Description		
The payload length of the Frame is given here. This parameter is required for validation if configured PDUs and update information fits into the Frame at configuration time [bytes].		
Template Description		
The used length (in bytes) of the referencing frame. Should not be confused with a static byte length reserved for each frame by some platforms (e.g. FlexRay). The frameLength of zero bytes is allowed.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::Frame.frameLength		
Mapping Rule		**Mapping Type**
Find Frame that is referenced by the regarded FrameTriggering and use the frameLength attribute		full
Mapping Status		**Mapping ID**
valid		up_FrIf_00040

BSW Module	BSW Context	
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering	
BSW Parameter		**BSW Type**
FrIfMessageId		EcucIntegerParamDef
BSW Description		
The first two bytes of the payload segment of the FlexRay frame format for frames transmitted in the dynamic segment can be used as receiver filterable data called the message ID.		
Template Description		
The first two bytes of the payload segment of the FlexRay frame format for frames transmitted in the dynamic segment can be used as receiver filterable data called the message ID.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Flexray::FlexrayCommunication::FlexrayFrameTriggering.message Id

Mapping Status	Mapping ID
valid	up_FrIf_00037

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig/FrIfCluster/FrIfController/FrIfFrameTriggering
BSW Parameter	**BSW Type**
FrIfSlotId	EcucIntegerParamDef
BSW Description	
This parameter contains the FlexRay Slot ID used to transmit this FlexRay Frame.	
Template Description	
In the static part the SlotID defines the slot in which the frame is transmitted. The SlotID also determines, in combination with FlexrayCluster::numberOfStaticSlots, whether the frame is sent in static or dynamic segment. In the dynamic part, the slot id is equivalent to a priority. Lower dynamic slot ids are all sent until the end of the dynamic segment. Higher numbers, which were ignored that time, have to wait one cycle and then must try again. minValue: 1 maxValue: 2047	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayCommunication::FlexrayAbsolutelyScheduledTiming.slotID	
Mapping Rule	**Mapping Type**

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig
BSW Parameter	**BSW Type**
FrIfFrameStructure	EcucParamConfContainerDef
BSW Description	
The Frame structure specifies a Construction Plan how a Frame is assembled with PDUs and their respective Update-Bits.	
Template Description	
Data frame which is sent over a communication medium. This element describes the pure Layout of a frame sent on a channel.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::Frame	
Mapping Rule	**Mapping Type**
Create container for each FlexRay Frame that is transmitted or received by the regarded ECU. IPduToFrameMapping element in the System Template contains the construction plan.	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00003

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfFrameStructure
BSW Parameter	**BSW Type**
FrIfByteOrder	EcucEnumerationParamDef
BSW Description	
This parameter defines the ByteOrder of all Pdus that are mapped into the Frame. The absolute position of a Pdu in the Frame is determined by the definition of the ByteOrder parameter: If BIG_ENDIAN is specified, the FrIfPduOffset indicates the position of the most significant bit in the Frame. If LITTLE_ENDIAN is specified, the FrIfPduOffset indicates the position of the least significant bit in the Frame.	
Template Description	
This attribute defines the order of the bytes of the Pdu and the packing into the Frame. Please consider that [constr_3246] and [constr_3222] are restricting the usage of this attribute.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::PduToFrameMapping.packingByteOrder	
Mapping Rule	**Mapping Type**
1:1 mapping	full

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfFrameStructure
BSW Parameter	**BSW Type**
FrIfPdusInFrame	EcucParamConfContainerDef
BSW Description	

This container holds all the information about a PDU in a FlexRay Frame.	
Template Description	
A PduToFrameMapping defines the composition of Pdus in each frame.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::PduToFrameMapping	
Mapping Rule	**Mapping Type**
Container must be created for each IPduToFrameMapping element inside the frame.	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00004

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfFrameStructure/FrIfPdusInFrame
BSW Parameter	**BSW Type**
FrIfPduOffset	EcucIntegerParamDef
BSW Description	
The value specifies the offset of the PDU within the Frame [bytes].	
Template Description	
This attribute describes the bitposition of a Pdu within a Frame. Please note that the absolute position of the Pdu in the Frame is determined by the definition of the packingByteOrder attribute. If Big Endian is specified, the start position indicates the bit position of the most significant bit in the Frame. If Little Endian is specified, the start position indicates the bit position of the least significant bit in the Frame. The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7. The Pdus are byte aligned in a Frame and only the values 0, 8, 16, 24,... (for little endian) and 7, 15, 23, ... (for big endian) are allowed.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::PduToFrameMapping.startPosition	
Mapping Rule	**Mapping Type**
Please note that the startPosition attribute is defined in bits and the FrIfPdu Offset parameter is defined in bytes.	full
Mapping Status	**Mapping ID**

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfConfig/FrIfFrameStructure/FrIfPdusInFrame

BSW Parameter	BSW Type
FrIfPduUpdateBitOffset	EcucIntegerParamDef

BSW Description

This value specifies where the PDU's Update-Bit is stored in the Frame (bit location of PDU's Update-Bit in the FlexRay Frame).

Template Description

Indication to the receivers that the corresponding Pdu was updated by the sender.
This attribute describes the position of the update bit in the frame that aggregates this PDUToFrameMapping. Length is always one bit.

Note that the exact bit position of the updateIndicationBitPosition is linked to the value of the attribute packingByteOrder because the method of finding the bit position is different for the values mostSignificantByteFirst and mostSignificantByteLast. This means that if the value of packingByteOrder is changed while the value of updateIndicationBitPosition remains unchanged the exact bit position of updateIndicationBitPosition within the enclosing Frame still undergoes a change.

This attribute denotes the least significant bit for "Little Endian" and the most significant bit for "Big Endian" packed signals within the IPdu (see the description of the packingByteOrder attribute). In AUTOSAR the bit counting is always set to "sawtooth" and the bit order is set to "Decreasing". The bit counting in byte 0 starts with bit 0 (least significant bit). The most significant bit in byte 0 is bit 7.

Collection of all Pdus that can be routed through a bus interface.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::Pdu	
Mapping Rule	**Mapping Type**
The container must be created for each Pdu that is contained in a FlexRay Frame.	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00008

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu
BSW Parameter	**BSW Type**
FrIfPduDirection	EcucChoiceContainerDef
BSW Description	
A PDU is either transmit or receive	
Template Description	
Communication Direction of the Connector Port (input or output Port).	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::CommConnectorPort.communicationDirection	
Mapping Rule	**Mapping Type**
The PduTriggering contains a reference to a IPduPort with the communication Direction.	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00009

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection
BSW Parameter	**BSW Type**
FrIfRxPdu	EcucParamConfContainerDef
BSW Description	
Receive PDU	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfRxPdu
BSW Parameter	**BSW Type**
FrIfRxIndicationName	EcucFunctionNameDef
BSW Description	

This parameter defines the name of the <User_RxIndication>. This parameter depends on the parameter FrIfUserRxIndicationUL. If FrIfUserRxIndicationUL equals FR_TP, FR_AR_TP, FR_NM, PDUR, FR_TSYN or XCP, the name of the <User_RxIndication> is fixed. If FrIfUserRxIndicationUL equals CDD, the name of the <User_RxIndication> is selectable.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfRxPdu
BSW Parameter	**BSW Type**
FrIfRxPduRef	EcucReferenceDef
BSW Description	
Reference to the external PDU definition.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfRxPdu
BSW Parameter	**BSW Type**
FrIfUserRxIndicationUL	EcucEnumerationParamDef
BSW Description	
This parameter defines the upper layer (UL) module to which the indication of the successfully received FrIfRxPdu has to be routed via <User_RxIndication>. This <User_RxIndication> has to be invoked when the indication of the configured FrIfRxPdu will be received by a Rx indication event from the FR Driver module. If no upper layer (UL) module is configured, no <User_RxIndication> has to be called in case of a Rx indication event of the FrIfRxPdu from the FR Driver module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection
BSW Parameter	**BSW Type**

FrIfTxPdu	EcucParamConfContainerDef
BSW Description	
This container specifies transmission PDUs.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfConfirm	EcucBooleanParamDef
BSW Description	
Defines whether the transmission of a PDU should be checked and confirmed to the PDU owning BSW module. If "FrIfUserTxUL" is configured as FR_TSYN then this parameter has to be set to FALSE for this PDU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfCounterLimit	EcucIntegerParamDef
BSW Description	
This value states the maximum number of indication of ready PDU data to the FrIf (i.e. maximum number of invocations of FrIf_Transmit) without an intermediate transmission of the PDU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfImmediate	EcucBooleanParamDef
BSW Description	

Defines whether the PDU is transmitted immediate or decoupled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfNoneMode	EcucBooleanParamDef
BSW Description	
Using the "None-Mode" which means that there is no API FrIf_Transmit call of the upper layer for this PDU.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfTxConfirmationName	EcucFunctionNameDef
BSW Description	
This parameter defines the name of the <User_TxConfirmation>. This parameter depends on the parameter FrIfUserTxUL. If FrIfUserTxUL equals FR_TP, FR_AR_TP, FR_NM, PDUR or XCP, the name of the <User_TxConfirmation> is fixed. If FrIfUserTxUL equals CDD, the name of the <User_TxConfirmation> is selectable.

Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfTxPduId	EcucIntegerParamDef
BSW Description	

The global PDU identifier, which has to be used by the upper layer BSW module. The identifier has to be zero based and consecutive.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfTxPduRef	EcucReferenceDef
BSW Description	
Reference to the external PDU definition.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfUserTriggerTransmitName	EcucFunctionNameDef
BSW Description	
This parameter defines the name of the <User_TriggerTransmit>. This parameter depends on the parameter FrIfUserTxUL. If FrIfUserTxUL equals FR_TP, FR_AR_TP, FR_NM, PDUR, FR_TSYN or XCP the name of the <User_TriggerTransmit> is fixed. If FrIfUserTxUL equals CDD, the name of the <User_TriggerTransmit> is selectable.	
Template Description

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfConfig/FrIfPdu/FrIfPduDirection/FrIfTxPdu
BSW Parameter	**BSW Type**
FrIfUserTxUL	EcucEnumerationParamDef
BSW Description	

This parameter defines the upper layer (UL) module to which the trigger of the Pdu to be transmitted (via the <User_TriggerTransmit>) or the confirmation of the successfully transmitted Pdu has to be routed (via the <User_TxConfirmation>). Please note that handle IDs which are used in callback functions are defined by the upper layer module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf
BSW Parameter	**BSW Type**
FrIfGeneral	EcucParamConfContainerDef
BSW Description	
This container contains the general configuration parameters of the FlexRay Interface.	
Template Description	
FlexRay specific attributes to the physicalCluster	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCluster	
Mapping Rule	**Mapping Type**
Container must be created if the ECU is connected to a FlexRay Cluster	full
Mapping Status	**Mapping ID**
valid	up_FrIf_00001

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfAbsTimerIdx	EcucIntegerParamDef
BSW Description	
Maximum number of supported absolute timers.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfAllSlotsSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to enable/disable of switching from key-slot / single-slot mode to all slot mode.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfBusMirroringSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to enable/disable reporting received/transmitted frames to the Bus Mirroring module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfCancelTransmitSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to request the cancellation of the I-PDU transmission to FrDrv.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfDisableLPduSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to disables the hardware resource of a LPdu for transmission/reception.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfDisableTransceiverBranchSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to disable branches of an active star.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfEnableTransceiverBranchSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to enable branches of an active star.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfFreeOpAApiName	EcucStringParamDef
BSW Description	
API name that is called when FREE_OP_A is selected as communication operation. See also chapter 8.8.3 Configurable Interfaces.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfFreeOpBApiName	EcucStringParamDef
BSW Description	
API name that is called when FREE_OP_B is selected as communication operation. See also chapter 8.8.3 Configurable Interfaces.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfFreeOpsHeader	EcucStringParamDef
BSW Description	
Defines header file for configurable FREE_OP_A / FREE_OP_B functions.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfGetClockCorrectionSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to enable/disable of polling the FlexRay Driver to getting CC clock correction values.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfGetGetChannelStatusSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to enable/disable of polling the FlexRay Driver to getting error information about the FlexRay communications bus.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfGetNmVectorSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to request the FlexRay hardware NMVector.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**

FrIfGetNumOfStartupFramesSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to enable/disable of polling the FlexRay Driver for the actual number of received startup frames on the bus.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfGetSyncFrameListSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to enable/disable of polling the FlexRay Driver to getting a list of actual received sync frames.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfGetTransceiverErrorSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrIf support to get the FlexRay Transceiver errors by calling the FlexRay Transceiver module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfGetWakeupRxStatusSupport	EcucBooleanParamDef
BSW Description	

Configuration parameter to enable/disable FrIf support to get the wakeup received information from the FlexRay controller.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfNumClstSupported	EcucIntegerParamDef
BSW Description	
Maximum number of FlexRay Clusters that the FlexRay Interface supports.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfNumCtrlSupported	EcucIntegerParamDef
BSW Description	
Maximum number of FlexRay CCs that the FlexRay Interface supports	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfPublicCddHeaderFile	EcucStringParamDef
BSW Description	
Defines header files for callback functions which shall be included in case of CDDs. Range of characters is 1.. 32.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
FrIf	FrIf/FrIfGeneral	
BSW Parameter		**BSW Type**
FrIfReadCCConfigApi		EcucBooleanParamDef
BSW Description		
Configuration parameter to enable/disable the optional FrIf_ReadCCConfig API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrIf	FrIf/FrIfGeneral	
BSW Parameter		**BSW Type**
FrIfReconfigLPduSupport		EcucBooleanParamDef
BSW Description		
Configuration parameter to enable/disable FrIf support to enable/disable the reconfiguration of a given LPdu according to the parameters (FrameId, Channel, CycleRepetition, CycleOffset, PayloadLength, HeaderCRC) at runtime.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrIf	FrIf/FrIfGeneral	
BSW Parameter		**BSW Type**
FrIfTxConflictNotificationHeaderName		EcucStringParamDef
BSW Description		
Configuration of the header file name that defines the UL_TxConflictNotification.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfTxConflictNotificationName	EcucStringParamDef
BSW Description	
Configuration of the API name that is called in case a TxConflict has been detected.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfUnusedBitValue	EcucIntegerParamDef
BSW Description	
Set unused bits of transmitted Pdus to a defined value.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrIf	FrIf/FrIfGeneral
BSW Parameter	**BSW Type**
FrIfVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables/disables the existence of the FrIf_GetVersionInfo() API service true: FrIf_GetVersionInfo() API service exists false: FrIf_GetVersionInfo() API service does not exist	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

C.4.3 FrNm Mapping

BSW Module	BSW Context	
FrNm	FrNm	
BSW Parameter		**BSW Type**
FrNmChannelConfig		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters for all FlexRay NM channels.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrNm	FrNm/FrNmChannelConfig	
BSW Parameter		**BSW Type**
FrNmChannel		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters for a FlexRay NM Channel.		
Template Description		
FlexRay specific NM cluster attributes.		
M2 Parameter		
SystemTemplate::NetworkManagement::FlexrayNmCluster		
Mapping Rule		**Mapping Type**
Create Container for each existing FlexrayNmCluster.		full
Mapping Status		**Mapping ID**
valid		up_FrNm_00046

BSW Module	BSW Context	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel	
BSW Parameter		**BSW Type**
FrNmChannelIdentifiers		EcucParamConfContainerDef
BSW Description		
This container contains instance specific identifiers related to the respective FlexRay Channel.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmActiveWakeupBitEnabled	EcucBooleanParamDef
BSW Description	
Enables/Disables the handling of the Active Wakeup Bit in the FrNm module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmCarWakeUpBitPosition	EcucIntegerParamDef
BSW Description	
Specifies the Bit position of the CWU within the NM-Message.	
Template Description	
Specifies the bit position of the CarWakeUp within the NmPdu.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmCarWakeUpBitPosition	
Mapping Rule	**Mapping Type**
The position of the Car Wakeup bit in the Ecuc is defined by the configuration parameters FrNmCarWakeUpBytePosition and FrNmCarWakeUpBitPosition (position in wakeUpByte). In the SysT the position is described only by the bit position in the NmMessage.	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00032

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmCarWakeUpBytePosition	EcucIntegerParamDef
BSW Description	
Specifies the Byte position of the CWU within the NM-Message.	
Template Description	
Specifies the bit position of the CarWakeUp within the NmPdu.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmCarWakeUpBitPosition	
Mapping Rule	**Mapping Type**
The position of the Car Wakeup bit in the Ecuc is defined by the configuration parameters FrNmCarWakeUpBytePosition and FrNmCarWakeUpBitPosition (position in wakeUpByte). In the SysT the position is described only by the bit position in the NmMessage.	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00029

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmCarWakeUpFilterEnabled	EcucBooleanParamDef
BSW Description	
If CWU filtering is supported, only the CWU bit within the NM message with source node identifier FrNmCarWakeUpFilterNodeId is considered as CWU request. FALSE - CWU Filtering is not supported TRUE - CWU Filtering is supported	
Template Description	
If this attribute is set to true the CareWakeUp filtering is supported. In this case only the CarWakeUp bit within the NmPdu with source node identifier nmCarWakeUpFilterNodeId is considered as CarWakeUp request.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmCarWakeUpFilterEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00031

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmCarWakeUpFilterNodeId	EcucIntegerParamDef
BSW Description	
Source node identifier for CWU filtering. If CWU filtering is supported, only the CWU bit within the NM message with source node identifier FrNmCarWakeUpFilterNodeId is considered as CWU request.	
Template Description	
Source node identifier for CarWakeUp filtering. If CarWakeUp filtering is supported (nmCarWakeUpFilterEnabled), only the CarWakeUp bit within the NmPdu with source node identifier nmCarWakeUpFilterNodeId is considered as CarWakeUp request.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmCarWakeUpFilterNodeId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00038

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmCarWakeUpRxEnabled	EcucBooleanParamDef
BSW Description	
Enables or disables support of CarWakeUp bit evaluation in received NM messages. FALSE - CarWakeUp not supported TRUE - CarWakeUp supported	
Template Description	
If set to true this attribute enables the support of CarWakeUp bit evaluation in received NmPdus.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmCarWakeUpRxEnabled	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00043

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmChannelHandle	EcucReferenceDef
BSW Description	
Channel identifier configured for the respective instance of the NM. The FrNmChannelHandle shall be encoded in the FrNmRxPduId parameter which is passed to FrNm_RxIndication() function called by the FrIf.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmComMNetworkHandleRef	EcucReferenceDef
BSW Description	
This reference points to the unique channel defined by the ComMChannel and provides access to the unique channel index value in ComMChannelId.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmNodeDetectionEnabled	EcucBooleanParamDef
BSW Description	
This parameter is used to enable or disable node detection support for a FrNm Channel.	
Template Description	
Enables the Request Repeat Message Request support. Only valid if nmNodeIdEnabled is set to true.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmNodeDetectionEnabled	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00047

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmNodeId	EcucIntegerParamDef
BSW Description	
NM node identifier configured for the respective FlexRay Channel. It is used for identifying the respective NM node in the NM-cluster. It must be unique for each NM node within one NM cluster.	
Template Description	
Node identifier of local NmNode. Must be unique in the NmCluster.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.nmNodeId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00044

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmPduScheduleVariant	EcucEnumerationParamDef
BSW Description	
This parameter defines the PDU scheduling variant that should be used for this channel. Option 1 NM-Vote and NM-Data in static segment (one PDU) Option 2 NM-Vote and NM-Data in dynamic segment (one PDU) Option 3 NM-Vote and NM-Data in static segment (separate PDU) Option 4 NM-Vote in static segment and NM-Data in dynamic segment Option 5 NM-Vote in dynamic segment and NM-Data in static segment Option 6 NM-Vote and NM-Data in dynamic segment (separate PDU) Option 7 Combined NM-Vote and CBV in static segment and NM-Data in dynamic segment	
Template Description	
FrNm schedule variant according to FrNm SWS.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmClusterCoupling.nmScheduleVariant	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00028

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmPnEnabled	EcucBooleanParamDef
BSW Description	

Enables or disables support of partial networking. false: Partial networking Range not supported true: Partial networking supported	
Template Description	
Defines whether this NmCluster contributes to the partial network mechanism.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmPncParticipation	
Mapping Rule	**Mapping Type**
If NmCluster.nmPncParticipation has the value "true" or is not defined then Fr NmPnEnabled shall be set to true.	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00033

BSW Module	**BSW Context**
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmPnEraCalcEnabled	EcucBooleanParamDef
BSW Description	
Specifies if FrNm calculates the PN request information for external requests. (ERA) false: PN request are not calculated true: PN request are calculated	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmPnEraRxNSduRef	EcucReferenceDef
BSW Description	
Reference to a global Pdu. The SduRef is required for every FrNm Channel, because ERA is reported per channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers

BSW Parameter	BSW Type
FrNmRxPdu	EcucParamConfContainerDef
BSW Description	
This container describes the FlexRay NM RX PDU:s.	
Template Description	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.rxNmPdu	
Mapping Rule	**Mapping Type**
Create Container if the regarded NmNode recieves a Pdu	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00039

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmRxPdu
BSW Parameter	**BSW Type**
FrNmRxPduContainsData	EcucBooleanParamDef
BSW Description	
This parameter defines if the PDU contains NM Data.	
Template Description	
Defines if the Pdu contains NM Data. If the NmPdu does not aggregate any ISignalToIPduMappings it still may contain UserData that is set via Nm_SetUserData(). If the ISignalToIPduMapping exists then the nmDataInformation attribute shall be ignored.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.nmDataInformation,System Template::Fibex::FibexCore::CoreCommunication::NmPdu.iSignalToIPduMapping	
Mapping Rule	**Mapping Type**
Set to true if either the NmPdu aggregates one or more iSignalToIPduMappings, or - if none are aggregated - if nmDataInformation is true. Set to false in all other cases	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00041

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmRxPdu
BSW Parameter	**BSW Type**
FrNmRxPduContainsVote	EcucBooleanParamDef
BSW Description	
This parameter defines if the PDU contains NM Vote information.	
Template Description	
Defines if the Pdu contains NM Vote information.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.nmVoteInformation	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00040

BSW Module	BSW Context

FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmRxPdu	
BSW Parameter		**BSW Type**
FrNmRxPduId		EcucIntegerParamDef
BSW Description		
PDU identifier configured for the respective FlexRay Channel. It is used for referring to the FlexRay Interface receive function. It must be consistent with the value configured in the FlexRay Interface. This ID is used for the combined reception of NM Vote and NM Data or for the reception of the NM Vote if NM Data is received in a separate PDU. ImplementationType: PduIdType		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmRxPdu	
BSW Parameter		**BSW Type**
FrNmRxPduRef		EcucReferenceDef
BSW Description		
The reference to a PDU in the global PDU structure described in the AUTOSAR ECU Configuration Specification. This reference will be used by the FrIf module to derive the PDU Id.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers	
BSW Parameter		**BSW Type**
FrNmSourceNodeIdentifierEnabled		EcucBooleanParamDef
BSW Description		
This parameter is used to enable or disable SourceNodeIdentifier support for a FrNm Channel.		
Template Description		
Enables the source node identifier.		
M2 Parameter		
SystemTemplate::NetworkManagement::NmCluster.nmNodeIdEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrNm_00048

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmSynchronizationPointEnabled	EcucBooleanParamDef
BSW Description	
This parameter defines if this channel shall provide the synchronization point indication to the NM Interface.	
Template Description	
If this parameter is true, then this network is a synchronizing network for the NM coordination cluster which it belongs to. The network is expected to call Nm_SynchronizationPoint() at regular intervals.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmSynchronizingNetwork	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00030

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers
BSW Parameter	**BSW Type**
FrNmTxPdu	EcucParamConfContainerDef
BSW Description	
This container describes the FlexRay NM TX PDU:s.	
Template Description	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.txNmPdu	
Mapping Rule	**Mapping Type**
Create Container if the regarded NmNode transmits a Pdu	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00035

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmTxPdu
BSW Parameter	**BSW Type**
FrNmTxConfirmationPduId	EcucIntegerParamDef
BSW Description	
Handle Id used by the Lower Layer when calling FrNm_TriggerTransmit() or FrNm_TxConfirmation().	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmTxPdu
BSW Parameter	**BSW Type**

FrNmTxPduContainsData	EcucBooleanParamDef
BSW Description	
This parameted defines if the PDU contains NM Data.	
Template Description	
Defines if the Pdu contains NM Data. If the NmPdu does not aggregate any ISignalToIPduMappings it still may contain UserData that is set via Nm_SetUserData(). If the ISignalToIPduMapping exists then the nmDataInformation attribute shall be ignored.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.nmDataInformation,SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.iSignalToIPduMapping	
Mapping Rule	**Mapping Type**
Set to true if either the NmPdu aggregates one or more iSignalToIPduMappings, or - if none are aggregated - if nmDataInformation is true. Set to false in all other cases	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00037

BSW Module	**BSW Context**
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmTxPdu
BSW Parameter	**BSW Type**
FrNmTxPduContainsVote	EcucBooleanParamDef
BSW Description	
This parameted defines if the PDU contains NM Vote information.	
Template Description	
Defines if the Pdu contains NM Vote information.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.nmVoteInformation	
Mapping Rule	**Mapping Type**
1:1 mapping	full

BSW Module	**BSW Context**

FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers	
BSW Parameter		**BSW Type**
FrNmUserDataTxPdu		EcucParamConfContainerDef
BSW Description		
This optional container is used to configure the UserNm PDU. This container is only available if FrNmComUserDataSupport is enabled.		
Template Description		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.iSignalToIPduMapping		
Mapping Rule		**Mapping Type**
Create container for each NmPdu that aggregates the ISignalToIPduMapping element. The configuration for these Pdus (e.g. Transfer Properties) shall be derived from this information.		full
Mapping Status		**Mapping ID**
valid		up_FrNm_00027

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmUserDataTxPdu	
BSW Parameter		**BSW Type**
FrNmTxUserDataPduId		EcucIntegerParamDef
BSW Description		
This parameter defines the Handle ID of the NM User Data I-PDU.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelIdentifiers/FrNmUserDataTxPdu	
BSW Parameter		**BSW Type**
FrNmTxUserDataPduRef		EcucReferenceDef
BSW Description		
Reference to the NM User Data I-PDU in the global PDU collection.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**

FrNm	FrNm/FrNmChannelConfig/FrNmChannel	
BSW Parameter		**BSW Type**
FrNmChannelTiming		EcucParamConfContainerDef
BSW Description		
This container contains instance-specific timing related to the respective FlexRay Channel.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming	
BSW Parameter		**BSW Type**
FrNmDataCycle		EcucEnumerationParamDef
BSW Description		
Number of FlexRay Schedule Cycles needed to transmit the NM Data of all ECUs on the FlexRay bus		
Template Description		
Number of FlexRay Communication Cycles needed to transmit the Nm Data PDUs of all FlexRay Nm Ecus of this FlexRayNmCluster.		
M2 Parameter		
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmDataCycle		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrNm_00022

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming	
BSW Parameter		**BSW Type**
FrNmMainFunctionPeriod		EcucFloatParamDef
BSW Description		
This parameter defines the processing cycle of the main function of FrNm module in seconds.		
Template Description		
Defines the processing cycle of the main function of FrNm module.		
M2 Parameter		
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmMainFunctionPeriod		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrNm_00025

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming	
BSW Parameter		**BSW Type**
FrNmReadySleepCnt		EcucIntegerParamDef

BSW Description	
FrNm switches to bus sleep mode at the end of the FrNmReadySleepCnt+1 repetition cycle without any NM vote. E.g. on a value of "1", the NM-State Machine will leave the Ready Sleep State after two NM Repetition Cycles with no "keep awake" votes.	
Template Description	
The value of this attribute influences the shutdown behavior of the FlexRay NM. FrNm switches to bus sleep mode nmReadySleepTime seconds after the completion of the last repetition cycle containing a NM vote.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationConnector.nmReadySleepTime	
Mapping Rule	**Mapping Type**
FrNmReadySleepCnt = ((Float2Int(nmReadySleepTime/cycle))/nmRepetitionCycle)-1	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00045

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming
BSW Parameter	**BSW Type**
FrNmRemoteSleepIndTime	EcucFloatParamDef
BSW Description	
Timeout for Remote Sleep Indication. It defines the time in seconds how long it shall take to recognize that all other nodes are ready to sleep. The value "0" denotes that no Remote Sleep Indication functionality is configured.	
Template Description	
Timeout for Remote Sleep Indication in seconds. It defines the time how long it shall take to recognize that all other nodes are ready to sleep.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmRemoteSleepIndicationTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00020

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming
BSW Parameter	**BSW Type**
FrNmRepeatMessageTime	EcucFloatParamDef
BSW Description	
Timeout for Repeat Message State. Defines the time in seconds how long the NM shall stay in the Repeat Message State. The value "0" denotes that no Repeat Message State is configured, which means that Repeat Message State is transient and implies that it is left immediately after entry and consequently no startup stability is guaranteed and no node detection procedure is possible.	
Template Description	
Timeout for Repeat Message State in seconds. Defines the time how long the NM shall stay in the Repeat Message State.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmRepeatMessageTime

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming
BSW Parameter	**BSW Type**
FrNmRepetitionCycle	EcucEnumerationParamDef
BSW Description	
Number of Flexray Schedule Cycles used to repeat the transmission of the Nm vote of all ECUs on the Flexray Bus.	
Template Description	
Number of FlexRay Communication Cycles used to repeat the transmission of the Nm vote Pdus of all FlexRay NmEcus of this FlexRayNmCluster. This value must be an integral multiple of nmVoting-Cycle.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmCluster.nmRepetitionCycle	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00024

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming
BSW Parameter	**BSW Type**
FrNmVoteInhibitionEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the inhibition of vote changes from the next-to-last repetition cycle to the last repetition cycle before the Ready Sleep Counter expires.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmChannelConfig/FrNmChannel/FrNmChannelTiming
BSW Parameter	**BSW Type**
FrNmVotingCycle	EcucEnumerationParamDef
BSW Description	
Number of FlexRay Schedule Cycles needed to transmit the Nm vote of all ECUs on the FlexRay Bus.	
Template Description	
Number of FlexRay CommunicationCycles needed to transmit the Nm vote of Pdus of all FlexRay NmEcus of this FlexRayNmCluster.	
M2 Parameter	

SystemTemplate::NetworkManagement::FlexrayNmCluster.nmVotingCycle	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00026

BSW Module	**BSW Context**
FrNm	FrNm
BSW Parameter	**BSW Type**
FrNmGlobalConfig	EcucParamConfContainerDef
BSW Description	
This container contains all global configuration parameters for the FrNm module.	
Template Description

Pre-processor switch for enabling the cycle counter emulation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures

BSW Parameter	BSW Type
FrNmDualChannelPduEnable	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the support of dual channel transmission and reception of NM messages.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**
FrNmHwVoteEnable	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the processing of FlexRay Hardware aggregated NM-Votes. This switch enables/disables the optional API FrIf_GetNmVector.	
Template Description	
Switch for enabling the processing of FlexRay Hardware aggregated NM-Votes.	
M2 Parameter	
SystemTemplate::NetworkManagement::FlexrayNmEcu.nmHwVoteEnabled	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00008

BSW Module	BSW Context
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**
FrNmPassiveModeEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling Passive Node Configuration support.	
Template Description	
Enables support of the Passive Mode. The passive mode is configurable per channel.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.nmPassiveModeEnabled	

Mapping Rule	Mapping Type
1:1 mapping. nmNode.nmPassiveModeEnabled shall always have the same value in all Nm Clusters with the same bus protocol in the scope of one EcuInstance.	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00015

BSW Module	BSW Context
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**

FrNmPduRxIndicationEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling PDU reception indication.	
Template Description	
Switch for enabling the PDU Rx Indication.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmPduRxIndicationEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00009

BSW Module	**BSW Context**
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**
FrNmPnEiraCalcEnabled	EcucBooleanParamDef
BSW Description	
Specifies if FrNm calculates the PN request information for internal an external requests. (EIRA) true: PN request are calculated false: PN request are not calculated	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**
FrNmPnEiraRxNSduRef	EcucReferenceDef
BSW Description	
Reference to a Pdu in the COM-Stack. Only one SduRef is required for FrNm because the EIRA is the aggregation over all FlexRay Channels.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures/FrNmPnInfo
BSW Parameter	**BSW Type**
FrNmPnFilterMaskByte	EcucParamConfContainerDef
BSW Description	
Filter mask byte configuration	
Template Description	
Bit mask for FlexRay Payload used to configure the FlexRay Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationConnector.pncFilterDataMask	
Mapping Rule	**Mapping Type**
For one EcuInstance all contributing FlexrayCommunicationConnector.pncFilterDataMask will be bitwise ORed to obtain aggregated pncFilterDataMask value for this ECU. Since the pncFilterDataMask is calculated over the whole payload of the NmPdu, the leading Bytes of this aggregated pncFilterDataMask shall be ignored based on the System.pncVectorOffset value. In order to get the FrNmPnFilterMaskByteIndex and FrNmPnFilterMaskByte Value for all the bytes aggregated pncFilterDataMask shall be processed in a littleEndian way. E.g. if pncVectorOffset = 2 and aggregated pncFilterDataMask has the value 2^ 63 this will end up in a FrNmPnFilterMaskByte with FrNmPnFilterMaskByte Index = 5 and FrNmPnFilterMaskByteValue = 128.	full

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures/FrNmPnInfo	
BSW Parameter		**BSW Type**
FrNmPnInfoOffset		EcucIntegerParamDef
BSW Description		
Specifies the offset of the PN request information in the NM message.		
Template Description		
Absolute offset (with respect to the NM-PDU) of the partial networking request release information vector that is defined in bytes as an index starting with 0.		
M2 Parameter		
SystemTemplate::System.pncVectorOffset		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrNm_00006

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures	
BSW Parameter		**BSW Type**
FrNmPnResetTime		EcucFloatParamDef
BSW Description		
Specifies the runtime of the reset timer in seconds. This reset time is valid for the reset of PN requests in the EIRA and in the ERA. The value shall be the same for every channel. Thus it is a global config parameter.		
Template Description		
Specifies the runtime of the reset timer in seconds. This reset time is valid for the reset of PN requests in the EIRA and in the ERA.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreTopology::EcuInstance.pnResetTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrNm_00010

BSW Module	**BSW Context**	
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures	
BSW Parameter		**BSW Type**
FrNmRemoteSleepIndicationEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling remote sleep indication. calculationFormula = If (FrNmPassiveModeEnabled == True) then Equal(False) else Equal(False or True)		
Template Description		
Switch for enabling remote sleep indication support.		
M2 Parameter		

SystemTemplate::NetworkManagement::NmEcu.nmRemoteSleepIndEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00013

BSW Module	**BSW Context**
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**
FrNmStateChangeIndicationEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling state change indication.	
Template Description	
Enables the CAN Network Management state change notification.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmStateChangeIndEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00011

BSW Module	**BSW Context**
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**
FrNmUserDataEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling user data support.	
Template Description	
Switch for enabling user data support.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmUserDataEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrNm_00018

BSW Module	**BSW Context**
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalFeatures
BSW Parameter	**BSW Type**
FrNmVotingNextToLastRepetitionCycleDisable	EcucBooleanParamDef
BSW Description	
Pre-processor switch for disabling vote changes in the last two repetition cycles before the Ready Sleep Counter expires.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
FrNm	FrNm/FrNmGlobalConfig	
BSW Parameter		**BSW Type**
FrNmGlobalProperties		EcucParamConfContainerDef
BSW Description		
This container contains module properties related to the FlexRay NM functionality.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalProperties	
BSW Parameter		**BSW Type**
FrNmDevErrorDetect		EcucBooleanParamDef
BSW Description		
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrNm	FrNm/FrNmGlobalConfig/FrNmGlobalProperties	
BSW Parameter		**BSW Type**
FrNmMainAcrossFrCycle		EcucBooleanParamDef
BSW Description		
If the FlexRay NM MainFunction is executed completely within the FlexRay communication cycle where the last NM vote of the current vote cycle is received, the FrNmMainAcrossFrCycle shall be configured to FALSE. If the FlexRay NM MainFunction is executed completely within the FlexRay communication cycle subsequent to the one where the last NM vote of the current vote cycle is received, the FrNmMainAcrossFrCycle shall be configured to TRUE.		
Template Description

C.4.4 FrTp Mapping

BSW Module	BSW Context
FrTp	FrTp
BSW Parameter	**BSW Type**
FrTpGeneral	EcucParamConfContainerDef
BSW Description	
This container contains the general configuration parameters of the FlexRay Transport Protocol module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTp	FrTp/FrTpGeneral
BSW Parameter	**BSW Type**
FrTpAckRt	EcucBooleanParamDef
BSW Description	
Preprocessor switch for enabling the Acknowledgement and retry mechanisms. True: Acknowledge and Retry is enabled False: Acknowledge and Retry is disabled	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTp	FrTp/FrTpGeneral
BSW Parameter	**BSW Type**
FrTpChanNum	EcucIntegerParamDef
BSW Description	
Preprocessor switch for defining the number of concurrent channels the module supports. Up to 32 channels shall be definable here.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTp	FrTp/FrTpGeneral
BSW Parameter	**BSW Type**
FrTpChangeParamApi	EcucBooleanParamDef
BSW Description	
Preprocessor switch for enabling the API to change FrTp communication parameters. True: ChangeParameter API is enabled False: ChangeParameter API is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTp	FrTp/FrTpGeneral
BSW Parameter	**BSW Type**
FrTpDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
FrTp	FrTp/FrTpGeneral	
BSW Parameter		**BSW Type**
FrTpFullDuplexEnable		EcucBooleanParamDef
BSW Description		
Preprocessor switch for enabling full duplex mechanisms for all channels. True: Full duplex is enabled False: Fullduplex is disabled (Half duplex is enabled)		
Template Description		
The full duplex mechanisms is enabled if this attribute is set to true. Otherwise half duplex is enabled.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpEcu.fullDuplexEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrTp_00036

BSW Module	BSW Context	
FrTp	FrTp/FrTpGeneral	
BSW Parameter		**BSW Type**
FrTpMainFuncCycle		EcucFloatParamDef
BSW Description		
This parameter contains the calling period of the TPs Main Function. The parameter is specified in seconds.		
Template Description		
The period between successive calls to the Main Function of the AUTOSAR TP. Specified in seconds.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpEcu.cycleTimeMainFunction		
Mapping Rule		**Mapping Type**
1:1 mapping		full

valid		up_FrTp_00035

BSW Module	BSW Context	
FrTp	FrTp/FrTpGeneral	
BSW Parameter		**BSW Type**
FrTpTransmitCancellation		EcucBooleanParamDef
BSW Description		
Preprocessor switch for enabling Transmit Cancellation and Receive Cancellation. True: Transmit/Receive Cancellation is enabled False: Transmit/Receive Cancellation is disabled		
Template Description		

With this switch Tx and Rx Cancellation can be turned on or off.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpEcu.cancellation	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00037

BSW Module	**BSW Context**
FrTp	FrTp/FrTpGeneral
BSW Parameter	**BSW Type**
FrTpUnknownMsgLength	EcucBooleanParamDef
BSW Description	
Preprocessor switch to support data transfer with unknown message length. True: Transmission with unknown message length is enabled False: Transmission with unknown message length is disabled	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTp	FrTp/FrTpGeneral
BSW Parameter	**BSW Type**
FrTpVersionInfoApi	EcucBooleanParamDef
BSW Description	
Preprocessor switch for enabling the Version info API. True: Version Info API is enabled False: Version Info API is disabled	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTp	FrTp
BSW Parameter	**BSW Type**
FrTpMultipleConfig	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters and sub containers of the AUTOSAR FrTp module.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
FrTp	FrTp/FrTpMultipleConfig	
BSW Parameter		**BSW Type**
FrTpConnection		EcucParamConfContainerDef
BSW Description		
This container contains the connection specific parameters to transfer N-PDUs via FlexRay TP.		
Template Description		
A connection identifies the sender and the receiver of this particular communication. The FlexRayTp module routes a Pdu through this connection. In a System Description the references to the PduPools are mandatory. In an ECU Extract these references can be optional: On unicast connections these references are always mandatory. On multicast the txPduPool is mandatory on the sender side. The rxPduPool is mandatory on the receiver side. On Gateway ECUs both references are mandatory.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpConnection		
Mapping Rule		**Mapping Type**
Create container for each FlexRayTpConnection that is described in the ECU Extract.		full
Mapping Status		**Mapping ID**
valid		up_FrTp_00003

BSW Module	BSW Context	
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection	
BSW Parameter		**BSW Type**
FrTpBandwidthLimitation		EcucBooleanParamDef
BSW Description		
This parameter indicates whether the connection requires a bandwidth limitation or not. If FrTpBandwidthLimitation=True the sender shall send a StartFrame always on the first PDU of a PDU-Pool.		
Template Description		
Specifies whether the connection requires a bandwidth limitation or not.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpConnection.bandwidthLimitation		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrTp_00010

BSW Module	BSW Context	
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection	
BSW Parameter		**BSW Type**

FrTpConCtrlRef	EcucReferenceDef
BSW Description	
FrTpConnectionControlReference: This parameter defines a reference to a connection control container.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnection.tpConnectionControl	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00011

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection
BSW Parameter	**BSW Type**
FrTpLa	EcucIntegerParamDef
BSW Description	
This parameter defines the Local Address for the respective connection. When the local instance is the sender, this is the Source Address within the TP frame. When the local instance is the receiver, this is the Target Address within the TP frame. If this parameter is not configured, all related Rx N-SDUs must be configured to use the meta data item TARGET_ADDRESS_16, and all related Tx-N-SDUs must be configured to use the meta data item SOURCE_ADDRESS_16.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnection.transmitter,SystemTemplate::Transport Protocols::FlexrayTpConnection.receiver	
Mapping Rule	**Mapping Type**
If the local address is the sender it shall be derived from FlexrayTpConnection.transmitter. If the remote address is the receiver it shall be derived from FlexrayTpConnection.receiver.	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00008

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection
BSW Parameter	**BSW Type**
FrTpMultipleReceiverCon	EcucBooleanParamDef
BSW Description	
This parameter defines, whether this connection is an 1:1 ('false') or an 1:n ('true') connection. If data segmentation is required this parameter is used to check whether segmentation is possible or not. If the connection is 1:n segmentation is not possible and an error will occur.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnection.multicast	
Mapping Rule	**Mapping Type**
If FlexRayTpConnection contains a mulicast reference to TpAddress than set this parameter to true	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00007

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection

BSW Parameter	BSW Type
FrTpRa	EcucIntegerParamDef

BSW Description

This parameter defines the Remote Address for the respective connection. When the local instance is the sender, this is the Target Address within the TP frame. When the local instance is the receiver, this is the Source Address within the TP frame. If this parameter is not configured, all related Rx N-SDUs must be configured to use the meta data item SOURCE_ADDRESS_16, and all related Tx-N-SDUs must be configured to use the meta data item TARGET_ADDRESS_16.

Template Description

M2 Parameter

SystemTemplate::TransportProtocols::FlexrayTpConnection.transmitter,SystemTemplate::TransportProtocols::FlexrayTpConnection.receiver

Mapping Rule	Mapping Type
If the local address is the sender it shall be derived from FlexrayTpConnection.transmitter. If the remote address is the receiver it shall be derived from FlexrayTpConnection.receiver.	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00006

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection

BSW Parameter	BSW Type
FrTpRxPduPoolRef	EcucReferenceDef

BSW Description

This parameter defines a reference to a RxPduPool.

Template Description

M2 Parameter

SystemTemplate::TransportProtocols::FlexrayTpConnection.rxPduPool, SystemTemplate::TransportProtocols::FlexrayTpConnection.txPduPool

Mapping Rule	Mapping Type
Depending whether the regarded Ecu is the transmitter or the receiver this reference shall be created if the FlexrayTpPduPool element is referenced by the FlexrayTpConnection via the txPduPool or rxPduPool reference. If the regarded ECU is the transmitter then the txPduPool holds the sent NPdus and the rxPduPool holds the received NPdus. If the ECU is the receiver then the txPduPool holds the received NPdus and the rxPduPool holds the sent NPdus.	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00005

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection

BSW Parameter	BSW Type
FrTpRxSdu	EcucParamConfContainerDef

BSW Description

This parameter defines the Rx Service Data Unit Identifier (Sdu Id) which uniquely identifies a data transfer (inter-module communication) between FrTp and PDUR. This N-SDU can produce meta data items of type SOURCE_ADDRESS_16 and TARGET_ADDRESS_16.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnection.directTpSdu	
Mapping Rule	**Mapping Type**
Create container if an Rx Pdu is referenced by the FlexRayTpConnection	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00004

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection/FrTpRxSdu
BSW Parameter	**BSW Type**
FrTpRxSduId	EcucIntegerParamDef
BSW Description	
This unique identifier is used for change parameter request or receive cancellation from PduR to FrTp. ImplementationType: PduIdType	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection/FrTpRxSdu
BSW Parameter	**BSW Type**
FrTpRxSduRef	EcucReferenceDef
BSW Description	
Reference to a PDU in the global PDU structure.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection
BSW Parameter	**BSW Type**
FrTpTxPduPoolRef	EcucReferenceDef
BSW Description	

This parameter defines a reference to a TxPduPool.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnection.rxPduPool, SystemTemplate::TransportProtocols::FlexrayTpConnection.txPduPool	
Mapping Rule	**Mapping Type**
Depending whether the regarded Ecu is the transmitter or the receiver this reference shall be created if the FlexrayTpPduPool element is referenced by the FlexrayTpConnection via the txPduPool or rxPduPool reference. If the regarded ECU is the transmitter then the txPduPool holds the sent NPdus and the rxPduPool holds the received NPdus. If the ECU is the receiver then the txPduPool holds the received NPdus and the rxPduPool holds the sent NPdus.	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00009

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection
BSW Parameter	**BSW Type**
FrTpTxSdu	EcucParamConfContainerDef
BSW Description	
This parameter defines the Tx Service Data Unit Identifier (Sdu Id) which uniquely identifies a data transfer (inter-module communication) between FrTp and PDUR. This N-SDU can consume meta data items of type SOURCE_ADDRESS_16 and TARGET_ADDRESS_16.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnection.directTpSdu	
Mapping Rule	**Mapping Type**
Create container if an Tx Pdu is referenced by the FlexRayTpConnection	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00012

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection/FrTpTxSdu
BSW Parameter	**BSW Type**
FrTpTxSduId	EcucIntegerParamDef
BSW Description	
This is a unique identifier for a to be transmitted message from the PduR to the FrTp. ImplementationType: PduIdType	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
FrTp	FrTp/FrTpMultipleConfig/FrTpConnection/FrTpTxSdu	
BSW Parameter		**BSW Type**

		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrTp	FrTp/FrTpMultipleConfig	
BSW Parameter		**BSW Type**
FrTpConnectionControl		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters to control a FlexRay TP connection.		
Template Description		
Configuration parameters to control a FlexRay TP connection.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl		
Mapping Rule		**Mapping Type**
Create container for each FlexRayTpConnectionControl that is described in the ECU Extract.		full
Mapping Status		**Mapping ID**
valid		up_FrTp_00013

BSW Module	BSW Context	
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl	
BSW Parameter		**BSW Type**
FrTpAckType		EcucEnumerationParamDef
BSW Description		
This parameter defines the type of acknowledgement which is used for the specific channel.		
Template Description		
This parameter defines the type of acknowledgement which is used for the specific channel.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.ackType		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrTp_00022

BSW Module	BSW Context	
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl	
BSW Parameter		**BSW Type**
FrTpMaxFCWait		EcucIntegerParamDef

BSW Description	
This parameter defines the maximum number of FlowControl N-PDUs with FlowState "WAIT"	
Template Description	
This attribute defines the maximum number of FlowControl N-PDUs with FlowState "WAIT".	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.maxFcWait	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00030

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpMaxNbrOfNPduPerCycle	EcucIntegerParamDef
BSW Description	
This parameter is part of the ISO 10681-2 protocol's FlowControl parameter "Bandwidth Control (BC)". It limits the number of N-Pdus the sender is allowed to transmit within a FlexRay cycle.	
Template Description	
This parameter limits the number of N-Pdus the sender is allowed to transmit within a FlexRay cycle.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.maxNumberOfNpduPerCycle	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00014

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpMaxRn	EcucIntegerParamDef
BSW Description	
This parameter defines the maximum number of retries (if retry is configured).	
Template Description	
This parameter defines the maximum number of retries (if retry is configured for the particular channel).	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.maxRetries	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00020

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpSCexp	EcucIntegerParamDef
BSW Description	

This parameter is part of the ISO 10681-2 protocol's FlowControl parameter "Bandwidth Control (BC)". It represents the exponent to calculate the minimum number of "Separation Cycles" the sender has to wait for the next transmission of an FrTp N-Pdu.	
Template Description	
Exponent to calculate the minimum number of "Separation Cycles" the sender has to wait for the next transmission of an FrTp N-Pdu.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.separationCycleExponent	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00024

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpTimeBr	EcucFloatParamDef
BSW Description	
This parameter defines the time in seconds the FrTp requires to transmit a corresponding FlowControl Frame. According to ISO 10681-2 this parameter is a performance requirement.	
Template Description	
Time (in seconds) until transmission of the next FlowControl N-PDU.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.timeBr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00015

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpTimeCs	EcucFloatParamDef
BSW Description	
This parameter defines the time in seconds between the sending of two CFs or between the sending of a CF and LF or between the reception of a FC and sending of the next CF.	
Template Description	
Time (in seconds) until transmission of the next ConsecutiveFrame NPdu / LastFrame NPdu.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.timeCs	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00026

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpTimeoutAr	EcucFloatParamDef
BSW Description	

This parameter states the timeout in seconds between the PDU transmit request of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface on the receiver side (for FC or AF).	
Template Description	
This parameter states the timeout between the PDU transmit request of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface on the receiver side (for FC or AF). Specified in seconds.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.timeoutAr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00017

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpTimeoutAs	EcucFloatParamDef
BSW Description	
This parameter specifies the timeout in seconds the FrIf shall confirm a transmitted Pdu to the FrTp.	
Template Description	
This attribute states the timeout between the PDU transmit request for the first PDU of the group used in the current connection of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface (when having sent the last PDU of the group used in this connection) on the sender side (SF-x, FF-x, CF or FC (in case of Transmit Cancellation)). Specified in seconds.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.timeoutAs	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00023

BSW Module	**BSW Context**
FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl
BSW Parameter	**BSW Type**
FrTpTimeoutBs	EcucFloatParamDef
BSW Description	
This parameter defines the timeout in seconds for waiting for an FC or AF on the sender side in a 1:1 connection.	
Template Description	
This parameter defines the timeout in seconds for waiting for an FC or AF on the sender side in a 1:1 connection.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.timeoutBs	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00018

BSW Module	**BSW Context**

FrTp	FrTp/FrTpMultipleConfig/FrTpConnectionControl	
BSW Parameter		**BSW Type**
FrTpTimeoutCr		EcucFloatParamDef
BSW Description		
This parameter defines the timeout value in seconds a receiver is waiting for a CF or a LF.		
Template Description		
This parameter defines the timeout value in seconds for waiting for a CF or FF-x (in case of retry) after receiving the last CF or after sending an FC or AF on the receiver side. Specified in seconds.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpConnectionControl.timeoutCr		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_FrTp_00032

BSW Module	**BSW Context**	
FrTp	FrTp/FrTpMultipleConfig	
BSW Parameter		**BSW Type**
FrTpMaxConnectionCnt		EcucIntegerParamDef
BSW Description		
Maximum number of TP connections. This parameter is needed only in case of post-build loadable implementation using static memory allocation.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
FrTp	FrTp/FrTpMultipleConfig	
BSW Parameter		**BSW Type**
FrTpRxPduPool		EcucParamConfContainerDef
BSW Description		
This container contains all Pdus that are assigned to that Pdu Pool.		
Template Description		
FlexrayTpPduPool is a set of N-PDUs which are defined for FrTp sending or receiving purpose.		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayTpPduPool		
Mapping Rule		**Mapping Type**
Create container if the FlexrayTpPduPool element is referenced by the Flexray TpConnection via the rxPduPool or txPduPool reference. If the regarded ECU is the transmitter then the txPduPool holds the sent NPdus and the rxPduPool holds the received NPdus. If the ECU is the receiver then the txPduPool holds the received NPdus and the rxPduPool holds the sent NPdus.		full
Mapping Status		**Mapping ID**
valid		up_FrTp_00001

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpRxPduPool

BSW Parameter	BSW Type
FrTpRxPdu	EcucParamConfContainerDef

BSW Description

Container to hold the PDU parameters.

ImplementationType: PduInfoType

Template Description

M2 Parameter

SystemTemplate::TransportProtocols::FlexrayTpPduPool.nPdu

Mapping Rule	Mapping Type
Create container for each NPdu that is referenced by the regarded FlexrayTp PduPool.	full
Mapping Status	**Mapping ID**
valid	up_FrTp_00002

BSW Module	BSW Context
FrTp	FrTp/FrTpMultipleConfig/FrTpRxPduPool/FrTpRxPdu

BSW Parameter	BSW Type
FrTpRxPduId	EcucIntegerParamDef

BSW Description

This is a unique identifier for a received message which is forwarded from the FrIf to the FrTp.

ImplementationType: PduIdType

Template Description

C.4.5 FrArTp Mapping

BSW Module	BSW Context	
FrArTp	FrArTp	
BSW Parameter		**BSW Type**
FrArTpGeneral		EcucParamConfContainerDef
BSW Description		
This container contains the general configuration (parameters) of the FlexRay TP.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrArTp	FrArTp/FrArTpGeneral	
BSW Parameter		**BSW Type**
FrArTpDevErrorDetect		EcucBooleanParamDef
BSW Description		
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**

valid	

BSW Module	BSW Context	
FrArTp	FrArTp/FrArTpGeneral	
BSW Parameter		**BSW Type**
FrArTpHaveAckRt		EcucBooleanParamDef
BSW Description		
Preprocessor switch for enabling the Acknowledgement and retry mechanisms.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrArTp	FrArTp/FrArTpGeneral	
BSW Parameter		**BSW Type**
FrArTpHaveGrpSeg		EcucBooleanParamDef
BSW Description		
Preprocessor switch for enabling segmentation of 1:n messages.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrArTp	FrArTp/FrArTpGeneral	
BSW Parameter		**BSW Type**
FrArTpHaveLm		EcucBooleanParamDef
BSW Description		
Preprocessor switch for enabling the mechanism for message longer than allowed by.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
FrArTp	FrArTp/FrArTpGeneral

BSW Parameter	BSW Type
FrArTpHaveTc	EcucBooleanParamDef
BSW Description	
Preprocessor switch for enabling Transmit Cancellation and Receive Cancellation.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrArTp	FrArTp/FrArTpGeneral
BSW Parameter	**BSW Type**
FrArTpMainFuncCycle	EcucFloatParamDef
BSW Description	
This parameter contains the calling period of the TPs Main Function. The parameter is specified in seconds.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrArTp	FrArTp/FrArTpGeneral
BSW Parameter	**BSW Type**
FrArTpVersionInfoApi	EcucBooleanParamDef
BSW Description	
Preprocessor switch for enabling the Version info API.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrArTp	FrArTp
BSW Parameter	**BSW Type**
FrArTpMultipleConfig	EcucParamConfContainerDef
BSW Description	

This container contains the configuration parameters and sub containers of the AUTOSAR FrArTp module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig
BSW Parameter	**BSW Type**
FrArTpChannel	EcucParamConfContainerDef
BSW Description	
This container contains the configuration (parameters) of one FlexRay TP channel.	
Template Description	
A channel is a group of connections sharing several properties. The FlexRay AutosarTransport Layer supports several channels. These channels can work concurrently, thus each of them requires its own state machine and management data structures and its own PDU-IDs.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpChannel	
Mapping Rule	**Mapping Type**
Create container for each FlexrayArTpChannel that exists in the Ecu Extract.	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00001

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel
BSW Parameter	**BSW Type**
FrArTpAckType	EcucEnumerationParamDef
BSW Description	
This parameter defines the type of acknowledgement which is used for the specific channel.	
Template Description	
Type of Acknowledgement.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpChannel.ackType	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00013

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel
BSW Parameter	**BSW Type**
FrArTpAdrType	EcucEnumerationParamDef
BSW Description	

This parameter states the addressing type this connection has. The meanings of the values are one byte and two byte.	
Template Description	
Adressing Type of this connection: true: Two Bytes false: One Byte	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpChannel.extendedAddressing	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00030

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel
BSW Parameter	**BSW Type**
FrArTpConcurrentConnections	EcucIntegerParamDef
BSW Description	
This parameter defines the number of connections that can be active at the same time. If set to 0, all configured connections can be active at the same time.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel
BSW Parameter	**BSW Type**
FrArTpConnection	EcucParamConfContainerDef
BSW Description	
This container contains the configuration (parameters) of one FlexRay TP connection. A connection can only belong to one channel.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpChannel.tpConnection	
Mapping Rule	**Mapping Type**
Create container for each existing FlexrayArTpConnection that is aggregated by FlexrayArTpChannel in the System description.	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00023

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel/FrArTpConnection
BSW Parameter	**BSW Type**

FrArTpConPrioPdus	EcucIntegerParamDef
BSW Description	
This parameter defines the number of TxNPdus to which this connection has prioritized access. It must be ensured that the number of prioritized PDUs of all connections is smaller than the total number of TxNPdus in the associated PDU pool.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel/FrArTpConnection
BSW Parameter	**BSW Type**
FrArTpLa	EcucIntegerParamDef
BSW Description	
This parameter defines the Local Address for the respective connection. When the local instance is the sender, this is the Source Address within the TP frame. When the local instance is the receiver, this is the Target Address within the TP frame. Note that in case of 1 byte addressing only the values from 0x0000 - 0x00FF are valid. If this parameter is not configured, all related Rx N-SDUs must be configured to use the meta data item TARGET_ADDRESS_16, and all related Tx-N-SDUs must be configured to use the meta data item SOURCE_ADDRESS_16.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpConnection.source	
Mapping Rule	**Mapping Type**
LocalAddress can be derived from the TpNode that is referenced by the Flex RayTpConnection as source.	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00024

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel/FrArTpConnection
BSW Parameter	**BSW Type**
FrArTpMultRec	EcucBooleanParamDef
BSW Description	
This parameter defines, whether this connection is an 1:1 (’false’) or an 1:n (’true’) connection. Of course, if the channel to which the connection is configured has retry or acknowledgement enabled, no retry or acknowledgement will occur in case the connection is an 1:n connection.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpConnection.multicast	
Mapping Rule	**Mapping Type**
If multicast is used set this attribute to true.	full
Mapping Status	**Mapping ID**

valid	up_FrArTp_00025

BSW Module	BSW Context	
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel/FrArTpConnection	
BSW Parameter		**BSW Type**
FrArTpRa		EcucIntegerParamDef
BSW Description		
This parameter defines the Remote Address for the respective connection. When the local instance is the sender, this is the Target Address within the TP frame. When the local instance is the receiver, this is the Source Address within the TP frame. Note that in case of 1 byte addressing only the values from 0x0000 - 0x00FF are valid. If this parameter is not configured, all related Rx N-SDUs must be configured to use the meta data item SOURCE_ADDRESS_16, and all related Tx-N-SDUs must be configured to use the meta data item TARGET_ADDRESS_16.		
Template Description		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayArTpConnection.target		
Mapping Rule		**Mapping Type**
RemoteAddress can be derived from the TpNode that is referenced by the Flex RayTpConnection as target.		full
Mapping Status		**Mapping ID**
valid		up_FrArTp_00026

BSW Module	BSW Context	
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel/FrArTpConnection	
BSW Parameter		**BSW Type**
FrArTpRxSdu		EcucParamConfContainerDef
BSW Description		
Describes the Rx N-SDU. This N-SDU can produce meta data items of type SOURCE_ADDRESS_16 and TARGET_ADDRESS_16.		
Template Description		
M2 Parameter		
SystemTemplate::TransportProtocols::FlexrayArTpConnection.directTpSdu		
Mapping Rule		**Mapping Type**
Create container for every IPdu that is received by the FrArTp and the regarded Ecu.		full
Mapping Status		**Mapping ID**
valid		up_FrArTp_00027

BSW Module	BSW Context	
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel/FrArTpConnection/FrArTpRxSdu	
BSW Parameter		**BSW Type**
FrArTpRxSduRef		EcucReferenceDef
BSW Description		
Reference to a PDU in the global PDU structure.		
Template Description		
M2 Parameter		

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel/FrArTpConnection/FrArTpRxSdu
BSW Parameter	**BSW Type**
FrArTpSduRxId	EcucIntegerParamDef
BSW Description	
This is a unique identifier for a received message. This Id is used in the CancelReceive and ChangeParameter API call. ImplementationType: PduIdType	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel

BSW Parameter	**BSW Type**
FrArTpStMin	EcucFloatParamDef

BSW Description

This parameter defines the minimum amount of time between two succeeding CFs of a 1:1 segmented transmission in seconds. Valid values are 0, 100μs, 200μs .. 900μs, 1ms, 2ms .. 127ms. The value can be changed at runtime using the FrArTp_ChangeParameter interface.

FrArTpStMin must be an integer multiple of the cycle length multiplied with the multiplexing factor, i.e. FrArTpStMin = n * FrIfGdCycle * m, where n is an integer >= 0 and m is the cycle multiplexor of those cycles where PDUs of the PDU pool are scheduled.

Please note: Due to the scheduling strategies of FrArTp, FrArTpStMin can only be kept to a degree defined by the maximum temporal distance of the PDUs of a PDU pool within one FlexRay cycle.

Template Description

This attribute defines the minimum amount of time between two succeeding CFs of a 1:1 segmented transmission in seconds. Valid values are 0, 100μs, 200μs .. 900μs, 1ms, 2ms .. 127ms. The value can be changed at runtime using the FrArTp_ChangeParameter interface.

The minimumSeparationTime must be an integer multiple of the cycle length multiplied with the multiplexing factor, i.e. minimumSeparationTime = n * cycle * m, where n is an integer >=0, cycle is FlexrayCluster.cycle, and m is the cycle multiplexor of those cycles where PDUs of the PDU pool are scheduled.

Please note: Due to the scheduling strategies of FrTp, minimumSeparationTime can only be kept to a degree defined by the maximum temporal distance of the PDUs of a PDU pool within one FlexRay cycle.

Range: 0 .. 0.127

1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00015

BSW Module	BSW Context
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel

BSW Parameter	BSW Type

FrArTpTimeBr	EcucFloatParamDef
BSW Description	
This parameter defines the time in seconds between receiving the last CF of a block or an FF-x (or SF-x) and sending out an FC or AF. It is obvious that FRARTP_TIME_BR + (FRARTP_TIMEOUT_AR * FRARTP_MAX_AR) < FRARTP_TIMEOUT_BS must hold (because the transmission duration on the bus has also to be considered). This parameter is defined in ISO 15765-2. It is contained in the configuration as a performance requirement.	
Template Description	
This attribute defines the time in seconds between receiving the last CF of a block or an FF-x (or SF-x) and sending out an FC or AF.	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpChannel.timeBr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00018

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel
BSW Parameter	**BSW Type**
FrArTpTimeCs	EcucFloatParamDef
BSW Description	
This parameter defines the time in seconds between the sending of two consecutive CFs or between reception of an FC or AF and sending of the next CF . It is obvious that FRARTP_TIME_CS + (FRARTP_TIMEOUT_AS * FRARTP_MAX_AS) < FRARTP_TIMEOUT_CR must hold (because the transmission duration on the bus has also to be considered). This parameter is defined in ISO 15765-2. It is contained in the configuration as a performance requirement.	
Template Description	
This attribute defines the time in seconds between the sending of two consecutive frames or between a consecutive frame and a flow control (for Transmit Cancellation) or between reception of an flow control or Acknowledgement Frame and sending of the next consecutive frame or a flow control (for Transmit Cancellation).	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpChannel.timeCs	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00010

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel
BSW Parameter	**BSW Type**
FrArTpTimeoutAr	EcucFloatParamDef
BSW Description	

This parameter states the timeout in seconds between the PDU transmit request of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface on the receiver side (for FC or AF).	
Template Description	
This attribute states the timeout in seconds between the PDU transmit request of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface on the receiver side (for FC or AF).	
M2 Parameter	
SystemTemplate::TransportProtocols::FlexrayArTpChannel.timeoutAr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrArTp_00005

BSW Module	**BSW Context**
FrArTp	FrArTp/FrArTpMultipleConfig/FrArTpChannel
BSW Parameter	**BSW Type**
FrArTpTimeoutAs	EcucFloatParamDef
BSW Description	
This parameter states the timeout in seconds between the PDU transmit request for the first PDU of the group used in the current connection of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface (when having sent the last PDU of the group used in this connection) on the sender side (SF-x, FF-x, CF).	
Template Description	
This attribute states the timeout in seconds between the PDU transmit request for the first PDU of the group used in the current connection of the Transport Layer to the FlexRay Interface and the corresponding confirmation of the FlexRay Interface (when having sent the last PDU of the group used in this connection) on the sender side (SF-x, FF-x, CF).	
M2 Parameter

C.4.6 FrSM Mapping

BSW Module	BSW Context	
FrSM	FrSM	
BSW Parameter		**BSW Type**
FrSMConfig		EcucParamConfContainerDef
BSW Description		
This container comprises the cluster specific configuration of the FlexRay State Manager.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrSM	FrSM/FrSMConfig	
BSW Parameter		**BSW Type**
FrSMCluster		EcucParamConfContainerDef
BSW Description		
This container specifies a FlexRay cluster and all related data. A FlexRay cluster may consist of more than one controller per ECU.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMCheckWakeupReason	EcucBooleanParamDef
BSW Description	
If FrSMCheckWakeupReason is true, the FrSM will check the wakeup reason in order to skip the wakeup in case of wakeup by bus. If FrSMCheckWakeupReason is false, the FrSM will always try to perform a wakeup.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMClusterDemEventParameterRefs	EcucParamConfContainerDef
BSW Description	
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster/FrSMClusterDemEventParameterRefs
BSW Parameter	**BSW Type**
FRSM_E_CLUSTER_STARTUP	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "FRSM_E_CLUSTER_STARTUP" has occurred. If the reference is not configured the error shall be reported as DET error.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster/FrSMClusterDemEventParameterRefs
BSW Parameter	**BSW Type**
FRSM_E_CLUSTER_SYNC_LOSS	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "FRSM_E_CLUSTER_SYNC_LOSS" has occurred. If the reference is not configured the error shall be reported as DET error.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMComMNetworkHandleRef	EcucReferenceDef
BSW Description	
Reference to the unique handle to identify one certain FlexRay network correspond to one of the network handles of the ComM configuration.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMDelayStartupWithoutWakeup	EcucBooleanParamDef
BSW Description	
If true, timer t1 shall be started instead of immediately calling FrIf_AllowColdstart in case of a startup without wakeup.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

FrSM	FrSM/FrSMConfig/FrSMCluster	
BSW Parameter		**BSW Type**
FrSMDurationT1		EcucFloatParamDef
BSW Description		
The duration of timer t1 in seconds. A value of 0 shall imply that the timer is not used.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
FrSM	FrSM/FrSMConfig/FrSMCluster	
BSW Parameter		**BSW Type**
FrSMDurationT2		EcucFloatParamDef
BSW Description		
The duration of timer t2 in seconds. A value of 0 shall imply that the timer is not used. The value of this parameter shall be larger than the value of FrSMDurationT1 parameter.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
FrSM	FrSM/FrSMConfig/FrSMCluster	
BSW Parameter		**BSW Type**
FrSMDurationT3		EcucFloatParamDef
BSW Description		
The duration of timer t3 in seconds. The value of this parameter shall be larger than the value of FrSMDurationT1 parameter. A value of 0 shall imply that the timer is not used. It shall only be possible to configure a value 0 if no FrNm is used.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMDurationT4	EcucFloatParamDef
BSW Description	
The timer t4 ensures that a dual channel node will eventually clear its coldstart inhibit bit and become a leading coldstarter.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMFrIfClusterRef	EcucReferenceDef
BSW Description	
References the cluster configuration in the FlexRay Interface configuration. Note that the assigned controllers and transceivers are defined in the FrIf configuration and can be accessed via this reference.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMIsColdstartEcu	EcucBooleanParamDef
BSW Description	
True: The ECU is a coldstart node for this FlexRay cluster. False: The ECU is no coldstart node for this FlexRay cluster.	
Template Description	
FlexrayCommunicationController.keySlotID: ID of the slot used to transmit the startup frame, sync frame, or designated single slot frame. If the attributes keySlotUsedForStartUp, keySlotUsedForSync, or keySlotOnlyEnabled are set to true the key slot value is mandatory. **FlexrayCommunicationController.keySlotUsedForStartUp**: Flag indicating whether the Key Slot is used to transmit a startup frame.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationController.keySlotID,SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCommunicationController.keySlotUsedForStartUp,	

Mapping Rule	Mapping Type
<= TRUE if keySlotId existing and valid (i.e. not 0) and keySlotUsedForStartUp set to true <= FALSE otherwise	
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMIsWakeupEcu	EcucBooleanParamDef
BSW Description	
True: FrSM shall perform a wakeup for this cluster. False: FrSM shall never perform a wakeup for this FlexRay cluster.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMMainFunctionCycleTime	EcucFloatParamDef
BSW Description	
This parameter defines the cycle time in seconds of the periodic calling of FrSM main function.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMMinNumberOfColdstarter	EcucIntegerParamDef
BSW Description	
This parameter defines the number of coldstarter that should not be underrun. If this parameter is not configured the mainfunction shall not check the number of startup frames.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMNumWakeupPatterns	EcucIntegerParamDef
BSW Description	
Maximum number of Wakeup Patterns the node may send before going to FRSM_STARTUP.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMStartupRepetitions	EcucIntegerParamDef
BSW Description	
The number of times an ECU may repeat the startup procedure for a FlexRay cluster.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMStartupRepetitionsWithWakeup	EcucIntegerParamDef
BSW Description	
The number of times an ECU may repeat the startup procedure including a wakeup for a FlexRay cluster.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMConfig/FrSMCluster
BSW Parameter	**BSW Type**
FrSMTrcvStdbyDelay	EcucFloatParamDef
BSW Description	
The duration of timer t_TrcvStdbyDelay in seconds. The granularity of this parameter shall be restricted to full FlexRay cycles (FrIfGdCycle). A value of 0 shall imply that the timer is not used.	
Template Description	
The duration of timer t_TrcvStdbyDelay in seconds. The granularity of this parameter shall be restricted to full FlexRay cycles (cycle). The transceiver status setting to STANDBY shall be delayed by this value. Not specifying a value or a value of 0 shall imply that the timer is not used.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Flexray::FlexrayTopology::FlexrayCluster.tranceiverStandbyDelay	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrSM_00001

BSW Module	BSW Context
FrSM	FrSM
BSW Parameter	**BSW Type**
FrSMGeneral	EcucParamConfContainerDef
BSW Description	
This container contains the general configuration parameters of the FlexRay State Manager.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMGeneral
BSW Parameter	**BSW Type**
FrSMAllSlotsSupport	EcucBooleanParamDef
BSW Description	
Configuration parameter to enable/disable FrSM support to enable/disable the switching from key-slot/single-slot mode to all-slot mode.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMGeneral
BSW Parameter	**BSW Type**
FrSMDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMGeneral
BSW Parameter	**BSW Type**
FrSMSyncLossErrorIndicationName	EcucFunctionNameDef
BSW Description	
Name of <Cdd>_SyncLossErrorIndication function that shall be called on loss of synchronization. If this parameter is omitted no indication shall take place.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrSM	FrSM/FrSMGeneral
BSW Parameter	**BSW Type**
FrSMVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables and disables the version info API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

C.5 Lin

C.5.1 Lin Driver Mapping

BSW Module	BSW Context	
Lin	Lin	
BSW Parameter		**BSW Type**
LinDemEventParameterRefs		EcucParamConfContainerDef
BSW Description		
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Lin	Lin/LinDemEventParameterRefs	
BSW Parameter		**BSW Type**
LIN_E_TIMEOUT		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when the error "Timeout caused by hardware error" has occurred. If the reference is not configured the error shall be reported as DET error.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Lin	Lin	
BSW Parameter		**BSW Type**
LinGeneral		EcucParamConfContainerDef
BSW Description		
This container contains the parameters related to each LIN Driver Unit.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
Lin	Lin/LinGeneral
BSW Parameter	**BSW Type**
LinDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Lin	Lin/LinGeneral
BSW Parameter	**BSW Type**
LinEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps the Lin driver to zero or multiple ECUC partitions to make the modules API available in this partition. The Lin driver will operate as an independent instance in each of the partitions.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Lin	Lin/LinGeneral
BSW Parameter	**BSW Type**
LinIndex	EcucIntegerParamDef
BSW Description	
Specifies the InstanceId of this module instance. If only one instance is present it shall have the Id 0.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
Lin	Lin/LinGeneral	
BSW Parameter		**BSW Type**
LinTimeoutDuration		EcucIntegerParamDef
BSW Description		
Specifies the maximum number of loops for blocking function until a timeout is raised in short term wait loops		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Lin	Lin/LinGeneral	
BSW Parameter		**BSW Type**
LinVersionInfoApi		EcucBooleanParamDef
BSW Description		
Switches the Lin_GetVersionInfo function ON or OFF.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Lin	Lin	
BSW Parameter		**BSW Type**
LinGlobalConfig		EcucParamConfContainerDef
BSW Description		
This container contains the global configuration parameter of the Lin driver.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context

Lin	Lin/LinGlobalConfig	
BSW Parameter		**BSW Type**
LinChannel		EcucParamConfContainerDef
BSW Description		
This container contains the configuration (parameters) of the LIN Controller(s).		
Template Description		
A physical channel is the transmission medium that is used to send and receive information between communicating ECUs. Each CommunicationCluster has at least one physical channel. Bus systems like CAN and LIN only have exactly one PhysicalChannel. A FlexRay cluster may have more than one PhysicalChannels that may be used in parallel for redundant communication. An ECU is part of a cluster if it contains at least one controller that is connected to at least one channel of the cluster.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreTopology::PhysicalChannel		
Mapping Rule		**Mapping Type**
A LinChannel container is constructed per CommunicationConnector belonging to the CommunicationController associated with the owning Lin Module container		full
Mapping Status		**Mapping ID**
valid		up_Lin_00001

BSW Module	**BSW Context**	
Lin	Lin/LinGlobalConfig/LinChannel	
BSW Parameter		**BSW Type**
LinChannelBaudRate		EcucIntegerParamDef
BSW Description		
Specifies the baud rate of the LIN channel		
Template Description		
Channels speed in bits/s.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreTopology::CommunicationCluster.baudrate		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_Lin_00002

BSW Module	**BSW Context**	
Lin	Lin/LinGlobalConfig/LinChannel	
BSW Parameter		**BSW Type**
LinChannelEcuMWakeupSource		EcucReferenceDef
BSW Description		
This parameter contains a reference to the Wakeup Source for this controller as defined in the ECU State Manager.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
Lin	Lin/LinGlobalConfig/LinChannel
BSW Parameter	**BSW Type**
LinChannelEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps one single Lin channel to zero or one ECUC partitions. The ECUC partition referenced is a subset of the ECUC partitions where the Lin driver is mapped to.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Lin	Lin/LinGlobalConfig/LinChannel
BSW Parameter	**BSW Type**
LinChannelId	EcucIntegerParamDef
BSW Description	
Identifies the LIN channel. Replaces LIN_CHANNEL_INDEX_NAME from the LIN SWS.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Implicit from each CommunicationConnector on the ECU representing a LIN channel. Increase the LinChannelId for each LIN channel created on the same CommunicationController, for each CommunicationController start indexing at zero.	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Lin	Lin/LinGlobalConfig/LinChannel
BSW Parameter	**BSW Type**
LinChannelWakeupSupport	EcucBooleanParamDef
BSW Description	
Specifies if the LIN hardware channel supports wake up functionality	
Template Description	
Defines whether the ECU shall be woken up by this CommunicationController. TRUE: wake up is possible FALSE: wake up is not supported Note: If wakeUpByControllerSupported is set to TRUE the feature shall be supported by both hardware and basic software.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::CommunicationController.wakeUpByControllerSupported	
Mapping Rule	**Mapping Type**
1:1 mapping	full

Mapping Status	Mapping ID
valid	up_Lin_00003

BSW Module	BSW Context	
Lin	Lin/LinGlobalConfig/LinChannel	
BSW Parameter		**BSW Type**
LinClockRef		EcucReferenceDef
BSW Description		
Reference to the LIN clock source configuration, which is set in the MCU driver configuration.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Lin	Lin/LinGlobalConfig/LinChannel	
BSW Parameter		**BSW Type**
LinNodeType		EcucEnumerationParamDef
BSW Description		
Specifies the LIN node type of this channel.		
Template Description		
LinMaster: Describing the properties of the refering ecu as a LIN master. **LinSlave**: Describing the properties of the referring ecu as a LIN slave.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinMaster, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave		
Mapping Rule		**Mapping Type**
Set to MASTER if the CommunicationController is defined as a LinMaster. Set to SLAVE if the CommunicationController is defined as a LinSlave. In the System Template the LinMaster/LinSlave is connected to the LinChannel via a CommunicationConnector.		full
Mapping Status		**Mapping ID**
valid		up_Lin_00004

C.5.2 Lin Interface Mapping

BSW Module	BSW Context	
LinIf	LinIf	
BSW Parameter		**BSW Type**
LinIfGeneral		EcucParamConfContainerDef
BSW Description		
This container contains the general parameters of LIN Interface module.		
Template Description		

LIN specific attributes	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinCluster	
Mapping Rule	**Mapping Type**
Container must be created if the ECU is connected to a LIN Cluster	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00001

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfBusMirroringSupported	EcucBooleanParamDef
BSW Description	
States if Bus Mirroring is enabled in the LIN Interface or not. The reason for this parameter is to reduce the size of LIN Interface if the Bus Mirroring is not used.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfMultipleDriversSupported	EcucBooleanParamDef
BSW Description	
States if multiple drivers are supported by the LIN Interface or not. The reason for this parameter is to reduce the size of LIN Interface if multiple drivers are not used.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfMultipleTrcvDriverSupported	EcucBooleanParamDef
BSW Description	
States if multiple transceiver drivers are supported by the LIN Interface or not. The reason for this parameter is to reduce the size of LIN Interface if multiple transceiver drivers are not used.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfNcOptionalRequestSupported	EcucBooleanParamDef
BSW Description	
States if the node configuration commands Assign NAD and Conditional Change NAD are supported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_LinIf_00035

BSW Module	BSW Context
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfPublicCddHeaderFile	EcucStringParamDef
BSW Description	
Defines header files for callback functions which shall be included in case of CDDs. Range of characters is 1.. 32.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfResponseErrorSignalChangedCallout	EcucFunctionNameDef
BSW Description	
This parameter contains the name of the callout function that is called after a response error signal change. Only applicable for LIN slave nodes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfSaveConfigurationCallout	EcucFunctionNameDef
BSW Description	
This parameter contains the name of the callout function that is called when a save configuration node configuration command is processed by this slave node. The service is only supported when this parameter is configured. Only applicable for LIN slave nodes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfTpSupported	EcucBooleanParamDef
BSW Description	
States if the TP is included in the LIN Interface or not. The reason for this parameter is to reduce the size of LIN Interface if the TP is not used.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfTrcvDriverSupported	EcucBooleanParamDef
BSW Description	
States if transceiver driver support is included in the LIN Interface or not. The reason for this parameter is to reduce the size of LIN Interface if transceiver drivers are not used.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGeneral
BSW Parameter	**BSW Type**
LinIfVersionInfoApi	EcucBooleanParamDef
BSW Description	
Switches the LinIf_GetVersionInfo function ON or OFF.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf
BSW Parameter	**BSW Type**
LinIfGlobalConfig	EcucParamConfContainerDef
BSW Description	
This container contains the global configuration parameters of the LinIf.	
Template Description	
LIN specific attributes	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinCluster	
Mapping Rule	**Mapping Type**
Container must be created if the ECU is connected to a LIN Cluster	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00002

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig
BSW Parameter	**BSW Type**
LinIfChannel	EcucParamConfContainerDef
BSW Description	
Describes each LIN channel the LinIf is connected to.	
Template Description	
The connection between the referencing ECU and the referenced channel via the referenced controller. Connectors are used to describe the bus interfaces of the ECUs and to specify the sending/receiving behavior. Each CommunicationConnector has a reference to exactly one communicationController. Note: Several CommunicationConnectors can be assigned to one PhysicalChannel in the scope of one ECU Instance.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::CommunicationConnector	
Mapping Rule	**Mapping Type**
Container must be created if the CommunicationConnector belonging to the ECU is connected to a LinChannel.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00003

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfBusIdleTimeoutPeriod	EcucFloatParamDef
BSW Description	
Bus idle timeout in seconds. According to the LIN protocol specification, the bus idle timeout period shall be in range [4, 10] seconds.	
Template Description	
This attribute shall be used to set an idle timeout period for the enclosing LinPhysicalChannel.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinPhysicalChannel.busIdleTimeoutPeriod	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfCddRef	EcucForeignReferenceDef
BSW Description	
Reference to the CDD module description. This parameter is only required when LinIfWakeupConfirmationUL, LinIfScheduleRequestConfirmationUL, LinIfGotoSleepConfirmationUL and/or LinIfGotoSleepIndicationUL is set to CDD.	
Template Description	

Head of the configuration of one Module. A Module can be a BSW module as well as the RTE and ECU Infrastructure. As part of the BSW module description, the EcucModuleConfigurationValues element has two different roles: The recommendedConfiguration contains parameter values recommended by the BSW module vendor. The preconfiguredConfiguration contains values for those parameters which are fixed by the implementation and cannot be changed. These two EcucModuleConfigurationValues are used when the base EcucModuleConfigurationValues (as part of the base ECU configuration) is created to fill parameters with initial values.
M2 Parameter
ECUCDescriptionTemplate::EcucModuleConfigurationValues

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel

BSW Parameter	**BSW Type**
LinIfChannelRef	EcucReferenceDef

BSW Description
Reference to the channel definition in the LIN driver.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel

BSW Parameter	**BSW Type**
LinIfComMNetworkHandleRef	EcucReferenceDef

BSW Description
Unique handle to identify one LIN network. Reference to one of the network handles configured for the ComM.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel	
BSW Parameter		**BSW Type**
LinIfFrame		EcucParamConfContainerDef
BSW Description		
Generic container for all types of LIN frames.		
Template Description		
LIN specific attributes to the FrameTriggering		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinFrameTriggering		
Mapping Rule		**Mapping Type**
Create container for each LinFrameTriggering aggregated by the PhysicalChannel representing the regarded LIN channel.		full
Mapping Status		**Mapping ID**
valid		up_LinIf_00022

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame	
BSW Parameter		**BSW Type**
LinIfChecksumType		EcucEnumerationParamDef
BSW Description		
Type of checksum that the frame is using. This parameter is optional because in case of sporadic frames it should not be set.		
Template Description		
Type of checksum that the frame is using. This attribute is optional because in case of sporadic frames it should not be set.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinFrameTriggering.linChecksum		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_LinIf_00028

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame	
BSW Parameter		**BSW Type**
LinIfFixedFrameSdu		EcucParamConfContainerDef
BSW Description		
In case this is a fixed frame this is the SDU (response). This container represents an eight byte array. The Byte order shall be MSB first. Only applicable to LIN master nodes.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFixedFrameSdu
BSW Parameter	**BSW Type**
LinIfFixedFrameSduByte	EcucParamConfContainerDef
BSW Description	
This container represents a byte within the 8 byte array.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFixedFrameSdu/LinIfFixed FrameSduByte
BSW Parameter	**BSW Type**
LinIfFixedFrameSduBytePos	EcucIntegerParamDef
BSW Description	
Index of the Byte in the SDU (response) 8 byte array.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFixedFrameSdu/LinIfFixed FrameSduByte
BSW Parameter	**BSW Type**
LinIfFixedFrameSduByteVal	EcucIntegerParamDef
BSW Description	
Byte value in the SDU (response) 8-byte array.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame
BSW Parameter	**BSW Type**

LinIfFrameId	EcucIntegerParamDef
BSW Description	
ID of the LIN frame. The Protected ID including parity is calculated by the generation tool.	
Template Description	
To describe a frames identifier on the communication system, usually with a fixed identifierValue. For LinSporadicFrames the attribute shall be ignored.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinFrameTriggering.identifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00026

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame
BSW Parameter	**BSW Type**
LinIfFrameIndex	EcucIntegerParamDef
BSW Description	
PID index of the frame. This index is used in the AssignFrameIdentifierRange node configuration service to identify the frame(s) to which a new PID shall be assigned. It corresponds to the order of the frames in the configurable frames list in the node attributes section of the LDF / NCF of the slave node. Only relevant for LIN slave nodes.	
Template Description	
This attribute is used to order the elements and allows an assignment of Pids to ConfigurableFrames that are defined in the slave.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinOrderedConfigurableFrame.index	
Mapping Rule	**Mapping Type**
1:1 mapping. Only relevant if CommunicationController is defined as a LinSlave.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00046

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame
BSW Parameter	**BSW Type**
LinIfFrameType	EcucEnumerationParamDef
BSW Description	
This parameter defines the type of frame (e.g. sporadic frame). For master nodes, all frame types are permitted. A sporadic slot may be used by a set of unconditional frames in the role of substitution frames. For slave nodes, only following types are permitted: Uncondtional, MRF, SRF, Event-triggered. An event-triggered slot may be used by a set of unconditional frames in the role of substitution frames.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
see details in EnumerationLiteralDef descritpions	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00032

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter	**BSW Type**	
ASSIGN	EcucEnumerationLiteralDef	
BSW Description		
AssignFrameId		
Template Description		
Schedule entry for an Assign Frame Id master request.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::AssignFrameId		
Mapping Rule		**Mapping Type**
Use FrameType "Assign" if ScheduleEntry is an "AssignFrameId".		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter	**BSW Type**	
ASSIGN_FRAME_ID_RANGE	EcucEnumerationLiteralDef	
BSW Description		
AssignFrameIdRange		
Template Description		
AssignFrameIdRange generates an assign frame PID range request.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::AssignFrameIdRange		
Mapping Rule		**Mapping Type**
Use FrameType "Assign_Frame_Id_Range" if ScheduleEntry is an "AssignFrameIdRange".		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter	**BSW Type**	
ASSIGN_NAD	EcucEnumerationLiteralDef	
BSW Description		
AssignNAD		
Template Description		
Schedule entry for an Assign NAD master request.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::AssignNad		
Mapping Rule		**Mapping Type**
Use FrameType "Assign_NAD" if ScheduleEntry is an "AssignNad".		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter	**BSW Type**	
CONDITIONAL	EcucEnumerationLiteralDef	

BSW Description	
Conditional Change NAD	
Template Description	
Generates an conditional change NAD request. See ISO 17987 protocol specification for more information.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::ConditionalChangeNad	
Mapping Rule	**Mapping Type**
Use FrameType "CONDITIONAL" if ScheduleEntry is an "ConditionalChange Nad".	
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType
BSW Parameter	**BSW Type**
EVENT_TRIGGERED	EcucEnumerationLiteralDef
BSW Description	
Event triggered frame	
Template Description	
An event triggered frame is used as a placeholder to allow multiple slave nodes to provide its response. The header of an event triggered frame is transmitted when a frame slot allocated to the event triggered frame is processed. The publisher of an associated unconditional frame shall only transmit the response if at least one of the signals carried in its unconditional frame is updated. The LIN Master discovers and purges collisions with the collisionResolvingScheduleTable. The event controlled frame shall not contain any Pdus.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinEventTriggeredFrame	
Mapping Rule	**Mapping Type**
Derive the type from System Description	full
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType
BSW Parameter	**BSW Type**
FREE	EcucEnumerationLiteralDef
BSW Description	
FreeFormat	
Template Description	
Representing freely defined data.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::FreeFormat	
Mapping Rule	**Mapping Type**
Use FrameType "Free Format" if ScheduleEntry is a "FreeFormatEntry".	full
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter		**BSW Type**
MRF		EcucEnumerationLiteralDef
BSW Description		
Master Request Frame		
Template Description		
The FrameTriggering describes the instance of a frame sent on a channel and defines the manner of triggering (timing information) and identification of a frame on the channel, on which it is sent. For the same frame, if FrameTriggerings exist on more than one channel of the same cluster the fan-out/in is handled by the Bus interface.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::FrameTriggering		
Mapping Rule		**Mapping Type**
Use common Frame for Master Request.		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter		**BSW Type**
SAVE_CONFIGURATION		EcucEnumerationLiteralDef
BSW Description		
SaveConfiguration		
Template Description		
This service is used to notify a slave node to store its configuration.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::SaveConfigurationEntry		
Mapping Rule		**Mapping Type**
Use FrameType "Save_Configuration" is an "SaveConfiguration".		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter		**BSW Type**
SPORADIC		EcucEnumerationLiteralDef
BSW Description		
Sporadic slot		
Template Description		
A sporadic frame is a group of unconditional frames that share the same frame slot. The sporadic frame shall not contain any Pdus.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinSporadicFrame		
Mapping Rule		**Mapping Type**
Derive the type from System Description		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter		**BSW Type**
SRF		EcucEnumerationLiteralDef
BSW Description		
Slave Response Frame		
Template Description		
The FrameTriggering describes the instance of a frame sent on a channel and defines the manner of triggering (timing information) and identification of a frame on the channel, on which it is sent. For the same frame, if FrameTriggerings exist on more than one channel of the same cluster the fan-out/in is handled by the Bus interface.		
M2 Parameter		
SystemTemplate::Fibex::FibexCore::CoreCommunication::FrameTriggering		
Mapping Rule		**Mapping Type**
Use common Frame for Slave Response.		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter		**BSW Type**
UNASSIGN		EcucEnumerationLiteralDef
BSW Description		
UnassignFrameId		
Template Description		
Schedule entry for an Unassign Frame Id master request where the protected identifier is assigned the value 0x40. This will disable reception/transmission of a previously dynamically assigned frame identifier.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::UnassignFrameId		
Mapping Rule		**Mapping Type**
Use FrameType "Unassign" if ScheduleEntry is an "UnassignFrameId".		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfFrameType	
BSW Parameter		**BSW Type**
UNCONDITIONAL		EcucEnumerationLiteralDef
BSW Description		
Unconditional Frame		
Template Description		
Unconditional frames carry signals. The master sends a frame header in a scheduled frame slot and the designated slave node fills the frame with data.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinUnconditionalFrame		
Mapping Rule		**Mapping Type**
Derive the type from System Description		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame
BSW Parameter	**BSW Type**
LinIfPduDirection	EcucChoiceContainerDef
BSW Description	
Direction of the frame	
Template Description	
LIN specific attributes to the FrameTriggering	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinFrameTriggering	
Mapping Rule	**Mapping Type**
Create container for each existing LinFrame.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00029

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection
BSW Parameter	**BSW Type**
LinIfInternalPdu	EcucParamConfContainerDef
BSW Description	
Represents a Diagnostic or Configuration frame : no Message ID (no PduId). Only applicable to LIN master nodes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection
BSW Parameter	**BSW Type**
LinIfRxPdu	EcucParamConfContainerDef
BSW Description	
represents a received PDU/frame	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinFrameTriggering.framePort	
Mapping Rule	**Mapping Type**
Create container if the regarded LinFrameTriggering in the ECU Extract contains a reference to an "in" FramePort	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00030

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection/LinIfRxPdu
BSW Parameter	**BSW Type**

LinIfRxIndicationUL	EcucFunctionNameDef
BSW Description	
This parameter defines the name of the <User_RxIndication>. This parameter depends on the parameter LinIfUserRxIndicationUL. If LinIfUserRxIndicationUL equals PDUR, the name of the <User_RxIndication> is fixed. If LinIfUserRxIndicationUL equals CDD, the name of the <User_RxIndication> is selectable.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection/LinIfRxPdu
BSW Parameter	**BSW Type**
LinIfRxPduRef	EcucReferenceDef
BSW Description	
Reference to the PDU that is received in this frame.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection/LinIfRxPdu
BSW Parameter	**BSW Type**
LinIfUserRxIndicationUL	EcucEnumerationParamDef
BSW Description	
This parameter defines the upper layer (UL) module to which the indication of the successfully received LinIfRxPdu has to be routed via <User_RxIndication>.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection
BSW Parameter	**BSW Type**

LinIfSlaveToSlavePdu	EcucParamConfContainerDef
BSW Description	
Represents a slave-to-slave PDU/frame. Master does only send the header but doesn't receive the response. Only relevant for master nodes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection
BSW Parameter	**BSW Type**
LinIfTxPdu	EcucParamConfContainerDef
BSW Description	
represents a transmitted PDU/frame	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinFrameTriggering.framePort	
Mapping Rule	**Mapping Type**
Create container if the regarded LinFrameTriggering in the ECU Extract contains a reference to an "out" FramePort	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00031

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfFrame/LinIfPduDirection/LinIfTxPdu
BSW Parameter	**BSW Type**
LinIfTxConfirmationUL	EcucFunctionNameDef
BSW Description	
This parameter defines the name of the <User_TxConfirmation>. This parameter depends on the parameter LinIfUserTxUL. If LinIfUserTxUL equals PDUR, the name of the <User_TxConfirmation> is fixed. If LinIfUserTxUL equals CDD, the name of the <User_TxConfirmation> is selectable.	
Template Description

BSW Parameter	**BSW Type**
LinIfGotoSleepIndicationUL	EcucEnumerationParamDef
BSW Description	
This parameter defines the upper layer (UL) module to which the indication of the goto-sleep command shall be sent. Only used for LIN Slave nodes, ignored for master nodes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Defines the interval of calls to main functions per channel in seconds.	

Template Description	
Time base is mandatory for the master. It is not used for slaves. LIN 2.0 Spec states: "The time_base value specifies the used time base in the master node to generate the maximum allowed frame transfer time." The time base shall be specified AUTOSAR conform in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinMaster.timeBase	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00033

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfMaxFrameCnt	EcucIntegerParamDef
BSW Description	
Maximum number of Frames. This parameter is needed only in case of post-build loadable implementation using static memory allocation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfNodeType	EcucChoiceContainerDef
BSW Description	
This container defines the LIN node type of this channel.	
Template Description	
LinMaster: Describing the properties of the refering ecu as a LIN master. **LinSlave**: Describing the properties of the referring ecu as a LIN slave.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinMaster, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave	
Mapping Rule	**Mapping Type**
Set to MASTER if the CommunicationController is defined as a LinMaster. Set to SLAVE if the CommunicationController is defined as a LinSlave. In the System Template the LinMaster/LinSlave is connected to the LinChannel via a CommunicationConnector.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00045

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType
BSW Parameter	**BSW Type**
LinIfMaster	EcucParamConfContainerDef
BSW Description	
Each Master can only be connected to one physical channel. This could be compared to the Node parameter in a LDF file.	
Template Description	
Describing the properties of the refering ecu as a LIN master.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinMaster	
Mapping Rule	**Mapping Type**
Create container if the regarded ECU contains a CommunicationController that is defined as a LinMaster. In the System Template the LinMaster is connected to the LinChannel via a CommunicationConnector.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00004

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfMaster
BSW Parameter	**BSW Type**
LinIfJitter	EcucFloatParamDef
BSW Description	
The jitter specifies the differences between the maximum and minimum delay from time base tick to the header sending start point in seconds.	
Template Description	
The attribute timeBaseJitter is a mandatory attribute for the master and not used for slaves. LIN 2.0 Spec states: "The jitter value specifies the differences between the maximum and minimum delay from time base start point to the frame header sending start point (falling edge of BREAK signal)." The jitter shall be specified AUTOSAR conform in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinMaster.timeBaseJitter	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00005

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType
BSW Parameter	**BSW Type**
LinIfSlave	EcucParamConfContainerDef
BSW Description	
Describes all parameters which are only relevant for a LIN Slave node.	
Template Description	
Describing the properties of the referring ecu as a LIN slave.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00044

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave
BSW Parameter	**BSW Type**
LinIfLinProtocolVersion	EcucEnumerationParamDef
BSW Description	
Defines the LIN protocol version of the slave node. This information is relevant for the LIN conformance test execution.	
Template Description	
LinSlaveConfig.protocolVersion: Version specifier for a communication protocol. Protocol version of the LinMaster and the LinSlaves may be different. **LinCommunicationController.protocolVersion**: Version specifier for a communication protocol.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlaveConfig.protocolVersion, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinCommunicationController.protocolVersion	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00040

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave
BSW Parameter	**BSW Type**
LinIfNodeConfigurationIdentification	EcucParamConfContainerDef
BSW Description	
This container is mandatory for all LIN 2.x and ISO17987 LIN slave nodes, and ignored for LIN 1.3 slave nodes and all master nodes,	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave/LinIfNodeConfigurationIdentification
BSW Parameter	**BSW Type**
LinIfConfiguredNAD	EcucIntegerParamDef
BSW Description	
Slave node configured NAD.	
Template Description	
LinSlave.configuredNad: To distinguish LIN slaves that are used twice or more within the same cluster. **LinSlaveConfig.configuredNad**: To distinguish LIN slaves that are used twice or more within the same cluster.	
M2 Parameter	

SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave.configuredNad, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlaveConfig.configuredNad	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00038

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave/LinIfNodeConfigurationIdentification
BSW Parameter	**BSW Type**
LinIfFunctionId	EcucIntegerParamDef
BSW Description	
LIN function Id.	
Template Description	
LinSlave.functionId: LIN function ID **LinSlaveConfig.functionId**: LIN function ID.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave.functionId, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlaveConfig.functionId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00039

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave/LinIfNodeConfigurationIdentification
BSW Parameter	**BSW Type**
LinIfInitialNAD	EcucIntegerParamDef
BSW Description	
Slave node initial NAD.	
Template Description	
LinSlave.initialNad: This attribute represents the initial NAD. **LinSlaveConfig.initialNad**: Initial NAD of the LIN slave.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave.initialNad, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlaveConfig.initialNad	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00037

BSW Module	**BSW Context**

LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave/LinIfNodeConfigurationIdentification

BSW Parameter	**BSW Type**
LinIfNasTimeout	EcucFloatParamDef
BSW Description	
N_As timeout in seconds.	
Template Description	
Value of the N_AS timeout. Unit: seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave.nasTimeout	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00034

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave/LinIfNodeConfigurationIdentification

BSW Parameter	**BSW Type**
LinIfSupplierId	EcucIntegerParamDef
BSW Description	
LIN consortium or ISO LIN supplier Id.	
Template Description	
LinSlave.supplierId: LIN Supplier ID **LinSlaveConfig.supplierId**: LIN Supplier ID.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave.supplierId, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlaveConfig.supplierId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00041

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave/LinIfNodeConfigurationIdentification

BSW Parameter	**BSW Type**
LinIfVariantId	EcucIntegerParamDef
BSW Description	
LIN variant Id.	
Template Description	
LinSlave.variantId: Specifies the Variant ID **LinSlaveConfig.variantId**: Specifies the Variant ID.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave.variantId, SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlaveConfig.variantId	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00042

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfNodeType/LinIfSlave
BSW Parameter	**BSW Type**
LinIfResponseErrorSignal	EcucReferenceDef
BSW Description	
Reference to the response_error signal. Mandatory for all LIN 2.x and ISO LIN slave nodes, not relevant for LIN 1.3 slave nodes.	
Template Description	
This ISignal shall be taken to transport the responseError bit.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinErrorResponse.responseError	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00043

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfScheduleChangeNextTimeBase	EcucBooleanParamDef
BSW Description	
Enables/disables the switch to a new schedule table at the start of the next time base after status check. True: LinIf selects a new schedule table in next main function. Only applicable for LIN Master nodes.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfScheduleRequestConfirmationUL	EcucEnumerationParamDef
BSW Description	
This parameter defines the upper layer (UL) module to which the confirmation of the successfully performed schedule table change shall be sent. Only applicable to LIN master nodes.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfScheduleTable	EcucParamConfContainerDef
BSW Description	
Describes a schedule table. Each LinIfChannel may have several schedule tables. Each schedule table can only be connected to one channel. Mandatory for LIN Master nodes. The SHORT-NAME of the LinIfScheduleTable container represents the symbolic name of the schedule table.	
Template Description	
The master task (in the master node) transmits frame headers based on a schedule table. The schedule table specifies the identifiers for each header and the interval between the start of a frame and the start of the following frame.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinScheduleTable	
Mapping Rule	**Mapping Type**
Create container for each ScheduleTable that is defined for this channel.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00007

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable
BSW Parameter	**BSW Type**
LinIfEntry	EcucParamConfContainerDef
BSW Description	
Describes an entry in the schedule table (also known as Frame Slot).	
Template Description	
Table entry in a LinScheduleTable. Specifies what will be done in the frame slot.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::ScheduleTableEntry	
Mapping Rule	**Mapping Type**
Each RelativelyScheduledTiming element in the System Description requires the creation of a LinIfEntry. RelativelyScheduledTiming.scheduleTablle decides to which schedule table the LinIfEntry belongs.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00011

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable/LinIfEntry
BSW Parameter	**BSW Type**
LinIfCollisionResolvingRef	EcucReferenceDef
BSW Description	
Reference to the schedule table, which resolves the collision. This parameter is only used if the referenced frames are event triggered frames.	

Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinEventTriggeredFrame.collisionResolvingSchedule	
Mapping Rule	**Mapping Type**
Emulate the reference from the System Description.	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00013

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable/LinIfEntry
BSW Parameter	**BSW Type**
LinIfDelay	EcucFloatParamDef
BSW Description	
Delay to next entry in schedule table in seconds.	
Template Description	
Relative delay between this tableEntry and the start of the successor in the schedule table in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::ScheduleTableEntry.delay	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00014

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable/LinIfEntry
BSW Parameter	**BSW Type**
LinIfEntryIndex	EcucIntegerParamDef
BSW Description	
Position of the Frame Entry in the Schedule Table. The first entry index in the schedule table is 0.	
Template Description	
Relative position in the schedule table. The first entry index in the schedule table is 0.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::ScheduleTableEntry.positionInTable	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00015

BSW Module	BSW Context
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable/LinIfEntry
BSW Parameter	**BSW Type**
LinIfFrameRef	EcucReferenceDef
BSW Description	
Reference to the frames that belong to this schedule table entry.	
Template Description	
M2 Parameter	

SystemTemplate::Fibex::Fibex4Lin::LinCommunication::ApplicationEntry.frameTriggering	
Mapping Rule	**Mapping Type**
Emulate reference from the System Description	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00012

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable
BSW Parameter	**BSW Type**
LinIfResumePosition	EcucEnumerationParamDef
BSW Description	
Defines where a RUN_CONTINUOUS schedule table shall proceed in case it has been interrupted by a RUN_ONCE table.	
Template Description	
Defines, where a schedule table shall be proceeded in case if it has been interrupted by a run-once table or MRF/SRF.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinScheduleTable.resumePosition	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00008

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable
BSW Parameter	**BSW Type**
LinIfRunMode	EcucEnumerationParamDef
BSW Description	
The schedule table can be executed in two different modes.	
Template Description	
The schedule table can be executed in two different modes.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinCommunication::LinScheduleTable.runMode	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinIf_00010

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfScheduleTable
BSW Parameter	**BSW Type**
LinIfScheduleTableIndex	EcucIntegerParamDef
BSW Description	
This is the unique index used by upper layers to identify a schedule. Note that the NULL_SCHEDULE for each channel must have index 0.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfTransceiverDrvConfig	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters of each underlying LIN Transceiver Driver.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel/LinIfTransceiverDrvConfig
BSW Parameter	**BSW Type**
LinIfTrcvIdRef	EcucReferenceDef
BSW Description	
Logical handle of the underlying LIN transceiver to be served by the LIN Interface.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinIf	LinIf/LinIfGlobalConfig/LinIfChannel
BSW Parameter	**BSW Type**
LinIfWakeupConfirmationUL	EcucEnumerationParamDef
BSW Description	
This parameter defines the upper layer (UL) module to which the confirmation of the wake-up shall be sent.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

C.5.3 LinNm Mapping

BSW Module	BSW Context	
LinNm	LinNm	
BSW Parameter		**BSW Type**
LinNmGlobalConfig		EcucParamConfContainerDef
BSW Description		
This container contains the global configuration parameter of the LinNm.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinNm	LinNm/LinNmGlobalConfig	
BSW Parameter		**BSW Type**
LinNmBusSynchronizationEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling bus synchronization support of the LinNm. This feature is required for NM Coordinator nodes only.		
Template Description		
Enables bus synchronization support.		
M2 Parameter		
SystemTemplate::NetworkManagement::NmEcu.nmBusSynchronizationEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_LinNm_00006

BSW Module	BSW Context	
LinNm	LinNm/LinNmGlobalConfig	
BSW Parameter		**BSW Type**
LinNmChannelConfig		EcucParamConfContainerDef
BSW Description		
This container contains the channel specific configuration parameter of the LinNm.		
Template Description		
Lin specific NmCluster attributes.		
M2 Parameter		
SystemTemplate::NetworkManagement::LinNmCluster		
Mapping Rule		**Mapping Type**
Create Container for each existing LinNmCluster.		full
Mapping Status		**Mapping ID**
valid		up_LinNm_00010

BSW Module	BSW Context
LinNm	LinNm/LinNmGlobalConfig/LinNmChannelConfig

BSW Parameter	BSW Type
LinNmComMNetworkHandleRef	EcucReferenceDef
BSW Description	
This reference points to the unique channel defined by the ComMChannel and provides access to the unique channel index value in ComMChannelId.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinNm	LinNm/LinNmGlobalConfig/LinNmChannelConfig
BSW Parameter	**BSW Type**
LinNmNodeDetectionEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the Node Detection feature.	
Template Description	
Enables the Request Repeat Message Request support. Only valid if nmNodeIdEnabled is set to true.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmNodeDetectionEnabled	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinNm_00013

BSW Module	BSW Context
LinNm	LinNm/LinNmGlobalConfig/LinNmChannelConfig
BSW Parameter	**BSW Type**
LinNmNodeIdEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling transmission of the source node identifier in NM messages.	
Template Description	
Enables the source node identifier.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmNodeIdEnabled	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinNm_00014

BSW Module	BSW Context
LinNm	LinNm/LinNmGlobalConfig/LinNmChannelConfig
BSW Parameter	**BSW Type**
LinNmTimeoutTime	EcucFloatParamDef
BSW Description	

Network Timeout after passive start-up. It denotes the time in seconds how long the NM shall stay in Network Mode in case of passive start-up before transition into Bus-Sleep Mode is initiated.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmComControlEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the Communication Control support.	
Template Description	
Enables the Communication Control support.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmComControlEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinNm_00007

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmCoordinatorSyncSupport	EcucBooleanParamDef
BSW Description	
Enables/disables the coordinator synchronization support.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Call cycle in seconds of LinNm_MainFunction.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmPassiveModeEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling support of the Passive Mode of the LinNm.	
Template Description	
Enables support of the Passive Mode. The passive mode is configurable per channel.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.nmPassiveModeEnabled	

Mapping Rule	**Mapping Type**
1:1 mapping. nmNode.nmPassiveModeEnabled shall always have the same value in all Nm Clusters with the same bus protocol in the scope of one EcuInstance.	full
Mapping Status	**Mapping ID**
valid	up_LinNm_00004

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmRemoteSleepIndicationEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling Remote Sleep Indication support. This feature is required for NM Coordinator nodes only.	
Template Description	
Switch for enabling remote sleep indication support.	
M2 Parameter	

SystemTemplate::NetworkManagement::NmEcu.nmRemoteSleepIndEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinNm_00003

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmStateChangeIndEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the Network Management state change notification.	
Template Description	
Enables the CAN Network Management state change notification.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmStateChangeIndEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinNm_00008

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmSynchronizationPointEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the Synchronize NM feature.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinNm	LinNm/LinNmGlobalConfig
BSW Parameter	**BSW Type**
LinNmUserDataEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling User Data support.	
Template Description	
Switch for enabling user data support.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmUserDataEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinNm_00005

BSW Module	BSW Context	
LinNm	LinNm/LinNmGlobalConfig	
BSW Parameter		**BSW Type**
LinNmVersionInfoApi		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling version info API support.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

C.5.4 LinTp Mapping

BSW Module	BSW Context	
LinTp	LinTp	
BSW Parameter		**BSW Type**
LinTpGeneral		EcucParamConfContainerDef
BSW Description		
Container that holds all LIN transport protocol general parameters.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinTp	LinTp/LinTpGeneral	
BSW Parameter		**BSW Type**
LinTpChangeParameterApi		EcucBooleanParamDef
BSW Description		
This parameter, if set to true, enables the LinTp_ChangeParameter Api for this Module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
LinTp	LinTp/LinTpGeneral	
BSW Parameter		**BSW Type**

LinTpVersionInfoApi	EcucBooleanParamDef
BSW Description	
Switches the LinTp_GetVersionInfo function ON or OFF.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinTp	LinTp
BSW Parameter	**BSW Type**
LinTpGlobalConfig	EcucParamConfContainerDef
BSW Description	
This container contains the global configuration parameters of the LinTp.	
Template Description	
TP Node (Sender or Receiver) provides the TP Address and the connection to the Topology description.	
M2 Parameter	
SystemTemplate::TransportProtocols::LinTpNode	
Mapping Rule	**Mapping Type**
Create container if the regarded ECU is a LinTpNode.	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00001

BSW Module	**BSW Context**
LinTp	LinTp/LinTpGlobalConfig
BSW Parameter	**BSW Type**
LinTpChannelConfig	EcucParamConfContainerDef
BSW Description	
This container contains the channel specific configuration parameters of LinTp.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::LinTpConnection.linTpNSdu	
Mapping Rule	**Mapping Type**
Create container for each NSdu that is received by the regarded ECU.	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00002

BSW Module	**BSW Context**
LinTp	LinTp/LinTpGlobalConfig/LinTpChannelConfig
BSW Parameter	**BSW Type**
LinTpChannelRef	EcucReferenceDef
BSW Description	
Index of the channel this LinTp channel belongs to.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
LinTp	LinTp/LinTpGlobalConfig/LinTpChannelConfig

BSW Parameter	**BSW Type**
LinTpDropNotRequestedNad	EcucBooleanParamDef

BSW Description

Configures if TP Frames of not requested LIN-Slaves are dropped or not.

TRUE: Drop TP Frames of not requested LIN-Slaves
FALSE: Keep TP Frames of not requested LIN-Slaves

Only used for LIN Master nodes, ignored for slave nodes.

Template Description

Configures if TP Frames of not requested LIN-Slaves are dropped or not.

M2 Parameter

SystemTemplate::TransportProtocols::LinTpConnection.dropNotRequestedNad

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00003

BSW Module	**BSW Context**
LinTp	LinTp/LinTpGlobalConfig/LinTpChannelConfig

BSW Parameter	**BSW Type**
LinTpMaxNumberOfRespPendingFrames	EcucIntegerParamDef

BSW Description

Configures the maximum number of allowed response pending frames.
Only used for LIN Master nodes, ignored for slave nodes.

Template Description

Configures the maximum number of allowed response pending frames.

M2 Parameter

SystemTemplate::TransportProtocols::LinTpConnection.maxNumberOfRespPendingFrames

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00009

BSW Module	**BSW Context**
LinTp	LinTp/LinTpGlobalConfig/LinTpChannelConfig

BSW Parameter	**BSW Type**
LinTpP2Max	EcucFloatParamDef

BSW Description

P2*max timeout when a response pending frame is expected in seconds. Note that the minimum value of LinTpP2Max shall be more than or equal to the value of LinTpP2Timing. Only used for LIN Master nodes, ignored for slave nodes.
Template Description
After reception of a response pending frame the P2 timeout counter is reloaded with the timeout time P2max.
M2 Parameter
SystemTemplate::TransportProtocols::LinTpConnection.p2Max

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00004

BSW Module	**BSW Context**
LinTp	LinTp/LinTpGlobalConfig/LinTpChannelConfig

BSW Parameter	**BSW Type**
LinTpP2Timing	EcucFloatParamDef

BSW Description
Definition of the P2max timeout observation parameter in seconds. Only used for LIN Master nodes, ignored for slave nodes.
Template Description
P2 timeout observation parameter.
M2 Parameter
SystemTemplate::TransportProtocols::LinTpConnection.p2Timing

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00010

BSW Module	**BSW Context**
LinTp	LinTp/LinTpGlobalConfig/LinTpChannelConfig

BSW Parameter	**BSW Type**
LinTpScheduleChangeDiag	EcucBooleanParamDef

BSW Description
Enables or disables the call of BswM_LinTp_RequestMode() to diagnostic request/response schedule. false: BswM is not called true: BswM is called Only used for LIN Master nodes, ignored for slave nodes.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig
BSW Parameter	**BSW Type**
LinTpMaxRxNSduCnt	EcucIntegerParamDef
BSW Description	
Maximum number of NSdus. This parameter is needed only in case of post-build loadable implementation using static memory allocation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig
BSW Parameter	**BSW Type**
LinTpMaxTxNSduCnt	EcucIntegerParamDef
BSW Description	
Maximum number of NSdus. This parameter is needed only in case of post-build loadable implementation using static memory allocation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig
BSW Parameter	**BSW Type**
LinTpRxNSdu	EcucParamConfContainerDef
BSW Description	
This container exists once for each received N-SDU on any channel the node is connected to. This N-SDU produces meta data items of type LIN_NAD_8.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::LinTpConnection.linTpNSdu	
Mapping Rule	**Mapping Type**
Create container for each NSdu that is received by the regarded ECU.	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00005

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig/LinTpRxNSdu

BSW Parameter	BSW Type
LinTpNcr	EcucFloatParamDef
BSW Description	
Value in seconds of the N_Cr timeout. N_Cr is the time until reception of the next Consecutive Frame N_PDU.	
Template Description	
This attribute defines the timeout value for waiting for a CF or FF-x (in case of retry) after receiving the last CF or after sending an FC or AF on the receiver side. Specified in seconds.	
M2 Parameter	
SystemTemplate::TransportProtocols::LinTpConnection.timeoutCr	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00008

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig/LinTpRxNSdu
BSW Parameter	**BSW Type**
LinTpRxNSduChannelRef	EcucReferenceDef
BSW Description	
Index of the channel this N-SDU belongs to.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig/LinTpRxNSdu
BSW Parameter	**BSW Type**
LinTpRxNSduId	EcucIntegerParamDef
BSW Description	
The identifier of the Transport Protocol message. This ID will be used by upper layers to call LinTp_ChangeParameter.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig/LinTpRxNSdu
BSW Parameter	**BSW Type**
LinTpRxNSduNad	EcucIntegerParamDef

BSW Description	
A N-SDU transported on LIN is identified using the NAD for the specific slave.	
Template Description	
To distinguish LIN slaves that are used twice or more within the same cluster.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Lin::LinTopology::LinSlave.configuredNad	
Mapping Rule	**Mapping Type**
Find connection from NSdu to CommunicationController	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00006

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig/LinTpRxNSdu
BSW Parameter	**BSW Type**
LinTpRxNSduPduRef	EcucReferenceDef
BSW Description	
Reference to the global PDU	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig
BSW Parameter	**BSW Type**
LinTpTxNSdu	EcucParamConfContainerDef
BSW Description	
This container exists once for each transmitted N-SDU on any channel the node is connected to. This N-SDU consumes meta data items of type LIN_NAD_8.	
Template Description	
M2 Parameter	
SystemTemplate::TransportProtocols::LinTpConnection.linTpNSdu	
Mapping Rule	**Mapping Type**
Create container for each NSdu that is received by the regarded ECU.	full
Mapping Status	**Mapping ID**
valid	up_LinTp_00011

BSW Module	BSW Context
LinTp	LinTp/LinTpGlobalConfig/LinTpTxNSdu
BSW Parameter	**BSW Type**
LinTpMaxBufReq	EcucIntegerParamDef
BSW Description	
This parameter defines the maximum number of times the LinTp should request upper layer for the Tx Buffer. It is also used to limit the number of retries for PduR_LinTpCopyTxData when no timer is active.	

Template Description	
M2 Parameter

BSW Parameter	**BSW Type**

ETH_E_ACCESS	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "Controller access failed" has occured.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs
BSW Parameter	**BSW Type**
ETH_E_ALIGNMENT	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "Alignment Error" has occured.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs
BSW Parameter	**BSW Type**
ETH_E_CRC	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "CRC Failure" has occured.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs
BSW Parameter	**BSW Type**
ETH_E_LATECOLLISION	EcucReferenceDef
BSW Description	

Reference to the DemEventParameter which shall be issued when the error "Late Collisions" has occured.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs
BSW Parameter	**BSW Type**
ETH_E_MULTIPLECOLLISION	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "Multiple Collisions" has occured.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs
BSW Parameter	**BSW Type**
ETH_E_OVERSIZEFRAME	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "Oversized Frame" has occured.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs
BSW Parameter	**BSW Type**
ETH_E_RX_FRAMES_LOST	EcucReferenceDef
BSW Description	
Reference to the DemEventParameter which shall be issued when the error "receive frames lost" has occured.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs	
BSW Parameter		**BSW Type**
ETH_E_SINGLECOLLISION		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when the error "Single Collisions" has occured.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Eth	Eth/EthConfigSet/EthCtrlConfig/EthDemEventParameterRefs	
BSW Parameter		**BSW Type**
ETH_E_UNDERSIZEFRAME		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when the error "Undersized Frame" has occured.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Eth	Eth	
BSW Parameter		**BSW Type**
EthGeneral		EcucParamConfContainerDef
BSW Description		
General configuration of Ethernet Driver module		
Template Description		
M2 Parameter		

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthCtrlOffloading	EcucParamConfContainerDef
BSW Description	
Configuration of hardware offloading features.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral/EthCtrlOffloading
BSW Parameter	**BSW Type**
EthCtrlEnableOffloadChecksumICMP	EcucBooleanParamDef
BSW Description	
Enables / Disables hardware offloading for ICMP checksums.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral/EthCtrlOffloading
BSW Parameter	**BSW Type**
EthCtrlEnableOffloadChecksumIPv4	EcucBooleanParamDef
BSW Description	
Enables / Disables hardware offloading for IPv4 checksums.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
Eth	Eth/EthGeneral/EthCtrlOffloading	
BSW Parameter		**BSW Type**
EthCtrlEnableOffloadChecksumTCP		EcucBooleanParamDef
BSW Description		
Enables / Disables hardware offloading for TCP checksums.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Eth	Eth/EthGeneral/EthCtrlOffloading	
BSW Parameter		**BSW Type**
EthCtrlEnableOffloadChecksumUDP		EcucBooleanParamDef
BSW Description		
Enables / Disables hardware offloading for UDP checksums.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Eth	Eth/EthGeneral	
BSW Parameter		**BSW Type**
EthDevErrorDetect		EcucBooleanParamDef
BSW Description		
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Eth	Eth/EthGeneral	
BSW Parameter		**BSW Type**

EthEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps the Ethernet driver to zero or multiple ECUC partitions to make the modules API available in this partition. The Ethernet driver will operate as an independent instance in each of the partitions.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthGetDropCountApi	EcucBooleanParamDef
BSW Description	
Enables / Disables Eth_GetCounterValues API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthGetEtherStatsApi	EcucBooleanParamDef
BSW Description	
Enables / Disables Eth_GetEtherStats API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthGetTxErrorCounterValuesApi	EcucBooleanParamDef
BSW Description	
Enables/Disables Eth_GetTxErrorCounterValues API.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthGetTxStatsApi	EcucBooleanParamDef
BSW Description	
Enables/Disables Eth_GetTxStats API.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthGlobalTimeSupport	EcucBooleanParamDef
BSW Description	
Enables/Disables the GlobalTime APIs used amongst others by Global Time Synchronization over Ethernet.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthIndex	EcucIntegerParamDef
BSW Description	
Specifies the InstanceId of this module instance. If only one instance is present it shall have the Id 0.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Specifies the period of main function Eth_MainFunction in seconds. Ethernet driver does not require this information but the BSW scheduler.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthMaxCtrlsSupported	EcucIntegerParamDef
BSW Description	
Limits the total number of supported controllers.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Eth	Eth/EthGeneral
BSW Parameter	**BSW Type**
EthVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables / Disables version info API	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

C.6.2 Ethernet Interface Mapping

BSW Module	BSW Context	
EthIf	EthIf	
BSW Parameter		**BSW Type**
EthIfConfigSet		EcucParamConfContainerDef
BSW Description		
Collecting container for all parameters with post-build configuration classes.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfConfigSet	
BSW Parameter		**BSW Type**
EthIfController		EcucParamConfContainerDef
BSW Description		
This container contains the configuration of EthIfController.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfConfigSet/EthIfController	
BSW Parameter		**BSW Type**
EthIfCtrlIdx		EcucIntegerParamDef
BSW Description		
This parameter provides a zero-based consecutive index of the Ethernet Communication Controllers. Upper layer BSW modules and the EthIf itself use this index to identify a Ethernet CC.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfController

BSW Parameter	BSW Type
EthIfCtrlMtu	EcucIntegerParamDef
BSW Description	
Specifies the maximum transmission unit (MTU) of the EthIfCtrl in [bytes]. Note: In case a VLAN tag is used for the EthIfCtrl, the frame length of the Ethernet frame will increase by 4 bytes.	
Template Description	
This attribute specifies the maximum transmission unit in bytes.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.maximumTransmissionUnit	
Mapping Rule	**Mapping Type**
Different MTU values may be defined for different VLANs. Therefore the maximumTransmissionUnit is specified in the EthernetCommunicationConnector. The value that is defined in the CommunicationConnector shall be used as the value of this parameter.	full
Mapping Status	**Mapping ID**
valid	up_EthIf_00001

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfController
BSW Parameter	**BSW Type**
EthIfEthTrcvRef	EcucReferenceDef
BSW Description	
Reference to an Ethernet transceiver, which is handled by the Ethernet Interface.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfController
BSW Parameter	**BSW Type**
EthIfMaxTxBufsTotal	EcucIntegerParamDef
BSW Description	
Limits the total number of transmit buffers.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfController
BSW Parameter	**BSW Type**
EthIfPhysControllerRef	EcucReferenceDef
BSW Description	
Reference to a physical Ethernet controller, which is handled by the Ethernet Interface.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfController
BSW Parameter	**BSW Type**
EthIfSwitchRefOrPortGroupRef	EcucChoiceReferenceDef
BSW Description	
The choice reference allows to configure either the EthIfController references an EthIfSwitch or an EthIfSwitchPortGroup. Reference to a EthIfSwitchPortGroup. In case port groups are controlled by PNC EthIfSwitchPortGroupRefSemantics shall have the value ETHIF_SWITCH_PORT_GROUP_LINK_INFO. In case port groups are controlled by the EhtIfController EthIfSwitchPortGroupRefSemantics shall have the value ETHIF_SWITCH_PORT_GROUP_CONTROL.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfController
BSW Parameter	**BSW Type**
EthIfVlanId	EcucIntegerParamDef
BSW Description	
A virtual-LAN is identified by this attribute according to IEEE 802.1Q.	
Template Description	
A VLAN is identified by this attribute according to IEEE 802.1Q. The allowed values range is from 0..4095.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanConfig.vlanIdentifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthIf_00002

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet
BSW Parameter	**BSW Type**
EthIfFrameOwnerConfig	EcucParamConfContainerDef
BSW Description	
Configuration of Ethernet frame owner	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfFrameOwnerConfig
BSW Parameter	**BSW Type**
EthIfFrameType	EcucIntegerParamDef
BSW Description	
Selects the Ethernet frame type.	
Template Description	
Ethernet specific attributes to the Frame.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::AbstractEthernetFrame	
Mapping Rule	**Mapping Type**
If an AbstractEthernetFrame is defined in the System Extract then it may be possible to derive this parameter from this information.	partial
Mapping Status	**Mapping ID**
valid	up_EthIf_00003

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfFrameOwnerConfig
BSW Parameter	**BSW Type**
EthIfOwner	EcucIntegerParamDef
BSW Description	
Selects the owner of an Ethernet frame type. The owner is a zero based index into the callback function configuration 'EthIfRxIndicationConfig'. I.e. an Ethernet frame of type IPv4 (0x800) at index 0 will call the first callback function configured in 'EthIfRxIndicationConfig'.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet

BSW Parameter	BSW Type
EthIfPhysController	EcucParamConfContainerDef
BSW Description	
This container contains the configuration of EthIfPhysController. The usage of EthIfEthCtrlRef and EthIfWEthCtrlRef is exclusive OR.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfPhysController
BSW Parameter	**BSW Type**
EthIfEthCtrlRef	EcucReferenceDef
BSW Description	
Reference to a physical Ethernet controller, which is handled by a specific Ethernet controller driver.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfPhysController
BSW Parameter	**BSW Type**
EthIfPhysControllerIdx	EcucIntegerParamDef
BSW Description	
This parameter provides a zero-based consecutive index of the physical Ethernet controllers. Upper layer BSW modules and the Ethernet Interface itself use this index to identify a physical Ethernet controller.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfConfigSet/EthIfPhysController
BSW Parameter	**BSW Type**

EthIfPhysCtrlRxMainFunctionPriorityProcessing	EcucParamConfContainerDef
BSW Description	
Configuration of ingress FIFO based main function processing.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfPhysController/EthIfPhysCtrlRxMainFunctionPriority Processing
BSW Parameter	**BSW Type**
EthIfPhysCtrlRxIndicationIterations	EcucIntegerParamDef
BSW Description	
Max number of Ethernet frames polled per main function invocation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfPhysController/EthIfPhysCtrlRxMainFunctionPriority Processing
BSW Parameter	**BSW Type**
EthIfPhysCtrlRxIngressFifoRef	EcucReferenceDef
BSW Description	
Reference to the reception FIFO.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfPhysController/EthIfPhysCtrlRxMainFunctionPriority Processing
BSW Parameter	**BSW Type**
EthIfPhysCtrlRxMainFunctionPeriod	EcucFloatParamDef
BSW Description	

Specifies the period of main function in seconds.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfPhysController
BSW Parameter	**BSW Type**
EthIfWEthCtrlRef	EcucReferenceDef
BSW Description	
Reference to a physical Wireless Ethernet controller, which is handled by a specific Wireless Ethernet controller driver.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet
BSW Parameter	**BSW Type**
EthIfRxIndicationConfig	EcucParamConfContainerDef
BSW Description	
Configuration of receive callback functions.	
Template Description

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfRxIndicationConfig
BSW Parameter	**BSW Type**
EthIfRxIndicationFunction	EcucFunctionNameDef
BSW Description	
Specifies receive indication callback function.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet
BSW Parameter	**BSW Type**
EthIfSwitch	EcucParamConfContainerDef
BSW Description	
This container contains the configuration of EthIfSwitches.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfSwitch
BSW Parameter	**BSW Type**
EthIfSwitchIdx	EcucIntegerParamDef
BSW Description	
This parameter provides a zero-based consecutive index of the Ethernet Interface Switches. Upper layer BSW modules and the EthIf itself use this index to identify a Ethernet Switch.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfSwitch
BSW Parameter	**BSW Type**
EthIfSwitchRef	EcucReferenceDef
BSW Description	
Reference to a Ethernet Switch, which is handled by a specific Ethernet Switch driver.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
EthIf	EthIf/EthIfConfigSet	
BSW Parameter		**BSW Type**
EthIfSwitchMgmtInfoIndicationConfig		EcucParamConfContainerDef
BSW Description		
Configuration of Switch Management callback function.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfConfigSet/EthIfSwitchMgmtInfoIndicationConfig	
BSW Parameter		**BSW Type**
EthIfSwitchMgmtInfoIndicationFunction		EcucFunctionNameDef
BSW Description		
Enables/Disables the ingress Switch management info indication redirected call to upper layers who registered for the call.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfConfigSet	
BSW Parameter		**BSW Type**
EthIfSwitchPortGroup		EcucParamConfContainerDef
BSW Description		
This container contains the configuration of EthIfSwitchPortGroups. If EthIfSwitchPortGroups are controlled by PNC one EthIfSwitchPortGroup per PNC shall exist. The host port shall be part of all EthIfSwitchPortGroups. The up link port of a master switch and the up link port of the slave switch shall be part of all EthIfSwitchPortGroups that contain EthSwtPorts belonging to the slave switch.		
Template Description		

EcuInstance.ethSwitchPortGroupDerivation: Defines whether the derivation of SwitchPortGroups based on VLAN and/or CouplingPort.pncMapping shall be performed for this EcuInstance. If not defined the derivation shall not be done. **CouplingPort.pncMapping**: Reference to the partial networks this CouplingPort participates in.
M2 Parameter
SystemTemplate::Fibex::FibexCore::CoreTopology::EcuInstance.ethSwitchPortGroupDerivation, SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort.pncMapping

Mapping Rule	**Mapping Type**
Derive EthIfSwitchPortGroup from M2 according to the following requirements only if EcuInstance.ethSwitchPortGroupDerivation is defined and set to TRUE: * For each EthernetPhysicalChannel that has CouplingPorts connected (CouplingPort has a VlanMembership refering to the EthernetPhysicalChannel) exactly one EthIfSwitchPortGroup shall be derived containing all connected CouplingPorts via the EthIfPortRef. Thus a EthSwtPort may be part in several EthIfSwitchPortGroups. * For each PNC that is referenced by at least one CouplingPort exactly one EthIfSwitchPortGroup shall be derived. The referenced CouplingPort shall be part of the EthIfSwitchPortGroup via the EthIfPortRef. Thus a EthSwtPort may be part in several EthIfSwitchPortGroups. * If the CouplingPorts have no reference to any PNC or all referenced PNCs have no relation to this EthernetPhysicalChannel then the derived EthIfSwitchPortGroupRefSemantics shall have the value ETHIF_SWITCH_PORT_GROUP_CONTROL, because this EthIfSwitchPortGroup is switched by EthSM. * If the CouplingPorts have at least one reference to any PNC that has a relation to this EthernetPhysicalChannel then the derived EthIfSwitchPortGroupRefSemantics shall have the value ETHIF_SWITCH_PORT_GROUP_LINK_INFO, because this EthIfSwitchPortGroup is only used for link status accumulation towards EthSM.	full

EthIfTrcvLinkStateChgFunction	EcucFunctionNameDef
BSW Description	
Specifies link state change callback function	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet
BSW Parameter	**BSW Type**
EthIfTxConfirmationConfig	EcucParamConfContainerDef
BSW Description	
Configuration of transmit indication callback functions.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfConfigSet/EthIfTxConfirmationConfig
BSW Parameter	**BSW Type**
EthIfTxConfirmationFunction	EcucFunctionNameDef
BSW Description	
Specifies transmit indication callback function	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf
BSW Parameter	**BSW Type**
EthIfGeneral	EcucParamConfContainerDef
BSW Description	
This container contains the general configuration parameters of the Ethernet Interface.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfEnableRxInterrupt	EcucBooleanParamDef
BSW Description	
Enables / Disables receive interrupt.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**

EthIfEnableSignalQualityApi	EcucBooleanParamDef
BSW Description	
Enable/disable the APIs read and clear the signal quality.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfEnableTxInterrupt	EcucBooleanParamDef
BSW Description	
Enables / Disables the transmit interrupt.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfEnableWEthApi	EcucBooleanParamDef
BSW Description	
Enables / Disables API's for WEth / WEthTrcv	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfGetAndResetMeasurementDataApi	EcucBooleanParamDef
BSW Description	
Enables / Disables the Get and Reset Measurement Data API	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfGetBaudRate		EcucBooleanParamDef
BSW Description		
Enables / Disables GetBaudRate API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfGetCounterState		EcucBooleanParamDef
BSW Description		
Enables / Disables GetCounterState API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfGetCtrlIdxList		EcucBooleanParamDef
BSW Description		
Enables / Disables GetCtrlIdxList API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**

valid	

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfGetTransceiverWakeupModeApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthIf_GetTransceiverWakeupMode API		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfGetVlanIdSupport		EcucBooleanParamDef
BSW Description		
Enables / Disables GetVlanId API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfGlobalTimeSupport		EcucBooleanParamDef
BSW Description		
Enables/Disables the Global Time APIs used amongst others by Global Time Synchronization over Ethernet.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context

EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfMainFunctionPeriod		EcucFloatParamDef
BSW Description		
Specifies the period of main function EthIf_MainFunctionRx and EthIf_MainFunctionTx in seconds. Ethernet Interface does not require this information but the BSW scheduler.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfMainFunctionStatePeriod		EcucFloatParamDef
BSW Description		
Specifies the period of main function EthIf_MainFunctionState in seconds. Ethernet Interface does not require this information but the BSW scheduler.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfMaxTrcvsTotal		EcucIntegerParamDef
BSW Description		
Limits the total number of transceivers.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfPortStartupActiveTime		EcucFloatParamDef

BSW Description
Denote the time delay after the mode "ETHTRCV_MODE_ACTIVE" of all EthIfSwitchPorts are requested via EthIf_StartAllPorts. This is only used for ports in EthIfSwtPortGroups which are not referenced by any EthIfController.
Template Description
M2 Parameter

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfGeneral

BSW Parameter	BSW Type
EthIfPublicCddHeaderFile	EcucStringParamDef

BSW Description
Defines header files for callback functions which shall be included in case of CDDs. Range of characters is 1.. 32.
Template Description
M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfGeneral

BSW Parameter	BSW Type
EthIfRxIndicationIterations	EcucIntegerParamDef

BSW Description
Maximum number of Ethernet frames per Ethernet controller polled from the Ethernet driver within EthIf_MainFunctionRx.
Template Description
M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthIf	EthIf/EthIfGeneral

BSW Parameter	BSW Type

EthIfSetForwardingModeApi	EcucBooleanParamDef
BSW Description	
Enables /disables EthIf_SetForwardingMode API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfSignalQualityCheckPeriod	EcucFloatParamDef
BSW Description	
Specifies the period in units of seconds in which the signal quality it polled in the context of EthIf_MainfunctionState. The value shall be an integral multiple of EthIfMainFunctionStatePeriod.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfStartAutoNegotiation	EcucBooleanParamDef
BSW Description	
Enables / Disables StartAutoNegotiation API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfSwitchManagementSupport	EcucBooleanParamDef
BSW Description	
Enables/Disables the Switch management APIs to support a Switch-port specific communication attribute access.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfSwitchOffPortTimeDelay		EcucFloatParamDef
BSW Description		
Denote the time delay after the mode "ETHTRCV_MODE_DOWN" of a EthIfSwitchPortGroup will be executed. This is only used for EthIfSwtPortGroups which are not referenced by any EthIfController. The time delay shall be greater than the UdpNm timings, because UdpNm shall finish its shutdown handling. (Repeat Message State, Prepare Bus-Sleep state, Bus-Sleep state).		
Template Description		
Switch off delay for CouplingPorts in seconds. It denotes the delay of switching off couplingPorts after the request to switch off a couplingPort was issued. (e.g. switch off of Ethernet switch ports).		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCluster.couplingPortSwitchoff Delay		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_EthIf_00005

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**
EthIfTrcvLinkStateChgMainReload		EcucIntegerParamDef
BSW Description		
Specifies the frequency of transceiver link state change checks in each period of main function EthIf_MainFunctionTx.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthIf	EthIf/EthIfGeneral	
BSW Parameter		**BSW Type**

EthIfVerifyConfigApi	EcucBooleanParamDef
BSW Description	
Enables /disables EthIf_VerifyConfig API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables / Disables version info API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfVersionInfoApiMacro	EcucBooleanParamDef
BSW Description	
Enables / Disables version info API macro implementation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthIf	EthIf/EthIfGeneral
BSW Parameter	**BSW Type**
EthIfWakeUpSupport	EcucBooleanParamDef
BSW Description	
Configures if wakeup is supported or not.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

C.6.3 Ethernet Switch Driver Mapping

BSW Module	BSW Context	
EthSwt	EthSwt	
BSW Parameter		**BSW Type**
EthSwtConfig		EcucParamConfContainerDef
BSW Description		
Configuration of one Ethernet Switch.		
Template Description		
A CouplingElement is used to connect EcuInstances to the VLAN of an EthernetCluster. CouplingElements can reach from a simple hub to a complex managed switch or even devices with functionalities in higher layers. A CouplingElement that is not related to an EcuInstance occurs as a dedicated single device.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingElement		
Mapping Rule		**Mapping Type**
For each CouplingElement with couplingType=switch one EthSwtConfig shall be created.		full
Mapping Status		**Mapping ID**
valid		up_EthSwt_00001

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig	
BSW Parameter		**BSW Type**
EthSwtArlTableEntryTimeout		EcucFloatParamDef
BSW Description		
If present, this parameter specifies the timeout in seconds for removing unused entries from the ARL table of the Ethernet switch. Otherwise, entries are not removed automatically.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig	
BSW Parameter		**BSW Type**
EthSwtClockSynchronizationSupport		EcucBooleanParamDef
BSW Description		

This parameter defines, if a Ethernet switch shall enable clock synchronization with another Ethernet switch to which it is connected via uplink port. If this parameter is set to TRUE the clock synchronization between connected Ethernet switches is activated and the clocks of the Ethernet switches are synchronized. If this parameter is set to FALSE the clock synchronization between connected Ethernet switches is deactivated. This parameter shall only be set to TRUE if the Ethernet switch hardware supports clock synchronization.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig

BSW Parameter	**BSW Type**
EthSwtConfigEcucPartitionRef	EcucReferenceDef

BSW Description
Maps the configuration of one single Ethernet switch to zero or one ECUC partitions. The ECUC partition referenced is a subset of the ECUC partitions where the Ethernet switch driver is mapped to.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig

BSW Parameter	**BSW Type**
EthSwtDemEventParameterRefs	EcucParamConfContainerDef

BSW Description
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtDemEventParameterRefs	
BSW Parameter		**BSW Type**
ETHSWT_E_ACCESS		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when the error "Ethernet Switch Access Failure" has occurred.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtDemEventParameterRefs	
BSW Parameter		**BSW Type**
ETHSWT_E_SYNCPORT2PHY		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when the error "Ethernet switch port and the referenced Ethernet transceiver are in contradicting modes" has occurred.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig	
BSW Parameter		**BSW Type**
EthSwtDropDoubleTagged		EcucBooleanParamDef
BSW Description		
This parameter defines if a switch shall drop double tagged (Q in Q) frames. If this parameter is set to TRUE double tagged frames are dropped at all ports. If this parameter is set to FALSE, then double tagged frames are forwarded. If double tagging is used as a feature, this parameter must be set to FALSE. This parameter shall only be set to TRUE when Switch-HW supports the filtering of double tagged frames as filtering by SW is NOT possible!		
Template Description		
M2 Parameter		

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig
BSW Parameter	**BSW Type**
EthSwtIdx	EcucIntegerParamDef
BSW Description	
Specifies the instance ID of the configured Ethernet Switch.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig
BSW Parameter	**BSW Type**
EthSwtManagementEthCtrlRef	EcucReferenceDef
BSW Description	
Reference to the Ethernet controller connected to the management port where the management frames will be transmitted/received.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig
BSW Parameter	**BSW Type**
EthSwtManagementPortRef	EcucReferenceDef
BSW Description	
Reference to the port where the management CPU is connected to.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig	
BSW Parameter		**BSW Type**
EthSwtNvm		EcucParamConfContainerDef
BSW Description		
Configuration of one Ethernet Switch Nvm usage in case the module requires non volatile memory in the Ecu to store switch configuration.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtNvm	
BSW Parameter		**BSW Type**
EthSwtConfigurationNvmBlockDescriptorRef		EcucReferenceDef
BSW Description		
Reference to the Nvm block description in the Nvm module configuration to store e.g. the port mirror configurations		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtNvm	
BSW Parameter		**BSW Type**
EthSwtTableNvmBlockDescriptorRef		EcucReferenceDef
BSW Description		
Reference to the Nvm block description in the Nvm module configuration to store e.g. the learned ARL table		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig
BSW Parameter	**BSW Type**
EthSwtPort	EcucParamConfContainerDef
BSW Description	
Configuration of one Ethernet Switch Port.	
Template Description	
A CouplingPort is used to connect a CouplingElement with an EcuInstance or two CouplingElements with each other via a CouplingPortConnection. Optionally, the CouplingPort may also have a reference to a macMulticastGroup and a defaultVLAN.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort	
Mapping Rule	**Mapping Type**
For each CouplingElement.couplingPort of a CouplingElement with couplingType=switch one EthSwtPort shall be created.	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00002

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort

BSW Parameter	**BSW Type**
EthSwtPortSchedulerPredecessorOrder	EcucIntegerParamDef
BSW Description	
Defines the order of the scheduler predecessors. This value has to be understood as a relative value, i.e. the value shows only the relative ordering of the elements. The highest value has the highest priority and gaps are allowed (not dense based). The values need to be unique within one EthSwtPortScheduler.	
Template Description	
Ordered List of predecessor inputs. The first element has the highest priority. The following elements have decreasing priorities.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortScheduler.predecessor	
Mapping Rule	**Mapping Type**
Defined by the order of CouplingPortScheduler.predecessor.	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00025

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortEgress
BSW Parameter	**BSW Type**
EthSwtPortShaper	EcucParamConfContainerDef

BSW Description	
Represents a Shaper in the egress port.	
Template Description	
Defines a shaper for the CouplingPort egress structure.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortShaper	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00014

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortEgress/EthSwtPortShaper
BSW Parameter	**BSW Type**
EthSwtPortEgressPredecessorFifoRef	EcucReferenceDef
BSW Description	
Reference to the fifo which is the predecessor for this shaper.	
Template Description	
Defines the CouplingPortFifo which provides the input to this shaper.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortShaper.predecessorFifo	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00016

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortEgress/EthSwtPortShaper
BSW Parameter	**BSW Type**
EthSwtPortShaperIdleSlope	EcucIntegerParamDef
BSW Description	
Defines the increase of credit in bits per second for the AVB shaper.	
Template Description	
Defines the increase of credit in bits per second for the AVB shaper.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortShaper.idleSlope	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00015

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort
BSW Parameter	**BSW Type**
EthSwtPortIdx	EcucIntegerParamDef
BSW Description	
Specifies the instance ID of the configured Ethernet Switch Port.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig/EthSwtPort
BSW Parameter	**BSW Type**
EthSwtPortIngress	EcucParamConfContainerDef
BSW Description	
Configuration of one Ethernet Switch Port ingress behavior.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress
BSW Parameter	**BSW Type**
EthSwtPortIngressDefaultPriority	EcucIntegerParamDef
BSW Description	
Default priority for ingress.	
Template Description	
Standard output-priority outgoing Frames will be tagged with. Defines the priority that received frames are assigned together with the VLAN Id (default-Vlan). The values from 0 (best effort) to 7 (highest) are allowed. In case modifyVlan and an already tagged received frame, the actual priority of the received frame is not modified.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanMembership.defaultPriority	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00060

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress
BSW Parameter	**BSW Type**
EthSwtPortIngressDefaultVlan	EcucIntegerParamDef
BSW Description	
Default VLAN for ingress.	
Template Description	

M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort.defaultVlan	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00059

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress
BSW Parameter	**BSW Type**
EthSwtPortIngressDropUntagged	EcucBooleanParamDef
BSW Description	
Defines the ingress behavior for untagged frames.	
Template Description	
Defines the handling of frames at the ingress port.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort.receiveActivity	
Mapping Rule	**Mapping Type**
If CouplingPort.receiveActivity is set to "dropUntagged" then EthSwtPortIngress DropUntagged shall be set to true. If CouplingPort.receiveActivity is set to something different than "dropUntagged" then EthSwtPortIngressDropUntagged shall be set to false.	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00058

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress
BSW Parameter	**BSW Type**
EthSwtPortIngressVlanModification	EcucIntegerParamDef
BSW Description	
If this parameter is defined all messages which arrive at this ingress port will be tagged with this VLAN Id. This tagging happen also if the arriving message already has a VLAN Id, it will be overwritten by the defined one. If this parameter is not defined no changes to the VLAN Id shall happen at this ingress port.	
Template Description	
All incoming messages at this CouplingPort shall be tagged with this VLAN Id. This tagging is performed regardless whether the message already has a VLAN tag or is untagged, an existing VLAN tag will be overwritten. This feature is XOR with CoupligPort.defaultVlan.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort.vlanModifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00004

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress

BSW Parameter	BSW Type
EthSwtPortPolicer	EcucParamConfContainerDef
BSW Description	
Definition of Rate Policing parameters.	
Template Description	
Defines a rate policy on a CouplingPort.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicy	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00050

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPortPolicer
BSW Parameter	**BSW Type**
EthSwtPortRatePolicedByteCount	EcucIntegerParamDef
BSW Description	
Amount of Byte Counts (excluding Header information) which can be received in a configured EthSwtPortRatePolicedTimeInterval.	
Template Description	
Amount of data in bytes (excluding header information) that can be received to define the rate policy.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicy.dataLength	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00051

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPortPolicer
BSW Parameter	**BSW Type**
EthSwtPortRatePolicedPriority	EcucIntegerParamDef
BSW Description	
Defines the priority which this rate policy shall be limited on. If no priority is given this rate policy is not considering priority.	
Template Description	
Defines the priority which this rate policy shall be limited on. If no priority is given this rate policy is not considering priority.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicy.priority	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00053

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPortPolicer
BSW Parameter	**BSW Type**
EthSwtPortRatePolicedTimeInterval	EcucFloatParamDef

BSW Description	
Time interval in seconds where a configured EthSwtPortRatePolicedByteCount can be received without a rate limitation.	
Template Description	
Time interval used to define the base of the rate policy.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicy.timeInterval	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00052

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPortPolicer
BSW Parameter	**BSW Type**
EthSwtPortRateViolationAction	EcucEnumerationParamDef
BSW Description	
Action to be taken when the rate policy criteria defined for this EthSwtPortPolicer are met.	
Template Description	
Defines the action to be performed when this rate policy is violated.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicy.policyAction	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00054

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPortPolicer/EthSwtPortRateViolationAction
BSW Parameter	**BSW Type**
BLOCK_SOURCE	EcucEnumerationLiteralDef
BSW Description	
All incoming traffic from the violating Source based on the MAC-Address is blocked.	
Template Description	
If the rate policy is violated the CouplingPort this CouplingPortRatePolicy is defined on shall block all frames from the MAC-Address the violation was caused by.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicyActionEnum.blockSource	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00055

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPortPolicer/EthSwtPortRateViolationAction
BSW Parameter	**BSW Type**
DROP_FRAME	EcucEnumerationLiteralDef

BSW Description	
The received frame which led to the violation of the rate policy is dropped.	
Template Description	
If the rate policy is violated the frame shall be dropped.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicyAction Enum.dropFrame	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00056

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPortPolicer
BSW Parameter	**BSW Type**
EthSwtPortRateVlanMembershipRef	EcucReferenceDef
BSW Description	
References the Vlans this rate policy shall apply to. If no EthSwtPortRateVlanMembershipRef is configured the rate policing applies only on the configured EthSwtPortRatePolicedPriority.	
Template Description	
Defines the VLANs this rate policy shall be limited on. If no VLAN is given this rate policy is not considering VLAN tags.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortRatePolicy.vLan	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00057

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress
BSW Parameter	**BSW Type**
EthSwtPortTrafficClassAssignment	EcucIntegerParamDef
BSW Description	
If this parameter is defined all arriving messages at this ingress port shall be assigned this traffic class. If this parameter is not defined no general port based traffic class assignment is done.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortDetails.ethernetTraffic ClassAssignment	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00005

EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress	
BSW Parameter		**BSW Type**
EthSwtPriorityRegeneration		EcucParamConfContainerDef
BSW Description		
Defines a priority regeneration where the EthSwtPriorityRegenerationIngressPriority is replaced by EthSwtPriorityRegenerationRegeneratedPriority. The EthSwtPriorityRegeneration is optional in case no priority regeneration shall be performed. In case a EthSwtPriorityRegeneration is defined it shall have 8 mappings, one for each priority.		
Template Description		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPortDetails.ethernetPriorityRegeneration		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_EthSwt_00009

BSW Module	**BSW Context**	
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortIngress/EthSwtPriorityRegeneration	
BSW Parameter		**BSW Type**
EthSwtPriorityRegenerationIngressPriority		EcucIntegerParamDef
BSW Description		
Message priority of the incoming message.		
Template Description		
Message priority of the incoming message. range: 0-7		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetPriorityRegeneration.ingressPriority		
Mapping Rule		**Mapping Type**
1:1 mapping		full

valid	up_EthSwt_00017

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortVlanMembership
BSW Parameter	**BSW Type**
EthSwtPortVlanForwardingType	EcucEnumerationParamDef
BSW Description	
Defines how the message with a specific VLAN Id shall be handled.	
Template Description	
Attribute denotes whether a VLAN tagged ethernet frame will be 1. sent with its VLAN tag (sentTagged) 2. sent without a VLAN tag (sentUntagged) 3. will be dropped at this port (notSent or VLAN not member of this list)	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanMembership.sendActivity	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00018

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortVlanMembership/EthSwtPortVlan ForwardingType
BSW Parameter	**BSW Type**
ETHSWT_NOT_SENT	EcucEnumerationLiteralDef
BSW Description	
The message with the specific VLAN Id shall not be sent at this port.	
Template Description	
will not be sent	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetSwitchVlanEgressTagging Enum.notSent	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**

valid	up_EthSwt_00035

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortVlanMembership/EthSwtPortVlanForwardingType	
BSW Parameter	**BSW Type**	
ETHSWT_SENT_TAGGED	EcucEnumerationLiteralDef	
BSW Description		
The message with the specific VLAN Id shall be sent with its VLAN Id at this port.		
Template Description		
sent with its VLAN tag		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetSwitchVlanEgressTaggingEnum.sentTagged		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_EthSwt_00037

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortVlanMembership/EthSwtPortVlanForwardingType	
BSW Parameter	**BSW Type**	
ETHSWT_SENT_UNTAGGED	EcucEnumerationLiteralDef	
BSW Description		
The message with the specific VLAN Id shall sent untagged.		
Template Description		
sent without a VLAN tag		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetSwitchVlanEgressTaggingEnum.sentUntagged		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_EthSwt_00036

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtPort/EthSwtPortVlanMembership	
BSW Parameter	**BSW Type**	
EthSwtPortVlanMembershipId	EcucIntegerParamDef	
BSW Description		
Determines the VID of the virtual network this port belongs to.		
Template Description		
A VLAN is identified by this attribute according to IEEE 802.1Q. The allowed values range is from 0..4095.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanConfig.vlanIdentifier		
Mapping Rule		**Mapping Type**

if a EthernetPhysicalChannel.vlan.vlanIdentifier is defined the value of vlanIdentifier shall be used for EthSwtPortVlanMembershipId. If no EthernetPhysicalChannel.vlan or EthernetPhysicalChannel.vlan.vlanIdentifier is defined then EthSwtPortVlanMembershipId shall be set to 0.	full
Mapping Status	**Mapping ID**
valid	up_EthSwt_00019

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig
BSW Parameter	**BSW Type**
EthSwtSpi	EcucParamConfContainerDef
BSW Description	
Configuration of one Ethernet Switch SPI access (if SPI is used).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig/EthSwtSpi
BSW Parameter	**BSW Type**
EthSwtSpiSequence	EcucParamConfContainerDef
BSW Description	
Container gives EthSwt driver information about one SPI sequence. One SPI sequence used by EthSwt driver is in exclusive use for it. No other driver is allowed to access this sequence. EthSwt driver may use one sequence to access n EthSwt hardware chips of the same type or n sequences are used to access one single EthSwt hardware chip. If a EthSwt hardware has no SPI interface, there is no instance of this container.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtConfig/EthSwtSpi/EthSwtSpiSequence
BSW Parameter	**BSW Type**
EthSwtSpiAccessSynchronous	EcucBooleanParamDef
BSW Description	
This parameter is used to define whether the access to the Spi sequence is synchronous or asynchronous. true: SPI access is synchronous. false: SPI access is asynchronous.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtConfig/EthSwtSpi/EthSwtSpiSequence	
BSW Parameter		**BSW Type**
EthSwtSpiSequenceName		EcucReferenceDef
BSW Description		
Reference to a Spi sequence configuration container.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt	
BSW Parameter		**BSW Type**
EthSwtGeneral		EcucParamConfContainerDef
BSW Description		
General configuration of Ethernet Switch Driver module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtDeletePortMirrorConfigurationApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_DeletePortMirrorConfiguration API		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps the Ethernet switch driver to zero or multiple ECUC partitions to make the modules API available in this partition. The Ethernet switch driver will operate as an independent instance in each of the partitions.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtEnableCableDiagnosticApi	EcucBooleanParamDef
BSW Description	
Enable/disable the APIs for cable diagnostic: EthSwt_RunPortCableDiagnostic, EthSwt_GetPortCableDiagnosticsResult	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtEnableVlanApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_EnableVLAN API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetArlTableApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetArlTable API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetBaudRateApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetBaudRate API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetCfgDataRawDone		EcucFunctionNameDef
BSW Description		
Defines the function name for <GetCfgDataRawDone>		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetCfgRaw		EcucBooleanParamDef
BSW Description		
Disable /Enable support of reading raw data from switch memory		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetCounterValuesApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_GetCounterValues API		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetDuplexModeApi		EcucBooleanParamDef
BSW Description		

Enables / Disables EthSwt_GetDuplexMode API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetLinkStateApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetLinkState API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetMacLearningModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetMacLearningMode API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetMaxFIFOBufferFillLevelApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetMaxFIFOBufferFillLevel API.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetPortCableDiagnosticsResultApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetPortCableDiagnosticsResult API	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetPortIdentifierApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetPortIdentifier API	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetPortMacAddrApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetPortMacAddr API.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetPortMirrorStateApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_GetPortMirrorState API		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetPortSignalQualityApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_GetPortSignalQuality API		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetRxStatsApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_GetRxStats API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtGetSwitchIdentifierApi		EcucBooleanParamDef
BSW Description		

Enables / Disables EthSwt_GetSwitchIdentifier API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetSwitchPortModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetSwitchPortMode API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetSwitchRegApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_GetSwitchReg API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetTxErrorCounterValuesApi	EcucBooleanParamDef
BSW Description	
Enables/Disables Eth_GetTxErrorCounterValues API.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGetTxStatsApi	EcucBooleanParamDef
BSW Description	
Enables/Disables Eth_GetTxStats API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtGlobalTimeSupportApi	EcucBooleanParamDef
BSW Description	
Enables/Disables the Global Time APIs used amongst others by Global Time Synchronization over Ethernet.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtIndex	EcucIntegerParamDef
BSW Description	
Specifies the InstanceId of this module instance. If only one instance is present it shall have the Id 0.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtLinkDownCallout		EcucFunctionNameDef
BSW Description		
Defines the function name for the <EthSwtLinkDownCallout> callout.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtLinkUpCallout		EcucFunctionNameDef
BSW Description		
Defines the function name for the <EthSwtLinkUpCallout> callout.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtLowPowerModeSupport		EcucBooleanParamDef
BSW Description		
Disable / Enable support of low power mode.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral

BSW Parameter	BSW Type
EthSwtMainFunctionPeriod	EcucFloatParamDef
BSW Description	
The cycle time of the periodic main function of EthSwt. Defined in seconds .	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtManagementSupportApi	EcucBooleanParamDef
BSW Description	
Enables/Disables the Switch management APIs to support a Switch-port specific communication attribute access.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtMgmtInfoIndicationTimeout	EcucFloatParamDef
BSW Description	
This parameter specifies the timeout while the Switch driver is waiting for management information out of the Switch for reception. The value 0 deactivates the timeout supervision. Unit: seconds	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtPersistentConfigurationResult		EcucBooleanParamDef
BSW Description		
Enables / Disables the callback API <User>_PersistentConfigurationResult.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtPersistentConfigurationResultUser		EcucFunctionNameDef
BSW Description		
Defines the <User> function name for the <User>_PersistentConfigurationResult callback.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtPublicCddHeaderFile		EcucStringParamDef
BSW Description		
Defines header files for callback functions which shall be included in case of CDDs.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtReadPortMirrorConfigurationApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_ReadPortMirrorConfiguration API		

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtReadTrcvRegisterApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_ReadTrcvRegister API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtResetConfigurationApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthSwt_ResetConfiguration API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSwt	EthSwt/EthSwtGeneral	
BSW Parameter		**BSW Type**
EthSwtSetForwardingModeApi		EcucBooleanParamDef
BSW Description		
Enables /disables EthSwt_SetForwardingMode API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**

Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtSetMacLearningModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_SetMacLearningMode API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtSetPortLoopbackModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_SetPortLoopbackModeApi API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtSetPortMirrorStateApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_SetPortMirrorState API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtSetPortTestModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_SetPortTestMode API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtSetPortTxModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_SetPortTxModeApi API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtSetSwitchPortModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_SetSwitchPortMode API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtSetSwitchRegApi	EcucBooleanParamDef
BSW Description	

Enables / Disables EthSwt_SetSwitchReg API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtStartSwitchPortAutoNegotiationApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_StartSwitchPortAutoNegotiation API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtStoreConfigurationApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_StoreConfiguration API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtVerifyConfigApi	EcucBooleanParamDef
BSW Description	
Enables /disables EthSwt_VerifyConfig API.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables / Disables version info API.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtWritePortMirrorConfigurationApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_WritePortMirrorConfiguration API	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSwt	EthSwt/EthSwtGeneral
BSW Parameter	**BSW Type**
EthSwtWriteTrcvRegisterApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthSwt_WriteTrcvRegister API.	
Template Description	
M2 Parameter

C.6.4 Service Discovery

BSW Module	BSW Context	
Sd	Sd	
BSW Parameter		**BSW Type**
SdConfig		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters and sub containers of the AUTOSAR Service Discovery module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Sd	Sd/SdConfig	
BSW Parameter		**BSW Type**
SdCapabilityRecordMatchCallout		EcucParamConfContainerDef
BSW Description		
Callout that is invoked by the Sd implementation to determine whether the configuration options contained in the entries of a received SD message match the capability record elements configured in SdServerCapabilityRecord or SdClientCapabilityRecord.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdCapabilityRecordMatchCallout	
BSW Parameter		**BSW Type**
SdCapabilityRecordMatchCalloutName		EcucFunctionNameDef
BSW Description		
Function name (i.e., C-identifier) of the SdCapabilityRecordMatchCallout.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
Sd	Sd/SdConfig
BSW Parameter	**BSW Type**
SdInstance	EcucParamConfContainerDef
BSW Description	
This container represents an instance of the SD; i.e. the SD configuration for a certain link.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance
BSW Parameter	**BSW Type**
SdClientService	EcucParamConfContainerDef
BSW Description	
This container specifies all parameters used by Client services.	
Template Description	
Service instances that are consumed by the ECU that is connected via the ApplicationEndpoint to a CommunicationConnector.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedServiceInstance	
Mapping Rule	**Mapping Type**
Create container for each existing ConsumedServiceInstance that is available in the Ecu Extract.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00012

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdClientCapabilityRecord	EcucParamConfContainerDef
BSW Description	
Sd uses capability records to store arbitrary name/value pairs conveying additional information about the named service. The following use cases are supported: 1) Key present, with no value (e.g. "passreq" -- password required for this service) 2) Key present, with empty value (e.g. "PlugIns=" server supports plugins, but none are presently installed) 3) Key present, with non-empty value (e.g. "PlugIns=JPEG,MPEG2,MPEG4")	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdClientConfig.capabilityRecord	
Mapping Rule	**Mapping Type**

1:1 mapping to ConsumedServiceInstance.sdClientConfig.capabilityRecord.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00023

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService/SdClientCapabilityRecord
BSW Parameter	**BSW Type**
SdClientServiceCapabilityRecordKey	EcucStringParamDef
BSW Description	
Defines a CapabilityRecord key.	
Template Description	
Defines a key.	
M2 Parameter	
GenericStructure::GeneralTemplateClasses::TagWithOptionalValue::TagWithOptionalValue.key	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00025

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService/SdClientCapabilityRecord
BSW Parameter	**BSW Type**
SdClientServiceCapabilityRecordValue	EcucStringParamDef
BSW Description	
Defines the corresponding CapabilityRecord value.	
Template Description	
Defines the corresponding value.	
M2 Parameter	
GenericStructure::GeneralTemplateClasses::TagWithOptionalValue::TagWithOptionalValue.value	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00024

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdClientCapabilityRecordMatchCalloutRef	EcucReferenceDef
BSW Description	
Reference to a SdCapabilityRecordMatchCallout, The referenced SdCapabilityRecordMatchCallout is invoked to determine whether the configuration options contained in the entries of a received SD message match the client's configured SdClientCapabilityRecord elements.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdClientService	
BSW Parameter		**BSW Type**
SdClientServiceAutoRequire		EcucBooleanParamDef
BSW Description		
If existing and set to true, this Service will be set to "required" on start.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdClientService	
BSW Parameter		**BSW Type**
SdClientServiceHandleId		EcucIntegerParamDef
BSW Description		
The HandleId by which the BswM can identify this Client Service Instance.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdClientService	
BSW Parameter		**BSW Type**
SdClientServiceId		EcucIntegerParamDef
BSW Description		
Id to identify the service. This is unique for the service interface.		
Template Description		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedServiceInstance.provided ServiceInstance		
Mapping Rule		**Mapping Type**
Shall be derived from the ConsumedServiceInstance.providedServiceInstance reference (serviceIdentifier attribute).		full
Mapping Status		**Mapping ID**
valid		up_Sd_00030

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdClientService	
BSW Parameter		**BSW Type**

SdClientServiceInstanceId	EcucIntegerParamDef
BSW Description	
Configuration parameter to specify Instance Id of the service as used in SD entries.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedServiceInstance.provided ServiceInstance	
Mapping Rule	**Mapping Type**
Shall be derived from the ConsumedServiceInstance.providedServiceInstance reference (InstanceIdentifier attribute).	full
Mapping Status	**Mapping ID**
valid	up_Sd_00013

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdClientServiceMajorVersion	EcucIntegerParamDef
BSW Description	
Major version number of the Service as used in the SD entries.	
Template Description	
Major version number of the Service.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdClientConfig.clientServiceMajor Version	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00014

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdClientServiceMinorVersion	EcucIntegerParamDef
BSW Description	
Minor version number of the Service as used in the SD Service Entries. If configured to 0xffffffff (any), SD will accept all Minor Versions.	
Template Description	
Minor version number of the Service.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdClientConfig.clientServiceMinor Version	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00029

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**

SdClientServiceTcpRef	EcucReferenceDef
BSW Description	
Reference to the SoAdSocketConnection representing the data path (TCP) for communication with methods. This element is also used to set the remote address of the server and to open the TCP connection.	
Template Description	
An application endpoint is the endpoint on an Ecu in terms of application addressing (e.g. socket). The application endpoint represents e.g. the listen socket in client-server-based communication.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ApplicationEndpoint	
Mapping Rule	**Mapping Type**
Shall be derived from the ApplicationEndpoint which aggregates the Consumed ServiceInstance	full
Mapping Status	**Mapping ID**
valid	up_Sd_00019

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdClientServiceTimerRef	EcucReferenceDef
BSW Description	
The reference of the SdClientTimer container for this service.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedServiceInstance.sdClient Config	
Mapping Rule	**Mapping Type**
The reference to the SdClientTimer shall be created pointing to the SdClient Timer container which was created based on the ConsumedServiceInstance.sd ClientConfig	full
Mapping Status	**Mapping ID**
valid	up_Sd_00067

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdClientServiceUdpRef	EcucReferenceDef
BSW Description	
Reference to the SoAdSocketConnection representing the data path (UDP) for communication with methods. This element is also used to set the remote address of the server.	
Template Description	
An application endpoint is the endpoint on an Ecu in terms of application addressing (e.g. socket). The application endpoint represents e.g. the listen socket in client-server-based communication.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ApplicationEndpoint	
Mapping Rule	**Mapping Type**

Shall be derived from the ApplicationEndpoint which aggregates the Consumed ServiceInstance	full
Mapping Status	**Mapping ID**
valid	up_Sd_00020

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdConsumedEventGroup	EcucParamConfContainerDef
BSW Description	
A Service may have event groups which can be consumed. A service consumer has to subscribe to the corresponding event-group. After the subscription the event consumer takes the role of a server and the event provider that of a client.	
Template Description	
A Service may have event groups which can be consumed. A service consumer has to subscribe to the corresponding event-group. After the subscription the event consumer takes the role of a server and the event provider that of a client.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedEventGroup	
Mapping Rule	**Mapping Type**
Create container for every existing consumedEventGroup that is aggregated by the ConsumedServiceInstance	full
Mapping Status	**Mapping ID**
valid	up_Sd_00021

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupAutoRequire	EcucBooleanParamDef
BSW Description	
If existing and set to true, this EventGroup will be set to "required" on start.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupHandleId	EcucIntegerParamDef
BSW Description	
The HandleId by which the BswM can identify this EventGroup.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupId	EcucIntegerParamDef
BSW Description	
The Eventgroup Id of this eventGroup as a unique identifier of the eventgroup in this service. This identifier is used for EventGroup entries as well.	
Template Description	
EventGroup ID. Shall be unique within one system to allow service discovery.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedEventGroup.eventGroup Identifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00027

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupMulticastActivationRef	EcucReferenceDef
BSW Description	
The reference of a Routing Group in order to activate and setup the Socket Connection for Multicast Events of this EventGroup. The multicast address from the received Multicast option is setup by SoAd_RequestIpAddrAssignment. The local address is the same as for the unicast events; thus, it was sent in the UDP Endpoint option of the Subscribe EventGroup entry. This is usually equal to the SdConsumedEventGroupUdpActivationRef.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedEventGroup.routingGroup	
Mapping Rule	**Mapping Type**
This reference shall be created if the CEG which refers to an ApplicationEndpoint in the role ConsumedEventGroup.applicationEndpoint contains a reference to the SoAdRoutingGroup and the eventGroupControlType of the SoAd RoutingGroup is set to activationMulticast.multicast.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00026

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupMulticastGroupRef	EcucReferenceDef

BSW Description	
Reference to the SoAdSocketConnectionGroup representing the multicast data path (UDP).	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnection.clientPort	
Mapping Rule	**Mapping Type**
If ConsumedEventGroup.applicationEndpoint reference to an ApplicationEndpoint exists then the reference SdConsumedEventGroupMulticastGroupRef shall be derived from a SocketConnection or SocketConnectionBundle that refers to the SocketAddress which aggregates this ApplicationEndpoint.	full
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupTcpActivationRef	EcucReferenceDef
BSW Description	
The reference of the Routing Group for activation of the data path for receiving TCP events. This element is also being used for getting the IP address and port number for building the TCP endpoint option for the Subscribe EventGroup entry. If no TCP methods are used in the service, this element is also being used for setting the remote address (TCP Endpoint option referenced by the Offer Service entry) and opening the TCP connection to the server before sending the Subscribe EventGroup entry. If multiple EventGroups of the same Service Instance are subscribed the TCP connection will be shared and must be opened only once.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedEventGroup.routingGroup	
Mapping Rule	**Mapping Type**
This container shall be created if the CEG that is aggregated by an Application Endpoint with a TcpTp configuration contains a reference to the SoAdRouting Group and the eventGroupControlType of the SoAdRoutingGroup is set to activationUnicast.st".	full
Mapping Status	**Mapping ID**
valid	up_Sd_00022

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupTimerRef	EcucReferenceDef
BSW Description	
The reference of the SdClientTimer container for this eventGroup.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedServiceInstance.sdClientConfig	

Mapping Rule	Mapping Type
The reference to the SdClientTimer shall be created pointing to the SdClient Timer container which was created based on the ConsumedEventGroup.sd ClientConfig	full
Mapping Status	**Mapping ID**
valid	up_Sd_00069

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedEventGroup
BSW Parameter	**BSW Type**
SdConsumedEventGroupUdpActivationRef	EcucReferenceDef
BSW Description	
The reference of the Routing Group for activation of the data path for receiving UDP events. This element is also being used for getting the IP address and port number for building the UDP endpoint option for the Subscribe EventGroup entry. If no UDP methods are used in the service, this element is also being used for setting the remote address (UDP Endpoint option referenced by the Offer Service entry). If multiple EventGroups of the same Service Instance are subscribed the UDP Socket Connection will be shared and must be set only once.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedEventGroup.routingGroup	
Mapping Rule	**Mapping Type**
This container shall be created if the CEG that is aggregated by an ApplicationEndpoint with UdpTp configuration contains a reference to the SoAdRouting Group and the eventGroupControlType of the SoAdRoutingGroup is set to activationUnicast.st".	full
Mapping Status	**Mapping ID**
valid	up_Sd_00028

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService
BSW Parameter	**BSW Type**
SdConsumedMethods	EcucParamConfContainerDef
BSW Description	
Container element for representing the data path for accessing the server methods.	
Template Description	
M2 Parameter	
SystemTemplate::DataMapping::DataMapping.serviceInstance	
Mapping Rule	**Mapping Type**
A method is described as a ClientServerInterface of a Software Component. If DataMappings exist that map operations of a ClientServerInterface to the regarded ConsumedServiceInstance then this container needs to be created.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00018

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientService/SdConsumedMethods
BSW Parameter	**BSW Type**
SdClientServiceActivationRef	EcucReferenceDef
BSW Description	
Reference to a SoAdRoutingGroupRef to activate/deactivate the data path for the methods.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::AbstractServiceInstance.routingGroup	
Mapping Rule	**Mapping Type**
This reference shall be created if the ConsumedServiceInstance contains a reference to the SoAdRoutingGroup.	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance
BSW Parameter	**BSW Type**
SdClientTimer	EcucParamConfContainerDef
BSW Description	
This container specifies all timers used by the Service Discovery module for Client Services.	
Template Description	
Client configuration for Service-Discovery.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdClientConfig	
Mapping Rule	**Mapping Type**
The Timing parameters can be derived from the SdClientConfig attributes and the aggregated elements RequestResponseDelay and InitialSdDelayConfig.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00032

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientTimer
BSW Parameter	**BSW Type**
SdClientTimerInitialFindDelayMax	EcucFloatParamDef
BSW Description	
Max value in [s] to delay randomly the transmission of a find message. This parameter is mandatory for ClientService.	
Template Description	
@RESTRICT_TO_STANDARD:CP! Max Value in seconds to delay randomly the first offer (if aggregated by SdServerConfig) or the transmission of a find message (if aggregated by SdClientConfig). @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! Max Value in seconds to delay randomly the first offer (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or the transmission of a find message (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). @END_RESTRICT_TO_STANDARD!	
M2 Parameter	

SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialDelayMax Value	
Mapping Rule	**Mapping Type**
Take information from SdClientConfig.initialFindBehavior	full
Mapping Status	**Mapping ID**
valid	up_Sd_00035

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientTimer
BSW Parameter	**BSW Type**
SdClientTimerInitialFindDelayMin	EcucFloatParamDef
BSW Description	
Min value in [s] to delay randomly the transmission of a find message. This parameter is mandatory for ClientService.	
Template Description	
@RESTRICT_TO_STANDARD:CP! Min Value in seconds to delay randomly the first offer or the transmission of a find message (if aggregated by SdClientConfig). @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! Min Value in seconds to delay randomly the first offer (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or the transmission of a find message (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). @END_RESTRICT_TO_STANDARD!	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialDelayMin Value	
Mapping Rule	**Mapping Type**
Take information from SdClientConfig.initialFindBehavior	full
Mapping Status	**Mapping ID**
valid	up_Sd_00033

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdClientTimer
BSW Parameter	**BSW Type**
SdClientTimerInitialFindRepetitionsBaseDelay	EcucFloatParamDef
BSW Description	
The base delay in [s] for find repetitions. Successive finds have an exponential back off delay (1x base delay, 2x base delay, 4x base delay, ...). This parameter is mandatory for ClientService.	
Template Description	
@RESTRICT_TO_STANDARD:CP! The base delay for offer repetitions (if aggregated by SdServerConfig) or find repetitions (if aggregated by SdClientConfig). Successive find messages have an exponential back off delay. @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! The base delay for offer repetitions (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or find repetitions (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). Successive find messages have an exponential back off delay. @END_RESTRICT_TO_STANDARD!	

M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialRepetitionsBaseDelay	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00036

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientTimer
BSW Parameter	**BSW Type**
SdClientTimerInitialFindRepetitionsMax	EcucIntegerParamDef
BSW Description	
Configuration for the maximum number of find repetitions. This parameter is mandatory for ClientService.	
Template Description	
@RESTRICT_TO_STANDARD:CP! Describes the maximum amount of offer repetitions (if aggregated by SdServerConfig) or the maximum amount of find repetitions (if aggregated by SdClientConfig). @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! Describes the maximum amount of offer repetitions (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or the maximum amount of find repetitions (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). @END_RESTRICT_TO_STANDARD!	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialRepetitionsMax	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00038

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdClientTimer
BSW Parameter	**BSW Type**
SdClientTimerRequestResponseMaxDelay	EcucFloatParamDef
BSW Description	
Maximum allowable response delay to entries received by multicast in seconds. This parameter is mandatory for ConsumedEventGroups.	
Template Description	
Maximum allowable response delay to entries received by multicast in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::RequestResponseDelay.maxValue	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00039

valid		

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdInstanceUnicastRxPdu	
BSW Parameter		**BSW Type**
SdRxPduRef		EcucReferenceDef
BSW Description		
Reference to the "global" Pdu structure to allow harmonization of handle IDs in the COM-Stack.		
Template Description		
M2 Parameter		

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance
BSW Parameter	**BSW Type**
SdServerService	EcucParamConfContainerDef
BSW Description	
This container specifies all parameters used by Server services.	
Template Description	
Service instances that are provided by the ECU that is connected via the ApplicationEndpoint to a CommunicationConnector.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ProvidedServiceInstance	
Mapping Rule	**Mapping Type**
Create container for each existing ProvidedServiceInstance that is available in the Ecu Extract.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00041

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdEventHandler	EcucParamConfContainerDef
BSW Description	
Container Element for representing an EventGroup as part of the Service Instance.	
Template Description	
Configures the outbound application endpoint a server uses to call a clients callback. Only required if the source TpPort is not dynamically assigned. If a consumed event group is referenced the configuration is only valid for this relation.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EventHandler	
Mapping Rule	**Mapping Type**
Create container for every existing EventHandler that is aggregated by the ProvidedServiceInstance	full
Mapping Status	**Mapping ID**
valid	up_Sd_00047

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler
BSW Parameter	**BSW Type**
SdEventHandlerEventGroupId	EcucIntegerParamDef
BSW Description	
The EventGroup Id of this EventGroup as a unique identifier of the EventGroup in this service. This identifier is used for EventGroup entries as well.	
Template Description	
EventGroup ID. Shall be unique within one system to allow service discovery.	
M2 Parameter	

SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedEventGroup.eventGroup Identifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00054

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler
BSW Parameter	**BSW Type**
SdEventHandlerHandleId	EcucIntegerParamDef
BSW Description	
The HandleId by which the BswM can identify this EventGroup.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler
BSW Parameter	**BSW Type**
SdEventHandlerMulticast	EcucParamConfContainerDef
BSW Description	
The subcontainer including the Routing Group for Activation of Events sent over Multicast. The activation ref is also being used for identification of the related Socket Connection in order to find the Multicast Address used in the Multicast Option referenced by the Subscribe EventGroup Ack entry.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EventHandler.routingGroup	
Mapping Rule	**Mapping Type**
This container shall be created if the EventHandler that is aggregated by an ApplicationEndpoint with a multicast configuration contains a reference to the SoAdRoutingGroup.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00051

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler/SdEventHandlerMulticast
BSW Parameter	**BSW Type**
SdEventActivationRef	EcucReferenceDef
BSW Description	

Reference to a SoAdRoutingGroup for activation of the data path for a subscribed client (start sending events after subscribe). This is usually equal to the SdEventActivationRef referenced by SdEventHandlerUdp
Template Description
This attribute defines the type of a RoutingGroup. There are RoutingGroups that activate the data path for unicast or multicast events of an event group. And there are RoutingGroups that activate the data path for initial events that are triggered, namely events that are sent out on the server side after a client got subscribed. Please note that this attribute is only valid for event communication (Sender Receiver communication) and shall be omitted in MethodActivationRoutingGroups.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SoAdRoutingGroup.eventGroupControlType

Mapping Rule	**Mapping Type**
Use this reference if eventGroupControlType is set to activationUnicast, activationMulticast or activationAndTriggerUnicast.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00057

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler/SdEventHandlerMulticast

BSW Parameter	**BSW Type**
SdMulticastEventSoConRef	EcucReferenceDef

BSW Description
Reference to the SoAdSocketConnection representing the multicast data path (UDP).
Template Description
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnection.clientPort

Mapping Rule	**Mapping Type**
Reference shall be derived from a SocketConnection that contains a reference to a SocketAddress with mutlicastConnector and with the regarded EventHandler in the ApplicationEndpoint.	full
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler

BSW Parameter	**BSW Type**
SdEventHandlerMulticastThreshold	EcucIntegerParamDef

BSW Description
Specifies the number of subscribed clients that trigger the Server to change the transmission of events to Multicast. If configured to 0 only unicast will be used. If configured to 1 the first client will be already served by multicast. If configured to 2 the first client will be served with unicast and as soon as the second client arrives both will be served by multicast. This does not influence the handling of initial events, which are served using unicast only.

Template Description
Specifies the number of subscribed clients that trigger the server to change the transmission of events to multicast. If configured to 0 only unicast will be used. If configured to 1 the first client will be already served by multicast. If configured to 2 the first client will be server with unicast and as soon as the second client arrives both will be served by multicast. This does not influence the handling of initial events, which are served using unicast only.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EventHandler.multicastThreshold

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00053

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler

BSW Parameter	BSW Type
SdEventHandlerTcp	EcucParamConfContainerDef
BSW Description	
The subcontainer including the Routing Groups for Activation and Trigger Transmit for Events sent over TCP. The activation ref (or triggering ref if no activation ref exists) is also being used for identification of the related socket connections in order to find the related client by iterating the SdEventHandlerTcp elements (remote address statically configured or automatically set by opening TCP connection before subscription).	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EventHandler.routingGroup	

Mapping Rule	Mapping Type
This container shall be created if the EventHandler that is aggregated by an ApplicationEndpoint with a TcpTp configuration contains a reference to the SoAdRoutingGroup.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00055

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler/SdEventHandlerTcp

BSW Parameter	BSW Type
SdEventActivationRef	EcucReferenceDef
BSW Description	
Reference to a SoAdRoutingGroup for activation of the data path for a subscribed client (start sending events after subscribe). This is usually equal to the SdEventActivationRef referenced by SdEventHandlerUdp	
Template Description	

This attribute defines the type of a RoutingGroup. There are RoutingGroups that activate the data path for unicast or multicast events of an event group. And there are RoutingGroups that activate the data path for initial events that are triggered, namely events that are sent out on the server side after a client got subscribed. Please note that this attribute is only valid for event communication (Sender Receiver communication) and shall be omitted in MethodActivationRoutingGroups.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SoAdRoutingGroup.eventGroupControlType	
Mapping Rule	**Mapping Type**
Use this reference if eventGroupControlType is set to activationUnicast, activationMulticast or activationAndTriggerUnicast.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00057

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler/SdEventHandlerTcp
BSW Parameter	**BSW Type**
SdEventTriggeringRef	EcucReferenceDef
BSW Description	
Reference to a SoAdRoutingGroup that is used for triggered transmit. Triggering is needed to sent out initial events on the server side after a client got subscribed.	
Template Description	
This attribute defines the type of a RoutingGroup. There are RoutingGroups that activate the data path for unicast or multicast events of an event group. And there are RoutingGroups that activate the data path for initial events that are triggered, namely events that are sent out on the server side after a client got subscribed. Please note that this attribute is only valid for event communication (Sender Receiver communication) and shall be omitted in MethodActivationRoutingGroups.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SoAdRoutingGroup.eventGroupControlType	
Mapping Rule	**Mapping Type**
Use this reference if eventGroupControlType is set to triggerUnicast or activationAndTriggerUnicast.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00056

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler
BSW Parameter	**BSW Type**
SdEventHandlerTimerRef	EcucReferenceDef
BSW Description	
The reference of the SdServerTimer container for this EventGroup.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EventHandler.sdServerConfig	
Mapping Rule	**Mapping Type**

The reference to the SdServerTimer shall be created pointing to the SdServer Timer container which was created based on the EventHandler.sdServerConfig	full
Mapping Status	**Mapping ID**
valid	up_Sd_00068

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler
BSW Parameter	**BSW Type**
SdEventHandlerUdp	EcucParamConfContainerDef
BSW Description	
The subcontainer including the Routing Groups for Activation and Trigger Transmit for Events sent over UDP. The activation ref (or triggering ref if no activation ref exists) is also being used for identification of the related socket connections in order to set the remote address of the client or find the related client by iterating the SdEventHandlerUdp elements (remote address statically configured or automatically set by method call before subscription).	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EventHandler.routingGroup	
Mapping Rule	**Mapping Type**
This container shall be created if the EventHandler that is aggregated by an ApplicationEndpoint with a UdpTp configuration contains a reference to the SoAdRoutingGroup.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00048

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler/SdEventHandlerUdp
BSW Parameter	**BSW Type**
SdEventActivationRef	EcucReferenceDef
BSW Description	
Reference to a SoAdRoutingGroup for activation of the data path for a subscribed client (start sending events after subscribe). This is usually equal to the SdEventActivationRef referenced by SdEventHandlerUdp	
Template Description	
This attribute defines the type of a RoutingGroup. There are RoutingGroups that activate the data path for unicast or multicast events of an event group. And there are RoutingGroups that activate the data path for initial events that are triggered, namely events that are sent out on the server side after a client got subscribed. Please note that this attribute is only valid for event communication (Sender Receiver communication) and shall be omitted in MethodActivationRoutingGroups.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SoAdRoutingGroup.eventGroupControlType	
Mapping Rule	**Mapping Type**
Use this reference if eventGroupControlType is set to activationUnicast, activationMulticast or activationAndTriggerUnicast.	full
Mapping Status	**Mapping ID**

valid	up_Sd_00057

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerService/SdEventHandler/SdEventHandler Udp
BSW Parameter	**BSW Type**
SdEventTriggeringRef	EcucReferenceDef
BSW Description	
Reference to a SoAdRoutingGroup that is used for triggered transmit. Triggering is needed to sent out initial events on the server side after a client got subscribed.	
Template Description	
This attribute defines the type of a RoutingGroup. There are RoutingGroups that activate the data path for unicast or multicast events of an event group. And there are RoutingGroups that activate the data path for initial events that are triggered, namely events that are sent out on the server side after a client got subscribed. Please note that this attribute is only valid for event communication (Sender Receiver communication) and shall be omitted in MethodActivationRoutingGroups.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SoAdRoutingGroup.eventGroupControlType	
Mapping Rule	**Mapping Type**
Use this reference if eventGroupControlType is set to triggerUnicast or activationAndTriggerUnicast.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00056

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdProvidedMethods	EcucParamConfContainerDef
BSW Description	
Container element for representing the needed elements of the data path for the methods provided by the service.	
Template Description	
M2 Parameter	
SystemTemplate::DataMapping::DataMapping.serviceInstance	
Mapping Rule	**Mapping Type**
A method is described as a ClientServerInterface of a Software Component. If DataMappings exist that map operations of a ClientServerInterface to the regarded ProvidedServiceInstance then this container needs to be created.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00043

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerService/SdProvidedMethods
BSW Parameter	**BSW Type**
SdServerServiceActivationRef	EcucReferenceDef
BSW Description	

Reference to a SoAdRoutingGroup to activated and deactivate the data path for methods of the service.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::AbstractServiceInstance.routingGroup	
Mapping Rule	**Mapping Type**
This reference shall be created if the ProvidedServiceInstance contains a reference to the SoAdRoutingGroup.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00045

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdServerCapabilityRecord	EcucParamConfContainerDef
BSW Description	
Sd uses capability records to store arbitrary name/value pairs conveying additional information about the named service. The following use cases are supported: 1) Key present, with no value (e.g. "passreq" -- password required for this service) 2) Key present, with empty value (e.g. "PlugIns=" server supports plugins, but none are presently installed) 3) Key present, with non-empty value (e.g. "PlugIns=JPEG,MPEG2,MPEG4")	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdServerConfig.capabilityRecord	
Mapping Rule	**Mapping Type**
1:1 mapping to ProvidedServiceInstance.sdServerConfig.capabilityRecord.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00062

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService/SdServerCapabilityRecord
BSW Parameter	**BSW Type**
SdServerCapabilityRecordKey	EcucStringParamDef
BSW Description	
Defines a CapabilityRecord key.	
Template Description	
Defines a key.	
M2 Parameter	
GenericStructure::GeneralTemplateClasses::TagWithOptionalValue::TagWithOptionalValue.key	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00063

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdServerService/SdServerCapabilityRecord	
BSW Parameter		**BSW Type**
SdServerCapabilityRecordValue		EcucStringParamDef
BSW Description		
Defines the corresponding CapabilityRecord value.		
Template Description		
Defines the corresponding value.		
M2 Parameter		
GenericStructure::GeneralTemplateClasses::TagWithOptionalValue::TagWithOptionalValue.value		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_Sd_00064

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdServerService	
BSW Parameter		**BSW Type**
SdServerCapabilityRecordMatchCalloutRef		EcucReferenceDef
BSW Description		
Reference to a SdCapabilityRecordMatchCallout, The referenced SdCapabilityRecordMatchCallout is invoked to determine whether the configuration options contained in the entries of a received SD message match the server's configured SdServerCapabilityRecord elements.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdServerService	
BSW Parameter		**BSW Type**
SdServerServiceAutoAvailable		EcucBooleanParamDef
BSW Description		
If existing and set to true, this Service will be set to "Available" on start.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdServerService	
BSW Parameter		**BSW Type**

SdServerServiceHandleId	EcucIntegerParamDef
BSW Description	
The HandleId by which the BswM can identify this Server Service Instance.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdServerServiceId	EcucIntegerParamDef
BSW Description	
Id to identify the service. This is unique for the service interface.	
Template Description	
Service ID. Shall be unique within one system to allow service discovery.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ProvidedServiceInstance.serviceIdentifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00066

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdServerServiceInstanceId	EcucIntegerParamDef
BSW Description	
Configuration parameter to specify Instance Id of the Service implemented by the Server Service.	
Template Description	
Instance identifier. Can be used for e.g. service discovery to identify the instance of the service.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ProvidedServiceInstance.instanceIdentifier	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00046

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdServerServiceLoadBalancingPriority	EcucIntegerParamDef
BSW Description	

Defines the value to be used for load balancing priority in the service offer. Lower value means higher priority.
Template Description
Defines the value to be used for load balancing priority in the service offer. Lower value means higher priority.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ProvidedServiceInstance.loadBalancingPriority

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00070

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService

BSW Parameter	**BSW Type**
SdServerServiceLoadBalancingWeight	EcucIntegerParamDef

BSW Description
Defines the value to be used for load balancing weight in the service offer. Higher value means higher probability to be chosen.
Template Description
Defines the value to be used for load balancing weight in the service offer. Higher value means higher probability to be chosen.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ProvidedServiceInstance.loadBalancingWeight

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00071

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService

BSW Parameter	**BSW Type**
SdServerServiceMajorVersion	EcucIntegerParamDef

BSW Description
Major version number of the Service as used in SD Entries.
Template Description
Major version number of the Service.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdServerConfig.serverServiceMajorVersion

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00042

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService

BSW Parameter	**BSW Type**

SdServerServiceMinorVersion	EcucIntegerParamDef
BSW Description	
Minor version number of the Service as used e.g. in Offer Service entries.	
Template Description	
Minor version number of the Service.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdServerConfig.serverServiceMinor Version	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00065

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdServerServiceTcpRef	EcucReferenceDef
BSW Description	
Reference to SoAdSocketConnectionGroup used for methods. This is used to access the local IP address and port for building the endpoint option for offers of this service.	
Template Description	
An application endpoint is the endpoint on an Ecu in terms of application addressing (e.g. socket). The application endpoint represents e.g. the listen socket in client-server-based communication.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ApplicationEndpoint	
Mapping Rule	**Mapping Type**
Shall be derived from the ApplicationEndpoint which aggregates the Provided ServiceInstance.	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerService
BSW Parameter	**BSW Type**
SdServerServiceTimerRef	EcucReferenceDef
BSW Description	
The reference of the SdServerTimer container for this service.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ProvidedServiceInstance.sdServer Config	
Mapping Rule	**Mapping Type**
The reference to the SdServerTimer shall be created pointing to the SdServer Timer container which was created based on the ProvidedServiceInstance.sd ServerConfig.	full
Mapping Status	**Mapping ID**
valid	up_Sd_00061

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdServerService	
BSW Parameter		**BSW Type**
SdServerServiceUdpRef		EcucReferenceDef
BSW Description		
Reference to SoAdSocketConnectionGroup used for methods. This is used to access the local IP address and port for building the endpoint option for offers of this service.		
Template Description		
An application endpoint is the endpoint on an Ecu in terms of application addressing (e.g. socket). The application endpoint represents e.g. the listen socket in client-server-based communication.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ApplicationEndpoint		
Mapping Rule		**Mapping Type**
Shall be derived from the ApplicationEndpoint which aggregates the Provided ServiceInstance.		full
Mapping Status		**Mapping ID**
valid		up_Sd_00044

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance	
BSW Parameter		**BSW Type**
SdServerTimer		EcucParamConfContainerDef
BSW Description		
This container specifies all timers used by the Service Discovery module for Server Services.		
Template Description		
Server configuration for Service-Discovery.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdServerConfig		
Mapping Rule		**Mapping Type**
The Timing parameters can be derived from the SdServerConfig attributes and the aggregated elements RequestResponseDelay and InitialSdDelayConfig.		full
Mapping Status		**Mapping ID**
valid		up_Sd_00001

BSW Module	BSW Context	
Sd	Sd/SdConfig/SdInstance/SdServerTimer	
BSW Parameter		**BSW Type**
SdServerTimerInitialOfferDelayMax		EcucFloatParamDef
BSW Description		
Max value in [s] to delay randomly the first offer. This parameter is mandatory for ServerService.		
Template Description		

@RESTRICT_TO_STANDARD:CP! Max Value in seconds to delay randomly the first offer (if aggregated by SdServerConfig) or the transmission of a find message (if aggregated by SdClientConfig). @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! Max Value in seconds to delay randomly the first offer (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or the transmission of a find message (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). @END_RESTRICT_TO_STANDARD!
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialDelayMax Value

Mapping Rule	**Mapping Type**
Take information from SdServerConfig.initialOfferBehavior	full
Mapping Status	**Mapping ID**
valid	up_Sd_00004

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerTimer

BSW Parameter	**BSW Type**
SdServerTimerInitialOfferDelayMin	EcucFloatParamDef

BSW Description
Min value in [s] to delay randomly the first offer. This parameter is mandatory for ServerService.
Template Description
@RESTRICT_TO_STANDARD:CP! Min Value in seconds to delay randomly the first offer or the transmission of a find message (if aggregated by SdClientConfig). @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! Min Value in seconds to delay randomly the first offer (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or the transmission of a find message (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). @END_RESTRICT_TO_STANDARD!
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialDelayMin Value

Mapping Rule	**Mapping Type**
Take information from SdServerConfig.initialOfferBehavior	full
Mapping Status	**Mapping ID**
valid	up_Sd_00007

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerTimer

BSW Parameter	**BSW Type**
SdServerTimerInitialOfferRepetitionBaseDelay	EcucFloatParamDef

BSW Description
The base delay in [s] for offer repetitions. Successive offers have an exponential back off delay (1x base delay, 2x base delay, 4x base delay, ...). This parameter is mandatory for ServerService.
Template Description

@RESTRICT_TO_STANDARD:CP! The base delay for offer repetitions (if aggregated by SdServerConfig) or find repetitions (if aggregated by SdClientConfig). Successive find messages have an exponential back off delay. @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! The base delay for offer repetitions (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or find repetitions (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). Successive find messages have an exponential back off delay. @END_RESTRICT_TO_STANDARD!
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialRepetitionsBaseDelay

Mapping Rule	**Mapping Type**
Take information from SdServerConfig.initialOfferBehavior	full
Mapping Status	**Mapping ID**
valid	up_Sd_00008

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerTimer

BSW Parameter	**BSW Type**
SdServerTimerInitialOfferRepetitionsMax	EcucIntegerParamDef

BSW Description
Configure the maximum amount of offer repetition. This parameter is mandatory for ServerService.
Template Description
@RESTRICT_TO_STANDARD:CP! Describes the maximum amount of offer repetitions (if aggregated by SdServerConfig) or the maximum amount of find repetitions (if aggregated by SdClientConfig). @END_RESTRICT_TO_STANDARD! @RESTRICT_TO_STANDARD:AP! Describes the maximum amount of offer repetitions (if aggregated in role initialOfferBehavior by SomeipSdServerServiceInstanceConfig) or the maximum amount of find repetitions (if aggregated in role initialFindBehavior by SomeipSdClientServiceInstanceConfig). @END_RESTRICT_TO_STANDARD!
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::InitialSdDelayConfig.initialRepetitionsMax

Mapping Rule	**Mapping Type**
Take information from SdServerConfig.initialOfferBehavior	full
Mapping Status	**Mapping ID**
valid	up_Sd_00006

BSW Module	**BSW Context**
Sd	Sd/SdConfig/SdInstance/SdServerTimer

BSW Parameter	**BSW Type**
SdServerTimerOfferCyclicDelay	EcucFloatParamDef

BSW Description
Interval between cyclic offers in the main phase. This parameter is mandatory for ServerService.
Template Description
Optional attribute to define cyclic offers. Cyclic offer is active, if the delay is set (in seconds).

M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::SdServerConfig.offerCyclicDelay	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00002

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerTimer
BSW Parameter	**BSW Type**
SdServerTimerRequestResponseMaxDelay	EcucFloatParamDef
BSW Description	
Maximum allowable response delay to entries received by multicast in seconds.	
Template Description	
Maximum allowable response delay to entries received by multicast in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::RequestResponseDelay.maxValue	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Sd_00003

BSW Module	BSW Context
Sd	Sd/SdConfig/SdInstance/SdServerTimer
BSW Parameter	**BSW Type**
SdServerTimerRequestResponseMinDelay	EcucFloatParamDef
BSW Description	
Minimum allowable response delay to entries received by multicast in seconds.	
Template Description	
Minimum allowable response delay to entries received by multicast in seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::RequestResponseDelay.minValue

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
SoAd	SoAd/SoAdBswModules
BSW Parameter	**BSW Type**
SoAdBswModuleRef	EcucForeignReferenceDef
BSW Description	
This is a reference to one BSW module's configuration (i.e. not the ECUC parameter definition template). Example, there could be several configurations of PduR and this reference selects one of them. SoAd has to figure out from the structure of the referenced BSW module's configuration, what kind of upper layer he deals with. In case of a CDD SoAd expects UL-APIs in form of _SoAd<If|Tp><function> and expects CDD Pdu configuration structures according to the Ecu Configuration specification (chapter CDD module\Socket Adaptor). In case it is one of the standardized AUTOSAR BSW modules, the configuration structures and API names for interaction with SoAd are defined in the corresponding SWS.	
Template Description	

Head of the configuration of one Module. A Module can be a BSW module as well as the RTE and ECU Infrastructure. As part of the BSW module description, the EcucModuleConfigurationValues element has two different roles: The recommendedConfiguration contains parameter values recommended by the BSW module vendor. The preconfiguredConfiguration contains values for those parameters which are fixed by the implementation and cannot be changed. These two EcucModuleConfigurationValues are used when the base EcucModuleConfigurationValues (as part of the base ECU configuration) is created to fill parameters with initial values.

valid	up_SoAd_00036

BSW Module	BSW Context
SoAd	SoAd/SoAdConfig/SoAdSocketConnectionGroup
BSW Parameter	**BSW Type**
SoAdSocketFramePriority	EcucIntegerParamDef
BSW Description	
Specifies the priority of the Ethernet frame. If IEEE 802.1Q VLAN Tags are used, the specified priority will be used in the VLAN Tag PCP filed. If this optional parameter is not available the default priority specified in the TcpIp module is used.	
Template Description	

VlanMembership.defaultPriority: Standard output-priority outgoing Frames will be tagged with. Defines the priority that received frames are assigned together with the VLAN Id (default-Vlan). The values from 0 (best effort) to 7 (highest) are allowed. In case modifyVlan and an already tagged received frame, the actual priority of the received frame is not modified. **NetworkEndpoint.priority**: Defines the frame priority where values from 0 (best effort) to 7 (highest) are allowed. **ApplicationEndpoint.priority**: Defines the frame priority where values from 0 (best effort) to 7 (highest) are allowed. **ProvidedServiceInstance.priority**: Defines the frame priority where values from 0 (best effort) to 7 (highest) are allowed. **ConsumedEventGroup.priority**: Defines the frame priority where values from 0 (best effort) to 7 (highest) are allowed.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanMembership.defaultPriority, SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::NetworkEndpoint.priority, SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ApplicationEndpoint.priority, SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ProvidedServiceInstance.priority, SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::ConsumedEventGroup.priority

Mapping Rule	**Mapping Type**
It shall be considered that the priority in the SoAd is defined only once per SocketConnectionGroup. The SocketConnections in the system description shall be created adequate. The priority in the system description can be defined at the Consumed EventGroup, ProvidedServiceInstance, at the ApplicationEndpoint and at the NetworkEndpoint. A default priority can be set at CouplingPort.VlanMembership. The priority defined on the ProvidedServiceInstance or ConsumedEvent Group overrides the priority defined on the ApplicationEndpoint. The priority on the ApplicationEndpoint overrides the priority on the NetworkEndpoint. The priority on the NetworkEndpoint overrides the default priority.	full

SoAdRxPduId	EcucIntegerParamDef
BSW Description	
This unique identifier is used for a receive cancellation request from an upper layer of the SoAd.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
SoAd	SoAd/SoAdConfig/SoAdSocketRoute/SoAdSocketRouteDest
BSW Parameter	**BSW Type**
SoAdRxPduRef	EcucReferenceDef
BSW Description	
Reference to the global PDU structure	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering	
Mapping Rule	**Mapping Type**
The SoAdRxPduRef reference shall be derived from the PduTriggering that is referenced by the SocketConnectionIpduIdentifier.	full
Mapping Status	**Mapping ID**
valid	up_SoAd_00030

BSW Module	**BSW Context**
SoAd	SoAd/SoAdConfig/SoAdSocketRoute/SoAdSocketRouteDest

BSW Parameter	BSW Type
SoAdRxRoutingGroupRef	EcucReferenceDef
BSW Description	
Reference to the routing group.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.routingGroup	
Mapping Rule	**Mapping Type**
The SoAdRxRoutingGroupRef reference to SoAdRoutingGroups shall be derived from SocketConnectionIpduIdentifier.routingGroup references.	full
Mapping Status	**Mapping ID**
valid	up_SoAd_00029

BSW Module	BSW Context
SoAd	SoAd/SoAdConfig/SoAdSocketRoute/SoAdSocketRouteDest
BSW Parameter	**BSW Type**
SoAdRxUpperLayerType	EcucEnumerationParamDef
BSW Description	
Specifies the upper layer interface type (must be "IF" in case of multiple RxPdus).	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::PduTriggering.iPdu	
Mapping Rule	**Mapping Type**
The SoAdRxUpperLayerType parameter can be derived from the actual type of the PDU: DcmIPdu -> "Tp" UUDT DcmIPdu: "If" (according to [SWS_Dcm_01101]) ISignalIPdu -> "If" if ComIPduType=NORMAL, "Tp" if ComIPduType=TP NmPdu -> "If" GeneralPurposePdu with category SD -> "If" GeneralPurposePdu with category DoIP -> "If" for UDP, "Tp" for TCP GeneralPurposePdu with category GLOBAL_TIME -> "If" GeneralPurposeIPdu with category = XCP -> "If" UserDefinedIPdu: "If" if CddPduRApiType=IF, "Tp" if CddPduRApiType=TP UserDefinedPdu: "If" if CddPduRApiType=IF, "Tp" if CddPduRApiType=TP MultiplexedIPdu: "If" ContainerIPdu: "If" SecuredIPdu: "If" (see limitation in AUTOSAR_SWS_SecureOnboardCommunication)	full
Mapping Status	**Mapping ID**
valid	up_SoAd_00032

BSW Module	BSW Context
SoAd	SoAd
BSW Parameter	**BSW Type**
SoAdGeneral	EcucParamConfContainerDef
BSW Description	
This container contains all global configuration parameters of SoAd.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
SoAd	SoAd/SoAdGeneral
BSW Parameter	**BSW Type**
SoAdDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
SoAd	SoAd/SoAdGeneral
BSW Parameter	**BSW Type**
SoAdGetAndResetMeasurementDataApi	EcucBooleanParamDef
BSW Description	
Enables / Disables the Get and Reset Measurement Data API	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
SoAd	SoAd/SoAdGeneral
BSW Parameter	**BSW Type**
SoAdIPv6AddressEnabled	EcucBooleanParamDef
BSW Description	
Allows for increased memory allocation to store IPv6 addresses. TRUE: Enables support for IPv6 addresses FALSE: Only IPv4 addresses are supported	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
SoAd	SoAd/SoAdGeneral
BSW Parameter	**BSW Type**
SoAdMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Determines the frequency at which the SoAd_MainFunction() is called in [s].	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
SoAd	SoAd/SoAdGeneral
BSW Parameter	**BSW Type**
SoAdRoutingGroupMax	EcucIntegerParamDef
BSW Description	
Specifies the maximum number of SoAd routing groups. Furthermore it defines the platform type used for RoutingGroupIdType. If SoAdRoutingGroupMax is not greater than 256, a uint8 is used, otherwise a uint16.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
SoAd	SoAd/SoAdGeneral
BSW Parameter	**BSW Type**
SoAdSoConMax	EcucIntegerParamDef
BSW Description	
Specifies the maximum number of SoAd socket connections. Furthermore it defines the platform type used for SoAd_SoConIdType. If SoAdSoConMax is not greater than 256, a uint8 is used, otherwise uint16.	
Template Description	

M2 Parameter

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
SoAd	SoAd/SoAdGeneral	
BSW Parameter		**BSW Type**
SoAdVersionInfoApi		EcucBooleanParamDef
BSW Description		
Activates the SoAd_GetVersionInfo() API. TRUE: Enables the SoAd_GetVersionInfo() API. FALSE: SoAd_GetVersionInfo() API is not included.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

C.6.6 EthSM

BSW Module	BSW Context	
EthSM	EthSM	
BSW Parameter		**BSW Type**
EthSMGeneral		EcucParamConfContainerDef
BSW Description		
This container contains the global parameter of the Ethernet State Manager.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthSM	EthSM/EthSMGeneral	
BSW Parameter		**BSW Type**
EthSMDevErrorDetect		EcucBooleanParamDef
BSW Description		
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.		
Template Description		

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSM	EthSM/EthSMGeneral
BSW Parameter	**BSW Type**
EthSMDummyMode	EcucBooleanParamDef
BSW Description	
Disables the API to the EthIf. The API to the ComM is available but the functionality is deactivated. The function calls from the ComM will be answered with the return value E_OK.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSM	EthSM/EthSMGeneral
BSW Parameter	**BSW Type**
EthSMMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Specifies the period in seconds that the MainFunction has to be triggered with.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSM	EthSM/EthSMGeneral
BSW Parameter	**BSW Type**
EthSMVersionInfoApi	EcucBooleanParamDef
BSW Description	
Enables and disables the version info API.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSM	EthSM
BSW Parameter	**BSW Type**
EthSMNetwork	EcucParamConfContainerDef
BSW Description	
This container contains the Ethernet network-specific parameters of each Ethernet network. It also contains the reference to combination of controller and transceiver assigned to an Ethernet network.	
Template Description	
The EthernetPhysicalChannel represents a VLAN or an untagged channel. An untagged channel is modeled as an EthernetPhysicalChannel without an aggregated VLAN.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetPhysicalChannel	
Mapping Rule	**Mapping Type**
1:1 For each EthernetPhysicalChannel the EcuInstance is connected to, one EthSMNetwork container is created.	full
Mapping Status	**Mapping ID**
valid	up_EthSM_00001

BSW Module	**BSW Context**
EthSM	EthSM/EthSMNetwork
BSW Parameter	**BSW Type**
EthSMComMNetworkHandleRef	EcucReferenceDef
BSW Description	
Unique handle to identify one certain Ethernet network. Reference to one of the network handles configured for the ComM.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthSM	EthSM/EthSMNetwork
BSW Parameter	**BSW Type**
EthSMDemEventParameterRefs	EcucParamConfContainerDef
BSW Description	
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSM	EthSM/EthSMNetwork/EthSMDemEventParameterRefs
BSW Parameter	**BSW Type**
ETHSM_E_LINK_DOWN	EcucReferenceDef
BSW Description	
Reference to configured DEM event to report bus off errors for this Eth network.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthSM	EthSM/EthSMNetwork
BSW Parameter	**BSW Type**
EthSMEthIfControllerRef	EcucReferenceDef
BSW Description	
Reference to EthIfCtrl container where a ETH controller and transceiver (optional) combination is configured.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

C.6.7 EthTrcv

BSW Module	BSW Context
EthTrcv	EthTrcv
BSW Parameter	**BSW Type**
EthTrcvConfigSet	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters and sub containers of the AUTOSAR EthTrcv module.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvConfigSet
BSW Parameter	**BSW Type**
EthTrcvConfig	EcucParamConfContainerDef
BSW Description	
Configuration of the individual transceiver	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvConfigSet/EthTrcvConfig
BSW Parameter	**BSW Type**
EthTrcvAutoNegotiationEnabled	EcucBooleanParamDef
BSW Description	
Specifies if Auto-Negotiation is enabled (TRUE) or disabled (FALSE) for determination of the Ethernet transceiver speed.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvConfigSet/EthTrcvConfig
BSW Parameter	**BSW Type**
EthTrcvConfigEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps the Ethernet transceiver configuration to zero or one ECUC partitions. The ECUC partition referenced is a subset of the ECUC partitions where the Ethernet transceiver driver is mapped to.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context	
EthTrcv	EthTrcv/EthTrcvConfigSet/EthTrcvConfig	
BSW Parameter	**BSW Type**	
EthTrcvConnNeg	EcucEnumerationParamDef	
BSW Description		
Specifies the connection negotiation of the Ethernet transceiver link.		
Template Description		
Specifies the connection negotiation of the CouplingPort.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort.connectionNegotiation Behavior		
Mapping Rule		**Mapping Type**
1:1 mapping		full

BSW Parameter	**BSW Type**
EthTrcvWakeupMap	EcucParamConfContainerDef
BSW Description	
Container for the mapping of wake up reasons to wake up sources. At least one container is needed if EthTrcvWakeUpSupport is not ETHTRCV_WAKEUP_NOT_SUPPORTED.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvConfigSet/EthTrcvConfig/EthTrcvWakeupMap
BSW Parameter	**BSW Type**
EthTrcvWakeupReason	EcucEnumerationParamDef
BSW Description	
This parameter defines the transceiver wake up reasons.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvConfigSet/EthTrcvConfig/EthTrcvWakeupMap
BSW Parameter	**BSW Type**
EthTrcvWakeupSourceRef	EcucReferenceDef
BSW Description	
Configures the wake-up source defined in EcuM.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv
BSW Parameter	**BSW Type**
EthTrcvGeneral	EcucParamConfContainerDef
BSW Description	
General configuration of Ethernet Transceiver Driver module	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvEcucPartitionRef	EcucReferenceDef
BSW Description	
Maps the Ethernet transceiver driver to zero or multiple ECUC partitions to make the modules API available in this partition. The Ethernet transceiver driver will operate as an independent instance in each of the partitions.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvEnableCableDiagnosticApi	EcucBooleanParamDef
BSW Description	
Enable/disable the APIs for cable diagnostic: EthTrcv_RunCableDiagnostic, EthTrcv_GetCableDiagnosticsResult	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvGetBaudRateApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_GetBaudRate API	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvGetCableDiagnosticsResultApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_GetCableDiagnosticsResult API.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
EthTrcv	EthTrcv/EthTrcvGeneral	
BSW Parameter		**BSW Type**
EthTrcvGetDuplexModeApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthTrcv_GetDuplexMode API		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthTrcv	EthTrcv/EthTrcvGeneral	
BSW Parameter		**BSW Type**
EthTrcvGetLinkStateApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthTrcv_GetLinkState API		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthTrcv	EthTrcv/EthTrcvGeneral	
BSW Parameter		**BSW Type**
EthTrcvGetPhyIdentifierApi		EcucBooleanParamDef
BSW Description		
Enables / Disables EthTrcv_GetPhyIdentifier API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
EthTrcv	EthTrcv/EthTrcvGeneral	
BSW Parameter		**BSW Type**
EthTrcvGetPhySignalQualityApi		EcucBooleanParamDef
BSW Description		

Enables / Disables EthTrcv_GetPhySignalQuality API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvGetTransceiverModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_GetTransceiverMode API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvGetTransceiverWakeupModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_GetTransceiverWakeupMode API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvIndex	EcucIntegerParamDef
BSW Description	
Specifies the InstanceId of this module instance. If only one instance is present it shall have the Id 0.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Specifies the period of main function EthTrcv_MainFunction in seconds.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvMaxTrcvsSupported	EcucIntegerParamDef
BSW Description	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvSetPhyTestModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_SetPhyTestMode API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvSetPhyTxModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_SetPhyTxMode API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvSetTransceiverModeApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_SetTransceiverMode API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvStartAutoNegotiationApi	EcucBooleanParamDef
BSW Description	
Enables / Disables EthTrcv_StartAutoNegotiation API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvVersionInfoApi	EcucBooleanParamDef
BSW Description	

Enables / Disables version info API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvVersionInfoApiMacro	EcucBooleanParamDef
BSW Description	
Enables / Disables version info API macro implementation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTrcv	EthTrcv/EthTrcvGeneral
BSW Parameter	**BSW Type**
EthTrcvWakeUpSupport	EcucEnumerationParamDef
BSW Description	
Configures wake-up to polling or interrupt or to not used/not supported. In case no wake up is supported by the hardware, the BSWMD pre-configuration shall be set to ETHTRCV_WAKEUP_NOT_SUPPORTED.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

C.6.8 TcpIp

BSW Module	**BSW Context**
TcpIp	TcpIp
BSW Parameter	**BSW Type**
TcpIpConfig	EcucParamConfContainerDef
BSW Description	

This container contains the configuration parameters and sub containers of the AUTOSAR TcpIp module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig
BSW Parameter	**BSW Type**
TcpIpCtrl	EcucParamConfContainerDef
BSW Description	
Specifies the EthIf controller used for IP communication.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl
BSW Parameter	**BSW Type**
TcpIpDhcpServerConfigRef	EcucReferenceDef
BSW Description	
Reference to a TcpIpDhcpServerConfig which shall be used for this controller setting (VLAN).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl
BSW Parameter	**BSW Type**
TcpIpEthIfCtrlRef	EcucReferenceDef
BSW Description	
Reference to EthIf controller where the IP address shall be assigned.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl
BSW Parameter	**BSW Type**
TcpIpIpFramePrioDefault	EcucIntegerParamDef
BSW Description	
Specifies the default value for the priority for all outgoing frames. Note: the value can be changed for each socket individually via TcpIp_ChangeParameter() service. If this optional parameter is not available, 0 is used as default priority.	
Template Description	
Standard output-priority outgoing Frames will be tagged with. Defines the priority that received frames are assigned together with the VLAN Id (default-Vlan). The values from 0 (best effort) to 7 (highest) are allowed. In case modifyVlan and an already tagged received frame, the actual priority of the received frame is not modified.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanMembership.defaultPriority	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00011

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl
BSW Parameter	**BSW Type**
TcpIpIpVXCtrl	EcucChoiceContainerDef
BSW Description	
Specifies whether this controller is an Internet Protocol version 4 (IPv4) or Internet Protocol version 6 (IPv4) instance.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl
BSW Parameter	**BSW Type**
TcpIpIpV4Ctrl	EcucParamConfContainerDef
BSW Description	
Specifies an Internet Protocol version 4 (IPv4) instance.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV4Ctrl
BSW Parameter	**BSW Type**
TcpIpArpConfigRef	EcucReferenceDef
BSW Description	
Reference to ARP configuration for this IPv4 instance. (Multiple IPv4 instances may use the same configuration container but will operate independently)	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV4Ctrl
BSW Parameter	**BSW Type**
TcpIpAutoIpConfigRef	EcucReferenceDef
BSW Description	
Reference to AutoIp configuration for this IPv4 instance. (Multiple IPv4 instances may use the same configuration container but will operate independently)	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV4Ctrl
BSW Parameter	**BSW Type**
TcpIpDhcpConfigRef	EcucReferenceDef
BSW Description	
Reference to DHCP configuration for this IPv4 instance. (Multiple IPv4 instances may use the same configuration container but will operate independently)	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV4Ctrl
BSW Parameter	**BSW Type**
TcpIpFragmentationConfigRef	EcucReferenceDef
BSW Description	
Reference to Fragmentation configuration for this IPv4 instance. (Multiple IPv4 instances may use the same configuration container but will operate independently)	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV4Ctrl
BSW Parameter	**BSW Type**
TcpIpIpV4MtuConfig	EcucParamConfContainerDef
BSW Description	
This container specifies the Maximum Transmission Unit parameters for this IPv4 instance.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV4Ctrl/TcpIpIpV4MtuConfig
BSW Parameter	**BSW Type**
TcpIpIpV4PathMtuEnabled	EcucBooleanParamDef
BSW Description	
If enabled the IPv4 processes incoming ICMPv4 "Packet Too Big" messages and stores a MTU value for each destination address.	
Template Description	
If enabled the IPv4/IPv6 processes incoming ICMP "Packet Too Big" messages and stores a MTU value for each destination address.	
M2 Parameter	

SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.pathMtuEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00048

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV4Ctrl/TcpIpIpV4MtuConfig
BSW Parameter	**BSW Type**
TcpIpIpV4PathMtuTimeout	EcucFloatParamDef
BSW Description	
If this value is >0 the IpV4 will reset the MTU value stored for each destination after n seconds. see [RFC1191 6.3. Purging stale PMTU information] Default: 600 seconds (10 minutes)	
Template Description	
If this value is >0 the IPv4/IPv6 will reset the MTU value stored for each destination after n seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.pathMtuTimeout	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00047

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl
BSW Parameter	**BSW Type**
TcpIpIpV6Ctrl	EcucParamConfContainerDef
BSW Description	
Specifies an Internet Protocol version 6 (IPv6) instance.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV6Ctrl
BSW Parameter	**BSW Type**
TcpIpIpV6DhcpConfigRef	EcucReferenceDef
BSW Description	
Reference to DHCPv6 configuration. (Multiple IPv6 instances may use the same configuration container but will operate independently)	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV6Ctrl
BSW Parameter	**BSW Type**
TcpIpIpV6FragmentationConfigRef	EcucReferenceDef
BSW Description	
Reference to IPv6 Fragmentation Configuration. (Multiple IPv6 instances may use the same configuration container but will operate independently)	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV6Ctrl
BSW Parameter	**BSW Type**
TcpIpIpV6MtuConfig	EcucParamConfContainerDef
BSW Description	
This container specifies the Maximum Transmission Unit parameters for this IPv6 instance.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV6Ctrl/TcpIpIpV6MtuConfig
BSW Parameter	**BSW Type**
TcpIpIpV6PathMtuEnabled	EcucBooleanParamDef
BSW Description	
If enabled the IPv6 processes incoming ICMPv6 "Packet Too Big" messages and stores a MTU value for each destination address. See RFC1981 "Path MTU Discovery for IP version 6" for details about PathMTU.	
Template Description	
If enabled the IPv4/IPv6 processes incoming ICMP "Packet Too Big" messages and stores a MTU value for each destination address.	
M2 Parameter	

SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.pathMtuEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00013

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV6Ctrl/TcpIpIpV6MtuConfig
BSW Parameter	**BSW Type**
TcpIpIpV6PathMtuTimeout	EcucFloatParamDef
BSW Description	
If this value is >0 the IpV6 will reset the MTU value stored for each destination after n seconds. see [RFC1981 5.3. Purging stale PMTU information] Default: 600 seconds (10 minutes)	
Template Description	
If this value is >0 the IPv4/IPv6 will reset the MTU value stored for each destination after n seconds.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.pathMtuTimeout	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00014

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpCtrl/TcpIpIpVXCtrl/TcpIpIpV6Ctrl
BSW Parameter	**BSW Type**
TcpIpIpV6NdpConfigRef	EcucReferenceDef
BSW Description	
Reference to Neighbor Discovery Protocol Configuration. (Multiple IPv6 instances may use the same configuration container but will operate independently)	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig
BSW Parameter	**BSW Type**
TcpIpDhcpServerConfig	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the DHCP Server sub-module.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpDhcpServerConfig
BSW Parameter	**BSW Type**
TcpIpDhcpAddressAssignment	EcucParamConfContainerDef
BSW Description	
Defines a Ethernet Switch port based IP address assignment.	
Template Description	
Specifies the IP Address which will be assigned to a DHCP Client at this SwitchPort. If no dhcpAddressAssignment is provided all DHCP-Discover messages received at this Port will be discarded by the DHCP Server.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanMembership.dhcpAddressAssignment	
Mapping Rule	**Mapping Type**
The existence of a dhcpAddressAssignment leads to one container.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00028

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpDhcpServerConfig/TcpIpDhcpAddressAssignment
BSW Parameter	**BSW Type**
TcpIpDhcpAddressLowerBound	EcucStringParamDef
BSW Description	
The lower bound IP address which shall be assigned. If lower bound and upper bound are identical exactly this IP address shall be assigned.	
Template Description	
Ipv4DhcpServerConfiguration.addressRangeLowerBound: Lower range of IP addresses to be issued to DHCP clients. IPv4 Address. Notation: 255.255.255.255. **Ipv6DhcpServerConfiguration.addressRangeLowerBound**: Lower range of IP addresses to be issued to DHCP clients. IPv6 Address. Notation: FFFF:...:FFFF.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4DhcpServerConfiguration.addressRangeLowerBound,SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6DhcpServerConfiguration.addressRangeLowerBound	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00033

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpDhcpServerConfig/TcpIpDhcpAddressAssignment
BSW Parameter	**BSW Type**
TcpIpDhcpAddressUpperBound	EcucStringParamDef

BSW Description
The upper bound IP address which shall be assigned. If lower bound and upper bound are identical exactly this IP address shall be assigned.
Template Description
Ipv4DhcpServerConfiguration.addressRangeUpperBound: Upper range of IP addresses to be issued to DHCP clients. Pv4 Address. Notation: 255.255.255.255. **Ipv6DhcpServerConfiguration.addressRangeUpperBound**: Upper range of IP addresses to be issued to DHCP clients. IPv6 Address. Notation: FFFF:...:FFFF.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4DhcpServerConfiguration.addressRangeUpperBound,SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6DhcpServerConfiguration.addressRangeUpperBound

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00034

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpDhcpServerConfig/TcpIpDhcpAddressAssignment

BSW Parameter	BSW Type
TcpIpDhcpSwitchPortRef	EcucReferenceDef

BSW Description
Reference to Ethernet Switch port. Optional in case the Dhcp server is operating without an Ethernet switch.
Template Description
A CouplingPort is used to connect a CouplingElement with an EcuInstance or two CouplingElements with each other via a CouplingPortConnection. Optionally, the CouplingPort may also have a reference to a macMulticastGroup and a defaultVLAN.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::CouplingPort

Mapping Rule	Mapping Type
The Switch CouplingPort the VlanMembership.dhcpAddressAssignment belongs to.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00032

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpDhcpServerConfig

BSW Parameter	BSW Type
TcpIpDhcpDefaultRouter	EcucStringParamDef

BSW Description
IP address of default router (gateway).
Template Description
Ipv4DhcpServerConfiguration.defaultGateway: IP address of the default gateway. Notation 255.255.255.255 **Ipv6DhcpServerConfiguration.defaultGateway**: IP address of the default gateway. Notation 255.255.255.255
M2 Parameter

SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4DhcpServerConfiguration.defaultGateway,SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6DhcpServerConfiguration.defaultGateway	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00031

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpDhcpServerConfig
BSW Parameter	**BSW Type**
TcpIpDhcpEthIfSwitchRef	EcucReferenceDef
BSW Description	
Reference to EthIfSwitch representation. Optional in case the Dhcp server is operating without an Ethernet switch.	
Template Description	
Specifies the IP Address which will be assigned to a DHCP Client at this SwitchPort. If no dhcpAddressAssignment is provided all DHCP-Discover messages received at this Port will be discarded by the DHCP Server.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::VlanMembership.dhcpAddressAssignment	
Mapping Rule	**Mapping Type**
The Switch CouplingElement the VlanMembership.dhcpAddressAssignment belongs to.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00029

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpDhcpServerConfig
BSW Parameter	**BSW Type**
TcpIpDhcpNetmask	EcucIntegerParamDef
BSW Description	
Network mask of IPv4 address or address prefix of IPv6 address in CIDR Notation, i.e. decimal value between 0 and 32 (IPv4) or 0 and 128 (IPv6) that describes the number of significant bits defining the network number or prefix of an IP address.	
Template Description	
Ipv4DhcpServerConfiguration.networkMask: Default network mask to be used by DHCP clients. Notation 255.255.255.255 **Ipv6DhcpServerConfiguration.networkMask**: Default network mask to be used by DHCP clients. Notation 255.255.255.255	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4DhcpServerConfiguration.networkMask,SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6DhcpServerConfiguration.networkMask	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**

valid	up_TcpIp_00030

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig	
BSW Parameter		**BSW Type**
TcpIpDuplicateAddressDetectionConfig		EcucParamConfContainerDef
BSW Description		
Specifies the DAD callout function.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpDuplicateAddressDetectionConfig	
BSW Parameter		**BSW Type**
TcpIpDuplicateAddressDetectionCalloutName		EcucFunctionNameDef
BSW Description		
This parameter defines the name of the DAD callout function <Up_DADAddressConflict>.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context

BSW Parameter		**BSW Type**
TcpIpIpConfig		EcucParamConfContainerDef
BSW Description		
Specifies the configuration parameters of the IP (Internet Protocol) sub-module		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig

BSW Parameter	BSW Type
TcpIpIpV4Config	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the IPv4 (Internet Protocol version 4) sub-module.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config
BSW Parameter	**BSW Type**
TcpIpArpConfig	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the ARP (Address Resolution Protocol) sub-module.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpArpConfig
BSW Parameter	**BSW Type**
TcpIpArpNumGratuitousARPonStartup	EcucIntegerParamDef
BSW Description	
Specifies the number of gratuitous ARP replies which shall be sent on assignment of a new IP address.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpArpConfig
BSW Parameter	**BSW Type**
TcpIpArpPacketQueueEnabled	EcucBooleanParamDef
BSW Description	

Enables (TRUE) or disables (FALSE) support of the ARP Packet Queue according to IETF RFC 1122, section 2.3.2.2.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpArpConfig
BSW Parameter	**BSW Type**
TcpIpArpRequestTimeout	EcucFloatParamDef
BSW Description	
Specifies a timeout in seconds for the validity of ARP requests. After the transmission of an ARP request the TcpIp shall skip the transmission of any further ARP requests to the same destination within a duration of TcpIpArpRequestTimeout seconds. (IETF RFC 1122, section 2.3.2.1) The value for this parameter shall be an integral multiple of TcpIpMainFunctionPeriod or 0. If this parameter set to 0 this features is disabled and no delay between ARP requests is enforced.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpArpConfig
BSW Parameter	**BSW Type**
TcpIpArpTableEntryTimeout	EcucFloatParamDef
BSW Description	
Timeout in seconds after which an unused ARP entry is removed.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpArpConfig
BSW Parameter	**BSW Type**
TcpIpArpTableSizeMax	EcucIntegerParamDef
BSW Description	

Maximum number of entries in the ARP table.	
Template Description	
This attribute specifies the size of neighbor cache or ARP table in units of entries.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.neighborCacheSize	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00035

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config
BSW Parameter	**BSW Type**
TcpIpAutoIpConfig	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the Auto-IP (automatic private IP addressing) sub-module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpAutoIpConfig
BSW Parameter	**BSW Type**
TcpIpAutoIpInitTimeout	EcucFloatParamDef
BSW Description	
The time in seconds Auto-IP waits at startup, before beginning with ARP probing. This delay is used to give DHCP time to acquire a lease in case a DHCP server is present.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config
BSW Parameter	**BSW Type**
TcpIpDhcpConfig	EcucParamConfContainerDef
BSW Description	

Specifies the configuration parameters of the DHCPv4. This container may be referenced by multiple IPv4 instances if they shall use the same configuration. This container may have multiple instances if different configurations are required for different IPv4 instances.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config

BSW Parameter	**BSW Type**
TcpIpIcmpConfig	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the ICMP (Internet Control Message Protocol) sub-module.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIcmpConfig

BSW Parameter	**BSW Type**
TcpIpIcmpEchoReplyEnabled	EcucBooleanParamDef
BSW Description	
Enables or disables transmission of ICMP echo reply message in case of a ICMP echo reception.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIcmpConfig

BSW Parameter	**BSW Type**
TcpIpIcmpMsgHandler	EcucParamConfContainerDef
BSW Description	

This container is a subcontainer of TcpIpIcmpConfig and specifies the configuration parameters for the ICMP message handler.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIcmpConfig/TcpIpIcmpMsgHandler
BSW Parameter	**BSW Type**
TcpIpIcmpMsgHandlerName	EcucFunctionNameDef
BSW Description	
This parameter defines the name of the ICMP message handler function <Up_IcmpMsgHandler>.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIcmpConfig
BSW Parameter	**BSW Type**
TcpIpIcmpTtl	EcucIntegerParamDef
BSW Description	
Default Time-to-live value of outgoing ICMP packets.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config
BSW Parameter	**BSW Type**
TcpIpIpFragmentationConfig	EcucParamConfContainerDef
BSW Description	

Specifies the configuration parameters of IPv4 packet fragmentation/reassembly. This container may be referenced by multiple IPv4 instances if they shall use the same configuration. This container may have multiple instances if different configurations are required for different IPv4 instances.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIpFragmentationConfig

BSW Parameter	**BSW Type**
TcpIpIpFragmentationRxEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support for reassembling of incoming datagrams that are fragmented according to IETF RFC 815 (IP Datagram Reassembly Algorithms).	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIpFragmentationConfig

BSW Parameter	**BSW Type**
TcpIpIpNumFragments	EcucIntegerParamDef
BSW Description	
Specifies the maximum number of IP fragments per datagram. Note: this parameter is only relevant if TcpIpIpFragmentationRxEnabled is TRUE.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**

TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIpFragmentation Config

BSW Parameter	BSW Type
TcpIpIpNumReassDgrams	EcucIntegerParamDef

BSW Description

Specifies the maximum number of fragmented IP datagrams that can be reassembled in parallel.
Note: this parameter is only relevant if TcpIpIpFragmentationRxEnabled is TRUE.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV4Config/TcpIpIpFragmentation Config

BSW Parameter	BSW Type
TcpIpIpReassTimeout	EcucFloatParamDef

BSW Description

Specifies the timeout in [s] after which an incomplete datagram gets discarded.
Note: this parameter is only relevant if TcpIpIpFragmentationRxEnabled is TRUE.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig

BSW Parameter	BSW Type
TcpIpIpV6Config	EcucParamConfContainerDef

BSW Description

Specifies the configuration parameters of the IPv6 (Internet Protocol version 6) sub-module.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config

BSW Parameter	BSW Type
TcpIpDhcpV6Config	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the DHCPv6. This container may be referenced by multiple IPv6 instances if they shall use the same configuration. This container may have multiple instances if different configurations are required for different IPv6 instances.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpDhcpV6Config
BSW Parameter	**BSW Type**
TcpIpDhcpV6CnfDelayMax	EcucFloatParamDef
BSW Description	
Maximum delay (s) before sending the first Confirm message. If this value is bigger than the previous minimum delay value a random delay will be chosen from the interval.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpDhcpV6Config
BSW Parameter	**BSW Type**
TcpIpDhcpV6CnfDelayMin	EcucFloatParamDef
BSW Description	
Minimum delay (s) before the first Confirm message will be sent.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpDhcpV6Config	
BSW Parameter		**BSW Type**
TcpIpDhcpV6InfDelayMax		EcucFloatParamDef
BSW Description		
Maximum delay (s) before sending the first Information Request message. If this value is bigger than the previous minimum delay value a random delay will be chosen from the interval.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpDhcpV6Config	
BSW Parameter		**BSW Type**
TcpIpDhcpV6InfDelayMin		EcucFloatParamDef
BSW Description		
Minimum delay (s) before the first Information Request message will be sent.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpDhcpV6Config	
BSW Parameter		**BSW Type**
TcpIpDhcpV6SolDelayMax		EcucFloatParamDef
BSW Description		
Maximum delay (s) before sending the first Solicit message. If this value is bigger than the previous minimum delay value a random delay will be chosen from the interval.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpDhcpV6Config	
BSW Parameter		**BSW Type**
TcpIpDhcpV6SolDelayMin		EcucFloatParamDef

BSW Description	
Minimum delay (s) before the first Solicit message will be sent.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config
BSW Parameter	**BSW Type**
TcpIpIcmpV6Config	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the ICMPv6 (Internet Control Message Protocol for IPv6) sub-module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIcmpV6Config
BSW Parameter	**BSW Type**
TcpIpIcmpV6EchoReplyAvoidFragmentation	EcucBooleanParamDef
BSW Description	
If enabled, the stack will respond only to incoming ICMPv6 Echo Requests (Pings) that fit the MTU of the respective interface, i.e. can be transmitted without IPv6 fragmentation. Only relevant if TcpIpIcmpV6EchoReplyEnabled is enabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIcmpV6Config
BSW Parameter	**BSW Type**
TcpIpIcmpV6EchoReplyEnabled	EcucBooleanParamDef
BSW Description	
If enabled, the stack will respond to incoming ICMPv6 Echo Requests (Pings).	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIcmpV6Config	
BSW Parameter		**BSW Type**
TcpIpIcmpV6HopLimit		EcucIntegerParamDef
BSW Description		
Default Hop-Limit value of outgoing ICMPv6 packets.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIcmpV6Config	
BSW Parameter		**BSW Type**
TcpIpIcmpV6MsgDestinationUnreachableEnabled		EcucBooleanParamDef
BSW Description		
Dis/Enables transmission of Destination Unreachable Messages		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIcmpV6Config	
BSW Parameter		**BSW Type**
TcpIpIcmpV6MsgHandler		EcucParamConfContainerDef
BSW Description		
This container is a subcontainer of TcpIpIcmpConfig and specifies the configuration parameters for the ICMPv6 message handler.		
Template Description		
M2 Parameter		

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIcmpV6Config/TcpIpIcmpV6MsgHandler
BSW Parameter	**BSW Type**
TcpIpIcmpV6MsgHandlerName	EcucFunctionNameDef
BSW Description	
This parameter defines the name of the ICMP message handler function <Up_IcmpMsgHandler>.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIcmpV6Config
BSW Parameter	**BSW Type**
TcpIpIcmpV6MsgParameterProblemEnabled	EcucBooleanParamDef
BSW Description	
If enabled an ICMPv6 parameter problem message will be sent if a received packet has been dropped due to unknown options or headers that are found in the packet. [RFC2460 4. IPv6 Extension Headers]	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config
BSW Parameter	**BSW Type**
TcpIpIpV6ConfigExtHeaderFilter	EcucParamConfContainerDef
BSW Description	
This container describes the white list for the filtering of IPv6 extension headers, i.e. frames containing IPv6 extension headers not listed here shall be silently dropped.	
Template Description	
White list for the filtering of IPv6 extension headers.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::IPv6ExtHeaderFilterList	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00037

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIpV6ConfigExtHeaderFilter
BSW Parameter	**BSW Type**
TcpIpIpV6ConfigExtHeaderFilterEntry	EcucIntegerParamDef
BSW Description	
IPv6 Extension Header type allowed by this filter.	
Template Description	
IPv6 Extension Header type allowed by this filter.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::IPv6ExtHeaderFilterList.allowedIPv6ExtHeader	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00038

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config
BSW Parameter	**BSW Type**
TcpIpIpV6FragmentationConfig	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of IPv6 packet fragmentation/reassembly. This container may be referenced by multiple IPv6 instances if they shall use the same configuration. This container may have multiple instances if different configurations are required for different IPv6 instances.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIpV6FragmentationConfig
BSW Parameter	**BSW Type**
TcpIpIpV6ReassemblyBufferCount	EcucIntegerParamDef
BSW Description	

Number of buffers that can be used for fragment reassembly. In case of a reassembly error or if not all fragments are received in time this buffer will be blocked until the specified "Fragment Reassembly Timeout" has been exceeded. A value of 0 disables fragment reassembly. [RFC2460 5. Packet Size Issues] "In order to send a packet larger than a path's MTU, a node may use the IPv6 Fragment header to fragment the packet at the source and have it reassembled at the destination(s). However, the use of such fragmentation is discouraged in any application that is able to adjust its packets to fit the measured path MTU (i.e., down to 1280 octets)."
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIpV6FragmentationConfig

BSW Parameter	**BSW Type**
TcpIpIpV6ReassemblyBufferSize	EcucIntegerParamDef

BSW Description
[RFC2460 5. Packet Size Issues] "A node must be able to accept a fragmented packet that, after reassembly, is as large as 1500 octets. A node is permitted to accept fragmented packets that reassemble to more than 1500 octets."the measured path MTU (i.e., down to 1280 octets)."
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIpV6FragmentationConfig

BSW Parameter	**BSW Type**
TcpIpIpV6ReassemblySegmentCount	EcucIntegerParamDef

BSW Description
Specifies the maximum number of consecutive data segments that can be managed in each reassembly buffer. If all fragments are received in order, only one segment will be needed. To deal with fragments received out of order this value should be configured bigger than 1.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIpV6Fragmentation Config

BSW Parameter	**BSW Type**
TcpIpIpV6ReassemblyTimeout	EcucFloatParamDef

BSW Description

[RFC2460 4.5 Fragment Header]
Default: 60 seconds

Template Description

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpIpV6Fragmentation Config

BSW Parameter	**BSW Type**
TcpIpIpV6TxFragmentBufferCount	EcucIntegerParamDef

BSW Description

These buffers will be used if the IpV6 receives packets from the upper layer that do not fit into the MTU and thus must be fragmented.

A value of 0 disables tx fragmentation.

If the upper layer transmits packets that do not fit into the link or path MTU, the IpV6 will split-up the packet into fragments.

see "Enable Fragment Reassembly"

Template Description

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpNdpConfig
BSW Parameter	**BSW Type**
TcpIpNdpArNudConfig	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters for NDP Address Resolution and Neighbor Unreachability Detection.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpNdpConfig/TcpIpNdpArNudConfig

BSW Parameter	BSW Type
TcpIpNdpDefaultReachableTime	EcucFloatParamDef
BSW Description	
Configuration of the ReachableTime (s) specified in [RFC4861 6.3.2. Host Variables]. "The time a neighbor is considered reachable after receiving a reachability confirmation." If "TcpIpNdpDynamicReachableTimeEnabled" is checked, this value may be reconfigured based on received Router Advertisements. Default: REACHABLE_TIME = 30 seconds	
Template Description	
M2 Parameter

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpNdpConfig/TcpIpNdpArNudConfig

BSW Parameter	BSW Type
TcpIpNdpNeighborUnreachabilityDetectionEnabled	EcucBooleanParamDef

BSW Description

Neighbor Unreachability Detection is used to remove unused entries from the neighbor cache. This feature is a basic feature of NDP and should be turned on.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpNdpConfig/TcpIpNdpArNudConfig

BSW Parameter	BSW Type
TcpIpNdpNumMulticastSolicitations	EcucIntegerParamDef

BSW Description

Maximum number of multicast solicitations that will be sent when performing address resolution.

[RFC4861 7.2.2. Sending Neighbor Solicitations]

Default: MAX_MULTICAST_SOLICIT = 3

Template Description

M2 Parameter

BSW Parameter	**BSW Type**
TcpIpNdpMaxRtrSolicitationDelay	EcucFloatParamDef

BSW Description

Maximum delay before the first Router Solicitation will be sent after interface initialization in (s).

[RFC4861 6.3.7. Sending Router Solicitations]

Default: MAX_RTR_SOLICITATION_DELAY = 1 second

Template Description

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpNdpConfig/TcpIpNdpPrefixRouterDiscoveryConfig

BSW Parameter	**BSW Type**
TcpIpNdpMaxRtrSolicitations	EcucIntegerParamDef

BSW Description

Maximum number of Router Solicitations that will be sent before the first Router Advertisement has been received.

0 = No Router Solicitations will be sent.
This has no impact on handling Router Advertisements.

[RFC4861 6.3.7. Sending Router Solicitations]

Default: MAX_RTR_SOLICITATIONS = 3 transmissions

Template Description

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpIpConfig/TcpIpIpV6Config/TcpIpNdpConfig/TcpIpNdpPrefixRouterDiscoveryConfig
BSW Parameter	**BSW Type**
TcpIpNdpPrefixList	EcucParamConfContainerDef
BSW Description	
Specifies a list of prefixes to be treated as "on-link" according to IETF RFC 4861 Section 5.1.	
Template Description	
Internet Protocol version 6 (IPv6) configuration.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6Configuration	
Mapping Rule	**Mapping Type**
A distinct list of all prefixes used within the same local network shall be retrieved for the respective ECU configuration. This can be achieved by following all socket connections of this ECU, identify the communication partners and their NetworkEndPoint elements via the ApplicationEndpoint references, retrieve the prefixes of NetworkEndPoint/Ipv6Configuration/ipAddressPrefixLength and NetworkEndPoint/Ipv6Configuration/ipv6Address and create a distinct list of them.	full

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr
BSW Parameter	**BSW Type**
TcpIpDomainType	EcucEnumerationParamDef
BSW Description	
Address family.	
Template Description	
To build a valid network endpoint address there has to be either one MAC multicast group reference or an ipv4 configuration or an ipv6 configuration.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::NetworkEndpointAddress	
Mapping Rule	**Mapping Type**
Derive this parameter from the NetworkEndpointAddress.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00006

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr/TcpIpDomainType
BSW Parameter	**BSW Type**
TCPIP_AF_INET	EcucEnumerationLiteralDef
BSW Description	
IPv4 address	
Template Description	

Internet Protocol version 4 (IPv4) configuration.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4Configuration	
Mapping Rule	**Mapping Type**
Set literal to TCPIP_AF_INETwhen the NetworkEndpoint contains an Ipv4Configuration.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00051

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr/TcpIpDomainType
BSW Parameter	**BSW Type**
TCPIP_AF_INET6	EcucEnumerationLiteralDef
BSW Description	
IPv6 address	
Template Description	
Internet Protocol version 6 (IPv6) configuration.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6Configuration	
Mapping Rule	**Mapping Type**
Set literal to TCPIP_AF_INET6 when the NetworkEndpoint contains an Ipv6 Configuration.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00050

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr
BSW Parameter	**BSW Type**
TcpIpLocalAddrIPv6ExtHeaderFilterRef	EcucReferenceDef
BSW Description	
Reference to a set of IPv6 Extension Headers which are allowed for this local IPv6 address. Note: this parameter is only relevant if the related TcpIpDomainType is TCPIP_AF_INET6.	
Template Description	
Reference to a list of IPv6 Extension Headers allowed for this SocketConnection. If no list is referenced all IPv6 Extension Headers are allowed and processed.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnection.allowedIPv6 ExtHeaders	
Mapping Rule	**Mapping Type**
1:1 mapping. constraint: All related SocketConnections shall reference either no or exactly the same IPv6ExtHeaderFilterList.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00039

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr
BSW Parameter	**BSW Type**
TcpIpStaticIpAddressConfig	EcucParamConfContainerDef
BSW Description	
This container is a subcontainer of TcpIpLocalAddr and specifies a static IP address including directly related parameters.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr/TcpIpStaticIpAddressConfig	
BSW Parameter		**BSW Type**
TcpIpDefaultRouter		EcucStringParamDef
BSW Description		
IP address of default router (gateway)		
Template Description		
Ipv6Configuration.defaultRouter: IP address of the default router. **Ipv4Configuration.defaultGateway**: IP address of the default gateway.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6Configuration.defaultRouter,SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4Configuration.defaultGateway		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_TcpIp_00009

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr/TcpIpStaticIpAddressConfig	
BSW Parameter		**BSW Type**
TcpIpNetmask		EcucIntegerParamDef
BSW Description		
Network mask of IPv4 address or address prefix of IPv6 address in CIDR Notation, i.e. decimal value between 0 and 32 (IPv4) or 0 and 128 (IPv6) that describes the number of significant bits defining the network number or prefix of an IP address.		
Template Description		
Ipv4Configuration.networkMask: Network mask. Notation 255.255.255.255 **Ipv6Configuration.ipAddressPrefixLength**: IPv6 prefix length defines the part of the IPv6 address that is the network prefix.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4Configuration.networkMask,SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6Configuration.ipAddressPrefixLength		
Mapping Rule		**Mapping Type**
- 1:1 mapping for Ipv6 - conversion to CIDR notation for Ipv4		full
Mapping Status		**Mapping ID**
valid		up_TcpIp_00007

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpLocalAddr/TcpIpStaticIpAddressConfig	
BSW Parameter		**BSW Type**
TcpIpStaticIpAddress		EcucStringParamDef
BSW Description		
Static IP Address. To specify any IP address for a certain EthIfCtrl, "ANY" has to be set as wildcard. See TcpIp_Bind() for more details.		
Template Description		
Ipv4Configuration.ipv4Address: IPv4 Address. Notation: 255.255.255.255. The IP Address shall be declared in case the ipv4AddressSource is FIXED and thus no auto-configuration mechanism is used. **Ipv6Configuration.ipv6Address**: IPv6 Address. Notation: FFFF:...:FFFF. The IP Address shall be declared in case the ipv6AddressSource is FIXED and thus no auto-configuration mechanism is used.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv4Configuration.ipv4Address,SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::Ipv6Configuration.ipv6Address		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_TcpIp_00008

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig	
BSW Parameter		**BSW Type**
TcpIpNvmBlock		EcucParamConfContainerDef
BSW Description		
Configuration of optional usage of Nvm in case the TcpIp module requires non volatile memory in the Ecu to store information (e.g. IP Address received via DHCP and shall be stored).		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpNvmBlock	
BSW Parameter		**BSW Type**
TcpIpNvmBlockDescriptorRef		EcucReferenceDef
BSW Description		
Reference to the Nvm block description in the Nvm module configuration.		
Template Description		
M2 Parameter		

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig
BSW Parameter	**BSW Type**
TcpIpPhysAddrConfig	EcucParamConfContainerDef
BSW Description	
Specifies the physical address configuration.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpPhysAddrConfig
BSW Parameter	**BSW Type**
TcpIpPhysAddrChgHandler	EcucParamConfContainerDef
BSW Description	
This container is a subcontainer of TcpIpPhysAddrConfig and specifies the configuration parameters for physical address change handler.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpPhysAddrConfig/TcpIpPhysAddrChgHandler
BSW Parameter	**BSW Type**
TcpIpPhysAddrChgHandlerName	EcucFunctionNameDef
BSW Description	
This parameter defines the name of the physical address change function <Up>_PhysAddrTableChg.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig
BSW Parameter	**BSW Type**
TcpIpSocketOwnerConfig	EcucParamConfContainerDef
BSW Description	
Specifies the upper layer modules of TcpIp using the socket API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig
BSW Parameter	**BSW Type**
TcpIpSocketOwner	EcucParamConfContainerDef
BSW Description	
This container is a subcontainer of TcpIpSocketOwnerConfig and specifies an upper layer of TcpIp that uses the socket API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner
BSW Parameter	**BSW Type**
TcpIpSocketOwnerCopyTxDataName	EcucStringParamDef
BSW Description	
This parameter defines the name of the <Up_CopyTxData> function of the TcpIpSocketOwner module. The function name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner

BSW Parameter	BSW Type
TcpIpSocketOwnerHeaderFileName	EcucStringParamDef
BSW Description	
This parameter specifies the name of the header file containing the definition of the TcpIpSocketOwner module functions. The header file name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner
BSW Parameter	**BSW Type**
TcpIpSocketOwnerLocalIpAddrAssignmentChgName	EcucStringParamDef
BSW Description	
This parameter defines the name of the <Up_LocalIpAddrAssignmentChg> function of the TcpIpSocketOwner module. The function name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner
BSW Parameter	**BSW Type**
TcpIpSocketOwnerRxIndicationName	EcucStringParamDef
BSW Description	
This parameter defines the name of the <Up_RxIndication> function of the TcpIpSocketOwner module. The function name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner	
BSW Parameter		**BSW Type**
TcpIpSocketOwnerTcpAcceptedName		EcucStringParamDef
BSW Description		
This parameter defines the name of the <Up_TcpAccepted> function of the TcpIpSocketOwner module. The function name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner	
BSW Parameter		**BSW Type**
TcpIpSocketOwnerTcpConnectedName		EcucStringParamDef
BSW Description		
This parameter defines the name of the <Up_TcpConnected> function of the TcpIpSocketOwner module. The function name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner	
BSW Parameter		**BSW Type**
TcpIpSocketOwnerTcpIpEventName		EcucFunctionNameDef
BSW Description		
This parameter defines the name of the <Up_TcpIpEvent> function of the TcpIpSocketOwner module. The function name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner	
BSW Parameter		**BSW Type**
TcpIpSocketOwnerTxConfirmationName		EcucStringParamDef
BSW Description		
This parameter defines the name of the <Up_TxConfirmation> function of the TcpIpSocketOwner module. The function name shall only be configurable if TcpIpSocketOwnerUpperLayerType is set to CDD.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpSocketOwnerConfig/TcpIpSocketOwner	
BSW Parameter		**BSW Type**
TcpIpSocketOwnerUpperLayerType		EcucEnumerationParamDef
BSW Description		
This parameter specifies the type of the upper layer module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig	
BSW Parameter		**BSW Type**
TcpIpTcpConfig		EcucParamConfContainerDef
BSW Description		
Specifies the configuration parameters of the TCP (Transmission Control Protocol) sub-module.		
Template Description		
Content Model for TCP configuration.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::TcpTp		
Mapping Rule		**Mapping Type**
This container shall be created if the TcpTp element is used in the ECU Extract.		full
Mapping Status		**Mapping ID**
valid		up_TcpIp_00002

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig	
BSW Parameter		**BSW Type**

TcpIpTcpConfigOptionFilter	EcucParamConfContainerDef
BSW Description	
This container describes the white list for the filtering of TCP options, i.e. segments containing TCP options not listed here shall be silently dropped.	
Template Description	
White list for the filtering of TCP options.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::TcpOptionFilterList	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00040

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig/TcpIpTcpConfigOptionFilter
BSW Parameter	**BSW Type**
TcpIpTcpConfigOptionFilterEntry	EcucIntegerParamDef
BSW Description	
TCP option kind allowed by this filter.	
Template Description	
TCP option kind allowed by this filter.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::TcpOptionFilterList.allowedTcpOption	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00042

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig/TcpIpTcpConfigOptionFilter
BSW Parameter	**BSW Type**
TcpIpTcpConfigOptionFilterId	EcucIntegerParamDef
BSW Description	
Identification of the TCP option filter.	
Template Description	
TCP option kind allowed by this filter.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::TcpOptionFilterList.allowedTcpOption	
Mapping Rule	**Mapping Type**
The list of allowedTcpOptions in TcpOptionFilterList is ordered. The Id of an entry can be derived from the order.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00041

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpCongestionAvoidanceEnabled	EcucBooleanParamDef

BSW Description	
Enables (TRUE) or disables (FALSE) support of TCP congestion avoidance algorithm according to IETF RFC 5681.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpFastRecoveryEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support of TCP Fast Recovery according to IETF RFC 5681.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpFastRetransmitEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support of TCP Fast Retransmission according to IETF RFC 5681.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpFinWait2Timeout	EcucFloatParamDef
BSW Description	

Timeout in [s] to receive a FIN from the remote node (after this node has initiated connection termination), i.e. maximum time waiting in FINWAIT-2 for a connection termination request from the remote TCP.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig

BSW Parameter	**BSW Type**
TcpIpTcpKeepAliveEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) TCP Keep Alive Probes according to IETF RFC 1122 chapter 4.2.3.6	
Template Description	
Indicates if Keep-Alive messages are send.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::TcpTp.keepAlives	

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00004

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig

BSW Parameter	**BSW Type**
TcpIpTcpKeepAliveInterval	EcucFloatParamDef
BSW Description	
Specifies the interval in [s] between subsequent keepalive probes.	
Template Description	
Specifies the interval in seconds between subsequent keepalive probes.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::TcpTp.keepAliveInterval	

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00022

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig

BSW Parameter	**BSW Type**
TcpIpTcpKeepAliveProbesMax	EcucIntegerParamDef
BSW Description	
Maximum number of times that a TCP Keep Alive is retransmitted before the connection is closed.	
Template Description	

Maximum number of times that TCP retransmits an individual data segment before aborting the connection.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::TcpTp.keepAliveProbesMax	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00023

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpKeepAliveTime	EcucFloatParamDef
BSW Description	
Specifies the time in [s] between the last data packet sent (simple ACKs are not considered data) and the first keepalive probe. Note: Setting this configuration parameter to a value smaller or equal to the value of TcpIpMainFunctionPeriod results in the transmission of keep alive probes within every MainFunction cycle.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpMaxRtx	EcucIntegerParamDef
BSW Description	
Maximum number of times that a TCP segment is retransmitted before the TCP connection is closed. This parameter is only valid if TcpIpTcpRetransmissionTimeout is configured. Note: This parameter also applies for FIN retransmissions.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpMsl	EcucFloatParamDef
BSW Description	

Maximum segment lifetime in [s]. (Note: TIME-WAIT = 2 x TcpIpTcpMsl - to ensure that the remote node received the acknowledgment to its connection termination request.)
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig

BSW Parameter	**BSW Type**
TcpIpTcpNagleEnabled	EcucBooleanParamDef

BSW Description
Enables (TRUE) or disables (FALSE) support of Nagle's algorithm according to IETF RFC 896. If enabled the Nagle's algorithm is activated per default for all TCP sockets, but can be deactivated via TcpIp_ChangeParameter() API.
Template Description
Indicates if Nagle's Algorithm is used.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::TcpTp.naglesAlgorithm

Mapping Rule	**Mapping Type**
If at least one of the TcpTp.naglesAlgorithm per ApplicationEndpoint is set to true, the parameter shall be set to true. If all of the TcpTp.naglesAlgorithm per ApplicationEndpoint are set to false, the parameter shall be set to false.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00003

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig

BSW Parameter	**BSW Type**
TcpIpTcpReceiveWindowMax	EcucIntegerParamDef

BSW Description
Default value of maximum receive window in bytes.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig

BSW Parameter	**BSW Type**

TcpIpTcpRetransmissionTimeout	EcucFloatParamDef
BSW Description	
Timeout in [s] before an unacknowledged TCP segment is sent again. If the timeout is disabled or set to INF, no TCP segments shall be retransmitted.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpSlowStartEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support of TCP slow start algorithm according to IETF RFC 5681.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpSynMaxRtx	EcucIntegerParamDef
BSW Description	
Maximum number of times that a TCP SYN is retransmitted. Note: SYN will be retried after TcpIpTcpRetransmissionTimeout. The connection will be dropped if no matching connection request has been received after the last TCP SYN has been sent and TcpIpTcpRetransmissionTimeout has been expired.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**

TcpIpTcpSynReceivedTimeout	EcucFloatParamDef
BSW Description	
Timeout in [s] to complete a remotely initiated TCP connection establishment, i.e. maximum time waiting in SYN-RECEIVED for a confirming connection request acknowledgment after having both received and sent a connection request.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTcpConfig
BSW Parameter	**BSW Type**
TcpIpTcpTtl	EcucIntegerParamDef
BSW Description	
Default Time-to-live value of outgoing TCP packets.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig
BSW Parameter	**BSW Type**
TcpIpTlsConfig	EcucParamConfContainerDef
BSW Description	
Specifies the configuration parameters of the TLS (Transport Layer Security) sub module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig
BSW Parameter	**BSW Type**
TcpIpTlsCiphersuites	EcucParamConfContainerDef
BSW Description	
This container provides the information about supported ciphersuites used by TLS.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites	
BSW Parameter		**BSW Type**
TcpIpTlsCertificateIdentity		EcucParamConfContainerDef
BSW Description		
This container provides information about the certificates used for ciphersuites.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCertificate Identity	
BSW Parameter		**BSW Type**
TcpIpTlsCipherKeyMLocalCertificate		EcucReferenceDef
BSW Description		
Reference to a KeyM certificate used to address the local certificate.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCertificate Identity	
BSW Parameter		**BSW Type**
TcpIpTlsCipherKeyMRemoteCertificate		EcucReferenceDef
BSW Description		
Reference to KeyM certificate container to reference the remote certificate.		
Template Description		
M2 Parameter		

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCertificateIdentity

BSW Parameter	**BSW Type**
TcpIpTlsServerNameIdentification	EcucStringParamDef

BSW Description
Defines a server identification name. If present, the name will be added as an extension with the "TLS client hello" handshake message. The TLS server will check for the name to identify the server certificate.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites

BSW Parameter	**BSW Type**
TcpIpTlsCiphersuiteDefinition	EcucParamConfContainerDef

BSW Description
This container provides the static information of a ciphersuite used by TLS.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuiteDefinition

BSW Parameter	**BSW Type**
TcpIpTlsCiphersuiteId	EcucIntegerParamDef

BSW Description
ID that represents the ciphersuite according to IETF, e.g. RFC4492, Sect. 6, RFC8446, Appendix B.4 or RFC5246, Appendix A.5.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Definition
BSW Parameter	**BSW Type**
TcpIpTlsCiphersuiteName	EcucStringParamDef
BSW Description	
Provides a verbal name for the ciphersuite. The name should be the one defined in the respective RFC, e.g. TLS_ECDHE_ECDSA_WITH_AES_128_CBC_SHA256 (TLS 1.2) or TLS_AES_128_GCM_SHA256 (TLS 1.3)	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Definition
BSW Parameter	**BSW Type**
TcpIpTlsCiphersuitePriority	EcucIntegerParamDef
BSW Description	
Defines the priority of the cipher. The higher the number the lower the priority.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Definition
BSW Parameter	**BSW Type**
TcpIpTlsUseAEADCipher	EcucBooleanParamDef
BSW Description	
Specifies if the ciphersuite supports AEAD for data en-/decryption.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Definition
BSW Parameter	**BSW Type**
TcpIpTlsUsePresharedKeys	EcucBooleanParamDef
BSW Description	
Defines if this ciphersuite uses pre-shared keys. If so, additional configuration or callbacks will be used for pre-shared key negotiation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Definition
BSW Parameter	**BSW Type**
TcpIpTlsUseSecurityExtensionForceMacThenHash	EcucBooleanParamDef
BSW Description	
Defines if the security extension according to IETF RFC 7366 shall be supported. This is useful for ciphersuites using CBC mode.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Definition
BSW Parameter	**BSW Type**
TcpIpTlsVersion	EcucEnumerationParamDef
BSW Description	
Declares the TLS version that this ciphersuite shall be used for.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites
BSW Parameter	**BSW Type**
TcpIpTlsCiphersuiteWorker	EcucParamConfContainerDef
BSW Description	
This container provides the jobs and keys necessary for TLS data transmission and reception.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker
BSW Parameter	**BSW Type**
TcpIpTlsCipherAEADCipherKeyLength	EcucIntegerParamDef
BSW Description	
Defines the key length for en- / decryption with authentication data (AEAD).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker
BSW Parameter	**BSW Type**
TcpIpTlsCipherCsmDecryptJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform the data decryption operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker

BSW Parameter	BSW Type
TcpIpTlsCipherCsmDecryptKeyRef	EcucReferenceDef

BSW Description
Reference to a CSM key associated to the CSM job that performs the data decryption operation

Template Description

M2 Parameter

Mapping Rule	Mapping Type

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker

BSW Parameter	BSW Type
TcpIpTlsCipherCsmEncryptJobRef	EcucReferenceDef

BSW Description
Reference to a CSM job to perform the data encryption operation

Template Description

M2 Parameter

Mapping Rule	Mapping Type

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker

BSW Parameter	BSW Type
TcpIpTlsCipherCsmEncryptKeyRef	EcucReferenceDef

BSW Description
Reference to a CSM key associated to the CSM job that performs the data encryption operation

Template Description

M2 Parameter

Mapping Rule	Mapping Type

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker
BSW Parameter	**BSW Type**
TcpIpTlsCipherCsmMacGenerateJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform the MAC generate operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker
BSW Parameter	**BSW Type**
TcpIpTlsCipherCsmMacGenerateKeyRef	EcucReferenceDef
BSW Description	
Reference to a CSM key associated to the CSM job that performs the MAC generate operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker
BSW Parameter	**BSW Type**
TcpIpTlsCipherCsmMacVerifyJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform the MAC verify operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker

BSW Parameter	BSW Type
TcpIpTlsCipherCsmMacVerifyKeyRef	EcucReferenceDef

BSW Description
Reference to a CSM key associated to the CSM job that performs the MAC verify operation

Template Description

M2 Parameter

Mapping Rule	Mapping Type

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker

BSW Parameter	BSW Type
TcpIpTlsCipherEncryptKeyLength	EcucIntegerParamDef

BSW Description
Defines the key length used for en- or decryption. The key length is valid for (symmetric) encryption and decryption.

Template Description

M2 Parameter

Mapping Rule	Mapping Type

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker

BSW Parameter	BSW Type
TcpIpTlsCipherMacKeyLength	EcucIntegerParamDef

BSW Description
Specifies the length of the MAC key

Template Description

M2 Parameter

Mapping Rule	Mapping Type

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuite Worker

BSW Parameter	BSW Type
TcpIpTlsCiphersuiteDefinitionRef	EcucReferenceDef
BSW Description	
Reference to a a ciphersuite definition container	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsCiphersuiteWorker
BSW Parameter	**BSW Type**
TcpIpTlsConnectionHandshakeRef	EcucReferenceDef
BSW Description	
References the container that contains the jobs and keys for handshake operation. Referencing multiple handshake containers allow to share them between workers and to choose the next unused during the handshake.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites
BSW Parameter	**BSW Type**
TcpIpTlsHandshake	EcucParamConfContainerDef
BSW Description	
This container provides information that is needed to process a handshake. It contains the appropriate references to jobs and keys of the CSM to perform the key exchange cryptographic for the ciphersuite and involved certificates.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake

BSW Parameter	BSW Type
TcpIpTlsCsmHashVerifyJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform the hash operation for the whole handshake.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeCalcPubValJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform the DH Key Exchange algorithm operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeCalcSecretJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform the Key Exchange algorithm operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeDecryptJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform data decryption, e.g. with RSA key exchange operation.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeDecryptKeyRef	EcucReferenceDef
BSW Description	
Reference to a CSM key to perform data decryption, e.g. with RSA, used for exchange operation.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeEncryptJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform data encryption, e.g. with RSA key exchange operation.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeEncryptKeyRef	EcucReferenceDef
BSW Description	
Reference to a CSM key to perform data encryption, e.g. with RSA, used for exchange operation.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeKeyRef	EcucReferenceDef
BSW Description	
Reference to a CSM key used for Diffie Hellman (DH) key exchange operation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeSignatureGenerateJobRef	EcucReferenceDef
BSW Description	
Reference to a CSM job to perform signature generation for DH operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake
BSW Parameter	**BSW Type**
TcpIpTlsCsmKeyExchangeSignatureGenerateKeyRef	EcucReferenceDef
BSW Description	
Reference to a CSM key to perform signature generation for DH operation	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context

TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake	
BSW Parameter		**BSW Type**
TcpIpTlsCsmKeyExchangeSignatureVerifyJobRef		EcucReferenceDef
BSW Description		
Reference to a CSM job to perform signature verification for DH operation		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake	
BSW Parameter		**BSW Type**
TcpIpTlsCsmKeyExchangeSignatureVerifyKeyRef		EcucReferenceDef
BSW Description		
Reference to a CSM key to perform signature verification for DH operation		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake	
BSW Parameter		**BSW Type**
TcpIpTlsCsmMasterSecretKeyRef		EcucReferenceDef
BSW Description		
This is the reference to the master key that is calculated during the session.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake	
BSW Parameter		**BSW Type**
TcpIpTlsCsmPRFSupportType		EcucEnumerationParamDef
BSW Description		
Specifies how the CSM job supports the PRF operation.		

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake	
BSW Parameter		**BSW Type**
TcpIpTlsCsmPrfMacJobRef		EcucReferenceDef
BSW Description		
Reference to a CSM job to perform the PRF hash operation		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsHandshake	
BSW Parameter		**BSW Type**
TcpIpTlsCsmPrfMacKeyRef		EcucReferenceDef
BSW Description		
Reference to a CSM key associated to the CSM job that performs the PRF hash operation		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites	
BSW Parameter		**BSW Type**
TcpIpTlsPskIdentity		EcucParamConfContainerDef
BSW Description		
This container provides information about static definition of pre-shared keys. It is used during the handshake to negotiate pre-shared keys between a client and a server. Note: The callbacks for pre-shared keys are an alternative to the static definition. The callbacks allow to define the associated keys at runtime if pre-shared keys are used but no static definition is available. The container definition is used for static configuration.		
Template Description		

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsPskIdentity
BSW Parameter	**BSW Type**
TcpIpTlsPresharedKeyCsmKeyRef	EcucReferenceDef
BSW Description	
Reference to a CSM key associated to the CSM job that performs the PRF hash operation	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsPskIdentity
BSW Parameter	**BSW Type**
TcpIpTlsPresharedKeyIdentity	EcucStringParamDef
BSW Description	
This item provides the key identification. The TLS client selects the pre-shared key based on the identification hint provided by the server and returns the key identification name back to the server.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsPskIdentity
BSW Parameter	**BSW Type**
TcpIpTlsPresharedKeyIdentityHint	EcucStringParamDef
BSW Description	
Provides the identity hint for a pre-shared key. This information is transmitted by the TLS Server to provide its identification to the TLS client. The TLS client uses the same information to select the pre-shared key.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsPskIdentity
BSW Parameter	**BSW Type**
TcpIpTlsPskGetClientKeyIdentityFunc	EcucFunctionNameDef
BSW Description	
Defines the function name for the Up_TlsClientGetPskIdentity() callback.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsPskIdentity
BSW Parameter	**BSW Type**
TcpIpTlsPskGetKeyIdentyHintFunc	EcucFunctionNameDef
BSW Description	
Defines the function name for the Up_TlsServerGetPskIdentityHint() callback.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsCiphersuites/TcpIpTlsPskIdentity
BSW Parameter	**BSW Type**
TcpIpTlsPskGetServerKeyIdentityFunc	EcucFunctionNameDef
BSW Description	
Defines the function name for the Up_TlsServerGetPskIdentity () callback.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig	
BSW Parameter		**BSW Type**
TcpIpTlsConnection		EcucParamConfContainerDef
BSW Description		
This container defines the properties of a TLS connection		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection	
BSW Parameter		**BSW Type**
TcpIpTlsCertificateIdentityRef		EcucReferenceDef
BSW Description		
References the container that contains the certificate and identity information.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection	
BSW Parameter		**BSW Type**
TcpIpTlsConnectionCiphersuiteWorkerRef		EcucReferenceDef
BSW Description		
References the container that contains the jobs and keys to process the application data.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection	
BSW Parameter		**BSW Type**
TcpIpTlsConnectionGetTimeFunc		EcucFunctionNameDef
BSW Description		

Defines the function name for the Up_TlsGetCurrentTimeStamp() callback.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection
BSW Parameter	**BSW Type**
TcpIpTlsConnectionGroupRef	EcucReferenceDef
BSW Description	
Assigns the TLS connection to a connection group.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection
BSW Parameter	**BSW Type**
TcpIpTlsConnectionId	EcucIntegerParamDef
BSW Description	
Identifier of the connection. The set of configured identifiers shall be consecutive and gapless.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection
BSW Parameter	**BSW Type**
TcpIpTlsConnectionPskIdentityRef	EcucReferenceDef
BSW Description	
References the container that contains information about pre-shared keys.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection
BSW Parameter	**BSW Type**
TcpIpTlsConnectionType	EcucEnumerationParamDef
BSW Description	
Specifies if the TLS connection is a server or a client.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection
BSW Parameter	**BSW Type**
TcpIpTlsIpAddressAssignment	EcucReferenceDef
BSW Description	
Contains additional information about the endpoint IP address information. If this reference is present, the IP address of the connecting socket shall also be checked if a TLS connection shall be assigned automatically to a socket.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection
BSW Parameter	**BSW Type**
TcpIpTlsMaxFragmentLength	EcucIntegerParamDef
BSW Description	
Specifies the max length in bytes of a TLS fragment that is sent as a block.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection	
BSW Parameter		**BSW Type**
TcpIpTlsPortAssignment		EcucIntegerParamDef
BSW Description		
Specifies the port address that is used for TLS communication.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection	
BSW Parameter		**BSW Type**
TcpIpTlsUseClientAuthenticationRequest		EcucBooleanParamDef
BSW Description		
Defines if client authentication shall be applied for this TLS connection.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig/TcpIpTlsConnection	
BSW Parameter		**BSW Type**
TcpIpTlsUseSecurityExtensionRecordSizeLimit		EcucBooleanParamDef
BSW Description		
Defines if the security extension for max_fragment_length shall be supported as defined in IETF RFC 8449, chapter 4.1.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context

TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig	
BSW Parameter		**BSW Type**
TcpIpTlsConnectionGroup		EcucParamConfContainerDef
BSW Description		
This optional container is used to collect all TlsConnections that belong to a TlsConnectionGroup. The intention of a TLS connection group is to share resources among TLS connections collected in a group, because only one connection of a group can be used at a time.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig	
BSW Parameter		**BSW Type**
TcpIpTlsCsmRandomGenerateJobRef		EcucReferenceDef
BSW Description		
Reference to a CSM job to generate a random value.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig/TcpIpTlsConfig	
BSW Parameter		**BSW Type**
TcpIpTlsMaxConnections		EcucIntegerParamDef
BSW Description		
Defines the max. number of TLS connections that can be opened at the same time.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
TcpIp	TcpIp/TcpIpConfig	
BSW Parameter		**BSW Type**
TcpIpUdpConfig		EcucParamConfContainerDef

BSW Description	
Specifies the configuration parameters of the UDP (User Datagram Protocol) sub-module	
Template Description	
Content Model for UDP configuration.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::UdpTp	
Mapping Rule	**Mapping Type**
This container shall be created if the UdpTp element is used in the ECU Extract.	full
Mapping Status	**Mapping ID**
valid	up_TcpIp_00001

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpConfig/TcpIpUdpConfig
BSW Parameter	**BSW Type**
TcpIpUdpTtl	EcucIntegerParamDef
BSW Description	
Default Time-to-live value of outgoing UDP packets.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp
BSW Parameter	**BSW Type**
TcpIpGeneral	EcucParamConfContainerDef
BSW Description	
This container is a subcontainer of TcpIp and specifies the general configuration parameters of the TCP/IP stack.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpBufferMemory	EcucIntegerParamDef
BSW Description	
Memory size in bytes reserved for TCP/IP buffers.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpDhcpServerEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) the DHCP (Dynamic Host Configuration Protocol) Server.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpGetAndResetMeasurementDataApi	EcucBooleanParamDef
BSW Description	
Enables / Disables the Get and Reset Measurement Data API	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpIpV4General	EcucParamConfContainerDef
BSW Description	
This container is a subcontainer of TcpIp and specifies the general configuration parameters of the TCP/IP stack for IPv4	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV4General
BSW Parameter	**BSW Type**
TcpIpArpEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support of ARP (Address Resolution Protocol).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV4General
BSW Parameter	**BSW Type**
TcpIpAutoIpEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) the Auto-IP (automatic private IP addressing) sub-module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV4General	
BSW Parameter		**BSW Type**
TcpIpDhcpClientEnabled		EcucBooleanParamDef
BSW Description		
Enables (TRUE) or disables (FALSE) the DHCP (Dynamic Host Configuration Protocol) Client.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV4General	
BSW Parameter		**BSW Type**
TcpIpIcmpEnabled		EcucBooleanParamDef
BSW Description		
Enables (TRUE) or disabled (FALSE) support of ICMP (Internet Control Message Protocol).		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV4General	
BSW Parameter		**BSW Type**
TcpIpIpV4Enabled		EcucBooleanParamDef
BSW Description		
Enables (TRUE) or disables (FALSE) support of IPv4 (Internet Protocol version 4).		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV4General	
BSW Parameter		**BSW Type**
TcpIpLocalAddrIpv4EntriesMax		EcucIntegerParamDef
BSW Description		

Maximum number of LocalAddr table entries for IPv4.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV4General
BSW Parameter	**BSW Type**
TcpIpPathMtuDiscoveryEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) the discovery of the maximum transmission unit on a path according to IETF RfC 1191.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpIpV6General	EcucParamConfContainerDef
BSW Description	
This container is a subcontainer of TcpIp and specifies the general configuration parameters of the TCP/IP stack for IPv6.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV6General
BSW Parameter	**BSW Type**
TcpIpDhcpV6ClientEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) the DHCPv6 (Dynamic Host Configuration Protocol for IPv6) Client.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV6General
BSW Parameter	**BSW Type**
TcpIpIpV6Enabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support of IPv6 (Internet Protocol version 6).	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV6General
BSW Parameter	**BSW Type**
TcpIpIpV6PathMtuDiscoveryEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) Path MTU Discovery support for IPv6 according to IETF RFC 1981.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV6General
BSW Parameter	**BSW Type**
TcpIpLocalAddrIpv6EntriesMax	EcucIntegerParamDef
BSW Description	
Maximum number of LocalAddr table entries for IPv6.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV6General
BSW Parameter	**BSW Type**
TcpIpNdpAddressResolutionUnrechabilityDetection Enabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support of Address Resoultion and Neighbor Unreachability Detetion via NDP.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral/TcpIpIpV6General
BSW Parameter	**BSW Type**
TcpIpNdpPrefixAndRouterDiscoveryEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disables (FALSE) support of Prefix and Router Discovery via NDP.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Period of TcpIp_MainFunction in [s].	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral	
BSW Parameter		**BSW Type**
TcpIpResetIpAssignmentApi		EcucBooleanParamDef
BSW Description		
Enables/disables the API TcpIp_ResetIpAssignment of a DHCP-client.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral	
BSW Parameter		**BSW Type**
TcpIpScalabilityClass		EcucEnumerationParamDef
BSW Description		
In order to customize the TcpIp Stack to the specific needs of the user it can be scaled according to the scalability classes.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral	
BSW Parameter		**BSW Type**
TcpIpTcpEnabled		EcucBooleanParamDef
BSW Description		
Enables (TRUE) or disabled (FALSE) support of TCP (Transmission Control Protocol).		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
TcpIp	TcpIp/TcpIpGeneral	
BSW Parameter		**BSW Type**
TcpIpTcpSocketMax		EcucIntegerParamDef

BSW Description	
Maximum number of TCP sockets	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpUdpEnabled	EcucBooleanParamDef
BSW Description	
Enables (TRUE) or disabled (FALSE) support of UDP (User Datagram Protocol)	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpUdpSocketMax	EcucIntegerParamDef
BSW Description	
Maximum number of UDP sockets.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
TcpIp	TcpIp/TcpIpGeneral
BSW Parameter	**BSW Type**
TcpIpVersionInfoApi	EcucBooleanParamDef
BSW Description	
If true the TcpIp_GetVersionInfo API is available.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

C.6.9 DoIP

BSW Module	**BSW Context**
DoIP	DoIP
BSW Parameter	**BSW Type**
DoIPConfigSet	EcucParamConfContainerDef
BSW Description	
This container contains the configuration parameters and sub containers of the AUTOSAR DoIP module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet
BSW Parameter	**BSW Type**
DoIPChannel	EcucParamConfContainerDef
BSW Description	
Configuration of one DoIPChannel.	
Template Description	
A connection identifies the sender and the receiver of this particular communication. The DoIp module routes a tpSdu through this connection.	
M2 Parameter	
SystemTemplate::DiagnosticConnection::DoIpTpConnection	
Mapping Rule	**Mapping Type**
One DoIPChannel container is created for each DoIP channel of the configured EcuInstance. A DoIP channel is constituted by the set of all DoIpTpConnection elements via which the configured EcuInstance sends or receives SDUs (SDUs are referenced by the PduTriggering DoIpTpConnection.tpSdu refers to) and that share the same local diagnosis address and tester address.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00057

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel
BSW Parameter	**BSW Type**
DoIPChannelSARef	EcucReferenceDef
BSW Description	

Reference to the DoIPTester.	
Template Description	
Reference to the address of the sender of the tpSdu.	
M2 Parameter	
SystemTemplate::DiagnosticConnection::DoIpTpConnection.doIpSourceAddress	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel
BSW Parameter	**BSW Type**
DoIPChannelTARef	EcucReferenceDef
BSW Description	
Reference to the target address.	
Template Description	
Reference to the address of the receiver of the tpSdu.	
M2 Parameter	
SystemTemplate::DiagnosticConnection::DoIpTpConnection.doIpTargetAddress	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel
BSW Parameter	**BSW Type**
DoIPPduRRxPdu	EcucParamConfContainerDef
BSW Description	
This container contains the Rx Pdus to connect with the Rx Pdus of the PduR.	
Template Description	
M2 Parameter	
SystemTemplate::DiagnosticConnection::DoIpTpConnection.tpSdu	
Mapping Rule	**Mapping Type**
If the DoIP channel receives an SDU, one DoIPPduRRxPdu container is created.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00058

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel/DoIPPduRRxPdu
BSW Parameter	**BSW Type**
DoIPPduRRxPduId	EcucIntegerParamDef
BSW Description	
The DoIPPduRRxPduId is required by the API call DoIP_TpCancelReceive.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00062

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel/DoIPPduRRxPdu
BSW Parameter	**BSW Type**
DoIPPduRRxPduRef	EcucReferenceDef
BSW Description	
Reference to the "global" Pdu structure to allow harmonization of handle IDs in the COM-Stack.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Reference to the EcuC container that corresponds to the SDU received by the DoIP channel	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00063

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel
BSW Parameter	**BSW Type**
DoIPPduRTxPdu	EcucParamConfContainerDef
BSW Description	
This container contains the Tx Pdus to connect with the Tx Pdus of the PduR. If the parameter is not configured the channel is for functional addressing.	
Template Description	
M2 Parameter	
SystemTemplate::DiagnosticConnection::DoIpTpConnection.tpSdu	
Mapping Rule	**Mapping Type**
If the DoIP channel sends an SDU, one DoIPPduRTxPdu container is created.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00059

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel/DoIPPduRTxPdu
BSW Parameter	**BSW Type**
DoIPPduRTxPduId	EcucIntegerParamDef
BSW Description	
The DoIPPduRTxPduId is required by DoIP_TpTransmit or DoIP_IfTransmit and DoIP_TpCancelTransmit.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00061

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel/DoIPPduRTxPdu
BSW Parameter	**BSW Type**
DoIPPduRTxPduRef	EcucReferenceDef
BSW Description	
Reference to the "global" Pdu structure to allow harmonization of handle IDs in the COM-Stack.	
Template Description	
M2 Parameter	
SystemTemplate::DiagnosticConnection::DoIpTpConnection.tpSdu	
Mapping Rule	**Mapping Type**
Reference to the EcuC container that corresponds to the SDU sent by the DoIP channel	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00060

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPChannel/DoIPPduRTxPdu
BSW Parameter	**BSW Type**
DoIPPduType	EcucEnumerationParamDef
BSW Description	
API Type to use for communication with PduR. DOIP_IFPDU for UUDT messages, DOIP_TPPDU for all other diagnostic messages.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet
BSW Parameter	**BSW Type**
DoIPConnections	EcucParamConfContainerDef
BSW Description	
Container contains all lower layer connection specific information, i.e. the single Pdu References and Handle IDs to the SoAd.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**

valid	

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet/DoIPConnections	
BSW Parameter		**BSW Type**
DoIPTargetAddress		EcucParamConfContainerDef
BSW Description		
This container describes a possible TargetAddress that is supported by DoIP.		
Template Description		
The logical DoIP address.		
M2 Parameter		
SystemTemplate::TransportProtocols::DoIpLogicAddress		
Mapping Rule		**Mapping Type**
This container shall be created for each DoIpLogicAddress referenced by a DoIpTpConnection in the role doIpTargetAddress		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTargetAddress	
BSW Parameter		**BSW Type**
DoIPTargetAddressValue		EcucIntegerParamDef
BSW Description		
Valid Target Address of a DoIP target address.		
Template Description		
The logical DoIP address.		
M2 Parameter		
SystemTemplate::TransportProtocols::DoIpLogicAddress.address		
Mapping Rule		**Mapping Type**
This value shall be derived from DoIpLogicAddress that is referenced by DoIp Connection in the role doIpTargetAddress		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet/DoIPConnections	
BSW Parameter		**BSW Type**
DoIPTcpConnection		EcucParamConfContainerDef
BSW Description		
This container describes a TCP connection to the lower layer SoAd module.		
Template Description		
The SoAd serves as a (De)Multiplexer between different PDU sources and the TCP/IP stack.		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnection		
Mapping Rule		**Mapping Type**

A DoIPTcpConnection is created for each SocketConnection for which the following conditions hold: - Protocol: Tcp, i.e. the SocketConnection refers to a local SocketAddress containing an ApplicationEndpoint which in turn contains a TcpTp configuration.- DoIP PDU transmission: The EcuInstance sends and/or receives via the Socket Connection PDUs that are of Type GeneralPurposeIPdu and have their category set to "DoIP".	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00003

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTcpConnection
BSW Parameter	**BSW Type**
DoIPRequestAddressAssignment	EcucBooleanParamDef
BSW Description	
The DoIP module shall request IP address assignment by calling SoAd_RequestIpAddrAssignment() for the TcpIpLocalAddr related to this DoIpConnection.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTcpConnection
BSW Parameter	**BSW Type**
DoIPSoAdTcpRxPdu	EcucParamConfContainerDef
BSW Description	
This container describes a Rx PDU received via SoAd over TCP	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering	
Mapping Rule	**Mapping Type**
Create Container for each Pdu that is of Type GeneralPurposeIPdu and has category "DoIP" and is received via the SocketConnection that represents the DoIPTcpConnection.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00009

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTcpConnection/DoIPSoAdTcpRxPdu
BSW Parameter	**BSW Type**
DoIPSoAdTcpRxPduId	EcucIntegerParamDef
BSW Description	

The DoIPSoAdTcpRxPduId is required by the API call DoIP_SoAdTpRxIndication to receive I-PDUs from the SoAd.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00007

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTcpConnection/DoIPSoAdTcpRx Pdu
BSW Parameter	**BSW Type**
DoIPSoAdTcpRxPduRef	EcucReferenceDef
BSW Description	
Reference to the "global" Pdu structure to allow harmonization of handle IDs in the COM-Stack.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering	
Mapping Rule	**Mapping Type**
Reference to the EcuC container that corresponds to the GeneralPurposeIPdu receiving by the DoIPTcpConnection.	full
Mapping Status	**Mapping ID**
obsolete	up_DoIP_00006

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTcpConnection
BSW Parameter	**BSW Type**
DoIPSoAdTcpTxPdu	EcucParamConfContainerDef
BSW Description	
This container describes a Tx PDU sent via SoAd over TCP	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering	
Mapping Rule	**Mapping Type**
Create Container for each Pdu that is of Type GeneralPurposeIPdu and has category "DoIP" and is transmitted via the SocketConnection that represents the DoIPTcpConnection.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00010

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTcpConnection/DoIPSoAdTcpTx Pdu
BSW Parameter	**BSW Type**

DoIPSoAdTcpTxPduId	EcucIntegerParamDef
BSW Description	
The DoIPSoAdTcpTxPduId is required by the API call DoIP_SoAdTpTxConfirmation that is called by the SoAd to confirm that the IPdu has been transmitted successfully.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00008

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPTcpConnection/DoIPSoAdTcpTx Pdu
BSW Parameter	**BSW Type**
DoIPSoAdTcpTxPduRef	EcucReferenceDef
BSW Description	
Reference to the "global" Pdu structure to allow harmonization of handle IDs in the COM-Stack.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering	
Mapping Rule	**Mapping Type**
Reference to the EcuC container that corresponds to the GeneralPurposeIPdu sent by the DoIPTcpConnection.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00004

BSW Module	**BSW Context**
DoIP	DoIP/DoIPConfigSet/DoIPConnections
BSW Parameter	**BSW Type**
DoIPUdpConnection	EcucParamConfContainerDef
BSW Description	
This Container describes a Udp connection to the lower layer SoAd module.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering	
Mapping Rule	**Mapping Type**
A DoIPUdpConnection is created for each SocketConnection for which the following conditions hold: * Protocol: Udp, i.e. the SocketConnection refers to a local SocketAddress containing an ApplicationEndpoint which in turn contains a UdpTp configuration.* DoIP PDU transmission: The EcuInstance sends and/or receives via the Socket Connection PDUs that are of Type GeneralPurposeIPdu and have their category set to "DoIP".	
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpConnection
BSW Parameter	**BSW Type**
DoIPRequestAddressAssignment	EcucBooleanParamDef
BSW Description	
The DoIP module shall request IP address assignment by calling SoAd_RequestIpAddrAssignment() for the TcpIpLocalAddr related to this DoIpConnection.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpConnection
BSW Parameter	**BSW Type**
DoIPSoAdUdpRxPdu	EcucParamConfContainerDef
BSW Description	
This container describes a Rx PDU received via SoAd over UDP.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering	
Mapping Rule	**Mapping Type**
Create Container for each Pdu that is of Type GeneralPurposeIPdu and has category "DoIP" and is received via the SocketConnection that represents the DoIPUdpConnection.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00011

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpConnection/DoIPSoAdUdpRxPdu
BSW Parameter	**BSW Type**
DoIPSoAdUdpRxPduId	EcucIntegerParamDef
BSW Description	
The DoIPSoAdUdpRxPduId is required by the API call DoIP_SoAdIfRxIndication to receive I-PDUs from the SoAd.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00014

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpConnection/DoIPSoAdUdpRx Pdu

BSW Parameter	BSW Type
DoIPSoAdUdpRxPduRef	EcucReferenceDef

BSW Description

Reference to the "global" Pdu structure to allow harmonization of handle IDs in the COM-Stack.

Template Description

M2 Parameter

SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering

Mapping Rule	Mapping Type
Reference to the EcuC container that corresponds to the GeneralPurposeIPdu received by the DoIPUdpConnection.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00016

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpConnection

BSW Parameter	BSW Type
DoIPSoAdUdpTxPdu	EcucParamConfContainerDef

BSW Description

This container describes a Tx PDU sent via SoAd over UDP.

Template Description

M2 Parameter

SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering

Mapping Rule	Mapping Type
Create Container for each Pdu that is of Type GeneralPurposeIPdu and has category "DoIP" and is transmitted via the SocketConnection that represents the DoIPUdpConnection.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00012

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpConnection/DoIPSoAdUdpTx Pdu

BSW Parameter	BSW Type
DoIPSoAdUdpTxPduId	EcucIntegerParamDef

BSW Description

The DoIPSoAdUdpTxPduId is required by the API call DoIP_SoAdIfTxConfirmation that is called by the SoAd to confirm that the IPdu has been transmitted successfully.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00013

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpConnection/DoIPSoAdUdpTx Pdu

BSW Parameter	BSW Type
DoIPSoAdUdpTxPduRef	EcucReferenceDef

BSW Description
Reference to the "global" Pdu structure to allow harmonization of handle IDs in the COM-Stack.

Template Description

M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering

Mapping Rule	Mapping Type
Reference to the EcuC container that corresponds to the GeneralPurposeIPdu sent by the DoIPUdpConnection.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00015

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections

BSW Parameter	BSW Type
DoIPUdpVehicleAnnouncementConnection	EcucParamConfContainerDef

BSW Description
This container describes the UDP multicast connections to the lower layer SoAd module.

Template Description
The SoAd serves as a (De)Multiplexer between different PDU sources and the TCP/IP stack.

M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnection

Mapping Rule	Mapping Type
This container shall be created: - if a SocketConnection contains a single SocketConnectionIpduIdentifier that references a PduTriggering of a GeneralPurposePdu with category set to DoIp - if the GeneralPurposePdu with category set to DoIp is sent by the regarded ECU. - if the SocketConnectionBundle containing this SocketConnection references (via role serverPort) a SocketAddress with an ApplicationEndpoint with a UdpTp configuration - if the SocketConnectionBundle containing this SocketConnection references (via role serverPort) a SocketAddress with an ipAddress that either is a the limited broadcast address (i.e., 255.255.255.255) in case of IPv4 or the link-local scope multicast address (i.e., FF02::1) in case of IPv6.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00001

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpVehicleAnnouncementConnection

BSW Parameter	BSW Type
DoIPRequestAddressAssignment	EcucBooleanParamDef

BSW Description
The DoIP module shall request IP address assignment by calling SoAd_RequestIpAddrAssignment() for the TcpIpLocalAddr related to this DoIpConnection.

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpVehicleAnnouncementConnection
BSW Parameter	**BSW Type**
DoIPSoAdUdpVehicleAnnouncementTxPdu	EcucParamConfContainerDef
BSW Description	
This container describes the vehicle announcement TxPdu sent via the SoAd.	
Template Description	
The SoAd serves as a (De)Multiplexer between different PDU sources and the TCP/IP stack.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnection	
Mapping Rule	**Mapping Type**
This container shall be created: - if a SocketConnection contains a single SocketConnectionIpduIdentifier that references a PduTriggering of a GeneralPurposePdu with category set to DoIp - if the GeneralPurposePdu with category set to DoIp is sent by the regarded ECU. - if the SocketConnectionBundle containing this SocketConnection references (via role serverPort) a SocketAddress with an ApplicationEndpoint with a UdpTp configuration - if the SocketConnectionBundle containing this SocketConnection references (via role serverPort) a SocketAddress with an ipAddress that either is a the limited broadcast address (i.e., 255.255.255.255) in case of IPv4 or the link-local scope multicast address (i.e., FF02::1) in case of IPv6.	full
Mapping Status	**Mapping ID**
valid	up_DoIP_00002

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpVehicleAnnouncementConnection/DoIPSoAdUdpVehicleAnnouncementTxPdu
BSW Parameter	**BSW Type**
DoIPSoAdUdpVehicleAnnouncementTxPduId	EcucIntegerParamDef
BSW Description	
The DoIPSoAdUdpVehicleAnnouncementTxPduId is required by the API call DoIP_SoAdIfTxConfirmation() that is called by the SoAd to confirm that the IPdu has been transmitted successfully.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**

valid	up_DoIP_00017

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet/DoIPConnections/DoIPUdpVehicleAnnouncementConnection/DoIPSoAdUdpVehicleAnnouncementTxPdu	
BSW Parameter		**BSW Type**
DoIPSoAdUdpVehicleAnnouncementTxPduRef		EcucReferenceDef
BSW Description		
Reference to the "global" PDU structure to allow harmonization of handle IDs in the COM-Stack.		
Template Description		
M2 Parameter		
SystemTemplate::Fibex::Fibex4Ethernet::EthernetCommunication::SocketConnectionIpduIdentifier.pduTriggering		
Mapping Rule		**Mapping Type**
Reference to the EcuC container that corresponds to the GeneralPurposeIPdu sent by the DoIPUdpVehicleAnnouncement connection.		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet	
BSW Parameter		**BSW Type**
DoIPEid		EcucIntegerParamDef
BSW Description		
Configured EID (Entity ID of) for vehicle identification/vehicle announcement. Only necessary if DoIPUseMacAddressForIdentification is set to FALSE.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		up_DoIP_00032

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet	
BSW Parameter		**BSW Type**
DoIPGid		EcucIntegerParamDef
BSW Description		
Configured GID (Group ID of) for vehicle identification/vehicle announcement.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		up_DoIP_00031

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet
BSW Parameter	**BSW Type**
DoIPLogicalAddress	EcucIntegerParamDef
BSW Description	
Describes the logical address of the DoIP entity, i.e. the LA that will route diagnostic requests to the Dcm of the DoIP entity.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet
BSW Parameter	**BSW Type**
DoIPRoutingActivation	EcucParamConfContainerDef
BSW Description	
This container describes the routing activation possibilities by representing for each container a possible routing activation request message to the DoIP entity and the according references to the activated diagnostic messages.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00033

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPRoutingActivation
BSW Parameter	**BSW Type**
DoIPRoutingActivationAuthenticationCallback	EcucParamConfContainerDef
BSW Description	
Container describes the Callbackfunction to call on a Routing Activation Request for Authentication. If this container is configured but the DoIPRoutingActivationAuthenticationFunc parameter is not present, the DoIP module will use an RPort of ServiceInterface <RoutingActivation>_RoutingActivation with the name "CB<RoutingActivation>RoutingActivation". <RoutingActivation> is the ShortName of the DoIPRoutingActiviation container.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00021

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPRoutingActivation/DoIPRoutingActivationAuthenticationCallback

BSW Parameter	BSW Type
DoIPRoutingActivationAuthenticationFunc	EcucFunctionNameDef

BSW Description

Direct C Callback function to trigger the authentication function for routing activation. If the DoIPRoutingActivationAuthenticationFunc parameter is present, the DoIP module will not use an RPort of ServiceInterface <RoutingActivation>_RoutingActivation but call the configured function.

Template Description

M2 Parameter

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**

Mapping Status	**Mapping ID**
valid	up_DoIP_00025

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPRoutingActivation/DoIPRoutingActivationConfirmationCallback
BSW Parameter	**BSW Type**
DoIPRoutingActivationConfirmationReqLength	EcucIntegerParamDef
BSW Description	
Describes the amount of bytes used to handle to the confirmation function on routing activation. If 0 is configured as length the parameter ConfirmedReqData will not be handled to the API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local

Mapping Status	Mapping ID
valid	up_DoIP_00026

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPRoutingActivation/DoIPRoutingActivationConfirmationCallback
BSW Parameter	**BSW Type**
DoIPRoutingActivationConfirmationResLength	EcucIntegerParamDef
BSW Description	
Describes the amount of bytes used to read by the confirmation function on routing activation. If 0 is configured as length the parameter ConfirmedResData will not be fetched via the API.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00027

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPRoutingActivation
BSW Parameter	**BSW Type**
DoIPRoutingActivationNumber	EcucIntegerParamDef
BSW Description	
Identifies the Routing activation Number which is received for a DoIP routing activation request message.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00024

BSW Module	BSW Context
DoIP	DoIP/DoIPConfigSet/DoIPRoutingActivation
BSW Parameter	**BSW Type**
DoIPTargetAddressRef	EcucReferenceDef
BSW Description	
Reference to all DoIPTargetAddress which are activated on this Routing activation.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00023

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet	
BSW Parameter		**BSW Type**
DoIPTester		EcucParamConfContainerDef
BSW Description		
This container describes the properties of the possible connectable Tester for the DoIP entity.		
Template Description		
A connection identifies the sender and the receiver of this particular communication. The DoIp module routes a tpSdu through this connection.		
M2 Parameter		
SystemTemplate::DiagnosticConnection::DoIpTpConnection		
Mapping Rule		**Mapping Type**
One DoIPTester container is created for each valid and unique tester address value of any DoIpTpConnection of the configured EcuInstance. If the configured EcuInstance receives the PDU Triggering referenced via DoIp TpConnection.tpSdu, the tester address of a DoIpTpConnection is referenced via DoIpLogicAddress.doIpSourceAddress. If the configured EcuInstance sends the PDU Triggering referenced via DoIpTpConnection.tpSdu, the tester address of a DoIpTpConnection is referenced via DoIpLogicAddress.doIpTargetAddress.		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet/DoIPTester	
BSW Parameter		**BSW Type**
DoIPNumByteDiagAckNack		EcucIntegerParamDef
BSW Description		
Specifies the number of original Diagnostic request bytes the DoIP entity responses on a NACK of a diagnostic response message to the Tester.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		up_DoIP_00018

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet/DoIPTester	
BSW Parameter		**BSW Type**
DoIPRoutingActivationRef		EcucReferenceDef
BSW Description		
Reference to a DoIPRoutingActivation describing the possible routing activations of the DoIPTester		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local

Mapping Status	Mapping ID
valid	up_DoIP_00020

BSW Module	BSW Context	
DoIP	DoIP/DoIPConfigSet/DoIPTester	
BSW Parameter		**BSW Type**
DoIPTesterSA		EcucIntegerParamDef
BSW Description		
Source Address of the Tester sent via routing activation or diagnostic message.		
Template Description		
The logical DoIP address.		
M2 Parameter		
SystemTemplate::TransportProtocols::DoIpLogicAddress.address		
Mapping Rule		**Mapping Type**
If the configured EcuInstance receives the PDU Triggering referenced via DoIp TpConnection.tpSdu, the tester address of a DoIpTpConnection is referenced via DoIpLogicAddress.doIpSourceAddress. If the configured EcuInstance sends the PDU Triggering referenced via DoIpTp Connection.tpSdu, the tester address of a DoIpTpConnection is referenced via DoIpLogicAddress.doIpTargetAddress.		full
Mapping Status		**Mapping ID**
valid		up_DoIP_00019

BSW Module	BSW Context	
DoIP	DoIP	
BSW Parameter		**BSW Type**
DoIPGeneral		EcucParamConfContainerDef
BSW Description		
This container specifies the general configuration parameters of the DoIP module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
DoIP	DoIP/DoIPGeneral	
BSW Parameter		**BSW Type**
DoIPAliveCheckResponseTimeout		EcucFloatParamDef
BSW Description		
Timeout in [s] for waiting for a response to an Alive Check request before the connection is considered to be disconnected. Represents parameter T_TCP_AliveCheck of ISO 13400-2:2012.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**

	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00040

BSW Module	**BSW Context**
DoIP	DoIP/DoIPGeneral
BSW Parameter	**BSW Type**
DoIPDevelopmentErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00034

BSW Module	**BSW Context**
DoIP	DoIP/DoIPGeneral
BSW Parameter	**BSW Type**
DoIPDhcpOptionVinUse	EcucBooleanParamDef
BSW Description	
If DoIPDhcpOptionVinUse is set to true the DoIP module will add the VIN to the Dhcp host name if no valid Dhcp host name is already set.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00054

BSW Module	**BSW Context**
DoIP	DoIP/DoIPGeneral
BSW Parameter	**BSW Type**
DoIPEntityStatusMaxByteFieldUse	EcucBooleanParamDef
BSW Description	
This parameter is used to distinguish the optional support of the Max data size element of a diagnostic entity status response.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local

Mapping Status	Mapping ID
valid	up_DoIP_00053

BSW Module	BSW Context
DoIP	DoIP/DoIPGeneral
BSW Parameter	**BSW Type**
DoIPFurtherActionByteCallback	EcucParamConfContainerDef
BSW Description	
This container describes the Callbackfunction to get the Further Action byte. This container shall always be present. If the DoIPFurtherActionByteDirect parameter is not present, the DoIP module will use an RPort of ServiceInterface CallbackGetFurtherActionByte with the name "CBGetFurther-ActionByte".	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
DoIP	DoIP/DoIPGeneral/DoIPFurtherActionByteCallback
BSW Parameter	**BSW Type**
DoIPFurtherActionByteDirect	EcucFunctionNameDef
BSW Description	
Direct C Callback function to get the OEM specific Further Action Byte for the DoIP vehicle identification response/vehicle announcement. If the DoIPFurtherActionByteDirect parameter is present, the DoIP module will not use an RPort of ServiceInterface "CBGetFurtherActionByte" but will call the configured function.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
DoIP	DoIP/DoIPGeneral
BSW Parameter	**BSW Type**
DoIPGIDInvalidityPattern	EcucIntegerParamDef
BSW Description	
Specifies the Byte pattern that is used for response messages if no valid GID could be retrieved. Only the value ’0’ or ’255’ is allowed".	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00052

BSW Module	**BSW Context**
DoIP	DoIP/DoIPGeneral
BSW Parameter	**BSW Type**
DoIPGeneralInactivityTime	EcucFloatParamDef
BSW Description	
Timeout in [s] for maximum inactivity of a TCP socket connection before the DoIP module will close the according socket connection. Represents parameter T_TCP_General_Inactivity of ISO 13400-2:2012	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	up_DoIP_00039

BSW Module	**BSW Context**
DoIP	DoIP/DoIPGeneral
BSW Parameter	**BSW Type**
DoIPGetGidCallback	EcucParamConfContainerDef
BSW Description	
This container describes the usage of a callback function to get the GID. (If this container is not present no callback function shall be used by DoIP module to retrive the GID.)	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
DoIP	DoIP/DoIPGeneral/DoIPGetGidCallback
BSW Parameter	**BSW Type**
DoIPGetGidDirect	EcucFunctionNameDef
BSW Description	
If the DoIPGetGidDirect parameter exist the DoIP module shall call the configured callback function (<User>_DoIPGetGID) direct. (It is not needed to specify a service port to the DoIP service component.) If the DoIPGetGidDirect parameter does NOT exist the DoIP module shall use a RPort with a CallbackGetGID type of client-server port interface to retrive the GID.	
Template Description

UdpNm	UdpNm/UdpNmGlobalConfig	
BSW Parameter		**BSW Type**
UdpNmChannelConfig		EcucParamConfContainerDef
BSW Description		
This container contains the channel-specific configuration parameters of the UdpNm.		
Template Description		
Udp specific NmCluster attributes		
M2 Parameter		
SystemTemplate::NetworkManagement::UdpNmCluster		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_UdpNm_00034

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmActiveWakeupBitEnabled		EcucBooleanParamDef
BSW Description		
Enables/Disables the handling of the Active Wakeup Bit in the UdpNm module.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**

valid	

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmAllNmMessagesKeepAwake		EcucBooleanParamDef
BSW Description		
Specifies if UdpNm drops irrelevant NM PDUs. false: Only NM PDUs with a PNI bit = true and containing a PN request for this ECU triggers the standard RX indication handling true: Every NM PDU triggers the standard RX indication handling		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmCarWakeUpBitPosition		EcucIntegerParamDef
BSW Description		
Specifies the Bit position of the CWU within the NM PDU.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmCarWakeUpBytePosition		EcucIntegerParamDef
BSW Description		
Specifies the Byte position of the CWU within the NM PDU.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**

valid	

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmCarWakeUpFilterEnabled		EcucBooleanParamDef
BSW Description		
If CWU filtering is supported, only the CWU bit within the NM PDU with source node identifier UdpNmCarWakeUpFilterNodeId is considered as CWU request. FALSE - CWU filtering is not supported TRUE - CWU filtering is supported.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmCarWakeUpFilterNodeId		EcucIntegerParamDef
BSW Description		
Source node identifier for CWU filtering. If CWU filtering is supported, only the CWU bit within the NM PDU with source node identifier UdpNmCarWakeUpFilterNodeId is considered as CWU request.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmCarWakeUpRxEnabled		EcucBooleanParamDef
BSW Description		
Enables or disables support of CarWakeUp bit evaluation in received NM PDUs. FALSE - CarWakeUp not supported. TRUE - CarWakeUp supported.		
Template Description		
M2 Parameter		

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmComMNetworkHandleRef	EcucReferenceDef
BSW Description	
This reference points to the unique channel defined by the ComMChannel and provides access to the unique channel index value in ComMChannelId.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmImmediateNmCycleTime	EcucFloatParamDef
BSW Description	
Defines the immediate NM PDU cycle time in seconds which is used for UdpNmImmediateNmTransmissions NM PDU transmissions.	
Template Description	
Defines the immediate NmPdu cycle time in seconds which is used for nmImmediateNmTransmissions NmPdu transmissions. This attribute is only valid if nmImmediateNmTransmissions is greater one.	
M2 Parameter	
SystemTemplate::NetworkManagement::UdpNmCluster.nmImmediateNmCycleTime	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00035

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmImmediateNmTransmissions	EcucIntegerParamDef
BSW Description	
Defines the number of immediate NM PDUs which shall be transmitted. If the value is zero no immediate NM PDUs are transmitted. The cycle time of immeditate NM PDUs is defined by UdpNmImmediateNmCycleTime.	
Template Description	
Defines the number of immediate NmPdus which shall be transmitted. If the value is zero no immediate NmPdus are transmitted. The cycle time of immediate NmPdus is defined by nmImmediateNmCycleTime.	

M2 Parameter	
SystemTemplate::NetworkManagement::UdpNmCluster.nmImmediateNmTransmissions	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00036

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmMainFunctionPeriod		EcucFloatParamDef
BSW Description		
Call cycle of UdpNm_MainFunction_x for the respective instance in [s].		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmMsgCycleOffset		EcucFloatParamDef
BSW Description		
Time offset in the periodic transmission node. It determines the start delay of the transmission. < UdpNmMsgCycleTime This parameter is only valid if UdpNmPassiveModeEnabled is disabled.		
Template Description		
Node specific time offset in the periodic transmission node. It determines the start delay of the transmission. Specified in seconds.		
M2 Parameter		
SystemTemplate::NetworkManagement::UdpNmNode.nmMsgCycleOffset		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_UdpNm_00015

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmMsgCycleTime		EcucFloatParamDef
BSW Description		
Period of a NM-message. It determines the periodic rate and is the basis for transmit scheduling. NmTimeoutTime = n * UdpNmMsgCycleTime This parameter is only valid if UdpNmPassiveModeEnabled is disabled.		

Template Description	
Period of a NmPdu in seconds. It determines the periodic rate in the periodic transmission mode with bus load reduction and is the basis for transmit scheduling in the periodic transmission mode without bus load reduction.	
M2 Parameter	
SystemTemplate::NetworkManagement::UdpNmCluster.nmMsgCycleTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00012

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmNodeDetectionEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the node detection support. This parameter shall be derived from NmNodeDetectionEnabled. This parameter shall only be enabled if UdpNmNodeIdEnabled == true. If(UdpNmPduCbvPosition != UDPNM_PDU_OFF) then Equal(NmNodeDetectionEnabled) else Equal(False).	
Template Description	
Enables the Request Repeat Message Request support. Only valid if nmNodeIdEnabled is set to true.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmNodeDetectionEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00038

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmNodeId	EcucIntegerParamDef
BSW Description	
Node identifier of local node. This parameter is only valid if UdpNmPassiveModeEnabled is set to OFF and UdpNmNodeDetectionEnabled is set to ON.	
Template Description	
Node identifier of local NmNode. Must be unique in the NmCluster.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.nmNodeId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00002

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmNodeIdEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling the source node identifier. This parameter shall be derived from NmNodeIdEnabled.		
Template Description		
Enables the source node identifier.		
M2 Parameter		
SystemTemplate::NetworkManagement::NmCluster.nmNodeIdEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_UdpNm_00039

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmPduCbvPosition		EcucEnumerationParamDef
BSW Description		

Defines the position of the control bit vector within the NM PACKET.
 	
The value of the parameter represents the location of the control bit vector in the NM PACKET (UDPNM_PDU_BYTE_0 means byte 0, UDPNM_PDU_BYTE_1 means byte 1, UDPNM_PDU_OFF means the control bit vector is not part of the NM PACKET)
 	
See also UdpNmPduNidPosition
 	
if (UdpNmPduCbvPosition != UDPNM_PDU_OFF && UdpNmPduNidPosition != UDPNM_PDU_OFF) then UdpNmPduCbvPosition != UdpNmPduNidPosition
 	
if (UdpNmPduCbvPosition != UDPNM_PDU_OFF && UdpNmPduNidPosition == UDPNM_PDU_OFF) then UdpNmPduCbvPosition = UDPNM_PDU_BYTE0		

Template Description		
Defines the position of the control bit vector within the NmPdu (Byte positon).		
M2 Parameter		
SystemTemplate::NetworkManagement::UdpNmCluster.nmCbvPosition		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_UdpNm_00005

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmPduNidPosition		EcucEnumerationParamDef
BSW Description		

Defines the position of the source node identifier within the NM PACKET.
 	
ImplementationType: UdpNm_PduPositionType
 	
The value of the parameter represents the location of the source node identifier in the NM PACKET (UDPNM_PDU_BYTE_0 means byte 0, UDPNM_PDU_BYTE_1 means byte 1, UDPNM_PDU_OFF means source node identifier is not part of the NM PACKET)
 	
See also UdpNmPduCbvPosition
if (UDPNM_PDU_NID_POSITION != UDPNM_PDU_OFF && UDPNM_PDU_CBV_POSITION != UDPNM_PDU_OFF) then UDPNM_PDU_NID_POSITION != UDPNM_PDU_CBV_POSITION
 	
if (UDPNM_PDU_NID_POSITION != UDPNM_PDU_OFF && UDPNM_PDU_CBV_POSITION == UDPNM_PDU_OFF) then UDPNM_PDU_IND_POSITION = UDPNM_PDU_BYTE0

Template Description
Defines the byte position of the source node identifier within the NmPdu.
M2 Parameter
SystemTemplate::NetworkManagement::UdpNmCluster.nmNidPosition

Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00008

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig

BSW Parameter	**BSW Type**
UdpNmPnEnabled	EcucBooleanParamDef

BSW Description
Enables or disables support of partial networking. false: Partial networking Range not supported true: Partial networking supported
Template Description
Defines whether this NmCluster contributes to the partial network mechanism.
M2 Parameter
SystemTemplate::NetworkManagement::NmCluster.nmPncParticipation

Mapping Rule	**Mapping Type**
If NmCluster.nmPncParticipation has the value "true" or is not defined then Udp NmPnEnabled shall be set to true.	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00037

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig

BSW Parameter	**BSW Type**
UdpNmPnEraCalcEnabled	EcucBooleanParamDef

BSW Description
Specifies if UdpNm calculates the PN request information for external requests. (ERA) false: PN request are not calculated true: PN request are calculated.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmPnEraRxNSduRef	EcucReferenceDef
BSW Description	
Reference to a Pdu in the COM-Stack. The SduRef is required for every UdpNm Channel, because ERA is reported per channel.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmPnHandleMultipleNetworkRequests	EcucBooleanParamDef
BSW Description	
false: UdpNm_NetworkRequest is ignored in NO. true: UdpNm_NetworkRequest triggers a change from NO to RM.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmRemoteSleepIndTime	EcucFloatParamDef
BSW Description	
Timeout for Remote Sleep Indication. It defines the time in [s] how long it shall take to recognize that all other nodes are ready to sleep. Typically it should be equal to: n * UdpNmMsgCycleTime, where n denotes the number of NM packets that are normally sent before Remote Sleep Indication is detected. The value of n decremented by one determines the amount of lost NM packets that can be tolerated by the Remote Sleep Indication procedure.	

Template Description	
Timeout for Remote Sleep Indication in seconds. It defines the time how long it shall take to recognize that all other nodes are ready to sleep.	
M2 Parameter	
SystemTemplate::NetworkManagement::UdpNmCluster.nmRemoteSleepIndicationTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00004

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmRepeatMessageTime	EcucFloatParamDef
BSW Description	
Timeout for Repeat Message State. It defines the time in seconds how long the NM shall stay in the Repeat Message State.	
Template Description	
Timeout for Repeat Message State in seconds. Defines the time how long the NM shall stay in the Repeat Message State.	
M2 Parameter	
SystemTemplate::NetworkManagement::UdpNmCluster.nmRepeatMessageTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00007

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmRepeatMsgIndEnabled	EcucBooleanParamDef
BSW Description	
Enable/disable the notification that a RepeatMessageRequest bit has been received.	
Template Description	
Switch for enabling the Repeat Message Bit Indication.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmCluster.nmRepeatMsgIndEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00040

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmRetryFirstMessageRequest	EcucBooleanParamDef
BSW Description	
Specifies if first message request in UdpNm is repeated until accepted by SoAd.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmRxPdu		EcucParamConfContainerDef
BSW Description		
This container describes the UdpNm RX PDU's.		
Template Description		
M2 Parameter		
SystemTemplate::NetworkManagement::NmNode.rxNmPdu		
Mapping Rule		**Mapping Type**
Create container for each NmPdu that is received on the regarded Nm cluster		full
Mapping Status		**Mapping ID**
valid		up_UdpNm_00016

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig/UdpNmRxPdu	
BSW Parameter		**BSW Type**
UdpNmRxPduId		EcucIntegerParamDef
BSW Description		
ID of the RxPdu that will be used by a RxIndication of the lower layer.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig/UdpNmRxPdu	
BSW Parameter		**BSW Type**
UdpNmRxPduRef		EcucReferenceDef
BSW Description		
The reference to a PDU in the global PDU structure described in the AUTOSAR ECU Configuration Specification. This reference will be used by the UdpNm module to derive the PDU Id.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmTimeoutTime	EcucFloatParamDef
BSW Description	
Network Timeout for NM packets. It denotes the time in [s] how long the NM shall stay in the Network Mode before transition into Prepare Bus-Sleep Mode shall take place. It shall be equal for all nodes in the cluster. It shall be greater than UdpNmMsgCycleTime. Typically, it should be equal to: x * UdpNmMsgCycleTime, where n denotes the number of NM PACKET cycle times in the Ready Sleep State before transition into the Bus-Sleep Mode is initiated. The value of n decremented by one determines the amount of lost NM packets that can be tolerated by the coordination algorithm.	
Template Description	
Network Timeout for NmPdus in seconds. It denotes the time how long the UdpNm shall stay in the Network Mode before transition into Prepare Bus-Sleep Mode shall take place.	
M2 Parameter	
SystemTemplate::NetworkManagement::UdpNmCluster.nmNetworkTimeout	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00014

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmTxPdu	EcucParamConfContainerDef
BSW Description	
This container describes the UdpNm TX PDU's.	
Template Description	
M2 Parameter	
SystemTemplate::NetworkManagement::NmNode.txNmPdu	
Mapping Rule	**Mapping Type**
Create container for each NmPdu that is transmitted on the regarded Nmcluster	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00009

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig/UdpNmTxPdu
BSW Parameter	**BSW Type**
UdpNmTxConfirmationPduId	EcucIntegerParamDef
BSW Description	
Id of the TxPdu that will be used by a TxConfirmation from the lower layer.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig/UdpNmTxPdu
BSW Parameter	**BSW Type**
UdpNmTxPduRef	EcucReferenceDef
BSW Description	
The reference to a PDU in the global PDU structure described in the AUTOSAR ECU Configuration Specification. This reference will be used by the UdpNm module to derive the PDU Id.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig
BSW Parameter	**BSW Type**
UdpNmUserDataTxPdu	EcucParamConfContainerDef
BSW Description	
Preprocessor switch for enabling the Tx path of Com User Data. Use case: Setting of NMUserData via SWC.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.iSignalToIPduMapping	

Mapping Rule	**Mapping Type**
Create container for each NmPdu that aggregates the ISignalToIPduMapping element. The configuration for these Pdus (e.g. Transfer Properties) shall be derived from this information.	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00013

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig/UdpNmUserDataTxPdu
BSW Parameter	**BSW Type**
UdpNmTxUserDataPduId	EcucIntegerParamDef
BSW Description	
This parameter defines the Handle ID of the NM User Data I-PDU.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig/UdpNmUserDataTxPdu	
BSW Parameter		**BSW Type**
UdpNmTxUserDataPduRef		EcucReferenceDef
BSW Description		
Reference to the NM User Data I-PDU in the global PDU collection.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmChannelConfig	
BSW Parameter		**BSW Type**
UdpNmWaitBusSleepTime		EcucFloatParamDef
BSW Description		
Timeout for bus calm down phase. It denotes the time in [s] how long the NM shall stay in the Prepare Bus-Sleep Mode before transition into Bus-Sleep Mode shall take place. It shall be equal for all nodes in the cluster. It shall be long enough to empty all Tx-buffer empty.		
Template Description		
Timeout for bus calm down phase in seconds. It denotes the time how long the CanNm shall stay in the Prepare Bus-Sleep Mode before transition into Bus-Sleep Mode shall take place.		
M2 Parameter		
SystemTemplate::NetworkManagement::UdpNmCluster.nmWaitBusSleepTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_UdpNm_00011

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig	
BSW Parameter		**BSW Type**
UdpNmComControlEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling the Communication Control support.		
Template Description		

Enables the Communication Control support.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmComControlEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00017

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmComUserDataSupport	EcucBooleanParamDef
BSW Description	
Enable/disable the user data support.	
Template Description	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::NmPdu.iSignalToIPduMapping	
Mapping Rule	**Mapping Type**
If an NmPdu contains user data defined via the existence of NmPdu.iSignalToI PduMapping and is consequently handled via the PduR and Com this attribute shall be set to true.	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00030

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmCoordinatorSyncSupport	EcucBooleanParamDef
BSW Description	
Enables/disables the coordinator synchronization support.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig	
BSW Parameter		**BSW Type**
UdpNmImmediateRestartEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling the immediate transmission of a NM PACKET upon bus-communication request in Prepare-Bus-Sleep mode. Must not be defined if UdpNmPassiveModeEnabled== true.		
Template Description		
Enables the asynchronous transmission of a CanNm PDU upon bus-communication request in Prepare-Bus-Sleep mode.		
M2 Parameter		
SystemTemplate::NetworkManagement::UdpNmClusterCoupling.nmImmediateRestartEnabled		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_UdpNm_00021

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig	
BSW Parameter		**BSW Type**
UdpNmNumberOfChannels		EcucIntegerParamDef
BSW Description		
Number of NM channels allowed within one ECU.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
UdpNm	UdpNm/UdpNmGlobalConfig	
BSW Parameter		**BSW Type**
UdpNmPassiveModeEnabled		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling support of the Passive Mode.		
Template Description		
Enables support of the Passive Mode. The passive mode is configurable per channel.		
M2 Parameter		

SystemTemplate::NetworkManagement::NmNode.nmPassiveModeEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping nmNode.nmPassiveModeEnabled shall always have the same value in all Nm Clusters with the same bus protocol in the scope of one EcuInstance.	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00001

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmPduRxIndicationEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the PDU Rx Indication. This parameter shall be derived from NmPduRxIndicationEnabled.	
Template Description	
Switch for enabling the PDU Rx Indication.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmPduRxIndicationEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00027

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmPnEiraCalcEnabled	EcucBooleanParamDef
BSW Description	
Specifies if UdpNm calculates the PN request information for internal and external requests. (EIRA) true: PN request are calculated false: PN request are not calculated	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmPnEiraRxNSduRef	EcucReferenceDef
BSW Description	
Reference to a Pdu in the COM-Stack. Only one SduRef is required for UdpNm because the EIRA is the aggregation over all Ethernet Channels.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmPnInfo

BSW Parameter	**BSW Type**
UdpNmPnFilterMaskByte	EcucParamConfContainerDef

BSW Description
PN information configuration
Template Description
Bit mask for Ethernet Payload used to configure the Ethernet Transceiver for partial network wakeup.
M2 Parameter
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.pncFilterDataMask

Mapping Rule	**Mapping Type**
For one EcuInstance all contributing EthernetCommunicationConnector.pncFilterDataMask will be bitwise ORed to obtain aggregated pncFilterDataMask value for this ECU. Since the pncFilterDataMask is calculated over the whole payload of the NmPdu, the leading Bytes of this aggregated pncFilterDataMask shall be ignored based on the System.pncVectorOffset value. In order to get the UdpNmPnFilterMaskByteIndex and UdpNmPnFilterMaskByte Value for all the bytes aggregated pncFilterDataMask shall be processed in a littleEndian way. E.g. if pncVectorOffset = 2 and aggregated pncFilterDataMask has the value 2^ 63 this will end up in a UdpNmPnFilterMaskByte with UdpNmPnFilterMaskByteIndex = 5 and UdpNmPnFilterMaskByteValue = 128.	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00031

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmPnInfo/UdpNmPnFilterMaskByte

BSW Parameter	BSW Type
UdpNmPnFilterMaskByteIndex	EcucIntegerParamDef
BSW Description	
Index of the filter mask byte. Specifies the position within the filter mask byte array.	
Template Description	
Bit mask for Ethernet Payload used to configure the Ethernet Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.pncFilterDataMask	
Mapping Rule	**Mapping Type**
For one EcuInstance all contributing EthernetCommunicationConnector.pncFilterDataMask will be bitwise ORed to obtain aggregated pncFilterDataMask value for this ECU. Since the pncFilterDataMask is calculated over the whole payload of the NmPdu, the leading Bytes of this aggregated pncFilterDataMask shall be ignored based on the System.pncVectorOffset value. In order to get the UdpNmPnFilterMaskByteIndex and UdpNmPnFilterMaskByteValue for all the bytes aggregated pncFilterDataMask shall be processed in a littleEndian way. E.g. if pncVectorOffset = 2 and aggregated pncFilterDataMask has the value 2^ 63 this will end up in a UdpNmPnFilterMaskByte with UdpNmPnFilterMaskByteIndex = 5 and UdpNmPnFilterMaskByteValue = 128.	full
Mapping Status	**Mapping ID**

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmPnInfo/UdpNmPnFilterMaskByte
BSW Parameter	**BSW Type**
UdpNmPnFilterMaskByteValue	EcucIntegerParamDef
BSW Description	
Parameter to configure the filter mask byte.	
Template Description	
Bit mask for Ethernet Payload used to configure the Ethernet Transceiver for partial network wakeup.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::EthernetCommunicationConnector.pncFilterDataMask	
Mapping Rule	**Mapping Type**
For one EcuInstance all contributing EthernetCommunicationConnector.pncFilterDataMask will be bitwise ORed to obtain aggregated pncFilterDataMask value for this ECU. Since the pncFilterDataMask is calculated over the whole payload of the NmPdu, the leading Bytes of this aggregated pncFilterDataMask shall be ignored based on the System.pncVectorOffset value. In order to get the UdpNmPnFilterMaskByteIndex and UdpNmPnFilterMaskByteValue for all the bytes aggregated pncFilterDataMask shall be processed in a littleEndian way. E.g. if pncVectorOffset = 2 and aggregated pncFilterDataMask has the value 2^ 63 this will end up in a UdpNmPnFilterMaskByte with UdpNmPnFilterMaskByteIndex = 5 and UdpNmPnFilterMaskByteValue = 128.	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00033

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmPnInfo

BSW Parameter	BSW Type
UdpNmPnInfoLength	EcucIntegerParamDef
BSW Description	
Specifies the length of the PN request information in the NM message.	
Template Description	
Length of the partial networking request release information vector (in bytes).	
M2 Parameter	
SystemTemplate::System.pncVectorLength	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00024

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig/UdpNmPnInfo
BSW Parameter	**BSW Type**
UdpNmPnInfoOffset	EcucIntegerParamDef
BSW Description	
Specifies the offset of the PN request information in the NM message.	
Template Description	
Absolute offset (with respect to the NM-PDU) of the partial networking request release information vector that is defined in bytes as an index starting with 0.	
M2 Parameter	
SystemTemplate::System.pncVectorOffset	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00023

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmPnResetTime	EcucFloatParamDef
BSW Description	
Specifies the runtime of the reset timer in seconds. This reset time is valid for the reset of PN requests in the EIRA and in the ERA. The value shall be the same for every channel. Thus it is a global config parameter.	
Template Description	
Specifies the runtime of the reset timer in seconds. This reset time is valid for the reset of PN requests in the EIRA and in the ERA.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::EcuInstance.pnResetTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00022

BSW Module	BSW Context
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**

UdpNmRemoteSleepIndEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling remote sleep indication support. This feature is required for gateway nodes only. It must not be defined if UdpNmPassiveModeEnabled==true. This parameter shall be derived from NmRemoteSleepIndEnabled.	
Template Description	
Switch for enabling remote sleep indication support.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmRemoteSleepIndEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00019

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmStateChangeIndEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling the UDP NM state change notification. This parameter shall be derived from NmStateChangeIndEnabled.	
Template Description	
Enables the CAN Network Management state change notification.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmStateChangeIndEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00025

BSW Module	**BSW Context**
UdpNm	UdpNm/UdpNmGlobalConfig
BSW Parameter	**BSW Type**
UdpNmUserDataEnabled	EcucBooleanParamDef
BSW Description	
Pre-processor switch for enabling user data support. This parameter shall be derived from NmUserDataEnabled.	
Template Description	
Switch for enabling user data support.	
M2 Parameter	
SystemTemplate::NetworkManagement::NmEcu.nmUserDataEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_UdpNm_00018

BSW Module	**BSW Context**

UdpNm	UdpNm/UdpNmGlobalConfig	
BSW Parameter		**BSW Type**
UdpNmVersionInfoApi		EcucBooleanParamDef
BSW Description		
Pre-processor switch for enabling version info API support.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

C.6.11 SomeIpTp

BSW Module	**BSW Context**	
SomeIpTp	SomeIpTp	
BSW Parameter		**BSW Type**
SomeIpTpChannel		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters of the SomeIpTp channel.		
Template Description		
This element is used to assign properties to SomeipTpConnections that are referencing this SomeipTpChannel.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpChannel		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
SomeIpTp	SomeIpTp/SomeIpTpChannel	
BSW Parameter		**BSW Type**
SomeIpTpNPduSeparationTime		EcucFloatParamDef
BSW Description		
Sets the duration of the minimum time in seconds the SomeIpTp module shall wait between the transmissions of N-PDUs.		
Template Description		
Sets the duration of the minimum time in seconds the SOME/IP TP module shall wait between the transmissions of NPdus.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpChannel.separationTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_SomeIpTp_00001

BSW Module	**BSW Context**

SomeIpTp	SomeIpTp/SomeIpTpChannel	
BSW Parameter		**BSW Type**
SomeIpTpRxNSdu		EcucParamConfContainerDef
BSW Description		
The following parameters needs to be configured for each N-SDU which has to be passed as one assembled RxPdu to the upper layer.		
Template Description		
Reference to an IPdu that is segmented by the Transport Protocol.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpConnection.tpSdu		
Mapping Rule		**Mapping Type**
Create reference if a SomeipTpConnection exists that points to the SomeipTp Channel that aggregates the SomeIpTpRxNSdu and references a PduTriggering in the role tpSdu that is received by the EcuInstance that is contained in the Ecu Extract.		full
Mapping Status		**Mapping ID**
valid		up_SomeIpTp_00007

BSW Module	**BSW Context**	
SomeIpTp	SomeIpTp/SomeIpTpChannel/SomeIpTpRxNSdu	
BSW Parameter		**BSW Type**
SomeIpTpRxNPdu		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters of the NPdu that is received from a lower layer		
Template Description		
Reference to the segmented IPdu.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpConnection.transportPdu		
Mapping Rule		**Mapping Type**
Create container if a SomeipTpConnection exists that points to a PduTriggering in the role transportPdu that is received by the EcuInstance that is contained in the Ecu Extract.		full
Mapping Status		**Mapping ID**
valid		up_SomeIpTp_00006

BSW Module	**BSW Context**	
SomeIpTp	SomeIpTp/SomeIpTpChannel/SomeIpTpRxNSdu/SomeIpTpRxNPdu	
BSW Parameter		**BSW Type**
SomeIpTpRxNPduHandleId		EcucIntegerParamDef
BSW Description		
This parameter defines the handle ID that is used by the PduR when calling SomeIpTp_RxIndication.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
SomeIpTp	SomeIpTp/SomeIpTpChannel/SomeIpTpRxNSdu/SomeIpTpRxNPdu	
BSW Parameter	**BSW Type**	
SomeIpTpRxNPduRef	EcucReferenceDef	
BSW Description		
Reference to a global Pdu that is used to harmonize HandleIDs in the COM-Stack.		
Template Description		
Reference to the segmented IPdu.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpConnection.transportPdu		
Mapping Rule		**Mapping Type**
Create reference if a SomeipTpConnection exists that points to a PduTriggering in the role transportPdu that is received by the EcuInstance that is contained in the Ecu Extract.		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
SomeIpTp	SomeIpTp/SomeIpTpChannel/SomeIpTpRxNSdu	
BSW Parameter	**BSW Type**	
SomeIpTpRxSduRef	EcucReferenceDef	
BSW Description		
Reference to a Pdu in the COM-Stack that represents the assembled RxPdu which is passed via the PduR to the upper layer.		
Template Description		
Reference to an IPdu that is segmented by the Transport Protocol.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpConnection.tpSdu		
Mapping Rule		**Mapping Type**
Create reference if a SomeipTpConnection exists that points to a PduTriggering in the role tpSdu that is received by the EcuInstance that is contained in the Ecu Extract.		full
Mapping Status		**Mapping ID**
valid		up_SomeIpTp_00005

BSW Module	BSW Context	
SomeIpTp	SomeIpTp/SomeIpTpChannel	
BSW Parameter	**BSW Type**	
SomeIpTpRxTimeoutTime	EcucFloatParamDef	
BSW Description		
Timer to monitor the successful reception. It is started when the first NPdu is received, restarted after reception of intermediate NPdus, and is stopped when the last NPdu has been received. The value shall be calculated as follows: (SomeIpTpRxTimeoutTime = SomeIpTpNPduSeparationTime + budget), where the time budget compensates intermediary hops and jitters within the ECU implementation.		
Template Description		
Timer to monitor the successful reception. It is started when the first NPdu is received, restarted after reception of intermediate NPdus, and is stopped when the last NPdu has been received.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpChannel.rxTimeoutTime		
Mapping Rule		**Mapping Type**
1:1 mapping		full

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context	
SomeIpTp	SomeIpTp/SomeIpTpChannel	
BSW Parameter		**BSW Type**
SomeIpTpTxNSdu		EcucParamConfContainerDef
BSW Description		
The following parameters needs to be configured for each N-SDU that the SomeIpTp module transmits via the SomeIpTpChannel.		
Template Description		
Reference to an IPdu that is segmented by the Transport Protocol.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpConnection.tpSdu		
Mapping Rule		**Mapping Type**
Create reference if a SomeipTpConnection exists that points to the SomeipTp Channel that aggregates the SomeIpTpTxNSdu and references a PduTriggering in the role tpSdu that is transmitted by the EcuInstance that is contained in the Ecu Extract.		full
Mapping Status		**Mapping ID**
valid		up_SomeIpTp_00008

BSW Module	BSW Context	
SomeIpTp	SomeIpTp/SomeIpTpChannel/SomeIpTpTxNSdu	
BSW Parameter		**BSW Type**
SomeIpTpTxNPdu		EcucParamConfContainerDef
BSW Description		
This container contains the configuration parameters of the segmented Tx NPdus that are transmitted to a lower layer.		
Template Description		
Reference to the segmented IPdu.		
M2 Parameter		
SystemTemplate::TransportProtocols::SomeipTpConnection.transportPdu		
Mapping Rule		**Mapping Type**
Create container if a SomeipTpConnection exists that points to a PduTriggering in the role transportPdu that is transmitted by the EcuInstance that is contained in the Ecu Extract.		full
Mapping Status		**Mapping ID**
valid		up_SomeIpTp_00003

Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context

WEth	WEth/WEthConfigSet/WEthCtrlConfig	
BSW Parameter		**BSW Type**
WEthDemEventParameterRefs		EcucParamConfContainerDef
BSW Description		
Container for the references to DemEventParameter elements which shall be invoked using the API Dem_SetEventStatus in case the corresponding error occurs. The EventId is taken from the referenced DemEventParameter's DemEventId symbolic value. The standardized errors are provided in this container and can be extended by vendor-specific error references.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
WEth	WEth/WEthConfigSet/WEthCtrlConfig/WEthDemEventParameterRefs	
BSW Parameter		**BSW Type**
WETH_E_ACCESS		EcucReferenceDef
BSW Description		
Reference to the DemEventParameter which shall be issued when the error "Controller access failed" has occured.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**	
WEth	WEth/WEthConfigSet/WEthCtrlConfig	
BSW Parameter		**BSW Type**
WEthRxBufTotal		EcucIntegerParamDef
BSW Description		
Configures the number of receive buffers.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	**BSW Context**
WEth	WEth/WEthConfigSet/WEthCtrlConfig

BSW Parameter	BSW Type
WEthTxBufTotal	EcucIntegerParamDef
BSW Description	
Configures the number of transmit buffers.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
WEth	WEth
BSW Parameter	**BSW Type**
WEthGeneral	EcucParamConfContainerDef
BSW Description	
General configuration of Wireless Ethernet Driver module.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
WEth	WEth/WEthGeneral
BSW Parameter	**BSW Type**
WEthDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the Default Error Tracer (Det) detection and notification ON or OFF. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
WEth	WEth/WEthGeneral
BSW Parameter	**BSW Type**
WEthEcucPartitionRef	EcucReferenceDef
BSW Description	

Maps the Wireless Ethernet driver to zero or multiple ECUC partitions to make the modules API available in this partition. The Wireless Ethernet driver will operate as an independent instance in each of the partitions.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
WEth	WEth/WEthGeneral

BSW Parameter	**BSW Type**
WEthGetWEtherStatsApi	EcucBooleanParamDef

BSW Description
Enables / Disables WEth_GetWEtherStats_32 and WEth_GetWEtherStats_64 API.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
WEth	WEth/WEthGeneral

BSW Parameter	**BSW Type**
WEthIndex	EcucIntegerParamDef

BSW Description
Specifies the InstanceId of this module instance. If only one instance is present it shall have the Id 0.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
WEth	WEth/WEthGeneral

BSW Parameter	**BSW Type**
WEthMainFunctionPeriod	EcucFloatParamDef

BSW Description
Specifies the period of main function WEth_MainFunction in seconds. Wireless Ethernet driver does not require this information but the BSW scheduler.

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
WEth	WEth/WEthGeneral	
BSW Parameter		**BSW Type**
WEthUpdatePhysAddrFilter		EcucBooleanParamDef
BSW Description		
Enables/Disables optional API WEth_UpdatePhysAddrFilter.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
WEth	WEth/WEthGeneral	
BSW Parameter		**BSW Type**
WEthVersionInfoApi		EcucBooleanParamDef
BSW Description		
Enables / Disables version info API.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

C.7 Diagnostic

C.7.1 Dcm Mapping

BSW Module	BSW Context	
Dcm	Dcm/DcmConfigSet/DcmDsl/DcmDslProtocol/DcmDslProtocolRow/DcmDslConnection/DcmDslMainConnection	
BSW Parameter		**BSW Type**
DcmDslProtocolRxConnectionId		EcucIntegerParamDef
BSW Description		

Unique identifier of the tester which uses this connection for diagnostic communication.	
Template Description	
An ECU specific ID for responses of diagnostic routines.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::EcuInstance.diagnosticAddress	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_Dcm_00055

BSW Module	**BSW Context**
Dcm	Dcm/DcmConfigSet/DcmDsl/DcmDslProtocol/DcmDslProtocolRow/DcmDsl Connection/DcmDslMainConnection
BSW Parameter	**BSW Type**
DcmDslProtocolRxTesterSourceAddr	EcucIntegerParamDef
BSW Description	
Tester source address uniquely describes a client and will be used e.g within the jump to Bootloader interfaces. This parameter is not required for generic connections (DcmPdus with MetaDataLength >= 1).	
Template Description	
An ECU specific ID for responses of diagnostic routines.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreTopology::EcuInstance.diagnosticAddress	
Mapping Rule	**Mapping Type**
1:1 mapping	full

C.8 Time management

C.8.1 StbM Time Management

BSW Module	**BSW Context**
StbM	StbM
BSW Parameter	**BSW Type**
StbMGeneral	EcucParamConfContainerDef
BSW Description	
This container holds the general parameters of the Synchronized Time-base Manager	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMGeneral

BSW Parameter	BSW Type
StbMDevErrorDetect	EcucBooleanParamDef
BSW Description	
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMGeneral
BSW Parameter	**BSW Type**
StbMGetCurrentTimeExtendedAvailable	EcucBooleanParamDef
BSW Description	
This allows to define whether an additional variant of the API GetCurrentTime with a 64 bit argument is provided.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMGeneral
BSW Parameter	**BSW Type**
StbMGptTimerRef	EcucReferenceDef
BSW Description	
This represents an optional sub-container in case any Time Notification Customer is configured. The designated GPT timer has to be configured to have a tick duration of one micro second.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMGeneral

BSW Parameter	BSW Type
StbMMainFunctionPeriod	EcucFloatParamDef
BSW Description	
Schedule period of the main function StbM_MainFunction. Unit: [s].	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMGeneral
BSW Parameter	**BSW Type**
StbMTimeRecordingSupport	EcucBooleanParamDef
BSW Description	
Enables/Disables the usage of the recording functionality for Synchronized and Offset timebases for Global Time precision measurement purpose.	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMGeneral
BSW Parameter	**BSW Type**
StbMTimerStartThreshold	EcucFloatParamDef
BSW Description	
This interval defines, when a GPT Timer shall be started for Time Notification Customers for which the corresponding Customer Timer is running [unit: seconds].	
Template Description	
M2 Parameter	

Mapping Rule	Mapping Type
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMGeneral
BSW Parameter	**BSW Type**
StbMVersionInfoApi	EcucBooleanParamDef
BSW Description	

Activate/Deactivate the version information API (StbM_GetVersionInfo). True: version information API activated False: version information API deactivated.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM
BSW Parameter	**BSW Type**
StbMSynchronizedTimeBase	EcucParamConfContainerDef
BSW Description	
Synchronized time.base collects the information about a specific time-base provider within the system.	
Template Description	
This represents the ability to define a global time domain.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain	
Mapping Rule	**Mapping Type**
For each GlobalTimeDomain where - the configured Ecu is connected to as slave or - the configured Ecu is connected to as master if the Ecu is not in the role of a GlobalTimeGateway for this GlobalTimeDomain an instance of StbMSynchronizedTimeBase shall be created.	full
Mapping Status	**Mapping ID**
valid	up_StbM_00001

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMAllowSystemWideGlobalTimeMaster	EcucBooleanParamDef
BSW Description	
For postbuild variant of the StbM this parameter has to be set to true for a Global Time Master that may act as a system-wide source of time. Otherwise no corresponding service ports/interfaces is provided. The Global Time Master functionality behind the service ports/interfaces has to be enabled/disabled separately via parameter StbMIsSystemWideGlobalTimeMaster.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
StbM	StbM/StbMSynchronizedTimeBase	
BSW Parameter		**BSW Type**
StbMClearTimeleapCount		EcucIntegerParamDef
BSW Description		
This attribute describes the required number of updates to the Time Base where the time difference to the previous value has to remain below StbMTimeLeapPastThreshold/StbMTimeLeapFutureThreshold until the TIMELEAP_PAST/TIMELEAP_FUTURE bit within timeBaseStatus of the Time Base is cleared.		
Template Description		
Defines the required number of updates to the Time Base where the time difference to the previous received value has to remain within the bounds of timeLeapFutureThreshold and timeLeapPastThreshold until that Time Base is considered healed.		
M2 Parameter		
SystemTemplate::GlobalTime::GlobalTimeSlave.timeLeapHealingCounter		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_StbM_00010

BSW Module	BSW Context	
StbM	StbM/StbMSynchronizedTimeBase	
BSW Parameter		**BSW Type**
StbMIsSystemWideGlobalTimeMaster		EcucBooleanParamDef
BSW Description		
This parameter shall be set to true for a Global Time Master that acts as a system-wide source of time information with respect to Global Time. It is possible that several Global Time Masters exist that have set this parameter set to true because the Global Time Masters exist once per Global Time Domain and one ECU may own several Global Time Domains on different buses it is connected to.		
Template Description		
If set to TRUE, the GlobalTimeMaster is supposed to act as the root of global time information.		
M2 Parameter		
SystemTemplate::GlobalTime::GlobalTimeMaster.isSystemWideGlobalTimeMaster		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_StbM_00002

BSW Module	BSW Context	
StbM	StbM/StbMSynchronizedTimeBase	
BSW Parameter		**BSW Type**
StbMLocalTimeClock		EcucParamConfContainerDef
BSW Description		
References the hardware reference clock of this Synchronized Time Base.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**

Mapping Status	Mapping ID
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase/StbMLocalTimeClock
BSW Parameter	**BSW Type**
StbMClockFrequency	EcucIntegerParamDef
BSW Description	
Represents the frequency [Hz] of the HW reference clock used by the StbM.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase/StbMLocalTimeClock
BSW Parameter	**BSW Type**
StbMClockPrescaler	EcucIntegerParamDef
BSW Description	
Represents the prescaler to calculate the resulting frequency of the HW reference clock used by the StbM.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase/StbMLocalTimeClock
BSW Parameter	**BSW Type**
StbMLocalTimeHardware	EcucChoiceReferenceDef
BSW Description	
Reference to the local time hardware.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMNotificationCustomer	EcucParamConfContainerDef
BSW Description	
This container holds the configuration of a notification customer, which is notified is informed about the occurance of a Time-base related event.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase/StbMNotificationCustomer
BSW Parameter	**BSW Type**
StbMNotificationCustomerId	EcucIntegerParamDef
BSW Description	
Identification of a event notification customer.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase/StbMNotificationCustomer
BSW Parameter	**BSW Type**
StbMTimeNotificationCallback	EcucFunctionNameDef
BSW Description	
Name of the customer specific notification callback function, which shall be called, if the time previously set by the customer is reached.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**

StbMNotificationInterface	EcucEnumerationParamDef
BSW Description	
The parameter defines what type of interface shall be used to notify a customer of a status event.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMOffsetTimeBase	EcucReferenceDef
BSW Description	
This is the reference to the Synchronized Time-Base this Offset Time-Base is based on. This reference makes the containing StbMSynchronizedTimeBase an Offset Time-Base.	
Template Description	
Reference to a synchronized time domain this offset time domain is based on. The reference source is the offset time domain. The reference target is the synchronized time domain.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.offsetTimeDomain	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_StbM_00005

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMStatusNotificationCallback	EcucFunctionNameDef
BSW Description	
Name of the customer specific status notification callback function, which shall be called, if a non-masked status event occurs.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMStatusNotificationMask	EcucIntegerParamDef
BSW Description	

The parameter defines the initial value for NotificationMask mask, which defines the events for which the event notification callback function shall be called.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMStoreTimebaseNonVolatile	EcucEnumerationParamDef
BSW Description	
This allows for specifying that the Time Base shall be stored in the NvRam.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMSyncLossTimeout	EcucFloatParamDef
BSW Description	
This attribute describes the timeout for the situation that the time synchronization gets lost in the scope of the time domain. Unit: seconds	
Template Description	
This attribute describes the timeout for the situation that the time synchronization gets lost in the scope of the time domain.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.syncLossTimeout	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_StbM_00004

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMSynchronizedTimeBaseIdentifier	EcucIntegerParamDef
BSW Description	

Identification of a Synchronized TimeBase via a unique identifier. Range: * 0 .. 15: Synchronized Time Bases * 16 .. 31: Offset Time Bases * 32 .. 127: Pure Local Time Bases * 128 .. 65535: Reserved
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase

BSW Parameter	**BSW Type**
StbMTimeCorrection	EcucParamConfContainerDef

BSW Description
Collects the information relevant for the rate- and offset correction of a Time Base.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase/StbMTimeCorrection

BSW Parameter	**BSW Type**
StbMAllowMasterRateCorrection	EcucBooleanParamDef

BSW Description
This attribute describes whether the rate correction value of a Time Base can be set by StbM_SetRateCorrection(): * false: the rate correction value can not be set by StbM_SetRateCorrection() * true: the rate correction value can be set by StbM_SetRateCorrection()
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase/StbMTimeCorrection

BSW Parameter	BSW Type
StbMMasterRateDeviationMax	EcucIntegerParamDef
BSW Description	
This attribute describes the maximum allowed absolute value of the rate deviation value to be set by StbM_SetRateCorrection() [unit: ppm].	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase/StbMTimeCorrection
BSW Parameter	**BSW Type**
StbMOffsetCorrectionAdaptionInterval	EcucFloatParamDef
BSW Description	
Defines the interval during which the adaptive rate correction cancels out the rate- and time deviation [unit: seconds].	
Template Description	
Defines the interval during which the adaptive rate correction cancels out the rate- and time deviation.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCorrectionProps.offsetCorrectionAdaptionInterval	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_StbM_00014

BSW Module	BSW Context
StbM	StbM/StbMSynchronizedTimeBase/StbMTimeCorrection
BSW Parameter	**BSW Type**
StbMOffsetCorrectionJumpThreshold	EcucFloatParamDef
BSW Description	
Threshold for the correction method. Deviations below this value will be corrected by a linear reduction over a defined timespan. Values equal- and greater than this value will be corrected by immediately setting the correct time- and rate in form of a jump [unit: seconds].	
Template Description	
Threshold for the correction method. Deviations below this value will be corrected by a linear reduction over a defined timespan. Values equal- and greater than this value will be corrected by immediately setting the correct time- and rate in form of a jump.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCorrectionProps.offsetCorrectionJumpThreshold	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_StbM_00013

BSW Module	BSW Context

StbM	StbM/StbMSynchronizedTimeBase/StbMTimeCorrection	
BSW Parameter		**BSW Type**
StbMRateCorrectionMeasurementDuration		EcucFloatParamDef
BSW Description		
Definition of the time span [s] which is used to calculate the rate deviation.		
Template Description		
Definition of the time span which is used to calculate the rate deviation.		
M2 Parameter		
SystemTemplate::GlobalTime::GlobalTimeCorrectionProps.rateCorrectionMeasurementDuration		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**

BSW Parameter		**BSW Type**

StbMTimeLeapPastThreshold	EcucFloatParamDef
BSW Description	
This represents the maximum allowed negative difference between the current Local Time Base value and a newly received Global Time Base value [unit: seconds].	
Template Description	
Defines the maximum allowed negative difference between the current Local Time Base value and a newly received Global Time Base value.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeSlave.timeLeapPastThreshold	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_StbM_00009

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase
BSW Parameter	**BSW Type**
StbMTimeRecording	EcucParamConfContainerDef
BSW Description	
Collects the information relevant for configuration of the precision measurement of a Time Base.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase/StbMTimeRecording
BSW Parameter	**BSW Type**
StbMOffsetTimeRecordBlockCallback	EcucFunctionNameDef
BSW Description	
Name of the customer specific callback function, which shall be called, if a measurement data for a Offset Time Base are available.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase/StbMTimeRecording
BSW Parameter	**BSW Type**
StbMOffsetTimeRecordTableBlockCount	EcucIntegerParamDef
BSW Description	

Represents the number of Blocks used for queing time measurement events for the Offset Time Base Record Table.
Template Description
M2 Parameter

Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
StbM	StbM/StbMSynchronizedTimeBase/StbMTimeRecording

BSW Parameter	**BSW Type**
StbMSyncTimeRecordBlockCallback	EcucFunctionNameDef

valid	

BSW Module	**BSW Context**
StbM	StbM

BSW Parameter	**BSW Type**
StbMTriggeredCustomer	EcucParamConfContainerDef

BSW Description
The triggered customer is directly triggered by the Synchronized Time-base Manager by getting synchronized with the current (global) definition of time and passage of time.

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
StbM	StbM/StbMTriggeredCustomer	
BSW Parameter		**BSW Type**
StbMOSScheduleTableRef		EcucReferenceDef
BSW Description		
Mandatory reference to synchronized OS ScheduleTable, which will be explicitly synchronized by the StbM.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
StbM	StbM/StbMTriggeredCustomer	
BSW Parameter		**BSW Type**
StbMSynchronizedTimeBaseRef		EcucReferenceDef
BSW Description		
Mandatory reference to the required synchronized time-base.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
StbM	StbM/StbMTriggeredCustomer	
BSW Parameter		**BSW Type**
StbMTriggeredCustomerPeriod		EcucIntegerParamDef
BSW Description		
The triggering period of the triggered customer, called by the StbM_MainFunction. The period is documented in microseconds.		
Template Description		

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

C.8.2 CAN Time Management

BSW Module	BSW Context	
CanTSyn	CanTSyn	
BSW Parameter		**BSW Type**
CanTSynGeneral		EcucParamConfContainerDef
BSW Description		
This container holds the general parameters of the CAN-specific Synchronized Time-base Manager		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanTSyn	CanTSyn/CanTSynGeneral	
BSW Parameter		**BSW Type**
CanTSynDevErrorDetect		EcucBooleanParamDef
BSW Description		
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
CanTSyn	CanTSyn/CanTSynGeneral	
BSW Parameter		**BSW Type**
CanTSynMainFunctionPeriod		EcucFloatParamDef
BSW Description		
Schedule period of the main function CanTSyn_MainFunction. Unit: [s].		
Template Description		
M2 Parameter		

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTSyn	CanTSyn/CanTSynGeneral
BSW Parameter	**BSW Type**
CanTSynVersionInfoApi	EcucBooleanParamDef
BSW Description	
Activate/Deactivate the version information API (CanTSyn_GetVersionInfo). True: version information API activated False: version information API deactivated.	
Template Description	
M2 Parameter	

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
CanTSyn	CanTSyn
BSW Parameter	**BSW Type**
CanTSynGlobalTimeDomain	EcucParamConfContainerDef
BSW Description	
This represents the existence of a global time domain on CAN. The CanTSyn module can administrate several global time domains at the same time that in itself form a hierarchy of domains and sub-domains. If the CanTSyn exists it is assumed that at least one global time domain exists.	
Template Description	
This represents the ability to define a global time domain.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain	

Mapping Rule	**Mapping Type**
The container shall exist if a GlobalTimeDomain exists that has a slave or master that refers to a CommunicationConnector that in turn is aggregated by the EcucInstance for which the ECU configuration is created. The container shall also exist if GlobalTimeDomain exists that has a gateway that refers to the EcuInstance for which the ECU configuration is created.	full
Mapping Status	**Mapping ID**
valid	up_CanTSyn_00001

BSW Module	**BSW Context**
CanTSyn	CanTSyn/CanTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
CanTSynGlobalTimeDomainId	EcucIntegerParamDef
BSW Description	

The global time domain ID.	
Template Description	
This represents the ID of the GlobalTimeDomain used in the network messages sent on behalf of global time management.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.domainId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_CanTSyn_00011

BSW Module	**BSW Context**
CanTSyn	CanTSyn/CanTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
CanTSynGlobalTimeFupDataIDList	EcucParamConfContainerDef
BSW Description	
The DataIDList for FUP messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
The DataIDList for FUP messages to calculate CRC.	
M2 Parameter	
SystemTemplate::GlobalTime::CAN::CanGlobalTimeDomainProps.fupDataIDList

CanTSyn	CanTSyn/CanTSynGlobalTimeDomain/CanTSynGlobalTimeFupDataIDList/ CanTSynGlobalTimeFupDataIDListElement
BSW Parameter	**BSW Type**
CanTSynGlobalTimeFupDataIDListValue	EcucIntegerParamDef
BSW Description	
Value of the DataIDList for FUP messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
CanTSyn	CanTSyn/CanTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
CanTSynGlobalTimeMaster	EcucParamConfContainerDef
BSW Description	
Configuration of the global time master. Each global time domain is required to have exactly one global time master. This master may or may not exist on the configured ECU.	
Template Description	
This represents the generic concept of a global time master.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeMaster	
Mapping Rule	**Mapping Type**
The existence of the CanTSynGlobalTimeMaster is bound to the existence of a GlobalTimeMaster that refers to a CommunicationConnector that in turn in aggregated at the EcuInstance for which the ECU configuration exists,	full
Mapping Status	**Mapping ID**
valid	up_CanTSyn_00006

BSW Module	BSW Context
CanTSyn	CanTSyn/CanTSynGlobalTimeDomain/CanTSynGlobalTimeMaster
BSW Parameter	**BSW Type**
CanTSynCyclicMsgResumeTime	EcucFloatParamDef
BSW Description	
Defines the time where the 1st regular cycle time based message transmission takes place, after an immediate transmission before. Unit: seconds	

Template Description	
Defines the minimum time between an "immediate" message and the next periodic message.	
M2 Parameter

BSW Parameter	**BSW Type**
EthTSynGlobalTimeDomain	EcucParamConfContainerDef
BSW Description	
This represents the existence of a global time domain on Ethernet. The EthTSyn module can administrate several global time domains at the same time that in itself form a hierarchy of domains and sub-domains. If the EthTSyn exists it is assumed that at least one global time domain exists.	
Template Description	
This represents the ability to define a global time domain.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain	
Mapping Rule	**Mapping Type**
The container shall exist if a GlobalTimeDomain exists that has a slave or master that refers to a CommunicationConnector that in turn is aggregated by the EcucInstance for which the ECU configuration is created. The container shall also exist if GlobalTimeDomain exists that has a gateway that refers to the EcuInstance for which the ECU configuration is created.	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00001

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
EthTSynGlobalTimeDomainId	EcucIntegerParamDef
BSW Description	
The global time domain ID.	
Template Description	
This represents the ID of the GlobalTimeDomain used in the network messages sent on behalf of global time management.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.domainId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00013

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain
BSW Parameter	**BSW Type**

EthTSynGlobalTimeFollowUpDataIDList	EcucParamConfContainerDef
BSW Description	
The DataIDList for Follow_Up message ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
The DataIDList for FUP messages to calculate CRC.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthGlobalTimeDomainProps.fupDataIDList	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00030

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynGlobalTimeFollowUpDataIDList
BSW Parameter	**BSW Type**
EthTSynGlobalTimeFollowUpDataIDListElement	EcucParamConfContainerDef
BSW Description	
Element of the DataIDList for Follow_Up message ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
The DataIDList for FUP messages to calculate CRC.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthGlobalTimeDomainProps.fupDataIDList	
Mapping Rule	**Mapping Type**
Value shall be derived from element of the ordered fupDataIDList.	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00031

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynGlobalTimeFollowUpDataIDList/ EthTSynGlobalTimeFollowUpDataIDListElement
BSW Parameter	**BSW Type**
EthTSynGlobalTimeFollowUpDataIDListIndex	EcucIntegerParamDef
BSW Description	
Index of the DataIDList for Follow_Up message ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynGlobalTimeFollowUpDataIDList/ EthTSynGlobalTimeFollowUpDataIDListElement
BSW Parameter	**BSW Type**

EthTSynGlobalTimeFollowUpDataIDListValue	EcucIntegerParamDef
BSW Description	
Value of the DataIDList for Follow_Up message ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
EthTSynGlobalTimeSecureTmacLength	EcucIntegerParamDef
BSW Description	
Represents the number of bytes for the used Truncated Message Authentication Code (TMAC). If 0, no message authentication will be used.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
EthTSynPortConfig	EcucParamConfContainerDef
BSW Description	
Configuration of the EthTSyn-Ports within the TimeDomain.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig
BSW Parameter	**BSW Type**
EthTSynFramePrio	EcucIntegerParamDef
BSW Description	

This optional parameter, if present, indicates the priority of outgoing EthTSyn messages, if sent via VLAN (used for the 3-bit PCP field of the VLAN tag). If this optional parameter is not present, frames are sent without a priority and VLAN field.	
Template Description	
Defines which VLAN priority shall be assigned to a time sync message in case the message is sent using a VLAN tag.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthGlobalTimeDomainProps.vlanPriority	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00012

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig
BSW Parameter	**BSW Type**
EthTSynGlobalTimeDebounceTime	EcucFloatParamDef
BSW Description	
This represents the configuration of a TX debounce time for Sync and Follow_Up messages compared to a message before with the same PDU. Unit: seconds	
Template Description	
Defines the minimum amount of time between two time sync messages are transmitted.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.debounceTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00027

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig
BSW Parameter	**BSW Type**
EthTSynGlobalTimeEthIfRef	EcucReferenceDef
BSW Description	
This represents the reference to the Ethernet interface taken to fetch the global time information.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig
BSW Parameter	**BSW Type**
EthTSynGlobalTimeMinMsgGap	EcucFloatParamDef
BSW Description	

This parameter represents the configuration of a minimum message gap time for received Timesync messages compared to a message before with the same PDU. If PDUs are received more often in between than this parameter allows, they shall be ignored. Unit: seconds	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig
BSW Parameter	**BSW Type**
EthTSynPdelayConfig	EcucParamConfContainerDef
BSW Description	
Configuration of cyclic propagation delay measurement.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPdelay Config
BSW Parameter	**BSW Type**
EthTSynGlobalTimePdelayRespEnable	EcucBooleanParamDef
BSW Description	
This parameter allows disabling Pdelay_Resp / Pdelay_Resp_Follow_Up transmission, if no Pdelay_Req messages are expected. FALSE: No Pdelay requests expected. Pdelay_Resp / Pdelay_Resp_Follow_Up transmission is disabled. TRUE: Pdelay requests expected. Pdelay_Resp / Pdelay_Resp_Follow_Up transmission is enabled.	
Template Description	
Defines whether PDELAY RESPONSE and PDELAY RESPONSE FOLLOW UP shall be sent on this CouplingPort.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthGlobalTimeManagedCouplingPort.pdelayResponseEnabled	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**

valid	up_EthTSyn_00022

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPdelayConfig
BSW Parameter	**BSW Type**
EthTSynGlobalTimePropagationDelay	EcucFloatParamDef
BSW Description	
If cyclic propagation delay measurement is enabled, this parameter represents the default value of the propagation delay until the first actually measured propagation delay is available. If cyclic propagation delay measurement is disabled, this parameter replaces a measured propagation delay by a fixed value. Unit: seconds	
Template Description	
If cyclic propagation delay measurement is enabled, this parameter represents the default value of the propagation delay until the first actually measured propagation delay is available. If cyclic propagation delay measurement is disabled, this parameter defines a fixed value for the propagation delay.	
M2 Parameter	
SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology::GlobalTimeCouplingPortProps.propagationDelay	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**

EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPdelayConfig
BSW Parameter	**BSW Type**
EthTSynPdelayRespAndRespFollowUpTimeout	EcucFloatParamDef
BSW Description	
Timeout value for Pdelay_Resp and Pdelay_Resp_Follow_Up after a Pdelay_Req has been transmitted resp. a Pdelay_Resp has been received. A value of 0 deactivates this timeout observation. Unit: seconds	
Template Description	
Timeout value for Pdelay_Resp and Pdelay_Resp_Follow_Up after a Pdelay_Req has been transmitted resp. a Pdelay_Resp has been received. A value of 0 or not defining this attribute deactivates this timeout observation.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthGlobalTimeManagedCouplingPort.pdelayRespAndRespFollowUpTimeout

EthTSynPortRole	EcucChoiceContainerDef
BSW Description	
Specifying the Role of the EthTSyn-Port (Master or Slave).	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**

Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole
BSW Parameter	**BSW Type**
EthTSynGlobalTimeMaster	EcucParamConfContainerDef
BSW Description	
Configuration of the global time master. Each global time domain is required to have exactly one global time master. This master may or may not exist on the configured ECU.	
Template Description	
This represents the generic concept of a global time master.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeMaster	
Mapping Rule	**Mapping Type**
The existence of a EthTSynGlobalTimeMaster is bound to the existence of a GlobalTimeMaster that refers to a CommunicationConnector that in turn in aggregated at the EcuInstance for which the ECU configuration exists.	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00004

EthTSynCrcPreciseOriginTimestamp	EcucBooleanParamDef
BSW Description	
preciseOriginTimestamp from the Follow_Up Message Field shall be included in CRC calculation.	
Template Description	
PreciseOriginTimestamp from the Follow_Up Message Field shall be included in CRC calculation.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthTSynCrcFlags.crcPreciseOriginTimestamp	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00036

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave/EthTSynCrcFlagsRxValidated
BSW Parameter	**BSW Type**
EthTSynCrcSequenceId	EcucBooleanParamDef
BSW Description	
sequenceId from the Follow_Up Message Header shall be included in CRC calculation.	
Template Description	
SequenceId from the Follow_Up Message Header shall be included in CRC calculation.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthTSynCrcFlags.crcSequenceId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00037

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave/EthTSynCrcFlagsRxValidated
BSW Parameter	**BSW Type**
EthTSynCrcSourcePortIdentity	EcucBooleanParamDef
BSW Description	
sourcePortIdentity from the Follow_Up Message Header shall be included in CRC calculation.	
Template Description	
SourcePortIdentity from the Follow_Up Message Header shall be included in CRC calculation.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthTSynCrcFlags.crcSourcePortIdentity	

Mapping Rule	Mapping Type
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00038

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave
BSW Parameter	**BSW Type**
EthTSynGlobalTimeFollowUpTimeout	EcucFloatParamDef
BSW Description	
Timeout value of the Follow_Up message (of the subsequent Sync message). A value of 0 deactivates this timeout observation. Unit: seconds	
Template Description	
Rx timeout for the follow-up message.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeSlave.followUpTimeoutValue	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00003

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave
BSW Parameter	**BSW Type**
EthTSynRxCrcValidated	EcucEnumerationParamDef
BSW Description	
Definition of whether or not validation of the CRC takes place.	
Template Description	
Definition of whether or not validation of the CRC is supported.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::GlobalTimeEthSlave.crcValidated	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00018

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave/EthTSynRxCrcValidated
BSW Parameter	**BSW Type**
CRC_IGNORED	EcucEnumerationLiteralDef
BSW Description	
EthTSyn ignores any CRC inside the Sub-TLVs.	
Template Description	
The CRC is supposed to be ignored	

M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCrcValidationEnum.crcIgnored	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00014

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave/EthTSynRxCrcValidated
BSW Parameter	**BSW Type**
CRC_NOT_VALIDATED	EcucEnumerationLiteralDef
BSW Description	
If EthTSynMessageCompliance is set to FALSE: EthTSyn discards Follow_Up messages with Sub-TLVs of Type 0x28, 0x44, 0x50 or 0x60.	
Template Description	
The CRC is not supposed to be present. If CRC is present the message is ignored.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCrcValidationEnum.crcNotValidated	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00015

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave/EthTSynRxCrcValidated
BSW Parameter	**BSW Type**
CRC_OPTIONAL	EcucEnumerationLiteralDef
BSW Description	
If EthTSynMessageCompliance is set to FALSE: EthTSyn discards Follow_Up messages with Sub-TLVs of Type 0x28, 0x44, 0x50 or 0x60, that contain an incorrect CRC value.	
Template Description	
Either the CRC is present and then shall be validated or the CRC is not present and no CRC check is done.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCrcValidationEnum.crcOptional	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00017

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/ EthTSynGlobalTimeSlave/EthTSynRxCrcValidated
BSW Parameter	**BSW Type**
CRC_VALIDATED	EcucEnumerationLiteralDef
BSW Description	
If EthTSynMessageCompliance is set to FALSE: EthTSyn discards Follow_Up messages with Sub-TLVs of Type 0x28, 0x44, 0x50 or 0x60, that contain an incorrect CRC value. EthTSyn rejects Follow_Up messages with Sub-TLVs of Type 0x34, 0x51 or 0x61.	

Template Description	
This CRC is supposed to be validated.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCrcValidationEnum.crcValidated	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00016

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig/EthTSynPortRole/EthTSynGlobalTimeSlave
BSW Parameter	**BSW Type**
EthTSynRxTmacValidated	EcucEnumerationParamDef
BSW Description	
This parameter controls whether or not TMAC validation shall be supported.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain/EthTSynPortConfig
BSW Parameter	**BSW Type**
EthTSynSwitchManagementEthSwitchPortRef	EcucReferenceDef
BSW Description	
In an AVB-Bridge config, this reference is used to assign the EthTSyn-Port to an Ethernet Switch-Port.	
Template Description	
Defines which CouplingPort is managed by this EthGlobalTimeManagedCouplingPort.	
M2 Parameter	
SystemTemplate::GlobalTime::ETH::EthGlobalTimeManagedCouplingPort.couplingPort	
Mapping Rule	**Mapping Type**
If the referenced CouplingPort is aggregated by a CouplingElement with couplingType = switch then the reference EthTSynSwitchManagementEthSwitchPortRef shall be defined and refer to the EthSwtPort which was derived from the CouplingPort.	full
Mapping Status	**Mapping ID**
valid	up_EthTSyn_00025

BSW Module	BSW Context
EthTSyn	EthTSyn/EthTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
EthTSynSynchronizedTimeBaseRef	EcucReferenceDef
BSW Description	
Mandatory reference to the required synchronized time-base.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

C.8.4 Flexray Time Management

BSW Module	BSW Context	
FrTSyn	FrTSyn	
BSW Parameter		**BSW Type**
FrTSynGeneral		EcucParamConfContainerDef
BSW Description		
This container holds the general parameters of the Flexray-specific Synchronized Time-base Manager		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrTSyn	FrTSyn/FrTSynGeneral	
BSW Parameter		**BSW Type**
FrTSynDevErrorDetect		EcucBooleanParamDef
BSW Description		
Switches the development error detection and notification on or off. * true: detection and notification is enabled. * false: detection and notification is disabled.		
Template Description		
M2 Parameter		
Mapping Rule		**Mapping Type**
		local
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
FrTSyn	FrTSyn/FrTSynGeneral	
BSW Parameter		**BSW Type**
FrTSynMainFunctionPeriod		EcucFloatParamDef
BSW Description		
Schedule period of the main function FrTSyn_MainFunction. Unit: [s].		

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGeneral
BSW Parameter	**BSW Type**
FrTSynVersionInfoApi	EcucBooleanParamDef
BSW Description	
Activate/Deactivate the version information API (FrTSyn_GetVersionInfo). True: version information API activated False: version information API deactivated.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn
BSW Parameter	**BSW Type**
FrTSynGlobalTimeDomain	EcucParamConfContainerDef
BSW Description	
This represents the existence of a global time domain on Flexray. The FrTSyn module can administrate several global time domains at the same time that in itself form a hierarchy of domains and sub-domains. If the FrTSyn exists it is assumed that at least one global time domain exists.	
Template Description	
This represents the ability to define a global time domain.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain	
Mapping Rule	**Mapping Type**
The container shall exist if a GlobalTimeDomain exists that has a slave or master that refers to a CommunicationConnector that in turn is aggregated by the EcucInstance for which the ECU configuration is created. The container shall also exist if GlobalTimeDomain exists that has a gateway that refers to the EcuInstance for which the ECU configuration is created.	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00001

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain

BSW Parameter	BSW Type
FrTSynGlobalTimeDomainId	EcucIntegerParamDef
BSW Description	
The global time domain ID.	
Template Description	
This represents the ID of the GlobalTimeDomain used in the network messages sent on behalf of global time management.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.domainId	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00009

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
FrTSynGlobalTimeMaster	EcucParamConfContainerDef
BSW Description	
Configuration of the global time master. Each global time domain is required to have exactly one global time master. This master may or may not exist on the configured ECU.	
Template Description	
This represents the generic concept of a global time master.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeMaster	
Mapping Rule	**Mapping Type**
The existence of the FrTSynGlobalTimeMaster is bound to the existence of a GlobalTimeMaster that refers to a CommunicationConnector that in turn in aggregated at the EcuInstance for which the ECU configuration exists,	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00002

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster
BSW Parameter	**BSW Type**
FrTSynCyclicMsgResumeTime	EcucFloatParamDef
BSW Description	
Defines the time where the 1st regular cycle time based message transmission takes place, after an immediate transmission before. Unit: seconds	
Template Description	
Defines the minimum time between an "immediate" message and the next periodic message.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeMaster.immediateResumeTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00016

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster

BSW Parameter	BSW Type
FrTSynGlobalTimeDebounceTime	EcucFloatParamDef
BSW Description	
This represents the configuration of a TX debounce time for SYNC and OFS messages compared to a message before with the same PDU. Unit: seconds	
Template Description	
Defines the minimum amount of time between two time sync messages are transmitted.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.debounceTime	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00015

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster
BSW Parameter	**BSW Type**
FrTSynGlobalTimeMasterPdu	EcucParamConfContainerDef
BSW Description	
This container carries all properties required to configure the PDU sent by the global time master for the given global time domain.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster/FrTSynGlobal TimeMasterPdu
BSW Parameter	**BSW Type**
FrTSynGlobalTimeMasterHandleId	EcucIntegerParamDef
BSW Description	
This represents the handle ID of the PDU that contains the global time information.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster/FrTSynGlobal TimeMasterPdu
BSW Parameter	**BSW Type**

FrTSynGlobalTimePduRef	EcucReferenceDef
BSW Description	
This represents the reference to the Pdu taken to transmit the global time information. The global time master of a global time domain acts as the sender of the Pdu while all the time slaves are supposed to receive the Pdu.	
Template Description	
This PduTriggering will be taken to transmit the global time information from a GlobalTimeMaster to a the associated GlobalTimeSlaves.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeDomain.pduTriggering	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00006

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster
BSW Parameter	**BSW Type**
FrTSynGlobalTimeTxCrcSecured	EcucEnumerationParamDef
BSW Description	
This represents the configuration of whether or not CRC is supported.	
Template Description	
Definition of whether or not CRC is supported. This is only relevant for selected bus systems.	
M2 Parameter	
SystemTemplate::GlobalTime::FR::GlobalTimeFrMaster.crcSecured	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00003

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster/FrTSynGlobal TimeTxCrcSecured
BSW Parameter	**BSW Type**
CRC_NOT_SUPPORTED	EcucEnumerationLiteralDef
BSW Description	
This represents a configuration where CRC is not supported.	
Template Description	
This indicates that CRC is not supported	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCrcSupportEnum.crcNotSupported	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_StbM_00007

FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster/FrTSynGlobal TimeTxCrcSecured
BSW Parameter	**BSW Type**

CRC_SUPPORTED	EcucEnumerationLiteralDef
BSW Description	
This represents a configuration where CRC is supported.	
Template Description	
This indicates that CRC is supported	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeCrcSupportEnum.crcSupported	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_StbM_00006

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster
BSW Parameter	**BSW Type**
FrTSynGlobalTimeTxPeriod	EcucFloatParamDef
BSW Description	
This represents the TX period. Unit: seconds	
Template Description	
This represents the period. Unit: seconds	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeMaster.syncPeriod	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00005

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster
BSW Parameter	**BSW Type**
FrTSynImmediateTimeSync	EcucBooleanParamDef
BSW Description	
Enables/Disables the cyclic polling of StbM_GetTimeBaseUpdateCounter() within FrTSyn_MainFunction().	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeMaster
BSW Parameter	**BSW Type**
FrTSynTxTmacCalculated	EcucEnumerationParamDef
BSW Description	
This parameter controls whether or not TMAC calculation shall be supported.	
Template Description	

M2 Parameter

Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
FrTSynGlobalTimeOfsDataIDList	EcucParamConfContainerDef
BSW Description	
The DataIDList for OFS messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
The DataIDList for OFS messages to calculate CRC.	
M2 Parameter	
SystemTemplate::GlobalTime::FR::FrGlobalTimeDomainProps.ofsDataIDList	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00011

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeOfsDataIDList
BSW Parameter	**BSW Type**
FrTSynGlobalTimeOfsDataIDListElement	EcucParamConfContainerDef
BSW Description	
Element of the DataIDList for OFS messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
The DataIDList for OFS messages to calculate CRC.	
M2 Parameter	
SystemTemplate::GlobalTime::FR::FrGlobalTimeDomainProps.ofsDataIDList	
Mapping Rule	**Mapping Type**
Value shall be derived from element of the ordered ofsDataIDList.	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00012

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeOfsDataIDList/FrTSyn GlobalTimeOfsDataIDListElement
BSW Parameter	**BSW Type**
FrTSynGlobalTimeOfsDataIDListIndex	EcucIntegerParamDef
BSW Description	
Index of the DataIDList for OFS messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeOfsDataIDList/FrTSynGlobalTimeOfsDataIDListElement
BSW Parameter	**BSW Type**
FrTSynGlobalTimeOfsDataIDListValue	EcucIntegerParamDef
BSW Description	
Value of the DataIDList for OFS messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
FrTSynGlobalTimeSecureTmacLength	EcucIntegerParamDef
BSW Description	
Represents the number of bytes for the used Truncated Message Authentication Code (TMAC). If 0, no message authentication will be used.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
FrTSynGlobalTimeSlave	EcucParamConfContainerDef
BSW Description	
This represents the time slave for the enclosing global time domain.	
Template Description	
This represents the generic concept of a global time slave.	
M2 Parameter	
SystemTemplate::GlobalTime::GlobalTimeSlave	

Mapping Rule	Mapping Type
The existence of the FrTSynGlobalTimeSlave is bound to the existence of a GlobalTimeSlave that refers to a CommunicationConnector that in turn in aggregated at the EcuInstance for which the ECU configuration exists,	full
Mapping Status	**Mapping ID**

	local
Mapping Status	**Mapping ID**
valid	

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
FrTSynGlobalTimeSyncDataIDList	EcucParamConfContainerDef
BSW Description	
The DataIDList for SYNC messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
The DataIDList for SYNC messages to calculate CRC.	
M2 Parameter	
SystemTemplate::GlobalTime::FR::FrGlobalTimeDomainProps.syncDataIDList	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00013

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeSyncDataIDList
BSW Parameter	**BSW Type**
FrTSynGlobalTimeSyncDataIDListElement	EcucParamConfContainerDef
BSW Description	
Element of the DataIDList for SYNC messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
The DataIDList for SYNC messages to calculate CRC.	
M2 Parameter	
SystemTemplate::GlobalTime::FR::FrGlobalTimeDomainProps.syncDataIDList	
Mapping Rule	**Mapping Type**
Value shall be derived from element of the ordered syncDataIDList.	full
Mapping Status	**Mapping ID**
valid	up_FrTSyn_00014

BSW Module	**BSW Context**
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeSyncDataIDList/FrTSynGlobalTimeSyncDataIDListElement
BSW Parameter	**BSW Type**
FrTSynGlobalTimeSyncDataIDListIndex	EcucIntegerParamDef
BSW Description	
Index of the DataIDList for SYNC messages ensures the identification of data elements due to CRC calculation and message authentication process.	

Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain/FrTSynGlobalTimeSyncDataIDList/FrTSyn GlobalTimeSyncDataIDListElement
BSW Parameter	**BSW Type**
FrTSynGlobalTimeSyncDataIDListValue	EcucIntegerParamDef
BSW Description	
Value of the DataIDList for SYNC messages ensures the identification of data elements due to CRC calculation and message authentication process.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
FrTSynSynchronizedTimeBaseRef	EcucReferenceDef
BSW Description	
Mandatory reference to the required synchronized time-base.	
Template Description	
M2 Parameter	
Mapping Rule	**Mapping Type**
	local
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
FrTSyn	FrTSyn/FrTSynGlobalTimeDomain
BSW Parameter	**BSW Type**
FrTSynUseExtendedMsgFormat	EcucBooleanParamDef
BSW Description	
* true: use at least 32 byte for Timesync messages (depending on configuration) * false: use always 16 byte for Timesync messages	
Template Description	

M2 Parameter	
Mapping Rule	**Mapping Type**
Mapping Status	**Mapping ID**
valid	

C.9 Crypto Stack

C.9.1 CryptoDriver

BSW Module	**BSW Context**
Crypto	Crypto/CryptoPrimitives/CryptoPrimitive/CryptoPrimitiveAlgorithmFamily
BSW Parameter	**BSW Type**
CRYPTO_ALGOFAM_3DES	EcucEnumerationLiteralDef
BSW Description	
0x13	
Template Description	
This attribute represents a description of the family (e.g. AES) of crypto algorithm implemented by the crypto primitive.	
M2 Parameter

C.9.2 Crypto Service Manager

BSW Module	BSW Context	
Csm	Csm/CsmJobs	
BSW Parameter		**BSW Type**
CsmJob		EcucParamConfContainerDef
BSW Description		
Container for configuration of CSM job. The container name serves as a symbolic name for the identifier of a job configuration.		
Template Description		
This meta-class has the ability to represent a crypto service mapping for the Pdu-based communication via SecOC.		
M2 Parameter		
SystemTemplate::SecureCommunication::SecOcCryptoServiceMapping		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_Csm_00001

BSW Module	BSW Context	
Csm	Csm/CsmJobs/CsmJob	
BSW Parameter		**BSW Type**
CsmJobPrimitiveRef		EcucReferenceDef
BSW Description		
This parameter refers to the used CsmPrimitive. Different jobs may refer to one CsmPrimitive. The referred CsmPrimitive provides detailed information on the actual cryptographic routine.		
Template Description		
This reference identifies the applicable crypto primitive for the authentication.		
M2 Parameter		
SystemTemplate::SecureCommunication::SecOcCryptoServiceMapping.authentication		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		up_Csm_00002

BSW Module	BSW Context	
Csm	Csm/CsmKeys	
BSW Parameter		**BSW Type**
CsmKey		EcucParamConfContainerDef
BSW Description		
Container for configuration of a CSM key. The container name serves as a symbolic name for the identifier of a key configuration.		
Template Description		
This meta-class has the ability to represent a crypto key		
M2 Parameter		
SystemTemplate::SecureCommunication::CryptoServiceKey		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**

C.10 Services

C.10.1 Transformer General

BSW Module	BSW Context
Xfrm	Xfrm/XfrmImplementationMapping/XfrmSignal/XfrmSignalChoice/XfrmISignalGroupRefChoice
BSW Parameter	**BSW Type**
XfrmISignalGroupRef	EcucForeignReferenceDef
BSW Description	
Reference to the ISignalGroup in the system description that transports the transformed data.	
Template Description	
SignalGroup of the Interaction Layer. The RTE supports a "signal fan-out" where the same System Signal Group is sent in different SignalIPdus to multiple receivers. An ISignalGroup refers to a set of ISignals that shall always be kept together. A ISignalGroup represents a COM Signal Group. Therefore it is recommended to put the ISignalGroup in the same Package as ISignals (see atp.recommendedPackage)	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignalGroup	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context
Xfrm	Xfrm/XfrmImplementationMapping/XfrmSignal/XfrmSignalChoice/XfrmISignalRefChoice
BSW Parameter	**BSW Type**
XfrmISignalRef	EcucForeignReferenceDef
BSW Description	
Reference to the ISignal in the system description that transports the transformed data.	
Template Description	
Signal of the Interaction Layer. The RTE supports a "signal fan-out" where the same System Signal is sent in different SignalIPdus to multiple receivers. To support the RTE "signal fan-out" each SignalIPdu contains ISignals. If the same System Signal is to be mapped into several SignalIPdus there is one ISignal needed for each ISignalToIPduMapping. ISignals describe the Interface between the Precompile configured RTE and the potentially Postbuild configured Com Stack (see ECUC Parameter Mapping). In case of the SystemSignalGroup an ISignal must be created for each SystemSignal contained in the SystemSignalGroup.	
M2 Parameter	
SystemTemplate::Fibex::FibexCore::CoreCommunication::ISignal	
Mapping Rule	**Mapping Type**
1:1 mapping	full
Mapping Status	**Mapping ID**
valid	

BSW Module	BSW Context	
Xfrm	Xfrm/XfrmImplementationMapping	
BSW Parameter		**BSW Type**
XfrmTransformationTechnologyRef		EcucForeignReferenceDef
BSW Description		
Reference to the TransformationTechnology in the DataTransformation of the system description for which the implementation (BswModuleEntry) shall be mapped.		
Template Description		
A TransformationTechnology is a transformer inside a transformer chain.		
M2 Parameter		
SystemTemplate::Transformer::TransformationTechnology		
Mapping Rule		**Mapping Type**
1:1 mapping		full
Mapping Status		**Mapping ID**
valid		

BSW Module	BSW Context	
Xfrm	Xfrm/XfrmImplementationMapping	
BSW Parameter		**BSW Type**
XfrmVariableDataPrototypeInstanceRef		EcucInstanceReferenceDef
BSW Description		
Instance Reference to a VariableDataPrototype in case a dedicated transformer BswModuleEntry is required per VariableDataPrototype access.		
Template Description		
This attribute defines whether the Transformer has an internal state or not.		
M2 Parameter		
SystemTemplate::Transformer::TransformationTechnology.hasInternalState		
Mapping Rule		**Mapping Type**
If an ISignal with dataTypePolicy set to transformingISignal - is received by this EcuInstance and - one of the TransformerTechnologys in the transformerChain has TransformationTechnology.hasInternalState set to true and - the corresponding VariableDataPrototype is consumed via multiple RPorts then this XfrmVariableDataPrototypeInstanceRef shall be used.		full
Mapping Status		**Mapping ID**
valid		up_Xfrm_00001

D.9.4 Added Constraints in 4.3.0

Id	Heading
[constr_1441]	In AUTOSAR, the transmission of union data types over the network is only supported by the SOME/IP Transformer
[constr_1463]	Applicable values for J1939Cluster.networkId
[constr_3222]	No ByteOrderEnum.opaque allowed for PduToFrameMapping.packingByteOrder
[constr_3223]	No ByteOrderEnum.opaque allowed for MultiplexedIPdu.selectorFieldByteOrder
[constr_3224]	No ByteOrderEnum.opaque allowed for SegmentPosition.segmentByteOrder.
[constr_3225]	LinFrameTriggering.linChecksum not allowed for LinSporadicFrames
[constr_3226]	LinFrameTriggering.linChecksum for LinEventTriggeredFrames
[constr_3227]	NmNode.nmPassiveModeEnabled setting
[constr_3229]	SwComponentPrototype mapped to an ApplicationPartition and EcuInstance
[constr_3230]	Usage of SenderRecRecordElementMapping.applicationRecordElement
[constr_3231]	Usage of IndexedArrayElement.applicationArrayElement
[constr_3232]	ApplicationPartition is allowed to be mapped to only one EcuPartition
[constr_3239]	Consistent mapping of software-component to J1939NmNode
[constr_3240]	Consistent mapping of J1939ControllerApplication to EcuInstance
[constr_3241]	Usage of AssignFrameId.messageId
[constr_3242]	Usage of UnassignFrameId.messageId
[constr_3243]	FrameTriggering.pduTriggering condition
[constr_3244]	Usage of SenderRecRecordElementMapping.implementationRecordElement
[constr_3245]	Usage of IndexedArrayElement.implementationArrayElement
[constr_3246]	Frame.packingByteOrder mix within a Frame is not allowed
[constr_3247]	Byte order mix within a MultiplexedIPdu is not allowed
[constr_3248]	Category of HwElement for ECUMapping
[constr_3249]	Category of HwElement for SwcToEcuMapping
[constr_3250]	PduTriggering.iSignalTriggering condition
[constr_3251]	Value of GlobalTimeDomain.domainId in subDomain chains
[constr_3252]	ISignalTriggering.iSignalPort reference condition
[constr_3253]	PduTriggering.iPduPort reference condition
[constr_3254]	FrameTriggering.framePort reference condition
[constr_3255]	FrameTriggering.pduTriggering reference condition with regard to the PhysicalChannel
[constr_3256]	PduTriggering.iSignalTriggering reference condition with regard to the PhysicalChannel
[constr_3257]	TimeSyncTechnology of servers and clients in a time synchronized network.
[constr_3258]	Restriction on ISignal.length in case iSignalType is set to array
[constr_3259]	Allowed use of SdServerConfig.capabilityRecord
[constr_3260]	Allowed use of SdClientConfig.capabilityRecord
[constr_3261]	GlobalTimeDomain.globalTimePduTriggering category
[constr_3262]	ConsumedEventGroup.eventGroupIdentifier is mandatory
[constr_3263]	Restriction of usage of SwcToEcuMapping in a System
[constr_3264]	Server side ClientServerToSignalMappings in case of a n:1 inter-ECU client-server communication
[constr_3265]	TransformationTechnology.hasInternalState setting for an E2E transformer
[constr_3266]	TransformationTechnology.hasInternalState setting for a SOME/IP Transformer

[constr_3267]	PduTriggerings in Service Discovery SocketConnectionBundles
[constr_3268]	Service Discovery SocketConnectionBundle serverPort reference to a TpPort
[constr_3269]	Service Discovery SocketConnection clientPort reference to a TpPort
[constr_3270]	Service Discovery SocketConnection clientPort reference to an IP Address
[constr_3271]	clientIpAddrFromConnectionRequest and clientPortFromConnectionRequest settings for SD SocketConnections
[constr_3272]	SocketConnectionIpduIdentifier.headerId setting for SD SocketConnectionBundles
[constr_3273]	Service Discovery multicast SocketConnectionBundle's serverPort reference to an IP Address
[constr_3274]	Service Discovery unicast SocketConnectionBundle's serverPort reference to an IP Address
[constr_3275]	PduTriggering containment in different PdurIPduGroups of the same EcuInstance is not allowed
[constr_3276]	Prohibition of usage of allowedIPv6ExtHeaders in IPv4 SocketConnections
[constr_3277]	Restriction of usage of IPv6ExtHeaderFilterLists in IPv6 SocketConnections
[constr_3278]	Usage of SOMEIPTransformationProps.sizeOfArrayLengthField
[constr_3279]	Usage of SOMEIPTransformationProps.sizeOfStructLengthField

E Mentioned Class Tables

For the sake of completeness, this chapter contains a set of class tables representing meta-classes mentioned in the context of this document but which are not contained directly in the scope of describing specific meta-model semantics.

Class	***ARElement*** (abstract)			
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::ARPackage			
Note	An element that can be defined stand-alone, i.e. without being part of another element (except for packages of course).			
Base	*ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	AclObjectSet, AclOperation, AclPermission, AclRole, AliasNameSet, ApplicationPartition, *AutosarDataType*, *BaseType*, BlueprintMappingSet, BswEntryRelationshipSet, BswModuleDescription, BswModuleEntry, BuildActionManifest, CalibrationParameterValueSet, ClientIdDefinitionSet, ClientServerInterfaceToBswModuleEntryBlueprintMapping, Collection, CompuMethod, ConsistencyNeedsBlueprintSet, ConstantSpecification, ConstantSpecificationMappingSet, CryptoServiceCertificate, CryptoServiceKey, CryptoServicePrimitive, DataConstr, DataExchangePoint, DataTransformationSet, DataTypeMappingSet, *DiagnosticCommonElement*, DiagnosticConnection, DiagnosticContributionSet, DiagnosticMasterToSlaveEventMappingSet, Documentation, EcucDefinitionCollection, EcucDestinationUriDefSet, EcucModuleConfigurationValues, EcucModuleDef, EcucValueCollection, EndToEndProtectionSet, EvaluatedVariantSet, FMFeature, FMFeatureMap, FMFeatureModel, FMFeatureSelectionSet, FlatMap, GeneralPurposeConnection, HwCategory, HwElement, HwType, IPv6ExtHeaderFilterSet, *Implementation*, InterpolationRoutineMappingSet, J1939ControllerApplication, KeywordSet, LifeCycleInfoSet, LifeCycleStateDefinitionGroup, McFunction, McGroup, ModeDeclarationGroup, ModeDeclarationMappingSet, PhysicalDimension, PhysicalDimensionMappingSet, *PortInterface*, PortInterfaceMappingSet, PortPrototypeBlueprint, PostBuildVariantCriterion, PostBuildVariantCriterionValueSet, PredefinedVariant, RapidPrototypingScenario, SdgDef, SwAddrMethod, SwAxisType, *SwComponentType*, SwRecordLayout, SwSystemconst, SwSystemconstantValueSet, SwcBswMapping, System, SystemSignal, SystemSignalGroup, TcpOptionFilterSet, *TimingExtension*, TransformationPropsSet, Unit, UnitGroup, ViewMapSet			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table E.1: ARElement

Class	**ARPackage**			
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::ARPackage			
Note	AUTOSAR package, allowing to create top level packages to structure the contained ARElements. ARPackages are open sets. This means that in a file based description system multiple files can be used to partially describe the contents of a package. This is an extended version of MSR's SW-SYSTEM.			
Base	*ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
arPackage	ARPackage	*	aggr	This represents a sub package within an ARPackage, thus allowing for an unlimited package hierarchy. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=blueprintDerivationTime xml.sequenceOffset=30

▽

△

Class	**ARPackage**			
element	PackageableElement	*	aggr	Elements that are part of this package **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=systemDesignTime xml.sequenceOffset=20
referenceBase	ReferenceBase	*	aggr	This denotes the reference bases for the package. This is the basis for all relative references within the package. The base needs to be selected according to the base attribute within the references. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=shortLabel xml.sequenceOffset=10

Table E.2: ARPackage

Class	***AbstractProvidedPortPrototype*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	This abstract class provides the ability to become a provided PortPrototype.			
Base	*ARObject*, *AtpBlueprintable*, *AtpFeature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *PortPrototype*, *Referrable*			
Subclasses	PPortPrototype, PRPortPrototype			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
providedComSpec	PPortComSpec	*	aggr	Provided communication attributes per interface element (data element or operation).

Table E.3: AbstractProvidedPortPrototype

Class	**AdminData**			
Package	M2::MSR::AsamHdo::AdminData			
Note	AdminData represents the ability to express administrative information for an element. This administration information is to be treated as meta-data such as revision id or state of the file. There are basically four kinds of meta-data • The language and/or used languages. • Revision information covering e.g. revision number, state, release date, changes. Note that this information can be given in general as well as related to a particular company. • Document meta-data specific for a company			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
docRevision (ordered)	DocRevision	*	aggr	This allows to denote information about the current revision of the object. Note that information about previous revisions can also be logged here. The entries shall be sorted descendant by date in order to reflect the history. Therefore the most recent entry representing the current version is denoted first. **Tags:** xml.roleElement=true xml.roleWrapperElement=true xml.sequenceOffset=50 xml.typeElement=false xml.typeWrapperElement=false

▽

△

Class	**AdminData**			
language	LEnum	0..1	attr	This attribute specifies the master language of the document or the document fragment. The master language is the one in which the document is maintained and from which the other languages are derived from. In particular in case of inconsistencies, the information in the master language is priority. **Tags:** xml.sequenceOffset=20
sdg	Sdg	*	aggr	This property allows to keep special data which is not represented by the standard model. It can be utilized to keep e.g. tool specific data. **Tags:** xml.roleElement=true xml.roleWrapperElement=true xml.sequenceOffset=60 xml.typeElement=false xml.typeWrapperElement=false
usedLanguages	MultiLanguagePlainText	0..1	aggr	This property specifies the languages which are provided in the document. Therefore it should only be specified in the top level admin data. For each language provided in the document there is one entry in MultilanguagePlain Text. The content of each entry can be used for illustration of the language. The used language itself depends on the language attribute in the entry. **Tags:** xml.sequenceOffset=30

Table E.4: AdminData

Class	**AnyInstanceRef**			
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::AnyInstanceRef			
Note	Describes a reference to any instance in an AUTOSAR model. This is the most generic form of an instance ref. Refer to the superclass notes for more details.			
Base	*ARObject*, *AtpInstanceRef*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
base	AtpClassifier	1	ref	This is the base from which navigation path begins. **Stereotypes:** atpDerived
contextElement	AtpFeature	*	ref	This is one step in the navigation path specified by the instance ref.
target	AtpFeature	1	ref	This is the target of the instance ref.

Table E.5: AnyInstanceRef

Class	**ApplicationArrayDataType**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	An application data type which is an array, each element is of the same application data type. **Tags:** atp.recommendedPackage=ApplicationDataTypes			
Base	*ARElement*, *ARObject*, *ApplicationCompositeDataType*, *ApplicationDataType*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *AutosarDataType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dynamicArraySizeProfile	String	0..1	attr	Specifies the profile which the array will follow if it is a variable size array.

▽

△

Class	ApplicationArrayDataType			
element	ApplicationArray Element	1	aggr	This association implements the concept of an array element. That is, in some cases it is necessary to be able to identify single array elements, e.g. as input values for an interpolation routine.

Table E.6: ApplicationArrayDataType

Class	*ApplicationCompositeDataType* (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	Abstract base class for all application data types composed of other data types.			
Base	*ARElement*, *ARObject*, *ApplicationDataType*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *AutosarDataType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	ApplicationArrayDataType, ApplicationRecordDataType			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.7: ApplicationCompositeDataType

Class	*ApplicationCompositeElementDataPrototype* (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
Note	This class represents a data prototype which is aggregated within a composite application data type (record or array). It is introduced to provide a better distinction between target and context in instance Refs.			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *DataPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	ApplicationArrayElement, ApplicationRecordElement			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
type	ApplicationDataType	1	tref	This represents the corresponding data type. **Stereotypes:** isOfType

Table E.8: ApplicationCompositeElementDataPrototype

Class	*ApplicationDataType* (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	ApplicationDataType defines a data type from the application point of view. Especially it should be used whenever something "physical" is at stake. An ApplicationDataType represents a set of values as seen in the application model, such as measurement units. It does not consider implementation details such as bit-size, endianess, etc. It should be possible to model the application level aspects of a VFB system by using ApplicationData Types only.			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *AutosarDataType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	*ApplicationCompositeDataType*, ApplicationPrimitiveDataType			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.9: ApplicationDataType

Class	ApplicationPrimitiveDataType			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	A primitive data type defines a set of allowed values. **Tags:** atp.recommendedPackage=ApplicationDataTypes			
Base	*ARElement*, *ARObject*, *ApplicationDataType*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *AutosarDataType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.10: ApplicationPrimitiveDataType

Class	ApplicationRecordDataType			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	An application data type which can be decomposed into prototypes of other application data types. **Tags:** atp.recommendedPackage=ApplicationDataTypes			
Base	*ARElement*, *ARObject*, *ApplicationCompositeDataType*, *ApplicationDataType*, *AtpBlueprint*, *Atp Blueprintable*, *AtpClassifier*, *AtpType*, *AutosarDataType*, *CollectableElement*, *Identifiable*, *Multilanguage Referrable*, *PackageableElement*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
element (ordered)	ApplicationRecord Element	1..*	aggr	Specifies an element of a record. The aggregation of ApplicationRecordElement is subject to variability with the purpose to support the conditional existence of elements inside a ApplicationrecordData Type. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

Table E.11: ApplicationRecordDataType

Class	ApplicationRecordElement			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
Note	Describes the properties of one particular element of an application record data type.			
Base	*ARObject*, *ApplicationCompositeElementDataPrototype*, *AtpFeature*, *AtpPrototype*, *DataPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
isOptional	Boolean	0..1	attr	This attribute represents the ability to declare the enclosing ApplicationRecordElement as optional. This means the that, at runtime, the ApplicationRecord Element may or may not have a valid value and shall therefore be ignored. The underlying runtime software provides means to set the ApplicationRecordElement as not valid at the sending end of a communication and determine its validity at the receiving end. **Tags:** atp.Status=draft

Table E.12: ApplicationRecordElement

Class	**ApplicationSwComponentType**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	The ApplicationSwComponentType is used to represent the application software. **Tags:** atp.recommendedPackage=SwComponentTypes			
Base	*ARElement*, *ARObject*, *AtomicSwComponentType*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*, *SwComponentType*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table E.13: ApplicationSwComponentType

Class	**ArgumentDataPrototype**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	An argument of an operation, much like a data element, but also carries direction information and is owned by a particular ClientServerOperation.			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *AutosarDataPrototype*, *DataPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
direction	ArgumentDirectionEnum	1	attr	This attribute specifies the direction of the argument prototype.
serverArgumentImplPolicy	ServerArgumentImplPolicyEnum	0..1	attr	This defines how the argument type of the servers RunnableEntity is implemented. If the attribute is not defined this has the same semantics as if the attribute is set to the value useArgumentType for primitive arguments and structures.

Table E.14: ArgumentDataPrototype

Enumeration	**ArgumentDirectionEnum**
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::PrimitiveTypes
Note	Use cases: • Arguments in ClientServerOperation can have different directions that need to be formally indicated because they have an impact on how the function signature looks like eventually. • Arguments in BswModuleEntry already determine a function signature, but the direction is used to specify the semantics, especially of pointer arguments.
Literal	***Description***
in	The argument value is passed to the callee. **Tags:** atp.EnumerationValue=0
inout	The argument value is passed to the callee but also passed back from the callee to the caller. **Tags:** atp.EnumerationValue=1
out	The argument value is passed from the callee to the caller. **Tags:** atp.EnumerationValue=2

Table E.15: ArgumentDirectionEnum

Class	**ArrayValueSpecification**			
Package	M2::AUTOSARTemplates::CommonStructure::Constants			
Note	Specifies the values for an array.			
Base	*ARObject*, *CompositeValueSpecification*, *ValueSpecification*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
element (ordered)	ValueSpecification	*	aggr	The value for a single array element. All Value Specifications aggregated by ArrayValueSpecification shall have the same structure. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

Table E.16: ArrayValueSpecification

Class	**AssemblySwConnector**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
Note	AssemblySwConnectors are exclusively used to connect SwComponentPrototypes in the context of a CompositionSwComponentType.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *SwConnector*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
provider	AbstractProvidedPort Prototype	0..1	iref	Instance of providing port.
requester	AbstractRequiredPort Prototype	0..1	iref	Instance of requiring port.

Table E.17: AssemblySwConnector

Class	***AtomicSwComponentType*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	An atomic software component is atomic in the sense that it cannot be further decomposed and distributed across multiple ECUs.			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*, *SwComponentType*			
Subclasses	ApplicationSwComponentType, ComplexDeviceDriverSwComponentType, EcuAbstractionSwComponent Type, NvBlockSwComponentType, SensorActuatorSwComponentType, ServiceProxySwComponent Type, ServiceSwComponentType			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
internalBehavior	SwcInternalBehavior	0..1	aggr	The SwcInternalBehaviors owned by an AtomicSw ComponentType can be located in a different physical file. Therefore the aggregation is «atpSplitable». **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=internalBehavior, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
symbolProps	SymbolProps	0..1	aggr	This represents the SymbolProps for the AtomicSw ComponentType. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=shortName

Table E.18: AtomicSwComponentType

Class	***AtpInstanceRef*** (abstract)			
Package	M2::AUTOSARTemplates::GenericStructure::AbstractStructure			
Note	An M0 instance of a classifier may be represented as a tree rooted at that instance, where under each node come the sub-trees representing the instances which act as features under that node. An instance ref specifies a navigation path from any M0 tree-instance of the base (which is a classifier) to a leaf (which is an instance of the target).			
Base	*ARObject*			
Subclasses	AnyInstanceRef, ApplicationCompositeElementInPortInterfaceInstanceRef, ApplicationDataPrototypeIn SystemInstanceRef, ComponentInCompositionInstanceRef, ComponentInSystemInstanceRef, Data PrototypeInSystemInstanceRef, InnerDataPrototypeGroupInCompositionInstanceRef, InnerPortGroupIn CompositionInstanceRef, InnerRunnableEntityGroupInCompositionInstanceRef, InstanceEventIn CompositionInstanceRef, *ModeGroupInAtomicSwcInstanceRef*, ModeInBswModuleDescriptionInstance Ref, ModeInSwcInstanceRef, OperationArgumentInComponentInstanceRef, *OperationInAtomicSwc InstanceRef*, OperationInSystemInstanceRef, PModeInSystemInstanceRef, ParameterInAtomicSWC TypeInstanceRef, PortGroupInSystemInstanceRef, *PortInCompositionTypeInstanceRef*, RModeInAtomic SwcInstanceRef, RteEventInEcuInstanceRef, RunnableEntityInCompositionInstanceRef, SwcService DependencyInSystemInstanceRef, *TriggerInAtomicSwcInstanceRef*, TriggerInSystemInstanceRef, VariableAccessInEcuInstanceRef, VariableDataPrototypeInCompositionInstanceRef, VariableData PrototypeInSystemInstanceRef, VariableInAtomicSWCTypeInstanceRef, *VariableInAtomicSwcInstance Ref*, VariableInComponentInstanceRef			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
atpBase	AtpClassifier	1	ref	This is the base from which the navigaion path starts. **Stereotypes:** atpAbstract; atpDerived
atpContextEle- ment (ordered)	AtpPrototype	*	ref	This is one particular step in the navigation path. **Stereotypes:** atpAbstract
atpTarget	AtpFeature	1	ref	This is the target of the instance ref. In other words it is the terminal of the navigation path. **Stereotypes:** atpAbstract

Table E.19: AtpInstanceRef

Class	***AutosarDataPrototype*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
Note	Base class for prototypical roles of an AutosarDataType.			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *DataPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	ArgumentDataPrototype, ParameterDataPrototype, VariableDataPrototype			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
type	AutosarDataType	1	tref	This represents the corresponding data type. **Stereotypes:** isOfType

Table E.20: AutosarDataPrototype

Class	***AutosarDataType*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	Abstract base class for user defined AUTOSAR data types for ECU software.			
Base	*ARElement*, *ARObject*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *Multilanguage Referrable*, *PackageableElement*, *Referrable*			
Subclasses	*AbstractImplementationDataType*, *ApplicationDataType*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***

▽

△

Class	***AutosarDataType*** (abstract)			
swDataDef Props	SwDataDefProps	0..1	aggr	The properties of this AutosarDataType.

Table E.21: AutosarDataType

Class	***BaseType*** (abstract)			
Package	M2::MSR::AsamHdo::BaseTypes			
Note	This abstract meta-class represents the ability to specify a platform dependant base type.			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Subclasses	SwBaseType			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
baseType Definition	BaseTypeDefinition	1	aggr	This is the actual definition of the base type. **Tags:** xml.roleElement=false xml.roleWrapperElement=false xml.sequenceOffset=20 xml.typeElement=false xml.typeWrapperElement=false

Table E.22: BaseType

Class	**BaseTypeDirectDefinition**			
Package	M2::MSR::AsamHdo::BaseTypes			
Note	This BaseType is defined directly (as opposite to a derived BaseType)			
Base	*ARObject*, *BaseTypeDefinition*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
baseType Encoding	BaseTypeEncoding String	1	attr	This specifies, how an object of the current BaseType is encoded, e.g. in an ECU within a message sequence. **Tags:** xml.sequenceOffset=90
baseTypeSize	PositiveInteger	0..1	attr	Describes the length of the data type specified in the container in bits. **Tags:** xml.sequenceOffset=70
byteOrder	ByteOrderEnum	0..1	attr	This attribute specifies the byte order of the base type. **Tags:** xml.sequenceOffset=110
memAlignment	PositiveInteger	0..1	attr	This attribute describes the alignment of the memory object in bits. E.g. "8" specifies, that the object in question is aligned to a byte while "32" specifies that it is aligned four byte. If the value is set to "0" the meaning shall be interpreted as "unspecified". **Tags:** xml.sequenceOffset=100
native Declaration	NativeDeclarationString	0..1	attr	This attribute describes the declaration of such a base type in the native programming language, primarily in the Programming language C. This can then be used by a code generator to include the necessary declarations into a header file. For example BaseType with `shortName: "MyUnsignedInt"`

▽

△

Class	BaseTypeDirectDefinition			
				△ nativeDeclaration: "unsigned short" Results in typedef unsigned short MyUnsignedInt; If the attribute is not defined the referring Implementation DataTypes will not be generated as a typedef by RTE. If a nativeDeclaration type is given it shall fulfill the characteristic given by basetypeEncoding and baseTypeSize. This is required to ensure the consistent handling and interpretation by software components, RTE, COM and MCM systems. **Tags:** xml.sequenceOffset=120

Table E.23: BaseTypeDirectDefinition

Class	BswInternalBehavior			
Package	M2::AUTOSARTemplates::BswModuleTemplate::BswBehavior			
Note	Specifies the behavior of a BSW module or a BSW cluster w.r.t. the code entities visible by the BSW Scheduler. It is possible to have several different BswInternalBehaviors referring to the same BswModuleDescription.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *InternalBehavior*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
arTypedPerInstanceMemory	VariableDataPrototype	*	aggr	Defines an AUTOSAR typed memory-block that needs to be available for each instance of the Basic Software Module. The aggregation of arTypedPerInstanceMemory is subject to variability with the purpose to support variability in the Basic Software Module's implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
bswPerInstanceMemoryPolicy	BswPerInstanceMemoryPolicy	*	aggr	Policy for a arTypedPerInstanceMemory The policy selects the options of the Schedule Manager API generation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
clientPolicy	BswClientPolicy	*	aggr	Policy for a requiredClientServerEntry. The policy selects the options of the Schedule Manager API generation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=clientPolicy, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
distinguishedPartition	BswDistinguishedPartition	*	aggr	Indicates an abstract partition context in which the enclosing BswModuleEntity can be executed. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.ShortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=60

▽

△

Class	**BswInternalBehavior**			
entity	BswModuleEntity	*	aggr	A code entity for which the behavior is described **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=5
event	BswEvent	*	aggr	An event required by this module behavior. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=10
exclusiveArea Policy	BswExclusiveArea Policy	*	aggr	Policy for an ExclusiveArea in this BswInternalBehavior. The policy selects the options of the Schedule Manager API generation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=exclusiveAreaPolicy, variation Point.shortLabel vh.latestBindingTime=preCompileTime
includedData TypeSet	IncludedDataTypeSet	*	aggr	The includedDataTypeSet is used by a basic software module for its implementation. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=includedDataTypeSet
internal TriggeringPoint	BswInternalTriggering Point	*	aggr	An internal triggering point. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=2
internal TriggeringPoint Policy	BswInternalTriggering PointPolicy	*	aggr	Policy for an internalTriggeringPoint in this BswInternal Behavior.. The policy selects the options of the Schedule Manager API generation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=internalTriggeringPointPolicy, variation Point.shortPoint vh.latestBindingTime=preCompileTime
modeReceiver Policy	BswModeReceiver Policy	*	aggr	Implementation policy for the reception of mode switches. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=modeReceiverPolicy, variation Point.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=25
modeSender Policy	BswModeSenderPolicy	*	aggr	Implementation policy for providing a mode group. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=modeSenderPolicy, variation Point.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=20
parameterPolicy	BswParameterPolicy	*	aggr	Policy for a perInstanceParameter in this BswInternal Behavior. The policy selects the options of the Schedule Manager API generation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=parameterPolicy, variatioPoint.short Label vh.latestBindingTime=preCompileTime

▽

△

Class	**BswInternalBehavior**			
perInstance Parameter	ParameterData Prototype	*	aggr	Describes a read only memory object containing characteristic value(s) needed by this BswInternal Behavior. The role name perInstanceParameter is chosen in analogy to the similar role in the context of SwcInternal Behavior. In contrast to constantMemory, this object is not allocated locally by the module's code, but by the BSW Scheduler and it is accessed from the BSW module via the BSW Scheduler API. The main use case is the support of software emulation of calibration data. The aggregation is subject to variability with the purpose to support implementation variants. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=atp.Splitkey shortName, variation Point.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=45
receptionPolicy	BswDataReception Policy	*	aggr	Data reception policy for inter-partition and/or inter-core communication. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=receptionPolicy, variationPoint.short Label vh.latestBindingTime=preCompileTime xml.sequenceOffset=55
releasedTrigger Policy	BswReleasedTrigger Policy	*	aggr	Policy for a releasedTrigger. The policy selects the options of the Schedule Manager API generation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=releasedTriggerPolicy, variation Point.shortLabel vh.latestBindingTime=preCompileTime
schedulerName Prefix	BswSchedulerName Prefix	*	aggr	Optional definition of one or more prefixes to be used for the BswScheduler. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=schedulerNamePrefix, variation Point.ShortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=50
sendPolicy	BswDataSendPolicy	*	aggr	Policy for a providedData. The policy selects the options of the Schedule Manager API generation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=sendPolicy, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
service Dependency	BswService Dependency	*	aggr	Defines the requirements on AUTOSAR Services for a particular item. The aggregation is subject to variability with the purpose to support the conditional existence of ServiceNeeds. The aggregation is splitable in order to support that ServiceNeeds might be provided in later development steps. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=serviceDependency, variation Point.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=40

▽

△

Class	BswInternalBehavior			
triggerDirect Implementation	BswTriggerDirect Implementation	*	aggr	Specifies a trigger to be directly implemented via OS calls. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=triggerDirectImplementation, variation Point.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=15
variationPoint Proxy	VariationPointProxy	*	aggr	Proxy of a variation points in the C/C++ implementation. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=shortName

Table E.24: BswInternalBehavior

Class	CalibrationParameterValue			
Package	M2::AUTOSARTemplates::SWComponentTemplate::MeasurementAndCalibration::CalibrationParameter Values			
Note	Specifies instance specific calibration parameter values used to initialize the memory objects implementing calibration parameters in the generated RTE code. RTE generator will use the implInitValue to override the initial values specified for the DataPrototypes of a component type. The applInitValue is used to exchange init values with the component vendor not publishing the transformation algorithm between ApplicationDataTypes and ImplementationDataTypes or defining an instance specific initialization of components which are only defined with ApplicationDataTypes. Note: If both representations of init values are available these need to represent the same content. Note further that in this case an explicit mapping of ValueSpecification is not implemented because calibration parameters are delivered back after the calibration phase.			
Base	*ARObject*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
applInitValue	ValueSpecification	0..1	aggr	This is the initial value specification structured according to the ApplicationDataType
implInitValue	ValueSpecification	0..1	aggr	This is the initial value specification structured according to the ImplementationDataType
initialized Parameter	FlatInstanceDescriptor	1	ref	This represents the parameter that is initialized by the CalibrationParameterValue.

Table E.25: CalibrationParameterValue

Class	ClientServerInterface			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	A client/server interface declares a number of operations that can be invoked on a server by a client. **Tags:** atp.recommendedPackage=PortInterfaces			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *PortInterface*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
operation	ClientServerOperation	1..*	aggr	ClientServerOperation(s) of this ClientServerInterface. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=blueprintDerivationTime
possibleError	ApplicationError	*	aggr	Application errors that are defined as part of this interface.

Table E.26: ClientServerInterface

Class	**ClientServerOperation**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	An operation declared within the scope of a client/server interface.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
argument (ordered)	ArgumentDataPrototype	*	aggr	An argument of this ClientServerOperation **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=blueprintDerivationTime
possibleError	ApplicationError	*	ref	Possible errors that may by raised by the referring operation.

Table E.27: ClientServerOperation

Class	**CompositionSwComponentType**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
Note	A CompositionSwComponentType aggregates SwComponentPrototypes (that in turn are typed by SwComponentTypes) as well as SwConnectors for primarily connecting SwComponentPrototypes among each others and towards the surface of the CompositionSwComponentType. By this means hierarchical structures of software-components can be created. **Tags:** atp.recommendedPackage=SwComponentTypes			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*, *SwComponentType*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
component	SwComponent Prototype	*	aggr	The instantiated components that are part of this composition. The aggregation of SwComponentPrototype is subject to variability with the purpose to support the conditional existence of a SwComponentPrototype. Please be aware: if the conditional existence of SwComponentPrototypes is resolved post-build the deselected SwComponent Prototypes are still contained in the ECUs build but the instances are inactive in in that they are not scheduled by the RTE. The aggregation is marked as atpSplitable in order to allow the addition of service components to the ECU extract during the ECU integration. The use case for having 0 components owned by the CompositionSwComponentType could be to deliver an empty CompositionSwComponentType to e.g. a supplier for filling the internal structure. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild
connector	SwConnector	*	aggr	SwConnectors have the principal ability to establish a connection among PortPrototypes. They can have many roles in the context of a CompositionSwComponentType. Details are refined by subclasses. The aggregation of SwConnectors is subject to variability with the purpose to support variant data flow. The aggregation is marked as atpSplitable in order to allow the extension of the ECU extract with AssemblySw ▽

▽

△

Class	CompositionSwComponentType			
				△ Connectors between ApplicationSwComponentTypes and ServiceSwComponentTypes during the ECU integration. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=postBuild
constantValue Mapping	ConstantSpecification MappingSet	*	ref	Reference to the ConstantSpecificationMapping to be applied for initValues of PPortComSpecs and RPortCom Spec. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=constantValueMapping
dataType Mapping	DataTypeMappingSet	*	ref	Reference to the DataTypeMapping to be applied for the used ApplicationDataTypes in PortInterfaces. Background: when developing subsystems it may happen that ApplicationDataTypes are used on the surface of CompositionSwComponentTypes. In this case it would be reasonable to be able to also provide the intended mapping to the ImplementationDataTypes. However, this mapping shall be informal and not technically binding for the implementers mainly because the RTE generator is not concerned about the CompositionSwComponent Types. Rationale: if the mapping of ApplicationDataTypes on the delegated and inner PortPrototype matches then the mapping to ImplementationDataTypes is not impacting compatibility. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=dataTypeMapping
instantiation RTEEventProps	InstantiationRTEEvent Props	*	aggr	This allows to define instantiation specific properties for RTE Events, in particular for instance specific scheduling. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortLabel, variationPoint.shortLabel vh.latestBindingTime=codeGenerationTime

Table E.28: CompositionSwComponentType

Class	CompuMethod			
Package	M2::MSR::AsamHdo::ComputationMethod			
Note	This meta-class represents the ability to express the relationship between a physical value and the mathematical representation. Note that this is still independent of the technical implementation in data types. It only specifies the formula how the internal value corresponds to its physical pendant. **Tags:** atp.recommendedPackage=CompuMethods			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
compuInternal ToPhys	Compu	0..1	aggr	This specifies the computation from internal values to physical values. **Tags:** xml.sequenceOffset=80
compuPhysTo Internal	Compu	0..1	aggr	This represents the computation from physical values to the internal values. **Tags:** xml.sequenceOffset=90

▽

△

Class	**CompuMethod**			
displayFormat	DisplayFormatString	0..1	attr	This property specifies, how the physical value shall be displayed e.g. in documents or measurement and calibration tools. **Tags:** xml.sequenceOffset=20
unit	Unit	0..1	ref	This is the physical unit of the Physical values for which the CompuMethod applies. **Tags:** xml.sequenceOffset=30

Table E.29: CompuMethod

Class	**CompuScale**			
Package	M2::MSR::AsamHdo::ComputationMethod			
Note	This meta-class represents the ability to specify one segment of a segmented computation method.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
desc	MultiLanguageOverview Paragraph	0..1	aggr	<desc> represents a general but brief description of the object in question. **Tags:** xml.sequenceOffset=30
compuInverse Value	CompuConst	0..1	aggr	This is the inverse value of the constraint. This supports the case that the scale is not reversible per se. **Tags:** xml.sequenceOffset=60
compuScale Contents	CompuScaleContents	0..1	aggr	This represents the computation details of the scale. **Tags:** xml.roleElement=false xml.roleWrapperElement=false xml.sequenceOffset=70 xml.typeElement=false xml.typeWrapperElement=false
lowerLimit	Limit	0..1	attr	This specifies the lower limit of the scale. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime xml.sequenceOffset=40
mask	PositiveInteger	0..1	attr	In difference to all the other computational methods every COMPU-SCALE will be applied including the bit MASK. Therefore it is allowed for this type of COMPU-METHOD, that COMPU-SCALES overlap. To calculate the string reverse to a value, the string has to be split and the according value for each substring has to be summed up. The sum is finally transmitted. The processing has to be done in order of the COMPU-SCALE elements. **Tags:** xml.sequenceOffset=35
shortLabel	Identifier	0..1	attr	This element specifies a short name for the particular scale. The name can for example be used to derive a programming language identifier. **Tags:** xml.sequenceOffset=20

▽

△

Class	**CompuScale**			
symbol	CIdentifier	0..1	attr	The symbol, if provided, is used by code generators to get a C identifier for the CompuScale. The name will be used as is for the code generation, therefore it needs to be unique within the generation context. **Tags:** xml.sequenceOffset=25
upperLimit	Limit	0..1	attr	This specifies the upper limit of a of the scale. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime xml.sequenceOffset=50

Table E.30: CompuScale

Class	«atpMixedString» **ConditionByFormula**			
Package	M2::AUTOSARTemplates::GenericStructure::VariantHandling			
Note	This class represents a condition which is computed based on system constants according to the specified expression. The expected result is considered as boolean value. The result of the expression is interpreted as a condition. • "0" represents "false"; • a value other than zero is considered "true"			
Base	*ARObject*, *FormulaExpression*, *SwSystemconstDependentFormula*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
bindingTime	BindingTimeEnum	1	attr	This attribute specifies the point in time when condition may be evaluated at earliest. At this point in time all referenced system constants shall have a value. **Tags:** xml.attribute=true

Table E.31: ConditionByFormula

Enumeration	**CouplingPortRoleEnum**
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::Fibex4Ethernet::EthernetTopology
Note	Defines the role a CouplingPort takes in the context of a CouplingElement.
Literal	***Description***
hostPort	The hostPort is connected to an ECU (host ecu). The host ECU controls the connected Coupling Element (e.g. Ethernet switch). **Tags:** atp.EnumerationValue=0
standardPort	A CoupingPort can be a standardPort that is used to connect the CouplingElement with Coupling Ports outside the ECU. **Tags:** atp.EnumerationValue=2
upLinkPort	A CouplingPort can be connected to another CouplingPort of a CouplingElement located on the same ECU (CouplingElement.ecuInstance) using the CouplingPortConnection. This is used to model a cascaded switch. **Tags:** atp.EnumerationValue=1

Table E.32: CouplingPortRoleEnum

Class	***DataPrototype*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
Note	Base class for prototypical roles of any data type.			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	*ApplicationCompositeElementDataPrototype*, *AutosarDataPrototype*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
swDataDef Props	SwDataDefProps	0..1	aggr	This property allows to specify data definition properties which apply on data prototype level.

Table E.33: DataPrototype

Class	**DataPrototypeMapping**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	Defines the mapping of two particular VariableDataPrototypes, ParameterDataPrototypes or Argument DataPrototypes with unequal names and/or unequal semantic (resolution or range) in context of two different SenderReceiverInterface, NvDataInterface or ParameterInterface or Operations. If the semantic is unequal following rules apply: The textTableMapping is only applicable if the referred DataPrototypes are typed by AutosarDataType referring to CompuMethods of category TEXTTABLE, SCALE_LINEAR_AND_TEXTTABLE or BITFIELD_TEXTTABLE. In the case that the DataPrototypes are typed by AutosarDataType either referring to CompuMethods of category LINEAR, IDENTICAL or referring to no CompuMethod (which is similar as IDENTICAL) the linear conversion factor is calculated out of the factorSiToUnit and offsetSiToUnit attributes of the referred Units and the CompuRationalCoeffs of a compuInternalToPhys of the referred CompuMethods.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
firstData Prototype	AutosarDataPrototype	1	ref	First to be mapped DataPrototype in context of a Sender ReceiverInterface, NvDataInterface, ParameterInterface or Operation.
firstToSecond Data Transformation	DataTransformation	0..1	ref	This reference defines the need to execute the Data Transformation <Mip>_<transformerId> functions of the transformation chain when communicating from the Data PrototypeMapping.firstDataPrototype to the Data PrototypeMapping.secondDataPrototype. This reference also specifies the reverse Data Transformation <Mip>_Inv_<transformerId> functions of the transformation chain (i.e. from the DataPrototype Mapping.secondDataPrototype to the DataPrototype Mapping.firstDataPrototype) if the referenced Data Transformation is symmetric, i.e. attribute Data Transformation.dataTransformationKind is set to symmetric.
secondData Prototype	AutosarDataPrototype	1	ref	Second to be mapped DataPrototype in context of a SenderReceiverInterface, NvDataInterface, Parameter Interface or Operation.
secondToFirst Data Transformation	DataTransformation	0..1	ref	This defines the need to execute the reverse Data Transformation <Mip>_Inv_<transformerId> functions of the transformation chain when communicating from the DataPrototypeMapping.secondDataPrototype to the Data PrototypeMapping.firstDataPrototype.
subElement Mapping	SubElementMapping	*	aggr	This represents the owned SubelementMapping.
textTable Mapping	TextTableMapping	0..2	aggr	Applied TextTableMapping(s)

Table E.34: DataPrototypeMapping

Class	**DataTypeMap**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	This class represents the relationship between ApplicationDataType and its implementing Abstract ImplementationDataType.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
applicationData Type	ApplicationDataType	1	ref	This is the corresponding ApplicationDataType
implementation DataType	AbstractImplementation DataType	1	ref	This is the corresponding AbstractImplementationData Type.

Table E.35: DataTypeMap

Class	**DataTypeMappingSet**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::Datatypes			
Note	This class represents a list of mappings between ApplicationDataTypes and ImplementationDataTypes. In addition, it can contain mappings between ImplementationDataTypes and ModeDeclarationGroups. **Tags:** atp.recommendedPackage=DataTypeMappingSets			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dataTypeMap	DataTypeMap	*	aggr	This is one particular association between an Application DataType and its AbstractImplementationDataType.
modeRequest TypeMap	ModeRequestTypeMap	*	aggr	This is one particular association between an Mode DeclarationGroup and its AbstractImplementationData Type.

Table E.36: DataTypeMappingSet

Class	**DelegationSwConnector**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
Note	A delegation connector delegates one inner PortPrototype (a port of a component that is used inside the composition) to a outer PortPrototype of compatible type that belongs directly to the composition (a port that is owned by the composition).			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *SwConnector*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
innerPort	PortPrototype	1	iref	The port that belongs to the ComponentPrototype in the composition **Tags:** xml.typeElement=true
outerPort	PortPrototype	1	ref	The port that is located on the outside of the Composition Type

Table E.37: DelegationSwConnector

Class	**Describable** (abstract)			
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::Identifiable			
Note	This meta-class represents the ability to add a descriptive documentation to non identifiable elements.			
Base	*ARObject*			
Subclasses	CyclicTiming, EventControlledTiming, HwElementConnector, HwPinConnector, HwPinGroupConnector, IPduTiming, Ipv4DhcpServerConfiguration, Ipv6DhcpServerConfiguration, PncMapping, SocketConnection, *TransformationComSpecProps*, *TransformationDescription*, *TransformationISignalProps*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
desc	MultiLanguageOverviewParagraph	0..1	aggr	This represents a general but brief (one paragraph) description what the object in question is about. It is only one paragraph! Desc is intended to be collected into overview tables. This property helps a human reader to identify the object in question. More elaborate documentation, (in particlar how the object is built or used) should go to "introduction". **Tags:** xml.sequenceOffset=-60
category	CategoryString	0..1	attr	The category is a keyword that specializes the semantics of the Describable. It affects the expected existence of attributes and the applicability of constraints. **Tags:** xml.sequenceOffset=-50
adminData	AdminData	0..1	aggr	This represents the administrative data for the describable object. **Tags:** xml.sequenceOffset=-20
introduction	DocumentationBlock	0..1	aggr	This represents more information about how the object in question is built or is used. Therefore it is a DocumentationBlock. **Tags:** xml.sequenceOffset=-30

Table E.38: Describable

Class	**DoIpActivationLineNeeds**			
Package	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
Note	A DoIP entity needs to be informed when an external tester is attached or activated. The DoIpActivation ServiceNeeds specifies the trigger for such an event. Examples would be a Pdu via a regular communication bus, a PWM signal, or an I/O. For details please refer to the ISO 13400.			
Base	*ARObject*, *DoIpServiceNeeds*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *ServiceNeeds*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.39: DoIpActivationLineNeeds

Class	**DoIpGidNeeds**			
Package	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
Note	The DoIpGidNeeds indicates that the software-component owning this ServiceNeeds is providing the GID number either after a GID Synchronisation or by other means like e.g. flashed EEPROM parameter. This need can be used independent from DoIpGidSynchronizationNeeds and is necessary if the GID can not be provided out of the DoIP configuration options.			
Base	*ARObject*, *DoIpServiceNeeds*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *ServiceNeeds*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.40: DoIpGidNeeds

Class	DoIpGidSynchronizationNeeds			
Package	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
Note	The DoIpGidSynchronizationNeeds indicates that the software-component owning this ServiceNeeds is triggered by the DoIP entity to start a synchronization of the GID (Group Identification) on the DoIP service 0x0001, 0x0002, 0x0003 or before announcement via service 0x0004 according to ISO 13400-2:2012 if necessary. Note that this need is only relevant for DoIP synchronization masters.			
Base	*ARObject*, *DoIpServiceNeeds*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *ServiceNeeds*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.41: DoIpGidSynchronizationNeeds

Class	DoIpPowerModeStatusNeeds			
Package	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
Note	The DoIpPowerModeStatusNeeds indicates that the software-component owning this ServiceNeeds is providing the PowerModeStatus for the DoIP service 0x4003 according to ISO 13400-2:2012.			
Base	*ARObject*, *DoIpServiceNeeds*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *ServiceNeeds*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.42: DoIpPowerModeStatusNeeds

Class	***DoIpServiceNeeds*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
Note	This represents an abstract base class for ServiceNeeds related to DoIP.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *ServiceNeeds*			
Subclasses	DoIpActivationLineNeeds, DoIpGidNeeds, DoIpGidSynchronizationNeeds, DoIpPowerModeStatus Needs, DoIpRoutingActivationAuthenticationNeeds, DoIpRoutingActivationConfirmationNeeds, Further ActionByteNeeds			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.43: DoIpServiceNeeds

Class	***EcucContainerDef*** (abstract)			
Package	M2::AUTOSARTemplates::ECUCParameterDefTemplate			
Note	Base class used to gather common attributes of configuration container definitions.			
Base	*ARObject*, *AtpDefinition*, *EcucDefinitionElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	EcucChoiceContainerDef, EcucParamConfContainerDef			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
destinationUri	EcucDestinationUriDef	*	ref	Several destinationUris can be defined for an Ecuc ContainerDef. With such destinationUris an Ecuc ContainerDef is applicable for several EcucUriReference Defs. **Stereotypes:** atpUriDef

▽

△

Class	***EcucContainerDef*** (abstract)			
multiplicity ConfigClass	EcucMultiplicity ConfigurationClass	*	aggr	Specifies which MultiplicityConfigurationClass this container is available for which ConfigurationVariant. This aggregation is optional if the surrounding EcucModuleDef has the Category STANDARDIZED_MODULE_DEFINITION. If the category attribute of the EcucModuleDef is set to VENDOR_SPECIFIC_MODULE_DEFINITION and if the upperMultiplicity is greater than the lowerMultiplicity then this aggregation is mandatory. **Tags:** xml.name Plural=MULTIPLICITY-CONFIG-CLASSES
postBuildVariant Multiplicity	Boolean	0..1	attr	Indicates if a container may have different number of instances in different post-build variants (previously known as post-build selectable configuration sets). TRUE means yes, FALSE means no.
requiresIndex	Boolean	0..1	attr	Used to define whether the value element for this definition shall be provided with an index.

Table E.44: EcucContainerDef

Class	**EcucContainerValue**			
Package	M2::AUTOSARTemplates::ECUCDescriptionTemplate			
Note	Represents a Container definition in the ECU Configuration Description.			
Base	*ARObject*, *EcucIndexableValue*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
definition	EcucContainerDef	1	ref	Reference to the definition of this Container in the ECU Configuration Parameter Definition. **Tags:** xml.sequenceOffset=-10
parameterValue	EcucParameterValue	*	aggr	Aggregates all ECU Configuration Values within this Container. atpVariation: [RS_ECUC_00079] **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=definition, variationPoint.shortLabel vh.latestBindingTime=postBuild
referenceValue	EcucAbstractReference Value	*	aggr	Aggregates all References with this container. atpVariation: [RS_ECUC_00079] **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=definition, variationPoint.shortLabel vh.latestBindingTime=postBuild
subContainer	EcucContainerValue	*	aggr	Aggregates all sub-containers within this container. atpVariation: [RS_ECUC_00078] **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=definition, shortName, variation Point.shortLabel vh.latestBindingTime=postBuild

Table E.45: EcucContainerValue

Class	**EndToEndProtectionVariablePrototype**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::EndToEndProtection			
Note	It is possible to protect the data exchanged between software components. For this purpose, for each communication to be protected, the user defines a separate EndToEndProtection (specifying a set of protection settings) and refers to a variableDataPrototype in the role of sender and to one or many variableDataPrototypes in the role of receiver. For details, see EndToEnd Library.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
receiver	VariableDataPrototype	*	iref	This represents the receiver. Note that 1:n communication is supported for this use case.
sender	VariableDataPrototype	0..1	iref	This represents the sender. Can be optional if an ecu extract is provided and the sender is part of the extract.
shortLabel	Identifier	0..1	attr	This serves as part of the split key in case of more than one EndToEndProtectionVariablePrototype is aggregated in the bound model.

Table E.46: EndToEndProtectionVariablePrototype

Class	**EndToEndTransformationComSpecProps**			
Package	M2::AUTOSARTemplates::SystemTemplate::Transformer			
Note	The class EndToEndTransformationIComSpecProps specifies port specific configuration properties for EndToEnd transformer attributes.			
Base	*ARObject*, *Describable*, *TransformationComSpecProps*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
disableEndTo EndCheck	Boolean	1	attr	Disables/Enables the E2E check. The E2Eheader is removed from the payload independent from the setting of this attribute.
maxDelta Counter	PositiveInteger	0..1	attr	Maximum allowed difference between two counter values of two consecutively received valid messages. For example, if the receiver gets data with counter 1 and Max DeltaCounter is 3, then at the next reception the receiver can accept Counters with values 2, 3 or 4.
maxErrorState Init	PositiveInteger	0..1	attr	Maximal number of checks in which ProfileStatus equal to E2E_P_ERROR was determined, within the last Window Size checks, for the state E2E_SM_INIT. The minimum value is 0.
maxErrorState Invalid	PositiveInteger	0..1	attr	Maximal number of checks in which ProfileStatus equal to E2E_P_ERROR was determined, within the last Window Size checks, for the state E2E_SM_INVALID. The minimum value is 0.
maxErrorState Valid	PositiveInteger	0..1	attr	Maximal number of checks in which ProfileStatus equal to E2E_P_ERROR was determined, within the last Window Size checks, for the state E2E_SM_VALID. The minimum value is 0.
maxNoNewOr RepeatedData	PositiveInteger	0..1	attr	EndToEndTransformationDescription holds these attributes which are profile specific and have the same value for all E2E transformers.
minOkStateInit	PositiveInteger	0..1	attr	Minimal number of checks in which ProfileStatus equal to E2E_P_OK was determined, within the last WindowSize checks, for the state E2E_SM_INIT. The minimum value is 1.
minOkState Invalid	PositiveInteger	0..1	attr	Minimal number of checks in which ProfileStatus equal to E2E_P_OK was determined, within the last WindowSize checks, for the state E2E_SM_INVALID. The minimum value is 1.

△

Class	**EndToEndTransformationComSpecProps**			
minOkState Valid	PositiveInteger	0..1	attr	Minimal number of checks in which ProfileStatus equal to E2E_P_OK was determined, within the last WindowSize checks, for the state E2E_SM_VALID. The minimum value is 1.
syncCounterInit	PositiveInteger	0..1	attr	EndToEndTransformationDescription holds these attributes which are profile specific and have the same value for all E2E transformers.
windowSize	PositiveInteger	0..1	attr	Size of the monitoring window for the E2E state machine. The meaning is the number of correct cycles (E2E_P_OK) that are required in E2E_SM_INITCOM before the transition to E2E_SM_VALID. The minimum allowed value is 1.

Table E.47: EndToEndTransformationComSpecProps

Class	***ExecutableEntity*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::InternalBehavior			
Note	Abstraction of executable code.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	*BswModuleEntity*, RunnableEntity			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
activation Reason	ExecutableEntity ActivationReason	*	aggr	If the ExecutableEntity provides at least one activation Reason element the RTE resp. BSW Scheduler shall provide means to read the activation vector of this executable entity execution. If no activationReason element is provided the feature of being able to determine the activating RTEEvent is disabled for this ExecutableEntity.
canEnter ExclusiveArea	ExclusiveArea	*	ref	This means that the executable entity can enter/leave the referenced exclusive area through explicit API calls.
exclusiveArea NestingOrder	ExclusiveAreaNesting Order	*	ref	This represents the set of ExclusiveAreaNestingOrders recognized by this ExecutableEntity.
minimumStart Interval	TimeValue	1	attr	Specifies the time in seconds by which two consecutive starts of an ExecutableEntity are guaranteed to be separated.
reentrancyLevel	ReentrancyLevelEnum	0..1	attr	The reentrancy level of this ExecutableEntity. See the documentation of the enumeration type ReentrancyLevel Enum for details. Please note that nonReentrant interfaces can have also reentrant or multicoreReentrant implementations, and reentrant interfaces can also have multicoreReentrant implementations.
runsInside ExclusiveArea	ExclusiveArea	*	ref	The executable entity runs completely inside the referenced exclusive area.
swAddrMethod	SwAddrMethod	0..1	ref	Addressing method related to this code entity. Via an association to the same SwAddrMethod, it can be specified that several code entities (even of different modules or components) shall be located in the same memory without already specifying the memory section itself.

Table E.48: ExecutableEntity

Class	***ExecutionTime*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::ResourceConsumption::ExecutionTime			
Note	Base class for several means how to describe the ExecutionTime of software. The required context information is provided through this class.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	AnalyzedExecutionTime, MeasuredExecutionTime, RoughEstimateOfExecutionTime, Simulated ExecutionTime			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
exclusiveArea	ExclusiveArea	0..1	ref	Reference to the ExclusiveArea this execution time is provided for.
executableEntity	ExecutableEntity	0..1	ref	The executable entity for which this execution time is described.
hardware Configuration	HardwareConfiguration	1	aggr	Provides information on the HardwareConfiguration used to specify this ExecutionTime.
hwElement	HwElement	0..1	ref	The hardware element (e.g. type of ECU) for which the execution time is specified.
includedLibrary	DependencyOnArtifact	*	ref	If this dependency is specified, the execution time of the library code is included in the execution time data for the runnable.
memorySection Location	MemorySectionLocation	*	aggr	Provides information on the MemorySectionLocation which is involved in the ExecutionTime description.
softwareContext	SoftwareContext	1	aggr	Provides information on the detailed SoftwareContext used to provide the ExecutionTime description.

Table E.49: ExecutionTime

Class	***FibexElement*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::Fibex::FibexCore			
Note	ASAM FIBEX elements specifying Communication and Topology.			
Base	*ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	*BusMirrorChannelMapping*, *CommunicationCluster*, CouplingElement, EcuInstance, *Frame*, Gateway, GlobalTimeDomain, ISignal, ISignalGroup, ISignalIPduGroup, NmConfig, *Pdu*, PdurIPduGroup, Secure CommunicationPropsSet, SoAdRoutingGroup, *TpConfig*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.50: FibexElement

Class	***HeapUsage*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::ResourceConsumption::HeapUsage			
Note	Describes the heap memory usage of a SW-Component.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	MeasuredHeapUsage, RoughEstimateHeapUsage, WorstCaseHeapUsage			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
hardware Configuration	HardwareConfiguration	0..1	aggr	Contains information about the hardware context this heap usage is describing.
hwElement	HwElement	0..1	ref	Specifies for which hardware element (e.g. ECU) this heap usage usage is given.
softwareContext	SoftwareContext	0..1	aggr	Contains details about the software context this heap usage is provided for.

Table E.51: HeapUsage

Class	**HwElement**			
Package	M2::AUTOSARTemplates::EcuResourceTemplate			
Note	This represents the ability to describe Hardware Elements on an instance level. The particular types of hardware are distinguished by the category. This category determines the applicable attributes. The possible categories and attributes are defined in HwCategory. **Tags:** atp.recommendedPackage=HwElements			
Base	*ARElement*, *ARObject*, *CollectableElement*, *HwDescriptionEntity*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
hwElement Connection	HwElementConnector	*	aggr	This represents one particular connection between two hardware elements. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=systemDesignTime xml.sequenceOffset=110
hwPinGroup	HwPinGroup	*	aggr	This aggregation is used to describe the connection facilities of a hardware element. Note that hardware element has no pins but only pingroups. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=systemDesignTime xml.sequenceOffset=90
nestedElement	HwElement	*	ref	This association is used to establish hierarchies of hw elements. Note that one particular HwElement can be target of this association only once. I.e. multiple instantiation of the same HwElement is not supported (at any hierarchy level). **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=systemDesignTime xml.sequenceOffset=70

Table E.52: HwElement

Class	**HwPinGroup**			
Package	M2::AUTOSARTemplates::EcuResourceTemplate			
Note	This meta-class represents the ability to describe groups of pins which are used to connect hardware elements. This group acts as a bundle of pins. Thereby they allow to describe high level connections. Pin groups can even be nested.			
Base	*ARObject*, *HwDescriptionEntity*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
hwPinGroup Content	HwPinGroupContent	1	aggr	This aggregation describes the contained pins/pin groups.

Table E.53: HwPinGroup

Class	***Identifiable*** (abstract)
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::Identifiable
Note	Instances of this class can be referred to by their identifier (within the namespace borders). In addition to this, Identifiables are objects which contribute significantly to the overall structure of an AUTOSAR description. In particular, Identifiables might contain Identifiables.
Base	*ARObject*, *MultilanguageReferrable*, *Referrable*

▽

△

Class	**Identifiable** (abstract)			
Subclasses	ARPackage, *AbstractEvent*, *AbstractImplementationDataTypeElement*, *AbstractServiceInstance*, ApplicationEndpoint, ApplicationError, ApplicationPartitionToEcuPartitionMapping, AsynchronousServer CallResultPoint, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpFeature*, AutosarOperationArgument Instance, AutosarVariableInstance, BswInternalTriggeringPoint, BswModuleDependency, *BuildAction Entity*, BuildActionEnvironment, CanTpAddress, CanTpChannel, CanTpNode, Chapter, ClassContent Conditional, ClientIdDefinition, ClientServerOperation, Code, *CollectableElement*, ComManagement Mapping, *CommConnectorPort*, *CommunicationConnector*, *CommunicationController*, Compiler, ConsistencyNeeds, ConsumedEventGroup, CouplingPort, *CouplingPortStructuralElement*, *Crypto ServiceMapping*, DataPrototypeGroup, DataTransformation, DependencyOnArtifact, *DiagEvent DebounceAlgorithm*, DiagnosticConnectedIndicator, DiagnosticDataElement, DiagnosticFunctionInhibit Source, DiagnosticMasterToSlaveEventMapping, *DiagnosticRoutineSubfunction*, DoIpLogicAddress, EC UMapping, *EOCExecutableEntityRefAbstract*, EcuPartition, EcucContainerValue, *EcucDefinition Element*, EcucDestinationUriDef, EcucEnumerationLiteralDef, EcucQuery, EcucValidationCondition, End ToEndProtection, ExclusiveArea, *ExecutableEntity*, *ExecutionTime*, FMAttributeDef, FMFeatureMap Assertion, FMFeatureMapCondition, FMFeatureMapElement, FMFeatureRelation, FMFeatureRestriction, FMFeatureSelection, FlatInstanceDescriptor, FlexrayArTpNode, FlexrayTpConnectionControl, FlexrayTp Node, FlexrayTpPduPool, *FrameTriggering*, GeneralParameter, GlobalTimeGateway, *GlobalTimeMaster*, *GlobalTimeSlave*, *HeapUsage*, HwAttributeDef, HwAttributeLiteralDef, HwPin, HwPinGroup, IPv6Ext HeaderFilterList, ISignalToIPduMapping, ISignalTriggering, *IdentCaption*, InternalTriggeringPoint, J1939 SharedAddressCluster, J1939TpNode, Keyword, LifeCycleState, LinScheduleTable, LinTpNode, Linker, MacMulticastGroup, McDataInstance, MemorySection, ModeDeclaration, ModeDeclarationMapping, ModeSwitchPoint, NetworkEndpoint, *NmCluster*, NmEcu, *NmNode*, NvBlockDescriptor, *Packageable Element*, ParameterAccess, PduToFrameMapping, PduTriggering, PerInstanceMemory, *Physical Channel*, PortGroup, *PortInterfaceMapping*, PossibleErrorReaction, ResourceConsumption, RootSw CompositionPrototype, RptComponent, RptContainer, RptExecutableEntity, RptExecutableEntityEvent, RptExecutionContext, RptProfile, RptServicePoint, RunnableEntityGroup, *SdgAttribute*, SdgClass, SecureCommunicationAuthenticationProps, SecureCommunicationFreshnessProps, *ServerCallPoint*, *ServiceNeeds*, SocketAddress, SomeipTpChannel, *SpecElementReference*, *StackUsage*, Structured Req, SwGenericAxisParamType, SwServiceArg, SwServiceDependency, SwcToApplicationPartition Mapping, SwcToEcuMapping, SwcToImplMapping, SystemMapping, TcpOptionFilterList, Timing Condition, *TimingConstraint*, *TimingDescription*, TimingExtensionResource, TimingModeInstance, Tls CryptoCipherSuite, Topic1, TpAddress, TraceableText, *TracedFailure*, *TransformationProps*, TransformationTechnology, Trigger, VariableAccess, VariationPointProxy, ViewMap, VlanConfig, Wait Point			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
desc	MultiLanguageOverview Paragraph	0..1	aggr	This represents a general but brief (one paragraph) description what the object in question is about. It is only one paragraph! Desc is intended to be collected into overview tables. This property helps a human reader to identify the object in question. More elaborate documentation, (in particular how the object is built or used) should go to "introduction". **Tags:** xml.sequenceOffset=-60
category	CategoryString	0..1	attr	The category is a keyword that specializes the semantics of the Identifiable. It affects the expected existence of attributes and the applicability of constraints. **Tags:** xml.sequenceOffset=-50
adminData	AdminData	0..1	aggr	This represents the administrative data for the identifiable object. **Tags:** xml.sequenceOffset=-40
annotation	Annotation	*	aggr	Possibility to provide additional notes while defining a model element (e.g. the ECU Configuration Parameter Values). These are not intended as documentation but are mere design notes. **Tags:** xml.sequenceOffset=-25

▽

△

Class	***Identifiable*** (abstract)			
introduction	DocumentationBlock	0..1	aggr	This represents more information about how the object in question is built or is used. Therefore it is a DocumentationBlock. **Tags:** xml.sequenceOffset=-30
uuid	String	0..1	attr	The purpose of this attribute is to provide a globally unique identifier for an instance of a meta-class. The values of this attribute should be globally unique strings prefixed by the type of identifier. For example, to include a DCE UUID as defined by The Open Group, the UUID would be preceded by "DCE:". The values of this attribute may be used to support merging of different AUTOSAR models. The form of the UUID (Universally Unique Identifier) is taken from a standard defined by the Open Group (was Open Software Foundation). This standard is widely used, including by Microsoft for COM (GUIDs) and by many companies for DCE, which is based on CORBA. The method for generating these 128-bit IDs is published in the standard and the effectiveness and uniqueness of the IDs is not in practice disputed. If the id namespace is omitted, DCE is assumed. An example is "DCE:2fac1234-31f8-11b4-a222-08002b34c003". The uuid attribute has no semantic meaning for an AUTOSAR model and there is no requirement for AUTOSAR tools to manage the timestamp. **Tags:** xml.attribute=true

Table E.54: Identifiable

Class	***Implementation*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::Implementation			
Note	Description of an implementation a single software component or module.			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Subclasses	BswImplementation, SwcImplementation			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
buildAction Manifest	BuildActionManifest	0..1	ref	A manifest specifying the intended build actions for the software delivered with this implementation. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=codeGenerationTime
codeDescriptor	Code	1..*	aggr	Specifies the provided implementation code.
compiler	Compiler	*	aggr	Specifies the compiler for which this implementation has been released
generated Artifact	DependencyOnArtifact	*	aggr	Relates to an artifact that will be generated during the integration of this Implementation by an associated generator tool. Note that this is an optional information since it might not always be in the scope of a single module or component to provide this information. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
hwElement	HwElement	*	ref	The hardware elements (e.g. the processor) required for this implementation.

▽

△

Class	*Implementation* (abstract)			
linker	Linker	*	aggr	Specifies the linker for which this implementation has been released.
mcSupport	McSupportData	0..1	aggr	The measurement & calibration support data belonging to this implementation. The aggregtion is «atpSplitable» because in case of an already exisiting BSW Implementation model, this description will be added later in the process, namely at code generation time. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=mcSupport
programming Language	Programminglanguage Enum	1	attr	Programming language the implementation was created in.
requiredArtifact	DependencyOnArtifact	*	aggr	Specifies that this Implementation depends on the existance of another artifact (e.g. a library). This aggregation of DependencyOnArtifact is subject to variability with the purpose to support variability in the implementations. Different algorithms in the implementation might cause different dependencies, e.g. the number of used libraries. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
required GeneratorTool	DependencyOnArtifact	*	aggr	Relates this Implementation to a generator tool in order to generate additional artifacts during integration. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
resource Consumption	ResourceConsumption	1	aggr	All static and dynamic resources for each implementation are described within the ResourceConsumption class. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=shortName
swVersion	RevisionLabelString	1	attr	Software version of this implementation. The numbering contains three levels (like major, minor, patch), its values are vendor specific.
swcBsw Mapping	SwcBswMapping	0..1	ref	This allows a mapping between an SWC and a BSW behavior to be attached to an implementation description (for AUTOSAR Service, ECU Abstraction and Complex Driver Components). It is up to the methodology to define whether this reference has to be set for the Swc- or Bsw Implementtion or for both.
usedCode Generator	String	0..1	attr	Optional: code generator used.
vendorId	PositiveInteger	1	attr	Vendor ID of this Implementation according to the AUTOSAR vendor list

Table E.55: Implementation

Class	**ImplementationDataType**
Package	M2::AUTOSARTemplates::CommonStructure::ImplementationDataTypes
Note	Describes a reusable data type on the implementation level. This will typically correspond to a typedef in C-code. **Tags:** atp.recommendedPackage=ImplementationDataTypes
Base	*ARElement*, *ARObject*, *AbstractImplementationDataType*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *AutosarDataType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*

▽

△

Class	**ImplementationDataType**			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
dynamicArray SizeProfile	String	0..1	attr	Specifies the profile which the array will follow in case this data type is a variable size array.
isStructWith Optional Element	Boolean	0..1	attr	This attribute is only valid if the attribute category is set to STRUCTURE. If set to True, this attribute indicates that the ImplementationDataType has been created with the intention to define at least one element of the structure as optional. **Tags:** atp.Status=draft
subElement (ordered)	ImplementationData TypeElement	*	aggr	Specifies an element of an array, struct, or union data type. The aggregation of ImplementionDataTypeElement is subject to variability with the purpose to support the conditional existence of elements inside a Implementation DataType representing a structure. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
symbolProps	SymbolProps	0..1	aggr	This represents the SymbolProps for the Implementation DataType. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=shortName
typeEmitter	NameToken	0..1	attr	This attribute is used to control which part of the AUTOSAR toolchain is supposed to trigger data type definitions.

Table E.56: ImplementationDataType

Class	**ImplementationDataTypeElement**			
Package	M2::AUTOSARTemplates::CommonStructure::ImplementationDataTypes			
Note	Declares a data object which is locally aggregated. Such an element can only be used within the scope where it is aggregated. This element either consists of further subElements or it is further defined via its swDataDefProps. There are several use cases within the system of ImplementationDataTypes fur such a local declaration: • It can represent the elements of an array, defining the element type and array size • It can represent an element of a struct, defining its type • It can be the local declaration of a debug element.			
Base	*ARObject*, *AbstractImplementationDataTypeElement*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
arraySize	PositiveInteger	0..1	attr	The existence of this attributes (if bigger than 0) defines the size of an array and declares that this Implementation DataTypeElement represents the type of each single array element. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
arraySize Handling	ArraySizeHandling Enum	0..1	attr	The way how the size of the array is handled in case of a variable size array.
arraySize Semantics	ArraySizeSemantics Enum	0..1	attr	This attribute controls the meaning of the value of the array size.

▽

△

Class	**ImplementationDataTypeElement**			
isOptional	Boolean	0..1	attr	This attribute represents the ability to declare the enclosing ImplementationDataTypeElement as optional. This means that, at runtime, the ImplementationDataType Element may or may not have a valid value and shall therefore be ignored. The underlying runtime software provides means to set the CppImplementationDataTypeElement as not valid at the sending end of a communication and determine its validity at the receiving end. **Tags:** atp.Status=draft
subElement (ordered)	ImplementationData TypeElement	*	aggr	Element of an array, struct, or union in case of a nested declaration (i.e. without using "typedefs"). The aggregation of ImplementionDataTypeElement is subject to variability with the purpose to support the conditional existence of elements inside a Implementation DataType representing a structure. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
swDataDef Props	SwDataDefProps	0..1	aggr	The properties of this ImplementationDataTypeElement.

Table E.57: ImplementationDataTypeElement

Class	***ImplementationProps*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::Implementation			
Note	Defines a symbol to be used as (depending on the concrete case) either a complete replacement or a prefix when generating code artifacts.			
Base	*ARObject*, *Referrable*			
Subclasses	BswSchedulerNamePrefix, ExecutableEntityActivationReason, SectionNamePrefix, SymbolProps, SymbolicNameProps			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
symbol	CIdentifier	1	attr	The symbol to be used as (depending on the concrete case) either a complete replacement or a prefix.

Table E.58: ImplementationProps

Class	***InternalBehavior*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::InternalBehavior			
Note	Common base class (abstract) for the internal behavior of both software components and basic software modules/clusters.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	BswInternalBehavior, SwcInternalBehavior			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
constant Memory	ParameterData Prototype	*	aggr	Describes a read only memory object containing characteristic value(s) implemented by this Internal Behavior. The shortName of ParameterDataPrototype has to be equal to the ”C’ identifier of the described constant. ▽

▽

△

Class	*InternalBehavior* (abstract)			
				△ The characteristic value(s) might be shared between SwComponentPrototypes of the same SwComponent Type. The aggregation of constantMemory is subject to variability with the purpose to support variability in the software component or module implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
constantValue Mapping	ConstantSpecification MappingSet	*	ref	Reference to the ConstanSpecificationMapping to be applied for the particular InternalBehavior **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=constantValueMapping
dataType Mapping	DataTypeMappingSet	*	ref	Reference to the DataTypeMapping to be applied for the particular InternalBehavior **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=dataTypeMapping
exclusiveArea	ExclusiveArea	*	aggr	This specifies an ExclusiveArea for this InternalBehavior. The exclusiveArea is local to the component resp. module. The aggregation of ExclusiveAreas is subject to variability. Note: the number of ExclusiveAreas might vary due to the conditional existence of RunnableEntities or BswModule Entities. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
exclusiveArea NestingOrder	ExclusiveAreaNesting Order	*	aggr	This represents the set of ExclusiveAreaNestingOrder owned by the InternalBehavior. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
staticMemory	VariableDataPrototype	*	aggr	Describes a read and writeable static memory object representing measurerment variables implemented by this software component. The term "static" is used in the meaning of "non-temporary" and does not necessarily specify a linker encapsulation. This kind of memory is only supported if supportsMultipleInstantiation is FALSE. The shortName of the VariableDataPrototype has to be equal with the ”C’ identifier of the described variable. The aggregation of staticMemory is subject to variability with the purpose to support variability in the software component’s implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime

Table E.59: InternalBehavior

Class	**MemorySection**			
Package	M2::AUTOSARTemplates::CommonStructure::ResourceConsumption::MemorySectionUsage			
Note	Provides a description of an abstract memory section used in the Implementation for code or data. It shall be declared by the Implementation Description of the module or component, which actually allocates the memory in its code. This means in case of data prototypes which are allocated by the RTE, that the generated Implementation Description of the RTE shall contain the corresponding MemorySections. The attribute "symbol" (if symbol is missing: "shortName") defines the module or component specific section name used in the code. For details see the document "Specification of Memory Mapping". Typically the section name is build according the pattern: <SwAddrMethod shortName>[_<further specialization nominator>][_<alignment>] where • **[<SwAddrMethod shortName>]** is the shortName of the referenced SwAddrMethod • **[_<further specialization nominator>]** is an optional infix to indicate the specialization in the case that several MemorySections for different purpose of the same Implementation Description referring to the same or equally named SwAddrMethods. • **[_<alignment>]** is the alignment attributes value and is only applicable in the case that the memoryAllocationKeywordPolicy value of the referenced SwAddrMethod is set to addrMethod ShortNameAndAlignment MemorySection used to Implement the code of RunnableEntitys and BswSchedulableEntitys shall have a symbol (if missing: shortName) identical to the referred SwAddrMethod to conform to the generated RTE header files. In addition to the section name described above, a prefix is used in the corresponding macro code in order to define a name space. This prefix is by default given by the shortName of the BswModule Description resp. the SwComponentType. It can be superseded by the prefix attribute.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
alignment	AlignmentType	0..1	attr	The attribute describes the alignment of objects within this memory section.
executableEntity	ExecutableEntity	*	ref	Reference to the ExecutableEntitites located in this section. This allows to locate different Executable Entitities in different sections even if the associated Sw Addrmethod is the same. This is applicable to code sections only.
memClass Symbol	CIdentifier	0..1	attr	Defines a specific symbol in order to generate the compiler abstraction "memclass" code for this Memory Section. The existence of this attribute supersedes the usage of swAddrmethod.shortName for this purpose. The complete name of the "memclass" preprocessor symbol is constructed as <prefix>_<memClassSymbol> where prefix is defined in the same way as for the enclosing MemorySection. See also AUTOSAR_SWS_CompilerAbstraction SWS_COMPILER_00040.
option	Identifier	*	attr	This attribute introduces the ability to specify further intended properties of this MemorySection. The following two values are standardized (to be used for code sections only and exclusively to each other): • INLINE - The code section is declared with the compiler abstraction macro INLINE. • LOCAL_INLINE - The code section is declared with the compiler abstraction macro LOCAL_INLINE ▽

▽

△

Class	MemorySection			
				△ In both cases (INLINE and LOCAL_INLINE) the inline expansion depends on the compiler specific implementation of these macros. Depending on this, the code section either corresponds to an actual section in memory or is put into the section of the caller. See AUTOSAR_SWS_CompilerAbstraction for more details.
prefix	SectionNamePrefix	0..1	ref	The prefix used to set the memory section's namespace in the code. The existence of a prefix element supersedes rules for a default prefix (such as the Bsw ModuleDescription's shortName). This allows the user to define several name spaces for memory sections within the scope of one module, cluster or SWC.
size	PositiveInteger	0..1	attr	The size in bytes of the section.
swAddrmethod	SwAddrMethod	1	ref	This association indicates that this module specific (abstract) memory section is part of an overall SwAddr Method, referred by the upstream declarations (e.g. calibration parameters, data element prototypes, code entities) which share a common addressing strategy. This can be evaluated for the ECU configuration of the build support. This association shall always be declared by the Implementation description of the module or component, which allocates the memory in its code. This means in case of data prototypes which are allocated by the RTE, that the software components only declare the grouping of its data prototypes to SwAddrMethods, and the generated Implementation Description of the RTE actually sets up this association.
symbol	Identifier	0..1	attr	Defines the section name as explained in the main description. By using this attribute for code generation (instead of the shortName) it is possible to define several different MemorySections having the same name - e.g. symbol = CODE - but using different sectionName Prefixes.

Table E.60: MemorySection

Class	ModeDeclaration			
Package	M2::AUTOSARTemplates::CommonStructure::ModeDeclaration			
Note	Declaration of one Mode. The name and semantics of a specific mode is not defined in the meta-model. **Tags:** atp.ManifestKind=ExecutionManifest,MachineManifest			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
value	PositiveInteger	0..1	attr	The RTE shall take the value of this attribute for generating the source code representation of this Mode Declaration.

Table E.61: ModeDeclaration

Class	**ModeDeclarationGroup**			
Package	M2::AUTOSARTemplates::CommonStructure::ModeDeclaration			
Note	A collection of Mode Declarations. Also, the initial mode is explicitly identified. **Tags:** atp.ManifestKind=ExecutionManifest,MachineManifest atp.recommendedPackage=ModeDeclarationGroups			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
initialMode	ModeDeclaration	1	ref	The initial mode of the ModeDeclarationGroup. This mode is active before any mode switches occurred.
mode Declaration	ModeDeclaration	1..*	aggr	The ModeDeclarations collected in this ModeDeclaration Group. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=blueprintDerivationTime
modeManager ErrorBehavior	ModeErrorBehavior	0..1	aggr	This represents the ability to define the error behavior expected by the mode manager in case of errors on the mode user side (e.g. terminated mode user).
modeTransition	ModeTransition	*	aggr	This represents the avaliable ModeTransitions of the ModeDeclarationGroup
modeUserError Behavior	ModeErrorBehavior	0..1	aggr	This represents the definition of the error behavior expected by the mode user in case of errors on the mode manager side (e.g. terminated mode manager).
onTransition Value	PositiveInteger	0..1	attr	The value of this attribute shall be taken into account by the RTE generator for programmatically representing a value used for the transition between two statuses.

Table E.62: ModeDeclarationGroup

Class	**ModeDeclarationGroupPrototype**			
Package	M2::AUTOSARTemplates::CommonStructure::ModeDeclaration			
Note	The ModeDeclarationGroupPrototype specifies a set of Modes (ModeDeclarationGroup) which is provided or required in the given context. **Tags:** atp.ManifestKind=ExecutionManifest,MachineManifest			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
swCalibration Access	SwCalibrationAccess Enum	0..1	attr	This allows for specifying whether or not the enclosing ModeDeclarationGroupPrototype can be measured at run-time.
type	ModeDeclarationGroup	1	tref	The "collection of ModeDeclarations" (= ModeDeclaration Group) supported by a component **Stereotypes:** isOfType

Table E.63: ModeDeclarationGroupPrototype

Class	**NumericalValueSpecification**
Package	M2::AUTOSARTemplates::CommonStructure::Constants
Note	A numerical ValueSpecification which is intended to be assigned to a Primitive data element. Note that the numerical value is a variant, it can be computed by a formula.
Base	*ARObject*, *ValueSpecification*

▽

△

Class	NumericalValueSpecification			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
value	Numerical	1	attr	This is the value itself. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

Table E.64: NumericalValueSpecification

Class	PPortPrototype			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	Component port providing a certain port interface.			
Base	*ARObject*, *AbstractProvidedPortPrototype*, *AtpBlueprintable*, *AtpFeature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *PortPrototype*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
provided Interface	PortInterface	1	tref	The interface that this port provides. **Stereotypes:** isOfType

Table E.65: PPortPrototype

Class	PRPortPrototype			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	This kind of PortPrototype can take the role of both a required and a provided PortPrototype.			
Base	*ARObject*, *AbstractProvidedPortPrototype*, *AbstractRequiredPortPrototype*, *AtpBlueprintable*, *Atp Feature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *PortPrototype*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
provided Required Interface	PortInterface	1	tref	This represents the PortInterface used to type the PRPort Prototype **Stereotypes:** isOfType

Table E.66: PRPortPrototype

Class	***PackageableElement*** (abstract)			
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::ARPackage			
Note	This meta-class specifies the ability to be a member of an AUTOSAR package.			
Base	*ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	*ARElement*, EnumerationMappingTable, *FibexElement*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.67: PackageableElement

Class	ParameterDataPrototype			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
Note	A parameter element used for parameter interface and internal behavior, supporting signal like parameter and characteristic value communication patterns and parameter and characteristic value definition.			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *AutosarDataPrototype*, *DataPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
initValue	ValueSpecification	0..1	aggr	Specifies initial value(s) of the ParameterDataPrototype

Table E.68: ParameterDataPrototype

Class	ParameterInterface			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	A parameter interface declares a number of parameter and characteristic values to be exchanged between parameter components and software components. **Tags:** atp.recommendedPackage=PortInterfaces			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *DataInterface*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *PortInterface*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
parameter	ParameterData Prototype	1..*	aggr	The ParameterDataPrototype of this ParameterInterface.

Table E.69: ParameterInterface

Class	ParameterSwComponentType			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	The ParameterSwComponentType defines parameters and characteristic values accessible via provided Ports. The provided values are the same for all connected SwComponentPrototypes **Tags:** atp.recommendedPackage=SwComponentTypes			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*, *SwComponentType*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
constant Mapping	ConstantSpecification MappingSet	*	ref	Reference to the ConstanSpecificationMapping to be applied for the particular ParameterSwComponentType **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=constantMapping
dataType Mapping	DataTypeMappingSet	*	ref	Reference to the DataTypeMapping to be applied for the particular ParameterSwComponentType **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=dataTypeMapping
instantiation DataDefProps	InstantiationDataDef Props	*	aggr	The purpose of this is that within the context of a given SwComponentType some data def properties of individual instantiations can be modified. The aggregation of InstantiationDataDefProps is subject to variability with the purpose to support the conditional existence of PortPrototypes **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

Table E.70: ParameterSwComponentType

Class	**PassThroughSwConnector**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
Note	This kind of SwConnector can be used inside a CompositionSwComponentType to connect two delegation PortPrototypes.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*, *SwConnector*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
providedOuterPort	AbstractProvidedPortPrototype	1	ref	This represents the provided outer delegation Port Prototype of the PassThroughSwConnector.
requiredOuterPort	AbstractRequiredPortPrototype	1	ref	This represents the required outer delegation Port Prototype of the PassThroughSwConnector.

Table E.71: PassThroughSwConnector

Class	**PhysConstrs**			
Package	M2::MSR::AsamHdo::Constraints::GlobalConstraints			
Note	This meta-class represents the ability to express physical constraints. Therefore it has (in opposite to InternalConstrs) a reference to a Unit.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
lowerLimit	Limit	0..1	attr	This specifies the lower limit of the constraint. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime xml.sequenceOffset=20
maxDiff	Numerical	0..1	attr	Maximum difference that is permitted between two consecutive values if the constraint is applied to an axis. **Tags:** xml.sequenceOffset=60
maxGradient	Numerical	0..1	attr	This element specifies the maximum slope that may be used in curves and maps. **Tags:** xml.sequenceOffset=50
monotony	MonotonyEnum	0..1	attr	This specifies the monotony constraints on the data object. Note that this applies only to curves and maps. **Tags:** xml.sequenceOffset=70
scaleConstr (ordered)	ScaleConstr	*	aggr	This is one particular scale which contributes to the data constraints. **Tags:** xml.roleElement=true xml.roleWrapperElement=true xml.sequenceOffset=40 xml.typeElement=false xml.typeWrapperElement=false
unit	Unit	0..1	ref	This is the unit to which the physical constraints relate to. In particular, it is the physical unit of the specified limits. **Tags:** xml.sequenceOffset=80
upperLimit	Limit	0..1	attr	This specifies the upper limit of the constraint. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime xml.sequenceOffset=30

Table E.72: PhysConstrs

Class	PncMappingIdent			
Package	M2::AUTOSARTemplates::SystemTemplate::PncMapping			
Note	This meta-class is created to add the ability to become the target of a reference to the non-Referrable PncMapping.			
Base	*ARObject*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.73: PncMappingIdent

Class	PortGroup			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	Group of ports which share a common functionality, e.g. need specific network resources. This information shall be available on the VFB level in order to delegate it properly via compositions. When propagated into the ECU extract, this information is used as input for the configuration of Services like the Communication Manager. A PortGroup is defined locally in a component (which can be a composition) and refers to the "outer" ports belonging to the group as well as to the "inner" groups which propagate this group into the components which are part of a composition. A PortGroup within an atomic SWC cannot be linked to inner groups.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
innerGroup	PortGroup	*	iref	Links a PortGroup in a composition to another PortGroup, that is defined in a component which is part of this CompositionSwComponentType.
outerPort	PortPrototype	*	ref	Outer PortPrototype of this AtomicSwComponentType which belongs to the group. A port can belong to several groups or to no group at all. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

Table E.74: PortGroup

Class	***PortInterface*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	Abstract base class for an interface that is either provided or required by a port of a software component.			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	ClientServerInterface, *DataInterface*, ModeSwitchInterface, TriggerInterface			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
isService	Boolean	1	attr	This flag is set if the PortInterface is to be used for communication between an • ApplicationSwComponentType or • ServiceProxySwComponentType or • SensorActuatorSwComponentType or • ComplexDeviceDriverSwComponentType • ServiceSwComponentType ▽

▽

△

				△ • EcuAbstractionSwComponentType and a ServiceSwComponentType (namely an AUTOSAR Service) located on the same ECU. Otherwise the flag is not set.
serviceKind	ServiceProviderEnum	0..1	attr	This attribute provides further details about the nature of the applied service.

Class	***PortInterface*** (abstract)			

Table E.75: PortInterface

Class	***PortInterfaceMapping*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	Specifies one PortInterfaceMapping to support the connection of Ports typed by two different Port Interfaces with PortInterface elements having unequal names and/or unequal semantic (resolution or range).			
Base	*ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	ClientServerInterfaceMapping, ModeInterfaceMapping, TriggerInterfaceMapping, VariableAndParameter InterfaceMapping			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table E.76: PortInterfaceMapping

Class	***PortPrototype*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	Base class for the ports of an AUTOSAR software component. The aggregation of PortPrototypes is subject to variability with the purpose to support the conditional existence of ports.			
Base	*ARObject*, *AtpBlueprintable*, *AtpFeature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	*AbstractProvidedPortPrototype*, *AbstractRequiredPortPrototype*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
clientServer Annotation	ClientServerAnnotation	*	aggr	Annotation of this PortPrototype with respect to client/server communication.
delegatedPort Annotation	DelegatedPort Annotation	0..1	aggr	Annotations on this delegated port.
ioHwAbstraction Server Annotation	IoHwAbstractionServer Annotation	*	aggr	Annotations on this IO Hardware Abstraction port.
modePort Annotation	ModePortAnnotation	*	aggr	Annotations on this mode port.
nvDataPort Annotation	NvDataPortAnnotation	*	aggr	Annotations on this non voilatile data port.
parameterPort Annotation	ParameterPort Annotation	*	aggr	Annotations on this parameter port.
senderReceiver Annotation	SenderReceiver Annotation	*	aggr	Collection of annotations of this ports sender/receiver communication.
triggerPort Annotation	TriggerPortAnnotation	*	aggr	Annotations on this trigger port.

Table E.77: PortPrototype

Class	**RPortPrototype**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	Component port requiring a certain port interface.			
Base	*ARObject*, *AbstractRequiredPortPrototype*, *AtpBlueprintable*, *AtpFeature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *PortPrototype*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
required Interface	PortInterface	1	tref	The interface that this port requires, i.e. the port depends on another port providing the specified interface. **Stereotypes:** isOfType

Table E.78: RPortPrototype

Class	***RTEEvent*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::SwcInternalBehavior::RTEEvents			
Note	Abstract base class for all RTE-related events			
Base	*ARObject*, *AbstractEvent*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	AsynchronousServerCallReturnsEvent, BackgroundEvent, DataReceiveErrorEvent, DataReceivedEvent, DataSendCompletedEvent, DataWriteCompletedEvent, ExternalTriggerOccurredEvent, InitEvent, InternalTriggerOccurredEvent, ModeSwitchedAckEvent, OperationInvokedEvent, SwcModeManagerErrorEvent, SwcModeSwitchEvent, TimingEvent, TransformerHardErrorEvent			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
disabledMode	ModeDeclaration	*	iref	Reference to the Modes that disable the Event. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=contextPort, contextModeDeclarationGroupPrototype, targetModeDeclaration
startOnEvent	RunnableEntity	0..1	ref	RunnableEntity starts when the corresponding RTEEvent occurs.

Table E.79: RTEEvent

Class	***ReceiverComSpec*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Communication			
Note	Receiver-specific communication attributes (RPortPrototype typed by SenderReceiverInterface).			
Base	*ARObject*, *RPortComSpec*			
Subclasses	NonqueuedReceiverComSpec, QueuedReceiverComSpec			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
compositeNetworkRepresentation	CompositeNetworkRepresentation	*	aggr	This represents a CompositeNetworkRepresentation defined in the context of a ReceiverComSpec. The purpose of this aggregation is to be able to specify the network representation of leaf elements of Application CompositeDataTypes.
dataElement	AutosarDataPrototype	0..1	ref	Data element these attributes belong to.
handleOutOfRange	HandleOutOfRangeEnum	1	attr	This attribute controls how values that are out of the specified range are handled according to the values of HandleOutOfRangeEnum.
handleOutOfRangeStatus	HandleOutOfRangeStatusEnum	0..1	attr	Control the way how return values are created in case of an out-of-range situation.
maxDeltaCounterInit	PositiveInteger	0..1	attr	Initial maximum allowed gap between two counter values of two consecutively received valid Data, i.e. how many subsequent lost data is accepted. For example, if the receiver gets Data with counter 1 and MaxDeltaCounter Init is 1, then at the next reception the receiver can accept Counters with values 2 and 3, but not 4. Note that if the receiver does not receive new Data at a consecutive read, then the receiver increments the tolerance by 1. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

△

Class	***ReceiverComSpec*** (abstract)			
maxNoNewOr RepeatedData	PositiveInteger	0..1	attr	The maximum amount of missing or repeated Data which the receiver does not expect to exceed under normal communication conditions.
network Representation	SwDataDefProps	0..1	aggr	A networkRepresentation is used to define how the data Element is mapped to a communication bus.
replaceWith	VariableAccess	0..1	aggr	This aggregation is used to identify the AutosarData Prototype to be taken for sourcing an external replacement in the out-of-range handling.
syncCounterInit	PositiveInteger	0..1	attr	Number of Data required for validating the consistency of the counter that shall be received with a valid counter (i.e. counter within the allowed lock-in range) after the detection of an unexpected behavior of a received counter.
transformation ComSpecProps	TransformationCom SpecProps	*	aggr	This references the TransformationComSpecProps which define port-specific configuration for data transformation.
usesEndToEnd Protection	Boolean	0..1	attr	This indicates whether the corresponding dataElement shall be transmitted using end-to-end protection. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

Table E.80: ReceiverComSpec

Class	***Referrable*** (abstract)			
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::Identifiable			
Note	Instances of this class can be referred to by their identifier (while adhering to namespace borders).			
Base	*ARObject*			
Subclasses	*AtpDefinition*, BswDistinguishedPartition, *BswModuleCallPoint*, BswModuleClientServerEntry, Bsw VariableAccess, CouplingPortTrafficClassAssignment, DiagnosticDebounceAlgorithmProps, *Diagnostic EnvModeElement*, EthernetPriorityRegeneration, EventHandler, ExclusiveAreaNestingOrder, *Hw DescriptionEntity*, *ImplementationProps*, LinSlaveConfigIdent, ModeTransition, *MultilanguageReferrable*, PncMappingIdent, *SingleLanguageReferrable*, SocketConnectionBundle, TimeSyncServerConfiguration, TpConnectionIdent			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
shortName	Identifier	1	attr	This specifies an identifying shortName for the object. It needs to be unique within its context and is intended for humans but even more for technical reference. **Tags:** xml.enforceMinMultiplicity=true xml.sequenceOffset=-100
shortName Fragment	ShortNameFragment	*	aggr	This specifies how the Referrable.shortName is composed of several shortNameFragments. **Tags:** xml.sequenceOffset=-90

Table E.81: Referrable

Class	**RoleBasedPortAssignment**
Package	M2::AUTOSARTemplates::SWComponentTemplate::SwcInternalBehavior::ServiceMapping
Note	This class specifies an assignment of a role to a particular service port (RPortPrototype or PPort Prototype) of an AtomicSwComponentType. With this assignment, the role of the service port can be mapped to a specific ServiceNeeds element, so that a tool is able to create the correct connector.

▽

△

Class	**RoleBasedPortAssignment**			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
portPrototype	PortPrototype	1	ref	Service PortPrototype used in the assigned role. This PortPrototype shall either belong to the same AtomicSw ComponentType as the SwcInternalBehavior which owns the ServiceDependency or to the same NvBlockSw ComponentType as the NvBlockDescriptor.
role	Identifier	1	attr	This is the role of the assigned Port in the given context. The value shall be a shortName of the Blueprint of a Port Interface as standardized in the Software Specification of the related AUTOSAR Service.

Table E.82: RoleBasedPortAssignment

Class	**RunnableEntity**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::SwcInternalBehavior			
Note	A RunnableEntity represents the smallest code-fragment that is provided by an AtomicSwComponent Type and are executed under control of the RTE. RunnableEntities are for instance set up to respond to data reception or operation invocation on a server.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *ExecutableEntity*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
argument (ordered)	RunnableEntity Argument	*	aggr	This represents the formal definition of a an argument to a RunnableEntity.
asynchronous ServerCall ResultPoint	AsynchronousServer CallResultPoint	*	aggr	The server call result point admits a runnable to fetch the result of an asynchronous server call. The aggregation of AsynchronousServerCallResultPoint is subject to variability with the purpose to support the conditional existence of client server PortPrototypes and the variant existence of server call result points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
canBeInvoked Concurrently	Boolean	1	attr	If the value of this attribute is set to "true" the enclosing RunnableEntity can be invoked concurrently (even for one instance of the corresponding AtomicSwComponent Type). This implies that it is the responsibility of the implementation of the RunnableEntity to take care of this form of concurrency. Note that the default value of this attribute is set to "false".
dataRead Access	VariableAccess	*	aggr	RunnableEntity has implicit read access to dataElement of a sender-receiver PortPrototype or nv data of a nv data PortPrototype. The aggregation of dataReadAccess is subject to variability with the purpose to support the conditional existence of sender receiver ports or the variant existence of dataReadAccess in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
dataReceive PointBy Argument	VariableAccess	*	aggr	RunnableEntity has explicit read access to dataElement of a sender-receiver PortPrototype or nv data of a nv data PortPrototype. The result is passed back to the application by means of an argument in the function signature. The aggregation of dataReceivePointByArgument is subject to variability with the purpose to support the conditional existence of sender receiver PortPrototype or the variant existence of data receive points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime

△

Class	**RunnableEntity**			
dataReceive PointByValue	VariableAccess	*	aggr	RunnableEntity has explicit read access to dataElement of a sender-receiver PortPrototype or nv data of a nv data PortPrototype. The result is passed back to the application by means of the return value. The aggregation of dataReceivePointByValue is subject to variability with the purpose to support the conditional existence of sender receiver ports or the variant existence of data receive points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
dataSendPoint	VariableAccess	*	aggr	RunnableEntity has explicit write access to dataElement of a sender-receiver PortPrototype or nv data of a nv data PortPrototype. The aggregation of dataSendPoint is subject to variability with the purpose to support the conditional existence of sender receiver PortPrototype or the variant existence of data send points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
dataWrite Access	VariableAccess	*	aggr	RunnableEntity has implicit write access to dataElement of a sender-receiver PortPrototype or nv data of a nv data PortPrototype. The aggregation of dataWriteAccess is subject to variability with the purpose to support the conditional existence of sender receiver ports or the variant existence of dataWriteAccess in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
external TriggeringPoint	ExternalTriggeringPoint	*	aggr	The aggregation of ExternalTriggeringPoint is subject to variability with the purpose to support the conditional existence of trigger ports or the variant existence of external triggering points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=externalTriggeringPoint, variation Point.shortLabel vh.latestBindingTime=preCompileTime
internal TriggeringPoint	InternalTriggeringPoint	*	aggr	The aggregation of InternalTriggeringPoint is subject to variability with the purpose to support the variant existence of internal triggering points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
modeAccess Point	ModeAccessPoint	*	aggr	The runnable has a mode access point. The aggregation of ModeAccessPoint is subject to variability with the purpose to support the conditional existence of mode ports or the variant existence of mode access points in the implementation. ▽

▽

△

Class	**RunnableEntity**			
				△ **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=modeAccessPoint, variation Point.shortLabel vh.latestBindingTime=preCompileTime
modeSwitch Point	ModeSwitchPoint	*	aggr	The runnable has a mode switch point. The aggregation of ModeSwitchPoint is subject to variability with the purpose to support the conditional existence of mode ports or the variant existence of mode switch points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
parameter Access	ParameterAccess	*	aggr	The presence of a ParameterAccess implies that a RunnableEntity needs read only access to a Parameter DataPrototype which may either be local or within a Port Prototype. The aggregation of ParameterAccess is subject to variability with the purpose to support the conditional existence of parameter ports and component local parameters as well as the variant existence of Parameter Access (points) in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
readLocal Variable	VariableAccess	*	aggr	The presence of a readLocalVariable implies that a RunnableEntity needs read access to a VariableData Prototype in the role of implicitInterRunnableVariable or explicitInterRunnableVariable. The aggregation of readLocalVariable is subject to variability with the purpose to support the conditional existence of implicitInterRunnableVariable and explicit InterRunnableVariable or the variant existence of read LocalVariable (points) in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
serverCallPoint	ServerCallPoint	*	aggr	The RunnableEntity has a ServerCallPoint. The aggregation of ServerCallPoint is subject to variability with the purpose to support the conditional existence of client server PortPrototypes or the variant existence of server call points in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
symbol	CIdentifier	1	attr	The symbol describing this RunnableEntity's entry point. This is considered the API of the RunnableEntity and is required during the RTE contract phase.
waitPoint	WaitPoint	*	aggr	The WaitPoint associated with the RunnableEntity.

▽

△

Class	RunnableEntity			
writtenLocal Variable	VariableAccess	*	aggr	The presence of a writtenLocalVariable implies that a RunnableEntity needs write access to a VariableData Prototype in the role of implicitInterRunnableVariable or explicitInterRunnableVariable. The aggregation of writtenLocalVariable is subject to variability with the purpose to support the conditional existence of implicitInterRunnableVariable and explicit InterRunnableVariable or the variant existence of written LocalVariable (points) in the implementation. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime

Table E.83: RunnableEntity

Class	*SenderComSpec* (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Communication			
Note	Communication attributes for a sender port (PPortPrototype typed by SenderReceiverInterface).			
Base	*ARObject*, *PPortComSpec*			
Subclasses	NonqueuedSenderComSpec, QueuedSenderComSpec			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
composite Network Representation	CompositeNetwork Representation	*	aggr	This represents a CompositeNetworkRepresentation defined in the context of a SenderComSpec.
dataElement	AutosarDataPrototype	0..1	ref	Data element these quality of service attributes apply to.
handleOutOf Range	HandleOutOfRange Enum	1	attr	This attribute controls how out-of-range values shall be dealt with.
network Representation	SwDataDefProps	0..1	aggr	A networkRepresentation is used to define how the data Element is mapped to a communication bus.
transmission Acknowledge	Transmission Acknowledgement Request	0..1	aggr	Requested transmission acknowledgement for data element.
usesEndToEnd Protection	Boolean	0..1	attr	This indicates whether the corresponding dataElement shall be transmitted using end-to-end protection. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime

Table E.84: SenderComSpec

Class	SenderReceiverInterface			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	A sender/receiver interface declares a number of data elements to be sent and received. **Tags:** atp.recommendedPackage=PortInterfaces			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *DataInterface*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *PortInterface*, *Referrable*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
dataElement	VariableDataPrototype	1..*	aggr	The data elements of this SenderReceiverInterface.
invalidation Policy	InvalidationPolicy	*	aggr	InvalidationPolicy for a particular dataElement

Table E.85: SenderReceiverInterface

Class	SensorActuatorSwComponentType			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	The SensorActuatorSwComponentType introduces the possibility to link from the software representation of a sensor/actuator to its hardware description provided by the ECU Resource Template. **Tags:** atp.recommendedPackage=SwComponentTypes			
Base	*ARElement*, *ARObject*, *AtomicSwComponentType*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*, *SwComponentType*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
sensorActuator	HwDescriptionEntity	1	ref	Reference from the Sensor Actuator Software Component Type to the description of the actual hardware.

Table E.86: SensorActuatorSwComponentType

Class	**ServiceNeeds** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::ServiceNeeds			
Note	This expresses the abstract needs that a Software Component or Basic Software Module has on the configuration of an AUTOSAR Service to which it will be connected. "Abstract needs" means that the model abstracts from the Configuration Parameters of the underlying Basic Software.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	BswMgrNeeds, ComMgrUserNeeds, CryptoServiceJobNeeds, CryptoServiceNeeds, *DiagnosticCapabilityElement*, DltUserNeeds, *DoIpServiceNeeds*, EcuStateMgrUserNeeds, ErrorTracerNeeds, FunctionInhibitionAvailabilityNeeds, FunctionInhibitionNeeds, GlobalSupervisionNeeds, HardwareTestNeeds, IndicatorStatusNeeds, J1939RmIncomingRequestServiceNeeds, J1939RmOutgoingRequestServiceNeeds, NvBlockNeeds, SecureOnBoardCommunicationNeeds, SupervisedEntityCheckpointNeeds, SupervisedEntityNeeds, SyncTimeBaseMgrUserNeeds, V2xFacUserNeeds, V2xMUserNeeds, VendorSpecificServiceNeeds			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.87: ServiceNeeds

Class	ServiceProxySwComponentType			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	This class provides the ability to express a software-component which provides access to an internal service for remote ECUs. It acts as a proxy for the service providing access to the service. An important use case is the request of vehicle mode switches: Such requests can be communicated via sender-receiver interfaces across ECU boundaries, but the mode manager being responsible to perform the mode switches is an AUTOSAR Service which is located in the Basic Software and is not visible in the VFB view. To handle this situation, a ServiceProxySwComponentType will act as proxy for the mode manager. It will have R-Ports to be connected with the mode requestors on VFB level and Service-Ports to be connected with the local mode manager at ECU integration time. Apart from the semantics, a ServiceProxySwComponentType has these specific properties: • A prototype of it can be mapped to more than one ECUs in the system description. • Exactly one additional instance of it will be created in the ECU-Extract per ECU to which the prototype has been mapped. • For remote communication, it can have only R-Ports with sender-receiver interfaces and 1:n semantics. • There shall be no connectors between two prototypes of any ServiceProxySwComponentType. **Tags:** atp.recommendedPackage=SwComponentTypes			
Base	*ARElement*, *ARObject*, *AtomicSwComponentType*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*, *SwComponentType*

Class	***SignalPathConstraint*** (abstract)			
Package	M2::AUTOSARTemplates::SystemTemplate::SignalPaths			
Note	Additional guidelines for the System Generator, which specific way a signal between two Software Components should take in the network without defining in which frame and with which timing it is transmitted.			
Base	*ARObject*			
Subclasses	CommonSignalPath, ForbiddenSignalPath, PermissibleSignalPath, SeparateSignalPath			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
introduction	DocumentationBlock	1	aggr	This represents introductory documentation about the signal path constraint.

Table E.89: SignalPathConstraint

Class	***StackUsage*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::ResourceConsumption::StackUsage			
Note	Describes the stack memory usage of a software.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	MeasuredStackUsage, RoughEstimateStackUsage, WorstCaseStackUsage			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
executableEntity	ExecutableEntity	0..1	ref	The executable entity for which this stack usage is described.
hardware Configuration	HardwareConfiguration	0..1	aggr	Contains information about the hardware context this stack usage is describing.
hwElement	HwElement	0..1	ref	Specifies for which hardware element (e.g. ECU) this stack usage is given.
softwareContext	SoftwareContext	0..1	aggr	Contains details about the software context this stack usage is provided for.

Table E.90: StackUsage

Primitive	**String**
Package	M2::AUTOSARTemplates::GenericStructure::GeneralTemplateClasses::PrimitiveTypes
Note	This represents a String in which white-space must be normalized before processing. For example: in order to compare two Strings: • leading and trailing white-space needs to be removed • consecutive white-space (blank, cr, lf, tab) needs to be replaced by one blank. **Tags:** xml.xsd.customType=STRING xml.xsd.type=string

Table E.91: String

Class	SwBaseType			
Package	M2::MSR::AsamHdo::BaseTypes			
Note	This meta-class represents a base type used within ECU software. **Tags:** atp.recommendedPackage=BaseTypes			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *BaseType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*

Class	SwComponentPrototype			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
Note	Role of a software component within a composition.			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
type	SwComponentType	1	tref	Type of the instance. **Stereotypes:** isOfType

Table E.93: SwComponentPrototype

Class	***SwComponentType*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	Base class for AUTOSAR software components.			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Subclasses	*AtomicSwComponentType*, CompositionSwComponentType, ParameterSwComponentType			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
consistency Needs	ConsistencyNeeds	*	aggr	This represents the collection of ConsistencyNeeds owned by the enclosing SwComponentType. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
port	PortPrototype	*	aggr	The PortPrototypes through which this SwComponent Type can communicate. The aggregation of PortPrototype is subject to variability with the purpose to support the conditional existence of PortPrototypes. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
portGroup	PortGroup	*	aggr	A port group being part of this component. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
swComponent Documentation	SwComponent Documentation	0..1	aggr	This adds a documentation to the SwComponentType. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=swComponentDocumentation, variationPoint.shortLabel vh.latestBindingTime=preCompileTime xml.sequenceOffset=-10

▽

△

Class	***SwComponentType*** (abstract)			
unitGroup	UnitGroup	*	ref	This allows for the specification of which UnitGroups are relevant in the context of referencing SwComponentType.

Table E.94: SwComponentType

Class	***SwConnector*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Composition			
Note	The base class for connectors between ports. Connectors have to be identifiable to allow references from the system constraint template.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Subclasses	AssemblySwConnector, DelegationSwConnector, PassThroughSwConnector			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
mapping	PortInterfaceMapping	0..1	ref	Reference to a PortInterfaceMapping specifying the mapping of unequal named PortInterface elements of the two different PortInterfaces typing the two PortPrototypes which are referenced by the ConnectorPrototype.

Table E.95: SwConnector

Class	«atpVariation» **SwDataDefProps**			
Package	M2::MSR::DataDictionary::DataDefProperties			
Note	This class is a collection of properties relevant for data objects under various aspects. One could consider this class as a "pattern of inheritance by aggregation". The properties can be applied to all objects of all classes in which SwDataDefProps is aggregated. Note that not all of the attributes or associated elements are useful all of the time. Hence, the process definition (e.g. expressed with an OCL or a Document Control Instance MSR-DCI) has the task of implementing limitations. SwDataDefProps covers various aspects: • Structure of the data element for calibration use cases: is it a single value, a curve, or a map, but also the recordLayouts which specify how such elements are mapped/converted to the Data Types in the programming language (or in AUTOSAR). This is mainly expressed by properties like swRecordLayout and swCalprmAxisSet • Implementation aspects, mainly expressed by swImplPolicy, swVariableAccessImplPolicy, sw AddrMethod, swPointerTagetProps, baseType, implementationDataType and additionalNative TypeQualifier • Access policy for the MCD system, mainly expressed by swCalibrationAccess • Semantics of the data element, mainly expressed by compuMethod and/or unit, dataConstr, invalidValue • Code generation policy provided by swRecordLayout **Tags:** vh.latestBindingTime=codeGenerationTime			
Base	*ARObject*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*

▽

△

Class	«atpVariation» **SwDataDefProps**			
additionalNative TypeQualifier	NativeDeclarationString	0..1	attr	This attribute is used to declare native qualifiers of the programming language which can neither be deduced from the baseType (e.g. because the data object describes a pointer) nor from other more abstract attributes. Examples are qualifiers like "volatile", "strict" or "enum" of the C-language. All such declarations have to be put into one string. **Tags:** xml.sequenceOffset=235
annotation	Annotation	*	aggr	This aggregation allows to add annotations (yellow pads ...) related to the current data object. **Tags:** xml.roleElement=true xml.roleWrapperElement=true xml.sequenceOffset=20 xml.typeElement=false xml.typeWrapperElement=false
baseType	SwBaseType	0..1	ref	Base type associated with the containing data object. **Tags:** xml.sequenceOffset=50
compuMethod	CompuMethod	0..1	ref	Computation method associated with the semantics of this data object. **Tags:** xml.sequenceOffset=180
dataConstr	DataConstr	0..1	ref	Data constraint for this data object. **Tags:** xml.sequenceOffset=190
displayFormat	DisplayFormatString	0..1	attr	This property describes how a number is to be rendered e.g. in documents or in a measurement and calibration system. **Tags:** xml.sequenceOffset=210
display Presentation	DisplayPresentation Enum	0..1	attr	This attribute controls the presentation of the related data for measurement and calibration tools.
implementation DataType	AbstractImplementation DataType	0..1	ref	This association denotes the ImplementationDataType of a data declaration via its aggregated SwDataDefProps. It is used whenever a data declaration is not directly referring to a base type. Especially • redefinition of an ImplementationDataType via a "typedef" to another ImplementationDatatype • the target type of a pointer (see SwPointerTarget Props), if it does not refer to a base type directly • the data type of an array or record element within an ImplementationDataType, if it does not refer to a base type directly • the data type of an SwServiceArg, if it does not refer to a base type directly **Tags:** xml.sequenceOffset=215
invalidValue	ValueSpecification	0..1	aggr	Optional value to express invalidity of the actual data element. **Tags:** xml.sequenceOffset=255
stepSize	Float	0..1	attr	This attribute can be used to define a value which is added to or subtracted from the value of a DataPrototype when using up/down keys while calibrating.
swAddrMethod	SwAddrMethod	0..1	ref	Addressing method related to this data object. Via an association to the same SwAddrMethod it can be specified that several DataPrototypes shall be located in the same memory without already specifying the memory section itself. **Tags:** xml.sequenceOffset=30

▽

△

Class	«atpVariation» **SwDataDefProps**			
swAlignment	AlignmentType	0..1	attr	The attribute describes the intended alignment of the DataPrototype. If the attribute is not defined the alignment is determined by the swBaseType size and the memory AllocationKeywordPolicy of the referenced SwAddr Method. **Tags:** xml.sequenceOffset=33
swBit Representation	SwBitRepresentation	0..1	aggr	Description of the binary representation in case of a bit variable. **Tags:** xml.sequenceOffset=60
swCalibration Access	SwCalibrationAccess Enum	0..1	attr	Specifies the read or write access by MCD tools for this data object. **Tags:** xml.sequenceOffset=70
swCalprmAxis Set	SwCalprmAxisSet	0..1	aggr	This specifies the properties of the axes in case of a curve or map etc. This is mainly applicable to calibration parameters. **Tags:** xml.sequenceOffset=90
swComparison Variable	SwVariableRefProxy	*	aggr	Variables used for comparison in an MCD process. **Tags:** xml.sequenceOffset=170 xml.typeElement=false
swData Dependency	SwDataDependency	0..1	aggr	Describes how the value of the data object has to be calculated from the value of another data object (by the MCD system). **Tags:** xml.sequenceOffset=200
swHostVariable	SwVariableRefProxy	0..1	aggr	Contains a reference to a variable which serves as a host-variable for a bit variable. Only applicable to bit objects. **Tags:** xml.sequenceOffset=220 xml.typeElement=false
swImplPolicy	SwImplPolicyEnum	0..1	attr	Implementation policy for this data object. **Tags:** xml.sequenceOffset=230
swIntended Resolution	Numerical	0..1	attr	The purpose of this element is to describe the requested quantization of data objects early on in the design process. The resolution ultimately occurs via the conversion formula present (compuMethod), which specifies the transition from the physical world to the standardized world (and vice-versa) (here, "the slope per bit" is present implicitly in the conversion formula). In the case of a development phase without a fixed conversion formula, a pre-specification can occur through swIntendedResolution. The resolution is specified in the physical domain according to the property "unit". **Tags:** xml.sequenceOffset=240
swInterpolation Method	Identifier	0..1	attr	This is a keyword identifying the mathematical method to be applied for interpolation. The keyword needs to be related to the interpolation routine which needs to be invoked. **Tags:** xml.sequenceOffset=250

▽

△

Class	«atpVariation» **SwDataDefProps**			
swIsVirtual	Boolean	0..1	attr	This element distinguishes virtual objects. Virtual objects do not appear in the memory, their derivation is much more dependent on other objects and hence they shall have a swDataDependency . **Tags:** xml.sequenceOffset=260
swPointerTarget Props	SwPointerTargetProps	0..1	aggr	Specifies that the containing data object is a pointer to another data object. **Tags:** xml.sequenceOffset=280
swRecord Layout	SwRecordLayout	0..1	ref	Record layout for this data object. **Tags:** xml.sequenceOffset=290
swRefresh Timing	MultidimensionalTime	0..1	aggr	This element specifies the frequency in which the object involved shall be or is called or calculated. This timing can be collected from the task in which write access processes to the variable run. But this cannot be done by the MCD system. So this attribute can be used in an early phase to express the desired refresh timing and later on to specify the real refresh timing. **Tags:** xml.sequenceOffset=300
swTextProps	SwTextProps	0..1	aggr	the specific properties if the data object is a text object. **Tags:** xml.sequenceOffset=120
swValueBlock Size	Numerical	0..1	attr	This represents the size of a Value Block **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime xml.sequenceOffset=80
swValueBlock Size Mult (ordered)	Numerical	*	attr	This attribute is used to specify the dimensions of a value block (VAL_BLK) for the case that that value block has more than one dimension. The dimensions given in this attribute are ordered such that the first entry represents the first dimension, the second entry represents the second dimension, and so on. For one-dimensional value blocks the attribute swValue BlockSize shall be used and this attribute shall not exist. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
unit	Unit	0..1	ref	Physical unit associated with the semantics of this data object. This attribute applies if no compuMethod is specified. If both units (this as well as via compuMethod) are specified the units shall be compatible. **Tags:** xml.sequenceOffset=350
valueAxisData Type	ApplicationPrimitive DataType	0..1	ref	The referenced ApplicationPrimitiveDataType represents the primitive data type of the value axis within a compound primitive (e.g. curve, map). It supersedes CompuMethod, Unit, and BaseType. **Tags:** xml.sequenceOffset=355

Table E.96: SwDataDefProps

Enumeration	**SwImplPolicyEnum**
Package	M2::MSR::DataDictionary::DataDefProperties
Note	Specifies the implementation strategy with respect to consistency mechanisms of variables.
Literal	*Description*
const	forced implementation such that the running software within the ECU shall not modify it. For example implemented with the "const" modifier in C. This can be applied for parameters (not for those in NVRAM) as well as argument data prototypes. **Tags:** atp.EnumerationValue=0
fixed	This data element is fixed. In particular this indicates, that it might also be implemented e.g. as in place data, (#DEFINE). **Tags:** atp.EnumerationValue=1
measurementPoint	The data element is created for measurement purposes only. The data element is never read directly within the ECU software. In contrast to a "standard" data element in an unconnected provide port is, this unconnection is guaranteed for measurementPoint data elements. **Tags:** atp.EnumerationValue=2
queued	The content of the data element is queued and the data element has 'event' semantics, i.e. data elements are stored in a queue and all data elements are processed in 'first in first out' order. The queuing is intended to be implemented by RTE Generator. This value is not applicable for parameters. **Tags:** atp.EnumerationValue=3
standard	This is applicable for all kinds of data elements. For variable data prototypes the 'last is best' semantics applies. For parameter there is no specific implementation directive. **Tags:** atp.EnumerationValue=4

Table E.97: SwImplPolicyEnum

Class	**SwRecordLayout**			
Package	M2::MSR::DataDictionary::RecordLayout			
Note	Defines how the data objects (variables, calibration parameters etc.) are to be stored in the ECU memory. As an example, this definition specifies the sequence of axis points in the ECU memory. Iterations through axis values are stored within the sub-elements swRecordLayoutGroup. **Tags:** atp.recommendedPackage=SwRecordLayouts			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	*Type*	*Mul.*	*Kind*	*Note*
swRecord LayoutGroup	SwRecordLayoutGroup	1	aggr	This is the top level record layout group. **Tags:** xml.roleElement=true xml.roleWrapperElement=false xml.sequenceOffset=20 xml.typeElement=false xml.typeWrapperElement=false

Table E.98: SwRecordLayout

Class	**SwRecordLayoutGroup**
Package	M2::MSR::DataDictionary::RecordLayout
Note	Specifies how a record layout is set up. Using SwRecordLayoutGroup it recursively models iterations through axis values. The subelement swRecordLayoutGroupContentType may reference other Sw RecordLayouts, SwRecordLayoutVs and SwRecordLayoutGroups for the modeled record layout.
Base	*ARObject*

▽

△

Class	**SwRecordLayoutGroup**			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
desc	MultiLanguageOverview Paragraph	0..1	aggr	This aggregation allows a brief description about the particular record layout group which can help to identify the entry. In-depth documentation should be added to the introduction of the surrounding record layout. **Tags:** xml.sequenceOffset=20
category	AsamRecordLayout Semantics	0..1	attr	This attribute denotes the semantics in particular in terms of the corresponding A2L-Keyword. This is to support the mapping of the more general record layouts in AUTOSAR/MSR to the specific A2l keywords. It is possible to express the specific semantics of A2l recordlayout keywords in swRecordlayoutGroup but not always vice versa. Therefore the mapping is provided in this optional attribute. **Tags:** xml.sequenceOffset=5
shortLabel	Identifier	1	attr	This attribute specifies a name which can be used e.g. when ECU code is generated from the record layout group. **Tags:** xml.sequenceOffset=3
swGenericAxis ParamType	SwGenericAxisParam Type	0..1	ref	This association allows to specify record layout groups to iterate over generic axis parameters. For example, if the generic axis parameter is an array, the record layout group will iterate over this array. Obviously, the axis referred to by swRecordLayoutGroup Axis shall be a generic axis in which the referenced Sw GenericAxisType is aggregated. **Tags:** xml.sequenceOffset=50
swRecord Layout Component	Identifier	0..1	attr	This attribute is used to denote the component to which the group in question applies. Thus, the record layout supports structured objects. This secures independence from the sequence of components, because they can be referred to via name. **Tags:** xml.sequenceOffset=90
swRecord LayoutGroup Axis	AxisIndexType	0..1	attr	This attribute specifies the iteration axis number for a Sw RecordLayoutGroup. The current record layout group then refers exactly to the axis with this number. This means that the values are taken by iterating along the thus referenced axis. **Tags:** xml.sequenceOffset=30
swRecord LayoutGroup ContentType	SwRecordLayoutGroup Content	0..1	aggr	This is the contents of the recordLayout which is produced for every step of iteration. **Tags:** xml.roleElement=false xml.roleWrapperElement=false xml.sequenceOffset=100 xml.typeElement=false xml.typeWrapperElement=false

▽

△

Class	**SwRecordLayoutGroup**			
swRecord LayoutGroup From	RecordLayoutIterator Point	0..1	attr	This attribute specifies the iterator index for the point in the axis from which a record layout group is commenced. Negative values are also possible, i.e. the value -4 counts from the fourth value from the end. If this property is missing, the iteration starts with '1'. **Tags:** xml.sequenceOffset=60
swRecord LayoutGroup Index	NameToken	0..1	attr	This attribute attributes a symbolic name to the iterator of the superimposed record layout group. This can be referenced as a loop index in contained SwRecordLayout V elements. **Tags:** xml.sequenceOffset=40
swRecord LayoutGroup Step	Integer	0..1	attr	This attribute specifies the step width for the iterator index that is used for the current record layout group. Note that negative values are also possible, in case of the starting point is higher than the endpoint. If the property is missing, the step width is "1". **Tags:** xml.sequenceOffset=80
swRecord LayoutGroupTo	RecordLayoutIterator Point	0..1	attr	This attribute specifies the end point for the iteration. Negative values are also possible, i.e. the value -4 counts up to the fourth value from the end. If this property is not there, the iteration ends at "-1" which is the last element. Note that depending on the arraySizeSemantics of Sw TextProps the iteration ends at the value specified in sw MaxTextSize. **Tags:** xml.sequenceOffset=70

Table E.99: SwRecordLayoutGroup

Class	**SwSystemconst**			
Package	M2::MSR::DataDictionary::SystemConstant			
Note	This element defines a system constant which serves an input to select a particular variation point. In particular a system constant serves as an operand of the binding function (swSyscond) in a Variation point. Note that the binding process can only happen if a value was assigned to to the referenced system constants. **Tags:** atp.recommendedPackage=SwSystemconsts			
Base	*ARElement*, *ARObject*, *AtpDefinition*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
swDataDef Props	SwDataDefProps	0..1	aggr	This denotes the data defintion properties of the system constant. This supports to express the limits and optionally a conversion within the internal to physical values by a compu method. **Tags:** xml.sequenceOffset=40

Table E.100: SwSystemconst

Class	**SwSystemconstValue**			
Package	M2::AUTOSARTemplates::GenericStructure::VariantHandling			
Note	This meta-class assigns a particular value to a system constant.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
annotation	Annotation	*	aggr	This provides the ability to add information why the value is set like it is. **Tags:** xml.sequenceOffset=30
swSystemconst	SwSystemconst	1	ref	This is the system constant to which the value applies. **Tags:** xml.sequenceOffset=10
value	Numerical	1	attr	This is the particular value of a system constant. It is specified as Numerical. Further restrictions may apply by the definition of the system constant. The value attribute defines the internal value of the Sw Systemconst as it is processed in the Formula Language. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime xml.sequenceOffset=20

Table E.101: SwSystemconstValue

Class	**SwSystemconstantValueSet**			
Package	M2::AUTOSARTemplates::GenericStructure::VariantHandling			
Note	This meta-class represents the ability to specify a set of system constant values. **Tags:** atp.recommendedPackage=SwSystemconstantValueSets			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
sw Systemconstant Value	SwSystemconstValue	*	aggr	This is one particular value of a system constant.

Table E.102: SwSystemconstantValueSet

Class	**SwcImplementation**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::SwcImplementation			
Note	This meta-class represents a specialization of the general Implementation meta-class with respect to the usage in application software. **Tags:** atp.recommendedPackage=SwcImplementations			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *Implementation*, *MultilanguageReferrable*, *PackageableElement*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
behavior	SwcInternalBehavior	1	ref	The internal behavior implemented by this Implementation.
perInstance MemorySize	PerInstanceMemory Size	*	aggr	Allows a definition of the size of the per-instance memory for this implementation. The aggregation of PerInstanceMemorySize is subject to variability with the purpose to support variability in the software components implementations. Typically different ▽

Class	SwcImplementation			
				△ algorithms in the implementation are requiring different number of memory objects, in this case PerInstance Memory. **Stereotypes:** atpVariation **Tags:** vh.latestBindingTime=preCompileTime
required RTEVendor	String	0..1	attr	Identify a specific RTE vendor. This information is potentially important at the time of integrating (in particular: linking) the application code with the RTE. The semantics is that (if the association exists) the corresponding code has been created to fit to the vendor-mode RTE provided by this specific vendor. Attempting to integrate the code with another RTE generated in vendor mode is in general not possible.

Table E.103: SwcImplementation

Class	SwcInternalBehavior			
Package	M2::AUTOSARTemplates::SWComponentTemplate::SwcInternalBehavior			
Note	The SwcInternalBehavior of an AtomicSwComponentType describes the relevant aspects of the software-component with respect to the RTE, i.e. the RunnableEntities and the RTEEvents they respond to.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *InternalBehavior*, *Multilanguage Referrable*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
arTypedPer Instance Memory	VariableDataPrototype	*	aggr	Defines an AUTOSAR typed memory-block that needs to be available for each instance of the SW-component. This is typically only useful if supportsMultipleInstantiation is set to "true" or if the component defines NVRAM access via permanent blocks. The aggregation of arTypedPerInstanceMemory is subject to variability with the purpose to support variability in the software component's implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
event	RTEEvent	*	aggr	This is a RTEEvent specified for the particular Swc InternalBehavior. The aggregation of RTEEvent is subject to variability with the purpose to support the conditional existence of RTE events. Note: the number of RTE events might vary due to the conditional existence of PortPrototypes using Data ReceivedEvents or due to different scheduling needs of algorithms. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime

▽

△

Class	**SwcInternalBehavior**			
exclusiveArea Policy	SwcExclusiveArea Policy	*	aggr	Options how to generate the ExclusiveArea related APIs. When no SwcExclusiveAreaPolicy is specified for an ExclusiveArea the default values apply. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=exclusiveAreaPolicy vh.latestBindingTime=preCompileTime
explicitInter Runnable Variable	VariableDataPrototype	*	aggr	Implement state message semantics for establishing communication among runnables of the same component. The aggregation of explicitInterRunnableVariable is subject to variability with the purpose to support variability in the software components implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
handle TerminationAnd Restart	HandleTerminationAnd RestartEnum	1	attr	This attribute controls the behavior with respect to stopping and restarting. The corresponding AtomicSw ComponentType may either not support stop and restart, or support only stop, or support both stop and restart.
implicitInter Runnable Variable	VariableDataPrototype	*	aggr	Implement state message semantics for establishing communication among runnables of the same component. The aggregation of implicitInterRunnableVariable is subject to variability with the purpose to support variability in the software components implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
includedData TypeSet	IncludedDataTypeSet	*	aggr	The includedDataTypeSet is used by a software component for its implementation. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=includedDataTypeSet
includedMode Declaration GroupSet	IncludedMode DeclarationGroupSet	*	aggr	This aggregation represents the included Mode DeclarationGroups **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=includedModeDeclarationGroupSet
instantiation DataDefProps	InstantiationDataDef Props	*	aggr	The purpose of this is that within the context of a given SwComponentType some data def properties of individual instantiations can be modified. The aggregation of InstantiationDataDefProps is subject to variability with the purpose to support the conditional existence of PortPrototypes and component local memories like "perInstanceParameter" or "arTypedPer InstanceMemory". **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=instantiationDataDefProps, variation Point.shortLabel vh.latestBindingTime=preCompileTime

▽

△

Class	**SwcInternalBehavior**			
perInstance Memory	PerInstanceMemory	*	aggr	Defines a per-instance memory object needed by this software component. The aggregation of PerInstanceMemory is subject to variability with the purpose to support variability in the software components implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
perInstance Parameter	ParameterData Prototype	*	aggr	Defines parameter(s) or characteristic value(s) that needs to be available for each instance of the software-component. This is typically only useful if supportsMultipleInstantiation is set to "true". The aggregation of perInstanceParameter is subject to variability with the purpose to support variability in the software components implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
portAPIOption	PortAPIOption	*	aggr	Options for generating the signature of port-related calls from a runnable to the RTE and vice versa. The aggregation of PortPrototypes is subject to variability with the purpose to support the conditional existence of ports. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=portAPIOption, variationPoint.short Label vh.latestBindingTime=preCompileTime
runnable	RunnableEntity	*	aggr	This is a RunnableEntity specified for the particular Swc InternalBehavior. The aggregation of RunnableEntity is subject to variability with the purpose to support the conditional existence of RunnableEntities. Note: the number of RunnableEntities might vary due to the conditional existence of Port Prototypes using DataReceivedEvents or due to different scheduling needs of algorithms. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
service Dependency	SwcService Dependency	*	aggr	Defines the requirements on AUTOSAR Services for a particular item. The aggregation of SwcServiceDependency is subject to variability with the purpose to support the conditional existence of ports as well as the conditional existence of ServiceNeeds. The SwcServiceDependency owned by an SwcInternal Behavior can be located in a different physical file in order to support that SwcServiceDependency might be provided in later development steps or even by different expert domain (e.g OBD expert ▽

▽

△

Class	SwcInternalBehavior			
				△ for Obd related Service Needs) tools. Therefore the aggregation is «atpSplitable». **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
shared Parameter	ParameterData Prototype	*	aggr	Defines parameter(s) or characteristic value(s) shared between SwComponentPrototypes of the same Sw ComponentType The aggregation of sharedParameter is subject to variability with the purpose to support variability in the software components implementations. Typically different algorithms in the implementation are requiring different number of memory objects. **Stereotypes:** atpSplitable; atpVariation **Tags:** atp.Splitkey=shortName, variationPoint.shortLabel vh.latestBindingTime=preCompileTime
supports Multiple Instantiation	Boolean	1	attr	Indicate whether the corresponding software-component can be multiply instantiated on one ECU. In this case the attribute will result in an appropriate component API on programming language level (with or without instance handle).
variationPoint Proxy	VariationPointProxy	*	aggr	Proxy of a variation points in the C/C++ implementation. **Stereotypes:** atpSplitable **Tags:** atp.Splitkey=shortName

Table E.104: SwcInternalBehavior

Class	SymbolProps			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Components			
Note	This meta-class represents the ability to attach with the symbol attribute a symbolic name that is conform to C language requirements to another meta-class, e.g. AtomicSwComponentType, that is a potential subject to a name clash on the level of RTE source code.			
Base	*ARObject*, *ImplementationProps*, *Referrable*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
–	–	–	–	–

Table E.105: SymbolProps

Class	TextValueSpecification			
Package	M2::AUTOSARTemplates::CommonStructure::Constants			
Note	The purpose of TextValueSpecification is to define the labels that correspond to enumeration values.			
Base	*ARObject*, *ValueSpecification*			
Attribute	**Type**	**Mul.**	**Kind**	**Note**
value	VerbatimString	1	attr	This is the value itself. Note that vt uses the | operator to separate the values for the different bitfield masks in case that the semantics of the related DataPrototype is described by means of a BITFIELD_TEXTTABLE in the associated CompuMethod.

Table E.106: TextValueSpecification

Class	***TransformationComSpecProps*** (abstract)			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Communication			
Note	TransformationComSpecProps holds all the attributes for transformers that are port specific.			
Base	*ARObject*, *Describable*			
Subclasses	EndToEndTransformationComSpecProps, UserDefinedTransformationComSpecProps			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
–	–	–	–	–

Table E.107: TransformationComSpecProps

Class	**Trigger**			
Package	M2::AUTOSARTemplates::CommonStructure::TriggerDeclaration			
Note	A trigger which is provided (i.e. released) or required (i.e. used to activate something) in the given context.			
Base	*ARObject*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
swImplPolicy	SwImplPolicyEnum	0..1	attr	This attribute, when set to value queued, allows for a queued processing of Triggers.
triggerPeriod	MultidimensionalTime	0..1	aggr	Optional definition of a period in case of a periodically (time or angle) driven external trigger.

Table E.108: Trigger

Class	**TriggerInterface**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::PortInterface			
Note	A trigger interface declares a number of triggers that can be sent by an trigger source. **Tags:** atp.recommendedPackage=PortInterfaces			
Base	*ARElement*, *ARObject*, *AtpBlueprint*, *AtpBlueprintable*, *AtpClassifier*, *AtpType*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *PackageableElement*, *PortInterface*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
trigger	Trigger	1..*	aggr	The Trigger of this trigger interface.

Table E.109: TriggerInterface

Class	***ValueSpecification*** (abstract)			
Package	M2::AUTOSARTemplates::CommonStructure::Constants			
Note	Base class for expressions leading to a value which can be used to initialize a data object.			
Base	*ARObject*			
Subclasses	*AbstractRuleBasedValueSpecification*, ApplicationValueSpecification, *CompositeValueSpecification*, ConstantReference, NotAvailableValueSpecification, NumericalValueSpecification, ReferenceValue Specification, TextValueSpecification			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
shortLabel	Identifier	0..1	attr	This can be used to identify particular value specifications for human readers, for example elements of a record type.

Table E.110: ValueSpecification

Class	**VariableAccess**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::SwcInternalBehavior::DataElements			
Note	The presence of a VariableAccess implies that a RunnableEntity needs access to a VariableData Prototype. The kind of access is specified by the role in which the class is used.			
Base	*ARObject*, *AbstractAccessPoint*, *AtpClassifier*, *AtpFeature*, *AtpStructureElement*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
accessed Variable	AutosarVariableRef	1	aggr	This denotes the accessed variable.
scope	VariableAccessScope Enum	0..1	attr	This attribute allows for constraining the scope of the corresponding communication. For example, it possible to express whether the communication is intended to cross the boundary of an ECU or whether it is intended not to cross the boundary of a single partition.

Table E.111: VariableAccess

Class	**VariableDataPrototype**			
Package	M2::AUTOSARTemplates::SWComponentTemplate::Datatype::DataPrototypes			
Note	A VariableDataPrototype is used to contain values in an ECU application. This means that most likely a VariableDataPrototype allocates "static" memory on the ECU. In some cases optimization strategies might lead to a situation where the memory allocation can be avoided. In particular, the value of a VariableDataPrototype is likely to change as the ECU on which it is used executes.			
Base	*ARObject*, *AtpFeature*, *AtpPrototype*, *AutosarDataPrototype*, *DataPrototype*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
initValue	ValueSpecification	0..1	aggr	Specifies initial value(s) of the VariableDataPrototype

Table E.112: VariableDataPrototype

Class	**VariationPoint**			
Package	M2::AUTOSARTemplates::GenericStructure::VariantHandling			
Note	This meta-class represents the ability to express a "structural variation point". The container of the variation point is part of the selected variant if swSyscond evaluates to true and each postBuildVariant Criterion is fulfilled.			
Base	*ARObject*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
desc	MultiLanguageOverview Paragraph	0..1	aggr	This allows to describe shortly the purpose of the variation point. **Tags:** xml.sequenceOffset=20
blueprint Condition	DocumentationBlock	0..1	aggr	This represents a description that documents how the variation point shall be resolved when deriving objects from the blueprint. Note that variationPoints are not allowed within a blueprintCondition. **Tags:** xml.sequenceOffset=28

▽

△

Class	**VariationPoint**			
formalBlueprint Condition	BlueprintFormula	0..1	aggr	This denotes a formal blueprintCondition. This shall be not in contradiction with blueprintCondition or formal BlueprintGenerator. It is recommended only to use one of the two. **Tags:** atp.Status=obsolete xml.sequenceOffset=29
formalBlueprint Generator	BlueprintGenerator	0..1	aggr	This represents a description that documents how the variation point shall be resolved when deriving objects from the blueprint by using ARMQL. Note that variationPoints are not allowed within a formal BlueprintGenerator. **Tags:** atp.Status=draft xml.sequenceOffset=30
postBuildVariant Condition	PostBuildVariant Condition	*	aggr	This is the set of post build variant conditions which all shall be fulfilled in order to (postbuild) bind the variation point. **Tags:** xml.sequenceOffset=40
sdg	Sdg	0..1	aggr	An optional special data group is attached to every variation point. These data can be used by external software systems to attach application specific data. For example, a variant management system might add an identifier, an URL or a specific classifier. **Tags:** xml.sequenceOffset=50
shortLabel	Identifier	0..1	attr	This provides a name to the particular variation point to support the RTE generator. It is necessary for supporting splitable aggregations and if binding time is later than codeGenerationTime, as well as some RTE conditions. It needs to be unique with in the enclosing Identifiables with the same ShortName. **Tags:** xml.sequenceOffset=10
swSyscond	ConditionByFormula	0..1	aggr	This condition acts as Binding Function for the Variation Point. Note that the mulitplicity is 0..1 in order to support pure postBuild variants. **Tags:** xml.sequenceOffset=30

Table E.113: VariationPoint

Class	**ViewMap**			
Package	M2::AUTOSARTemplates::GenericStructure::ViewMapSet			
Note	The ViewMap allows to relate any number of elements on the "first" side to any number of elements on the "second" side. Since the ViewMap does not address a specific mapping use-case the roles "first" and "second" shall imply this generality. This mapping allows to trace transformations of artifacts within the AUTOSAR environment. The references to the mapped elements can be plain references and/or InstanceRefs.			
Base	*ARObject*, *Identifiable*, *MultilanguageReferrable*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
firstElement	Referrable	*	ref	Reference to identifible elements on the first "side". **Tags:** xml.sequenceOffset=20
firstElement Instance	AtpFeature	*	iref	InstanceRefs to elements on the first "side". **Tags:** xml.sequenceOffset=50

▽

△

Class	**ViewMap**			
role	Identifier	0..1	attr	This attribute is used to describe specific mapping scenarios, e.g. the mappings: AR_AbstractSystemDescription_SystemDescription AR_SystemDescription_SystemExtract **Tags:** xml.sequenceOffset=10
secondElement	Referrable	*	ref	Reference to identifible elements on the second "side". **Tags:** xml.sequenceOffset=30
secondElement Instance	AtpFeature	*	iref	InstanceRefs to elements on the second "side". **Tags:** xml.sequenceOffset=60

Table E.114: ViewMap

Class	**ViewMapSet**			
Package	M2::AUTOSARTemplates::GenericStructure::ViewMapSet			
Note	Collection of ViewMaps that are used to establish relationships between different AUTOSAR artifacts. **Tags:** atp.recommendedPackage=ViewMapSets			
Base	*ARElement*, *ARObject*, *CollectableElement*, *Identifiable*, *MultilanguageReferrable*, *Packageable Element*, *Referrable*			
Attribute	***Type***	***Mul.***	***Kind***	***Note***
viewMap	ViewMap	*	aggr	ViewMaps that are collected by the ViewMapSet.

Table E.115: ViewMapSet

F Splitable Elements in the Scope of this Document

This chapter contains a table of all model elements stereotyped ≪atpSplitable≫ in the scope of this document.

Each entry in Table F.1 consists of the identification of the specific model element itself and the applicable value of the tagged value atp.Splitkey.

For more information about the concept of splitable model elements and how these shall be treated please refer to [2].

Name of splitable element	Splitkey
AliasNameSet.aliasName	shortLabel
ClientIdDefinitionSet.clientIdDefinition	shortName, variationPoint.shortLabel
